Garment workers, united.—Secured increase in wages, averaging 10 per cent for 20,000 members; made many substantial gains in other particulars, such as securing from employers free thread, free oil, and other necessary working materials. Factory conditions greatly improved as to ventilation, sanitation, and general comfort.

Garment workers, ladies'.—Number of persons involved in strikes, 2,800; resulting in reduction of hours per day, 1. All attempts to reduce wages were successfully resisted. Through the efforts of this organization, hours of labor have been reduced from an unlimited number per week to a standard of 50 per week, and all legal holidays are duly observed.

Glass bottle blowers.—Agreements with employers renewed maintaining previous years' conditions. Death benefits, \$64,000; unemployed benefits, \$165,000; donations to other unions, \$5,500.

Glass workers, amalgamated.—New agreements with employers secured in six cities without strike. All efforts to reduce wages failed. Before organization men in this trade in New York City worked 56 hours and 60 hours per week for \$14. The minimum wage now paid is \$20 for a 48-hour week.

Glove workers.—Net number of new unions, 4; gain in membership, 275. Agreements secured from 10 employers, including an increase in wages ranging from 5 to 10 per cent without strikes. Several attempts to reduce wages were made, most of which were successfully resisted. In one instance, the settlement of a dispute secured an increase in prices for making gloves, and the local union increased its membership from 77 to 250. The endeavors of this organization have increased wages for block cutters over 40 per cent. Uniform prices for work have been established and the system of paying for machine rent and use of power abolished. A weekly pay day has been established, and a 54-hour week and Saturday half-holiday generally secured.

Granite cutters.—Net number of new unions, 3; won 12 strikes; 2 pending; number of persons involved, 1,800; number benefited, 1,800—by which they secured an increase in wages of about 16 cents per member per day. Many

gains in other respects, by which sanitation was improved and unhealthful machines eliminated. Cost of strikes, \$27,000. Donations to other unions, \$5,900. As a result of the work of this organization and without the need of strikes, arrangements have been made with employers by which a minimum wage of \$4 per day has been obtained, with a 44-hour working week, and working sheds made comfortable in winter by installing proper heating and ventilating systems.

Grinders, pocketknife blades.—Old agreements with employers renewed. No reduction in wages effected during past year. Cost of strike, \$3,300.

Hatters.—All attempts to reduce wages successfully resisted. Death benefits, \$50,000; donations to other unions, \$4,500.

Hodcarriers.—A general advance in working conditions and wages secured for members during year; strikes engaged in, 11; number won, 9; compromised, 2; death benefits, \$3,000; donations to other unions, \$1,200.

Horseshoers.—Net number of new unions, 6; gain in membership, 200; number of strikes, 3; number won, 3; number of persons involved, 300; number benefited, 300. As a result an increase of wages was secured ranging from 25 to 50 cents per member per day. Many gains in other respects by which the union label was recognized and a proper regulation of apprentices; wages were increased; hours were reduced in several cases without strikes; donations to other unions, \$1,400. Cost of strikes, \$8,000. This organization has succeeded in reducing hours of labor from 10 and 11 to 9 per day. Wages paid before organization were about \$2.50 and \$3 per day. Since organization wages range from \$3 to \$5 per day, and the Saturday half-holiday during summer months has been secured in a large number of cities.

Hotel and restaurant employees.—Net number of new unions, 37; gain in membership, 3,800; number of strikes, 43; number won, 29; compromised, 7; pending, 4; lost, 2; number of persons involved, 755; number benefited, 540; resulting in advance of wages of about 7 per cent to the members involved. Death benefits, \$27,000; sick benefits, \$35,000. Donations to other unions, \$20,000. Costs of strikes, \$12,500. As a result of the efforts of this organization employees are treated more reasonably by employers, so that less irksome conditions of labor prevail; number of working hours are fewer; a weekly rest day in many cases has been secured.

Iron and steel workers.—Puddlers and other members in the boiling departments secured an increase in wages averaging 8 per cent without strikes. Death benefits, \$4,200. Death benefits to members' wives, \$600. Sick benefits, \$9,000. Donations to other unions, \$300.

Lace operatives.—No reductions in wages effected during year. Death benefits, \$1,500. Death benefits to members' wives, \$400. Donations to other unions, \$700. Cost of strikes, \$500.

Lathers.—Wages paid to lathers have advanced 100 per cent as a result of this organization. During 1912 an average increase of about 10 per cent was secured without strikes. Death benefits, \$5,500.

Laundry workers.—Gain in membership, 500. Several increases in wages and reduction in working hours were secured without strikes. All attempts to reduce wages were successfully resisted. As a result of organization among laundry workers, members are now enjoying an eight or nine hour day with pay for overtime, whereas the unorganized laundry workers are working unlimited hours with no overtime pay and smaller wage rates per day. As a result of legislation, the eight-hour working day has been secured in several western cities through State legislation for laundry employees.

Leather workers.—Death benefits, \$1,500; sick benefits, \$2,200; donations to other unions, \$1,600; unemployed benefits, \$300. As a result of continued effort, hours have been reduced from 10 to 9 per day. A 20 per cent increase in wages was secured for 400 men during the year without strike. In all districts where this trade is organized, piece prices paid on different classes of work are far higher than those paid in unorganized districts, and the hours per day or week are fewer.

Lithographers.—Gain in membership, 420. The 48-hour week prevails throughout the trade as a result of organization.

Longshoremen.—Net number of new unions, 14; number of strikes, 4; number won, 4. Secured several increases in wages without strike. All attempts to reduce wages during the year successfully resisted.

Machinists.—Net number of new unions, 48. Gain in membership, 7,000. Agreements made with 75 manufacturing employers and 28 railroad systems without strike, by which a total of \$1,250,000 in increased wages were secured

for over 22,000 machinists. Shop conditions have been materially improved, the straight eight-hour day has been obtained in several cases, and the 50-hour week in others, as a result of direct negotiations with employers. The Federal eight-hour law has been enforced on all naval and ordnance contracts in private shipyards and private ordnance works, thereby directly benefiting over 25,000 organized and unorganized workers in such establishments. Death benefits, \$57,000. Cost of strikes, \$525,000.

Maintenance of way employees (railroad track repair men).—Net number of new unions, 36; an average increase of 5 cents per member per day has been secured during the year without strikes; death benefits, \$14,000.

Marbleworkers.—Net number of new unions, 3; gain in membership, 100; number of strikes, 9; number won, 6; compromised, 1; pending, 1; lost 1; number of persons involved, 2,000; number benefited, 1,200. As a result an increase in wages of 35 cents per member per day was gained, and "negotiations are still under way for an increase in wages for the men involved in the other strikes." Donations to other unions, \$4,000; cost of strikes, \$9,000.

Meat cutters.—Gain in membership, 800. Increase of 25 cents per member per day has been generally secured and hours of labor reduced two and three hours per day, without strikes. Death benefits, \$1,500; sick benefits, \$4,000; donations to other unions, \$3,000. General results of organization: Former wages averaged \$9 to \$12 per week; the minimum wage now is \$15 per week and many receive a higher rate. Former working hours ranged from 13 to 16 hours per day; the straight 10-hour day now prevails.

Metal polishers.—Gain in membership, 1,000; number of strikes, 29; number won, 20; compromised, 4; pending, 4; lost, 1; number involved, 800; number benefited, 800. An average increase in wages of 15 per cent was gained and working hours reduced one-half hour per day. All attempts to reduce wages were successfully resisted. Death benefits, \$3,200; donations to other unions, \$1,800; cost of strikes, \$4,400. As a result of persistent effort this organization has succeeded in materially increasing wages, has gradually reduced hours, and secured the installation of modern sanitary conditions, with proper ventilating and blowing systems, so that the help of grinders and metal polishers has been greatly benefited.

Metal workers, sheet.—Net number of new unions, 32; an average increase of 40 cents per member per day secured for 125 members because of strike. The past year has seen a general improvement in the wage scales and the hours of labor. Death benefits, \$96,000; donations to other unions, \$5,000; cost of strikes, \$23,000.

Mine Workers, United (coal).—Number of new unions, 48; gain in membership, 154,000; number of persons benefited because of strikes, 165,000, securing thereby an increase in wages of 10 per cent; no reduction tolerated during 1912. Eight-hour day universal throughout the trade where organized. Much beneficial legislation in the interest of coal-mine employees secured in many States. The Federal law governing the Bureau of Mines was materially strengthened and improved. The total aggregate increase in wages received by the organized coal miners during 1912 amounted to over \$8,000,000.

Miners, metalliferous.—Seven thousand miners in Montana secured an increase of 50 cents per day without strike; 14,000 miners in other districts received an increase of 25 cents per day. A small increase was obtained in three districts affecting 700 miners. Attempted reductions of wages in Nevada resisted by strike. An eight-hour law has been secured in the new State of Arizona governing mines, mills, and smelters. Death benefits, \$27,000; sick benefits, \$116,000; donations to other unions, \$10,200. Cost of strikes, \$108,000. During 1912 the Western Federation of Miners made remarkable progress; in fact, greater than in any preceding year. The average increase in wages per member per year amounted to nearly \$100. The aggregate increase in wages per month amounted to \$286,853; the aggregate increased wages for the year amounted to \$3,442,230. Thirty-five thousand metal miners received an increase of wages during 1912. The total reduction in hours of labor for the year equaled 2,983,510 hours; 8,200 metal miners were benefited by a reduction in hours, and the total wage saved by a reduction of hours, computed at 37½ cents per hour, equaled \$1,200,000. No reduction in wages accompanied the reduction in hours in any of the places affected. The grand total gain to the men working in the metal-mining industries in the campaign organized under the Western Federation of Miners, according to the scale of wages paid, amounted for the year to \$4,562,000. Fifty local unions of the Western Federation of Miners

own their meeting halls. Many of them have their own hospitals. A grand total of over \$1,000,000 is invested in property of this character.

Molders and coremakers.—In over 200 foundries they secured an increase in wages ranging from 15 cents to 50 cents per day through direct negotiations with employers without strikes. The nine-hour day has been practically established throughout the trade. Many members have been benefited by the enactment of the Federal eight-hour law on Government work in private shipyards and private ordnance works. No reductions in wages have been effected during the year. Shop conditions dealing with sanitation and ventilation have been materially improved in many localities. Death benefits, \$62,000; sick benefits, \$152,500; unemployed benefits, \$11,000; cost of strikes, \$263,000.

Musicians.—Net number of new unions, 30; gain in membership, 1,000; over 20,000 members were involved in a lockout by the Theatrical Syndicate. It ended in complete victory for the musicians, and an increase in wages was gained, averaging 10 per cent. Members elsewhere secured recognition of the union and improvement in wages and conditions in many instances without strikes. All efforts to reduce wages were successfully resisted. Donations to other unions, \$6,000. Cost of strikes, \$5,000.

Painters.—Net number of new unions, 8; death benefits, \$100,000; death benefits to members' wives, \$13,000; disability benefits, \$21,000. The eight-hour day generally prevails among the painters.

Paper makers.—Net number of new unions, 16; gain in membership, 2,000; a general increase in wages equaling 5 per cent was secured. Hours of labor were reduced from 11 hours per day to 8 hours per day for over 2,000 members. Better sanitary conditions have been secured and many local organizations secured increased wages and better conditions of employment. Death benefits, \$600,000; cost of strikes, \$17,000. Through the efforts of this organization the workday has been reduced from 11 hours per day and 13 hours per night to a straight 8-hour shift in 50 paper mills. Several increases in wages and reduction in hours have been granted by a number of nonunion employers after the above improvements have been secured in union mills.

Pattern makers.—Net number of new unions, 3; gain in membership, 500. An increase in wages averaging 10 per cent was secured for 240 members, and hours of labor reduced from nine to eight hours per day. Most of the improvements gained were secured without strikes. The extension of the Federal eight-hour law to apply to naval contracts in private shipyards and army contracts in ordnance works materially benefited the members of the pattern makers' league. Death benefits, \$2,425; sick benefits, \$6,220.71; tool insurance, \$7,472.81. Cost of strikes, \$13,489.09. The technical schools inaugurated by the pattern makers in behalf of the apprentices in the trade are having a most beneficial influence.

Pavers and rammersmen.—Secured several wage increases without strike. All efforts to reduce wages successfully resisted.

Paving cutters.—Number of new unions, 8; gain in membership, 200; death benefits, \$2,200; donations to other unions, \$800; cost of strikes, \$550. General improvement in conditions secured by direct negotiations with employers during the year without strike.

Photo-engravers.—New unions, 4; gain in membership, 275; general improvements secured throughout the trade during the year without strike. Death benefits, \$2,000; sick benefits, \$6,300.

Plasterers.—Many local organizations demanded and obtained an increase in wages with better working conditions through direct negotiation with employers. The eight-hour day prevails throughout the trade and Saturday half-holiday is general the year round. Two attempts were made to reduce wages; they were successfully resisted; death benefits paid, \$25,000.

Plate printers.—No reductions in wages during the year. Death benefits, \$1,400.

Plumbers and steam fitters.—Net number of new unions, 54; number of strikes, 60; number won, 45; compromised, 2; pending, 10; lost, 3. In many instances wages were increased and hours reduced without strike. All efforts to reduce wages successfully resisted. Death benefits, \$14,500; sick benefits, \$43,100; cost of strikes, \$82,000. The eight-hour day is universal throughout the trade, and the Saturday half-holiday prevails the year round in most localities.

Potters.—Gain in membership, 50. Agreements renewed by direct negotiation with employers. Death benefits, \$6,000. Cost of strikes, \$2,700.

Powder and high-explosive workers.—Wages increased 12½ per cent and hours reduced from 10 to 9 hours per day in one locality as a result of strike. Many members secured 12½ cents per day increase in wages without strike.

Printing pressmen.—Net number of new unions, 17; gain in membership, 1,000; increase in wages of 25 cents per day secured for 400 members because of strike. Many advantages and increased wages gained in 78 localities without strike. Death benefits, \$16,700. Cost of strikes, \$41,000. The technical school established by the printing pressmen at Rogersville, Tenn., has been of great benefit to its members during the year, the rates of tuition being \$30 for a six-weeks' course.

Pulp and sulphite workers.—New unions, 5; gain in membership, 800; and 5 per cent increase in wages secured for 150 through strike. After persistent effort the eight-hour day has been secured in many pulp mills, and the wages of the workers have been increased over 20 per cent. Donations to other unions, \$1,000; cost of strikes, \$500.

Quarry workers.—New unions, 7; gain in membership, 1,000; increase in wages, ranging from 1 to 3 cents per hour secured for 800 members through strike. Saturday half-holidays secured in three localities without strikes. Shorter hours and higher wages for 500 members secured without strikes. All efforts to reduce wages successfully resisted. Death benefits, \$1,500; donations to other unions, \$400; cost of strikes, \$11,000.

Railroad telegraphers.—New unions, 5; gain in membership, 3,000; during the year the telegraphers negotiated new agreements with many railroad corporations, by which increased wages were secured, hours reduced, and material conditions of telegraphers improved. The total gain in wages for the whole membership during 1912 aggregated over \$1,000,000. Before the railroad telegraphers were organized they toiled from 13 to 18 hours per day, 365 days in the year, for wages as low as \$18 per month in some instances; some few positions of great responsibility paid as high as \$60 or \$70 per month. Since organization the working hours have been reduced to a maximum of nine hours per day, and in many instances an eight-hour day has been secured; minimum wages have been increased to \$55 per month, and the maximum rates for the more difficult positions increased proportionately. Death benefits, \$87,000. Donations to other unions, \$1,200.

Railway carmen.—Net number of new unions, 13; improved working conditions and wage increases have been secured on many railroads through direct negotiations with railroad officials without strike. Cost of strikes, \$68,000.

Railway employees (street car men).—Number of new unions, 20; gain in membership, 1,000; number of persons benefited through strike, 6,600; securing thereby increases in wages ranging from ½ cent to 5 cents per hour; wages were increased in many cities by direct negotiations with officials without strike. Death benefits, \$126,000; sick benefits, \$18,000; donations to other unions, \$14,000. Cost of strikes, \$80,000.

Roofers, composition.—Gain in membership, 50; increase of wages, 25 cents per day; a reduction of hours, one per day, secured for 36 members through strike. Death benefits, \$2,500; sick benefits, \$1,500; donations to other unions, \$600; cost of strike, \$1,000. As a result of persistent effort by the members of this organization, wages have been increased from \$1.75 and \$2 per day to an average rate of \$4.50 per day. The length of workday before organization was 9 and 10 hours per day. At present the eight-hour workday prevails throughout the trade.

Seamen.—All attempts to reduce wages successfully resisted. Better food, better quarters, better treatment, and improved conditions have been secured by the seamen during 1912. Through the efforts of this organization seamen's wages have nearly doubled, and working hours in many ports have been reduced two hours per day.

Shingle weavers.—Wages increased 12 per cent for 40 members through strike. Substantial increases in wages were secured from a number of companies without strikes. Accident benefits, \$2,100; cost of strikes, \$4,000.

Slate and tile roofers.—Gain in membership, 50; wages increased 2½ cents per hour for many members. Death benefits, \$1,200.

Slate workers.—Over 1,000 members benefited because of strike. Death benefits, \$300; death benefits to members' wives, \$100.

Spinners.—An increase of 10 per cent in wages secured without strike. Death benefits, \$1,000; unemployed benefits, \$5,000; cost of strikes, \$35,000. The spinners' union, affiliated with other textile trades, have succeeded in securing legislation through recent years to reduce the length of the working

week from two hours to six hours per week in several States. In every instance where the hours have been reduced, wages have been increased.

Stage employees, theatrical.—New unions formed, 39; gain in membership, 1,000; increase in wages, averaging \$1 a day; benefiting 3,250 members through strikes. All attempts to reduce wages successfully resisted. Death benefits, \$10,000; cost of strikes, \$25,000. Through the efforts of this organization wages have been increased for theatrical stage employees from 25 to 50 per cent over all the United States and Canada.

Stereotypers and electrotypers.—Gain in membership, 90; increases in wages, aggregating \$13,000 annually, secured without strikes; death benefits, \$5,000; cost of strikes, \$5,400. Through the efforts of this organization the eight-hour day has been established throughout the trade, wages have been materially increased and better working conditions generally inaugurated.

Stonecutters.—Gain in membership, 1,500. Several strikes were undertaken during the year, all of which were won, thereby benefiting 2,500 members at a small cost. The net increase in wages aggregated \$150 for the year. The eight-hour day generally prevails, and the Saturday half-holiday the year round has been extended during the year. Death benefits, \$15,000.

Switchmen, railroad.—New unions formed, 11; gain in membership, 316. Many new agreements written with several large railroad companies through direct negotiation without strike, thereby securing substantial increase in wages, and better working conditions. Death benefits, \$169,000.

Tailors.—New unions formed, 18; and 5 per cent increase in wages secured through strikes; 700 members secured the eight-hour day, and an increase in wages in 61 establishments without strikes. All attempts to reduce wages successfully resisted. Death benefits, \$31,000; sick benefits, \$34,000; donations to other unions, \$940; cost of strikes, \$52,000.

Teamsters.—New unions formed, 31; gain in membership, 1,000; number of strikes, 12; number won, 11; pending, 1; number of persons benefited, 2,200, by securing an increase in wages of 35 cents a day; all efforts to reduce wages successfully resisted; cost of strikes, \$20,000.

Textile workers.—New unions formed, 40; gain in membership, 2,000. The victory of the textile workers in Lawrence, Mass., in their strike against a reduction in wages when the State 54-hour a week law went into effect, which reduced the hours of labor two per week, served as an impetus to the textile workers in many other centers in their efforts for improved working conditions and higher wages. In Fall River and in New Bedford, Mass., a 10 per cent increase in wages was secured without a strike, thereby benefiting many thousands of operatives. A strike in Lowell, Mass., was won after a 5-weeks' struggle. The dyers of Philadelphia struck to establish a minimum wage of 25 cents per hour, and succeeded in obtaining this demand in over 40 shops. The silk workers and the thread workers in Connecticut struck for a 10 per cent increase in wages. The thread workers succeeded in four days; but the silk workers had to continue their struggle for 13 weeks, when a compromise was effected and a 7½ per cent increase was granted to all the operatives, several thousand benefiting. In New York State a law was passed reducing the hours of labor of textile workers from 60 to 54 per week. This has gone into effect without any reduction in pay. Death benefits, \$1,100. Cost of strike, \$16,000.

Tile layers.—New unions formed, 11; gain in membership, 216; an increase in wages averaging 40 cents per day for tile layers, and 25 cents per day for helpers, secured because of strike. Several increases in pay secured in other localities without strikes. The average wage for tile layers is now \$4.50 per day, and for helpers \$2.50 per day. The eight-hour day prevails generally throughout the United States and Canada among the tile layers. Previous to organization the 10-hour day was in effect, and the maximum pay averaged about 2.50 per day for the tile layers, and \$1.50 for the tile helpers.

Tin-plate workers.—All efforts to reduce the wages were successfully resisted. A 3 per cent increase in wages was secured in several localities without a strike.

Tobacco workers.—A slight reduction in hours, and a small increase in wages were secured in some localities without a strike. Death benefits, \$1,400; sick benefits, \$5,200; donations to other unions, \$300.

Travelers' goods and leather novelty workers.—Gain in membership, 175; wages increased, 10 per cent, and hours reduced from 10 and 9½ to 9 hours per day for 420 persons; a reduction in hours and a slight increase in wages were secured in several localities without a strike. Death benefits, \$125; sick benefits, \$300; donations to other unions, \$60; cost of strikes, \$1,700. Continuous

effort by this organization has resulted in increasing the wages from \$13.50 to \$15 per week. In several localities this rate is somewhat higher.

Tunnel and subway constructors.—Gain in membership, 140; wages increased, 25 cents per day; and hours reduced from 10 to 8 per day on several construction jobs because of a strike; death benefits, \$1,800; sick benefits, \$400; traveling benefits, \$1,200; donations to other unions, \$300.

Typographical union.—The year ending May 31, 1912, shows a gain in membership of 3,519; 101 new agreements secured, by which substantial increases in wages were obtained, and, in addition, 21 other offices were unionized. Death benefits, \$75,000; old-age pensions, \$177,000; donations to other unions, \$16,000; cost of strikes, \$70,000. Average paying membership for 1912, 53,807; total wages earned by members for 1912, \$53,378,902; average earnings per member for 1912, \$992. The average age of compositors at death has risen from 41 years in 1900 to 48 years in 1912, this is due largely to the establishment of the eight-hour day in this trade, and to the improved conditions under which the compositors work, which is due to the efforts of the organization. The Typographical Union maintains an old-age pension fund, from which a sum of \$5 per week is paid to the members who are unable to follow the trade after 60 years of age and who have been members of the union for 20 years, or who are 70 years of age and have been members for 10 years, or those who are afflicted with a disease which debars a member from the Union Printers' Home, at Colorado Springs, Colo. This home is owned by the International Typographical Union, and this home had 135 inmate residents during 1912. The total number admitted to this home since July, 1892, when it was opened, to May 31, 1912, was 1,312. The cost of maintenance of the home for the year 1912 was \$82,212. The average cost for the total maintenance per member per month equalled \$50.74; the average cost of food per resident member per month for the year ending May 31, 1912, was \$31.96. The greatest advantage that has come to the membership of the typographical union is in the conservation of health, brought about by sanitary working conditions in printing offices which was made obligatory upon the employers. The International Typographical Union now has full control of the expert teachers of the Inland Printer's Technical Printing School. Under union influences, during the last few years, this school has graduated nearly 3,000 competent machine operators. The efficiency of the instructions given in this school has won many encomiums from trade educators.

This report does not include the legislative or administrative gains secured in municipalities—gains which in their respective localities affect the working people directly and have an important bearing. It is impossible to include herein these gains, for it would require too large an investigation, covering the municipalities, both large and small, throughout the United States, Canada, Cuba, and Porto Rico.

Nor does this report include the economic gains of several railroad brotherhoods and the bricklayers, which are unaffiliated, to the American Federation of Labor. Their gains have been substantial in both organization, hours of labor, wages, and improved conditions. This applies also to local unions directly affiliated to the American Federation of Labor, which have no other national affiliations.

It is a source of great gratification to be able to report the general progress made in the labor movement of America in every line of its activity, and yet these advances will prove but the stimulus for more persistent efforts for the greater uplift and advancement of all.

In the name of the workers of America I extend fraternal greetings of fellowship to the toilers of the civilized world.

Fraternally, yours,

SAMUEL GOMPERS,
President American Federation of Labor.

WASHINGTON, D. C., October 8, 1913.

Mr. HILLQUIT. Now, Mr. Gompers, to take up another subject, is it your conception, Mr. Gompers, or that of the Federation, that workers in the United States to-day receive the full product of their labor?

Mr. GOMPERS I think, but I am not quite so sure, that I know what you have in mind.

Mr. HILLQUIT. Do you understand my question?

Mr. GOMPERS. I think I do, but in the generally accepted sense of that term, no.

Mr. HILLQUIT. In any particular sense, yes?

Mr. GOMPERS. No.

Mr. HILLQUIT. Then the workers of this country do not receive the whole product of their labor? Can you hazard a guess as to what proportion of the product they do receive in the shape of wages?

Mr. GOMPERS. I am not a good guesser, and I doubt that there is any value in a guess.

Mr. HILLQUIT. You have no general idea, have you, on the subject?

Mr. GOMPERS. I have a most general idea, but I am not called upon to guess.

Mr. HILLQUIT. No; will you please give us your most general idea?

Mr. GOMPERS. As to what proportion?

Mr. HILLQUIT. As to approximately what proportion the workers, as a whole, get from their product?

Mr. GOMPERS. I will say that it is impossible for anyone to definitely say what proportion the workers receive as the result of their labor; but it is the fact that due to the organized-labor movement they have received and are receiving a larger share of the product of their labor than they ever did in the history of modern society.

Mr. HILLQUIT. Then one of the functions of organized labor is to increase the share of the workers in the product of their labor, is that correct?

Mr. GOMPERS. Yes, sir; organized labor makes constantly increasing demand upon society for reward for the services which the workers give to society, and without which the civilized life would be impossible.

Mr. HILLQUIT. And these demands for an increasing share of the reward of the product of labor continue by a gradual process all the time?

Mr. GOMPERS. I am not so sure as to gradual process. Sometimes it is not a gradual process, but it is all the time.

Mr. HILLQUIT. All the time?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Then, Mr. Gompers, you assume that the organized-labor movement has generally succeeded in forcing a certain increase of that portion of the workers in the share of the general product, do you?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And it demands more now?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And if it should get, say, 5 per cent more within the next year, will the organized-labor movement rest contented with that and stop?

Mr. GOMPERS. Not if I know anything about human nature.

Mr. HILLQUIT. Will the organized labor movement, or the labor movement of the country generally, stop in its demands for an ever greater share in the product at any time before it has received or does receive the full product, and before in its eyes complete social justice shall have been done?

Mr. GOMPERS. That question again that you have bobbed up with quite serenely in regard to the share of the product of labor, say that the working people—and I prefer to say working people and speak of them as real human beings—the working people, as all other people, they are prompted by the same desires and hopes of a better life, and they are not willing to wait until after they have shuffled off this mortal coil for the better life, they want it here and now, and they want to make conditions better for their children so that they may meet the other, the newer problems in their time. The working people are pressing forward, pressing forward, making their claims and presenting those claims with whatever power they have, to exercise it in a normal, rational manner, to secure a larger, and constantly larger share of the products. They are working to the highest and best ideals of social justice.

Mr. HILLQUIT. Now, the highest and best ideals of social justice, as applied to the distribution of wealth, wouldn't that be a system under which the workers, manual, mental, directive, executive and all other lines together get the sum total of all the products we supply them?

Mr. GOMPERS. Really, a fish is caught by the tempting bait; a mouse or a rat is caught in a trap by the tempting bait; the intelligent, comprehensive, common-sense workmen prefer to deal with the problems of to-day, the problem which confronts them to-day, with which they are bound to contend if they want to advance, rather than to deal with a picture and a dream which has never had, and I am sure never will have, any reality in the affairs of humanity, and which threaten, if it could be introduced, the worst system of circumscriptional effort and activity that has ever been invented by the ken of the human kind.

Mr. HILLQUIT. That is what I want to get from you, Mr. Gompers, but I would like to get an answer. In your experience with the labor movement and in its ever forward march toward greater and greater improvement, and a greater and greater share of social justice, can you point out any line where the labor movement will stop and rest contented so long as it may receive short of the full product of its work?

Mr. GOMPERS. I say that the workers, as human beings, will never stop in any effort, nor stop at any point in the effort to secure greater improvements in their condition, a better life in all its phases. And wherever that may lead, whatever that may be, so far in my time and my age I decline to permit my mind or my activities to be labeled by any particularism.

Mr. HILLQUIT. Do not try to attach any ism to me, please; but the question I ask is whether you maintain—whether the American Federation of Labor, and its authorized spokesmen have a general social philosophy, or work blindly from day to day?

Mr. GOMPERS. I think your question——

Mr. HILLQUIT (interrupting). Inconvenient.

Mr. GOMPERS. No. I will tell you what it is, it is a question prompted to you, and is an insult.

Mr. HILLQUIT. It is not a question prompted to me.

Mr. GOMPERS. It is an insult.

Mr. HILLQUIT. Why? Why, Mr. Gompers?

Mr. GOMPERS. To insinuate that the men and women in the American Federation of Labor movement are acting blindly from day to day.

Mr. HILLQUIT. I have not insinuated——

Mr. GOMPERS (interrupting). Your question implies it.

Mr. HILLQUIT. I am giving you an opportunity to deny.

Mr. GOMPERS. If a man should ask me whether I still beat my wife, any answer I could make would incriminate me if I answered yes or no. If I answered that I did not, the intimation would be that I had stopped. If I answered that I did, that I was continuing to beat her.

Mr. HILLQUIT. But Mr. Gompers, this question bears no analogy to that story——

Mr. GOMPERS (interrupting). Your question is an insult and a studied one.

Mr. HILLQUIT. Now, will you state whether you will or whether you will not answer my question?

Mr. GOMPERS. Will you repeat the question?

Mr. HILLQUIT. My question was whether the American Federation of Labor as represented by its spokesmen has a general social philosophy, or whether the organization is working blindly from day to day? Now, that is a plain question.

Mr. GOMPERS. Yes; it is a plain question; it is a plain insult.

Chairman WALSH. Do you refuse to answer it on the ground that it is insulting?

Mr. GOMPERS. Yes, sir.

Chairman WALSH. That is all, then.

Mr. HILLQUIT. Then, inform me upon this matter: In your political work of the labor movement is the American Federation of Labor guided by a general social philosophy, or is it not?

Mr. GOMPERS. It is guided by the history of the past, drawing its lessons from history, to know of the conditions by which the working people are surrounded and confronted; to work along the lines of least resistance; to accomplish the best results in improving the condition of the working people, men and women and children, to-day and to-morrow and to-morrow—and to-morrow's to-morrow; and each day making it a better day than the one that had gone before. That is the guiding principle and philosophy and aim of the labor movement—in order to secure a better life for all.

Mr. HILLQUIT. But in these efforts to improve conditions from day to day you must have an underlying standard of what is better, don't you?

Mr. GOMPERS. No. You start out with a given program, and everything must conform to it; and if the facts do not conform to your theories, why, your declarations, or, rather, your actions, betray the state of mind "so much the worse for the facts."

Mr. HILLQUIT. Mr. Gompers, what I ask you is this: You say you try to make the conditions of the workers better every day. In order to determine whether the conditions are better or worse you must have some standards by which you distinguish the bad from the good in the labor movement, do you not?

Mr. GOMPERS. Certainly. Well, is that—

Mr. HILLQUIT (interrupting). Now, just—

Mr. GOMPERS (interrupting). Well, one moment. Does it require much discernment to know that a wage of \$3 a day and a workday of 8 hours a day in sanitary workshops are all better than \$2.50 a day and 12 hours a day and under perilous conditions of labor? It does not require much conception of a social philosophy to understand that.

Mr. HILLQUIT. Then, Mr. Gompers, by the same parity of reasoning, \$4 a day and seven hours a day of work and very attractive working conditions are still better?

Mr. GOMPERS. Unquestionably.

Mr. HILLQUIT. Therefore—

Mr. GOMPERS (interrupting). Just a moment. I have not stipulated \$4 a day or \$8 a day or any number of dollars a day or eight hours a day or seven hours a day or any number of hours a day, but the best possible conditions obtainable for the workers is the aim.

Mr. HILLQUIT. Yes; and when these conditions are obtained—

Mr. GOMPERS (interrupting). Why, then, we want better.

Mr. HILLQUIT (continuing). You will still strive for better?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. Now, my question is, Will this effort on the part of organized labor ever stop until it has the full reward for its labor?

Mr. GOMPERS. It won't stop at all.

Mr. HILLQUIT. That is a question—

Mr. GOMPERS (interrupting). Not when any particular point is reached, whether it be that toward which you have just declared or anything else. The working people will never stop—

Mr. HILLQUIT. Exactly.

Mr. GOMPERS (continuing). In their effort to obtain a better life for themselves and for their wives and for their children and for humanity.

Mr. HILLQUIT. Then, the object of the labor union is to obtain complete social justice for themselves and for their wives and for their children?

Mr. GOMPERS. It is the effort to obtain a better life every day.

Mr. HILLQUIT. Every day and always—

Mr. GOMPERS. Every day. That does not limit it.

Mr. HILLQUIT. Until such time—

Mr. GOMPERS. Not until any time.

Mr. HILLQUIT. In other words—

Mr. GOMPERS (interrupting). In other words, we go further than you. [Laughter and applause in the audience.] You have an end; we have not.

Mr. HILLQUIT. Then, Mr. Gompers, you want to go on record as saying that the American Federation of Labor, in its endeavors and striving goes farther than the Socialist Party—

Mr. GOMPERS (interrupting). When you say you have a goal—

Mr. HILLQUIT (interrupting). I have not finished the question.

Chairman WALSH. Finish your question, Mr. Hillquit.

Mr. HILLQUIT. If the Socialist Party has for its present purpose the abolition of the present system of profits and wages, and seeks to secure to the workers the full measure of the product of their labor, if they—their purposes eventually seek to obtain that by gradual steps—then I understand you to say that the American Federation of Labor goes beyond it.

Mr. GOMPERS. I have said this, and I say that no categorical answer, yes or no, can be given to that question. I say this, that the fact that what I said to you yesterday, after the close of your statement is—as a clever sophist you take the cake; but it is cleverness and sophistry.

Mr. HILLQUIT. That is becoming almost personal, Mr. Gompers.

Chairman WALSH. Yes; I think so.

Mr. GOMPERS. As just indicated, the abolition of private profits and wages—there are quite a number of employers who quite agree with you, who would reduce wages and take wages away entirely. The question of the cooperative Commonwealth and the ownership of the means of production and distribution is implied by it. Now, let me say—

Mr. HILLQUIT (interrupting). It is not, Mr. Gompers.

Mr. GOMPERS. Well, all right.

Mr. HILLQUIT. I am not proposing any system. I want your aims and the limits of your aims.

Mr. GOMPERS. By your question, you want to place me in the position of saying that I am for the system of society which some of you dreamers have conceived of, and then say that I go beyond it.

Mr. HILLQUIT. I do not, Mr. Gompers, you interrupted me——

Mr. GOMPERS (interrupting). Well you interrupted me, so we are even. And I say that the movement of the working people, whether under the American Federation, or not, will be simply following the human impulse for improvement in their condition, and wherever that may lead, they will go, without having a goal up to yours or surpassing yours, but it will lead them constantly to the material and physical and social and moral well-being of the people.

Mr. HILLQUIT. Then, Mr. Gompers, you would not say that the difference between the program of the American Federation of Labor, and that of the Socialist Party is a quantitative one—that the Socialist Party wants more than the American Federation of Labor. You would not say that, would you?

Mr. GOMPERS. I don't know that it is necessary that the comparison—that I should answer as to the comparison. It is not interesting at all, nor is it a contribution to the subject which the commission desires to ascertain.

Mr. HILLQUIT. You decline to answer that point?

Mr. GOMPERS. The question is not germane to the subject under inquiry, and is not necessary.

Chairman WALSH. I would like to hear it answered if possible, Mr. Gompers. If it is not possible for any reason, very well.

Mr. GOMPERS. May I hear the question read?

(Question read.)

Mr. GOMPERS. The Socialist Party proposition—socialism is a proposition to place the working people of the country and of the world in a physical material strait-jacket.

Mr. HILLQUIT. Pardon me, Mr. Gompers, I have not asked your opinion about what you consider to be the tendencies of the cooperative commonwealth. I am speaking merely about the aim to abolish the wage system and the program to secure to the workers the full product of their labor; and I am asking you, in this respect, whether we demand more than the American Federation has ultimately in view.

Mr. GOMPERS. I think you demand something to which the American labor movement declines to give its adherence.

Mr. HILLQUIT. Then do I understand you to say that the American labor movement would countenance the abolition of the wage system and the return of the full reward of labor to the workers?

Mr. GOMPERS. Your question is an assumption and is unwarranted, for as a matter of fact we decline to commit our labor movement to your species of speculative philosophy.

Mr. HILLQUIT. I have not introduced speculative philosophy, Mr. Gompers. If I can not make myself clear, please tell me so.

Chairman WALSH. May I be permitted here to ask the stenographer to read that last question?

Mr. HILLQUIT. Certainly, Mr. Chairman.

(The question read, as follows:) "I am speaking merely about the aim to abolish the wage system, and about the program to secure to the workers the full product of their labor, and I am asking in this respect whether we demand more than the American Federation of Labor has ultimately in view?"

Chairman WALSH. That is with reference to getting the full product of labor alone?

Mr. HILLQUIT. Yes.

Chairman WALSH. Now, can you answer that directly, Mr. Gompers?

Mr. GOMPERS. No; that is impossible to answer yes or no.

Chairman WALSH. Then let it stand there, because that implies that it is impossible to answer it.

Mr. HILLQUIT. Now, Mr. Chairman, I have two more lines of questioning that I can dispose of in 15 or 20 minutes——

Chairman WALSH. Just go right ahead, Mr. Hillquit; I don't mean by this to limit your inquiry, for I know that you will be economical of our time. You may proceed with any other questions that you wish to ask.

Mr. HILLQUIT. Mr. Gompers, when you stated first that the actual workmen of to-day do not get the full reward for their labor or the full product of their toil, will you tell me who gets the other part which is withheld from the workers?

Mr. GOMPERS. Investment, superintendence, the agencies for the creation of wants among the people, and many others.

Mr. HILLQUIT. Well, then, according to your statement those are legitimate factors in industry entitled to reward?

Mr. GOMPERS. Many of them, yes; many of them are being eliminated.

Mr. HILLQUIT. Which ones are entitled and which ones are not entitled to reward?

Mr. GOMPERS. Superintendency, the creation of wants, administration, return for investment—

Mr. HILLQUIT. Return for investment? Does that include every kind of capital invested in industry regardless of origin?

Mr. GOMPERS. No, sir.

Mr. HILLQUIT. Then what do you mean by return for investment?

Mr. GOMPERS. For honest investment. I don't mean watered stocks or inflated holdings, but honest investment.

Mr. HILLQUIT. Now, honest stock investment?

Mr. GOMPERS. Honest investment. I did not say "stock investment."

Mr. HILLQUIT. Well, I am talking about stock investment, Mr. Gompers. Do you consider dividends paid by corporations as separate and apart from salaries paid for superintendence and initiation, and so on—do you consider that a legitimate return from the products of general labor?

Mr. GOMPERS. That depends entirely as to the character of the services performed.

Mr. HILLQUIT. Now, I assume that no service was performed as far as services being performed are concerned—we have classified those under the head of superintendence, management, initiation, and so on. Now, I am referring to the dividend on stock, which is paid to stockholders by virtue of stock ownership and regardless of any activity on the part of the stockholder.

Mr. GOMPERS. I am speaking of the honest investment, too, which you did not include.

Mr. HILLQUIT. Will you please answer that question with such qualifications as you may deem proper to make?

Mr. GOMPERS. Well, I have already answered that question.

Mr. HILLQUIT. What is your answer?

Mr. GOMPERS. I am sorry that I have not made myself clear.

Mr. HILLQUIT. I have not asked you the question before, so you could not have answered it.

Mr. GOMPERS. I should like to have the stenographer read what I have said.

Chairman WALSH. Just read back there a few questions, Mr. Reporter.

"Mr. HILLQUIT. Well, then, according to your statement, those are legitimate factors in industry entitled to reward?

"Mr. GOMPERS. Many of them; yes; many of them are being eliminated.

"Mr. HILLQUIT. Which ones are entitled and which ones are not entitled to reward?

"Mr. GOMPERS. Superintendency, the creation of wants, administration, return for investment—

"Mr. HILLQUIT. Return for investment? Does that include every kind of capital invested in industry regardless of origin?

"Mr. GOMPERS. No, sir.

"Mr. HILLQUIT. Then what do you mean by return for investment?

"Mr. GOMPERS. For honest investment. I don't mean watered stocks or inflated holdings, but honest investment.

"Mr. HILLQUIT. Now, honest stock investment?

"Mr. GOMPERS. Honest investment. I did not say 'stock investment.'

"Mr. HILLQUIT. Well, I am talking about stock investment, Mr. Gompers. Do you consider dividends paid by corporations as separate and apart from salaries paid for superintendence and initiation, and so on—do you consider that a legitimate return from the products of general labor?

"Mr. GOMPERS. That depends entirely as to the character of the services performed.

"Mr. HILLQUIT. Now, I assume that no service was performed, as far as services being performed are concerned; we have classified those under the head of superintendence, management, initiation, and so on. Now, I am referring to the dividend on stock, which is paid to stockholders by virtue of stock ownership and regardless of an activity on the part of the stockholder.

"Mr. GOMPERS. I am speaking of the honest investment, too, which you did not include."

Mr. HILLQUIT. Then my next question was: I am referring to dividends not paid at all for services performed, but as an incident to stock ownership, and regardless of the personal services, activity, or inactivity of the owner of the stock.

Mr. GOMPERS. I have already replied, and I now repeat, upon honest investment, yes.

Mr. HILLQUIT. Mr. Gompers, assume that I purchased to-day in the open market and paid the full price for, say, 100 shares of Steel Corporation stock. The next quarter year I get my dividends on it. Am I entitled to such dividends?

Mr. GOMPERS. Mr. Chairman, I suggest that if Mr. Hillquit is going to permit this investigation to degenerate into a question of high finance, why, we had better get a high financier here.

Chairman WALSH. I think that is a proper question and germane to this inquiry, but if you can not answer it you may say so.

Mr. GOMPERS. I wish, respectfully, Mr. Chairman, to differ from that remark of the Chair—

Chairman WALSH. Then you don't care to answer?

Mr. GOMPERS. I decline to answer it on the ground that it is not material to the question and purely a question of a financial character. It is not a question upon which proper interrogation can be made.

Mr. HILLQUIT. Now, Mr. Gompers, let me explain to you the reason why—

Chairman WALSH. I have ruled that it was, but we are not going to compel Mr. Gompers to reply to it.

Mr. HILLQUIT. No; of course not.

Chairman WALSH. Go ahead.

Mr. HILLQUIT. Will you please define what you call honest investment as distinguished—

Mr. GOMPERS (interrupting). An honest man finds no difficulty in determining what is honest.

Mr. HILLQUIT. Now, Mr. Gompers, that is really not an answer. You have made that statement, and I presume you mean something by it; I should like to know what you mean?

Mr. GOMPERS. I mean honest, actual physical investment.

Mr. HILLQUIT. Now, I am asking you, does the purchase of stock with real physical money, at the full price constitute such an honest investment?

Mr. GOMPERS. First, let me say, in answer to that question, that with the manipulations of stocks and of the stock market, and that entire thing, I am out of harmony and am opposed to it, and have done and will do whatever I can to eliminate that speculation involved in stocks—in the fundamentals of stock jobbery and stock sales.

Mr. HILLQUIT. Mr. Gompers, you are familiar with industrial conditions as few men in this country. You know perfectly well that the most important industries in the United States are managed and operated by corporations; and you know that the income from such industry is distributed very largely in the form of dividends on stocks and interest on bonds, don't you?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Now I am asking you this question as the president of the American Federation of Labor: Do you consider that vast sum of money paid annually by industry in the shape of such dividends on stock and interest on bonds in the various industries a legitimate and proper division of the product of labor, or do you not?

Mr. GOMPERS. I do not.

Mr. HILLQUIT. That is an answer. Then, the owners or stockholders or bondholders of modern corporations would thus receive a workless income as the product of the labor of the workers who have produced it. Is that your opinion?

Mr. GOMPERS. Unquestionably.

Mr. HILLQUIT. And the efforts of the American labor movement to secure a larger share are directed against that class who gets an improper share.

Mr. GOMPERS. Against all who—

Mr. HILLQUIT (interrupting). Exactly—against all who obtain a workless income which comes from the product of labor. Is that correct?

Mr. GOMPERS. Well, all who illegitimately stand between the workers and the attainment of a better life.

Mr. HILLQUIT. Which means, or does it not mean, all those who obtain or derive an income without work by virtue of control of the industry, and get it from the product of labor.

Mr. GOMPERS. No.

Mr. HILLQUIT. It does not?

Mr. GOMPERS. No.

Mr. HILLQUIT. What is your exception?

Mr. GOMPERS. It means, as I have before called attention to, honest investment—honest enterprise.

Mr. HILLQUIT. But you desire now to modify the answer you have made just a little while ago to the effect that you consider all payments in dividends and interest on stock and bonds of a corporation as the illegitimate part of the division of products?

Chairman WALSH. I think that is a question that he can not properly answer—unless you want to answer it, Mr. Gompers. It seems to me you are getting into a field—

Mr. GOMPERS (interrupting). That is it, Mr. Chairman—I think the gentleman is getting into a field of inquiry—

Mr. HILLQUIT (interrupting). I will tell you why it is very much at home. Mr. Gompers, what I mean, is:

Chairman WALSH. The only thing I suggested this for, you are asking him for his meaning of his other answers with reference to those questions, and that is calling for his conclusions, and it may be very difficult for us to agree upon those, and it will merely call upon him for argument, and not afford the commission any assistance.

Mr. HILLQUIT. Have the efforts of the workers in the American Federation of Labor and as otherwise organized, to obtain a larger share of the product, have they met with favorable consideration by those who obtain what we may call the unearned part of the product?

Mr. GOMPERS. If you mean the employers—

Mr. HILLQUIT (interrupting). Employers, capitalists, stockholders, bondholders—the capitalist class generally.

Mr. GOMPERS. As a matter of fact, there has been very much opposition to the efforts of the working people to secure improved conditions.

Mr. HILLQUIT. Exactly. And that opposition is based upon the desire of the beneficiaries of the present system of distribution to retain as much as possible of their present share or to increase it, is it not?

Mr. GOMPERS. I suppose it is not difficult to determine that that is one of the reasons; but one additional reason is that there are employers who live in the twentieth century and have the mentality of the sixteenth century in regard to their attitude toward working people and they still imagine that they are the masters of all that serve; and that any attempt on the part of the working people to secure improvement in their condition is a species of rebellion—a rebellious spirit which must be bound down. But we find this, Mr. Hillquit, that after we have had some contest of such a character with employers—and whether we have won the battle or lost it—if we but maintain our organization, there is less difficulty thereafter in reaching a joint agreement or a collective bargain involving improved conditions of the working people.

Mr. HILLQUIT. That is, if you retain your organization?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And the stronger the organization the more likelihood of securing such concessions, is that correct?

Mr. GOMPERS. Unquestionably.

Mr. HILLQUIT. Then it is not on account of the changed sentiment of the employer that he is ready to yield, but on account of greater strength shown by the employees, is that correct?

Mr. GOMPERS. Not entirely.

Mr. HILLQUIT. No; why not?

Mr. GOMPERS. Not entirely; for, as a matter of fact, the employer changes his sentiment when he is convinced that the workingmen have demonstrated that they have the right to have a voice in determining the questions affecting the relations between themselves and their employers; as evidenced, if you please, by the late Mr. Baer, whom, you may recall, once declared that he would not speak with nor confer with the representative of the miners or anyone who stood for them; that he and his associates were the trustees of God in the administration of this property, and to take care of the rights and interests of the working people. Well, he lived to revise his judgment, as many other employers do revise their judgments, and have come to agreements with workmen.

Mr. HILLQUIT. Now, Mr. Gompers, the employers as a class, being interested in retaining their share of the products, general product, or increasing it, and the workers, as you say, being determined to demand an ever greater and greater share of it, would you say that the economic interests between those two are harmonious or not?

Mr. GOMPERS. If you had omitted the two words "or not" the question would have meant just the same.

Mr. HILLQUIT. Well, they are there, and it does not cause me any effort to leave them there, so answer the question.

Mr. GOMPERS. I say they are not, and I may say this and take this opportunity, I am under affirmation before this commission, and I may take this opportunity of saying that no man of my knowledge, within the range of my acquaintance, has ever been so thoroughly misrepresented upon that question as is implied in your question than I have.

Mr. HILLQUIT. State your actual position.

Chairman WALSH. At this point the commission will adjourn until 2 o'clock sharp. I will say for the information of those present that we will be compelled to meet in the reception room of the mayor's office on the first floor of this building at 2 o'clock sharp.

AFTER RECESS—2 O'CLOCK P. M.

Chairman WALSH. The commission will now come to order, please. You may proceed, Mr. Hillquit.

TESTIMONY OF MR. SAMUEL GOMPERS—Continued.

Mr. GOMPERS. Mr. Chairman, I desire to finish the answer which I was about to make to the question upon the recess being taken.

The question propounded essentially was whether I believed that the relations between the employers and employees are harmonious, or can be harmonized.

Mr. HILLQUIT. Economically harmonious.

Mr. GOMPERS. I answered no, and I stated that I have been misrepresented by Socialists, writers, and orators upon that subject so many times that they themselves finally believed it, and no amount of emphatic repudiation of that statement, no matter how often that repudiation and denial was expressed by me, it made no change in the assertion that my position was contrary to the one I have stated here.

Mr. HILLQUIT. Then you want to go on record now, Mr. Gompers, as stating that, in your opinion, the economic interests of the employing classes and those of the workers are not harmonious?

Mr. GOMPERS. I have no desire to particularly go on record here upon that subject. That record has been made from my earliest understanding of the conditions which prevail in the industrial world.

Mr. HILLQUIT. And that is your answer now?

Mr. GOMPERS. That has been my position ever since, and has not been changed in the slightest. There are times when there are, for temporary purposes, reconcilable conditions, but they are temporary only. When a fair and reasonable opportunity presents itself for continued improvement in the condition of the workers, that movement must necessarily go on, and will go on.

Mr. HILLQUIT. And that movement, Mr. Gompers, must be a movement of the workers as workers; is that correct?

Mr. GOMPERS. Yes, sir; undominated by the so-called intellectuals or butters-in.

Mr. HILLQUIT. In other words, the movement for the working class improvement must be conducted by the workers as such in order to be effective?

Mr. GOMPERS. To be the most effective.

Mr. HILLQUIT. To be most effective.

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And it must be necessarily conducted against the employing classes?

Mr. GOMPERS. It is conducted for the working people.

Mr. HILLQUIT. And is it or is it not conducted against the interests of the employing people?

Mr. GOMPERS. It is conducted for the interests of the employing people.

Mr. HILLQUIT. Now, Mr. Gompers, you have stated before that the interests of the working people are not harmonious with those of the interests of the employing classes. You have also stated that, in order to secure lasting and valuable improvements, the workers as such must conduct their own battles. Are not such battles conducted against somebody?

Mr. GOMPERS. They are primarily conducted for somebody.

Mr. HILLQUIT. For somebody?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. But can a battle be conducted for somebody which is not also conducted against somebody?

Mr. GOMPERS. As those who stand in the way, hostile to advance of the conditions of the working people, it is in so far conducted against them, whoever they may be.

Mr. HILLQUIT. Who are they, as a matter of fact, actually, in your opinion?

Mr. GOMPERS. Those employers who refuse to understand modern industrial conditions and constant needs for advancement of the working people.

Mr. HILLQUIT. In other words, those employers who refuse to accede to the demands of organized labor. Is that correct?

Mr. GOMPERS. Sometimes it is not organized labor, for there are frequent demands made by workingmen and working women who are unorganized and then become organized after they have made their demands.

Mr. HILLQUIT. Very well. Then, whenever they are organized, the class of people against whom labor struggles are the class of employers who refuse to accede to the demands. Is that correct?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Is that class of employers limited to only such of those who have a narrow social vision, or does it extend pretty largely to the entire employing class, in your experience?

Mr. GOMPERS. It is growing less and less so. As a matter of fact, there are more employers to-day who live under collective bargains with their organized working people than at any time in the history of the industrial world.

Mr. HILLQUIT. And as to those employers who have agreements for collective bargaining with employees, do they, as a rule and within your experience, volunteer improvements to their employees, or are such improvements forced from them either by method of collective bargaining or by surprise or other weapons of the labor movement?

Mr. GOMPERS. I don't know what you have in mind when you mention other weapons.

Mr. HILLQUIT. Oh, boycotts, for instance.

Mr. GOMPERS. That is a weapon?

Mr. HILLQUIT. Yes.

Mr. GOMPERS. And not weapons?

Mr. HILLQUIT. Strikes, I said.

Mr. GOMPERS. No. You said surprise and other weapons, so you could not have included strikes.

Mr. HILLQUIT. Well, make it strikes and weapons.

Mr. GOMPERS. That is usually in the initiative stages of the altered relations between workers and employers. Later there is a realization that it is more costly to engage in strikes or lockouts—I mean a realization on the part of the employers that it is more costly to enter into prolonged strikes or lockouts—and that they are willing to concede conditions rather than to have the industry interrupted. These grow in extent and alter the vision of the employer in his attitude toward the workmen and the relations which govern the employer toward the worker. So that their sentiment and views are often in entire accord with the organization of the working people.

Mr. HILLQUIT. Now, taking the relations of the employer and employees as a whole, would you say that the gains made by the organized labor movement in this country has been in any large extent the result of a free gift and voluntary concession on the part of the employing classes, or would you say they have been wrung from the employing classes by organized labor?

Mr. GOMPERS. There is no question as to the fact of the latter alternative implied by your question. What the working men of America have obtained in improved conditions, higher wages, shorter hours of labor, were not handed to them on a silver platter. They had to organize; they had to show their teeth; they had to strike; and they had to go hungry and make sacrifices in order to impress upon the employers their determination to be larger sharers in the production of wealth.

Mr. HILLQUIT. Then, as a whole, the achievements of the American labor movements have been accomplished in organized struggle of the workers against their employers. Is that correct?

Mr. GOMPERS. As a rule, but—

Mr. HILLQUIT. There are exceptions?

Mr. GOMPERS. There are exceptions. For instance, you might say there have been a number of workmen who were unorganized, or nearly unorganized. The instance comes to me just now of the miners—the coal miners. In their first strike of 1897 there was not 3 per cent organized. And yet upon the initiative of the union, upon the recommendation of the officers of the American Federation of Labor, a movement was inaugurated to present a scale to the mine operators in the bituminous fields, and unless that proposed increase in wages and other conditions were granted upon a certain day there would come a call urging the miners to lay down their tools. The employers, realizing the unorganized condition of the miners, never for a moment imagined that the small union would have any influence upon their so-called “independent workers”—really the workingmen over whom they had exercised domination for a long time. Now, as a matter of fact, the miners responded, and, though they were unorganized, there was a group patriotism to which I referred in the early part of my testimony—a group patriotism, a camaraderie, an understanding of their common interests—and they received the assistance of their fellow workmen in other industries, the full assistance of the American Federation of Labor, until, finally, it was the initial step of the regeneration of the miners until they won, and they established the eight-hour day, the right to make their purchases of their necessities wherever they chose; the right to be at least like any other ordinary citizens and men; and the spirit and influence spread until it reached the anthracite coal field—until it reached the entire competitive fields in the bituminous coal fields in other States, and so on.

Mr. HILLQUIT. Yes, but, Mr. Gompers—

Mr. GOMPERS (interrupting). Pardon me a moment. If I recall rightly, you spoke for about an hour and a half to one question I asked yesterday.

Mr. HILLQUIT. You recall wrongly. It seemed to you long?

Chairman WALSH. Let us not try to enter into competition on that, please, because I fear I will have to try to limit this in some way.

Mr. GOMPERS. I will try not to occupy more than three minutes in my answer, to say they were unorganized men. The same is true in the garment trades, in the needle trades, and in several others.

Mr. HILLQUIT. Yes, sir. Mr. Gompers, in all those instances the workers organized during the fight?

Mr. GOMPERS. After the fight.

Mr. HILLQUIT. After the fight?

Mr. GOMPERS. After the fight was on.

Mr. HILLQUIT. But it was collective action on their part, anyhow?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. Simultaneous and collective?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. And there is no exception to the rule that in order to obtain lasting improvements the workers must collectively struggle for it, as workers?

Mr. GOMPERS. As workers; yes, sir.

Mr. HILLQUIT. And in such struggles the workers can not possibly be aided by the employing classes, can they?

Mr. GOMPERS. That is not entirely so, because it frequently occurs that the competitive interests of the employers may impel some of them to aid the workmen in the establishment of what has become known as standardized conditions in the trade—a minimum of standardization.

Mr. HILLQUIT. Just an incident in the struggles of the workers, and of which the workers take advantage when such occasions arise?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. But, on the whole, the American Federation of Labor recognizes that the struggle for improvement of the conditions of the workers is a struggle of the workers, and, probably, organized workers, is it not?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. You don't tolerate within your unions employers as members?

Mr. GOMPERS. We do not; that is, our affiliated unions do not. But the American Federation of Labor, with its directly affiliated locals by charter—those locals which have no national of their own—we don't permit employers to become members.

Mr. HILLQUIT. Can you conceive of any scheme by which the interests of the employers and those of the employees could be harmonious and could lead to the same beneficent results as the independent struggles of the workers?

Mr. GOMPERS. Will you please read the question?

(The question was read, as follows:;) "Can you conceive of any scheme by which the interests of the employer and those of the employees could be harmonious and could lead to the same beneficent results as the independent struggles of the workers?"

Mr. GOMPERS. I know of no means by which the interests of the employers and the workmen can be harmonious in the full broad sense of that term.

Mr. HILLQUIT. And do you concede that the labor leader or labor representative is most useful to his organization and to his movement who devotes his time and his thought, single mindedly, to the interests of the labor organizations?

Mr. GOMPERS. And to the working people.

Mr. HILLQUIT. To the working people?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. And do you consider a labor leader who combines with a number of prominent employers in an alleged effort to improve the condition of the workers to be doing useful work for the labor movement?

Mr. GOMPERS. I concede this that it is the duty of such men you designate as labor leaders to carry the word, to preach the doctrine, to carry the message and the gospel of labor, of justice to labor, to any place on earth, and to any people on earth; to defend that doctrine; to promote a better understanding among any and all; it is the duty of every leader to make his cause best known wherever the opportunity may afford.

Mr. HILLQUIT. For the benefit and advantage of the working class, is it not?

Mr. GOMPERS. Absolutely and alone.

Mr. HILLQUIT. And is it not likewise in the interests of the large employers of labor to carry the gospel of their interests wherever they can, and particularly into the camp of labor.

Mr. GOMPERS. Whether it is their interests I am not prepared to say, but I judge from my own experience that that is not the truth, and it is not the fact.

Mr. HILLQUIT. Mr. Gompers, do you know of the existence of the National Manufacturers' Association?

Mr. GOMPERS. I do.

Mr. HILLQUIT. Do you think that the National Manufacturers' Association has no interest in carrying the antilabor gospel and, if you want, the employers gospel, to all four quarters of the earth?

Mr. GOMPERS. While I know that the National Association of Manufacturers is absolutely hostile to the labor movement and unions and everything it represents, but that is not such an association in which a labor leader is either accepted or tolerated. He therefore can not bring the doctrine and the message of labor there.

Mr. HILLQUIT. Yes; but the National Association of Manufacturers is an association of employers.

Mr. GOMPERS. Yes, it is. But, Mr. Hillquit, don't let us lose unnecessary time, because you haven't got that association in mind.

Mr. HILLQUIT. We will come to it if you will just wait. If you will answer questions direct and straight it will come very soon.

Mr. GOMPERS. You have not been in the habit of answering questions straight yourself so you don't know whether they are straight.

Mr. HILLQUIT. The argument is stricken out.

Chairman WALSH. For the convenience and comfort of the crowd that is here, the officials of the building have brought in some more chairs. They will be brought in there [indicating] and preference ought to be given to those who are to be called as witnesses and sufficient chairs, of course, given to the press at this table.

Mr. HILLQUIT. Mr. Gompers, when I refer to the National Association of Manufacturers, I meant to bring out the point that it is in the interest of the employers to actively organize for a warfare against organized labor. Would you agree with that?

Mr. GOMPERS. Primarily that is its avowed purpose. It has a greater purpose, and that is to prevent organization of working people to protect themselves or to promote their interests. As a matter of fact the president of that organization, only a few days ago, declared that he was going to form a new union—over our heads.

Mr. HILLQUIT. That new union, in his case, was not to be a bona fide labor union, but a scab union, as you understand it.

Mr. GOMPERS. I might say it is treason to the labor movements and treason to the interests of labor.

Mr. HILLQUIT. I understand—now, Mr. Gompers, let us proceed—and isn't that, at any rate to your mind, a manifestation of the fact that employers in their relation to employees and to the labor movement, will be guided by their economic interests?

Mr. GOMPERS. Generally speaking, yes; but the largest number of employers are not members of that organization, and are not in accord with that association. In addition, let me say, that I do not know that there are quite a number of employers who belong to the National Association of Manufacturers because of the trade advantages which are secured through the other features and branches of the activity of the National Association of Manufacturers.

Mr. HILLQUIT. Admitting that the employing classes have certain economic interests opposed to the working classes, would you think it natural to expect that it would organize in defense of its interests and against the organized labor movement?

Mr. GOMPERS. If they organized at all for the consideration of that subject, that would be the purpose.

Mr. HILLQUIT. Mr. Gompers, do you know the history and origin of the American Civic Federation?

Mr. GOMPERS. I do.

Mr. HILLQUIT. By whom was it organized?

Mr. GOMPERS. By Mr. Ralph M. Easley; together with some business men and publicists and a few workmen in the city of Chicago.

Mr. HILLQUIT. When it became a national institution, was it not the late Mark Hanna who was its first leading spirit?

Mr. GOMPERS. No, sir; that is a Socialist misrepresentation of the facts.

Mr. HILLQUIT. Was Mr. Mark Hanna connected with the organization at all, so far as you know?

Mr. GOMPERS. Several—many years—after its first formation.

Mr. HILLQUIT. When it became an institution of national scope was Mr. Hanna connected with it?

Mr. GOMPERS. After it had become an institution of national scope, and a considerable time after.

Mr. HILLQUIT. And while he was so connected, was not he rather a leading figure in the federation?

Mr. GOMPERS. He was for two years its president—president of the American Civic Federation. May I suggest at the start that when you speak of the American Federation of Labor you designate its name, and when you speak of the Civic Federation you designate it by its name, and not confuse the record by the indefinite or confusing word "federation" as applied equally to both.

Mr. HILLQUIT. You would not want to have the American Federation of Labor mistaken for the American Civic Federation?

Mr. GOMPERS. Oh, I would not want by your indirection and insinuation to make such—to confuse.

Mr. HILLQUIT. Mr. Gompers, were not and are not some of the leading members of the National Civic Federation very well known capitalists?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Will you name some of them—Mr. Hanna?

Mr. GOMPERS. Mr. Hanna, Mr. Seth Low, Mr. Andrew Carnegie, Mr. Belmont—

Mr. HILLQUIT (interrupting). Mr. Schwab?

Mr. GOMPERS. No.

Mr. HILLQUIT. Was Mr. Schwab never a member of the National Civic Federation?

Mr. GOMPERS. Not to my knowledge—Mr. Brown of the New York Central Railroad, and I think Mr. Delano—no? Mr. Delano says he was not. Oh, quite a number of large employers of labor.

Mr. HILLQUIT. And the object of the federation, among other things, was to adjust certain labor disputes, was it not?

Mr. GOMPERS. It was not.

Mr. HILLQUIT. Doesn't the Civic Federation maintain a department of mediation, arbitration, and other instrumentalities for the adjustment of labor disputes?

Mr. GOMPERS. It has a department of mediation. It undertakes no effort at arbitration, unless called upon to do so voluntarily by both sides. It has

brought employers and workmen together engaged in tremendously important disputes, who could—who it seemed could not be brought together for the purpose of meeting and discussing their diverse points of view and diverse interests; and the result has been that agreements have been reached between large bodies of workers and large employers, the terms and conditions of labor being improved, and to the mutual satisfaction—at least temporary mutual satisfaction of both parties to the dispute.

Mr. HILLQUIT. Mr. Gompers, has not the Civic Federation also taken stands on various practical problems of the labor movement and labor legislation?

Mr. GOMPERS. Never; unless it was adhered to by the representatives of the working people.

Mr. HILLQUIT. Yes, sir; but with such adherence the Civic Federation has undertaken such work, has it not?

Mr. GOMPERS. Not undertaken it, but aided in it.

Mr. HILLQUIT. Aided in it?

Mr. GOMPERS. Aided the working people in their organized capacity to accomplish it.

Mr. HILLQUIT. For instance, in the propaganda for a workmen's compensation act?

Mr. GOMPERS. Yes; and since you have mentioned that workmen's compensation act, it is due to the American labor movement to say that immediately upon the close of the session last evening I called up over the phone Mr. Daniel Harris, president of the New York State Federation of Labor, and asked him as to the connection of yourself and the Socialist Party in the work to secure a workmen's compensation act for the State of New York, and he informed me and showed me the record, that the bill which you advocated was one which was impossible of enactment by the legislature of the State of New York. It required specifically that there should be an appropriation of \$1,000,000, to provide that a member of the commission shall be a Socialist, and such other provisions as were not only impossible of achievement but repugnant to the labor movement and the interests of the working people of the State of New York; and that they could not and would not stand for the bill and that, as a matter of fact, it was a species of assistance as we find in legislatures in which a pretense of kindness for the legislation under consideration will kill with kindness and defeat the very object of the bill. And that now there is upon the statute books of the State of New York the best and most comprehensive and generous workmen's compensation law that prevails in any State or in any country on the face of the globe.

Chairman WALSH. The question was, in this case, Mr. Gompers, whether or not the National Civic Federation advocated the last workmen's compensation act? Is that it?

Mr. HILLQUIT. Workmen's compensation act?

Chairman WALSH. Did it or not?

Mr. GOMPERS. It did.

Chairman WALSH. We will have to bring this shortly to a close, and I will ask you, Mr. Hillquit, to get to the point that you deem most important, and for Mr. Gompers to answer responsively, or we will have to enter up the answer. This is just for the purpose of getting through.

Mr. GOMPERS. May I, in 10 words, call your attention to this?

Chairman WALSH. Yes.

Mr. GOMPERS. Yesterday, without five minutes of preparation, I undertook to cross-examine Mr. Hillquit when he was on the stand, and to each question he undertook to answer in his own way, and after his own assertion, without any limitation, and now, after an evening's preparation and a night's preparation, comes here to discuss entirely extraneous subjects, and if I am expected to simply answer categorically yes or no, why, I don't know whether that would seem exactly the proper thing to do.

Chairman WALSH. If I have left that impression upon you, Mr. Gompers, I have been very unfortunate in my own mode of expression. I have allowed this to go along for approximately 20 minutes longer than your cross-examination of yesterday, so I am now trying to check it, and that is the only way that I can see to do it.

I wish to reiterate that I would desire very much, the commission would, that you would answer yes or no wherever possible, explaining, however, any such answers in your own terms and at reasonable length.

Mr. GOMPERS. Mr. Chairman, don't you believe that the correction of the record, statement, should be made just at this time when this subject is under discussion?

Chairman WALSH. What is that?

Mr. GOMPERS. I made a statement of fact in regard to the record.

Chairman WALSH. I am not complaining about anything that has been done up to this point, but we are about to bring this to a close.

Mr. HILLQUIT. I shall cheerfully submit to the directions of the Chair, except I do want to state in the record—

Chairman WALSH. I understand you are going to be recalled in rebuttal.

Mr. HILLQUIT. I am?

Chairman WALSH. Yes; I see so.

Mr. HILLQUIT. If I am, I will drop it.

Chairman WALSH. At the end of this cross-examination Mr. Gompers can make any statement voluntarily as he sees fit, and I understand it is the purpose of a great many of the members of the commission to ask questions of Mr. Gompers, they being familiar with his organization.

Mr. GOMPERS. Thank you.

Mr. HILLQUIT. Then, Mr. Gompers, your belief is that a capitalists' union, which has come in the Civic Federation and have ordinarily led, have done so for the benefit of the working class?

Mr. GOMPERS. Your assumption is wrong when you say that they have led the National Civic Federation.

Mr. HILLQUIT. They have participated in its work, have they?

Mr. GOMPERS. Yes, sir.

Mr. HILLQUIT. Now, Mr. Gompers, have they done so, in your opinion, for the benefit of organized labor?

Mr. GOMPERS. I think they have done it in an attempt to secure some improvement in conditions among the working people. I should say, for instance—let me call your attention to this: The workmen's compensation, the Civic Federation had a committee for over a year studying that subject.

Mr. HILLQUIT. Yes, sir.

Mr. GOMPERS. Among them Mr. Tecumseh Sherman and others. They had the experts from all over the country upon that subject and they formulated a bill. When the New York State Federation of Labor declared that it would not stand for that bill the Civic Federation immediately withdrew that bill from any consideration of it.

Mr. HILLQUIT. Mr. Gompers, I thought we were agreed on brief questions and brief answers for the little time we still have. Your answer, then, is that those men that you named did work in the Civic Federation, the lead part or otherwise, with a desire to help labor?

Mr. GOMPERS. I did not say that?

Mr. HILLQUIT. What did you say?

Mr. GOMPERS. I said they endeavored, in so far as they could, to help in the formulation of a bill on workmen's compensation that would be helpful and beneficial.

Mr. HILLQUIT. Pardon me. You have answered that question.

Mr. GOMPERS. Pardon me a moment.

Mr. HILLQUIT. No; unless I am directed to by the chairman.

Mr. GOMPERS. Counsel interrupts me.

Mr. HILLQUIT. We will try to stick to questions and answers. I was not referring to workmen's compensation. I am referring to the motives for the activity of the capitalists you have named in the National Civic Federation, and I am asking you whether you believe that those capitalists have been giving the time and the work of the American Civic Federation for the benefit of the working classes.

Mr. GOMPERS. I will say that I don't know their motives. I simply know their acts, and I say that there has never been an action taken by the National Civic Federation that was hostile to the interests of the working people.

Mr. HILLQUIT. You have stated before, Mr. Gompers, that you believe there was no harmony between the interests of the employing classes and those of the workers, and that you believe that the workers must depend upon their own efforts as workers, without the interventions of intellectuals, you say, or others, to secure the improvements. Now, I am asking you, do you believe that they can secure such improvements with the intervention of capitalists of the type that you have named in the Civic Federation?

Mr. GOMPERS. First, when you speak of the intellectuals to which I referred I say the intellectuals who undertake to dominate our movement. The National Civic Federation have never attempted to dominate the affairs of our movement. And, second, you said regardless of what motives they have. I

simply know their acts. It is most difficult for anyone to determine even your motive or my motive. I only can judge of people's acts, and I know their acts have never been hostile in the Civic Federation to the interests of the working people.

Mr. HILLQUIT. Then, you would not think it is perfectly proper for an official representative of the American Federation of Labor to cooperate with well-known capitalist employers for common ends?

Mr. GOMPERS. There is no such thing as that upon which your question is predicated.

Mr. HILLQUIT. Answer the question, whether you think it proper or not.

Mr. GOMPERS. This is another one of those questions the answer to which will convict.

Mr. HILLQUIT. It might, Mr. Gompers.

Mr. GOMPERS. Yes; and it will.

Mr. HILLQUIT. You think so?

Mr. GOMPERS. I may not be quite so clever, but at least I shall try to be truthful and assume nothing upon which—unless I have basis for it. There is no such thing as cooperation between the leaders of the labor movement and the leaders of the National Civic Federation. What is done is to endeavor to impress upon all with whom I—and I know that your questions are directed toward me without regard to anyone else—I say, so far as I am concerned, I can go anywhere where men assemble and where they consider the questions affecting the working people; I can meet with them and bring the message of labor to them; to argue and contend as best I can with them for the rights of the working people; and if I can influence them to any act of helpfulness toward any one thing in which the working people are interested I have accomplished something. I have never felt that I have come away with my skirts besmirched or my character impaired or my determination to toil and struggle for the working people impeded or impaired in any way.

Mr. HILLQUIT. And you think it is perfectly feasible and possible for a labor leader to influence large employers and capitalists to join the American Civic Federation and National Civic Federation to take measures for the benefit of organized labor?

Mr. GOMPERS. That is not the question. I will appeal to the devil and his mother-in-law to help labor if labor can be aided in that way.

Mr. HILLQUIT. And will you cooperate?

Mr. GOMPERS. Let me say this: The question comes with ill grace when Socialists are butting in everywhere, no matter whether the employed or the capitalist class—

Mr. HILLQUIT. Let's not try to evade the question.

Mr. GOMPERS. That is not evasion. That is a supplemental statement of fact.

Mr. HILLQUIT. Very supplemental. Now, Mr. Gompers, you have drawn the parallel between the National Civic Federation and the devil and his grandmother. Now, I am asking you, will you go to the extent—will you expect the devil or his grandmother to aid the American labor movement, and would you cooperate with him?

Chairman WALSH. Please proceed to some other question.

Mr. HILLQUIT. Very well. Mr. Gompers, do you know that is a contradiction between your previous statement to the effect that there is a certain antagonism between the interests of employers and of employees, that the struggles of the workers are directed against the employers, and that those struggles must be conducted by themselves as workers and your activities in the National Civic Federation?

Mr. GOMPERS. No.

Mr. HILLQUIT. Hold on—

Mr. GOMPERS. One minute. No. As a matter of fact, the National Civic Federation is quite as emphatically damned by the National Association of Manufacturers as it is by you and your associates, because, as the National Association of Manufacturers have said—they say that it is dominated by the labor leaders.

Mr. HILLQUIT. Do you agree with them—the National Manufacturers' Associations?

Mr. GOMPERS. I should prefer not to say. I would not care to weaken such influence as I might have with the National Civic Federation by claiming that I do dominate it.

Mr. HILLQUIT. Mr. Gompers, you are familiar with the trades-union movement outside of the United States, aren't you; in other countries of the world, I mean.

Mr. GOMPERS. Yes, sir; fairly well.

Mr. HILLQUIT. Can you name a single instance in any country of the world where representatives of the trades-union movement have any affiliation similar to that of the leaders of the American Federation of Labor and the National Civic Federation?

Mr. GOMPERS. As a matter of fact, there is no such affiliation here as that which you refer to.

Mr. HILLQUIT. If not, such as there is?

Mr. GOMPERS. There is no affiliation.

Mr. HILLQUIT. You hold membership in the National Civic Federation?

Mr. GOMPERS. I do not, sir; there is no such thing as membership.

Mr. HILLQUIT. Aren't you an officer of the Federation?

Mr. GOMPERS. I am.

Mr. HILLQUIT. But not a member?

Mr. GOMPERS. There is no such thing.

Chairman WALSH. You will have to keep order in the rooms or I will ask the sergeant at arms to clear the room.

Mr. GOMPERS. You must remember that it has no membership in that term of membership. It is voluntary men, who are willing to aid or give aid or secure aid. Simply attend. The officers are simply a matter of administrative—what is it they perform?

Mr. HILLQUIT. Whatever it is. Does anybody appoint or elect the officers of the National Civic Federation?

Mr. GOMPERS. Those who may come to the annual meetings.

Mr. HILLQUIT. Those who happen to come in?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. And they elect?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. And you are such elected officer?

Mr. GOMPERS. Yes.

Mr. HILLQUIT. I would like to ask whether you know any analogous example anywhere in the world of where the officers of a national labor movement hold office in a body similar to the National Civic Federation?

Mr. GOMPERS. No; that is impossible.

Mr. HILLQUIT. Of course.

Mr. GOMPERS. As a matter of fact, there isn't any capitalist in the—say, for instance, in Germany, who would condescend to meet with a representative of labor; and yet let me call attention to this fact, that in the strike of the building trades in Berlin and extending all through Germany two years ago there was a board of arbitration selected, and on which there were a capitalist and public officials and not one labor man; not one labor man.

Mr. HILLQUIT. Is that the closest analogy to the American Civic Federation you can think of abroad?

Mr. GOMPERS. No. In England, when the coal strike occurred of two years ago, approximately, there were the conference between—associated effort of the coal miners, the coal mine owners, and the representatives of what you would term the capitalistic government.

Mr. HILLQUIT. Yes; those are all special cases and acting on special occasions, but not definite, permanent organizations, are they?

Mr. GOMPERS. All for a definite purpose, and the only activity in which I am engaged in with any work of the Civic Federation is cases of that character.

Chairman WALSH. Assuming you can come to a convenient and logical close, we will call your cross-examination closed.

Mr. HILLQUIT. If he would answer, I could close in five minutes.

Chairman WALSH. We can not control his answers and you can not, and with that in mind try to shorten it.

Mr. HILLQUIT. I will in 5 or 10 minutes. You say you are familiar with the trade movement abroad. Will you please state which movement, in European countries, you consider the strongest?

Mr. GOMPERS. In the United States?

Mr. HILLQUIT. No; outside of the United States—countries abroad?

Mr. GOMPERS. The strongest in numbers, do you mean?

Mr. HILLQUIT. In numbers; things accomplished, and everything else that goes to make up strikes.

Mr. GOMPERS. In Great Britain.

Mr. HILLQUIT. Great Britain. Next to Great Britain?

Mr. GOMPERS. Germany.

Mr. HILLQUIT. Then?

Mr. GOMPERS. I think that I might say, like the boy, "there ain't no then."

Mr. HILLQUIT. How about Austria?

Mr. GOMPERS. That is very poorly organized.

Mr. HILLQUIT. How about Belgium?

Mr. GOMPERS. Poorer organized.

Mr. HILLQUIT. And how about the Scandinavian countries, Sweden, Norway, and Denmark?

Mr. GOMPERS. They were better organized before their general strike about five years ago. That strike has weakened the movement there very materially.

Mr. HILLQUIT. Now, with respect to actual accomplishment, the attainment of definite measures of relief, which would you place ahead of the rest?

Mr. GOMPERS. To which do you mean, of relief?

Mr. HILLQUIT. I mean the reform measures in the nature of labor legislation or social insurance and similar measures?

Mr. GOMPERS. I would say Germany. Next comes England.

Mr. HILLQUIT. Yes; then would you take Belgium?

Mr. GOMPERS. No.

Mr. HILLQUIT. What would you take next?

Mr. GOMPERS. I would take Austria.

Mr. HILLQUIT. And then?

Mr. GOMPERS. Belgium.

Mr. HILLQUIT. As to—

Mr. GOMPERS. Belgium occupies an entirely different position to either Germany, England, or Austria, for Belgium is an absolutely highly developed industrial country.

Mr. HILLQUIT. Yes.

Mr. GOMPERS. And yet the labor organizations, the trade-union movement, is very, very far in the rear.

Mr. HILLQUIT. Now, Mr. Gompers, do you know the general political affiliations, attainments, and practices of the German trade-union movement?

Mr. GOMPERS. I do, sir.

Mr. HILLQUIT. Are the German trade-unionists pretty closely allied to the Socialist Party of Germany?

Mr. GOMPERS. They are in their membership, and there is a sort of a common work, too. But this, too, must be borne in mind in regard to Germany: The trade-unions of Germany have absolutely no right of lawful political activity. I have said, Mr. Hillquit, that if I were in Germany I would belong to the Socialist Party, not because I would give adhesion to the philosophy of socialism, but because it is the only protesting democratic party in Germany.

Mr. HILLQUIT. And, as a matter of fact, Mr. Gompers, the large bulk of trade-unionists in Germany supports the candidates of the Socialist Party in elections?

Mr. GOMPERS. As a rule that is true.

Mr. HILLQUIT. And also a number of prominent trade-union leaders are members of the Parliament, including the international secretary, Karl Legien?

Mr. GOMPERS. Yes. You know that Mr. Legien belongs to the Revisionists, so-called in Germany, in the Socialist Party, or the Bernstein school, which recognizes the absolute economic independence of the trade-union movement from the domination of the political Socialist Party?

Mr. HILLQUIT. Yes; but that has nothing to do with the case.

Mr. GOMPERS. That is what you may think.

Mr. HILLQUIT. Well, let's proceed. Mr. Legien is a member in good standing of the Socialist Party, and also a leader in the trade-labor movement. Do you know about the political activity of the trade-unionists in England?

Mr. GOMPERS. I do.

Mr. HILLQUIT. How does it express itself?

Mr. GOMPERS. In an independent political party.

Mr. HILLQUIT. Known as the Labor Party?

Mr. GOMPERS. Labor Party.

Mr. HILLQUIT. In which the socialist organization, independent labor, and another socialist organization known as the Fabians are officially represented? Is that correct?

Mr. GOMPERS. I think so; yes, sir.

Mr. HILLQUIT. And do you know that the political activity of the workers in Belgium—

Mr. GOMPERS (interrupting). Suppose we stop with England for a moment before we make these terrific jumps that likely will drown us in the chasm—

Chairman WALSH. Well, let us make that one jump. We have only three minutes left, and I must bring it to a close in three minutes more.

Mr. HILLQUIT. I don't want to waste my time—my three minutes—on Mr. Gompers' answers. Mr. Gompers may answer in rebuttal.

Chairman WALSH. Well, are you willing to answer this question and leave what you have to say to rebuttal?

Mr. GOMPERS. Very well. Belgium is fairly representative of the political action of the workers. As a matter of fact, the Socialists of Brussels dominate the offices and dominate whatever of the labor movement there is in Belgium, and that, as a consequence, has left the Belgian workmen the lowest in Europe in economic conditions.

Mr. HILLQUIT. In which they are.

Mr. GOMPERS. In which they are. As a matter of fact, wherever the workmen are most active politically, there they lose sight of their economic interests, believing that by casting their vote once a year they can secure remedial legislation that will offset the work of trade-unionism.

Mr. HILLQUIT. Mr. Gompers, isn't it a fact that the American Federation of Labor is the only large national body of organized workers which has no independent political policy or party or organization or affiliation of its own?

Mr. GOMPERS. The American Federation of Labor—it is improper to place the American Federation of Labor in that position, because it has an independent policy and an independent political policy—a policy so politically independent that it is independent of the Socialist Party, too. It looks to achievements rather than the instrumentality to the achievements, and we have achieved in the American labor movement more real betterment for the working people than has been accomplished by any other labor movement in the world.

Chairman WALSH. Mr. Hillquit, we would be very glad, of course—this is intensely interesting to me, as I know it is to the balance of the commission, but we must bring this to a close at some place, and I have allowed this to run 40 minutes in time over what it was yesterday, and so I will, on behalf of the commission, thank you very much for your contribution to our work, and will bring it to a close.

Mr. HILLQUIT. Well, I understand, I will have a chance—

Chairman WALSH. Yes; you may be put on in rebuttal.

Mr. HILLQUIT. Thank you.

Chairman WALSH. Mr. Garretson, I believe you have something you wish to ask.

Commissioner GARRETSON. Yes; I have a question or two. In regard to the last question asked you, Mr. Gompers, while it only applied to the American Federation of Labor, is it not a fact that the entire trade-union movement of America is absolutely without political affiliation?

Mr. GOMPERS. Without any parties and political affiliation.

Commissioner GARRETSON. And that the large national organizations not affiliated with the A. F. of L. are also absolutely independent?

Mr. GOMPERS. Yes, sir.

Commissioner GARRETSON. Going back to one phase of the question that was asked to-day in regard to the attitude of trade-unions toward the minimum wage, you have been connected with the political or legislative efforts of your organization all the years it has made legislative efforts, have you not?

Mr. GOMPERS. Yes, sir.

Commissioner GARRETSON. Now, what labor interests have you come most intimately in contact with during the most of that entire period in the national legislative direction? Has it been the railway brotherhoods?

Mr. GOMPERS. Yes, sir.

Commissioner GARRETSON. By the way, whenever the Federal Government tries its hand on industrial legislation in this country, whom is it always tried out on?

Mr. GOMPERS. On the men engaged in interstate commerce, and that usually applies to the men engaged as workmen on the railroads, and of course, to seamen.

Commissioner GARRETSON. And always to men in train and engine service?

Mr. GOMPERS. Yes, sir.

Commissioner GARRETSON. Now, if the dog survives under the treatment, then it is extended by the States to others in greater or less degree?

Mr. GOMPERS. That is the logical tendency.

Commissioner GARRETSON. Has there or has there not, to your knowledge, been an insistent effort for many years to establish for those men some tribunal or other that would fix the wage, conditions of service, or hours of labor, and conditions of service—

Mr. GOMPERS (interrupting): Yes, sir.

Commissioner GARRETSON. Legislatively?

Mr. GOMPERS. Yes, sir.

Commissioner GARRETSON. Isn't there now pending the usual contention?

Mr. GOMPERS. Yes, sir.

Commissioner GARRETSON. Has your investigation ever demonstrated to you that the insistence, the quiet insistence, behind the scenes, for the enactment of legislation placing in a Government board the power to fix these conditions, was always traceable—

Mr. GOMPERS (interrupting). Yes, sir.

Commissioner GARRETSON (continuing). To the larger interests that employ men?

Mr. GOMPERS. Yes, sir. There is an underground process constantly at work to devise ways and means ostensibly and superficially well-sounding, like a sugar-coated pill is well-tasting, by which process and method there is attempted to fix the status of workmen, to tie them to their labor, to tie them to their task, and that the right of the freedom of action shall be first impaired and then denied. And our friends, the members and leaders of the Socialist Party, would very gladly establish that in the wholesale. They do not understand the struggle for freedom.

Commissioner GARRETSON. Is, in your opinion, that effort anything more than the echo and the effort to continue the conditions that grew up under English legislation in one form or another, from the time of the Black Death until the time of Elizabeth?

Mr. GOMPERS. Yes, sir. There is now a law in England that, under certain conditions, if a miner—a coal miner—does not report for work at a specified time, he may be proceeded against and fined and sent to imprisonment. And frequently cases of that kind occur. I took great pleasure in exposing the existence, not only of that law and that practice, but how utterly at variance such a condition was with the boasted freedom of which we heard so much when I was on the other side five years ago as a delegate to the labor movement there.

Commissioner GARRETSON. One other question, Mr. Gompers, growing out of a question and answer this morning, touching on the same point as this minimum wage. Is it or is it not true, from your standpoint, that the woman and child labor to whom, in this country, the special legislative restrictions largely apply, including the minimum wage, in some instances are, in reality, nothing but really auxiliaries to the ordinary wage problem as applied to men; and that their employment is nothing but an economic subterfuge in which some restrictions are necessary, that would not be recognized as right as applied to men's wage or employment?

Mr. GOMPERS. I think it is generally regarded that children, at least, and minor women, anyway, and women, perhaps, generally, are the wards of the Nation. They are not enfranchised, they haven't political rights, and have not yet even attained any of the economic rights that workmen have.

Commissioner GARRETSON. Nor can they industrially protect themselves as others can?

Mr. GOMPERS. They have not thus far done so.

Commissioner GARRETSON. I mean, they have not shown the capacity to do it?

Mr. GOMPERS. Not yet—that is, to a large extent. They have sometimes done and have made magnificent fighting and self-sacrificing trade-unionists.

Commissioner GARRETSON. I would like to ask you one question in regard to the Civic Federation. Have you ever heard the opinion expressed by labor men who do sit in the same room and eat at the same table with the employing class that benefits had been gained for laboring men through the agencies of such organizations as the Civic Federation?

Mr. GOMPERS. There is no question about it, sir. As a matter of fact it has—I am not prepared to say as to the motives of any of the men—but simply as a matter of fact—the Civic Federation men have been instrumental in bringing

together the representatives of employers and the representatives of workmen who meet for the first time where all other agencies have proved futile, in trying to bring them together.

Commissioner GARRETSON. Have you ever seen the time when the agencies exercised by the organization and which you are able to put in motion through its influence brought conference and settlement where no other means were available?

Mr. GOMPERS. Time and time and again.

Commissioner GARRETSON. Would you consider that if an employer had reached the stage where he believed—I will put the most sordid motive to it—that it was good business to join the effort to enact State legislation or to carry forward a certain movement which in itself was beneficial to the laboring men, would you care a continental what his motive was? Or would you avail yourself of the assistance without caring about the motive?

Mr. GOMPERS. I think I would avail myself of whatever assistance he could render.

Commissioner GARRETSON. If his money would aid you, you would not ask whether it was tainted?

Mr. GOMPERS. I would not accept his money.

Commissioner GARRETSON. If he sent the money in an effort to better the condition of the working people?

Mr. GOMPERS. If he desired to send the money in furtherance of that, if I did not handle it—because I would not handle any money—but if he desired to expend his money in the furtherance of a proposition of that character, I should interpose no objection.

Commissioner GARRETSON. It would not affect your conscience if you aided him in that respect in separating himself from his money?

Mr. GOMPERS. Except it could not reach my hands.

Commissioner GARRETSON. That part of it is not necessary in this phase of it; not in the phase we are looking at.

Mr. GOMPERS. Yes, sir; I would not inquire.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Have you any questions, Mrs. Harriman?

Commissioner HARRIMAN. In your opinion, Mr. Gompers, will the labor movement in this country ever become a political as well as an economic movement?

Mr. GOMPERS. It is already there.

Commissioner HARRIMAN. I mean more or less in the way that labor takes part in things in England?

Mr. GOMPERS. I am not prepared to say what the next or future generations may develop; but it is to the American Federation of Labor, and I suppose that to the American working people it is, of lesser consequence as to which instrumentality is employed in the accomplishment of a case than the accomplishment of the purpose itself. And we have in the United States secured the advantages of legislation of the most substantial character without the use or the necessity of a so-called independent labor party.

This must also be borne in mind, Mrs. Harriman, that in England and in Brussels and largely in Germany—

Commissioner HARRIMAN. In Belgium?

Mr. GOMPERS. What did I say?

Commissioner GARRETSON. You said Brussels.

Mr. GOMPERS. Yes, sir; Belgium. They are practically industrial countries. The United States, despite the fact that it is becoming largely an industrial country, it is yet mostly an agricultural country. The agricultural workers are almost totally unorganized and sparse, separate from each other. There is no application of the conditions prevailing in many of the countries to the United States. Bear in mind, too, this fact; some may say that it is simply form, but the truth is that we have a Republic. The truth is that we have no established church; we have no established monarchy; that the element and essentials to political freedom obtain in the United States; and that there is not either a monarchy or established church, or a standing army and compulsory military service.

All those elements of opposition—all those elements which obtain in many European countries—do not obtain here, and they are justified as well as it is practical for them to establish a party and seek to remedy these conditions first. There is no necessity, in the United States, at least, to work for the abolition of those conditions. Our conditions are primarily industrial.

Commissioner HARRIMAN. Then your answer is you do not think so, at the moment?

Mr. GOMPERS. I have my day dreams, and I build my castles in the air and allow my mind to run riot sometimes, but if I want to be of some benefit to my fellow workers now and hereafter I am going to get down to terra firma and help them in their present struggle.

Commissioner HARRIMAN. Mr. Gompers, does or does not the American Federation of Labor stand as much for industrialism as the I. W. W.?

Mr. GOMPERS. All comparisons are said to be odious, and I dislike rather to mention names that you did in the same breath.

Commissioner HARRIMAN. I am sorry.

Mr. GOMPERS. I mean, I do.

Commissioner HARRIMAN. I simply wanted it for my own information.

Mr. GOMPERS. I am not speaking for you; I am speaking for myself. The history of the so-called I. W. W., and I don't know which one you mean, because there are two of those things. The aroma is not inviting.

I can speak of the American Federation of Labor. Its organizations have done so much. I know that the American Trades Union movement has done so much for the working people and for the American people, not only working people, because there is not anything that the organized labor movement can do for its members but will find its reflex in the conditions of the other workers. The shorter workday, the increased wages, the shop conditions, the character, the treatment of the men and women who work as compared to the treatment of general workers in other countries is simply incomparable.

Chairman WALSH. Can you draw a comparison between the extent of the desire on the part of the American Federation of Labor for industrial unionism and that of the so-called I. W. W. as it now stands?

Mr. GOMPERS. No.

Chairman WALSH. That was the question.

Mr. GOMPERS. No.

Chairman WALSH. You can not do that?

Mr. GOMPERS. No.

Chairman WALSH. Let us go ahead, then, with another question.

Mr. GOMPERS. That is not industrial unionism that they advocate.

Chairman WALSH. What he called industrial unionism on the stand yesterday, organizing all workers into one union.

Mr. GOMPERS. Into one big union?

Chairman WALSH. Yes. Do you desire that also?

Mr. GOMPERS. It is preposterous. May I use this as an illustration?

Chairman WALSH. You say it is impossible. I am trying to bring it to a close.

Commissioner BALLARD. In looking at your chart this morning I noticed that the numbers of the American Federation of Labor for about 20 years up to 1900 were along an even scale from four to five hundred thousand. In 1900 up, 1901, 1902, 1903, and 1904, the numbers began to elevate about 400,000 a year. Did the policy of the American Federation of Labor change about the year 1900? Or was that just the growth of conditions?

Mr. GOMPERS. It was the growth of conditions. The American workman had come to understand that the Federation was a movement to be really helpful, constructive work.

Commissioner BALLARD. I understood you to say that the American Federation of Labor was largely composed of organizations of different unions in different sections of the country, and different places and different classes.

Mr. GOMPERS. Yes, sir.

Commissioner BALLARD. They all send dues to the American Federation of Labor based on their numbers?

Mr. GOMPERS. Yes, sir. That is the national and international unions do. The central bodies and State federations and departments do not. They pay a nominal fee, because they are already represented in their national unions.

Commissioner BALLARD. I understood you to say, Mr. Gompers, in your testimony that they all had the right of secession and the right of withdrawal; and I would like to know what the rights of the American Federation of Labor are to regulate or to criticize the constitution and principles of your federated parties. Have you any real control over those federated bodies?

Mr. GOMPERS. No, sir. May I say, Mr. Ballard, that freedom of conscience, freedom of judgment, prevails absolutely in the American Federation of Labor.

We have no control over the organizations in any declarations or laws or policies which they may pursue, so long as they do not violate the fundamentals of federation.

Commissioner BALLARD. That is all.

Chairman WALSH. Have you any questions?

Commissioner O'CONNELL. I want to develop briefly a point or two.

It is quite generally rumored in the minds of a large number of people, and I have heard it said that the American Federation of Labor or its affiliated organizations would not make any attempt to organize the unskilled men in industries. The American Federation of Labor directly includes local unions, as you gave this morning some 600? Are those unions composed largely of unskilled men?

Mr. GOMPERS. Yes, sir.

Commissioner O'CONNELL. Are there local unions of unskilled men—when I say unskilled men I mean laborers of all character, running into large numbers, several thousand, ten or fifteen thousand in one local union?

Mr. GOMPERS. What is the question?

(The last question was read by the reporter.)

Commissioner O'CONNELL. For instance, in the building labors in Chicago, is there a local union in Chicago of laborers running up into ten or fifteen thousand?

Mr. GOMPERS. Yes, sir. I should say, Commissioner O'Connell, that one of the leaflets published by the American Federation of Labor and distributed in the millions and issued for over 20 years, this statement is contained, that "To maintain high wages all of the trades and callings must be organized; that the lack of organization among the unskilled vitally affects the skilled; that general organization of skilled and unskilled can only be accomplished by united action."

I may say that out of the 1,760 organizers, most of them, yes, 1,700 of them, voluntary organizers, are doing splendid service all through the country to organize the unskilled as well as the skilled. Because, as a matter of fact, the concentration of effort is more necessary for the unskilled than it is for the skilled.

Commissioner O'CONNELL. You heard Mr. St. John, the Secretary of the I. W. W., who appeared before us the other day, when asked a question as to the membership of that organization; I think it was fourteen thousand three hundred and some odd outstanding membership.

(The question was read by the reporter.)

Mr. GOMPERS. Good-standing membership.

Commissioner O'CONNELL. You heard that statement?

Mr. GOMPERS. Yes, sir.

Commissioner O'CONNELL. Do you suppose there are affiliated with the American Federation of Labor, either directly as local unions organized, or indirectly through the affiliated organizations, instances where one single local union has in its membership more members than the total membership of the I. W. W.?

Mr. GOMPERS. Yes, sir.

Commissioner O'CONNELL. The American Federation of Labor employs a large number of salaried organizers whose services are largely used in the direction of organizing the unskilled laborers of the country?

Mr. GOMPERS. Yes, sir.

Commissioner O'CONNELL. The American Federation of Labor disburses large sums of money of its income from the per capita tax for the purpose of organizing the unskilled labor?

Mr. GOMPERS. Yes, sir; at least two-thirds of it.

Commissioner O'CONNELL. The affiliated national and international organizations of the American Federation of Labor largely—a very large number of them accept into membership the unskilled assistants and labor of all kinds connected with their trades and callings?

Mr. GOMPERS. Yes, sir.

Commissioner O'CONNELL. So that in your opinion the statement made that the American Federation of Labor does not attempt to nor does not organize the unskilled labor of the country is not well founded?

Mr. GOMPERS. That is an untruth. It is a statement unfounded by the opponents of the American Federation of Labor and simply repeated and repeated often enough to make the people who repeat it believe it.

Commissioner LENNON. President Gompers, because several people have asked me for such an explanation I want you to give an explanation of the matter

of the peace resolution that was sent to Karl Legien, showing the restrictions of the German Government over free assemblage, free speech, and free press. You have just mentioned it, and some people did not know. They would like to know what the story of it is.

Mr. GOMPERS. At the Seattle convention of the American Federation of Labor last November, two series of preambles and resolutions were introduced, both of them having for their purpose the abolition of wars among nations, and one of the resolutions contained in it a provision recommending or urging the Federal Government of the United States to adopt the policy announced by Mr. Churchill, the first lord of the Admiralty of Great Britain, and for and on behalf of the Government of that country, for a naval holiday; that is, a discontinuance for a year or two of the building of war vessels. The resolution commended the stand taken by Mr. Churchill upon that subject and recommended first that the Government of the United States should second the effort of the British Government in regard to that subject. The committee's report to which these resolutions were referred recommended that the organized labor movement of the several countries of Europe should be communicated with for the purpose of having them make representations to their own respective governments to cooperate in that object, in the carrying out of that object. As being part of the International Federation of Trade Unions, I communicated with the chief executive officer of that federated body and asked him to transmit the resolutions adopted by the American Federation of Labor convention to the officers of the various trade-unions in their respective countries. I received a reply that that was impossible; it would be a violation of the laws of Germany; the trade-union movement would find themselves in jeopardy and the men themselves in jeopardy if that was done. In other ways the officers and the offices were helpful to me in having the resolution translated in a number of different languages, and they were returned here and I sent them from here to the offices of the trade-union movements in those respective countries.

Commissioner LENNON. President Gompers, would you state the policies and attitude of the Federation and its affiliated organizations as to the carrying out of collective bargains and trade agreements and any agreements that are entered into with employers for definite time?

Mr. GOMPERS. The American Federation of Labor has repeatedly declared and emphasized that agreements entered into between organized workmen and their employers, covering a specific period, with reference to wages, hours, and conditions of employment, should be sacredly kept, and I think that perhaps the most conspicuous instance where there was a provocation, not on the part of the employers themselves, but by reason of the interests involved, was in the case of the United Mine Workers of America, when, during the anthracite strike, a general clamor went up for the United Mine Workers to hold a special convention and declare a general strike of all the coal miners of the country in spite of the fact that the great desire to be helpful was manifested by all; yet, to the great credit of the United Mine Workers, they said that that leaves out their averments with their employers, and as a consequence they kept their faith, they kept their words, their pledged words, and it worked out, and instead of placing it in the power of the employes to say that it is no use to enter into agreements with this organization because at any convenient time it would break it, they had the additional incentive to enter into new agreements, and in so far as the anthracite miners' strike is concerned, it terminated with considerable improvement in their condition.

Chairman WALSH. There was some question asked by Mr. Hillquit that I interrupted you in your answer, saying that you would have an opportunity hereafter to make answer. If you can recall it, why, you may answer it now; if not, of course, you understand you are to be called in rebuttal after you hear the other witnesses. Do you recall it now?

Mr. GOMPERS. I do not know just what you mean now.

Chairman WALSH. Then you will have an opportunity and can do it later.
(Witness excused.)

TESTIMONY OF MR. JOSEPH J. ETTOR.

Mr. THOMPSON. Will you please give us your name and address?

Mr. ETTOR. Joseph J. Ettor, New York City.

Mr. THOMPSON. Of New York City?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. What is your occupation?

Mr. ETTOR. What is my trade or present occupation?

Mr. THOMPSON. Either the trade or present occupation; either one or both.

Mr. ETTOR. I am a metal worker by trade, and my present occupation is national organizer for the Industrial Workers of the World.

Mr. THOMPSON. I might say, Mr. Chairman, and members of the commission, that we had requested by letter Mr. W. D. Haywood to come here and represent the Industrial Workers of the World along with Mr. Vincent St. John, and Mr. Haywood replied in a letter, which is part of the record of the commission, that he was sick and unable to come, and asked us to send for Mr. Etor in his stead, who was then in Wakefield, Mass., which we did, and Mr. Etor is here in that way.

Chairman WALSH. Very good.

Mr. THOMPSON. How long have you been connected with the Industrial Workers of the World officially?

Mr. ETTOR. I have been a member since it organized, and I have been an officer now in the general organization since 1908.

Mr. THOMPSON. You may state again for the record the date of the organization.

Mr. ETTOR. I have been a member of the organization since its inception, 1905, and an officer in the general organization since 1908.

Mr. THOMPSON. Mr. Etor, I will ask you if the constitution or form of organization of the Industrial Workers of the World is printed?

Mr. ETTOR. It is.

Mr. THOMPSON. Have you got a copy of it with you now?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. Would you mind furnishing the commission with that copy?

Mr. ETTOR (handing pamphlet). That is the constitution with the latest amendments.

Mr. THOMPSON. I will ask to have this marked "Mr. Etor's Exhibit No. 1." (Received and marked "Etor's Exhibit No. 1.")

Etor Exhibit No. 1, "Preamble and Constitution of the Industrial Workers of the World," published by the I. W. W. Publishing Bureau, was submitted in printed form.)

Mr. THOMPSON. Have you any printed proceedings of conventions or other official bodies meetings of the Industrial Workers of the World with you that you could furnish the commission?

Mr. ETTOR. I have various papers and various publications of our organization.

Mr. THOMPSON. Have you any proceedings of the last convention held in Chicago which are printed?

Mr. ETTOR. No; but I could furnish them to the commission later.

Mr. THOMPSON. Would you be willing to do that?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. Mr. Etor, it has been said here by Mr. Vincent St. John, representing your organization, that the Industrial Workers of the World were opposed to any and all contracts on their behalf with employers. Is that as you understand it?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. I would like——

Mr. ETTOR. With the proviso, he said, "all time agreements."

Mr. THOMPSON. Yes; all time agreements. Then what kind of agreements other than time agreements are you willing to make with employers?

Mr. ETTOR. Merely agreements that express the conditions under which we go to work for the time being.

Mr. THOMPSON. Are there any limitations upon the conditions which you are willing to put in such a contract? Do they include hours, wages, working conditions, generally?

Mr. ETTOR. Why, conditions that are agreed by the workers and the representatives of the employers.

Mr. THOMPSON. Would it be permissible, under your form of organization, to include in such an agreement a form of arbitration and the appointment of an arbitration board?

Mr. ETTOR. Yes; providing that it is only the employers and the employees: no third party.

Mr. THOMPSON. No third party?

Mr. ETTOR. No.

Mr. THOMPSON. The fact, then, that you do not permit a time agreement does not prevent you from organizing machinery for the mediation and, if you please, for the arbitration of disputes between employers and employees which call for just the representative of both sides?

Mr. ETTOR. No. In fact, that is a mistake. In the best sense of the term, the I. W. W. organizes the only machinery which gives the workers representation in disputes with their employers.

Mr. THOMPSON. Will you please state how?

Mr. ETTOR. I may go further, if you please?

Mr. THOMPSON. Yes, if you please.

Mr. ETTOR. For example, on a strike committee of the I. W. W. no one can take part except the strikers themselves, to go and represent the strikers before the employers. No one can go there except strikers themselves. They may have a spokesman, but he has no other rights except as a spokesman. As a matter of fact, I repeat, the I. W. W. organizes the only possible way by which the workers get actual and direct representation in their dealings with their employers.

Mr. THOMPSON. To illustrate, Mr. ETTOR—what I mean by an illustration, let me give this to you: Assuming that a strike committee from the Industrial Workers of the World had called on an employer with reference to certain matters they wished—demanded, rather—and that the employer agreed to those demands, and then said to this committee: "We would like to institute a board of arbitration or mediation, whatever you want to call it, consisting of two members appointed by you and two members appointed by me, that shall listen, sit and listen, and adjudicate disputes which may arise between the firm and the workers." Could this committee of strikers, with the consent of the people they represented, agree to that form of arrangement?

Mr. ETTOR. Providing that the board so constituted would not act as an umpire.

Mr. THOMPSON. Well, if the board so constituted only consisted of the appointees of the workers and the appointees of the firm; if, you say, these four people should agree with reference to a matter in the future, would that be binding on the workers?

Mr. ETTOR. They could only agree tentatively, not finally. Any final agreement would have to be put to a vote of the workers.

Mr. THOMPSON. In other words, it is your—

Mr. ETTOR (interrupting). That is, the best they could do would be to report to the workers that they had gone into certain matters and had come to a certain definite understanding, and then the workers would vote yes or no on the proposition.

Mr. THOMPSON. In other words, the representatives of the workers would have no power to hand down a decision which would be binding on the workers?

Mr. ETTOR. No.

Mr. THOMPSON. For any length of time?

Mr. ETTOR. No, sir.

Mr. THOMPSON. And that, therefore, as a matter of fact any agreement or arbitration or settlement of dispute between the workers and a firm in such dispute, there could be no settlement by any appointed body, but it must be by the workers as a whole, where the dispute arises?

Mr. ETTOR. That is correct.

Mr. THOMPSON. And consequently, the representatives of the Industrial Workers of the World have no power to enter into these collective agreements which you spoke of here?

Mr. ETTOR. No, sir.

Mr. THOMPSON. Now, in the enforcement, Mr. ETTOR, then, of any difficulty relating to the workers, the theory of the workers, if I state it correctly, is to submit it to trial of a strike if need be?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. That would be—it must be, of course, the case if there was a discharge of a worker and the other workers wanted him reinstated, that they must finally—it must be enforced by means of a strike if the employer refuses to do so?

Mr. ETTOR. Well, that is a matter to be left to the workers.

Mr. THOMPSON. I mean, they have no means of establishing any other machinery to settle that point?

Mr. Error. The point is that the officers of the I. W. W. haven't anything else to say in the controversy except the power of advising as to what course should be pursued—that is, the suggestion of the course to pursue; but final action and decision depends upon the workers themselves.

Mr. Thompson. In other words, under your form of organization, your method of handling industrial disputes, there could be no prearranged machinery by which the question of this man discharged could be handled by a definite body, unless a body of the workers?

Mr. Error. Yes, sir; there may be a prearranged machinery within the local union. That is, the local union may have in its by-laws—may have a committee that would attend to all such matters and offer advice to the workers.

Mr. Thompson. But—that is, the organization of the local itself. But there could be no means of establishing an agreement with the employer by which certain machinery could be established in which he would have an equal office in point of membership for decision?

Mr. Error. No; we don't give the employer anything to say in the machinery, in the conduct of our work.

Mr. Thompson. Then, in the case of the discharge of the worker, and the employer should ask you to consider his case by some standing body or temporary body, you would be compelled to say to him that he must reinstate him, or there must be a strike?

Mr. Error. That is again a matter that would be left to the local union.

Mr. Thompson. I mean in case the employer refused to reinstate him? Suppose your committee, in representing the strikers, the strike committee, or the workers' committee, or whatever form it may be of the local union, should go to the union and say, "We want this man reinstated," you could not agree to any machinery by which that would be tried out; you could not agree in advance to any machinery by which that question could be tried out?

Mr. Error. The committee can not agree to anything. The only thing it can do is to discuss the question and come to a tentative understanding and make its report and its recommendation to the workers. The workers are the ones that decide what action and what position shall be taken.

Mr. Thompson. Then, in any case of discharge, Mr. Error—

Mr. Error (interrupting). In other words, whatever committees there are are generally committees elected for a specific purpose, and they get specific instructions, and they are only there to do whatever they are told to do, and nothing else.

Mr. Thompson. Well, in such a case if the committee appointed by the workers and representing them should go to the firm and the firm should refuse to reinstate the workers, the only means that the workers would have in case they wanted to insist upon that would be a strike, is that it?

Mr. Error. They might not decide to strike.

Mr. Thompson. I mean if they wanted to insist upon it?

Mr. Error. I repeat that is a matter left to the workers.

Mr. Thompson. I mean suppose the workers should insist upon that man being reinstated, what other methods have they got at hand; what other instruments other than the strike in such a case?

Mr. Error. Well, they might strike outside of the shop, or inside of the shop.

Mr. Thompson. You mean by slow work and poor work, and so on?

Mr. Error. They might do good work and still strike on the job.

Mr. Thompson. Well, what, for instance, inside, and do good work?

Mr. Error. Well, for instance, a union of restaurant and hotel workers. A number of patrons are in the habit of coming in and asking the waiter what is good on the bill of fare, and it will be the duty of these union men to tell them what is good and what is bad. That is commonly known as "open-mouthed strike," in which the workers do not do anything bad—they actually tell the truth of the situation [laughter].

Mr. Thompson. Well, a case other than a restaurant case. Take a case in a factory where they are making silk, for instance. What is the method there, inside?

Mr. Error. The silk-workers union might, for example—it is in the best position to do so. They could explain how the silk dresses are really tin-can dresses—that is, two parts of the dresses are made out of tin cans—and they might explain how, in the process of dyeing, lead is put in in order to affect the weight.

Mr. Thompson. Well, assuming that such action brought no response that was beneficial to the workers, what else could they do, then, if they were going to insist upon the reinstatement of that man?

Mr. ETTOR. Well, this is a method of warfare, Mr. Thompson.

Mr. THOMPSON. Yes.

Mr. ETTOR. The question as to whether it would bring response immediately or not would depend on to what extent it would affect the pocketbook of the boss.

Mr. THOMPSON. Well, the last resort would have to be the strike, wouldn't it?

Mr. ETTOR. Taking the strike as a general term, it may be a strike outside or a strike inside of the mill or factory.

Mr. THOMPSON. Then your organization believes that the method you speak of—the strike inside or the strike outside—constitutes the best method to adjust questions arising in a shop in which the workers from day to day are seeking justice, for instance, as to questions of discharge, questions of mistreatment of workmen by the foreman or other members of the firm, questions of disagreement as to work and the prices as to work and wages, and bad conditions in the shop——

Mr. ETTOR (interrupting). I won't say they are the only methods, but I say they are the only methods left to us.

Mr. THOMPSON. What objection is there in fact to entering into an agreement with an employer by which such things as the discharge of a man, the mistreatment of an employee in a shop, the discrimination in the case of an employee in the matters of work, or the time, or the price, or the place in the shop, or improvement of shop conditions could be left to the adjudication of a body previously determined upon by the workers and the employing firm?

Mr. ETTOR. There are two objections. One objection is that all agreements are dictated by the strongest party to the agreement. The second objection is that since this board would be composed of four men, two of them being loyal to the workers, and two of them being loyal to the employers, they could never come to an agreement.

Mr. THOMPSON. It is perfectly possible, then, that they might agree on a third (fifth) man who might be either an employer or one of the workers.

Mr. ETTOR. That would be impossible, for the employer would never agree to a workingman, or a working woman. They would always insist on what they call a public-spirited citizen. And the public-spirited citizen is an employer who has succeeded in organizing his industry to that point of efficiency that he does not have to attend to it himself. He has spare time to devote to a sort of a social sport called civic duty.

Mr. THOMPSON. Now, Mr. ETTOR, from your experience with the adjustment of such matters as I have spoken to you about by the Industrial Workers of the World, do you think that they have adequate and sufficient machinery for the settlement of those matters that would be superior to the establishment by the workers and employers jointly of a board empowered to decide these questions from day to day?

Mr. ETTOR. I said in my previous reply that it is not a question of whether that is the best method, but it is the only method left to us.

Mr. THOMPSON. That is left to you as workers, or left to you by reason of your organization?

Mr. ETTOR. No; left to the working class.

Mr. THOMPSON. Upon what basis do you make that statement; what are the reasons that support it?

Mr. ETTOR. In social questions the strongest decide what shall prevail and what shall not.

Mr. THOMPSON. Well, that is so indefinite, Mr. ETTOR, and may be applied so differently——

Mr. ETTOR (interrupting). I think that is quite definite.

Mr. THOMPSON. I would like it more in detail.

Mr. ETTOR. Well, to this extent: Say that there is a dispute between the workers and the employer over a definite proposition. We say that the only way to settle that dispute is for the employers' and the employees' representatives to get together and find out what the dispute is really about. However, as to which side is going to win on the dispute depends upon which side is the strongest. In other words, if the workers find themselves in a position at a particular time because of the market demands and because of the power of their organization in the shop, or for any other reason that is sufficiently strong, they will enforce their will. If they lack—that is, if the work is slack and there is not sufficient organization in the shop and there is not sufficient knowledge and intelligence among the workers to effect the desired results—then the employer will win out.

Mr. THOMPSON. Now, Mr. Ettor, what has been your experience in the adjustment of disputes of this kind while you have been an official connected with the Industrial Workers of the World? Where and in what industries?

Mr. ETTOR. Well, the greatest instance—that is, the instance of any note—is the strike in Lawrence.

Mr. THOMPSON. The strike in Lawrence was a general strike in Lawrence in one industry, was it not?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. Against many firms?

Mr. ETTOR. Against all the firms in Lawrence.

Mr. THOMPSON. Yes, sir. Now, in that case, that clearly does not come within the kind of cases I am thinking of—the adjustment of cases of discharge and of discrimination in the shop and of unfair working conditions. That was a general strike. But take what questions arise from day to day in shops where you have had and dealt with the adjustment of those cases under your method.

Mr. ETTOR. Well, you see that is not right. It is not the practice of the organizers of the Industrial Workers of the World to have any experience of that nature, because that is work that is attended to by the members of their local union themselves. It would only be in rare cases where an organizer would be called in.

Mr. THOMPSON. Therefore you have had no experience in regard to that subject yourself?

Mr. ETTOR. Well, I have experience, but I could not give you any definite proposition. The local unions have had successes in that line.

Mr. THOMPSON. Let me make it more definite. Have you got in your organization a union which is established in a shop having, say, from six to twelve thousand workers, where there is from time to time, or rather from day to day, as the questions arise, any adjustment of these industrial disputes? If so, where is it and how are they handled?

Mr. ETTOR. No; we have no local at that number. However, we have locals who have a very small membership in mills and factories that employ five to ten thousand that have been able to settle disputes that way.

Mr. THOMPSON. For the entire membership?

Mr. ETTOR. Why, yes; they settle such disputes as come to their attention or that they desire to take up.

Mr. THOMPSON. Where are those organizations and how are these matters of daily occurrence that are in dispute—

Mr. ETTOR. Well, we have them in the textile industry—Paterson, for example.

Mr. THOMPSON. Well, where is the firm there where you have an organization where they are—that is, where the workers and where you do adjust from day to day these constantly arising industrial disputes between the workers and the firm?

Mr. ETTOR. I could not name—

Mr. THOMPSON (interrupting). Then you would not want to refer this commission to any example for investigation as to the success of your methods?

Mr. ETTOR. I could not give any definite information. That has been done by the local in Paterson.

Mr. THOMPSON. This commission is going to hold public hearings in Paterson, and is very anxious to get information, and will you refer us to some organization or some individual from whom we may get information?

Mr. ETTOR. Why, the officers of the local union of the I. W. W. there.

Mr. THOMPSON. Do you know who they are now?

Mr. ETTOR. No; they have changed officers. That is, I know some of them.

Mr. THOMPSON. Will you give them?

Mr. ETTOR. Ewald Koettgen.

Mr. THOMPSON. Does he live in Paterson there?

Mr. ETTOR. Yes, sir.

Mr. THOMPSON. Is that the only name you can give?

Mr. ETTOR. Adolph Lessig.

Mr. THOMPSON. What others?

Mr. ETTOR. I could not recall any others.

Mr. THOMPSON. Are their headquarters easily found?

Mr. ETTOR. Oh, yes; they are on the main street.

Mr. THOMPSON. Now, Mr. Ettor, do you know from your own knowledge—from your own industrial experience—of any large shop running anywhere from 500 people up where there are arising daily questions of discharge which are

called into question by the workers, where there are arising daily questions of discrimination which are called into question by the workers, discrimination of various kinds, not only as to the character of the work, but as to the treatment of the employees, and where there are many questions arising in such establishments as to unfair treatment personally by the foreman and the other officials? Now, how will your organization from day to day treat these constantly recurring questions which the workers feel ought to have settlement?

Mr. ETTOR. Why, the way I would do that would to be that the organization would have a grievance committee to which all grievances would be reported. That grievance committee would be either a grievance committee representing each department and functioning in each department of the shop, or a general grievance committee, to which the workers of the various departments could make their grievances known. That grievance committee could investigate the facts and make its report of the investigation to the local union.

Mr. THOMPSON. Do you think—

Mr. ETTOR (interrupting). For example, while I think of it, I have in mind the local union of silk workers of the I. W. W. here in the city. It has two shops in one section of the city in which it is carrying this out. They have shop meetings besides the regular union meetings, and in the shop meetings the chairman from each one of the floors reports the matters that have been brought to his attention that he has investigated, and they ask what he recommends; then the question is put to the house as to what they will do with the report of this chairman on floor No. 1 or 2 or 3, and so on, and the body takes action. For example, it might decide that all the shop chairmen of the various floors go into the office the next morning and make representation to the employer and ask for reparation in the matter and report back to the next shop meeting, to be called either by the general shop chairman or by the shop chairmen themselves or on the insistence of a sufficient number of the workers in that shop.

Mr. THOMPSON. Now, Mr. ETTOR, in any industry of any size, even less than a thousand, where these questions may arise—and I guess you know as well as I do that they do arise every day, many of them—in order to adjust it that way you would have to have practically a daily meeting of the employees, would you not, as a whole?

Mr. ETTOR. Not necessarily. I rather think that once we get into swing of this practice we will do away with the professional labor leader—

Mr. THOMPSON (interrupting). That is not my question.

Mr. ETTOR. And, further than that, I rather think when we get into a thing of this kind and give the employer a taste of that kind of action that he will be somewhat hesitating in repeating these daily offenses and injuries and outrages on the workers—

Mr. THOMPSON (interrupting). Well, now it is possible, too, Mr. ETTOR, that these daily outrages sometimes are merely questions of judgment in which the workers may feel that the employer has erred. But leave that out. That is your method of treating those disputes that may arise. There is nothing else that you would care to add to that—

Mr. ETTOR (interrupting). No.

Mr. THOMPSON (continuing). In order to assist this commission in arriving at a knowledge of your methods.

Mr. ETTOR. I will give this commission all the information that I am asked for that I may have.

Chairman WALSH. Have you much more to ask this witness, Mr. Thompson?

Mr. THOMPSON. I only wish to ask him some questions as to the destroying of property and the taking of life.

Chairman WALSH. I will make this suggestion: You heard the testimony given by Mr. Vincent St. John yesterday?

Mr. ETTOR. I did.

Chairman WALSH. As to the philosophy, plans, and basis of your organization?

Mr. ETTOR. Yes, sir.

Chairman WALSH. Now, do you have any dissent with anything that Mr. St. John said? Or do you care to make any additional statements? We do not want to duplicate testimony, of course.

Mr. ETTOR. No, no; I do not.

Chairman WALSH. You have none?

Mr. ETTOR. No.

Chairman WALSH. That is all, then; thank you.

Mr. ETTOR. However, I want to make the point clear; I want to bring it to the attention of this commission. As I understand, this commission is organized for the purpose of finding out the reason for the labor struggle; and one of the reasons for not only the struggle but all that pertains to it, and particularly the I. W. W., the disadvantage that attends their case. I had in mind what occurred yesterday, and every member of this commission remembers the testimony of Mr. St. John; and yet, as a fair example of the treatment that we receive from the press is the example exhibited last night and this morning, in which all of the papers joined in a chorus of absolute misrepresentation in which they tried to make out that the I. W. W. believes in violence as a reason for itself; in other words, for violence's sake. The I. W. W. is the only organization, as a matter of fact, that would organize the workers in such a way as to make its war cry "War against war." In other words, we are organized against violence, and the only violence that takes place in the struggles of the I. W. W. is the violence that is provoked by the employers.

Chairman WALSH. Is there any further statement, Mr. Ettor?

Mr. ETTOR. No, sir.

Chairman WALSH. Mr. Delano would like to ask you a question.

Commissioner DELANO. If I understand the theory of your organization, it is that you organize an entire trade, all of the employees in a trade, those being highly paid and those getting low pay. Supposing it is the textile industry, a textile mill, you would organize all of the employees in that mill, from the highest paid to the lowest paid?

Mr. ETTOR. Our plan of organization is to organize all the workers of a textile mill into one union from the lowest paid, and the man or woman or child with the least skill to the man, woman, or child with the greatest skill. I want to say that there is absolutely no apprenticeship regulation in our organization. Any man, woman, or child whose labor and whose sweat is required to be coined into dollars for the employer, if their labor is good enough for the employer, we want to organize their energy and their enthusiasm into one union.

Commissioner DELANO. In that method of organization, how do you settle the share or the wages that man and woman should receive? For example, you might in the same organization have highly skilled people getting as high as \$5 or \$6 a day, or very much less skilled people, or just beginners in the industry, receiving perhaps \$1 a day or something like that or less. How do you tell how much they shall have? You couldn't settle that by vote. I should not think. There might be very few of the highly skilled and might be outvoted by the less skilled.

Mr. ETTOR. We do not make any effort at establishing different wage scales. As a general proposition we establish a minimum wage. Or, when we make demands, we make a general demand.

Commissioner DELANO. A general advance of a certain amount?

Mr. ETTOR. Yes, of, say, a given percentage for all involved.

Commissioner HARRIMAN. I asked this question of Mr. St. John yesterday: I said, "Do you believe in violence?" And he said "Yes"; and he did not qualify his answer in any way. I have the notes here. I only felt that it was fair to call your attention to that fact.

Mr. ETTOR. I openly disagree with you. I know he did qualify it.

Chairman WALSH. In what way?

Mr. ETTOR. He qualified it by saying that he did not believe in violence as a method by itself.

Commissioner HARRIMAN. Did you hear that?

Mr. ETTOR. Of course I did. I know his position.

Chairman WALSH. Any other question?

Commissioner BALLARD. You spoke of a strike within the shops and said, for instance, the employer might pursue some unfair or dishonest policy. Are we to understand when wages are good and the worker is getting what he wants he withholds that information, but that at other times he will tell on the manufacturer?

Mr. ETTOR. That is what the manufacturer does to the worker.

Commissioner BALLARD. I am only asking you for the worker at this time.

Mr. ETTOR. Yes; in other words, in our struggle for better conditions, in our struggle for more life, in our struggle for more humanity against property and profits, we propose to pay the employer in equal exchange. The employer keeps us at work, but when we join the union, then he tells us that we are bad workers.

Commissioner BALLARD. Are you?

Mr. ERROR. Well, he decides that question. He has his own scales and his own tape measure by which he decides what is bad and what is good. We propose to have a tape measure and scale of our own.

Commissioner BALLARD. If the manufacturer really honestly tries to give good goods and fair treatment, and you were still discontented, do you think it would be right to injure him if you could?

Mr. ERROR. I can not imagine any such situation. The tendency is not that manufacturers vie with one another as to who can turn out the best goods, but the tendency is that manufacturers vie with one another as to who can produce the cheapest by employing the cheapest labor as well as the cheapest raw material, and who can sell it the cheapest.

Commissioner BALLARD. You have had experience with no others but those?

Mr. ERROR. That is all the experience that I have had with all of them.

Commissioner BALLARD. You are very unfortunate.

Commissioner O'CONNELL. Does the I. W. W. believe in the methods that have been held up for political action as laid down by the Socialists here?

Mr. ERROR. No, sir.

Commissioner O'CONNELL. You do not believe in political action?

Mr. ERROR. We believe in political action of our own. That is, we believe in direct political action by the workers in which every worker in industry has a vote in his own union to determine the affairs of the workers at work, for the interests of the workers, but we do not believe in so-called political action which presupposes the going to a booth on a certain day, under certain conditions, and voting for any lawyer or for any of these public-spirited gentlemen, and that they are going to go to Congress, or anywhere else, and through the process of passing laws, they will create better conditions for the workers.

Commissioner O'CONNELL. I think Mr. Hillquit, who has addressed us here and who is a lawyer by profession, is a candidate for Congress. You would not feel like supporting him, trusting your affairs in his hands in Congress?

Mr. ERROR. You put it right. I might add, Mr. Hillquit or anybody else.

Commissioner O'CONNELL. Are you a native of the United States?

Mr. ERROR. Yes, sir.

Commissioner O'CONNELL. Born in the United States?

Mr. ERROR. Yes, sir.

Chairman WALSH. At this point the commission will stand adjourned until to-morrow morning at 10 o'clock, to meet in the aldermanic chamber.

The revised program will be that Mr. Max Hayes will be the next witness; then G. W. Sullivan, Morris Hillquit, Vincent St. John, and Samuel Gompers will be called in rebuttal.

(And thereupon, at 4.30 o'clock, the further proceedings were adjourned from this Friday, May 22, until Saturday morning, May 23, 1914, at 10 o'clock a. m.)

NEW YORK CITY, *Saturday, May 23, 1914.*

Present: Chairman Walsh, Commissioner Garretson, Lennon, Ballard, O'Connell.

Chairman WALSH. Please come to order. Call your next witness, Mr. Thompson.

TESTIMONY OF MR. MAX S. HAYES.

Chairman WALSH. Just a moment before you proceed. I think, as you have announced the program, it would be as follows: Mr. Hayes and Mr. F. R. Gordon and Mr. Sullivan in behalf of the A. F. of L., and then in rebuttal Mr. Hillquit, Mr. St. John, and Mr. Gompers.

Mr. THOMPSON. That is correct.

Chairman WALSH. I will make the announcement that we will adjourn at 12 o'clock promptly to-day for the day, and we would like to conclude these witnesses before 12 o'clock.

Mr. THOMPSON. Mr. Hayes, will you please give us your name, address, and your occupation.

Mr. HAYES. Max S. Hayes; 979 Parkwood Drive, Cleveland, Ohio; editor of the Cleveland Citizen; organizer for the International Typographical Union; national committeeman from Ohio for the Socialist Party; and a few other minor positions.

Mr. THOMPSON. What is this paper or journal you speak of, Mr. Hayes?

Mr. HAYES. It is a weekly labor paper.

Mr. THOMPSON. Published by the typographical union?

Mr. HAYES. No; published by a corporation of which I am a member.

Mr. THOMPSON. It is not affiliated or identified with any particular organization?

Mr. HAYES. Wholly independent as a newspaper.

Mr. THOMPSON. Then, from your statement, Mr. Hayes, we are to understand that you are a member of a union affiliated with the American Federation of Labor, and also you are a member of the Socialist Party?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. And an organizer for both in the past?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. Mr. Hayes, did you hear the testimony which was given here yesterday by Mr. Gompers?

Mr. HAYES. I did.

Mr. THOMPSON. In reply to the cross-examination of Mr. Hillquit?

Mr. HAYES. Yes.

Mr. THOMPSON. I would like to have you state, as you see it, the position occupied by the American Federation of Labor, its aims and objects, and the position occupied by the Socialist Party and its aims and objects; wherein they agree and in what respect they differ.

Mr. HAYES. Well, in a general way, the aims and objects of the American Federation of Labor, so far as its political and social demands are concerned, are quite similar; in fact, are about the same as those of the Socialist Party in the immediate demands of the platform on which the latter organization is based. Holding a sort of dual position in the two organizations, having attended the conventions of the American Federation of Labor during the last 15 years as a delegate, I have followed the trend quite closely, and naturally have gained some convictions relative to the principles upon which both organizations are founded. I want it understood that I am not here speaking as a representative of either organization. I have not been delegated by the Socialist Party nor by the American Federation of Labor to express the views of their memberships; but they are my own impressions. In other words, I do not wish to pose as a labor leader or a Socialist leader; but I would prefer, however, to be classified, perhaps, as an ordinary labor and socialist agitator. I sometimes become a little bit provoked when I am referred to as a labor leader or a Socialist leader, because my impression of the democracy of the dual movements is that they lead themselves largely, but have spokesmen, advocates, agitators, etc. In my capacity as a delegate to the American Federation of Labor and as a member of the Socialist Party, as editor of the Citizen for the last 25 years, as a member of the trade-union movements for 30 years, and about 19 years of the Socialist Party or the Socialist movement, I have come to the conclusion that the American Federation of Labor is the logical economic organization for this country. I have no sympathy with or for the so-called Industrial Workers of the World any more than I had for the Socialist Trade and Labor Alliance which was organized in opposition to the American Federation of Labor prior to the I. W. W., or with the American Labor Union, which was launched after the A. R. U. strike. I do not fully agree with Comrade Debs, on the one hand, regarding his views as to what form organization should take on the industrial field. Nor do I agree with Brother Sam Gompers, on the other hand, in his opposition to the Socialist movement or to the progressive demands made by the Socialist movement or the principles thereof.

My opinion is, after being in close touch, in daily contact, not with the officers of these organizations but with the rank and file—those are the ones with whom I come in touch, because it is my business as an organizer; and I believe I am as fully conversant with the views of the average worker—the man in the street, so called—as any person can be, because of that daily contact. That there is not the difference between the membership of the Socialist Party and the membership of the trade-union movement that people are frequently led to believe exists, because of the contentions, the rivalries, the jealousies, or the animosities that may exist between the so-called leaders of these movements. I do not wish to deal particularly with the individuals, because, in the long run, there is not very much gained in the matter of criticizing individuals. When I speak of individuals I want it understood I am dealing with their views, with their policies. Whatever antipathy may exist between Mr. Debs

and Mr. Gompers as national figures, who are known as representatives of the organizations with which they are affiliated, does not generally exist among the rank and file. I listened very attentively to Mr. Gompers's examination yesterday, and I was not particularly surprised at some of his statements, because he has given expression to substantially the same views in conventions with reference to the Socialist movement.

To the ordinary individual it would appear that there is a sort of gulf, an inseparable barrier, between the Socialist organization on the one side and the recognized labor movement on the industrial field on the other side.

Now, as a matter of fact, the very large bulk of the membership—a majority, I would say, of the membership of the Socialist Party—is composed of trade-unionists, and a very large proportion, that is, the largest proportion of the membership of the Socialist Party, is of the trade-union world. Instead of there being antagonism—I speak from experience when I say, as representative of the typographical union, that I have been very materially assisted by Socialist organizations. For instance, in cities and towns in the Middle West where we had no local organization and where there appeared to be difficulty in getting the printers to form a union to affiliate with the international organization, I have corresponded with Socialists, members of Socialist locals, and enlisted their cooperation in interesting printers upon the subject of organization, later following up the correspondence by a personal visit, with the result that we formed a union.

That is my individual experience, and undoubtedly many organizers, international organizers—you understand I am making a distinction between international organizers and the organizers of the American Federation of Labor, those directly connected with headquarters in Washington. I know, from representatives of the international affiliated with the American Federation of Labor, they likewise have been assisted by and used Socialist organizations in the smaller towns, and we have Socialist organizations in hundreds of towns where there are no unions, and they aid in securing the formation of trade-unions. I might sit here and explain for an hour more of the cooperation that exists between the rank and file, between the memberships of the Socialist Party and the labor unions, particularly in the smaller towns of the country.

Mr. THOMPSON. May I interrupt you at this point?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. Is it known to the Socialist Party that you are a member of the A. F. of L.?

Mr. HAYES. Oh, certainly.

Mr. THOMPSON. Has there ever been any objection to your membership of the A. F. of L. by the Socialist Party?

Mr. HAYES. Absolutely none.

Mr. THOMPSON. Has there ever been any objection by the American Federation of Labor to your membership and participation as an official in the Socialist Party?

Mr. HAYES. None whatsoever.

Mr. THOMPSON. Does that condition which exists with reference to you exist with reference to thousands of other workers?

Mr. HAYES. It does.

Mr. THOMPSON. Is there a fair percentage of the membership of the American Federation of Labor, in your opinion, that are Socialists, avowedly such?

Mr. HAYES. Yes, sir. There is a very large percentage. I would not be able to give you exact figures, but you can take the convention proceedings. If you will follow the A. F. of L. proceedings and those who are delegates to the conventions of the American Federation of Labor know it, you will observe that there is a steady increase in the representatives from the international unions who are also Socialists. Take the miners, just for an illustration, the Miners' organization; a very large percentage of the United Mine Workers to-day are Socialists. That is particularly true in the Middle West, in Ohio, in Indiana, in Illinois. Some of those mining towns are almost solidly Socialist, which is demonstrated by the votes cast in the elections for delegates sent to their national conventions, usually held in Indianapolis. The same is true of the brewery workers, the machinists, and other trades in which there has been steady progress made during the past 6 or 8 or 10 years.

No objection has ever been raised by the Socialist Party. In fact, the Socialist Party, or rather, the Socialist press and the prominent Socialists, who do not happen to be in a position where they themselves can affiliate with the trade-unions, have advised and constantly insisted that the rank and file of

the Socialist membership, where they are eligible, should join the trade-unions and assist in the struggles on the industrial field.

Mr. THOMPSON. Mr. Hayes, you have said that you believe that the American Federation of Labor is the logical leader of the working class in this country?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. And, for that reason, you object to the Industrial Workers of the World, to the Socialist Labor Party, to the American Labor Union, and to any other organization which undertakes to divide the field. Am I correct in that statement?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. Why, then, do you cooperate with the Socialist Party; and what is the reason that these two bodies, the American Federation of Labor and the Socialist Party, are capable of existing side by side and not dividing that field?

Mr. HAYES. I am a member of the trade-union movement because it is the bread-and-butter organization—the movement that meets the problems on the industrial fields. It has been stated by President Gompers that the matter of reducing the hours of labor, raising wages, gaining more decent working conditions in shops, mines, and on the railroads in the country is an absolute necessity and in that I fully agree. But I recognize the limitations of the trade-union movement, and hence I have come to the conclusion that it is absolutely necessary also to give a political expression to the wants and desires of the working class in order to place ourselves in a position of equality in waging the contest for these improvements with the capitalists, who are not only organized industrially but politically, and are in control politically and industrially.

As to the political movement of labor, I recall when some of the ultraconservatives of the American Federation of Labor opposed any and every form of political action, contending then, what the Industrial Workers of the World claim to be possible, that they can accomplish by direct action and without the assistance of governmental weapons, they would achieve—the full product of their toll.

We had, for instance, in the Kansas City convention in 1898, in the Detroit convention, in the Louisville convention, and in other sessions debated those points, and the prominent members and officers of the American Federation of Labor took the position at that time that the labor movement should keep its hands off of political maneuvering in order to gain those advantages.

They would make no political effort whatever except to petition and make a demand here and there for some immediate relief where there was a possibility of obtaining it. But there has been a steady evolution even among those conservatives to the extent that they now operate through what they call a labor representation committee, adopting the name of the Labor Representation Committee of Great Britain. That is merely the name, however. There were, I believe, three individuals selected at a conference in Washington to operate this political policy and to obtain certain objects, whereas in Great Britain the Labor Representation Committee was the formation of the Labor Party, with which, as was brought out yesterday, the Independent Labor Party of which Kier Hardie is one of the prominent spokesmen, is affiliated, and with which the British Socialist Party will undoubtedly affiliate during the next few months, as there is a referendum vote in progress now on that very proposition; so there will be a combination in Great Britain of those three or four parties, including the Fabian Society. And, now, do you want to ask a question?

Mr. THOMPSON. I want to ask you directly, isn't it the fact to-day that by this affiliation, which you spoke of, that the American Federation of Labor is taking a very direct interest in the legislation affecting the welfare of the workmen of this country?

Mr. HAYES. Yes; that is what I intended to develop—to show that the officers of the American Federation of Labor have advocated political action and the election of members to Congress who are now classified as a "labor group" in a loose manner. Practically every member of the "labor group," however, maintains his adherence and claims he is responsible to his political party, as, for instance, Secretary of Labor Wilson, who made the public statement that he can not and will not be regarded as a "labor representative"—he is a Democratic Congressman. He was elected as a Democrat, and, logi-

cally, affiliated with his party in Congress. He is, however, a labor man. Now there comes the division in the labor movement. The conservative element are inclined to the view that more can be accomplished—having come to the point where they are now willing to engage in political effort—by acting through the old parties in the election of members to Congress, while the radical element, with which I generally affiliate in the American Federation conventions, insist that the only logical, definite, and substantial manner to make progress is through a party that is composed wholly and solely of labor men. That is, we contend that it is essential to be as conscious of our solidarity as workers on the political field as we are on the industrial field; that it is an absurdity, for instance, to make demands upon the industrial field from the employing class and then turn around and elect the representatives—largely attorneys—very frequently of corporations. I am not making the fling at the attorneys generally, but it is nevertheless true that attorneys are in preponderance at Washington.

Now, we make certain demands on the industrial field, and then elect attorneys to Congress and to the State legislatures who are dominated, as has been proven in any number of investigations, by large corporations; and, naturally, understand their class interests much better than the workers understand their when it comes to a crisis, and make it difficult to secure the enactment of fundamental laws and legislation which, for instance, we have been demanding for many years, such as the curbing of the injunction curse in labor controversies, amending the Sherman law, and so on. It is difficult to force those measures through the National Congress or the State legislatures because of the fact that these attorneys and capitalists, manufacturers, merchants, etc., understand their class interests much better than the workers understand their class interests, and hence in every contest where the lines are sharply drawn the capitalists' representatives usually are opposed to the enactment of remedial legislation for labor. In this country we have had a tremendous advantage over the workers in Europe, who were mentioned yesterday. The workers in Europe have had more to contend with than we have had in this country. They have been held in a condition of industrial slavery for centuries, from the feudal state down through the present capitalist condition of industry. The workers in Europe have found class lines drawn against them—the lines of privilege—the church and state were allied against them; and while here we have been practically free, yet the workers are paying absolutely no attention to their political power, so far as going along independent lines are concerned.

Mr. THOMPSON. Mr. Hayes, did I understand you correctly that one of the lines of demarcation between the American Federation of Labor and the Socialist Party is this: That in matters of legislation the American Federation of Labor will affiliate, you say, indiscriminately with any other party if it may be able to carry its purposes, whereas the Socialist Party believes in organizing a party of its own to stand for whatever it advocates?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. Now, in regard to the concrete or present industrial situation, the Socialist Party believes in letting that field lie in the hands of the American Federation of Labor to adjust the present-day working hours, wages, and conditions?

Mr. HAYES. Yes, sir.

Mr. THOMPSON. Whereas they look forward to a program which deals more particularly with the philosophy or theory of what society should be industrially?

Mr. HAYES. In a political sense; yes.

Mr. THOMPSON. That is correct?

Mr. HAYES. Yes.

Mr. THOMPSON. Now, Mr. Hayes, coming down to one or two concrete questions. Mr. Gompers stated yesterday, I think, if I remember it rightly, that the American Federation of Labor would take a stand against the inauguration of an eight-hour workday, or, rather, the limitation of the hours of work, by legislation. In that respect was that his personal opinion or is that the general tendency of the American Federation of Labor on that subject?

Mr. HAYES. Well, it certainly is his personal opinion, because I don't know of any instance, nationally or in any State, where there has been any opposition from the trades-unions against the enactment of an eight-hour law. In fact, it has been the cardinal principle of the American Federation of Labor to demand the enactment of an eight-hour law to comprise not only the workers

directly employed by Uncle Sam but those who are furnishing supplies to the United States Government. We have the same law in States. I do not know but what Mr. Gompers was misunderstood somewhat. That is——

Commissioner O'CONNELL. That certainly could not have been Mr. Gompers's position yesterday. I think Mr. Thompson here had the question——

Mr. HAYES (interrupting). I did not hear him say it.

Commissioner O'CONNELL. Mr. Gompers purely referred to municipal legislation and national which the organization had——

Mr. HAYES. As I understand Mr. Gompers's contention against the enactment of the eight-hour law, it was that he would oppose its application to business as a whole—to private business?

Commissioner O'CONNELL. Yes.

Mr. HAYES. Now, I entirely disagree with Mr. Gompers upon that point. I don't believe there are any considerable number of unions—none, at least, that I can call to mind—that would oppose the general, national, sweeping eight-hour law to comprise every man, woman, and child in the country engaged in the industrial world any more than they would on the minimum-wage question. I don't like to take issue——

Chairman WALSH (interrupting). The matter is a little confused in my mind, so that when Mr. Gompers comes back on the stand he should be asked the question by counsel straight out, and so then we will not need to go into the difference, if any, of the recollection of the commission on the matter. I rather recollect as Mr. O'Connell does, and we will have it straightened out when he comes on the stand. Now, as I take it, the question has been fully answered that Mr. Hayes is in favor of such legislation limiting the hours of labor of the workers wherever it comes from, and that his observation has been that the American Federation of Labor likewise has had that position.

Mr. HAYES. No; the American Federation of Labor has not, to my knowledge, gone on record in favor of a general eight-hour law to be enacted by the National or State Government covering the entire industrial field, but merely so far as it related to employees of the Government—National, State, and local.

Mr. THOMPSON. Is the American Federation of Labor committed to a program of hostility to legislation in favor of the working classes?

Mr. HAYES. No, sir; it is not.

Mr. THOMPSON. As a member of the American Federation of Labor, you would say that the natural tendency of that body would be to sympathize and help the passage of legislation leading to or helping the condition of the working class?

Mr. HAYES. The American Federation of Labor?

Mr. THOMPSON. Yes.

Mr. HAYES. Oh, yes; certainly. The American Federation of Labor has always stood behind anything in the nature of progressive legislation.

Mr. THOMPSON. In other words, in the political field as well as in the industrial field the American Federation of Labor stands for progressive programs, so far as the workingman's interests are concerned; is that correct?

Mr. HAYES. Yes, sir. The only objection I have, it does not go far enough.

Mr. THOMPSON. I understand that. I just want to get the general lines laid down here so the commission may understand it. Now, Mr. Hayes, with reference to the limitations, you say the American Federation of Labor places no limit on the demands that they may make from time to time with reference to wages or hours; or, rather, with reference to getting a larger share or, perhaps, the whole share of the product it produces; is that correct?

Mr. HAYES. Yes, sir. I believe Mr. Gompers expressed the general opinion. In fact, I was very pleased to hear him make that admission.

Mr. THOMPSON. Would not that be the natural position of the American Federation of Labor? It must be that position.

Mr. HAYES. I can not see where they could take any other position where the thing is put up squarely to the membership.

Mr. THOMPSON. Well, wouldn't that be naturally the position of the American Federation of Labor—must be that position?

Mr. HAYES. I do not see where they could take any other position, where it is put up squarely to the membership.

Mr. THOMPSON. Mr. Chairman, I am through with the witness.

Chairman WALSH. Any questions?

Commissioner GARRETSON. Yes; I would like to ask Mr. Hayes a question or two. It may not altogether have a direct bearing on the testimony, Mr. Hayes, but I want to get an understanding myself of a certain phase here because

you take somewhat different ground from any exponent of your faith that I have seen. Bear in mind, I am not, in asking the questions—I am not affiliated with either interests, the A. F. of L. nor the Socialist Party. Do I understand this, from your view point, that you regard the trade-union movement, or in other words, I will narrow it somewhat and say the American Federation of Labor, as the proper form of machinery for realizing such benefits as can be gained for the workers from day to day without waiting for the success of this or that improvement that might be brought about by political action, while at the same time, in your character as a citizen, you believe that the Socialist Party is the proper form of the expression of your legislative beliefs and the means for securing the same? Am I interpreting your meaning right or not?

Mr. HAYES. Substantially. I would like to ask or amplify that to this extent. I regard, as I stated in my opening remarks, the American Federation of Labor has the legitimate, recognized, organized industrial movement on this continent. It is not perfect. My contention is that the American Federation of Labor is broadening from the purely craft or trade form of organization into an industrial form. There are at least a dozen international unions affiliated with the American Federation of Labor that are industrial in their several trades—as the miners, the brewery workers, and other bodies; and, for instance, the machinists only recently broadened out. They are now talking about merging three of the garment working trades—the needle industry—into one complete union. And right on that point I take issue with the accusations made by representatives of the I. W. W., for they laid such particular emphasis upon this point and it appealed in a large measure to many Socialists the country over, and they repeat what is untrue, to the effect that the American Federation of Labor had neglected the so-called common laborers. I happened to have a debate with a representative of the I. W. W. on this subject in Seattle last November, and challenged him to produce the proofs, he having repeated the same accusation. I showed by the records and the figures, which I expected President Gompers to submit to the commission yesterday, but probably he overlooked doing so—that one organization alone, the hod carriers, the building laborers' union, had a larger increase last year in membership—in 1913—than the entire membership of the I. W. W. is to-day. The United Mine Workers and brewery workers include thousands upon thousands of unskilled and so-called common laborers in their ranks.

Commissioner GARRETSON. Then the American Federation of Labor has organized more unskilled workers than the I. W. W.?

Mr. HAYES. Most certainly.

Commissioner GARRETSON. Then on the former question, virtually you, as a citizen, are a Socialist?

Mr. HAYES. Yes, sir.

Commissioner GARRETSON. As a worker you are a trade-unionist?

Mr. HAYES. I am.

Commissioner GARRETSON. Now, one further question I would like to ask your opinion on as tracing the American and the continental socialistic movement. This is purely opinion, Mr. Hayes—

Mr. HAYES. Yes.

Commissioner GARRETSON. In your opinion, is it not true that the continental socialistic and its blended trade-union movements is more a movement of citizens than of workers, on account of the disabilities they labor under as citizens which hamper them as workers?

Mr. HAYES. It doesn't make any difference whether you call a working man a citizen or a citizen a working man; they are one and the same. You can not separate them.

Commissioner GARRETSON. Does he not bear the dual relation—

Mr. HAYES. He does bear a dual relation; yes, sir. As a Socialist he is affiliated with the Social Democratic Party or the Labor Party or the Independent Labor Party, according to whatever country he lives in, and likewise he is required to associate himself with a trade-union.

Commissioner GARRETSON. Well, then, would you not draw the same distinction in regard to him that you did with regard to yourself, that politically he would be a Socialist—

Mr. HAYES (interrupting). Yes, sir.

Commissioner GARRETSON. And in his capacity as worker a trade unionist?

Mr. HAYES. Yes, sir.

Commissioner GARRETSON. So the two would be blended there, as is unnecessary here to a certain degree, would they not—I mean as an absolute necessity for their betterment?

Mr. HAYES. Yes. Each carries out its own functions; they are separate organizations, but there is also a third agency called the cooperative movement. It is a tripartite agreement, practically.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner BALLARD. You say that the A. F. of L. and the Socialist Party both want to take a larger share of labor's production?

Mr. HAYES. Yes, sir.

Commissioner BALLARD. And they want finally to take it all?

Mr. HAYES. Undoubtedly. Wealth should belong to those who produce it, and the workers produce the wealth, and consequently they should own the wealth.

Commissioner BALLARD. As soon as they become sufficiently powerful numerically they would simply take it whether those whom it belongs to wanted to give it up or not?

Mr. HAYES. I am not prepared to say just how they are going to acquire it. If I had my way about it, they would certainly take the railways and the mines and the steel mills and other great monopolies and operate them under control of the Government, and probably we would hire Brother Rockefeller as business agent of the oil division of the Government, or Judge Gary as manager of the steel department; but they would have to be workers.

Commissioner BALLARD. In other words, you would put men in charge of the different departments who you thought could handle those departments, no matter what their previous condition had been?

Mr. HAYES. Oh, yes; they are superintendents.

Commissioner BALLARD. I gather from the I. W. W. that they want to do the same thing, except they would resort to force immediately to take it as soon as they felt they could, and the Socialist Party does not propose quite that just yet?

Mr. HAYES. The Socialist Party believes in organizing and working that out politically, in order to secure control of the lawmaking machinery, and doing it legally; and the I. W. W., as I understand it, expects to accomplish it by so-called direct and mass action. I do not hanker for that sort of propaganda, because it would necessarily injure the working mass—millions of individuals.

Commissioner BALLARD. That is all, Mr. Hayes.

Mr. HAYES. There is just one point, Mr. Chairman, on which I would like to say something.

Chairman WALSH. Very well. You may state it, but be very brief.

Mr. HAYES. Yes; it will take but two or three minutes. That was with reference to the discussion here yesterday about minimum wage. The minimum-wage proposition has never been acted upon authoritatively by the American Federation of Labor. I do not believe with President Gompers that the American Federation of Labor—though he probably has a right to speak for the American Federation of Labor, while I have not, except as a member—is committed against the minimum wage—a general minimum wage. There has never been any discussion upon that point upon the floor of the American Federation of Labor. There has never been, to my knowledge, any discussion of the question of a general minimum-wage law in any convention of an international union in this country. The matter has been up for discussion in State conventions and in local bodies.

For example, in the State of Ohio at the constitutional convention in 1912 a minimum-wage amendment was submitted to a referendum vote. It received the support of the labor men in that constitutional convention—Socialists and trade-unionists—about a dozen in the convention. From there it went to the people of the State and it was indorsed. The minimum-wage proposition, the amendment to the constitution of the State of Ohio, was indorsed generally by organized labor of that State. When it came to the matter of the election it was carried by an overwhelming majority. There is a movement on foot at this time in the State of Ohio to secure the enactment of a minimum-wage law, but not on a basis prescribing \$3 or \$3.50 or \$4 as a minimum wage, but the effort is to enact a law in line with the constitutional provisions requiring the appointment of a commission to examine four times a year, every quarter, the living conditions that exist in the larger cities. They have to consider the cost of living so far as paying rent for a six or seven room house, clothing, food, and other immediate necessities, and then basing the minimum wage upon that cost of existence, whether it be \$3 or \$5 or \$10 a day, that wage will have to

be paid, if the law is passed which is now being initiated and will be submitted to a referendum vote in the next year or two, and undoubtedly other States will copy it, as they have our workmen's compensation law. By the way, there is another point I want to touch upon in just a few words. That workmen's compensation law was arranged and prepared by a brother Socialist, Harry D. Thomas. He has since died, but he was probably more thoroughly acquainted with the legislation pertaining to labor laws and to a compensation law, as he had made a study of that and himself prepared the data and submitted it to an attorney in sympathy with the idea who went to the legislature, where it was adopted, and it was likewise adopted as an amendment to the constitution, and afterwards formulated again into a law. So much for the charges that the Socialists are inactive in the matter of securing legislation for the betterment of the workers to-day, to-morrow, and the next day. We are always at it.

Chairman WALSH. That is all, is it, Mr. Hayes?

Mr. HAYES. That is all I have to submit.

Commissioner BALLARD. Just one moment; you are in favor of Government ownership of public utilities, as I gather—railways and other public utilities?

Mr. HAYES. Yes, sir.

Commissioner BALLARD. Well, in the experience of those States where that has been done, do you feel that the administration has been better done than where it is in the hands of private corporations?

Mr. HAYES. I believe so, all things considered. Germany's railways are Government owned and operated, and they have been cited as an example, but those opposing contend that they are not a betterment. But when you take into consideration the fact that they were originally seized in order to beat back the rising tide of socialism, and are operated by people who are opposed to socialism, you will realize that there can be very many economies introduced even now that they refuse to take cognizance of. They are military roads, as a matter of fact. I might cite other examples of railways, but I may conclude by citing to the point that was amplified by Mr. Mellen in his examination in Washington the other day that it is either a case of monopoly or Government-owned railways, and I prefer Government ownership rather than monopolies. That is all.

Commissioner LENNON. Mr. Hayes, do you believe that the application of the principles of Socialism would solve finally the problem of the distribution of wealth, or is it a step in the evolutionary progress of the race?

Mr. HAYES. Oh, it is a step, of course. The next step in our evolution as a race, in precisely the same manner as, centuries ago, we had the condition of slavery; then we evolved into feudalism, then into capitalism; now we are going into socialism, and I might say on that point that 10 years ago, when we discussed socialism, many people confounded and confused us with anarchists and bomb-throwers, while to-day we have reached the point where we are almost respectable. Everybody thinks they know something about socialism, and perhaps they are becoming a little socialistic themselves. So that when my friend Gompers tries to ridicule the socialist movement he had better be careful, because he doesn't know what will happen in the next 10 years. He accuses the Socialists of having purloined some of the demands of the trade-unions. He might have said that the Bull Moosers stole some political planks from the Socialists; the Democrats stole some, and probably the old mossback Republican Party may have grabbed a few of those planks. One thing they won't steal, and that is the collective-ownership plan.

Chairman WALSH. I am very much obliged to you, Mr. Hayes.

Mr. THOMPSON. I would suggest, as you know, that Mr. Gordon has some of the same information as that of President Gompers. We do not want to duplicate, so that we should get the three witnesses who lead the discussion as it were, and give them as much time as possible before 12 o'clock. I would like to have given them half an hour on a side, or 20 minutes on a side, but the time is getting short.

TESTIMONY OF MR. F. G. R. GORDON.

Mr. THOMPSON. Will you please state your name, residence, and your business?

Mr. GORDON. F. G. R. Gordon, Haverhill, Mass.

Mr. THOMPSON. What is your position?

Mr. GORDON. I am a journalist at the present time.

Mr. THOMPSON. What paper are you connected with?

Mr. GORDON. One of the papers in Haverhill, and I am a writer upon economic subjects.

Mr. THOMPSON. Mr. Gordon, you have been here for the last three days, I believe, all the time?

Mr. GORDON. Yes, sir.

Mr. THOMPSON. And have heard the expression of views of Mr. Morris Hillquit and Mr. Samuel Gompers and Mr. St. John, who have expressed the views of the American Federation of Labor, the Socialist Party, and the Industrial Workers of the World, have you not?

Mr. GORDON. Yes, sir.

Mr. THOMPSON. What have you to say different from that which has already been offered in reference to those matters?

Mr. GORDON. Mr. Thompson, we have tried out, in a general way, this problem of industrial unionism, or the one big union, as it is called. We have tried that out several times, and it made a most miserable failure; tried it out with the help of the Socialist movement of France, where it has been a failure; tried it out in this country with the Knights of Labor, in the first instance, and the American Railway Union, the American Labor Union, the Industrial Workers of the World, and they have all been a failure.

As for the Socialist movement——

Mr. THOMPSON. Just a moment. I would like to ask you what you have to say in reference to the statement of Mr. Hayes, who was just on the stand, that in the hod carriers alone the American Federation of Labor has organized last year, in the year 1913, more unskilled laborers than are in the Industrial Workers of the World, and that among the brewery workers and others the American Federation of Labor have successfully organized thousands upon thousands of unskilled laborers. If that is true, how do you compare it with the statement that you have just made that it is a failure?

Mr. GORDON. The organization of the hod carriers is to organize, or the building laborers, is practically the organization of a trade of one industry itself. It is not like the old Knights of Labor, the organization of everybody and everything into one organization; but it is an organization that looks after its particular interests and is affiliated with the American Federation of Labor because it seeks aid from them and in return gives aid to them. A federation of unions under the scope and plan of the American Federation of Labor, and entirely different from this other world-saving scheme of the I. W. W.'s and the Socialists of the world. I think that it is correct to say that every leading Socialist upon the face of the globe agrees that State socialism is State slavery. I don't know of any leading Socialist that wants State socialism. They all want a social democracy, and that is an utter impossibility. There never has been over two great attempts to establish it, and both of them have been a failure. I refer to the ancient Mir of Russia and the New England town meeting system upon a political scale; so far as the law goes, they have been absolutely political democracy. So far as the operation goes—that is, the everyday annual practice of those meetings—they are guided and dominated and ruled by less than 10 per cent of the population who live in their respective communities. And that is the history the world over; and that is the history of the Socialist parties the world over to-day. They too are dominated; they have a democracy in theory, but they are guided, dominated, and bossed just the same as the two old parties of this country, and just as much as the conservative parties throughout the world.

So that if that is true, and it is true, then socialism leads to a system of State slavery, which certainly is not what the working class want, and I do not believe anybody else wants it.

Furthermore, the Socialists are holding out a delusive opinion to the wage-working element of this country, because they assert and maintain their platform, and the representatives of that movement maintained before this commission that society in this and every other country was divided into capitalists and wage earners. That is what the platform says; that is what the platform of the Socialist Party says, which you will find on page 351 of Mr. Morris Hillquit's book on the history of socialism in America. You will find also in the platform, in Mr. Benson's book, *The Truth About Socialism*, in the appendix, the platform of the Socialist Party adopted in 1912, in which it declares, practically declares, that the tendency is for the elimination and destruction of the middle class and the dividing of society into two classes, and, along with that, so long as this system exists, we are having an increase of pauperism and increase of misery of every kind, an increase of child labor, and

all that sort of thing. Now, that is not true, Mr. Thompson, at all. There are no blue books in any industrial nation to prove that that is true. On the contrary, the industrial reports of every industrial nation upon the face of this globe absolutely disprove that contention and that philosophy of the Socialist movement.

In the first place, in this country the wage earners, the proletarian army, so called, is in the vast minority. If every man in 1912, every man that they class as such, had voted for Mr. Debs, he couldn't possibly have carried over 12 States out of 48.

Furthermore, even if they were in the majority, it is easy to show that they could not carry the country then, because they are concentrated into the great industrial States of this country, and those great industrial States are only 12 in number. It is easy enough for any man who stops to think about it to know that the manufacturing industries, textile, iron and steel, or any of that sort, are concentrated into a comparatively few States in this country. With 24 Senators—suppose they could elect them—and they could not possibly elect them in my judgment, but they could not enact legislation if they have 24 Senators out of 96.

They are fooling away the time of the working class and themselves and are trying to fool everybody else. They say the cure for the evils of the present democracy is more democracy. That is the same thing as if you have a bad cold and want to get rid of it and you should go out and catch the typhoid fever.

Then they say that these immediate demands which they are asking for, which are largely identical with the demands of the American Federation of Labor, really do not amount to anything, and in one of their platforms they warn the working classes against the public ownership of public utilities, because they say that under that scheme the capitalists will simply concentrate their power to extract more profits from the public and concentrate themselves in power.

Now, along with this they say that child labor is increasing, and this is not true. In 1880 in the manufacturing establishments of this country there were 181,000 children under 16 years of age employed. If you will look at the census of 1910, you will find out that there were 161,000, 20,000 less than there were in 1880, although we have got more than 2,000,000 more people employed in the manufacturing industry.

Pauperism is not increasing. Relatively, in this country it is decreasing. The middle class, instead of decreasing, is enormously increasing. It is growing faster than the population. When they talk about the concentration of industry I recall that they said 12 years ago, and even later than that, that the farming industry of this country was to be concentrated and that the future of farming was to be carried upon the bonanza scale. And they circulated all over this country a book, "The Cooperative Commonwealth." I just want to mention one fact, that a few years later the same author of that book wrote another Socialist book in which he devoted another chapter to this farm question, in which he acknowledged that he had been mistaken and that the so-called science of the Socialist Party was a myth and a dream and that instead of farming being carried on on the bonanza scale it was to be carried on in an intensified manner, and that instead of the farms growing larger they were growing smaller.

And, in that connection, let me tell you that during the past 10 years, or the last decade, the census shows that the farmers' property of this country increased about 117 per cent, and that the farmers' property at the present time is forty-two billions of dollars, one-third of all the wealth of this country is owned by the farmers in farm values. And when Mr. Hillquit talks about the social ownership of the tools, there never was a time in the history of any industrial country when so many people had a share, owned stocks and bonds in one form or another, in the tools of production as there is at the present time. Why? In 1901, or rather, in 1900, so far as can be estimated by the investigators, the great iron and steel industry was owned by 55,000 people. To-day one of those corporations engaged in the iron and steel industry, one of 416 corporations engaged in the iron and steel industry, have 130,000 stockholders, 130,000 owners, of whom some 40,000 are wage earners, also in that same establishment. Every single line of industry in this country shows the same tendency. Seventy-two railways have increased—

Mr. THOMPSON. May I interrupt you?

Mr. GORDON. Yes, sir.

Mr. THOMPSON. The time is growing short, and I would like to ask you two questions, and have you, if you will, make short answers.

Mr. GORDON. All right.

Mr. THOMPSON. The time is growing very late. In reference to the forms of industrial unions, of which you have spoken, is not the United Mine Workers an example of industrial unionism, or one straight union, on the line of the Industrial Workers of the World?

Mr. GORDON. On the line of organizing one industry?

Mr. THOMPSON. Yes.

Mr. GORDON. In one union?

Mr. THOMPSON. Yes, sir.

Mr. GORDON. It certainly is.

Chairman WALSH. What other question?

Mr. THOMPSON. In reference to the question of the social democracy proposition, you speak about the fact that the Socialist Party is controlled, as all other parties were, and as all other organizations in the past have been, by a small percentage. I take it, you mean, that is true naturally of every organization of men?

Mr. GORDON. Yes, sir.

Mr. THOMPSON. Of the American Federation of Labor?

Mr. GORDON. Everywhere.

Mr. THOMPSON. That is all. I am very sorry we could not have heard you at greater length. Perhaps when we go to Boston we will impose upon you again.

We will take up the matter now as originally outlined, the rebuttal will proceed, as follows:

Mr. Hillquit, Mr. St. John, and Mr. Gompers. Inasmuch as the time is limited, why, each gentleman will be limited to 20 minutes.

I was going to say that they can go along and be not interrupted by any questions; and if they get through with what they wish to volunteer in the 20 minutes some of the commissioners have some questions. I will call Mr. Hillquit.

TESTIMONY OF MR. MORRIS HILLQUIT—Recalled.

Chairman WALSH. You may proceed, Mr. Hillquit, and answer anything you see fit within the time limit; answer any part of what has gone before in the testimony of Mr. Gompers or Mr. St. John.

Mr. HILLQUIT. Within 20 minutes. That being the case, I shall not attempt an elaborate answer to all the statistical information of Mr. Gordon. I may merely call attention to this fact, that the objection he finds to the Socialist Party is an objection, not against socialism, but against democracy generally.

I would also call your attention to the fact that I find it somewhat strange that Mr. Gordon, who has been aiding here Mr. Gompers at the inquiry, should hold such utterly reactionary views; and to the fact that if his statements were true, and if conditions were improving so wonderfully well all along the line, and particularly with the working class, that there is very little reason left for the American Federation of Labor, or for the Socialist Party, or for any other kind of radical or reform organization.

I know Mr. Gordon has been a member of the Socialist Party many years ago; I know that, as far as he is concerned, the socialist movement has proved a failure, which I regret.

I desire to answer two questions raised by Mr. Gompers in his testimony, one with reference to the character of compensation act which the Socialists in the city of New York drafted and prepared some years ago. Mr. Gompers's statement was to the effect that it contained a demand for the appointment of a Socialist as member of the proposed commission and also for an appropriation of \$1,000,000 by the State of New York. The draft in question was not of Socialist authorship exclusively. It was prepared by the Socialists in conjunction with representatives of the labor organizations of the greater city of New York; that is, the organizations of the American Federation of Labor in that city. And when adopted it represented the local sentiment of the American Federation of Labor, as well as that of the Socialists. It made no requirement to have a Socialist appointed on the commission. It did, on the contrary, however, contain a requirement to the effect that the commission be largely composed of accredited representatives of organized labor. As to the

million-dollar appropriation, I don't recall it; but I may say that if it provided for the sum of \$1,000,000 to be appropriated by the State of New York for the purpose of organizing a proper machinery on the basis of a workmen's compensation or system the demand was exceedingly modest. The State of New York, with its population of 10,000,000 or more; the State of New York, which appropriates \$60,000,000 for improvement of canals and to help the trade along, should consider it but a mere pittance to allow \$1,000,000 to save the lives and limbs of its one million and a half industrial employees, and Mr. Gompers, I believe, should be the last man in the world to find it exorbitant. Mr. Gompers has also stated that the Socialist Representative in Congress, Victor L. Berger, had voted to sustain the veto power of the President of the United States. That statement I wish to deny here. The Socialist Party directly requires by its platform the abolition of the Senate and of the veto power of the President. Of course, the question of sustaining the veto power of the President never came up in Congress. What Mr. Gompers is pleased to construe as such a vote was, no doubt, a vote or votes on two measures which Mr. Berger considered reactionary and opposed to the best interests of the workers. He voted against the measure. The President of the United States happened to share his conception of it and vetoed the bills after the majority had voted in their favor. The bills then came up for a second time, and they were still as reactionary and as bad as ever, and Mr. Berger still consistently voted against them. And that is all there is to his voting to support or maintain the veto power of the United States President.

This by way of rebuttal, and now I shall say a few words by way of summary of the relations of the Socialist movement to the American Federation of Labor as I understand it. Since the method of mutual cross-examination has brought out a good deal, but not all the conclusions, I shall say this briefly. First of all, the matter, it seems to me, is one of very large social importance. The American Federation of Labor and all other organized workers within or outside of the federation represented about 3,000,000 persons. The Socialist Party at the last presidential election polled short of 1,000,000 votes. We may legitimately assume that for every male voter there is a female nonvoter Socialist sympathizer, and, taking the men and women voters and nonvoters, we will probably conservatively estimate the number of persons in the United States who support the Socialist philosophy and Socialist program to be likewise 3,000,000. The relation between those two powerful factors in the industrial and political world seems to me of importance, and I wish to state, first of all, for the benefit of the commission and the public at large, and the working class particularly, that, whether for good or for evil, the Socialist movement and the labor movement, the organized economic labor movement, must be considered ultimately as one. One of the same conditions, having consciously or unconsciously the same aims and objects and leading to the same result. The Socialist movement originated very largely in an effort to secure to the workers the full product of their labor, and by the same token to deprive the idlers of their unearned part of the general national product. It stands, then, for the nationalization of industries, for the collective ownership of means of operating those industries.

The labor movement, it appears very evidently from Mr. Gompers's statement, stands likewise for an ever increasing share of the product to be given to the workers; for an ever decreasing share of the product to be left to the nonworkers, and Mr. Gompers admitted that this process has no limitation and will not stop before the entire product of the work is turned over to the working class as a whole. Thus, you see, substantially and ultimately the two movements stand for the same thing. The distinction may be one of the degree of consciousness. The Socialists proceed upon a general social philosophy. They have thought out the thing; they ask themselves where does it lead to; they have drawn their conclusions and formulated them in the Socialist program. The trade-union movement, properly, as Mr. Gompers himself stated, is not concerned much with elements of social philosophies. It works for practically the immediate ends, but those ends lead eventually to the same port. There is also no great merit in the distinction between political and economic functions. Economic functions—we name economic functions so because they are confined to small scopes; the same functions become political functions when they are expended. The demand to abolish child labor in a certain shop or a complexity of shops, or to introduce an eight-hour work-day in a certain shop or in a number of shops, is economic and considered so in its functions. The same demands stated broadly for an entire industry or

an entire division of the working class, and being formulated by way of legal enactment, becomes political action. And it is just because the Socialists stand for the larger aspect of the movement or have it in view that the activity is more political, and it is because the labor unions, while standing on the same basis, do not have the larger vision that they consider their activity primarily economic. As a matter of fact, as to the ultimate result, the two do not differ much from each other. I make that statement to avert the misunderstanding as to the attitude of the social movement and of the Socialist Party toward the American Federation of Labor.

What Mr. Hayes stated is not his individual view; it is the view of the Socialist Party at large. The Socialist Party is absolutely committed to a policy of friendship to organized labor, and unequivocally recognizes the American Federation of Labor to-day as the main representative of organized labor. The little tilt I had the pleasure to have with my friend Mr. Gompers was very largely individual and directed not against the American Federation of Labor, but against certain conceptions and policies of the present leadership of the American Federation of Labor. The attitude of the Socialist Party to the American Federation of Labor as such, as distinguished from its leadership, is absolutely friendly, and the criticism which is charged to me, directed against its present leadership, is also of a purely friendly nature.

I will mention briefly these criticisms. In the first place, the Socialists believe that the present management or leadership of the American Federation of Labor fail to recognize the drift and trend toward industrialism in organization. Now, mind you, we don't say that the American Federation of Labor is not developing in that direction. It is. But what we do say is that the development is not aided consciously by its leaders, because the leaders fail to understand the importance of it. The present leaders of the American Federation of Labor fail to see that industrial conditions to-day are not what they were in 1881 when the present federation or its predecessor was organized.

Mr. Gompers placidly told here on the stand that the American Federation of Labor had originally adopted a plan and system of absolute autonomy of trades and had rigidly adhered to it. If it actually had, it would not be a subject for praise, but one for severe criticism, because industrial development has not been still within the last 30 years. Industries to-day are more inter-related, more interwoven, more organically connected than they were in 1881, and if the workers are to keep pace with them and be in a position to meet their employers in the higher organization, they must organize accordingly. The example cited by Mr. Gompers, the State organizations and State autonomy, and the Federal Government of the United States, does not apply at all. That is purely political. An industry can not be so separated from another clearly as one State may be separated geographically and arbitrarily from another. Now, we recognize, however, that the American Federation of Labor is tending toward very great industrial organizations. We fully approve of the report which Mr. Gompers offered in evidence here before the commission and favors extension of industrialism within the American Federation of Labor. We only wish that the leaders of the federation had been clear-sighted enough to see the tendency and to cooperate with it and help it along more actively.

Another point of criticism, and mild criticism again that we have is this, that the American Federation of Labor does not seem to understand the significance of the agitation which has assumed the name I. W. W., Industrial Workers of the World, and here I want to make this statement: The Socialist Party has no sympathy with the methods of the Industrial Workers of the World, none whatsoever. You have heard the testimony of the representatives. We regard their methods as absolutely ineffective, as childishly inadequate. But the Industrial Workers of the World mean more than 14,000 men organized in Mr. St. John's organization. It means a certain new spirit in the American labor movement. It means Lawrence, it means Patersons. It means Little Falls, it means McKeesport Rock. It means this new phase of the labor movement which has risen within the last few years. How are we to account for it? How does the American Federation of Labor account for it? It is not a mere incident. There must be some cause underlying it. Now, the Socialists claim—what is the cause? Nothing is produced without causes. The causes are briefly stated as follows:

First, the machine-industry has made skilled labor a less and less important factor, and unskilled labor a more important factor in this country. It has produced a different type of emigrants who have come here by millions, who

have no right of citizenship, and who are unorganized; who are poor beyond description, and who have no means of civilized resistance or warfare. It has created a new class within the working class, and new conditions, and it has led to the spontaneous organized and frequent violent outbursts which we have designated by the general name I. W. W. revolts. These revolts are not explained by the labor name I. W. W. They represent a new phase in the labor movement, and the American Federation of Labor should have taken cognizance of it, or the leadership should have taken cognizance by making more strenuous efforts—they have made honest efforts, I admit—but more strenuous efforts to organize these men and to acclimatize them, and, if you want, to Americanize them and make them part and parcel of the American labor movement.

On the question of politics Mr. Hayes has said a good deal, and, in view of my limited time, I shall not take it up.

Chairman WALSH. You have two minutes.

Mr. HILLQUIT. Then I shall say a few words on another subject of criticism, and that is the relation of the American Federation of Labor to the Civic Federation. The Civic Federation is an organization instituted by employers for the purpose principally and primarily of deadening the aggressive spirit of the American labor movement, and we think it is succeeding marvelously. Mr. Gompers has stated here that the American Civic Federation has no membership and he is not a member of it. Since he is to follow me, I should like him to answer these few questions:

First. If the National Civic Federation has no membership, and anyone who happens to come in has a voice in the choice of officers, would it be permissible, say, for me and a hundred of my Socialist friends to go to the next meeting and have a vote in the election of officials? If they were, we might be tempted to try it.

Second. If the American Civic Federation has no membership, it has, presumably, no dues. It maintains a labor office. It pays salaries to a secretary and a large staff of various workers. It has various departments. It spends very large sums of money. One of the features of its activities is a very lavish annual banquet. I should like to know, Mr. Gompers, how that money comes. Does the American Federation of Labor contribute any part to it, and if it does not, who does? And if it is all contributed by our capitalists and friends in the National Civic Federation I should like Mr. Gompers to say whether, in his opinion, such contributions are made solely and single-mindedly for the benefit of the workers.

Chairman WALSH. Call your next witness, Mr. Thompson.

TESTIMONY OF MR. VINCENT ST. JOHN—Recalled.

Chairman WALSH. If there is any statement you would like to volunteer in your rebuttal of what has been said by anyone else, or any further explanation that you desire to make in the time limit, I believe you heard it.

Mr. ST. JOHN. Well, Mr. Chairman, I do not care to take up any time in making a statement, in order to amplify anything that I have said. All I care to do at this time is simply to offer to the commission this printed matter here for your use, if you want it—pamphlets and literature and a stenographic report which was promised you by Mr. Ettor, and other matters.

(Mr. St. John at this point submitted the following printed matter: "Songs to Fan the Flames of Discontent," published by The Industrial Worker, Spokane, Wash.; "Eleven Blind Leaders, or 'Practical Socialism' and 'Revolutionary Tactics,'" by B. H. Williams, publisher, Press of the I. W. W. Publishing Bureau, New Castle, Pa.; "On the Firing Line," published by The Industrial Worker, Spokane, Wash.; "Appeal to Wage Workers, Men and Women," by E. S. Nelson, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "The Trial of a New Society," by Justus Ebert, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "Twenty-four Cartoons of Mr. Block," by Ernest Riebe, published by Block Supply Co., Minneapolis, Minn.; "The Farm Laborer and the City Worker, a Message to Both," by Edward McDonald, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "One Big Union in the Textile Industry," by Ewald Roettgen, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "Getting Recognition, What it Means to a Union," by A. M. Stirton, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "Union Scabs and Others," by Oscar Ameringer, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "Two Kinds of Unionism," by Edward Hammond, published by I.

W. W. Publishing Bureau, Cleveland, Ohio; "Political Parties and the I. W. W.," by Vincent St. John, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "Is the I. W. W. Anti-Political?" by Justus Ebert, published by I. W. W. Publishing Bureau, Cleveland, Ohio; "Industrial Unionism, the Road to Freedom," by Joseph J. Ettor, and "Stenographic Report of the Eighth Annual Convention of the Industrial Workers of the World, Chicago, Ill., September 15-29, 1913," published by the I. W. W. Publishing Bureau, Cleveland, Ohio.)

Chairman WALSH. They speak for themselves?

Mr. ST. JOHN. Yes, sir.

Chairman WALSH. Very much obliged to you. Thank you. Now, then, I would like to divide this time that is left here between Mr. Hillquit and Mr. Gompers and, inasmuch as Mr. Gompers has the close of the debate, Mr. Hillquit may resume the stand, and, after he is through, Mr. Garretson is very anxious to ask him a question. Now, you have consumed 20 minutes already, and the 20 minutes left by Mr. St. John's retirement will be divided between you, so that you may have 10 minutes more and then Mr. Gompers will have 30 minutes instead of 20.

Mr. HILLQUIT. I should, of course, if the commission would not object to it, like to have a chance of using those 10 minutes after I have heard Mr. Gompers. There may be some questions to which I would like to reply.

Chairman WALSH. There may be some criticism of that, because the committee on public hearings fixed the debate in this way, and I would not like to interfere.

Mr. HILLQUIT. Very well. I will answer questions.

TESTIMONY OF MR. MORRIS HILLQUIT—Recalled.

Commissioner GARRETSON. There has been one point that has not been brought out here at all from the standpoint of the Socialists that I would like expression on. What is the attitude of the Socialists—you can answer that either as a party or individual, because it is one you may have made no declaration upon, your party. Toward the means of economizing industrial waste caused by strikes, do you look on the Erdman Act—I am citing the only Federal enactment—as a desirable means of settlement of labor difficulties?

Mr. HILLQUIT. The Socialist Party has not expressed itself on this subject, as you state. The Socialist Party on the whole regards a strike as a necessary and inevitable evil—an evil inherent in the present system and which no amount of legislation can curb or change. In other words, we believe that there is a case where they would agree with Mr. Gompers and say "Beware of the Greeks bearing gifts," if the legislature were to enact or offer to enact any measure tending to prevent strikes and offering another method of settlement, for what it might mean would be that whereas the workers in well organized industries to-day have that last resort, the strike, by which they may enforce the demands, such weapon may be taken away from them by legislative enactment.

Commissioner GARRETSON. You are aware of the origin of the Erdman Act?

Mr. HILLQUIT. Not well.

Commissioner GARRETSON. I will say here that the Erdman Act was passed to its original adoption largely by the railway organizations?

Mr. HILLQUIT. Yes.

Commissioner GARRETSON. Now, you are familiar—but do you regard a purely voluntary settlement as represented by that act as a desirable agency for the minimizing—bearing in mind your views as expressed with regard to the strike is exactly my own—but do you recognize it is desirable to minimize the times when it becomes an absolute necessity?

Mr. HILLQUIT. Yes; if it can be done without sacrifice to the workers.

Commissioner GARRETSON. Or without pressure?

Mr. HILLQUIT. Without pressure and without sacrifice of the interests of the workers. I would, of course, prefer, as a rule, to avoid strikes rather than to incur strikes.

Commissioner GARRETSON. You are also familiar with the successor of the Erdman Act, the Newlands Act?

Mr. HILLQUIT. In a general way.

Commissioner GARRETSON. Are you familiar with the terms that led up to its adoption?

Mr. HILLQUIT. I am not.

Commissioner GARRETSON. Its passage?

Mr. HILLQUIT. I am not.

Commissioner GARRETSON. You don't know what function the Civic Federation performed in that.

Mr. HILLQUIT. I do not.

Commissioner GARRETSON. I am not on the witness stand.

Mr. HILLQUIT. No. But there is only one point, Mr. Garretson, in which again I would like to quote my friend Gompers with reference to the Civic Federation. I would say "Beware of the Greeks bearing gifts."

Commissioner O'CONNELL. In the closing paragraph of instructions on which this commission is created it reads: "The commission shall seek to discover the underlying cause of dissatisfaction in the industrial situation and report its conclusions." If you were a member of this commission, what would you recommend, in your opinion, the industrial condition of unrest, the cause for it?

Mr. HILLQUIT. That would be an exceedingly easy task for me. I think the national platform of the Socialist Party gives both a statement of the causes and the ultimate remedy and the immediate remedy applicable to it to-day.

Commissioner O'CONNELL. What would be the immediate remedy?

Mr. HILLQUIT. The immediate remedy would be the adoption of these various planks in the platform of the Socialist Party which I yesterday had the pleasure of reading to Mr. Gompers, and which he gave assent in practically all cases. That would be the immediate measure.

Commissioner O'CONNELL. What would you assign as the cause of industrial unrest?

Mr. HILLQUIT. Private ownership of the tools of the production of the things which all men need to sustain their lives.

Chairman WALSH. Now, I have a couple of questions I am going to submit to you and ask you if you will give them some sort of answer in writing.

Mr. HILLQUIT. Yes, sir.

Chairman WALSH. We will give it whatever publication we can, but I will ask you to give it some thought, and I will ask you to hand it in. In addition to the interests of the capitalists and the workers, tending to range them in opposition to each other, is there not a sense of justice existing in some minds that incline them to act without regard to class interests; and, second, is—are there any prominent capitalists in the Socialist Party?

Mr. HILLQUIT. Yes; the answer to both is "Yes." It does not require study, that, because I have had it asked several times.

Chairman WALSH. Very well; that is all, then.

TESTIMONY OF MR. SAMUEL GOMPERS—Recalled.

Chairman WALSH. I know you heard the announcement here, but Mr. O'Connell had one question that he told me he desired to ask you to straighten out what might have been a misunderstanding here before you came in—a question that was asked by Commissioner O'Connell. Mr. Thompson asked Mr. Hayes, who was on the stand, as to the position of the Socialist Party on the question of general legislation in the matter of a general eight-hour workday, quoting you as saying that you were opposed to that kind of legislation. I was under the impression that you had not been properly quoted, or that your position was misunderstood in the matter.

Mr. GOMPERS. It is not unusual for me to be misrepresented and misquoted.

Commissioner O'CONNELL. Mr. Gompers, I don't mean to indicate that Commissioner Thompson—

Mr. GOMPERS (interrupting). I am not speaking of Commissioner Thompson. I am speaking of the general fact that whenever—

Commissioner O'CONNELL. In order that we may get the record straight on that—

Mr. GOMPERS (continuing). Whenever any utterance is made by me that may be a declaration of a principle or a purpose with which the Socialists differ, they have no hesitancy to misrepresent and misquote me. On the contrary, the very emphasis which I may give to any particular point will simply be distorted again in order that the misrepresentation may be continued. On this subject of an eight-hour law I have said and have worked to the accomplishment of the thought for the eight-hour workday by law for all employees of the Government, whether National, State, or municipal, and for all employees of contractors or subcontractors who do Government work—an eight-hour day for all Government employees, because the Government is then the employer. The

eight-hour day for minors and for women workers. But I am opposed to the statutory fixing of the hours of labor for men, and gave the historic achievements of the working people of the United States, true only partially, but yet the achievements secured by the workmen through their own initiative, through their own collective action, or by agreement with employers. Now, in the limited time at my disposal, unless any further questions are asked me, I should like to take cognizance of some things that have been said. First, the construction placed by Mr. Hillquit upon the statement which I made in answer to one of his questions as to membership in the Civic Federation. I omitted to say "dues paid membership." Answering his question of this morning, I should say that the National Civic Federation exists by the voluntary contributions of those who agree to contribute in furtherance of any thought or purpose that they may have in mind. I want to call your attention to the studied effort of Mr. Hillquit to call that association the American Civic Federation, with the avowed effort frequently made and declared by the Socialists, and as evidenced by his questions to me upon cross-examination, to confuse the name and the fact of the American Federation of Labor with the National Civic Federation, and using the term as the associates of Mr. Hillquit so frequently use—they often refer to the American Federation of Labor by the supposed title of the American Civic Federation of Labor. The difference is between practice and pretense. The pussy-footed Socialist, Mr. Hillquit, before this commission is not the same kind of Socialist before the world.

It may not take a man five minutes to ask questions which it would take hours, and sometimes weeks, to answer. The charge of criminality against an individual may take months to disprove. That there may be no question on this matter let me quote from Mr. Morris Hillquit, member of the executive committee of the Socialist Party, one of its ablest and most sophistical exponents, and of high standing in this country. In the Metropolitan Magazine for July, 1912, he says:

"Stated in more concrete terms, the Socialist program requires the public or collective ownership and operation of the principal instruments and agencies for the production and distribution of wealth. The land, mines, railroads, steamboats, telegraph and telephone lines, mills, factories, and modern machinery. This is the main program, and the ultimate aim of the whole Socialist movement, the political creed of all Socialists. It is the unfailing test of Socialist adherence, and admits of no limitation, extension, or variation. Whoever accepts this program is a Socialist; whoever does not, is not."

In fact, in all their platforms, immediately following their so-called social-reform program, will appear the frank avowal quoted below, this one being taken from the platform of the national Socialist convention in Indianapolis, in June, 1912:

"Such measures of relief as we may be able to force from capitalism are but a preparation of the workers to seize the whole powers of government in order that they may thereby lay hold of the whole system of socialized industry and thus come to their rightful inheritance."

Mr. Chairman, I have here a number of quotations which I should like to have incorporated as a part of my statement, which I do not care at this time to read in my time.

Chairman WALSH. Very good. Just give them to the stenographer, and they will be identified and put in as part of your statement.

(The quotations referred to by Mr. Gompers are from an article by him published in the Metropolitan Magazine for July, 1912, and are as follows:)

"That the Socialist Party has no use for social reform was well stated by Keir Hardie at the recent annual conference of the Independent Labor Party of England, which is the title of the Socialist Party in that country, when he declared:

"'The Independent Labor Party is not a reform organization. It is revolutionary in the fullest sense of the word. The party does not exist to patch up the existing order of society and make it a little more tolerable, but to overthrow the existing order and build up a socialist state.'

"That they decided to throw off all pretense for reform and come out boldly for revolution is well shown by Charles Edward Russell, the Socialist candidate for governor of New York, in a political speech made on Saturday evening, September 7, 1912. In referring at that time to the social reforms included in the platform of the Progressive Party, he said that he wanted it distinctly understood that they had no interest in them. He added:

"Some gentlemen in this campaign believe that two or three fragments of the Socialist program, with a few worn-out remedial laws, will spike the Socialist guns. They have jimmied the back door of the Socialist house, have stolen half a dozen silver-plated spoons, and think they have shut down the house, and they forget that the Socialist Party is not a party of reform, but of revolution."

"To a reporter on the Evening Sun, who asked Mr. Russell if there were not Socialist ideas in the Progressive platform, he replied:

"Not a single one. Those who say that there are don't know what the word 'socialist' means. The Progressive Party is just as far from Socialism as from Democracy. Their planks are mere palliatives and nostrums, idle as the wind—not worth talking about."

"The Appeal to Reason, which has a circulation larger than all the other Socialist publications combined, in an editorial in the issue of April 19, 1913, under the head of 'Confiscate the Industries,' says:

"We make no apology for advocating the confiscation of the Nation's industries as soon as we have the power to confiscate them."

"The rebels of '76 confiscated the colonial possessions and drove out King George and his vassals, who held the legal title to them."

"The Lincoln administration confiscated the slave property of the southern slaveholders, and this constitutes its crowning glory."

"The railroads of this Nation have plundered the people without mercy ever since the first of them was chartered. The people have paid for them over and over again, and now, when the people come to take possession of these railroads, which they built and which in very truth belong to them, they would be nothing less than idiotic to turn over the Public Treasury to the private capitalists, whose claim to them would not bear for one instant the searchlight of honest inquiry."

"So with the telegraph and telephone; so with the steel mills and the coal mines; so with the oil refineries and the cotton mills."

* * * * *

"Of course, we expect to confiscate the Nation's industries legally, for as we shall have the power to legalize our acts the same as the capitalists now do, we can quite easily give legal sanction to whatever may be necessary to secure the peace, prosperity, and happiness of the people."

* * * * *

"We would have no one under any mistaken impression so far as our position on confiscation is concerned. We want the capitalists themselves to know that we are organizing to take from them the right and power they have had since the beginning of capitalism to take from us the proceeds of our toil."

"The Appeal to Reason unfurls the flag of confiscation and appeals to all the toilers of the Nation—in the mills and mines, on the railroads and the farms—to rally beneath its folds and hasten the day of their deliverance."

"To succeed in this program of confiscation, the Socialists necessarily conclude that they must undermine the Army and Navy, indeed, all the agencies of law and order. Hence, they declare for the disarmament of the armies and navies and the abolition of the State militia, so that when they get ready to take over this property they may not be met by the defenders of law and order. That the Socialists fully realize the serious nature of their undertaking, the following extract from a signed article by the Socialist Congressman, Victor Berger, in his own paper, the Social Democratic Herald, of July 31, 1909, will clearly show:

"In view of the plutocratic lawmaking of the present day, it is easy to predict that the safety and hope of this country will finally lie in one direction only, that of a violent and bloody revolution."

"Therefore, I say, each of the 500,000 Socialist voters and of the 2,000,000 workmen who instinctively incline our way should, besides doing much reading and still more thinking, also have a good rifle and the necessary rounds of ammunition in his home and be prepared to back up his ballot with his bullets if necessary."

Mr. GOMPERS. The idea of the suggestion of making more strenuous efforts to organize the unskilled workers—as a matter of fact, the American Federation of Labor, during the entire year, devotes more of its time and more of its revenues, more of the efforts of its officers and organizers and representatives in the organization of the unskilled workers than any other one thing. It is physically impossible to give more strenuous efforts in any cause than are given by the

witness before this commission at this time, and who is made the principal object of the attack by the Socialists here and elsewhere. There is no man—I don't care who he is—who works harder and more consistently and persistently in the efforts to organize the workers, in the effort to improve their condition, in the effort to secure, to firmly rivet the rights to which the toilers of our country are entitled, and to suggest by one who is in the ranks of the Socialists, as—

Mr. HILLQUIT (interrupting). Meaning me?

Mr. GOMPERS (continuing). That more strenuous efforts should be put forth comes with ill grace, and, after all, what is "skilled" and "unskilled"? It is all a matter of gradation. There are some men who say that they work with their heads. My answer to that is, so do hogs. The matter of gifts and powers and responsibility entering into their work, they are required in any field of human activity in wage labor. What would you call the ditch digger? What would you call the hod carrier—the laborer? What would you call the conductor on a street railway? What would you call a street railway motor-man—a man who will acquire the ability to operate a car in the course of 6 or 8 or 10 hours, and is intrusted after that with the operation of the car? The fact of the matter is that for a long period of years the socialists have had the open sesame to the people of Europe, who speak languages other than English, and the minds of the foreign-speaking workmen have been poisoned against the American Federation of Labor, and that, as a consequence, many of the workmen coming from other countries in which languages other than English is spoken come here with a mind prejudiced and poisoned against the American labor movement, and they start out what they regard as their own.

Now, before I get deeper into this question, let me say that I quite agree with Mr. Hayes's statement that, after all, the quarrel is among us—our dispute is among us, the working people—and we are fighting it out as best we know how. Men who are socialists belong to the unions affiliated with the American Federation of Labor. Mr. Hayes is a member of the International Typographical Union; and I think at least he will agree with me in this, that in the conventions of the International Typographical Union he has as much say as any other member or delegate. In the conventions of the American Federation of Labor he has as free a throw to express his opinion as any other man.

And I want to call your attention to this one fact, that during the period of preparation of the International Typographical Union for the inauguration of the 8-hour workday, and the then possibility of a strike being inaugurated for its accomplishment, Mr. Max Hayes, the socialist, was tactful enough to declare that socialist policy and socialist philosophy must not be interjected into the trade-union movement, at least, during the period of that controversy. And I held with him and hold with him; but where his was a temporary limitation mine is an absolute one—that it is not necessary to burden man to make more difficult the strenuous struggle of all America's organized workers with the terrific enemies and powerful enemies of the employers.

The other point of difference particularly is, and I want to emphasize it, that the attempt, and the constant attempt, of Socialist speakers and writers to belittle the achievements of the organized labor movement of America. The other is that, even after you increase wages, it does you no material good; it does not do any material good; it is simply so much effort wasted. It is the effort of the Socialist Party to divert the attention of the American working people from the immediate need and from the immediate struggle to something remote. If the working people of America can be made to believe that they can secure the relief that they need, the improvement which is justly theirs, the freedom which they ought to have, by casting a vote once every year, wherefore join in the unions engaged in the everyday struggle to improve material conditions now? It is the difference between the man who preaches from the pulpit that the working people are in the positions God ordained and that they will have a better time in the sweet by-and-by. And on the same hand the Socialists who paint a beautiful picture of a future, alluring the workmen from the immediate struggles to the hopes for the future. It is the idea of men being diverted from the immediate struggle and immediate needs for the natural, rational development of the human race; and securing day by day and week by week and month by month and year by year, a little to-day, a little to-morrow, adding, adding, gaining, gaining, moving forward, every step in advance, and never taking one receding step except it be to plant the foot forward firmer than ever before.

I would not want any man to believe nor to so place our movement as if we were satisfied. There is not anything satisfying in what we have accomplished. It is gratifying, but simply whets our appetite and desires and the aims and aspirations for still better and better and still better things.

My time is running away from me, and there is so much to say when a man throws out suggestions and questions, and yet I can not help, but I must take cognizance of the statements or explanations which Mr. Hillquit made for Mr. Berger in voting to sustain the President's veto in the House of Representatives.

You know that the Congress of the United States, using the nomenclature of Socialists, is a capitalistic concern. The Congress of the United States passed two measures demanded by the American Federation of Labor, and that is, first, for a better regulation of immigration into the United States; and, secondly, an appropriation bill in which was contained the demands made by the American Federation of Labor.

It was that appropriations contained in that bill shall not be used to prosecute men or women, or labor in their effort to raise wages, shorten hours, or to improve their working conditions. I grant that that was not a fundamental law that would be so far-reaching, but capitalist Congress passed it at the request of labor, and Mr. Victor Berger, the only Socialist Member of Congress, voted, first, against the proposition itself, and then, when the President vetoed it, he, as the representative of this great party of labor, voted to sustain a President in that veto; and let me say, the idea of a man of democratic tendencies, much less a pronounced Socialist, to vote in favor of sustaining the veto of any President upon any measure is contrary to the principles of democracy, for the presidential veto is nothing more than an inheritance of the exercise of the royal prerogative.

Commissioner O'CONNELL. What was the second?

Mr. GOMPERS. The other was the question of the regulation of immigration—a bill passing the capitalist Congress, if you please.

Mr. HILLQUIT. Yes; affecting immigration.

Mr. GOMPERS. I did not interrupt you, much as I wanted to.

Chairman WALSH. Yes; there must be no interruption from any source.

Mr. GOMPERS. And much as you deserved it.

The other bill, Mr. O'Connell, was the bill to regulate the immigration to the United States, which every man realizes is necessary, no matter what differences there may be as to the degree of regulation and limitation; there is a general agreement among the people of the United States that some regulation and limitation is necessary other than that which exists to-day. That bill passed the House of Representatives and the United States Senate by overwhelming majorities and then came to the President, and the President vetoed it, and Mr. Berger voted to sustain the veto and was one among the minority which failed to secure the two-thirds vote to pass over the President's veto, an action which should not only damn the man politically in his own party but from every Democrat, in the best sense of that term, and not in its party sense.

I should say that we have been contending always—the American Federation of Labor—for the purpose of getting the workmen to organize and to unite, to fraternize, and to make a common cause as best they can; to have their agreements terminated, as near as possible, about the same time, so that new joint agreements of one industry or kindred trades might be made under the best advantages and conditions with the employers.

May I call attention again to the report of the executive council to the Rochester convention; to the question of industrial unionism, the report of the committee upon that subject, the adoption of which by the convention—submitted to Mr. Hillquit upon the witness stand—he could express no dissent from it, and yet this morning says that we have not reached and are only reaching that goal from which he himself could find no dissent?

In regard to the workmen's compensation bill, let me say this: That there are now representatives of labor as commissioners on that commission, and since Mr. John Mitchell was appointed a commissioner, a member of that commission, he has been stigmatized by the Socialist press and speakers as a faker and a four-flusher and a fraud upon the American workmen. Mr. James Lynch, the commissioner of the department of labor, formerly president of the International Typographical Union, has been denounced time and again as a faker, four-flusher, and fraud, and all that sort of thing, an imposter upon labor, a misleader. Let the trade-union movement anywhere in the country nominate a labor man for any position, such as, for instance, the board of

aldermen, the State legislature, for Congress of the United States, and the Socialist Party will antagonize him. Why, Mr. Frank Buchanan, former president of the Bridge and Structural Iron Workers' Union, a candidate for Congress in Chicago, Ill., was antagonized by the Socialist Party. In the last election, running for reelection, Mr. Victor Berger came from Milwaukee, neglecting his own district, in order to defeat Frank Buchanan as a Member of Congress. That is the instance that comes to me just now.

I am simply thinking aloud. It is not just one instance; there is no deviation from their course. As I say, it is the difference between the pretense made here and the practice which obtains throughout.

I remember, Mr. Chairman, the question that I did not answer, and which I desire to add, the categorical answer of yes or no. That is, in the establishment or inauguration of so-called big unions, one big union for labor. First, we had the National Labor Union. It was the first general organization of labor. Then the Rochester convention of national labor unions. And I can recommend to every student, and particularly do I recommend to Mr. Hillquit, the reading of the declaration of purposes of the National Labor Union, which met at Rochester, somewhere in the sixties and he will find that his declarations of immediate demands contained in the Socialist Party, immediate demand upon which he questioned me yesterday, is more fully, ampler, and abler set forth than by the Socialist Party who purloined all this stuff from us.

The Knights of Labor, the Western Labor Union, the American Labor Union, the Socialist Trade and Labor Alliance, and the Industrial Workers of the World—I have no right to make any choice as to which is the better; I believe the statement of each of the representatives of the I. W. W. when they speak of the other I. W. W.

And now, as I said, Mr. Debs is engaged in a movement to destroy the American Federation of Labor; and I am not misquoting him, I am not misrepresenting him—these are his direct words, and if you cared to, I should be very glad to submit them.

Chairman WALSH. Please submit them, because, Mr. Gompers, you have just three minutes left.

Mr. GOMPERS. Then I want to refer to this one big union. There is not anything that could be more disastrous to the interests of labor than the establishment, if it could be established, of a so-called one big union. There are differentiations in all human activities. Perhaps no better example might be cited than the Army on the battlefield and in the preparation for battle, and the organized labor movement on the industrial field. If you can imagine in the Military Establishment of this or of any other country, instead of now having each corps of men doing their particular work, knowing when that work is to be done and how to do it, and each working or growing into the work with the other upon the best accepted understanding of the purposes that the army is to achieve. Purposes and tactics change, and they have changed now from what they were 10, 50, or 100 years ago, and so has the labor movement, and yet it is organized scientifically upon the basis that each is to do a particular thing at a particular time, each accomplish their work, and in their whole accomplishing their great purposes. You can imagine what would occur if the infantrymen, the cavalrymen—the men and the horses were all thrown in together. The worst thing which could occur to such an army would be to order a movement of any kind—to advance or to retreat. The only safety for them would be to stand still forever and anon. And so it is with the labor movement.

The labor movement is organized in a trade, in a calling, in an industry, with its departments such as have already been established, the coalition of each with the other, hoping that the other is to do the best thing that can be done for the one specific purpose of best protecting the men and the women of labor, the children of our time, to promote, to help them to promote their best interests now and for the future, neither treading upon the other, all trying as best they can in the light of their intelligence, in the light of their experience, in the light of the plans formulated by themselves and those chosen to speak for them, a well ordered, rational, democratically governed movement of organized labor of America, will lead to the attainment—as it has already led to the attainment of the highest possible conditions of humanity, and the conscience that shall demand as well as give to every human being the rights, and the liberties of the better civilization we now have—for which we are constantly tending and constantly striving.

Chairman WALSH. We are very much obliged to you, Mr. Gompers.

Mr. THOMPSON. There is a question I would like to ask, which has been propounded by the audience.

Chairman WALSH. If it can be answered by yes or no, proceed.

Mr. THOMPSON. This is a question handed in by some members of the audience.

Mr. GOMPERS. Well, I don't know. I don't know whether I have committed murder or not.

Chairman WALSH. You can do the same as I suggested to Mr. Hillquit about his questions. You can answer it later, if you care to.

Mr. GOMPERS. The question can not be answered by yes or no. I shall be very glad to answer it, if the gentleman desires, at some other time. It can not be answered by yes or no.

Chairman WALSH. The commission will now stand adjourned until Monday morning at 10 o'clock, to meet here sharply at that hour in this room.

(At 12.15 o'clock p. m., May 25, 1914, an adjournment was taken until Monday, May 25, 1914, at 10 o'clock a. m.)

38819°—S. Doc. 415, 64-1—vol 2—36

THE BUILDING TRADES OF NEW YORK CITY

(For exhibits under this subject, see pages 1789 to 1799)

COMMISSION ON INDUSTRIAL RELATIONS.

NEW YORK CITY, *May 25, 1914—10 a. m.*

Present: Chairman Walsh, Commissioners Lennon, O'Connell, Ballard, and Garretson.

THE ARBITRATION PLAN.

Chairman WALSH. The commission will please come to order.

Mr. THOMPSON. I will call Mr. Eidlitz.

Chairman WALSH. What is it to-day, Mr. Thompson?

Mr. THOMPSON. The hearing to-day, Mr. Chairman, begins the building trades of New York City, and the particular matter on for this day is the arbitration plan, the so-called New York arbitration plan in the building trades, which was in existence for a number of years. The first witness for the day is Mr. Eidlitz, who will speak generally on the whole subject, and more particularly with reference to the employers' views on the arbitration plan.

TESTIMONY OF MR. OTTO M. EIDLITZ.

Mr. THOMPSON. Mr. Eidlitz, I believe you testified before the commission at Washington?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. On the question of collective bargaining?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. I do not intend to cover that whole field in detail as I did then, but I would like from you now a brief statement of what led to the formation of the New York arbitration plan in the building trades. Briefly state it, please, for the purpose of this record.

Mr. EIDLITZ. For a great many years, in the city of New York, the various departments of the building industry made agreements with their unions; that is, the plumbers, the steam fitters, the bricklayers, carpenters, and so on down the line. It transpired that a number of individuals came from the West who had perhaps new ideas as to the value, financially speaking, of what organization might mean to an intelligent unscrupulous leader. They proceeded to organize a very beautiful graft game in the city of New York, and exacted tribute by calling strikes, and would release the job from the strike for a consideration. They were notably led by Sam Parks, of the housesmith and bridgemen's union. The situation became so serious after a year or two that the employers decided that there was only one thing that could be done, and that was to unite, and by their own union offset this aggressive and graft situation. We did so. One thousand firms were united, a constitution and by-laws drafted, and the whole project put in operation, the Building Trades Employers' Association formed, and the whole project put in operation in about three weeks. Bonds were exacted from all the members, according to their importance in the industry; a bonding committee formed to see that justice should be done to the small as well as the larger men. We then served notice on the organizations that hereafter the conditions that had prevailed for the last two or three years must cease.

Mr. THOMPSON. You mean by that the organization of the workingmen?

Mr. EIDLITZ. Yes, sir; that is to say, the inaugurating of strikes for graft. At that time, if I remember rightly—this occurred in 1903—there had been a strike of the material dealers—that is, the teamsters who were supplying the dealers went on strike—and for some little time around May the work was

shut down all over the city. During this interval, as I remember it—I am speaking now to the best of my remembrance—this situation was crystallized as I have related. A few years prior to this Bishop Potter, who had been very deeply interested in the relation between labor and capital, had asked a number of the men in the various departments—various departments of endeavor—to draft a scheme of what they suggested as to how to handle the problem between capital and labor, and, among others, he also asked me to make a suggestion. The suggestion was made by myself, and it was indorsed by the building trades employers' association, and the unions were notified that before the relations would be taken up with them again that they would have to subscribe to this method of settling trade disputes. In other words, the fine point of what this method was was that before a strike they must confer, the question must be investigated. A delegate could not go on the job and say to those who were there to pull the men off.

Mr. THOMPSON. Mr. Eidlitz, with reference to the bond that you say was exacted by the employers' association from its members, in a general way what was the nature and intent of that bond?

Mr. EIDLITZ. The nature and intent of that bond was this: The thousand firms were divided into approximately 28 or 29 or 30 organizations, having a varying membership, in some cases the membership took in very nearly all the employers in this industry in the city of New York and in others it was only partial; and the object of the bond was, first, the governing body of the building trades employing association was vested in a board of governors and three representatives from each of the units composing it.

Mr. THOMPSON. Have you got, Mr. Eidlitz, any literature giving the units composing its organization?

Mr. EIDLITZ. Well, yes; I have it as it existed in 1907, when this was—

Mr. THOMPSON (interrupting). Now, was a copy of that book you have there filed with the commission at Washington?

Mr. EIDLITZ. Yes, sir; Mr. Ballard has a copy of it.

Mr. THOMPSON. I mean, and you also filed one, did you not, with the commission at Washington?

Mr. EIDLITZ. Yes, sir; I did.

Mr. THOMPSON. Now, the title of it?

Mr. EIDLITZ. This is simply the report gotten out in 1910, entitled, "The Decisions of the General Arbitration Board of the New York Building Trades Affecting the Jurisdiction of the Trade."

Mr. THOMPSON. Now, Mr. Eidlitz, does that book containing those decisions also contain an outline of your organization, its aims, membership, and purposes?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Does it also state in there the nature and extent of this bond and give an account of it?

Mr. EIDLITZ. State what?

Mr. THOMPSON. This bond that you require.

Mr. EIDLITZ. I don't think so. But the nature of the bond—I was getting to that—the nature of the bond is that when the board of governors issued an order, and an individual firm disregarded that order—after hearing before the grievance committee the bond was forfeited.

Mr. THOMPSON. For what amounts were those bonds given? I understand they were for different amounts?

Mr. EIDLITZ. I think the lowest was \$500.

Mr. THOMPSON. What was the highest?

Mr. EIDLITZ. Well, we had at one time one as high as \$25,000. Most of them ranged from \$500 to \$2,500.

Mr. THOMPSON. What was the name of this association at that time?

Mr. EIDLITZ. Building Trades Employers' Association.

Mr. THOMPSON. Is that still in existence to-day?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. During the life of that association, were any of these employers' bonds forfeited?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Were any collections made on them?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. In what instances do you remember? What firm or what employers, and in what trade, and, if any, the amount of forfeitures?

Mr. EIDLITZ. Well, I don't remember that. There were about four or five.

Mr. THOMPSON. Were the employers, at the time the bond is forfeited, expelled from the organization?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Are, do you know, any of those employers back in the association?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Then, there was no provision in your organization by which a man would have to be expelled for good?

Mr. EIDLITZ. He would be expelled, but he could always have a hearing; but his coming back, however, was absolutely dependent on the will of the board of governors. Some of them were out for quite some little time.

Mr. THOMPSON. Mr. Eidlitz, have you any literature in connection with the employing association, showing its forms, intents, and purposes?

Mr. EIDLITZ. No; but I would be very glad to send you such literature.

Mr. THOMPSON. I would be very glad if you would do so after you return.

Mr. EIDLITZ. Yes, sir.

(NOTE. Pamphlets entitled "Building Trades Employers' Association," "Constitution and By-Laws of the Building Trades Employers' Association," and "To the Employees of the Members of the Building Trades Employers' Association," all submitted in printed form.)

Mr. THOMPSON. Now, after the formation of your organization, how did you deal with the organizations of workingmen who violated your rules?

Mr. EIDLITZ. Well, we took up the question right at that time, which perhaps would explain the method. As I said, we served notice on the various unions of the industry that we would not do business with them again until they had signed an agreement agreeing to handle labor disputes on the basis that was outlined in the plan. Some of the organizations came in quickly, and others, when we found that they were unwilling to accept the situation, we formed new unions, giving them the same trade conditions, giving them the same wage, and succeeded, in the course of two years, in reorganizing every one of those 29 organizations.

Mr. THOMPSON. Have you a memorandum showing the 29 organizations?

Mr. EIDLITZ. I can read them to you. Some of those organizations saw the light and came in quickly; others took a longer time, but some of them we had very considerable trouble with, and dual unions were formed, and for a time existed; and finally they were all cleaned up and the trade became as one organization, but all under the plan.

Mr. THOMPSON. There were 29 of them, you say, that you had to form dual unions in? I would like to get the names of those, if you can give them.

Mr. EIDLITZ. The masons and builders' association, who had an agreement with their bricklayers and laborers; the hoisting association, that had an agreement with their hoisting employees; the marble-industry employers' association, who have an agreement with three organizations—the cutters and carvers, their shop hands, and their laborers; the electrical contractors' association, that have an agreement with the electricians and helpers; the wirework manufacturers, who have had an agreement with the holsters; the house movers and shovers, who have an agreement with their employees; the employers' association of architectural iron workers; the rock and cement workers; the ornamental bronze and iron workers; the association of interior decorators and cabinetmakers; the tile grate and mantel association; the parquet flooring association; the composition roofers and waterproofers' association; the association of roofers and sheet-metal workers of Greater New York; the Iron League of Architects and Erectors' Association; and the employing plasters' association.

Mr. THOMPSON. Mr. Eidlitz, the names you are reading there are names of employers' associations affiliated with your body?

Mr. EIDLITZ. Yes; and, of course, they all have their agreement with us——

Mr. THOMPSON (interrupting). Yes, sir; I understand that. But in how many cases at that time did you have to form dual labor unions? You said 29, as I understand it?

Mr. EIDLITZ. Well, as I remember—well, it was an appreciable amount, but I don't just exactly know how many. It occurred in the case of the plasterers, and it occurred in the case of the carpenters. I believe it did in the case of the tile layers. I am going from memory now—and this is 11 years ago; although I was right in the midst of it, these things escape me. I should think probably 5 or 6 or 7, however, out of the 29, or perhaps 10; less than a third.

Mr. THOMPSON. In the dealings that the association had with the trade-unions since that time, in case of trouble with the union, have you also formed a dual union?

Mr. EIDLITZ. We have.

Mr. THOMPSON. And is that the policy of your association up to the present time?

Mr. EIDLITZ. Not necessarily.

Mr. THOMPSON. I mean this: It is one of the means of warfare, if necessary?

Mr. EIDLITZ. It is one of them.

Mr. THOMPSON. I mean, you have not abandoned it or repudiated it, or anything of that kind; but it is still open to use?

Mr. EIDLITZ. Yes; it has not happened but, I think, more than twice since 1903 and 1904.

Mr. THOMPSON. In regard, Mr. Eidlitz, to the forfeiture of bonds that you have spoken about; did any of the companies resist the forfeiture, and if so, what was the outcome of that position?

Mr. EIDLITZ. Any of the companies?

Mr. THOMPSON. Yes; that these bonds were forfeited?

Mr. EIDLITZ. Well, the bonds were exacted from a bonding company, and when the forfeit was ordered by the board of directors the bonding company had to make good. It was then subject to fight afterwards.

Mr. THOMPSON. Well, did any of the firms fight it afterwards?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. What firm, do you know, or firms?

Mr. EIDLITZ. Well, is that essential?

Mr. THOMPSON. Well, I think that I would like to have you answer, Mr. Eidlitz.

Mr. EIDLITZ. Well, if you don't mind, I would rather not; of course that is a matter of record.

Mr. THOMPSON. Well, I will not press the point.

Mr. EIDLITZ. Thank you.

Commissioner O'CONNELL. It can be gotten from the records, Mr. Eidlitz?

Mr. EIDLITZ. Yes; and if you want those records there won't be any trouble in getting them from the secretary of the association. That is all very carefully kept.

Mr. THOMPSON. Now, briefly as you can state it, Mr. Eidlitz, what was the specific form of arbitration provided for in that agreement in the way you state?

Mr. EIDLITZ. Well, the cardinal difference between the operation under the plan and the operation before the plan was that no representative of labor had a right to go on any work and stop work before he brought the contention to the attention of the proper accredited tribunal who was handling this problem.

Mr. THOMPSON. And what was that tribunal, and how was it made up?

Mr. EIDLITZ. That tribunal, as it existed during the major part of the agreement, was composed of 12 men—6 employers and 6 representatives of labor. The delegate—they sat about three times a week. The delegate who had the grievance against any employer brought this charge before the executive committee—the executive committee made the ruling. Now, if they found that the delegate's contention was correct they issued an order which said that the executive committee finds that the arbitration plan is not maintained on the job, for instance, at Eighteenth Street. The moment that order was issued all the representatives of the Building Trades Employers' Association who were on that job were immediately notified of that order. Then the question was in the hands of the laborites to do what they wished to do.

In other words, the committee after investigation found that the delegate's representation that conditions contrary to the trade agreement were existing on that job, and, that being the case, they were at liberty to handle it according to trade-union methods. Now, very often, it was straightened out; the mere fact of that ruling having been made, the secretary would call up, in many cases it was an owner who we were not in direct relation with, and the secretary would call up and advise the owner, tell them of the trouble here, and in a vast majority of cases that was all that was necessary; the trouble was cleared up without any further strike or anything further, or any other effort.

Mr. THOMPSON. Now, Mr. Eidlitz, when you say that it was left to the laborites, to pursue their usual or ordinary methods and settle the trouble, did your association do anything itself to improve those conditions?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. Did you enforce the order?

Mr. EIDLITZ. Well, no, we did not, except so far as it related—if it related to one of our own members, you see—if it related to one of our members, that member was notified to clean up his situation, that he was acting contrary to

his trade agreement, see, and he would have to clean it up, and in ninety-nine cases out of a hundred it was cleared up.

Mr. THOMPSON. Suppose he did not, then what further would your association do to him?

Mr. EIDLITZ. If he did not clean it up, if he did not abide by his contract relation with his own trade, after being notified by the parent body that he was in default, see, then, so far as we were concerned, we took our hands off; but, you see, he had to comply or else he would be subject to forfeiture of bond as well because the committee had found him wanting.

Mr. THOMPSON. But the limit of your activity was the forfeiting of the bond, as I take it, from what you said? You pursue no aggressive warfare against that foreman?

Mr. EIDLITZ. No.

Mr. THOMPSON. Do you contribute——

Mr. EIDLITZ (interrupting). Well, in this way we do, at times, but, of course, some of these questions you know are very near, very close, and sometimes you can go from a flagrant case to a hair-splitting case, don't you know. Now, then, when the man was found guilty, if he had found it was one of those near cases, as I might term them, he had a chance to come before the grievance committee and explain himself; that is, the grievance committee of the Building Trades Employers' Association; and if they found—in many cases this association found the trouble that had caused this complaint was all over—that all the work was finished, don't you know, and there was really no way of getting at it, and he would be fined.

Mr. THOMPSON. To whom did that fine go?

Mr. EIDLITZ. To the Building Trades Employers' Association.

Mr. THOMPSON. In any fight that was going on in work under actual construction, did your association help finance the strike of the workers, if they struck?

Mr. EIDLITZ. Help to finance a strike of the workers?

Mr. THOMPSON. Did you give any contributions in money to the workers?

Mr. EIDLITZ. No.

Mr. THOMPSON. In case they struck on a job, where a man violated the agreement?

Mr. EIDLITZ. No.

Mr. THOMPSON. In other words, as a matter of fact, your activity was practically confined to making a ruling notifying the member of that ruling, forfeiting his bond, if necessary, and that is what you did, and after that you took your hands off?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. And let——

Mr. EIDLITZ. In other words, before everybody was subject to the whim of any delegate who thought he saw a chance to do something, or who might have been a new man on the road and very energetic and want to make a demonstration, and after the plan was inaugurated, it became necessary for him to prove his case before his own colleagues.

Mr. THOMPSON. I think I understand that. Now, further proceeding with your plan of arbitration, you have this committee of 12. Then, in case they don't agree, what would happen then?

Mr. EIDLITZ. In case that the committee of 12 could not agree, then the matter was referred to the supreme court, so to speak, which was composed of 2 representatives of either side of the entire industry; that is, it was a body of about 120 men.

Mr. THOMPSON. And the matter was taken up there?

Mr. EIDLITZ. The matter was taken up there.

Mr. THOMPSON. Was it heard?

Mr. EIDLITZ. Was heard, and a vote taken.

Mr. THOMPSON. A vote taken. Was there any appeal from the order of that body?

Mr. EIDLITZ. No.

Mr. THOMPSON. There was not?

Mr. EIDLITZ. No appeal from the order of the general board.

Mr. THOMPSON. In case the general board deadlocked, then what were the means of settling it, if any?

Mr. EIDLITZ. In case of a deadlock, why, of course, the subject—we always were ready to submit any question to arbitration with an umpire.

Mr. THOMPSON. And your rules and provisions did provide for the final refer-

ence, after this general committee, to a board of arbitration, did it not?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. And sometimes that board with an even number, as I understand it, two on each side?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. And it admits the issue to vote to five with the addition of an umpire?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. To the four—

Mr. EIDLITZ. No; perhaps I don't quite get you, but the general board was composed of 120 men.

Mr. THOMPSON. I understand.

Mr. EIDLITZ. Two from each side of the employers and employees, so that there were four representatives from the brick trade and four representatives from the carpenters' trade on each side, and so all the way down the line.

Mr. THOMPSON. After that you had a provision, as I understand, by which in case of a deadlock there the matter might go to arbitration?

Mr. EIDLITZ. If they so voted it could, but if there was a decision, that is, if it had come to a vote, it could not be referred because a disgruntled party wanted to try it over again.

Mr. THOMPSON. But in case it so happened to break in the presentation of the matter before this general body?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. Then the matter was taken up for a vote on the application of one of the parties to send it to arbitration?

Mr. EIDLITZ. Yes.

Mr. THOMPSON. Then it would be so sent, would it not?

Mr. EIDLITZ. It would. There never was, as I remember it at the present moment, at least we always were first and last in favor of arbitrating the question, and the only point about it was that in arbitrating trade questions it is a rather long-winded proposition and somewhat costly, and that is why the labor side at times were a bit reluctant about having many questions tried by arbitration.

Mr. THOMPSON. Now, Mr. Eidlitz, who generally composed this arbitration board of four when it was only four?

Mr. EIDLITZ. It was composed of two men, two employers and two laborites, who were not interested in the particular subject under discussion. In other words, if the scrap was between a plumber and a steam fitter, a plumber or a steam fitter employer or workman could not sit on that board, but they had the right to select any one of those other 58 names on either side to act for them.

Mr. THOMPSON. That is to say, each contestant had the right, for instance—

Mr. THOMPSON. That is to say, each contestant had the right, so far as the union was concerned—a union representative had the right to select the man of his own choosing?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Anyone of his own choosing?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Then, they were not confined necessarily to pick men who were not concerned in the controversy?

Mr. EIDLITZ. They could pick whoever they wanted outside of their own trade.

Mr. THOMPSON. I mean outside of their own trade.

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. That was true of the employers as well?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Now, Mr. Eidlitz, in the following out of that work—the work of your association—was it ever necessary to declare a lockout against any of the unions?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. In the building trades in New York City?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. If, so, when and where was it?

Mr. EIDLITZ. Well, the most flagrant one was one that happened, I think, three years ago—four years ago now nearly.

Mr. THOMPSON. Wasn't there a lockout declared in 1904 against the carpenters, electricians, tile setters, mosaic work, and plumbers?

Mr. EIDLITZ. Yes, sir. That is going back. 1903 and 1904, that was really the war time of trying to bring the plan into operation.

Mr. THOMPSON. But wasn't there an amendment at that time?

Mr. EIDLITZ. Yes, sir; there was.

Mr. THOMPSON. Wasn't there an amendment of your arbitration plans in the year 1904 as a result of the lockout declared at that time? If so, what was the amendment?

Mr. EIDLITZ. I have not got a copy of the old plan here with me.

Mr. THOMPSON. Generally, what was the substance of it, if you remember?

Mr. EIDLITZ. The main amendments were making the plan more specific, arranging certain methods of voting, and amplifying it generally. The main features of it were left untouched.

Mr. THOMPSON. And this book you have will show those amendments?

Mr. EIDLITZ. Shows the amended plan.

Mr. THOMPSON. Now, Mr. Eidlitz—

Mr. EIDLITZ. I will be very glad to send you a copy of the original, too.

Mr. THOMPSON. Were any unions dropped from this arbitration plan? I will direct your attention more specifically to the iron workers in 1906; and why were they dropped?

Mr. EIDLITZ. Well, in 1906, the housesmiths and bridgemen had been making a great deal of difficulty, and in 1906 their national officers came here to New York and inaugurated a warfare against the firm of Post & McCord, on the basis that Post & McCord were dependents of the American Bridge Co.—dependents or actually were a part of the American Bridge Co.—and as the American Bridge Co., in their bridge work throughout the country, had at that time decided that they would not employ union men any more, they inaugurated this warfare against Post & McCord, finding that Post & McCord were a part of the bridge company. The executive committee of the joint board, composed of employers and employed, took up the question with the officials of the housesmiths and bridgemen. We made every effort to give them positive proof that they were wrong in their contention. We offered to show them the books of the Post & McCord Co., and their articles of incorporation, but they refused to listen. They said that, in as much as Post & McCord had sold their interest to the American Bridge Co., that they considered that they were a part of it, and they were not open to conviction as to the contrary.

Mr. THOMPSON. Mr. Eidlitz, was there a contract at that time existing by which the union worked with Post & McCord?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Were Post & McCord willing to carry out that contract?

Mr. EIDLITZ. Absolutely; they had to.

Mr. THOMPSON. Has the ironworkers' union, the structural ironworkers' union, been affiliated, been with your body since that time?

Mr. EIDLITZ. No, sir.

Mr. THOMPSON. Or in agreement with them, rather?

Mr. EIDLITZ. No, sir.

Mr. THOMPSON. When did the arbitration plan break down, Mr. Eidlitz, and what was the cause of it, if it did break down?

Mr. EIDLITZ. In 1910 the steam fitters struck for a raise of wages, and their case was examined by the executive committee and referred to the supreme court. I simply mention it that way so as to make the two bodies clear in your mind—the expression the supreme court. The supreme court heard the case and ordered the steam fitters back to work; that then the question would be taken up. They did not go back. They were given a week. Another meeting was held and again the vote of both was successful, and they ordered them back to work. They did not go back.

Now, whenever an organization does not obey the demand of the supreme court, then they are supposed to be at the mercy, if you wish to put it that way, of the employers. In other words, the employers, after they have had their day in court, the union has had its day in court, does not abide by the decision of the executive committee, and the supreme court, then the employer has the option to proceed with his work in any way that he sees fit, and the other organizations, union organizations, agree not to obstruct him. In the plans the unions as a whole guaranteed the faithful living up to the plan of each individual organization. See? And we guarantee the faithful living up of each individual employer or else something will happen.

Now, when the organization, as an organization or a union, as a union decided that they would not abide by the decision which had been arrived at in the judicial manner, then they were left at the mercy of the employer, and that was done by formal vote. It was done by formal vote in the case of the painters and in the case of the housesmiths.

Mr. THOMPSON. And in the case of the ironworkers, too?

Mr. EIDLITZ. Yes. Well, the ironworkers are the housesmiths. The housesmiths and bridge workers—"ironworkers" is the general term, but housesmiths and bridgemen is the official title.

In this case the unions and the employers together voted that the plan should obtain and that any member of the Iron League or of the ornamental iron masters' association could man his work with whomever they pleased and none of the other 28 unions would interfere. That is, they would go on peaceably with their work and not try to obstruct the employer. Do you see? But when it came to the steam fitters the unions refused to pass that vote, namely, that the shops of the steam fitting employers are now open to whoever they see fit to employ and we will not interfere. See? They refused to pass that resolution which was necessary, and consequently the plan was inoperative. They had agreed to either secure the prompt adherence to the ruling by the defaulting union or else to allow the employer to proceed with his work in the way that he saw fit and without hindrance on the part of the other members. They would not do that.

Mr. THOMPSON. Since that time, Mr. Eidlitz, has there been any adjustment? And how has the adjustment been brought about?

Mr. EIDLITZ. Since that time the unions, recognizing that, irrespective of anything else, the settlement of trade disputes or jurisdictional disputes by arbitration, even though it might be slower, was the only feasible way of handling that problem, that it could not be handled by force; they decided to accept, and did accept, this volume of decisions, which has nearly 100 mills; as I remember it—may be only 85, I don't remember exactly—but the work of seven years is in there, and there was a lot of good effort, and intelligent effort, too, on the part of those who were handling that work. They accepted that as their Bible; they agreed that those decisions should maintain, irrespective of whatever relations existed between the building trades associations and the unions of New York.

Mr. THOMPSON. Have you carried on any specific arbitration since that time?

Mr. EIDLITZ. Yes, sir. I was getting to that. The thing—it naturally would follow that, although this eliminated, to a very large extent, the greatest extent, many of the contentious questions that had been bothering the industry for a great many years; still as the industry went on new points were bound to come up. And the method that has since been employed is that the executive committee, composed entirely of employers, is ready to meet at any time any of the representatives of labor and have the grievances on the particular job or on the general question decided, and they thrash out the proposition.

Mr. THOMPSON. That is as a matter of conference?

Mr. EIDLITZ. As a matter of conference. It is not entirely by conference. Of course, having the ground work of this to go on, and the experience on both sides of seven years of handling problems by arbitration, it became a very different project, then, to proceed by conference to handle a thing in a similar way.

Mr. THOMPSON. Have you ever, after the conference, or as a result of conference, taken up by arbitration any disputes?

Mr. EIDLITZ. Yes, sir. There is one pending between the elevator contractors and electricians at the present time. There have been several.

Mr. THOMPSON. That, then, Mr. Eidlitz, is in brief the story of arbitration as it has worked and is working?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. In the building trades in New York City?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Now, Mr. Eidlitz, referring to the nature of the relations between the unions and the employers, as I understand it, in New York the various associations of employers, like the master painters or the master carpenters, have agreement with the local unions?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Are these agreements in any way carried out with the international as parties to them?

Mr. EIDLITZ. Many of them are.

Mr. THOMPSON. Many of them are?

Mr. EIDLITZ. Yes, sir. Most of them, I imagine.

Mr. THOMPSON. But do you deal more directly with the local unions rather than the international?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. You do?

Mr. EIDLITZ. Yes, sir; in most cases. There are some cases where the international plays quite a part, but in most cases, in every case, of course, the agreement is made directly with the local unions. In some of the cases the international officers revise that agreement; I imagine in many cases.

Mr. THOMPSON. But, from the standpoint of your association and the membership of your association, you look at the local union?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. To be the responsible party?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. If I understand you—

Mr. EIDLITZ. Mr. Thompson is going to make it a case in New York where we are trying to have home rule obtained, isn't that it?

Mr. THOMPSON. It does obtain, doesn't it?

Mr. EIDLITZ. It does obtain to a very large extent.

Mr. THOMPSON. I think that was your testimony in Washington.

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Now, coming to the agreements, Mr. Eidlitz, that are made between the unions and the associations who are a part of your larger association, do they generally provide for the employment solely by the masters of the members of that craft? That is, do the master employers generally agree that they will only employ members of the union in their particular craft?

Mr. EIDLITZ. Absolutely.

Mr. THOMPSON. And do the unions generally agree that they will only work for members of the masters' association?

Mr. EIDLITZ. No, sir.

Mr. THOMPSON. They do not?

Mr. EIDLITZ. No, sir.

Mr. THOMPSON. Do the agreements permit generally of the right of the union men to work for any employer he sees fit?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. They do?

Mr. EIDLITZ. Yes, sir. And they do.

Mr. THOMPSON. Do you know of any agreement now in existence in New York City where the union agrees—the membership of the union, rather—the union agrees on behalf of its membership that they will act solely for the employer?

Mr. EIDLITZ. I think there is no such agreement in existence to-day. There was.

Mr. THOMPSON. There was?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. There has been some litigation in New York City, has there not, over that?

Mr. EIDLITZ. That I don't know.

Mr. THOMPSON. Have any suits ever been brought in New York City, so far as you know, against the master carpenters' association by firms outside of the city of New York who stand ready to furnish trim in this city?

Mr. EIDLITZ. Yes, sir; I had forgotten that.

Mr. THOMPSON. Those suits, or many of them, are they still in existence?

Mr. EIDLITZ. I think that the suit was discontinued.

Mr. THOMPSON. Were there several suits? Or had you been advised?

Mr. EIDLITZ. Well, this was all the same proposition. This was a suit by a number of woodworking concerns in the West against all the master carpenters in the city of New York and the Brotherhood of Carpenters jointly to permit or to force them to allow their product, made under entirely different conditions, to come into New York. In the agreement of the carpenters they had a clause which said that the trim should be made under certain conditions, particularly in Manhattan and the Bronx, and the employers finally agreed to that condition, because there was a great deal of trouble happening and a great many strikes and unpleasantness occurring, due to the fact that nonunion and cheap trim was being run in and put up by the carpenters, and one union finding out that this man was doing this, and the man who finally brought the action had put up this illegal work, if you want to term it so, or contraband article, they came to an agreement that no member of the association would handle in Manhattan or the Bronx that type of trim.

Mr. THOMPSON. Then, again, according to your idea, that was solely for the purpose, as far as the employers were concerned, of saving themselves trouble?

Mr. EIDLITZ. No, sir. It was solely because the union was causing strikes all the time on account of it and because the union wanted it. We did not want it.

Mr. THOMPSON. You mean to say the manufacturers wanted to save themselves trouble on their buildings?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. That is, the erectors?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. So far as you know, and so far as any agreements which members of your association have with the union, are outside contractors permitted to come into the city of New York and erect buildings?

Mr. EIDLITZ. Absolutely. They are doing it all the time.

Mr. THOMPSON. They do it all the time?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Then, there is nothing, so far as you know, in the agreement between the master builders and the unions which seeks to restrict the contracting work in New York City on buildings to the contractors of this city?

Mr. EIDLITZ. There are some trades, I think, that put a fence around the city,

Mr. THOMPSON. What trades are those, if you know?

Mr. EIDLITZ. Why, I think to an extent it exists in the stone trade and the marble trade.

Mr. THOMPSON. To what extent does it exist in the stone trade? How does it evidence itself?

Mr. EIDLITZ. Why, because in the stone trade there is an agreement, practically an agreement, that we will have all the stone that is used here brought in in the rough and cut in this balliwick here. In other words, we can not bring Indiana limestone cut and carved in Indiana and set it in New York.

Mr. THOMPSON. Can you bring Vermont marble into this city all dressed and polished and set it?

Mr. EIDLITZ. Well, that is practically stone. Exterior stone cutting; that comes under the same category.

Mr. THOMPSON. The same ruling?

Mr. EIDLITZ. The same ruling, practically; yes, sir.

Mr. THOMPSON. In what other branch of building material does that rule apply, if you know?

Mr. EIDLITZ. I think it only applies in the stone trade and to a limited extent that you have mentioned there in the carpenter trade. And I don't know that it applies to-day in the carpenter trade.

Mr. THOMPSON. Now, Mr. Eidlitz, directing your attention to jurisdictional disputes, is the method which you speak of, or have spoken of, in connection with the settlement of other disputes applied to jurisdictional matters?

Mr. EIDLITZ. It has. Most of those cases that have not been adjudicated are jurisdictional troubles.

Mr. THOMPSON. What have you to say from your experience in that regard with reference to the settling of jurisdictional disputes in the building trades in other parts of the country? Do you believe it should be done by local agreements in each respective city, or could it be done by a national body representing the employers and the employees?

Mr. EIDLITZ. Well, I think that the local conditions, Mr. Thompson, vary so largely in the different cities of the Union that it would be extremely difficult to have a national board, if you should term it so, composed in a similar manner as the New York board was composed, to try the cases and arrive at a decision which would be fair in every city of the country. Of course, you understand there are certain fundamental things which go without saying, and which are very rarely, if ever, challenged unless you challenge the whole subject of open and closed shops. And, naturally, if you go to Detroit or some of those other cities that are operating under entirely different forms, or if you go to Boston, where there is a very large percentage of open-shop conditions, you can see at once that you can not discuss absolutely closed-shop propositions to determine what should happen in a city or a town that is operating under fundamentally different conditions.

Furthermore, in the city of New York, and I am talking now, of course, for the city of New York, many of the national unions, in certain of the trades at least, are largely dependent for their support and well-being upon the support they get from New York. It does not apply to all of them, but it does apply to a number of them. And, consequently, in many instances, it is a case of the tail trying to wag the dog, and the dog does not like it, and New York is the dog.

Mr. THOMPSON. First looking at the principle of the matter where similar conditions exist as do in New York City, which I take it from what you say is where there is a closed-shop arrangement?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. Between the employers and the unions?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. What objection is there to having the same kind of a decision made in a jurisdictional dispute in both classes or all classes?

Mr. EIDLITZ. Well, the only point about that, Mr. Thompson, is that here in New York we specialize, even perhaps a little more than they do in other places. Some of the things which would be considered without question as belonging to one trade or the other here would have what we might term a specialty and does that kind of work, and he wants his little part of that, and he does not want to be interfered with by any general order.

Mr. THOMPSON. Take the specialist, name any specific instance where you think a specialist could not be joined with a larger body of laborers?

Mr. EIDLITZ. I do not say he could not be joined.

Mr. THOMPSON. Without separating him.

Mr. EIDLITZ. I do not say he could not be joined. We have had an example of that right here and now in the steam fitters' trade. For instance, I will give you an example of what I mean. In most of the cities of this Union, the smaller cities, the plasterers and the bricklayers are together in one organization. If there is a little cement work to be done in that jurisdiction it is done by a member of the bricklayers and plasterers' international union? See? They are all in the one body. Now, when you come to the city of New York you have the bricklayers in one body, you have the plasterers in another belonging to the international organization of plasterers, and you have the cement mason in still another. Do you see? In the same way, for many years, the plumbers and the steam fitters were all in one organization.

Mr. THOMPSON. Just a moment. Taking that last.

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. As I understand you, the international organization covers those three things—the bricklayers, plasterers, and the cement men?

Mr. EIDLITZ. It does cover those three things in the majority of the smaller cities of the country.

Mr. THOMPSON. Yes.

Mr. EIDLITZ. But when you get to the larger cities the bricklayer has his own organization, the plasterer has his own organization, and the cement man has his own organization.

Mr. THOMPSON. Are these organizations of the plasterers and the cement men as distinguished from the bricklayers?

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON. As a matter of fact, it is a matter of different localities? Are not they even in large cities members of the International Union of Bricklayers?

Mr. EIDLITZ. No, sir.

Mr. THOMPSON. They are not?

Mr. EIDLITZ. No, sir. There is an international organization of plasterers. As I remember it, somewhere between twenty and thirty thousand. There is an international association of cement workers. That is what causes the trouble where they specialize.

Mr. THOMPSON. I want to go into that. That is the foundation of the jurisdictional dispute in large cities, I take it—that the plasterers, cement men, and bricklayers can be members of the same international union in the smaller cities. What is to prevent their being members of the international union in the large cities, except larger numbers?

Mr. EIDLITZ. There is nothing to prevent it, except that there is in existence 25,000 members in the organization who are having their own way and have their own sense of importance about their individual organizations, and who have their own craft that they are trying to protect, and they are going to scrap, make a very serious remonstrance before they will amalgamate with the bricklayers. Whether or no that would not be the best thing to do is not the point at issue, as I take it.

Mr. THOMPSON. There is nothing in the trade that would prevent them from amalgamating? That is, in the work itself? They do amalgamate in the smaller towns?

Mr. EIDLITZ. They do, except that there is an understanding between the bricklayers and the International Plasterers' Union that whenever there shall

be a certain number of plasterers in the bricklayers' union and the work in the local enables them to be pretty continuously employed on plastering, that the bricklayers will not object if the plasterers of the bricklayers' organization make an application to the International Plasterers' Union to start a local of plasterers in that locality. In other words, what it means is that so long as the work in the locality is small and a man can not continuously earn a livelihood at it, or there are only 3 or 4 or 5 who could be continuously employed, the bricklayers control the situation; but when it comes to a time where 12 or 15 or 20 plasterers can be continuously employed in that locality, then the bricklayers will not interfere with the plasterers making application to a national or international plasterers' union for a local, and those men will leave the bricklayers to go into the plasterers.

Mr. THOMPSON. If it were possible to have the plasterers, even in large cities like New York, and the cement men a part of the bricklayers' union—as I can well conceive that would be——

Mr. EIDLITZ. Yes, sir.

Mr. THOMPSON (continuing). Would that help in the settlement of and adjustment of industrial disputes?

Mr. EIDLITZ. I think it would. I think it is fair to say—that is probably axiomatic—that the fewer contestants for any department of work, naturally, the less chance of friction.

Chairman WALSH. Mr. Lennon wants to ask you a question.

Commissioner LENNON. Mr. Eidlitz, you spoke in the opening of your testimony of compensation being paid and you mentioned the name of Mr. Parks. I do not want to get into personalities, but I simply call your attention to it. Who paid this compensation, the contractors, the owners, or the union?

Mr. EIDLITZ. Well, if you can believe what we hear, all three; and then some.

Commissioner LENNON. What was this compensation paid for? What was the object in view in paying this money?

Mr. EIDLITZ. Why, a strike would be inaugurated on a job and there did not seem to be any way it could be settled. For instance, nonunion material would be brought to the job and perhaps a large amount of it allowed to be installed, and all of a sudden Mr. Parks or his emissaries would step in and say, "Those skylights have got to come off."

Commissioner LENNON. Who do you understand got this money, the individuals or the unions?

Mr. EIDLITZ. Well, I imagine that was pretty well confined to a small coterie. There was a little inside club in the housesmiths and bridgemen's union which—of course, I don't know this of my own knowledge, it is simply hearsay now—those funds went to that club; but I think Mr. Parks got the majority of it, and a very appreciable part of it—he and his direct lieutenants.

Commissioner LENNON. Did the plan of arbitration which you originally were party to during it—did that put a stop to this system?

Mr. EIDLITZ. It put a stop to nine-tenths of it. I don't believe we can put a stop to the disposition of human nature to be frail when they get power behind them, as long as you and I are going to be on this world, altogether; but you can check it; but you will not be able to eradicate it by a commission form of government or otherwise.

Commissioner LENNON. So far as your observation went, were there not instances where contractors were the initiators in this graft system?

Mr. EIDLITZ. Initiators?

Commissioner LENNON. Yes; I don't mean every contractor. I mean a contractor here and there. Wouldn't he try to do anything?

Mr. EIDLITZ. To be perfectly frank with you, I believe there is something in what you say. I don't doubt it at all, that there were some contractors who deliberately went to work and speculated on the situation; bought the cheap stuff and installed it, and then paid tribute to those who made that dicker beforehand. I don't think that is at all beyond the bounds of possibility. Rotten on both sides.

Commissioner LENNON. Did this system, or whatever it may be called—or lack of system, which it really is—what effect did it have on the building operations in the city of New York?

Mr. EIDLITZ. Why, the troubles were happening so fast and furious that we were on our beam ends for half the time.

Commissioner LENNON. Well, I should have added to that question, what effect—I mean, what effect did it have more upon the cost of buildings—the stoppage of building?

Mr. EIDLITZ. It hampered it, naturally hampered the cost and put a premium on paresis, so far as the contractor and owner were concerned.

Commissioner BALLARD. Are nonunion materials now penalized by the unions? Can a contractor bring in nonunion materials now and have them put in buildings if he wishes?

Mr. EIDLITZ. As a matter of fact, you will remember that most of the things that go into a building are manufactured under nonunion conditions—steel, brick, cement, lime—all those ingredients; all the piping of every description.

Commissioner BALLARD. So they can and do bring in materials made by nonunion manufacturers?

Mr. EIDLITZ. Absolutely. The thing is simply controlled, if you wish to call it so, or an attempt made to control it, in a very few of the trades.

Commissioner BALLARD. How about the plumbing supplies? Can a contractor or individual buy plumbing from any plumber he wants and have it installed by union men, if he may select, or is the plumbing trade a dominating trade so far as purchasing the goods is concerned? Is there an agreement between the manufacturers of plumbers' supplies and the smaller dealers in plumbers' supplies that they won't sell to anybody except certain union men or certain union workers?

Mr. EIDLITZ. No; I think not.

Commissioner BALLARD. Do you happen—

Mr. EIDLITZ (interrupting). I think not. There is on that a protective agreement between the manufacturing houses of plumbing fixtures and the licensed plumbers of the city. I think that obtains pretty well throughout the whole country. That is to say, the average individual can not go to a plumbing house and purchase fixtures at the same price that a plumber can. In other words, that is protection of wholesaler and jobber.

Commissioner BALLARD. He could not purchase them at all, could he?

Mr. EIDLITZ. Yes; he can purchase them.

Commissioner BALLARD. Are the wages which the union men in the various trades in New York receive the same as they receive in other cities, or are they higher?

Mr. EIDLITZ. They are higher, except, I believe, in San Francisco.

Commissioner BALLARD. Would a contractor have a right to bring union men from Buffalo or some western city into New York to do this work, or must he deal with the local unions?

Mr. EIDLITZ. He can bring his men from wherever he likes.

Commissioner BALLARD. The contractor can?

Mr. EIDLITZ. Yes; he would have to pay the New York scale when he gets them here.

Commissioner BALLARD. Would the union man have to join the local union here?

Mr. EIDLITZ. They probably would; they would have to take out their cards in the local union, and—

Commissioner BALLARD. And pay an initiation fee?

Mr. EIDLITZ. Well, I would not say that. I do not know what happens in all of them, but in most cases it is a very moderate fee. They take out their transfer cards from their home local and turn them in in New York and pay a certain fee, \$1.25, or something of that sort, for the privilege of working in this jurisdiction.

Commissioner BALLARD. The organization of employers came after the labor unions were organized, didn't they?

Mr. EIDLITZ. Yes.

Commissioner BALLARD. Would the organization of employers take into this organization any and every employer who wished to come in in that trade?

Mr. EIDLITZ. I think so; unless there is something very serious against them.

Commissioner BALLARD. Then, you say the organization of employers expel members if they are guilty of practices which the organization itself does not stand for?

Mr. EIDLITZ. Yes.

Commissioner BALLARD. Now, workingmen that have been employed by you and other contractors in the organization of contractors, has there ever been any trouble from men who are Socialists or I. W. W. or any other of those various isms?

Mr. EIDLITZ. Well, there have been some organizations; there have been troubles which we might have ascribed to that spirit among its membership. But I do not think that is a spirit that receives a great deal of consideration from real organized labor.

Commissioner BALLARD. For instance, if the employers should have some controversy with some union which sometimes occurs?

Mr. EIDLITZ. Yes.

Commissioner BALLARD. Suppose, for the sake of the argument, that this committee of 100 or 120 should decide against the local union, and the local union that was decided against might not accept it, and would they resort to any of this so-called sabotage, or would they say simply, "Well, we submitted the matter to arbitration and got beat, and have got to abide by it until something else comes up?"

Mr. EIDLITZ. Well, they have indulged somewhat in sabotage; they have in the fight. They have done some very disgraceful things, some of them, notably, in the housemen and bridgemen, in the way of dynamiting and crippling derricks, and so forth, that has happened.

Commissioner BALLARD. They have, perhaps, during the strike or the warfare, but after the thing was over, would they still resort to sabotage?

Mr. EIDLITZ. No. I think the average union is like the average individual. They might lose their temper in the heat of the fight, but once it is settled, all bets are off, and they go on together again.

Commissioner BALLARD. You say the employers' association expel any member who is guilty of such practices as the association would not stand for. Do you know of any cases where the unions have either expelled—the local unions have expelled local individuals from their order because they did practices which the union claimed they would not stand for?

Mr. EIDLITZ. I don't know of that of my own personal knowledge. I don't know it. I think it has happened. I think, from hearsay, I think it has happened. I think there are certain men that they have discriminated against.

Commissioner BALLARD. There is no effort on the part of the employers' association to divide among themselves the cities, like New York, into districts which one employer or group of employers will take, and a certain section another group of employers, and another section still another? It has been claimed that that has been done.

Mr. EIDLITZ. That is absolutely untrue so far as the Building Trades Employers' Association is concerned. You want to remember that there are a great many builders or so-called builders outside of the Building Trades Employers' Association who may have all sorts of arrangements that we know nothing of. Our association does not control the building industry of the city of New York. It does control the labor situation, because when we, as one unit, attack any individual organization, we are, as a rule, fairly well supported by those outside, but so far as any relations between employers are concerned, any secret work that it does, that is absolutely foreign.

Commissioner BALLARD. About what per cent of the number of old building contractors are in your association now?

Mr. EIDLITZ. That I could not tell you.

Commissioner BALLARD. Do you know about?

Mr. EIDLITZ. I can't, for instance, tell you in one trade. I can tell you this: There are some trades where we control pretty well the reputable houses, so-called. Now, I don't want by that to throw out any disparaging remarks. I don't want you to consider that as a disparaging remark on the ones outside, except that the ones on the outside have not seen fit to come in, nor to live up to the mandates. They want to play the game on their own hook. So I used it simply in that way.

Commissioner BALLARD. Do you think you have a third of all of them in your association?

Mr. EIDLITZ. No; I should think not. Not of all of them. For instance, I can cite you, as far as the master plumbers are concerned, the master plumbers in New York number between four and five hundred. There are at least 450 in the Fifty-eighth Street organization, and we have about 40 of those. Now, consequently, we do not control the master plumbers' association. But the houses who constitute this 40 may employ 50 per cent, or perhaps, even at times, 60 per cent of the union labor in the city. That is the point—

Commissioner BALLARD (interrupting). I was going to ask you what per cent do you think of all union labor is employed by your organizations as compared with the rest?

Mr. EIDLITZ. It varies so in the different trades, Mr. Ballard, it would be absolutely impossible to give that in a general way. I would say probably—I don't think it is too much to say that at the present time there is probably more

brick laid by members outside of our association in the city of New York than inside.

Commissioner BALLARD. Just one more point, now; now, back to this question of districting the city. As to whether your association or any of the officers of your association divides the city into different districts, whether you would consider any member or any person who would thus endeavor to control the work in a given district, whether you would consider that against the spirit of your organization and any member would be disciplined who would do that?

Mr. EIDLITZ. Yes, sir; it is right in the preamble of our constitution that that is prohibited.

Commissioner BALLARD. Well, Mr. Chairman, that is all, I think, sir.

Chairman WALSH. Have you something you wish to ask, Mr. Garretson?

Commissioner GARRETSON. I want to ask one question brought out or suggested by Mr. Ballard. Take this plumbers' agreement, Mr. Eidlitz. It is purely as between the manufacturers of plumbers' supply and contracting plumbers, and has no relation whatever to the union question?

Mr. EIDLITZ. No; none at all.

Commissioner GARRETSON. It is a trade agreement—that is, a commercial agreement?

Mr. EIDLITZ. A trade agreement between the employers and manufacturers—the wholesalers and the jobbers.

Commissioner GARRETSON. That is all.

Chairman WALSH. Any others who wish to ask questions?

Commissioner O'CONNELL. Yes.

Chairman WALSH. Mr. O'Connell would like to ask you something, Mr. Eidlitz.

Commissioner O'CONNELL. In the organization of these dual unions that have been formed by your association, were they formed by men employed in the place of the men who had gone out on a strike or were they formed by men who were former members of the organization?

Mr. EIDLITZ. Why, some of both, Mr. O'Connell.

Commissioner O'CONNELL. Who organized them, or with whom would they affiliate?

Mr. EIDLITZ. Why, eventually, they are affiliated with their internationals of that trade. Sometimes it took some time to do it. Sometimes it was a matter of two years or three years. We had a condition here where we had an organization of plasterers for about three years that worked only for the members of our association; and there was another organization of plasterers, the remnant of the original plasterers that we were fighting, that was working up in Harlem, and other places—about 500 strong; and the other union was about 1,500 strong, working for us.

Commissioner O'CONNELL. Then, until such time as they did become affiliated with an international union they were purely local, of course?

Mr. EIDLITZ. Yes, sir.

Commissioner O'CONNELL. And they were largely, then, in the domination of your association, having no general head?

Mr. EIDLITZ. Oh, I don't think so. You see, there has never been any attempt on—I don't think you can talk about domination, Mr. O'Connell, unless there is an attempt to get men to give you something that the union did not give you and for less money. Now, there has never been any fight, so far as the New York contractors have been concerned, about trying to change any conditions—at least, that is a minor point. There have been a few in one or two cases where before they would agree to resume work on the old basis there were certain abuses that had crept in which were eliminated. But in most cases where you talk about the fight was between the unions and nonunions, and because of the employer apparently having the upper hand was willing to make a sacrifice, and in purchasing his labor for less money than he would prior to the fight. Now, we have always gone on the basis that we want to do business with union men; but they have got to play fair with us or we will make them.

Commissioner O'CONNELL. You have a particular way, though, in which you wanted them to play?

Mr. EIDLITZ. Wanted them to play simply fair and live up to the trade agreement.

Commissioner O'CONNELL. You would not treat with them unless they were part of the trade agreement with you?

Mr. EIDLITZ. No, sir.

Commissioner O'CONNELL. Then, you say if they did not become parties to that agreement, you would organize a dual union?

Mr. EIDLITZ. Oh, that happened 10 years ago or 11.

Commissioner O'CONNELL. But I am talking about——

Mr. EIDLITZ (interrupting). The only thing, sir, is—I think you are trying to give a coloring to this discussion, which is hardly fair. Still, that is your privilege.

Commissioner O'CONNELL. You say you are heartily in favor of dealing with the unions and treating with them. You do treat with them and make no other agreements where there is recourse to unions?

Mr. EIDLITZ. Yes; I am in favor of it.

Commissioner O'CONNELL. That is your impression or the general opinion of your association, is it, because they are making the contract with them?

Mr. EIDLITZ. And there is a reason for it.

Commissioner O'CONNELL. Have you any idea what percentage of the building-trade workmen in New York are working under contract?

Mr. EIDLITZ. Why, I should say, sir, that there are some nonunionists in every one of the trades. But I should doubt—it varies in percentages according to the different trades. But I should think that New York was probably 90 per cent organized, when you leave out the housesmiths and the painters.

Commissioner O'CONNELL. This commission is instructed under the law to ascertain the underlying causes for industrial unrest and to make some recommendations, and so forth. Have you given any thought, Mr. Eidlitz, to what would be an ideal plan, or something to be recommended to Congress to relieve in a general way the condition of unrest and of avoiding strikes and lockouts and those things that cause friction?

Mr. EIDLITZ. Well, I think in the industrial relations something in general on—not necessarily identical—but along the lines of this plan we have had in operation as it has worked out, I think, more advantageously than any plan of that kind that I have seen yet, because it has crystallized many of these disputes and removed them from the arena of the war.

Commissioner O'CONNELL. Have you had any long drawn-out contest as to agreements in the association with employees wherein the question of trades has not been settled for some time and you finally could not settle it under your plan?

Mr. EIDLITZ. Well, I think if you eliminate the question of wages, I think we have been fairly successful in 99 per cent of the cases that came under it.

Commissioner O'CONNELL. But the plan itself does not appear as final. In other words, there is no third person or odd number of persons in it.

Mr. EIDLITZ. Well, in many cases it does provide for an arbitrator in one of these points of contest. Several of them have gone to an umpire for final decision, everybody conferring, and it has been put up to the umpire.

Commissioner O'CONNELL. The proposition itself does not make that absolutely essential, though; that is, for mutual agreement, if one is submitted to arbitration?

Mr. EIDLITZ. Yes, sir.

Commissioner O'CONNELL. So, if you should lock horns, to use that term, and nobody would agree, then the trouble would stand——

Mr. EIDLITZ (interrupting). Well, of course, if a man don't want to play, you can't make him play. The only thing to say is, "If you don't play, we are not going to give in on this proposition unless you want to try it out in a fair way, and we are perfectly willing to try it that way and to agree on an umpire. Now, if you don't, if you go out and make any attempt to work, we are going to get you, and that is all." By getting him we mean that he is not going to work for this Building Trades Employers' Association if we can help it, and so far we have stopped it. That is why I have said all the way through that the relation between employer and employee, both sides want to be thoroughly organized, and every act of one toward the other wants to be tinged with apprehension. Now, you have got that, and that is the whole secret of the relation between employer and employee, so far as I have been able to say after 30 years of observation of it.

Now, that other question you asked there, sir. I would like to say this: I do consider that so far as public carriers are concerned, where there is a difference between their employers and employees on a public carrier, public transportation, public utilities, that there ought to be a tribunal with compulsory powers to settle it, because of the loss to the innocent participator in the trouble, which is so infinitely greater than it is in any industrial dispute. So far as the industrial dispute is concerned, I have come to the conclusion that it would be a wonderful and an admirable thing to have an outside court

or committee appointed who would be voluntarily called upon in case of industrial disputes, and could be——

Commissioner O'CONNELL (Interrupting). You go so far as public transportation in that line, and after that you are not in favor of compulsory arbitration?

Mr. EIDLITZ. Yes, sir.

Commissioner O'CONNELL. But you would not go all the way?

Mr. EIDLITZ. How is that?

Commissioner O'CONNELL. All down the line?

Mr. EIDLITZ. No. I say in industrial disputes I think there should be a commission who could be called in in any industrial disputes when they have arrived at the point where it is either a question of strike or lockout; and then there should be a committee that the saner minds on either side could appeal to, composed of outsiders and disinterested individuals, to whom they would say, "Come in here and rule on this, and we will do whatever you say." Now, sometimes when a body of employers and a body of employees are scrapping with each other they get to the point where they see only red on both sides, and then if somebody is introduced from the outside, whose freedom from bias can not be questioned, they might be ready to let him rule on the question, or to let that commission rule on the question, rather than to get into a warfare where they know that both sides are going to suffer very seriously.

Chairman WALSH. Mr. Garretson, did you want to ask anything?

Commissioner GARRETSON. Yes, sir; I do on that statement. You don't believe that compulsory arbitration is good in anything except the transportation business?

Mr. EIDLITZ. Public utilities, I said, Mr. Garretson.

Commissioner GARRETSON. I misunderstood you. I understood you to say in the transportation of the country.

Commissioner O'CONNELL. He mentioned railways and public utilities.

Mr. EIDLITZ. Public utilities, I said. Electric-light plants and such things is what I mean; electric-light plants and gas and——

Commissioner GARRETSON. Then you did not mean railroads?

Mr. EIDLITZ. Well, I do very specifically mean the railroads; yes, Mr. Commissioner.

Commissioner GARRETSON. Well, that is the question I asked you.

Mr. EIDLITZ. Well, I'm on record as subscribing to that, and you know it.

Commissioner GARRETSON. I know that is true. In other words, you believe in depriving the largest industry of the country, the one that involves the most men, of the rights that every other class of labor has in the public good?

Mr. EIDLITZ. Yes, sir.

Commissioner GARRETSON. You would handle 5,000,000 men in a way that you do not believe that the average man should be for the benefit of the balance of society?

Mr. EIDLITZ. Well, things, you know—all things, Brother Garretson, are according to the size of the interests involved. There are a whole lot of things that get by where they are not absolutely crucial.

Commissioner GARRETSON. Certainly.

Mr. EIDLITZ. But where it becomes a question, as it did three years ago, whether 52 railroads here in the East should cease work and deprive 40,000,000 people of their supplies and of the essentials to the women and children, who would be deprived in that regard, and the whole thing depending upon the say so of whether or no that should happen, should depend upon the will of two or three men, it becomes a question of whether or not, before allowing a situation of that kind to come up, it does not give more power into the hands of the labor side than is due, or is ever exercised by any of the so-called capitalists or money kings.

Commissioner GARRETSON. Oh! That is what it resolves itself into in the long run—that the public good will be secured on the same basis that it is said the public salvation is secured, by vicarious atonement. That is what it amounts to—5,000,000 people up for the good of the others.

Mr. EIDLITZ. The only point to that is this: Those 5,000,000 know when they go into that business that they are going into a hazardous business to start with. They know that.

Commissioner GARRETSON. They have testified to it.

Mr. EIDLITZ. They did. One moment! They are going into a hazardous business to start with, and also know, if they look up the records at all, that

as an industry they are now being paid better than any industry in the country. Now, that may be, that they should be, on account of the hazard they take, but they know that is the fact. They also know that things do not go back. It has not been the history of the wage scale of this country that it retreats—that it goes back. That has not been the history of the wage scale since organized labor started, that it goes back.

Commissioner GARRETSON. That is, some men have never gone back, I suppose, in times of depression?

Mr. EIDLITZ. No.

Mr. GARRETSON. Well, the wages of those railroad men, transportation men, have they never gone back when a depression was on?

Mr. EIDLITZ. Well, have they?

Commissioner GARRETSON. They have.

Mr. EIDLITZ. Well, it has been in isolated cases.

Commissioner GARRETSON. Not isolated, but general. There has never been but one depression where those organizations were strong enough to prevent that, and where they did not, and that was 1907.

Mr. EIDLITZ. 1907?

Commissioner GARRETSON. 1907. I want to ask you what bearing, Mr. Eidlitz, that has on the question of the inherent right a man has?

Mr. EIDLITZ. None, whatever. You are quite right on that.

Commissioner GARRETSON. That is all.

Chairman WALSH. You stated you were in favor of collective bargaining, and the reason for it; and you stated, also, in answer to Mr. O'Connell, that it was well to have both sides apprehensive.

Mr. EIDLITZ. Of one another.

Chairman WALSH. Please state why that is your position.

Mr. EIDLITZ. The question of collective bargaining is a question of making arrangement with skillful men in a given industry. I am talking now with reference to the building industry. We have to build quickly. We have to be in a position to gather at a moment's notice skillful men, and that is not possible unless you have organizations of skillful men with whom you are in agreement, and whom you know you can call upon to supply the labor needed.

Chairman WALSH. That is the reason—

Mr. EIDLITZ (interrupting). That is the reason why I believe in collective bargaining. Furthermore, I do believe that is not absolutely so in the case of every individual, but I do believe that the average intelligent workman who has ability drifts to the organization that he believes will get him the best conditions and the best wage. There are a few who may differ from that and believe that they want to stay on the outside because it is against their Americanism to join an organization; but the majority of the organization who are intelligent and have ability in their crafts are organized. I do not say there are none outside, but if you want to get men able to do what they are supposed to do you have got to look for them in the ranks of organized labor.

Commissioner BALLARD. Let me ask one question. You say the painters are less well organized than members of the other trades—building trades?

Mr. EIDLITZ. Yes, sir.

Commissioner BALLARD. Suppose you were building some large building and they bring on some nonunion painters, would they be allowed to work?

Mr. EIDLITZ. No, sir; we would not bring them on.

Commissioner BALLARD. You employ only union men. One other question: If there be a jurisdictional dispute, as I heard a few days ago there was in the electrical elevator business, do you claim the right to make your arrangement before that is settled? Is there any way of forcing those trades to come to an agreement quickly rather than to stop building as to all the workmen?

Mr. EIDLITZ. Well, we don't have that stoppage that you talk about. So much on that. The men realize that there is no object in stopping. What they want in most cases is a decision of what is going to obtain in the future; and in many cases, where work has been going on in a certain way, and a question now arises as to a spread-over, so that it becomes a matter for jurisdictional investigation, or reaches the stage of a jurisdictional dispute, an arbitration is held, and the work goes right on. It may take four weeks or six weeks or longer to settle it, but the building proceeds. We will not arbitrate with men who are on a strike in the building industry. The men have got to go back or there is no arbitration.

Commissioner BALLARD. That is all, Mr. Eidlitz.

TESTIMONY OF MR. ROSWELL D. TOMPKINS.

Mr. THOMPSON. State your name and residence, please, Mr. Tompkins.

Mr. TOMPKINS. Office, No. 154 East Fifty-fourth Street; home address, 509 West One hundred and fifty-seventh Street. At present, I am secretary-treasurer of the executive committee of the United Trades Business Agents of Greater New York, and also Long Island; and also secretary-treasurer of the United Trades Business Agents of Manhattan and vicinity.

Mr. THOMPSON. How long have you been secretary of those respective bodies?

Mr. TOMPKINS. Ten years for the United Trades Business Agents of Manhattan.

Mr. THOMPSON. I understand you took part in the contest which led to the adoption of the arbitration plan, Mr. Eldlitz spoke of; is that correct?

Mr. TOMPKINS. As a representative of the tile layers' union.

Mr. THOMPSON. Now, you heard Mr. Eldlitz's testimony, did you not?

Mr. TOMPKINS. I did.

Mr. THOMPSON. Have you anything in respect thereto in which you differ with Mr. Eldlitz?

Mr. TOMPKINS. I will coincide with the statements made by Mr. Eldlitz in regard to the beginning of the plan and the operation of it up to a certain extent. The dissolution of the committee I don't know anything about. I was not a delegate at the time to that body.

Mr. THOMPSON. Then so far as you know of that plan you agree with his statement of the facts?

Mr. TOMPKINS. I do, yes.

Mr. THOMPSON. Mr. Tompkins, in your experience as secretary of this United Trades Business Agents, you have come more or less in contact with jurisdictional disputes, have you not?

Mr. TOMPKINS. Many of them; yes, sir.

Mr. THOMPSON. You have known their nature, etc., as they have come up?

Mr. TOMPKINS. Any complaint that has been filed in the board, I am aware of it; yes, sir.

Mr. THOMPSON. Do you think that a national body, or a body of men who would have jurisdiction over the entire country, would be able to take up and determine jurisdictional disputes?

Mr. TOMPKINS. I do not.

Mr. THOMPSON. For what reason?

Mr. TOMPKINS. The local conditions of the different cities and different States are not the same. That would be one preventive, in my opinion, of an international body trying to settle jurisdictional disputes. In many cities and in many States there are introductions in the building trades that do not appear in other localities. I might state that there are appliances and things used by the mechanics in the building trades here in the city that are not used by other mechanics in other cities and States.

Mr. THOMPSON. Couldn't such national bodies make allowance wherever there are appliances used, as there are here, which are different from the ordinary run of cities?

Mr. TOMPKINS. Nationally, I do not believe they could.

Mr. THOMPSON. Could they not also standardize building conditions, so far as they would relate to the matter in dispute?

Mr. TOMPKINS. I do not believe there could be a standardization in the building trades in regard to jurisdictions any more than there could be in the setting of a prevailing rate of wages. I might illustrate that by saying that in the State of New York here we have a standard rate, or what is known as a prevailing rate of wages. There is a labor law in this State. In many States of the Union there is no law that covers a prevailing rate.

Mr. THOMPSON. What do you mean—no law?

Mr. TOMPKINS. No State law. We have in the State of New York a State law calling for a prevailing rate of wages and an eight-hour workday. In many States there is no such thing.

Mr. THOMPSON. You mean that relates to public buildings, does it not?

Mr. TOMPKINS. To the public buildings, or municipal or State work.

Mr. THOMPSON. But there is no prevailing minimum-wage law or eight-hour day with relation to industry generally in the building line, is there?

Mr. TOMPKINS. There is a minimum rate in all industries in organized labor in the building trades.

Mr. THOMPSON. No; but I mean not by State law?

Mr. TOMPKINS. Not by State law. I might add to that that the building trades of this city submit, for approval to the board of estimate and apportionment in this city, the prevailing rates set by the building-trades union, with their employers, for the incoming year, or two years, or three years, or whatever the length of the trade agreement is; and if, upon investigation, if there are among the mechanical trades in the employ of the city or working upon municipal work 99 per cent of those mechanical trades will be up for discussion and investigation, and there will be a finding by the board of estimate and apportionment that will be set as the prevailing rate where the presentation is found to be correct.

Mr. THOMPSON. That is, under the State law?

Mr. TOMPKINS. Yes, sir.

Mr. THOMPSON. I understand that. Now, Mr. Tompkins, specifically tell us why, in your opinion, a national body could not determine jurisdictional matters for the country at large and standardize jurisdictional disputes? Take the trades in which disputes have arisen.

Mr. TOMPKINS. Well, I will state that the city of New York here we have an organization known as the house shorers and movers. I do not believe anywhere else in the United States there is another organization of like character. That is distinctive. The house shorers and movers probably have connections in other cities with other local bodies; but in this city it is a distinctive industry itself, and has been for many years.

Another instance that I will cite is the bluestone cutters' organization, as it exists in this city and has existed for over 50 years. It is distinctive in itself. In no other city do I know where there is a distinctive organization of bluestone cutters.

Mr. THOMPSON. What do you mean by that?

Mr. TOMPKINS. Bluestone cutters are those who work upon flags, curbing, and the bridges running from sidewalk to sidewalk across the street. I might state that it has been decided by a national body that this plan of making flagging, bridging, and curbing—that is the correct name for it—belongs in another department of industry; and still they are not in a position in that national body to enforce that jurisdiction, which they have given to another international association.

Mr. THOMPSON. Well, Mr. Tompkins, take that illustration there as typical of the situation. There is nothing inherent in the business of bluestone cutting that separates that from other stonecutters, is there?

Mr. TOMPKINS. Yes; it is a specialty.

Mr. THOMPSON. Yes; but even a specialty, why would that prevent their association with other types of stonecutters; for instance, a local, perhaps. To direct your mind to exactly what I mean, take the tailors as against the cloak industry in this city. Some of the tailors are machine workers and could not sew with their hands. There are other people who are sewers with their hands who could not run machines. There are cutters, who could neither run machines nor could they sew. Yet those different people organize as separate locals of some international and adjust between themselves any questions of jurisdiction which may arise, as sometimes does, between the cutters and trimmers, who are very close together. Now, that actually exists here in this city. There are more employees, perhaps, than there are in the building trades. I just give you that to illustrate my line of thought. Now, why could not the bluestone cutters become a local in the International Stonecutters' Union?

Mr. TOMPKINS. My opinion is—

Mr. THOMPSON. Just a moment. Where they are within the union itself there could be an adjustment of any jurisdictional point that might arise between the locals.

Mr. TOMPKINS. My opinion is that the bluestone cutter would not become nationally affiliated—that is, under the conditions that have been presented—owing to the fact that he has built up that industry here in the city and has maintained it and has a record, as I have stated, for over 50 years as a bona fide labor organization.

Mr. THOMPSON. That would be the reason—

Mr. TOMPKINS (interrupting). And they are jealous concerning their industry, which they have brought up to its present condition.

Mr. THOMPSON. I understand your point, then. Now, with reference to the tile layers' association, of which you are a member, what is the name?

Mr. TOMPKINS. Ceramic, mosaic, and caustic tile layers and helpers.

Mr. THOMPSON. International organization?

Mr. TOMPKINS. International organization.

Mr. THOMPSON. And with a union all over the country?

Mr. TOMPKINS. I might say the tile layers were first organized in this city in December, 1883. I am a charter member of it and was three years in the business prior to them becoming organized in this city. They were known as the mosaic and caustic tile layers and helpers of New York and vicinity. In 1886 they separated. The tile layers formed their local under the Knights of Labor and the helper formed his own local under the Knights of Labor. The international union was formed about 1903 or 1904. Prior to that it was a local attachment chartered under the Knights of Labor.

Mr. THOMPSON. What proportion of the men in the trade in New York City are in your union, if you know?

Mr. TOMPKINS. Ninety-eight per cent.

Mr. THOMPSON. How large an organization have you got in this city, if you know?

Mr. TOMPKINS. On the mechanical end of the tile layer, 500.

Mr. THOMPSON. Have you trade agreements with employers' associations?

Mr. TOMPKINS. We have.

Mr. THOMPSON. With what association?

Mr. TOMPKINS. With the tile, grate, and mantel association.

Mr. THOMPSON. Any other organization?

Mr. TOMPKINS. Only with the tile dealers.

Mr. THOMPSON. What are your working conditions, hours of labor, and the rate per day of wage?

Mr. TOMPKINS. The working conditions are eight hours a day with the exception of Saturdays, when the men stop work, cease work, at 12 o'clock noon. The pay they receive is five dollars and a half per day, double time for all overtime, or between the hours of 5 p. m. and 8 a. m., Sundays and legal holidays included. We do not permit any of our members to work on a Saturday afternoon between the hours of 12 noon and 5 p. m.

Mr. THOMPSON. Have you any rule with reference to superannuated workers?

Mr. TOMPKINS. We have.

Mr. THOMPSON. What are they and why are they?

Mr. TOMPKINS. A superannuated member of the tile layers' union must have been 20 years a member of the union and have attained the age of 55 or over. He applies then to the executive board, who examines his record to find out that he has been a member for 20 years or over. Then he is permitted to make arrangements for \$1 a day less. Only one man allowed to each shop, superannuated.

Mr. THOMPSON. Has that resulted in keeping these workers at work?

Mr. TOMPKINS. It has.

Mr. THOMPSON. What is the regularity of employment in your industry in this city? Are your members pretty regularly employed all the year through or what are the seasons, if any?

Mr. TOMPKINS. Well, I might state that for the last six months it has been very bad, but prior to that, why, the men were pretty regularly employed. I might state that our members go all over the United States and Canada and down through South American countries, and every thing, pretty regularly employed except within the last six months.

Mr. THOMPSON. For a normal year, about how many months' work do they have work, a normal year, a full year?

Mr. TOMPKINS. They will average about 10 months.

Mr. THOMPSON. What arrangements have you for benefit to your membership in the way of sick, accident, out-of-work, and strike benefits?

Mr. TOMPKINS. We have no regular sick benefits or out-of-work or accident benefit, but if any of our members are incapacitated through injuries or anything, we give them relief. That is, it is voluntary relief. We have a mortuary fund that we allow the beneficiaries \$350.

Mr. THOMPSON. I might say, Mr. Tompkins, have you got a printed copy of your constitution and by-laws?

Mr. TOMPKINS. No; I have not with me.

Mr. THOMPSON. Can you furnish the commission with them?

Mr. TOMPKINS. The secretary of the union will do so upon application.

Mr. THOMPSON. That would contain all these points, would it not?

Mr. TOMPKINS. Yes, sir.

Mr. THOMPSON. Is there any limitation or restriction in regard to the initiation of future members in your union?

Mr. TOMPKINS. We have a helpers' system which compels the helper to serve four years. That is an international rule. And unless that helper applying for advancement produces a document showing he has been a bona fide helper for four years in an international local of helpers, the application will not be entertained.

Mr. THOMPSON. What is your initiation fee to helpers and to others who come in who have not been helpers?

Mr. TOMPKINS. The initiation fee is \$100, \$55 payable by the applicant and \$50 by the helpers' local that he advances from, payable at the end of six months.

Mr. THOMPSON. What is the initiation fee to people who have not been helpers and who come in?

Mr. TOMPKINS. One hundred and fifty dollars to the general fund and \$50 to the mortuary fund.

Mr. THOMPSON. That is, initiation fee of \$200?

Mr. TOMPKINS. Yes.

Mr. THOMPSON. Why is it that your initiation fee is made so high in your union?

Mr. TOMPKINS. The initiation fee of the tile layers has been put up to the present figure owing to great good that has been derived by members. That is, I might state that we have a system of loaning money to our members who are in distress and helping them out and aiding them, which, of course, is returnable, without interest or anything, within a specified time. And we have found out that on the initiation fee that we formerly used to charge, I might say we have advanced it from \$25 up to the present figure—that is, \$25, then it went to \$50, \$75, and a hundred, and so on. We found it was necessary in order to maintain the high standard that we were trying to accomplish—that is, to aid and assist our members—it was necessary to charge this fee to any new applicants to help out in doing the work we have started out to do.

Mr. THOMPSON. Does not the initiation fee of \$200 paid by your workmen practically amount to keeping them out of the union?

Mr. TOMPKINS. Not at all.

Mr. THOMPSON. Can he pay this \$200 in installments?

Mr. TOMPKINS. It is paid in installments.

Mr. THOMPSON. What are the installments he is permitted to pay?

Mr. TOMPKINS. He pays \$5 per week for every week that he works, and if he can show that he has not worked a week then there is another week extended for that \$5 payment.

Mr. THOMPSON. In other words, it does not require the payment down of \$200?

Mr. TOMPKINS. No; it does not.

Mr. THOMPSON. Five dollars is the amount required?

Mr. TOMPKINS. The first requirement made is \$50 to the mortuary fund, which makes him eligible in case anything should happen, or his beneficiary eligible immediately to that fund.

Mr. THOMPSON. And on the balance of \$150 he only has to pay \$5 a week?

Mr. TOMPKINS. Yes.

Mr. THOMPSON. Has your union any policy with reference to the initiation of aliens or negroes?

Mr. TOMPKINS. I will state that we do not take into the tile layers' union any aliens. That is to say, our requirements for membership in the mechanics' union; that is, the tile layer must either be a citizen or have declared his intentions of becoming such. On the negro end of it, I might state that we only had one application from a negro, and he is now a member in good standing and has been for several years.

Mr. THOMPSON. Have the books of your union ever been closed to the admission of members, and what were the conditions and for how long were they kept closed?

Mr. TOMPKINS. Our books have never been closed. There have been applications come from various people, but it is when the books have been in the hands of the auditors, and, of course, they were not available for opening up and taking in any applicants at that time.

Chairman WALSH. For how long a period would that be?

Mr. TOMPKINS. About three months.

Mr. THOMPSON. Does that occur very often? How often do you have your books examined by the auditors?

Mr. TOMPKINS. Every three months.

Mr. THOMPSON. Every three months. And for how long a period, just a day or so?

Mr. TOMPKINS. No; sometimes the auditors will hold the books probably for three months, but that has not been where there has been any applicants, probably, in five or six years, where applications have been made while the books have been in the hands of the auditor.

Mr. THOMPSON. You have the books examined every three months by the auditors?

Mr. TOMPKINS. Yes.

Mr. THOMPSON. And how long on the average will they keep the books?

Mr. TOMPKINS. I might state that I am chairman and have been chairman of the board of auditors for the past eight years. We generally can make a report inside of two weeks. I might state the reason they keep them longer, if we have to do it, is in case of discrepancies occurring between the financial secretary and a member over a question of the stamps on his cards or something of that kind, and we have to investigate it.

Mr. THOMPSON. Then on an average about two months in every year your books are closed to receiving members?

Mr. TOMPKINS. About that time.

Mr. THOMPSON. Do the auditors ever keep the books in their hands for a longer period to keep out the admission of new members?

Mr. TOMPKINS. Never to my knowledge.

Mr. THOMPSON. Are the members of your union working for other employers than those with whom you have the contract which you mentioned?

Mr. TOMPKINS. We will work for any employer that pays us the prevailing rates of wages or the amount according to conditions in our trade—that we have with our employers, the tile dealers.

Mr. THOMPSON. When in your agreement with your association you say that your union agrees that its entire membership is at the disposal of the tile, grate, and mantel association, if required, what is that understood to mean?

Mr. TOMPKINS. We might have 50 or 75 members working for what we call the independent dealer, who has an independent agreement similar to the one we have with the association, and if the tile dealers' association calls upon us for more men, we then call those men in from those independent dealers.

Mr. THOMPSON. And they are taken off the work of the independent dealers?

Mr. TOMPKINS. Yes; that is the agreement.

Mr. THOMPSON. Do you wait until the work is finished or do you call them off at any time you please?

Mr. TOMPKINS. We call them off—give them at least a week's notice.

Mr. THOMPSON. Will the members of your union work for other employers in New York City outside of those in the association you have made the agreement with?

Mr. TOMPKINS. The members of our union will work for any legitimate tile dealer.

Mr. THOMPSON. Anywhere?

Mr. TOMPKINS. Anywhere.

Mr. THOMPSON. Has your organization in its by-laws or its rules or in any of the resolutions which it has passed, any restriction on the output of the work of a member?

Mr. TOMPKINS. Not at all.

Mr. THOMPSON. How do you interpret this rule which is part of your by-laws: "Each and every member will be expected to do a fair day's work, and if on any job it is the judgment of the other members working on said job that any individual member who is found working detrimental to the interests of other members on that job a complaint must be filed immediately by the business agent against the member complained of, and if found guilty shall be removed from the job."

Mr. TOMPKINS. The interpretation of that is this: A job might be working with probably 8 or 10 men, probably for three or four weeks, going along very nicely, and another new man is introduced on the job. This man starts in to speed it up, as they call it. Probably for three or four weeks prior to the admittance of this man in on the job everything has been going along very nicely, no fault found by either the employer or the foreman, and this man starts out and probably will put in a certain amount a day of work on the job, and it is found out that he is getting probably 50 or 75 cents on the side for doing it. Now, that is what that clause covers.

Mr. THOMPSON. Well, assume that he is not being paid anything extra on the side, but is working faster than your members think he ought to work, he still would come within this rule, wouldn't he?

Mr. TOMPKINS. He would come within that rule and, upon complaint, be removed from that job.

Mr. THOMPSON. Who decides whether he is working faster than he ought or not, the local union?

Mr. TOMPKINS. The local union—the men on that job.

Mr. THOMPSON. Does the manufacturer or contractor have any voice in it?

Mr. TOMPKINS. No voice in it at all.

Mr. THOMPSON. Do any of the employers of New York City complain of that rule or the enforcement of it, in any case?

Mr. TOMPKINS. Not to my knowledge.

Mr. THOMPSON. That is all.

Commissioner GARRETSON. How many local unions are there in this territory affiliated with either national or international unions, are there any?

Mr. TOMPKINS. The tile layers?

Commissioner GARRETSON. No; all the trades in general; the building trades?

Mr. TOMPKINS. There are probably four or five local unions in New York City that are not affiliated with national or international unions.

Commissioner GARRETSON. They are supreme to themselves?

Mr. TOMPKINS. They are individual, what we call individual locals.

Commissioner GARRETSON. Is that caused generally by the fact that the regulations won't admit them to their international unions of that craft in existence of those crafts?

Mr. TOMPKINS. No; not at all.

Commissioner GARRETSON. But there isn't any—

Mr. TOMPKINS (interrupting). No; I am stating that our individual craftsmen of an individual union have no national or international together.

Commissioner GARRETSON. Are there any here of which there is an international union that are not affiliated?

Mr. TOMPKINS. Not to my knowledge.

Commissioner GARRETSON. In regard to the initiation fee that is charged, does your organization assume that the benefits in which the men become an equal partner are equal to value received for the amount that he pays; is that the idea underlying the thing?

Mr. TOMPKINS. That is the idea.

Commissioner LENNON. Are the initiation fees charged in New York City different to what they are in other cities of the country in the international union?

Mr. TOMPKINS. Yes; there is a difference. I believe Chicago has the same rates as New York. There are several of the States charge \$100 or over.

Commissioner LENNON. Well, suppose a member that was admitted for \$100 in some local of your international were to come to New York, would he have to pay another \$100?

Mr. TOMPKINS. He will have to pay the difference between his local initiation fee and our local fee. That is an international rule.

Commissioner LENNON. The international rule?

Mr. TOMPKINS. Yes.

Commissioner LENNON. I want to ask you a question or two about your jurisdiction matters. Take the matter that is now at issue between the bricklayers and the marble workers. What is there particularly peculiar in that situation in New York that is different from anywhere else that it could not be settled nationally just as well as locally? What is there in that situation that appears to you different?

Mr. TOMPKINS. I would rather that question be asked of workers in that trade themselves.

Commissioner LENNON. I don't mean for you to indicate anything as to how it ought to be settled. I don't mean that.

Mr. TOMPKINS. If I were to give my personal views upon it I would state if I was a marble worker and had learned my trade here in the city or in any other part of the United States as a marble worker, I certainly would object to any other body interfering or coming in or trying to absorb that particular industry at which I had learned my trade.

Commissioner LENNON. I would not question you on that phase of it, because it would not be right for me to do so. What I want to get at is this, why could not the same sort of settlement, whatever it might be, of that jurisdictional dispute, be the same in the city of New York as it would be in Detroit or St. Louis or San Francisco or New Orleans? Why should there be any difference when a settlement is finally reached? Why can not it be the same all over the country?

Mr. TOMPKINS. That is a question that I could not answer.

Commissioner LENNON. You have only observed it in New York?

Mr. TOMPKINS. I might state here, we know the marble worker as the mechanic of that craft, and we know the bricklayer does not do that work.

Commissioner BALLARD. You spoke of letting one old man in each shop. Suppose there were more old men than shops; what would you do with the others allowed to work for a dollar a day less?

Mr. TOMPKINS. I will state here at the present time, in our last report, which was in April, that is our quarterly report, we had 11 superannuated members, and we had in the neighborhood of about 55 or 56 shops. So you see there is a big scope or a big room; if others want to superannuate themselves they can do so on application.

Commissioner BALLARD. You spoke on the fact that if any members of the association of employers wanted a tile worker and you had tile workers working at other places, they would be called off, some of these members. Why do you give that preference to these members of the employers' association?

Mr. TOMPKINS. That is our agreement that we have with the employers' association, a system of improvership, and it is through that agreement there that we guarantee to supply them with all the mechanics they need. That approperate system we do not permit with the independent employer.

Commissioner BALLARD. Will your people set tiles in a building where any nonunion men are at work?

Mr. TOMPKINS. You mean nonunion tile layers?

Commissioner BALLARD. Nonunion workmen on any other work?

Mr. TOMPKINS. Our members absolutely refuse to work with any body of nonunion men of any kind if the organized part of that craft call their attention to the fact there are any men of any particular craft there—our men absolutely refuse to work alongside of them.

Commissioner BALLARD. Is that stated in your constitution, or by-laws, or preambles?

Mr. TOMPKINS. Yes. We fine our members for it; that is, on our own end of it, also.

Commissioner BALLARD. You won't work with a nonunion man at all when he is working on a building you are working on?

Mr. TOMPKINS. Not if complaint comes to the organization.

Commissioner BALLARD. You said for the last few months trade had been pretty dull in your branch. Do your men go and seek elsewhere when their work is dull?

Mr. TOMPKINS. Very few of our members leave New York to seek work elsewhere. We have many members, however, that are sent for from various cities who go where they can be put upon work—we have many men.

Commissioner BALLARD. I mean, for instance, suppose your workmen have no work in New York City and he does not get work elsewhere as a tile layer, will he do any other kind of work?

Mr. TOMPKINS. Well, we have many men that will take motor men's jobs or conductor's jobs, or anything on the railroad, or drive a truck.

Commissioner BALLARD. They will do anything to keep themselves going?

Mr. TOMPKINS. Yes; anything at all.

Commissioner BALLARD. Now, for instance, you say you won't let a nonunion man work on a building with him. Suppose he is out of work and he wants to go to a factory, on a good job in a factory; suppose that is a nonunion factory, he would go and work with a nonunion man in that factory, would he not?

Mr. TOMPKINS. I don't recall at any time where any of our men has ever sought any factory work.

Commissioner BALLARD. And suppose they seek any kind of work that is not unionized, they would work with nonunion men, but they would not let a nonunion man work with them in their work?

Mr. TOMPKINS. I don't now think of any nonunion conditions that have arisen of that kind. If they took up truck driving they would attach themselves to the teamsters' union, or if they worked on a railroad—I might state I know many of the men who have worked as conductors on the surface lines of railroads and they have always attached themselves to the organization of employees attached to that kind of work.

Commissioner BALLARD. If they went to work where there was no organization they would not hesitate to do so?

Mr. TOMPKINS. I can not speak for the men who go around seeking that kind of employment.

Commissioner BALLARD. Are there any allied trades that men would be able to work on because they are accustomed to handling tiles—the tile layers, for instance?

Mr. TOMPKINS. No, sir. I might state that the tile layers confine themselves to the jurisdiction of their organization, and it is very remote to have a complaint come from a tile layer interfering or infringing on some other mechanic's jurisdiction.

Commissioner BALLARD. That is all.

Chairman WALSH. Are there any other questions?

(No response.)

Chairman WALSH. That is all; thank you, Mr. Tompkins.

Mr. THOMPSON. I will next call Mr. McCord.

TESTIMONY OF MR. FRANK B. McCORD.

Mr. THOMPSON. Will you please give us your name, residence, and your occupation?

Mr. McCORD. Frank B. McCord; 101 Park Avenue; vice president of Post & McCord, contractors.

Mr. THOMPSON. Is your firm a member of the Iron League, so-called?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. What is the Iron League?

Mr. McCORD. The Iron League represents fabrication plants and erecting plants for putting up buildings, bridges, and contracting.

Mr. THOMPSON. Is it limited to the city of New York, or does it extend all over the country?

Mr. McCORD. The Iron League is practically in a radius of 25 miles from the city hall. It embraces that jurisdiction. The members are in that jurisdiction.

Mr. THOMPSON. Did your firm in the past have trouble with the structural ironworkers?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. When was that?

Mr. McCORD. I should say it was about 8 years ago.

Mr. THOMPSON. Was it caused by the structural ironworkers refusing to work on your work?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. They believing that you were members of the American Bridge Co.?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. Or owned by them?

Mr. McCORD. Yes, sir.

Chairman WALSH. I did not hear that.

Mr. THOMPSON. That his firm was owned by the American Bridge Co. Since that time have you had any agreement with the structural ironworkers?

Mr. McCORD. No, sir.

Mr. THOMPSON. Are you in favor of or opposed to agreements with labor unions?

Mr. McCORD. I am opposed to an agreement with the ironworkers.

Mr. THOMPSON. But generally are you opposed to agreements with labor unions?

Mr. McCORD. We only have one other union.

Mr. THOMPSON. That is the hoisting engineers?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. With that union you have an agreement, have you not?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. Therefore your attitude on agreements is simply a personal one; that is to say, that with the ironworkers you have not one and you would not have one?

Mr. McCORD. No, sir; I would not.

Mr. THOMPSON. But you are not opposed to making agreements?

Mr. McCORD. Well—

Mr. THOMPSON. To the making of agreements?

Mr. McCORD. No.

Mr. THOMPSON. With the unions?

Mr. McCORD. That is right.

Mr. THOMPSON. Why are you opposed to an agreement with the structural ironworkers?

Mr. McCORD. Because they won't live up to an agreement.

Mr. THOMPSON. That is to say, they did not in the past?

Mr. McCORD. And they would not in the future.

Mr. THOMPSON. Then all that you care to say with reference to the making of agreements with trade unions is what you have said?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. You have no other opinion about it?

Mr. McCORD. No, sir.

Mr. THOMPSON. Have you any opinion as to the best method of settling disputes?

Mr. McCORD. None at all.

Mr. THOMPSON. Between working men and employers?

Mr. McCORD. None at all.

Mr. THOMPSON. You think that is a subject which does not need any attention, I presume?

Mr. McCORD. No, sir.

Mr. THOMPSON. You have not given it any?

Mr. McCORD. We have had peace for eight years, and we never went that long before.

Mr. THOMPSON. Yes, but you have had an agreement with the hoisting engineers, have you not?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. That is part of the peace, is it not?

Mr. McCORD. Well, if they had not worked for us we would have gone on the open shop there.

Mr. THOMPSON. You are a member of the National Erectors' Association, are you not?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. Is that association committed to any policy with reference to unions, so far as contracts are concerned?

Mr. McCORD. I don't know, sir.

Mr. THOMPSON. You don't know?

Mr. McCORD. No, sir.

Mr. THOMPSON. Then your membership of that association has nothing to do with this attitude of yours?

Mr. McCORD. No, sir.

Mr. THOMPSON. A great many disputes do arise in the building trades, do they not?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. How long have you been in the building-trade business?

Mr. McCORD. Well, I have been active about eight years.

Mr. THOMPSON. Active about eight years?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. What were you doing before that time?

Mr. McCORD. I was in the shop.

Mr. THOMPSON. In the shop?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. You were dealing with workingmen there, were you not?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. For how many years?

Mr. McCORD. About eight.

Mr. THOMPSON. That makes 16 years in all?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. During those 16 years, Mr. McCord, nothing has come to your attention that makes you believe that any method should be brought into existence for the settling of disputes between employers and employees?

Mr. McCORD. I think you can always settle with your own men.

Mr. THOMPSON. You do not need any arbitration machinery for that purpose?

Mr. McCORD. No, sir.

Mr. THOMPSON. I think that is all, Mr. Chairman.

Chairman WALSH. Do any of the commissioners wish to ask Mr. McCord any questions?

Commissioner GARRETSON. Mr. McCord, do you employ any members of the ironworkers' union?

Mr. McCORD. I should probably say yes.

Commissioner GARRETSON. No discrimination against them in matters of employment or membership?

Mr. McCORD. No, sir.

Commissioner GARRETSON. No questions asked when a man comes to you?

Mr. McCORD. No, sir.

Commissioner GARRETSON. What is your method of employment? Do you have an employing department?

Mr. McCORD. No, sir.

Commissioner GARRETSON. Just catch as catch can?

Mr. McCORD. As they come.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Ballard would like to ask some questions.

Commissioner BALLARD. Mr. McCord, when you were placing your men on more or less of a nonunion agreement, can you work on buildings that are being built by contractors who employ union men?

Mr. McCORD. Yes, sir.

Commissioner BALLARD. And the union men—the carpenters or painters or other workers—do not object to your structural ironworkers being nonunion?

Mr. McCORD. No, sir.

Commissioner BALLARD. I understood from the previous witness that union men would not work with nonunion men?

Mr. McCORD. He will have to answer that.

Commissioner BALLARD. You do not find any trouble?

Mr. McCORD. No, sir.

Commissioner BALLARD. You, then, can go to any building being built in New York City with your men, who are nonunion perhaps, and find no objection from the other workmen who are union?

Mr. McCORD. None at all.

Commissioner BALLARD. Why do you think that the structural ironworkers' union would not live up to an agreement?

Mr. McCORD. They never did.

Commissioner BALLARD. Would you care to give any experience you have had with them?

Mr. McCORD. Well, take it—go back when we started off on the arbitration plan. They formed a new union and the bosses beat them out, and then these men that they had broke in was taken into the old union, and, of course, they were wiped out right away; they did not get any more jobs. They were killed right then and there. Then this man Ryan came on from the West there and said the arbitration plan wasn't worth anything, and the structural ironworkers were bigger than New York City—they were more powerful—and they were going to stop us from working. They have not stopped us yet.

The same men are at the head of that union as were eight years ago. They have not changed their politics.

Commissioner BALLARD. And you think men work for you alongside of nonunion men in your shop?

Mr. McCORD. Yes, sir.

Commissioner BALLARD. And where they have one of their shops unionized will they let a nonunion man go into their shop?

Mr. McCORD. Sure.

Commissioner BALLARD. Has anything occurred to you that you would like to suggest to the commission that you could recommend as one of the means for ameliorating conditions or friction that would perhaps help the Industrial Commission? Have you thought of any suggestions?

Mr. McCORD. I thought of this as a suggestion, that prior to 1902 all the time before that we were having strikes and strikes right along, but for the last eight years the ironmen have not had any trouble at all; they have not made us any trouble at all. Always before that we couldn't go a year without getting into trouble.

Commissioner BALLARD. Now——

Mr. McCORD. Now it is peace.

Commissioner BALLARD. Why now and not then?

Mr. McCORD. Because Mr. Delegate can not call the men off the job.

Commissioner McCONNELL. Mr. McCord, you were a member of the arbitration plan, too, then?

Mr. McCORD. Yes, sir.

Commissioner McCONNELL. Are the ironworkers in the arbitration plan?

Mr. McCORD. There is no arbitration plan.

Commissioner O'CONNELL. What?

Mr. McCORD. There is no arbitration plan now.

Commissioner O'CONNELL. There is no plan at all now?

Mr. McCORD. No, sir.

Commissioner O'CONNELL. The organization exists, does it?

Mr. McCORD. Yes, sir; the bosses hold their organization together.

Commissioner O'CONNELL. Is there any working arrangement between the Iron League—

Mr. McCORD. And the housesmiths?

Commissioner O'CONNELL. The builders' association?

Mr. McCORD. Well, they are just members of it.

Commissioner O'CONNELL. There is no working arrangement?

Mr. McCORD. No, sir.

Commissioner O'CONNELL. Would there be any conflict if the building employers ordered one thing done and you did not do it and your league agreed upon another plan?

Mr. McCORD. I think we would resign.

Commissioner O'CONNELL. That is all I have.

Chairman WALSH. Are there any other questions?

Commissioner GARRETSON. Your objection lies wholly on the question of keeping faith, Mr. McCord?

Mr. McCORD. What?

Commissioner GARRETSON. Your objection lies wholly on the question of keeping faith?

Mr. McCORD. They never did.

Commissioner GARRETSON. Well, I say that is what your objection is grounded in?

Mr. McCORD. Yes; it is good grounds, too.

Commissioner GARRETSON. You don't know of any employer that ever broke faith with his workmen?

Mr. McCORD. I don't know, sir.

Commissioner GARRETSON. Would it be as deadly an offense for the employer to violate faith in the carrying out of an agreement as it would for the employee?

Mr. McCORD. I don't quite get what you are driving at.

Commissioner GARRETSON. Well, is what is sauce for the goose sauce for the gander?

Mr. McCORD. I suppose so; yes.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner BALLARD. But if the employer should break faith, would you do the same thing, or what would you do to the employer?

Mr. McCORD. What will we do to our association?

Commissioner BALLARD. Yes.

Mr. McCORD. We would not do anything with him.

Commissioner BALLARD. If an employer broke faith you would not expel him, or would you expel him?

Mr. McCORD. I guess some of them broke already in the Iron League, if you want to know, but it doesn't make any difference.

Commissioner BALLARD. That is all right.

Mr. THOMPSON. There are some matters we intended to bring out by other witnesses, but have been touched upon by the examination of the commissioners that I would like to put a question or two on it now.

Chairman WALSH. Very good.

Mr. THOMPSON. You say, Mr. McCord, that other union men work on buildings where your work is put in in this city?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. Isn't that due to the fact that at the time the structural iron workers struck on your work some years ago, the other unions in the city held that they were violating their agreement with you?

Mr. McCORD. Sure.

Mr. THOMPSON. And refused to stand by them in that strike?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. And since that time the structural ironworkers have not got a representation on the board of business agents?

Mr. McCORD. On the board of business agents?

Mr. THOMPSON. Yes.

Mr. McCORD. I beg your pardon, they have.

Mr. THOMPSON. And at least they have not been backed up in their fight by the other unions in this city?

Mr. McCORD. There is no fight.

Mr. THOMPSON. I mean at that time or since. I mean at the time of the trouble the others did not assist in working on your material?

Mr. McCORD. Yes, sir.

Mr. THOMPSON. Although put up by nonunion people?

Mr. McCORD. Sure.

Mr. THOMPSON. That is all.

Chairman WALSH. That is all. Call your next.

Mr. THOMPSON. I will call Mr. Johnston.

TESTIMONY OF MR. JOHN W. JOHNSTON.

Mr. THOMPSON. Mr. Johnston, will you please give us your name and address and your business?

Mr. JOHNSTON. John W. Johnston, 116 East One hundred and fifteenth Street; structural ironworker.

Mr. THOMPSON. What position have you with the structural ironworkers' union?

Mr. JOHNSTON. At the present time I am president of it.

Mr. THOMPSON. President of it?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. How long have you been president of it?

Mr. JOHNSTON. Well, for one year now and at previous times I have held it for a term of six months. And before, I think, about three terms.

Mr. THOMPSON. Were you an ironworker in New York City at the time that your union got in trouble with the firm of Post & McCord?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. Did you hear what Mr. Eldlitz has said in that respect, as to how the trouble arose?

Mr. JOHNSTON. I heard part of it. I didn't hear all he said.

Mr. THOMPSON. You didn't hear all he said?

Mr. JOHNSTON. No, sir.

Mr. THOMPSON. Tell us briefly, please, how that trouble arose and how you view it from the union standpoint.

Mr. JOHNSTON. The trouble arose through the American Bridge Co. subletting their work to a nonunion firm down here in the Eastman district in Connecticut, I believe it was, and refusing under any conditions to come to any agreement whereby they would not continue to do the same thing, to work union men, or that done the work themselves and sublet the work to nonunion contractors. We believed that as long as they worked our union men themselves that they should have in their contract a union clause whereby the sublet work would also be taken by unions, which they refused to do. Finally the thing went along for a good many months, about seven months, and we brought all the pressure that it was possible to bear, and we did everything to try to get an arrangement with the American Bridge Co. So as to bring more pressure to bear, believing, as we still believe, that the firm of Post & McCord is a subsidiary firm of the American Bridge Co., we called their men off their work. They did try to prove, as Mr. Eldlitz said, they offered their books and offered us to look over their books and everything of that kind, but from everything that we could find out we believed that they were purely and simply a subsidiary firm of the American Bridge Co. That is about what led up to the calling off of our men from the Post & McCord firm.

Mr. THOMPSON. At that time your union, Mr. Johnston, had an agreement with the builders' association?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. To submit all matters of dispute to this executive committee, and then to this larger committee, did it not?

Mr. JOHNSTON. It had generally been submitted to them for five or six months and they did not give it; no—practically they did not do anything to bring the matter to an issue.

Mr. THOMPSON. Did these two committees refuse to make a decision in your matter?

Mr. JOHNSTON. Well, it laid dormant and never came to a head. They did not refuse to make a decision, but they did not bring anything about whereby we were getting any redress.

Mr. THOMPSON. Did your union push the matter?

Mr. JOHNSTON. Well, in fact it was a national issue.

Mr. THOMPSON. That is the real crux of the situation, isn't it?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. It was a national issue?

Mr. JOHNSTON. Yes, sir. And of course when the national ordered us, or comes here and asked us to call our men off the Post & McCord work—we didn't call them off by the way—we held a meeting of our council and everything was shown at that meeting of the council and a vote was taken by the vote of the council. The international president prevailed to get our men called off.

Mr. THOMPSON. You called them off without waiting for the adjudication of the matter by this arbitration plan, isn't that true?

Mr. JOHNSTON. Yes. Yes, we had——

Mr. THOMPSON. Did you have the support of the sister unions in New York City; did they agree with you upon that action?

Mr. JOHNSTON. As I said, it was a national issue.

Mr. THOMPSON. Yes; but did the other unions, the painters, the bricklayers, the carpenters, and other organizations in New York who were affiliated with you in this New York agreement, agree with you and stand by you in that action?

Mr. JOHNSTON. Well, I believe they did.

Mr. THOMPSON. Didn't they refuse to do that?

Mr. JOHNSTON. But we never asked them to call their men off the work. In fact, the condition of the trade at this time did not warrant calling off the other trades.

Mr. THOMPSON. Since that time has your organization tried to get an agreement?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. With the firm of Post & McCord?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. Of course, you have not been able to do so?

Mr. JOHNSTON. We have tried to get an agreement with the Iron League; that is composed of the New York contractors, but I might state that the Iron League was composed when this trouble arose—the reason that we believe—or I would give it as my opinion, at the time that this trouble arose there was a distinct iron league, and there was also this National Erectors' Association, and this trouble with Post & McCord, the Iron League at that time had to leave, was drove into the erectors' association, the National Erectors; still I believe they are doing business yet under the head of the Iron League.

Chairman WALSH. A little bit louder, please.

Mr. JOHNSTON. I say that was what drove the Iron League into the National Erectors' Association, was on account of this trouble which always made us believe that the Post & McCord firm was a part of the American Bridge Co.

Mr. THOMPSON. What help, if any, have the other unions here given you in your efforts to get an agreement? Have you asked them for any help?

Mr. JOHNSTON. Well, yes; we have asked them to intercede for us, but it appeared that we never could get—just like the man who was here ahead of me—he would never listen to anything. He would rather go out of the plan of arbitration and everything else than to have anything to do with the ironworkers. I know many times not only some of the unions, but also some of the contractors of the city of New York, have tried to bring about a plan of agreement between the ironworkers and the employers, but Post & McCord is the stumbling block. They won't have it under any condition, just as he said.

Mr. THOMPSON. What was the attitude of the local structural ironworkers' union with regard to this strike called by the international order or body, if you know?

Mr. JOHNSTON. Well, the majority voted for it, but there were a number who were opposed to it, but the majority voted for it.

Mr. THOMPSON. You are working under open-shop conditions in New York City now, are you not?

Mr. JOHNSTON. Well, the employers call it open shop. We are working at the present time where we can get the prevailing rate of wages and the hours, which the organization demands. We allow our men to work on the conditions that they get the prevailing rate of wages and the hours, and certain allowances for overtime, and all that.

Mr. THOMPSON. But are the nonunion men permitted to work on the same job?

Mr. JOHNSTON. In some cases.

Mr. THOMPSON. Your men work alongside of nonunion men?

Mr. JOHNSTON. We have allowed them to do that since 15 months now.

Mr. THOMPSON. About 15 months?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. Prior to that time did your men work with nonunion workers?

Mr. JOHNSTON. Prior to that time with some firms—with some contracting firms we did allow it; that is, contracting firms that were friendly with ours, but under the provisions of the bosses, or National Erectors' Association, they do keep some nonunion men on the job so that they can call it open shop, and we allowed it to overcome—

Mr. THOMPSON. How many men are there in structural ironwork, if you know, in New York City and vicinity?

Mr. JOHNSTON. I should say in New York and vicinity about 3,500.

Mr. THOMPSON. How many of those belong to your organization, do you know?

Mr. JOHNSTON. We have got five locals in this vicinity; in the five locals I should say there are about 3,000 members.

Mr. THOMPSON. And so far as you know, there are only about 500 nonunion structural ironworkers working on buildings in New York City?

Mr. JOHNSTON. Well, I should say there was not that much; but the men that are working nonunion on the structural ironwork are only the men they pick up, as I have explained, so that they will have nonunion men on the job.

Mr. THOMPSON. Has your organization any trade agreement in New York City?

Mr. JOHNSTON. We have no agreement whatever at the present time outside of the verbal agreement with some firms.

Mr. THOMPSON. What are the working conditions of your trade now in respect to hours per day and rate of wages?

Mr. JOHNSTON. The hours per day is fair, but the rate of wages is bad, owing to this trouble.

Mr. THOMPSON. What are the hours per day and the rate of wages?

Mr. JOHNSTON. The hours per day is eight hours, and the rate of wages is \$5 for eight hours' work.

Mr. THOMPSON. That is for regular structural-iron workers?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. How much do the helpers get, if you know?

Mr. JOHNSTON. We have got helpers with the craft—one craft—that is, light work, bronze work, and finishing work.

Chairman WALSH. How does that rate of wages compare with other cities—Chicago, St. Louis, and Detroit—Mr. Thompson?

Mr. THOMPSON. Yes. How does the rate of wages paid here compare with Chicago?

Mr. JOHNSTON. Well, they pay about 60 cents a day more in Chicago; and Indianapolis, I think, they pay 40 or 50 cents a day; and California, \$1 a day more.

Chairman WALSH. How about St. Louis?

Mr. JOHNSTON. Seventy-five cents a day more.

Chairman WALSH. And Buffalo?

Mr. JOHNSTON. Buffalo, the same wages.

Chairman WALSH. Are the conditions about the same?

Mr. JOHNSTON. About the same; yes.

Chairman WALSH. And Boston?

Mr. JOHNSTON. Boston, the conditions are about the same.

Chairman WALSH. Philadelphia?

Mr. JOHNSTON. I think Philadelphia is on the same scale, too. You see, since our trouble these other organizations have all come to us. We lay dormant on account of the taking of this Post-McCord—

Chairman WALSH. What about Washington, D. C.?

Mr. JOHNSTON. Washington, D. C., has come up to the same wages we have at the present time.

Chairman WALSH. You mean the same wages or the same conditions as in the city of New York?

Mr. JOHNSTON. In regard to their wages and hours.

Chairman WALSH. Well, is your organization strong in Washington?

Mr. JOHNSTON. Yes, sir.

Chairman WALSH. What are the wages there?

Mr. JOHNSTON. \$5 per day, eight hours' work.

Chairman WALSH. The same as here?

Mr. JOHNSTON. Yes; the same as here.

Chairman WALSH. Excuse me, Mr. Thompson. Go ahead.

Mr. THOMPSON. Very well, Mr. Chairman. What have you to say as to the regularity of the employment of ironworkers in this city?

Mr. JOHNSTON. Well, we have good seasons and bad seasons.

Mr. THOMPSON. Taking a normal year, how many months in that year will an ironworker be able to get work?

Mr. JOHNSTON. I guess about nine months, they will average.

Mr. THOMPSON. About nine months?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. Is your trade, in your opinion, less regular or more regular than other building trades here?

Mr. JOHNSTON. Well, this past year has been a bad year for the other trades. Of course, we have had those subways and those new bridges coming up, and everything like that, and elevated roads. That has been very beneficial to our trade this year. But, as a regular thing, our trade is much the same as other trades.

Mr. THOMPSON. What initiation do you charge?

Mr. JOHNSTON. \$25.

Mr. THOMPSON. Have you any limitations—well, I will withdraw that question. What policy have you, if any, with reference to the admission of aliens and the negroes?

Mr. JOHNSTON. Any man who is a practical ironworker is admitted to our organization by having an examination. We have an examining board. Any man who is practical can become a member of our organization. Of course, there was one question you asked there that I wish to go back to. That is about helpers. Now, in the trade of structural-iron workers, heavy work, instead of the helper system we have the apprentice system?

Mr. THOMPSON. What is that system?

Mr. JOHNSTON. That system is we have 1 apprentice to 7 mechanics, and as soon as he is able to demand the worker's wage he is taken in under the practical iron workmen, and comes in under the head of the \$10 fee as an apprentice.

Mr. THOMPSON. And do you apply the apprentice system in New York City where you have no trade agreement?

Mr. JOHNSTON. Well, it is very easy applying all these things. They are only too glad to get these men. The bosses are only too glad to get the apprentice system and have union ironworkers. But they want to have a few men who are not, so that they can call it "open shop." That is the only way I can see to apply it.

Mr. THOMPSON. Are your books of membership closed?

Mr. JOHNSTON. No, sir.

Mr. THOMPSON. To the admission of new members any time?

Mr. JOHNSTON. No, sir; always open.

Mr. THOMPSON. Is there any restriction of output practiced by your union in regard to the amount of work they will do on a job per day?

Mr. JOHNSTON. None whatever.

Mr. THOMPSON. It has been stated that since the abrogation of the contract that your union had with Post & McCord, the amount of work done by the members of your union has been greater per day than before that time. Is that true, as you understand it?

Mr. JOHNSTON. I can only give an opinion on that. I don't think so.

Mr. THOMPSON. You don't think so?

Mr. JOHNSTON. I don't believe so.

Mr. THOMPSON. You don't know the facts?

Mr. JOHNSTON. Sir?

Mr. THOMPSON. You don't know?

Mr. JOHNSTON. Well, I am not positive of the facts. I have never heard of it.

Mr. THOMPSON. Well, if you know, does the structural-iron worker feel less secure of his job now than he did before when he had the contract?

Mr. JOHNSTON. An ironworker's job is secure while the contractor has work for him and he does it.

Mr. THOMPSON. Well, if he is just as secure in his job now as he was before, what are the reasons you would like to have a contract with the employer?

Mr. JOHNSTON. Well, the condition of the trade at present is—where we bring in a man to do ironwork that don't know anything about it a man is not as safe along with him as with a practical man, naturally. There is more loss of life and limb. Men take more chances than working among men that know one another.

Chairman WALSH. Mr. Thompson, at this point we will adjourn until 2 o'clock sharp, to meet in this same room.

(Thereupon, at 12.45 o'clock, a recess was taken until 2 o'clock p. m. of this Monday, May 25, 1914.)

AFTER RECESS.

Chairman WALSH. The commission may come to order.

Mr. THOMPSON. Mr. Johnston, is the structural-iron work a particularly dangerous occupation?

Mr. JOHNSTON. Yes, sir.

Mr. THOMPSON. That is all.

Does anybody wish to ask Mr. Johnston any questions?

Commissioner GARRETSON. Mr. Johnston, is there any discrimination against the members of your organization in this territory in seeking employment on account of their membership in the organization?

Mr. JOHNSTON. There has been, but on account of the rush of work at the present time it is not shown.

Commissioner GARRETSON. They want the men bad enough that they waive the point?

Mr. JOHNSTON. They waive the point; yes, sir.

Commissioner GARRETSON. The allegation was made on the stand this morning that the opposition underlying contracting with your organization on the part of the firm that was being represented was on account of the failure to keep faith, in other words, keep arrangements?

Mr. JOHNSTON. Yes.

Commissioner GARRETSON. From your standpoint, did the firm in question always keep faith with the union in the contractual days?

Mr. JOHNSTON. Well, there has been as many agreements broken by the contractors, or more, than there has been by the employees.

Commissioner BALLARD. It was suggested to us that on buildings in New York City, they are practically all constructed by union men, and if a nonunion man came on to do any work the union men won't allow it, and yet they do allow nonunion men to go ahead in your union. Is that all because of this breaking of agreements that happened some time ago?

Mr. JOHNSTON. Well, the trade conditions—the conditions of the trade in the past five years over here, I might say, through the entire organization of the Iron League and the National Erectors' Association, getting together, made those organizations combine to such an extent that all trade deals—they embrace all trades—they embrace them to such an extent that no one trade could exactly call the members out to protect another. I want to state just before that, understand, we had a competition here. We have a competition here of the Iron League and the National Erectors' Association, and the McCord belonging to the Iron League demanded the full protection of the Iron League whenever we had the trouble with them, and on him demanding that full protection they forced all the Iron League into the National Erectors' Association.

Commissioner BALLARD. In other words, the union men and the union employers all got together, did they, or the different associations of union men and different associations of employers all got together and would not want to do any work with anybody but the other?

Mr. JOHNSTON. No; before that there was a competition in New York. It was related here this morning, in old times there was a competition which existed in New York between outside firms coming in and getting the work of the old firms of the Iron League. That was what led up to a lot of this disruption. The old Iron League wanted to have a fence built around New York for itself. The union men saw it more beneficial to allow open competition, such as the George A. Fuller Co., when they came in to New York here, and the Thomson-Starrett and all those large contracting companies, and the Iron League at that time of course felt rather sore to have so much competition coming, and, I believe, that was where the first formation of the Iron League

came from. Then it worked up to the stand whereby the American Bridge Co. came in here, the National Erectors' Association, and you might say they ate up the Iron League.

Commissioner BALLARD. Where are the headquarters of your league?

Mr. JOHNSTON. Our headquarters is 154 East Fifty-fourth Street.

Commissioner BALLARD. That is the local union. Where is the national headquarters?

Mr. JOHNSTON. In Indianapolis, Ind.

Commissioner BALLARD. And it is known as what?

Mr. JOHNSTON. Bridge and Structural Ironworkers' International Association.

Commissioner BALLARD. Well, Post & McCord, when you had this trouble—how long ago was it you had that trouble with Post & McCord?

Mr. JOHNSTON. That is about over 10 years ago—I guess 11 years ago—10 or 11 years ago.

Commissioner BALLARD. And you claim that they were then part of the American Bridge Co.?

Mr. JOHNSTON. Yes, sir; that was the contention of our international president. He couldn't get any proofs that they were not.

Commissioner BALLARD. Could not get any proofs that they were?

Mr. JOHNSTON. No.

Commissioner BALLARD. It seems the unions in New York were very united, and for 10 years they have been refusing to, in a way, recognize your union, haven't they?

Mr. JOHNSTON. No, sir; they recognize—we are all recognized in the board of building trades, but the board of building trades has not been in a position, as I said before—the National Erectors and Employers' Association has got so strong in power that in the past—well, I will say 9 or 10 years—they have been unable to help the ironworkers, have not been able to get themselves in a position to help it because they have all had troubles just the same as we have had, but they appear to be more bitter against the ironworkers than the others. They formed dual organizations; on everybody they could not make so satisfactory a deal like that.

Commissioner BALLARD. You say there are about 3,500 workmen in your line and 3,000 of them belong to the union in the city of New York?

Mr. JOHNSTON. Yes, sir; 3,000 at the lowest estimation.

Commissioner BALLARD. Now, in the enforcing of your demands to require that your union shall be employed and nobody else, what methods do you take to enforce your demands?

Mr. JOHNSTON. We have tried to get agreements.

Commissioner BALLARD. Yes.

Mr. JOHNSTON. We have been trying to get agreements in the past for the last seven years. We have done everything with regard to communicating with those people that bring about meetings, and they refused to meet us to treat with us. They say they don't discriminate against our men, but practically they have not discriminated against our men when they need them, but when they don't need them they like to laugh at our men walking the street and put the other fellow on that they can get along with.

Commissioner BALLARD. Why do you suppose that for seven years they would make agreements with every other union in the whole city excepting yours? Have they picked you out especially for any particular reason outside of this one that has been referred to? Why for seven years should they be so persistent in refusing to treat with you when they treated with other unions?

Mr. JOHNSTON. They are not treating with all other unions except plasterers. They have only just treated with them, I guess, about nine months ago. There has been the steam fitters; they had a fight on for a long time, up to a short time ago. In fact, the amalgamation with the plumbers was what caused them to give them an arrangement.

Commissioner BALLARD. Would you object to leaving with the commission the preamble and constitution and by-laws of your international union and also of your local union?

Mr. JOHNSTON. I have not got it with me, but I could send it.

Commissioner BALLARD. I wish you would, if there is no objection, one of each international and one of each of the locals.

Mr. JOHNSTON. I will have the secretary mail them.

Commissioner BALLARD. Does your local or international union, where they have any trouble with an employer, countenance such things as sabotage or doing injury or damage to the work?

Mr. JOHNSTON. The organization has never tolerated anything of that condition since I have been in it, and that has been for over 20 years.

Commissioner BALLARD. Never have tolerated it?

Mr. JOHNSTON. No, sir.

Commissioner BALLARD. Have you ever expelled anybody who was guilty of such practice?

Mr. JOHNSTON. We have never had the proof.

Commissioner BALLARD. If you did have the proofs.

Mr. JOHNSTON. If we had the proofs, certainly they would not be allowed in the organization.

Chairman WALSH. Is there any other commissioner who desires to ask any question?

Call your next.

Mr. THOMPSON. I will call Mr. Outwater.

TESTIMONY OF MR. EDWIN OUTWATER.

Mr. THOMPSON. Will you please state your name, your residence, and your occupation?

Mr. OUTWATER. Edwin Outwater; 18 East Forty-first Street; house address, Riverdale, New York City.

Chairman WALSH. I thought Mr. Dunn was your next, Mr. Thompson.

Mr. THOMPSON. Mr. Outwater asked to be put on the stand the first thing, as he is going to Europe to-morrow.

Chairman WALSH. Very good.

Mr. THOMPSON. What is your occupation?

Mr. OUTWATER. Builder.

Mr. THOMPSON. Are you president of the master carpenters' association?

Mr. OUTWATER. I am.

Mr. THOMPSON. How long have you been president of the association?

Mr. OUTWATER. Eighteen months.

Mr. THOMPSON. Eighteen months?

Mr. OUTWATER. Yes, sir.

Mr. THOMPSON. Were you a member of that association before that time?

Mr. OUTWATER. I was.

Mr. THOMPSON. For how long?

Mr. OUTWATER. The last 15 years.

Mr. THOMPSON. What office, if any, did you hold before you became president?

Mr. OUTWATER. Trustee.

Mr. THOMPSON. For how long?

Mr. OUTWATER. For the past 10 years.

Mr. THOMPSON. Has your association, the carpenters' association, an agreement with the journeymen carpenters' union?

Mr. OUTWATER. We have.

Mr. THOMPSON. Is it in writing?

Mr. OUTWATER. Yes, sir.

Mr. THOMPSON. Is it renewed from year to year, an annual agreement, or what is it?

Mr. OUTWATER. It has been renewed up to last January. There is no agreement that exists at the present time.

Mr. THOMPSON. At the present time?

Mr. OUTWATER. No, sir.

Mr. THOMPSON. Were the agreements made to cover many years, or was an agreement always an annual affair?

Mr. OUTWATER. Our last agreement covered two years.

Mr. THOMPSON. Two years?

Mr. OUTWATER. Yes, sir. There has generally been an annual agreement.

Mr. THOMPSON. Were these agreements substantially the same in their general terms, leaving out of question the wages and hours?

Mr. OUTWATER. They were.

Mr. THOMPSON. Was there any provision in the agreement between your association and the carpenters' union by which the carpenters' union agreed not to work on or with nonunion material and by which you agreed not to seek to install nonunion material?

Mr. OUTWATER. In our last agreement there was a clause in there that said we were not to use nonunion or prison material. In the making of that agreement a discussion came up that we would not make an agreement as broad

as that, because it was not possible for the other side to live up to an agreement of that kind, because they had never lived up to it.

Mr. THOMPSON. That is, the union had never lived up to it; is that it?

Mr. OUTWATER. No, sir. It made trouble for us and we couldn't live up to an agreement of that kind.

Mr. THOMPSON. That is, the master builders?

Mr. OUTWATER. The master carpenters' association. I better go on. And then a clause was inserted that exempted all outside-lying districts, excepting Manhattan and south of One hundred and seventy-seventh Street. If the other side maintained a union condition in that district, the master carpenters' association agreed that they would put up no material that was handled by the Brotherhood of Carpenters. If the Brotherhood of Carpenters handled any material of any kind whatsoever in that district, any of our members had a perfect right to handle that material.

Mr. THOMPSON. Mr. Outwater, are there any factories manufacturing trim in and around the city of New York?

Mr. OUTWATER. There are.

Mr. THOMPSON. And are these mills or factories, the owners of them, are they members of your association?

Mr. OUTWATER. Yes. That possibly is the vein of a great deal of trouble that exists at the present time in the master carpenters' association. The Building Trades Employers' Association is organized on the basis of a union condition that should prevail in our shops and on our buildings. The manufacturing woodworkers' association are engaged only in the manufacturing of materials.

Mr. THOMPSON. And they are members of your association?

Mr. OUTWATER. They are members of the association, a local organization, but is the same as the master carpenters, holding and use brotherhood carpenters in their work, on their work, the same as the employing carpenter or the general contractor in erecting his work.

Mr. THOMPSON. Then this agreement that you speak of which exists between your association and the union in reference to the refusal to handle nonunion material would be to the advantage of those woodworkers, of the woodworkers' association, manufacturing woodworkers' association?

Mr. OUTWATER. That is the trouble.

Mr. THOMPSON. And the union members?

Mr. OUTWATER. Yes, sir.

Mr. THOMPSON. The members of the union?

Mr. OUTWATER. Yes, sir.

Mr. THOMPSON. Was it of any particular advantage to the members of your association?

Mr. OUTWATER. An advantage to what? How?

Mr. THOMPSON. This agreement that you made.

Mr. OUTWATER. So far as the woodworkers' agreement, the manufacturing woodworkers' agreement, it is detrimental to the carpenters' agreement.

Mr. THOMPSON. Detrimental to the master carpenters?

Mr. OUTWATER. Detrimental to the master carpenters, and that is what brings trouble in our trade.

Mr. THOMPSON. Are any of the master carpenters engaged also in the manufacture of wood trim?

Mr. OUTWATER. A very small percentage. I don't know of but two or three in New York City that manufacture trim.

Mr. THOMPSON. Did that influence the making of such an agreement?

Mr. OUTWATER. It did not.

Mr. THOMPSON. It did not?

Mr. OUTWATER. No, sir.

Mr. THOMPSON. Has your association been the subject of any litigation growing out of that contract?

Mr. OUTWATER. Unfortunately it has.

Mr. THOMPSON. Can you state what suits were started, and what is the status of them, briefly?

Mr. OUTWATER. Suit was started by the Payne Lumber Co. against the manufacturing woodworkers, mentioning by name several of the labor side and the master carpenters' association was made a party to that action.

Mr. THOMPSON. Is that suit still pending now?

Mr. OUTWATER. It is.

Mr. THOMPSON. What was that, an injunction suit or a damage suit?

Mr. OUTWATER. It was first started as an injunction suit and just what stage it has got to now—it is up on appeal—I don't know. The records will show that.

Mr. THOMPSON. Is the Payne Lumber Co., or a company of similar name—I don't know whether they have that name exactly or not—have they sued your company for damages as well?

Mr. OUTWATER. We have been made a party to it; yes, sir.

Mr. THOMPSON. Has any other suit been started against your association, or the members of it, because of this agreement?

Mr. OUTWATER. Not to my knowledge.

Mr. THOMPSON. What, in your opinion, is the advantage that that agreement gives to the parties making it?

Mr. OUTWATER. It is certainly an advantage to us to have an agreement with our men, establishing a firm condition under which we can do business, so we know when we are taking a contract, signing a contract, that it is possible to complete it without being interrupted, the same as we were prior to the organization of the Building Trades Employers' Association.

Mr. THOMPSON. Well, that is a benefit so far as your association is concerned.

Mr. OUTWATER. Yes, sir.

Mr. THOMPSON. That is the sole benefit, in your opinion?

Mr. OUTWATER. Yes, sir.

Mr. THOMPSON. So far as your association is concerned?

Mr. OUTWATER. The sole benefit so far as my association is concerned.

Mr. THOMPSON. Of course, you entered into this agreement voluntarily?

Mr. OUTWATER. Well, after a great deal of discussion and various meetings it was the best trade agreement that we could get. In the light of what has transpired, we do not think it is a very good one, and we do not propose to enter into such an agreement as that again.

Chairman WALSH. What is wrong about your present agreement? Briefly state it; what are the points that you have found not to be good in the working of it?

Mr. OUTWATER. The special point is the naming in our agreement of union trim.

Chairman WALSH. Have you had trouble growing out of that with those that furnish nonunion trim?

Mr. OUTWATER. We have had no trouble. The master carpenters' association has had no trouble in their agreement with regard to the erection of such trim as we purchase, but we do not purchase trim that we are satisfied will not be erected for us. So we try to keep out of trouble.

Mr. THOMPSON. One more question, Mr. Chairman. It has been suggested to me to ask, Did the employers' association in turn help to finance the litigation that was brought against you on account of that contract?

Mr. OUTWATER. When you speak of the parent association, what association do you mean?

Mr. THOMPSON. The one Mr. Eidlitz spoke of.

Mr. OUTWATER. The building trades' association?

Mr. THOMPSON. Yes.

Mr. OUTWATER. We financed it.

Commissioner BALLARD. Then I would like to ask you a little further about this purchase on nonunion-made trim. If you were not bound down by an agreement of this character, you could purchase trim in the open market or wherever you pleased, couldn't you?

Mr. OUTWATER. We can.

Commissioner BALLARD. You can now?

Mr. OUTWATER. Yes, sir.

Commissioner BALLARD. But the union parties won't work with it?

Mr. OUTWATER. Within the district I have outlined it is dangerous to do it, and I don't know anyone that does it. If they do they do not get the protection from the master carpenters' association.

Commissioner BALLARD. What I mean is if it were not for your agreements, and if there were no agreements on that line, then every contractor could purchase what he pleased, and you would prefer to have it that way, would you?

Mr. OUTWATER. We prefer to have it so every contractor could purchase where he pleases. Is that your question?

Commissioner BALLARD. Yes, sir.

Mr. BALLARD. Yes, sir.

Mr. OUTWATER. Yes, sir.

Commissioner BALLARD. That is what you want?

Mr. OUTWATER. Yes, sir.

Commissioner BALLARD. And you want the union carpenters to agree to work any material that you give them?

Mr. OUTWATER. Yes, sir.

Commissioner BALLARD. And at the present time that does not obtain under the agreement?

Mr. OUTWATER. No, sir.

Commissioner BALLARD. And that is your objection to the present agreement?

Mr. OUTWATER. We object to the present agreement because it puts us in a position where we are a party to a discrimination. Now, we do not want to be placed in a position where we discriminate.

Commissioner BALLARD. That is all, Mr. Chairman.

Chairman WALSH. Mr. O'Connell, have you any questions?

Commissioner LENNON. Have you had any difficulty with carpenters living up to their side of the agreement? Have they complied with the agreement with your organization, in so far as it has been extended from time to time?

Mr. OUTWATER. They have, rigidly.

Commissioner LENNON. They have?

Mr. OUTWATER. Yes, sir.

Commissioner LENNON. Is there any suit pending, or has there been any suit pending, at law by your association against the carpenters?

Mr. OUTWATER. There is not, nor has not been, to my knowledge.

Commissioner LENNON. What, if any, efforts are being made now to enter upon a new agreement? Are there any efforts being made within the last—since the 1st of January, say, to enter into a new agreement?

Mr. OUTWATER. I think that question is entirely deadlocked. We won't enter into another agreement where we are made a party to a discrimination.

Commissioner LENNON. Have you had any conferences?

Mr. OUTWATER. Several.

Commissioner LENNON. You have had several conferences?

Mr. OUTWATER. Yes, sir.

Commissioner LENNON. That is a point on which the hitch comes?

Mr. OUTWATER. That is the point.

Commissioner LENNON. Is there material financial advantage in buying trim made outside of New York City?

Mr. OUTWATER. Why, yes. Material can be manufactured cheaper outside of New York City, and is, than it is manufactured here.

Commissioner LENNON. Well, you enter into an agreement with the union to employ union men and union men only. That is apparently no more of a restriction than it is to use union material?

Mr. OUTWATER. Well, that might be a difference of opinion.

Commissioner LENNON. Yes; that is true. Are the contracts that are going on here now, such as there may be, being erected in the main by union carpenters?

Mr. OUTWATER. Yes, sir.

Commissioner GARRETSON. Mr. Outwater, as your agreement stands, you are at perfectly liberty to purchase where you please as it is, are you not, if you take the chance on having it erected?

Mr. OUTWATER. Yes.

Commissioner GARRETSON. There is nothing in the contract that prescribes that right to buy anywhere?

Mr. OUTWATER. There is nothing that prohibits a man buying anywhere.

Commissioner GARRETSON. Then the objection that really exists in the continuation of your present contract with the carpenters' association lies in the fact that you have bound yourselves with the carpenters' union that you would recognize their right to refuse to use it, is that right?

Mr. OUTWATER. We have not bound ourselves, except in the territory I speak of.

Commissioner GARRETSON. Where they are not erecting, you are buying—all the master carpenters are buying work from mills that could not furnish materials in this restricted district?

Mr. OUTWATER. Yes.

Commissioner GARRETSON. The only objection is in the restricted district, is it not?

Mr. OUTWATER. That is all. I take my chance anywhere else, and I have not had any trouble.

Commissioner GARRETSON. The fact is, if that clause of the agreement was not continued in that restricted district, you would be confronted with exactly the same condition in your relation with the carpenters; that is, the same danger of refusal, but you would not be bound by your agreement not to ask them to do it?

Mr. OUTWATER. Yes; but in our agreement if we can prove that they are erecting that material for anyone outside the master carpenters' association, they can not refuse to erect it for us.

Commissioner GARRETSON. You simply don't want that left in the agreement as a matter of record?

Mr. OUTWATER. We don't want it even implied.

Commissioner GARRETSON. So that the abolition of the clause would not change the conditions an iota?

Mr. OUTWATER. Not so far as we are concerned it might not.

Commissioner GARRETSON. That is all.

TESTIMONY OF MR. WALTER GORDON MERRITT.

Mr. THOMPSON. Will you please give your name, profession, and address?

Mr. MERRITT. Walter Gordon Merritt; my profession is practicing lawyer in New York City; my office address is 135 Broadway, and I reside at 863 Park Avenue, in the city.

Mr. THOMPSON. You are the attorney, are you not, for the American Anti-Boycott Association?

Mr. MERRITT. I am known as associate counsel.

Mr. THOMPSON. What is your association? Where is its head office, and what are its purposes, if you know?

Mr. MERRITT. Its head offices are in New York City. Its purposes are suggested by its title, the fighting of the boycott; but in connection with the association's activities, it feels that an illegal strike partakes of the same nature as the boycott; so I might say its activities would extend to fighting the boycott, illegal strikes, unlawful picketing, and kindred matters.

Mr. THOMPSON. The boycotting you refer to is boycotting in the labor question?

Mr. MERRITT. The matter has never come before our association in any other way.

Mr. THOMPSON. I simply wanted to distinguish it from the Gregorian.

Mr. MERRITT. We have nothing to do with the Night Riders.

Mr. THOMPSON. When you say you take in the question of illegal strikes and of picketing, who act as judges as to whether a strike is legal or illegal, so far as your association is concerned?

Mr. MERRITT. It becomes a legal question so far as our association is concerned.

Mr. THOMPSON. Well, how do you determine a legal from an illegal strike so far as to decide whether your association will take any hand in it?

Mr. MERRITT. It is referred to counsel, and if it presents a good case under the law in the opinion of counsel and the other desirable conditions are existing, our association may undertake to defend the member in trouble in the courts of law or equity.

Mr. THOMPSON. Now, Mr. Merritt, the record here is made for laymen, and I would like to have you give one illustration of what you would call an illegal strike that would call for action by your association?

Mr. MERRITT. A strike to prevent, say, the use of open-shop products of a particular manufacture.

Mr. THOMPSON. What other illustration can you give of illegal strikes?

Mr. MERRITT. A strike in violation of a contract.

Mr. THOMPSON. Well, would that be an illegal strike?

Mr. MERRITT. Under the decisions of the United States Supreme Court such a strike or effort to carry it on could be enjoined.

Mr. THOMPSON. And you would therefore determine that as an illegal strike?

Mr. MERRITT. We certainly would.

Mr. THOMPSON. What other kind of strike would you call an illegal strike?

Mr. MERRITT. Any strike which sought purposes in violation of the antitrust law.

Mr. THOMPSON. Now, what would such a strike be in violation of the anti-trust law?

Mr. MERRITT. A case came up here very recently in New York in which I acted in behalf of the Gill Engraving Co.

Mr. THOMPSON. I did not get that.

Mr. MERRITT. Gill Engraving Co., which manufactured photo-engraving plates. They completed the plates in their factory, and then turned them over to customers who are usually publishers, and those publishers used them to print from in their publications. The photo-engravers' union, in their effort to protect the union shops from the competition of the Gill Engraving Co., which was an open or nonunion shop, issued an order that none of the union shops in New York City should be allowed to do any work for any publishing house that did any work of the Gill Engraving Co., inasmuch as the Gill Engraving Co. was the only nonunion shop of any size, and all publishing houses were dependent upon doing work, or having work done by some of the union shops, it resulted in preventing the Gill Engraving customers from getting out their publications.

Mr. THOMPSON. That would come, then, Mr. Merritt, would it not, within your first class of cases; that is, the strike against nonunion material?

Mr. MERRITT. I should not say so. That was a strike against a nonunion customer. The material did not come to the shop at all, and the men who struck did not come in contact with the material in any way. But it was a strike against a customer who did business with a nonunion concern. There are a great many other varieties of strikes which might suggest themselves. The law is in a formative state on this very question, and it has been one of my contentions that this distinction between a legal and an illegal strike is one of the most important distinctions to be developed in order that the field of industrial warfare may be narrowed.

Mr. THOMPSON. What other form of strike do you call illegal?

Mr. MERRITT. I think such a strike as took place on the Delaware, Lackawanna & Western road, or it may have been the Delaware & Hudson road, I think it was, because of the discharge of two men working on that road who were accused of incompetency, is illegal, if those men were discharged in good faith on account of incompetency, and I think a court of equity would take cognizance of that fact and determine the legality or illegality of that strike placed upon its determination of that question of fact. That, however, has not been developed, perhaps, outside of the State of Massachusetts, where principles of law on that general line have been considered.

Mr. THOMPSON. Then you would consider—let me state it in other words: You would consider a strike by the employees of any firm or corporation upon the discharge of some other member would come within the term of illegal strikes?

Mr. MERRITT. I think an arbitrary resistance of the discharge of a man who was properly discharged, where his discharge does not in any way relate to the welfare of the other members employed in that factory, should be termed an illegal strike.

Mr. THOMPSON. Who is to determine whether or not the employee should have been properly discharged or not?

Mr. MERRITT. A court of equity.

Mr. THOMPSON. What is that?

Mr. MERRITT. A court of equity.

Mr. THOMPSON. A court of equity. I see. And if a court of equity should decide it long after the strike was found and had been called and, although the employees would not know what the court of equity was going to decide, still it would be called an illegal strike, so far as you are concerned? I will restate that question. It is pretty long. A court of equity never decides a case until after it is brought before the court, does it?

Mr. MERRITT. Certainly not.

Mr. THOMPSON. And naturally, of course, as a lawyer, you can not always tell what a court is going to decide?

Mr. MERRITT. Certainly not.

Mr. THOMPSON. Now, therefore, the employees, if they considered the discharge of any of their fellows was a wrongful discharge, must take the chance of going on an illegal strike?

Mr. MERRITT. Absolutely. All business men are taking that chance in entering into combinations of any character.

Mr. THOMPSON. Well, that is a different question. I sometimes doubt that, in its broad application. But, therefore, your association, under your view of its duties and obligations and rights, could be called upon to take a question up to

a court of equity for decision wherever there was a strike for reinstatement of discharged employees?

Mr. MERRITT. An application might be made to our association to do it, but whether our association would do it I can not say.

Mr. THOMPSON. But you would feel it has the right to do it under this question of illegal strike?

Mr. MERRITT. Certainly, and I reply that——

Mr. THOMPSON (interrupting). Now, you say that——

Mr. MERRITT (interrupting). Pardon me——

Mr. THOMPSON (interrupting). Yes——

Mr. MERRITT. Pardon me. My attention was called to a strike where I was called in as counsel, and I am sorry I am not privileged to disclose the name, because the case did not come into the court and as between client and counsel I have no right to give the name. But that was all on account of a man being discharged because of a charge of being drunk, and the other employees called a strike because they were resisting that charge; and that would come within the rule I have in mind.

Mr. THOMPSON. Well, the employer has the right to pay such wages as he may wish to pay for the work, has he not?

Mr. MERRITT. Yes, sir.

Mr. THOMPSON. Suppose now the larger firms and corporations combine in a strike for the purpose of forcing an arbitrary condition on the employer which is not a question of wages; would that be an illegal strike?

Mr. MERRITT. Certainly not.

Mr. THOMPSON. How do you try to distinguish between that case and the case of discharging an employee?

Mr. MERRITT. My test is a very simple one, Mr. Thompson, it is that the working men have a right to strike for any demands which logically relate to their welfare in their particular employment. That is a right that has been allowed to them by the law and should have been allowed; but if the question is one which does not come under the classification of those affecting his welfare, in that case, then, it is not within the rights vouchsafed the workman and the strike should be declared illegal.

Mr. THOMPSON. Then you think a workingman has no right to determine per se and absolutely for himself as to where and in what manner his welfare is involved; is that right?

Mr. MERRITT. Why, I think his determination is subject to review by a court.

Mr. THOMPSON. You think it is?

Mr. MERRITT. Why, certainly. Take these carpenters' cases we have in mind. Our courts have held that these strikes against nonunion men are criminal, and though the workmen may believe they are for their benefit—and as a matter of fact it does in some degree redound to their benefit, just as all combinations in restraint of trade are beneficial to those engaged in them. But the workman decides that he is benefited, and his decision is subject to review when he violates any laws.

Mr. THOMPSON. And you think that also in the case of the discharge of an employee, the question as to whether that affects the welfare of the other workers is a matter subject to the review of the court?

Mr. MERRITT. I think it ought to be. I have no cases on the subject.

Mr. THOMPSON. How does your association act? Has it a membership?

Mr. MERRITT. It has.

Mr. THOMPSON. How does it act in the support of its aims in cases where it thinks that it wants to take a hand?

Mr. MERRITT. By litigation.

Mr. THOMPSON. That is to say, bringing suit either in chancery or in law—by injunction or for damages?

Mr. MERRITT. Yes.

Mr. THOMPSON. Or criminal suit, if that is necessary?

Mr. MERRITT. Yes, sir. Of course the suit is brought in the name of the affected party, as it must necessarily be.

Mr. THOMPSON. Are any such suits pending now in the city of New York?

Mr. MERRITT. Yes, sir.

Mr. THOMPSON. Against whom are they pending and what is their nature?

Mr. MERRITT. The Gill Engraving Co. case I have just described. There is a case of the Duplex Printing Press Co., which manufactures printing presses in Battle Creek, Mich. An effort has been made by the machinists' union to unionize their trade in Battle Creek, and the head of that firm objects to a closed

shop and persists in running his factory as an open shop. The unions have entered into a scheme to force the unionization of the factory by preventing the hauling, installation, or operation of the presses of the Duplex Co. wherever they may come in contact with them. The presses are shipped to New York and they have had trouble in getting car men to haul them, because the unions ordered the car men not to; and they have ordered the people employed by the car men to refuse to do their work, or the hoisters to refuse to help in transferring the presses from the wagons into the building. They have ordered the machinists not to install the presses, and have made suggestions to the pressmen's union, which have never been actually carried out, though they have been threatened, that they should not operate the presses. The immediate cause of a suit arose in connection with the National Exposition Co., of New York, which held an exposition in the Grand Central Palace about a month ago, in which printing presses were to be exhibited. This company commonly holds its exposition in connection with the American Newspaper Association and some other people engaged in the newspaper business; and at that time the various people who were manufacturing printing presses exhibited them at the exposition, and so the possible buyer meets the possible seller. There are about 200 exhibitors to do this, and the machinists' union took the position that the exposition company must cancel its contract or repudiate it—which was in writing—permitting the Duplex Co. to exhibit; and that unless they did so the show would be busted up, as they put it; and that a strike would be called against every exhibitor, the employees employed by him in connection with the exhibit and a strike would be called against all the employees of the exposition company itself. Facing a possible loss of \$100,000 or more in a few days, because the exposition had to go right on, there being no time or opportunity to do anything else, we secured an injunction against them.

Mr. THOMPSON. Now, I won't ask you for the details in the other cases, but what date are they and can you and will you furnish this commission with a typewritten statement of the cases that exist?

Mr. MERRITT. I should be very glad to hand them my briefs, which I think will be sufficient to cover all the cases. I can hand them briefs in all that have been presented. In fact, I think the commission is already in possession of them. I have had a great many letters from Mr. Ritter, I think it was, requesting the briefs or documents in a number of these cases, and have been very glad to respond and send them on to them.

Mr. THOMPSON. Well, if you will send the commission direct, say, a statement of the cases or a list of the cases and the numbers, so that they may be investigated by our investigators—just such a statement as we can follow out—we will be very glad to have you do that.

Mr. MERRITT. Very well.

Mr. THOMPSON. Referring to the litigation, which I believe you started against the master carpenters' association which Mr. Outwater spoke about to-day, what kind of litigation did you bring in that matter? How many suits, and what was the character of the suits?

Mr. MERRITT. I think Mr. Outwater is confused as to the character of the cases, and with the privilege of the commission I would like to state this in my own way. I have made some notes and will be as orderly as I can be.

Chairman WALSH. We will be very glad indeed to hear you.

Mr. MERRITT. The condition which exists in New York to-day in Manhattan and in the lower part of the Bronx is such that no open-shop wood trim can be placed in any large building, and there has been a complete cessation of trade in open-shop wood trim except one or two of negligible size; and this is all due to or is made possible by the actual closed-shop conditions existing in the building trades. Mr. Eldlitz stated that they have a thousand firms in the building trades employers' association. There are about 75,000 to 100,000 workingmen, though, representing 30 to 35 different trades which are called upon to do work in connection with any of our large buildings in New York. So then there is this joint agreement between these 1,000 firms and this 100,000 workingmen that no man shall be employed unless he is a member of his respective union making a closed-shop condition. That arrangement is not a voluntary one. You could see yourself from Mr. Eldlitz's testimony how it originally started; but after it is started it is enforced by the rules prevailing in the building trades council, which compelled all men of all trades to go out on a strike in the event that any man employed in any one of the 35 trades is not a member of the union. And their constitution provides for penalties to be imposed upon any union that does not strictly enforce that rule, calling a

general strike against the employer of nonunion men; and the union is then expected and becomes obligated to enforce that, and any man who is outside of the union is not recognized.

This building trades council—I might interrupt by saying that I am not stating hearsay or facts off-hand, but facts which have been made a matter of record on sworn testimony. It employs about 75 agents which go about the city of New York to ascertain wherever a nonunion man is working or by chance gets employment and reports that to headquarters in order that the machinery may be put in force against him; and the result has been, as any builder will testify, that it is impossible for any employer to erect a large building in the Borough of Manhattan or the Bronx or Brooklyn except by the employment of union men exclusively in all the organized trades. The few nonunion men in these trades who do work in New York do it on small alteration and jobbing work where the combined trades do not have the same opportunity of bringing the pressure to bear. It was reported to me in one of the reports sent out by the Department of Labor at Washington, that 200 men were discharged annually or dismissed from these trades because, for some reason, they can not obtain union membership or their union membership has ceased. You understand this is a private body, and has a right to select its members; and a court has no judicial control over their suspension or expulsion, provided it is done in accordance with law. So when a man's membership ceases he becomes an outsider and is driven from this group here in New York; and in that way some 200 men are discharged annually.

Mr. Eidlitz was speaking of the bonds to enforce these rules and regulations—bonds given by the employers. They attempted to collect the money on one of the bonds against the Thomson-Starrett Co., and they won out in our appellate division, and subsequently it went to the court of appeals in which it was held that all agreements of this kind were illegal and unenforcible, because unduly restraining the right of the individual man to pursue his trade. Now, I make that introduction, because it is absolutely essential to understanding the trim situation here in New York. The workingmen in the building trades in New York City control it just as they please, because the union membership and a right to pursue a trade are the same thing. If you fail to comply with the rules of the union or of the employers' association and you are expelled from the union or anything of that kind you are expelled from the trade; that Mr. Eidlitz speaks of. And as one of the delegates testified in one of these cases to me concerning the situation in which I was very much interested, whereby they found two men who it turned out were union men on the job without their cards. Those are not the cards of their trade, but the cards of the building trades council which represents all of the trades where the industrial feature of it is thrown out. He must be a union man, and the building trades council issues that card. They found two men there without their cards, and the men said they would immediately go and get their cards—that they had forgotten them and left them at home. The delegate refused to allow that, however, and he called a strike on the job after these men had withdrawn and the grievance had been removed, and he never came near that job for a week after that. In the meantime they tried to get the men to go to work, but they could not; and this delegate will be one of the witnesses here—Mr. Alexander Kelso, and you can verify that story. And the result was that every man employed there, who was getting \$5.50 a day or thereabouts, lost that money for a week, because two men on that job had failed to bring their cards with them. And Mr. Kelso says that is not an unusual case; that frequently they punish the men for working with a man who has not brought his card, and that this was in the nature of a punishment.

Well, that shows you that the men in the trades are absolutely under the rule of the union, as they necessarily must be where their livelihood depends on union orders and union cards. Now, having obtained this arrangement, the carpenters' union have sought to extend it by limiting building operations to union products of the wood line. It was necessary to employ the union carpenters because if you do not you will have a strike of all the other 30 trades on the building; and if you attempt to employ nonunion carpenters to install the material, the union carpenters will refuse to work with them, and you will run up against that general paralysis in the building trades. The carpenters' union in 1904 adopted a rule directing all the unions and district councils to prevent their members, wherever possible, from handling nonunion trim. The local district council here in New York then passed a rule fining the members \$10 if they worked on "unfair" trim. In attempting to put that rule into

effect they ran into difficulty with the master carpenters' association. The master carpenters' association was ready to yield the question of nonunion trim for the sake of industrial peace, provided they could make sure that their competitors, who were not members of the organization, should not have the privilege of using nonunion trim, because nonunion trim, being cheaper, they would be subjected to unfair competition, as you can easily see. So, finding the union unable to control the members engaged in the unfair trade, and in order to assist them, they refused to handle nonunion material except such nonunion trim as was made by firms not on the unfair list, and this unfair list was issued by the carpenters' district council to the master carpenters' association and the master carpenters' association took it up with the Building Trades Employers' Association, who also took part in distributing this information. For two years there was a deadlock between the master carpenters and the carpenters' union on this point. They came together and tried to make an agreement, but could not because they always broke on this question of unfair trim. In the meantime the master carpenters employed tracers or spies to see where the nonunion men were working on work with union carpenters and to prove to the union that they were dealing square by them. And about 1909 they were convinced that no nonunion trim could be put up in New York City. And then they tried once more to use nonunion trim on the Alvin Court Building, and the carpenters called for a strike, and they attempted to employ nonunion carpenters, and sent out of the city to get men, but it was never feasible, and the strike was called in about 20 different trades on that building, and they decided from that time on to yield to the carpenters' rules, and they made an agreement not to use nonunion trim.

Then the manufacturers—the woodworkers' association—who also employ members of the United Brotherhood of Carpenters, and also members of the Building Trades Employers' Association, entered into an agreement with the carpenters that they would run union shops subject to union scale, provided the union men would not put up the nonunion material, and they could thereby be protected from open-shop competition. That is the condition we were confronted with in Manhattan and The Bronx at the time our litigation commenced. The manufacturers, the woodworkers' association, employed spies to go around and secure information as to where nonunion men were being used, and furnished that information to the union, who would strike the job if it were the material of any of the open shops. Having established that situation in Manhattan and The Bronx, about the 1st of January, 1910, they determined to extend it to Brooklyn. And I should say that in Manhattan a number of the jobbers have been forced into agreements agreeing not to use a nonunion product, subject to a penalty of \$2,500; and deposits have been made with the union substantially the same as money to secure these various provisions; and the only jobber who persisted in his refusal was attacked and boycotted in the same way only throughout the community, and an injunction suit was started for him. They determined to extend this to Brooklyn and brought it up at the next convention of the United Brotherhood of Carpenters, and their business agent took it up with the employers' association in Brooklyn and told them they were going to do the same thing over there, and they sent word to the Newton concern and the Bossert concern, and went down the list; and we secured injunctions at that time against this. I think that states the situation perhaps a little bit too much at length. There are, therefore, two suits pending in Brooklyn at the present time now awaiting decision before the appellate division of the supreme court. One is the suit brought by Albro J. Newton and the other by Louis Bossert against the carpenters' union. The Bossert Co. formerly did a business of half a million dollars across the river here; but to-day the open shops in Brooklyn who manufacture this trim do not know what interborough trade is. They can not sell it across the river, although they can produce it at prices 25 to 50 per cent under the union shops.

Now, there was another suit brought by Irving & Casson, manufacturers of cabinetwork, and we secured a permanent injunction in that suit and that suit has been determined and the costs paid. There was still another suit brought by the Payne Lumber Co. and several others, open-shop manufacturers of woodwork, eight in all—five or six in Oshkosh, one in Clinton, Iowa, and another in Tennessee, another in Williamsport, Pa., and in that city we secured a preliminary injunction, but when the case came on for trial the trial court held that the combination violated the Sherman antitrust law and the State antitrust law, which was a penal law, and entered an order of dismissal, and it was then taken to the circuit court of appeals in the Federal court, and it was dismissed

there on practically the same ground in a few lines, and the case is now lodged with the United States Supreme Court. I think that covers the cases against the carpenters' union.

Mr. THOMPSON. You have just looked into these matters from the legal standpoint, I take it?

Mr. MERRITT. Yes, sir; and from the social and economic standpoint as well. I also have written considerably on the subject.

Mr. THOMPSON. I see. Now, I will ask you as to a question I have in my mind. Are you acquainted with the conditions under which the Payne Lumber Co. manufactured its trim?

Mr. MERRITT. In a general way.

Mr. THOMPSON. Are the wages paid to its working people as high as the wages paid in union shops in New York City?

Mr. MERRITT. No comparison; they are so much lower.

Mr. THOMPSON. Then the reason why the union asks for such a contract is in order to increase the wages and the return of its members?

Mr. MERRITT. No question about it.

Mr. THOMPSON. So far as the manufacturing woodworkers are concerned, the reason is they want to get more business?

Mr. MERRITT. Yes, absolutely.

Mr. THOMPSON. And perhaps a monopoly of the business here.

Mr. MERRITT. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman; thank you.

Mr. MERRITT. I have a number of other things which I think——

Chairman WALSH. If you have anything which you think is germane to this question that you desire to volunteer, we will be very glad to hear it, Mr. Merritt.

Mr. MERRITT. Thank you very much, Mr. Chairman. I think of another thing as to a finding of facts on conditions prevailing in New York in connection with this trim matter, and that was the findings by Judge Putnam in the Dhuy case.

(Merritt Exhibit No. 1, "Decision," Hon. Harrington Putnam, justice, supreme court, New York State, April 30, 1913, in the case of Louis Bossert and John Bossert et al., plaintiffs, against Frederick Dhuy et al., was submitted in printed form.)

Chairman WALSH. Just proceed, Mr. Merritt.

Mr. MERRITT. Now, this condition in the building trades, which, of course, is for the mutual benefit of the employers and employees, is satisfactory to a large extent to those parties mutually engaged in the business, is being utilized in a great many ways to the detriment of the outsider who is not a party to it. One of the favorite schemes is for the employers to instigate strikes against a competing employer who does not conform to their standards as to the way in which the business should be conducted. I am not now referring to the wage scale, or the question of the union or the open shop, but I am referring to things which the employer thinks are detrimental to his business and wants eradicated. And he finds this union an instrument, by which the have a complete grip on the trades of New York, useful to him in eliminating what he thinks is competition that he does not want to meet.

Mr. THOMPSON. In other words, it is the workingman that is used as the battering ram?

Mr. MERRITT. In a great many of these cases that is true. In the wood-trim cases it is the master carpenters that are being used as a battering ram. But all these agreements are give and take. One gives one thing and one gives another, and it makes it desirable for them to come together for mutual protection in that way, regardless of what happens to the public or the outsider. Now, a case came to my mind which resulted in an indictment by the supreme court grand jury, for which I prepared the case, and with the facts of which I am entirely familiar, where the combination of mason builders up in The Bronx, operating union arrangements in the same way are operating down in Manhattan, determined to put out of business a man by the name of O'Connor because he lumped his contract, as the wording is.

Mr. THOMPSON. You mean master mason builders?

Mr. MERRITT. The rule is, as between the bricklayers and the master masons, that no man shall take any contract unless he includes in that contract an agreement for material, in order thereby to keep out men of small credit and of small standing who can not afford to include the material item in their contract. There have been all sorts of subterfuges to try and get around that.

This man, they claim, did not include the material feature in his contracts, and they ordered that he be put out of business. I am quoting the exact language. So they directed the bricklayers' union to call a strike on all the buildings where he had any contracts.

In the first instance they prevented his securing one or two contracts just before they were allotted to him by stating that they would never allow the building to be completed if the contract was consummated. In these other cases they actually called a strike of about 35 men. The men went down before the joint conference committee of the master mason builders and bricklayers to see what the trouble was. And in all these joint conferences—I can not help using the word—star-chamber proceedings prevail. They call the man before them and tell him what the trouble is and let him make his statement. He then retires, and in a short time the decision comes out and he can find out nothing further concerning it, and it goes into effect, and goes into effect with greater force than a legal decision, because he has got to comply with it or go out of business, so far as the conditions existing in New York are concerned. They demanded of this man that he hand over all of his contracts and checks. He said he never paid by check. He was a man who was just above the mechanic and had become a contractor on a small scale. And he gave them what material he had, and they said, "If you won't give us more than that none of your building operations will be allowed to go on." So they called a strike, and it was just before Christmas and 35 men were ordered out from the work. The men turned on the delegate and said, "We don't see why we should go out. Nothing is the matter with this job. We want to continue at work." He says, "It doesn't make any difference. If you don't go out it means \$25 or \$50 fine." One of them turned to the delegate and said, "I feel like killing you. You get your wages and I have my family starving." I am not stating this for effect, but it is absolutely a matter of sworn record in this case. And they called the men out and those men came down to my office and gave me an affidavit against the union—a thing I never knew to happen before, because, while I get some information from members who feel they are abused, yet they very seldom are willing to come to the front in that regard. It was just before Christmas time and a very bad thing for them. They lost \$100 each for the time they were out of employment, as far as I can calculate. I think that is pretty accurate. Now, those men were just being made the tools of an unscrupulous employer, and it is an abuse of course which grows out of this monopolistic condition which exists in New York City.

Now, another feature is the way in which this combination is being used as a collection agency. Having obtained control over the labor conditions they can prevent anyone working on a building which they issue an edict against. And in a number of the trades, particularly carpenters, masons, builders, and plumbers—I have it noted here—if a former owner of a building has failed to pay the master mechanic who is working there or the journeyman has not been paid in full and the loan man forecloses the building and the decree of court is issued, selling that building at foreclosure free and clear, that building can never be erected if it is a large building, anyway, until some one pays the debts of the former bankrupt owner; and the title companies of New York City will tell you that millions of dollars are being paid and have been paid out in that way. The building is busted and the builder goes down and it is sold out and the combination between the mechanics and the other employers are such as to completely control the industry, and makes it impossible for that building to go on until some one pays the back debts.

I had a case here where the objection was to a man named Snow that had formerly loaned money on other buildings where some master plumber had not been paid, and they called strikes on a number of buildings where they suspected he loaned money in order to compel the payment of the debt of a master plumber in connection with this other building which was entirely finished, and a matter that was purely one of history.

I will just quote a few lines here from the Plumbers' Supplement which shows how this thing is used:

"It is expressly agreed that no journeyman shall work or be allowed to work on any property where a member of the master plumbers' association has done work for which he has not been paid. If a building shall be abandoned for any cause on which the wages of union plumbers are unpaid no member of the master plumbers' association shall complete the same until such debt is discharged to the satisfaction of the conference board."

And I wish to say that the union men, in all strikes of the character which I have been talking about, so far as my information goes, act upon the orders of the union under fear of fines and penalties, and not because of any cooperation in this matter. It is different from a strike where the men are seeking benefits for themselves. It needs the power of the organization to carry out these things; and the same thing applies to the wood trim business, when they undertook to strike all the jobs where the material of the Newton Co. was being used. Every man left every job in Brooklyn where materials of this concern were being used except one, and that man was fined \$25, and thereafter expelled from the union for nonpayment.

Now, this question of restriction on material by refusing to handle it, or striking against it, is a question which is uppermost in the minds of my people. In a great many trades it is one of the customary means that the union is utilized at the present time to attain its ends. The whole idea being that if you unionize a shop where conditions, perhaps, do not permit of production on the same cost, that you must protect that shop from competition.

Now, I could state to this commission a number of trades and a number of instances of different kinds where that condition prevails; but I don't know that you care to have me elaborate on them any more.

Chairman WALSH. Well, briefly and concisely, give us a few of them.

Mr. MERRITT. Well, in Chicago at the present the electrical workers' union is in the hands of a man named Mike Boyle, and it has been impossible for a number of years for a panel switchboard to be installed in the city of Chicago except it is union made, and any one of the large electrical companies that incur the displeasure of the union at any time for any temporary cause find their trade shut off like a snap of the finger by the order of Mike Boyle. If conditions in Chicago are to be investigated you will find a record of Mike Boyle a very interesting one. The stone and marble work is also subject to restriction, but I think all I could say on it has already been said before this commission.

Chairman WALSH. By whom?

Mr. MERRITT. I think Mr. Eldlitz practically stated the situation. We had a case involved in the erection of the municipal building, where on that the stone contract amounted to something like \$2,000,000, and they tried to insist upon the stone being trimmed and cut down here in New York, where the union wage scale was double the union scale wage in Maine where the stone was actually produced. Now, that condition of restriction on the use of material has also been extended in a measure into the metal trades department of the American Federation of Labor and the building trades department, and I suppose it is—

Chairman WALSH (interrupting). You mean in the same way—restriction in the same way as the stone and marble case?

Mr. MERRITT. Restriction by the same method; that is, refusal to handle it and the institution of strikes on buildings where the material is being used. The commission, I suppose, is familiar with the metal trades department of the American Federation of Labor, and certain members are, anyway, and the building trades department of the American Federation of Labor, and they at one time did meet together with a view of bringing about a complete exclusion from commerce of all metal products that were not made in union shops by the two departments instigating strikes on buildings where the open-shop materials were used. That does not become a local matter; that becomes a national matter because the strikes take place on the Atlantic and Pacific coast at practically the same time on buildings where particular machines or products are being used. This trim situation is localized in a way—localized in New York, and localized in San Francisco, and perhaps localized in one or two other sections of the country.

Commissioner LENNON. Did I understand you—before you leave, that—to indicate that the officers of the federation and of the department had cooperated together with that end in view?

Mr. MERRITT. I would not say the officers of the federation except as they were officers of the department. But I have a record here on that point.

Chairman WALSH. What is the record?

Mr. MERRITT. I think Mr. Parris, who held some office in the metal trades department, appeared before the building trades department at St. Louis on November 28 to December 5, 1910. Mr. Parris made a short address, in which among other things he said:

"Heretofore very little consideration has been given by the building tradesmen as to how the machinery and general supplies for their work have been manufactured. I believe if you would say that unless it was manufactured under fair conditions you would not handle it. I realize that we can not give you a like help in return, but sometime we hope to be able to do so. I expect during your meeting to go before your executive council and ask that something be done to bring the departments closer together. We realize that this is one of the most successful forms of organization."

Then, following that—I should have preceded that with this: This was the same convention of the metal trades.

"*Resolved*, That it be an instruction of this convention to the incoming executive board of this department to meet the executive board of the building trades department and other departments, to the end of securing the cooperation of the building trades department in refusing to handle the product of firms against whom the metal trades have strike."

Then that was changed. It was found to be too narrow in its construction, according to the minutes, because it was limited to concerns that had strikes. It said:

"*Resolved*, That it be an instruction of this convention to the incoming executive board of the building trades department and other departments to the end of securing the cooperation of those departments for our mutual advancement."

Then they actually did appear before the department.

Chairman WALSH. Who actually appeared before what department?

Mr. MERRITT. I am reading from the minutes of the executive council report taken at the 1910 convention of the building trades department, and it explains itself:

"Since coming to St. Louis we have had an opportunity to confer with the president and secretary of the metal trades department with a view of outlining the plans whereby the two departments might cooperate more closely with each other. With this end in view, we recommend that the building trades department empower the executive council to cooperate with the metal trades department and render every assistance possible to that department, and that the authority to render such assistance be placed in the hands of the executive council of this department, so that if an opportunity presents itself and we are called upon by the executive council of the metal trades department for cooperation and assistance with a view to having machinery used in a building made under fair conditions, and with a further view of assisting the metal trades department where machinery that comes from unfair shops is being used in the building."

That is not a complete sentence, but I think it is the way the record appears.

Chairman WALSH. Now, will you please state all of the instances which you have in mind and in which you claim there has been any restriction of output by the unions alone, or by the unions in combination with employers, or by the employers? First, just give your recollection of all of it for the record, and then I will ask you—first, I will ask you this question: In your work, in your professional inquiries or investigations, you go outside, as I understand you, the State of New York, to find those instances, do you? You mentioned Chicago and other cases.

Mr. MERRITT. I have been to Chicago; yes.

Chairman WALSH. Well, do you look up generally the practices of organizations that are interstate or national in their scope that you suspect?

Mr. MERRITT. My information is limited. I have made a very general investigation along certain lines, and written some pamphlets on the subject, but so far as saying I have general information concerning all national organizations, that is not true. I am very much in ignorance as to some of them.

Chairman WALSH. Then if you will kindly give us all the instances you have, in New York and elsewhere, such as I have described, and then give us any pamphlets or any manuscript records that you have, covering the same subject, we will be obliged to you.

Mr. MERRITT. Well, I stated the wood trim in New York, and the stone and marble and electrical in Chicago. The refrigerating machinery——

Chairman WALSH. What are the trades involved in that?

Mr. MERRITT. Machinists. And, of course, they sell very largely to the brewers, I think. I know at one time there was a negotiation to have the brew-

ers make an agreement only to use union machines. Whether that has ever been perfected through the United States Brewers' Association, I don't know.

Chairman WALSH. Any others?

Mr. MERRITT. From examination of cases I can say brick and plumbing, and that is all I think of now; that is, that I am privileged to say.

Of course difference arises in various trades where there is a particular attack.

Chairman WALSH. We will be obliged to you if you will submit hereafter in writing any others that you may be able to find.

Mr. MERRITT. I have a short memorandum here, of two pages, that I would like to read, if I may.

Chairman WALSH. Very good.

Mr. MERRITT. It does not relate to the building trades.

Chairman WALSH. It relates to this subject?

Mr. MERRITT. Yes. [Reading:]

"The primary consideration at the present time, both for the benefit of labor unions and the protection of outsiders, is the responsibility of organized labor to organized society. The rights of these engaged in industry should be clearly and justly defined, and adequate civil and criminal remedies should be available to protect those who are wronged and to punish the wrongdoer. The magnitude and power of labor organizations like the federation emphasizes the necessity for broader governmental intervention. Many of the more important national unions connected with the federation, and which constitute the larger part of its membership, are vast business organizations having an annual income of hundreds of thousands of dollars, and if they are made suable and held liable for the acts of their servants and employees, like all other employers, the result would be beneficial for unionists and nonunionists, leading the members to greater activity and vigilance in the management of union affairs in order to protect their funds and leading to greater care in the selection of law-abiding business agents, delegates, pickets, etc.

"2. All labor agreements should be made enforceable by making a union liable for damages in case of violation, and making it possible to file such agreements with a court of equity with power to enjoin all attempts to instigate, maintain, or enforce strikes in violation thereof.

"3. Strikes on public utilities should be absolutely forbidden, and the question of wages and hours determined by the same commissions which pass upon the reasonableness of rates. It is illogical and unsymmetrical to empower a commission to fix rates which are to a large extent determined by wages, and to deny that commission any control over the wage scale. I am told that such a provision was embodied in the act creating the New York Public Service Commission, but was removed on account of political expediency, and the commission appointed to investigate the Debs strike made a recommendation of this character. My views upon this question are more fully explained in my pamphlet entitled, 'Strikes and Public Utilities,' which has been submitted to your commission. In passing laws forbidding strikes and determining the means of their enforcement it must be remembered that while an individual can not be penalized for quitting employment, there is no difficulty in enacting legislation forbidding combinations to quit work in concert.

"4. The distinction between lawful and unlawful strikes must be developed and enforced. The strike is a dangerous weapon, inflicting vast losses, and among the laws of any modern civilized nation no other combination so calculated and intended to inflict such injury is permitted. For this reason it should not be forgotten that its sole justification lies in the twofold fact that it is not practical to fix the wage and hour scale by law and the workingman needs the power of combined action to aid him in his economic bargain. All other questions or disputes arising between the employer and employee should, as far as possible, be regulated by the State, and the field of industrial warfare thereby narrowed. Sympathetic strikes, whether to prevent the sale of products or to make a public demonstration, should not be allowed, because they do not relate directly to the conditions of employment of the strikers. When we realize that all but a small percentage of strikes are ordered by labor unions, we have a right to expect that a law forbidding the union so acting in connection with illegitimate strikes would be effective without operating on the men directly.

"5. Laws should be enacted providing that no strikes should be called except after a free and unrestrained ballot by the strikers in support thereof, and the method of taking the ballot should be prescribed.

"6. The country at large and employers and employees in particular should be protected against an organized war of exclusion, to drive the nonunion man, the open-shop employer, and open-shop products out of industry. Forcing all opportunities of employment in any industry under the domination and control of any one organization, either of capital or labor, is monopoly, and despotism of a dangerous and hateful character.

"7. As long as we maintain our governmental policy of free trade and competition, the labor unions must be subjected to the ban of our antitrust laws for legal and economic reasons. When capital uses the labor union as a convenient instrumentality to destroy the trade and business of open-shop competitors, it is impossible to draw any practical line of demarcation between the acts of employer and employees in this respect. Combinations to drive open-shop products out of commerce are a menace to the Nation and must be suppressed."

Chairman WALSH. Mr. O'Connell says he would like to ask you a question.

Commissioner O'CONNELL. I figure from that document that you have just read that you are in favor of putting the organizations of labor within the law, the regulation of their hours of work and wages and conditions of employment, and contractual relations in the carrying out of those contracts, all within the law?

Mr. MERRITT. Now, Mr. O'Connell, if you mean compulsory—

Commissioner O'CONNELL. Compulsory settlements?

Mr. MERRITT. Compulsory settlements as to wages and hours other than public utilities, I am not in favor of it.

Commissioner O'CONNELL. Outside of public utilities, you are?

Mr. MERRITT. In public utilities, I am.

Commissioner O'CONNELL. Why not outside of public utilities, if it is a good thing for them?

Mr. MERRITT. There is a manifest distinction or distinctions. To begin with, a public utility, it seems to me, is multiplicity in character and may well be recognized as such. It is, under our antitrust laws of New York State, and it should be, in my mind, under our railroad laws. So that we do not have any comparative problem which is raised by attempting to regulate wages throughout a big Nation like this, where people sell their products throughout 40 States, 40 different States in the Union. Secondly, the necessity of avoiding strikes on public utilities is very much greater than it is in avoiding strikes on industries. I, at least, think we better try it on one before we try it on the other.

Commissioner O'CONNELL. Are you in position to give some information as to the make-up of your organization, such as its membership, cost, and so on?

Mr. MERRITT. We are in position—

Commissioner O'CONNELL. I mean to ask you are you the person to give that?

Mr. MERRITT. Not as to membership. I could give you a copy of the constitution and cost. As to the list of membership, I could not give you that. I don't know of it.

Commissioner O'CONNELL. Where would that be accessible?

Mr. MERRITT. I should think any of the officers could give you that. Our secretary or treasurer, or the chairman ought to have that data on file.

Commissioner O'CONNELL. Does your association act only for its members in the matter of boycotts?

Mr. MERRITT. Yes, sir.

Commissioner O'CONNELL. Strikes, etc.?

Mr. MERRITT. Yes, sir.

Commissioner O'CONNELL. Approximately, what is the membership?

Mr. MERRITT. Between 500 and 1,000.

Commissioner O'CONNELL. Do you furnish a prepared procedure for lawyers in various parts of the country to handle these cases? It does not come through your office or through your association? For instance, if I were an attorney in some town that made application to the association for advice and information, would I be furnished with it?

Mr. MERRITT. If a man wrote me for a brief in any case I personally would furnish it to him.

Commissioner O'CONNELL. You do not keep prepared pamphlets and documents and so on, to furnish for distribution?

Mr. MERRITT. Absolutely not. That would be a matter of courtesy between brother lawyers.

Commissioner O'CONNELL. What is the difference between your way of handling this trim proposition and the employer blacklisting an employee and preventing him from securing employment?

Mr. MERRITT. One goes one step further than the other; but as to my opinion, I am distinctly in favor of a law in every State of the United States which forbids any person or corporation discriminating against any person because he is or is not a member of any union. The trim proposition does go one step further than that—further than the mere refusal to work with a nonunion man. It goes out into the channels of commerce and follows him wherever his products may be offered for sale. In this way it is distinctly more dangerous and widespread and comes, of course, within the scope of laws forbidding the restraint of commerce.

Commissioner O'CONNELL. I don't know whether it is any broader than a machinist leaving New York and going to San Francisco, and finding out when he gets there that his record has been received there ahead of him and can not find employment.

Mr. MERRITT. I think that is pretty broad. But there is a secondary—boycotting a man directly and boycotting his products wherever it goes into commerce—it is one step further.

Commissioner O'CONNELL. Does your association believe that men ought to organize or ought not organize?

Mr. MERRITT. There is an association; they are unquestionably in favor of it. On such questions as that, of course, I am largely colored by my own voice. We have never canvassed the association.

Commissioner O'CONNELL. Speaking of a resolution adopted by the executive board regarding the departments cooperating, rendering service to each other, do you think that is a legal act—for organizations to cooperate with each other and assist each other; do you think that would make wages and hours better, etc.?

Mr. MERRITT. Not as you put it. The test is not whether the object is to raise wages, but as to the means employed to accomplish it; and if, as I interpret these records, it meant some arrangement between the building-trades departments and the metal-trades departments, whereby they would not work on any building where open-shop products are used. I call it illegal, and think it should be illegal.

Commissioner O'CONNELL. Supposing machinery were being built in prison and were coming out into the open market, and we agreed among the building trades that that ought not to go into a building in competition with common labor, do you think that would be a violation of law?

Mr. MERRITT. Yes, sir. As long as it is the policy of the State to manufacture it and send it out into the market it is a free market. Your remedy, if you object to it, is to have the law changed.

Commissioner O'CONNELL. In competition with a man who employs—or an employer who employs children, in some instances babies—if we decide that that is unfair and unwholesome and unhealthy in every character, shape, and manner, would we be violating the law by refusing—

Mr. MERRITT. Absolutely. And that is one of those cases where it seems to me the uplifter must not think the ends justify the means. You can go to the State and change the law. You can call strikes in factories. Things should be done in order to remedy such conditions, and as a matter of fact we are very rapidly limiting those. So that I think we see a solution without resorting to such means as you have in mind.

Commissioner GARRETSON. Who are the officers of your organization, Mr. Merritt—the president?

Mr. MERRITT. Charles H. Merritt is the chairman, and he is responsible for my being in this world. Henry A. Potter is the treasurer. Mr. Herman F. Lee is the secretary. I think there are some vice chairmen, but I couldn't tell you their names.

Commissioner GARRETSON. You made the statement that one form of illegal strike was where it started in breach of a trade agreement. Has any Federal court on this continent ever held that a trade agreement could be enforced in the courts?

Mr. MERRITT. It can not be enforced; no, sir; not specifically; and that is not what I intended to say. I would like to make an explanation right at that point.

Commissioner GARRETSON. That was one of the definitions that you gave; I am interested in that.

Mr. MERRITT. It is an illegal strike, in my mind. But rather than try to compel a continuance of relations, it seems to me the proper method is to stay the hands of those who are trying to induce or bring about this strike. It has been my experience, as attorney in those cases, that the men would not strike if the hands of the officers may be stayed or the mouths of the officers be closed. It is the promulgation of the order that brings about the strike.

One thing more. The strike is an entirely different thing, as I use the word, from an attack of an individual, in quitting employment. You can not even penalize by statute an individual for quitting employment. That would be against the provision of the Constitution against involuntary servitude. But my opinion would be that you could pass a law that would be perfectly constitutional favoring strikes, because then you are going into the field not of individual rights but of combinations.

Commissioner O'CONNELL. Does an illegal strike consist in breaking a law that might be passed or one that is in existence?

Mr. MERRITT. Your question would involve retroactive law, which of course would not be permitted.

Commissioner O'CONNELL. It would not only be retroactive; it would only be a provisional—prospective rather. You say that a law of that kind could, in your opinion, be constitutionally passed. Would a breach of it before it was passed render a strike illegal?

Mr. MERRITT. Why, certainly not.

Commissioner O'CONNELL. By the way, in the breach of trade agreement, is it any more serious for the men to breach an agreement than it is for the employer to do so?

Mr. MERRITT. Absolutely not.

Commissioner GARRETSON. Have your investigations included any data on comparative number of breaches?

Mr. MERRITT. Not at all. In fact, I have not any data in detail as to breaches by the unions.

Commissioner GARRETSON. Have you ever gotten any personal familiarity with trade agreements in any degree, their text and intent, or the laws of the organizations?

Mr. MERRITT. Considerably with some of the organizations you see.

Commissioner GARRETSON. Take one case that you referred to, of which you spoke—are you cognizant of and familiar with the clause in the Delaware & Hudson Railway agreement concerning discipline?

Mr. MERRITT. No, sir; I do not.

Commissioner GARRETSON. Do you know whether or not there was an absolute breach of that agreement by the company?

Mr. MERRITT. No, sir.

Commissioner GARRETSON. In the implying of discipline to the two men in question?

Mr. MERRITT. No, sir. I was not even sure there was an agreement.

Commissioner GARRETSON. Do you know what the law governing those four organizations or five organizations—four or them, at least—I will speak from absolute knowledge, governing the method of going on a strike? Are you aware that no strike could be engaged in by the members of those four organizations without two-thirds of the individual membership having voted in favor thereof?

Mr. MERRITT. I understood that there was something of that kind.

Commissioner GARRETSON. And that the details governing the voting of those men are fully incorporated in that law?

Mr. MERRITT. Yes, sir.

Commissioner GARRETSON. Which is a matter of open knowledge?

Mr. MERRITT. Yes, sir; I knew that. And that is where the railroad unions are away ahead of the ordinary unions in matters of this kind.

Commissioner GARRETSON. Still that is the instance you cited as one of illegality?

Mr. MERRITT. I cited that by illustration. Let me see if you thoroughly understood me: That where men are discharged from a railroad for incompetency, there is no right and should be no right, legally to resist that discharge, providing they were discharged in good faith for incompetency. If there is an agreement which provides otherwise, it would be a different proposition.

Commissioner GARRETSON. Have you ever made any investigation that led you to believe that the greatest weapon against organization of men has for

years been the discharge of every man who prominently attempted to organize men on the line by subterfuge in all classes of organization?

Mr. MERRITT. No, sir; I do not believe that is true, from my investigations. Commissioner GARRETSON. You do not?

Mr. MERRITT. No, sir; and I do not find; and I have given this a great deal of thought, Mr. Garretson.

Commissioner GARRETSON. Yes, sir.

Mr. MERRITT. It is a matter in which you have to generalize, and in which it is a matter of opinion to a great extent; but the employers associations, for instance, all over the country, have not engaged in any general discrimination against unions in the way unions have engaged in the discrimination against nonunion men.

Commissioner GARRETSON. Against whom?

Mr. MERRITT. Against nonunion men.

Commissioner GARRETSON. There is a point I will admit I don't know much about. Are you also aware that those railway organizations are open-shop organizations?

Mr. MERRITT. Yes, sir; indeed, and I congratulate you on it.

Commissioner GARRETSON. I have other friends that do not congratulate me on it.

Mr. MERRITT. Let me state this to you on that railroad question, because I want to be understood on this point. If an employer discharges a man because he was active, I should think, without any question, the men employed were justified legally in striking and in resisting that discharge by strike. If there was also a fact in your Delaware & Hudson case, and that was one of the issues, my solution is that a court of equity, whatever industrial course may ever be developed in connection with this, should pass upon that question of fact just as any court does ordinarily in the exercises of its usual functions, pass upon any question of fact; and if it held they were discriminating, that then they could go ahead and strike.

Commissioner GARRETSON. I wonder how many more courts it would take in this country if that question came before the courts. It would create unfinished business to the judgment day.

Mr. MERRITT. We ought to have industrial courts.

Commissioner GARRETSON. Following up that question, you stated that you believe that the employees of public utilities should be forbidden to strike. What difference would there be, then, in the condition of the servant on public utilities from that of the English villain under the old-wage enactment of England?

Mr. MERRITT. All the difference in the world.

Commissioner GARRETSON. What?

Mr. MERRITT. As I recall—

Commissioner GARRETSON. He could leave the land, I will admit that.

Mr. MERRITT. The position of a man employed on a public utility would be just the same as a post-office clerk or mail clerk. His wages and hours would be governed by what the Government says is right. And that is the position to put him in.

Commissioner GARRETSON. Just as the English villain was paid for hour labor also, by what the Government said was right.

Mr. MERRITT. Yes, sir.

Commissioner GARRETSON. How many enactments were there in the English law in the period from Edward III to Elizabeth?

Mr. MERRITT. I won't discuss that.

Commissioner GARRETSON. Something over 300.

Mr. MERRITT. I suppose so.

Commissioner GARRETSON. If it is ethically right that those men should be deprived of the weapons, we will say for a better trim, that all other men engaged in labor are to possess, why isn't it ethically right that the others also should be disarmed?

Mr. MERRITT. I wish to put the question the other way, that if we are going to be so kind to the railroad employees as to have the Government fix the hours and wages—

Commissioner GARRETSON. They are not all public utilities.

Mr. MERRITT. If we are going to have that in public utilities, I don't think we are taking anything away from them.

Commissioner GARRETSON. Is there a record where the wage is fixed by governmental agencies that it was not a quasi slavery?

Mr. MERRITT. State that question again, please.

Commissioner GARRETSON. Is there a record in existence, wherever government has fixed a wage, that it has not been quasi slavery for the laborer?

Mr. MERRITT. That is a matter of terminology. I should not call it quasi slavery or anything of the kind. If the public utility employees of our country were subjected to governmental control as to the wages and hours, they could leave at any time if they were not satisfied. There are lots of other industries that they can go into.

Commissioner GARRETSON. Isn't that exactly the attitude that every employer has taken for 500 years; that if his service and wage did not suit the employee he could leave?

Mr. MERRITT. Yes, sir.

Commissioner GARRETSON. Is it going forward or backward?

Mr. MERRITT. Going forward. To my mind there is the greatest difference in the world in leaving it to a private employer who is actuated by a desire to increase his profits than turning it over to the Government, which has the power to pass upon so many things, in which all the people are concerned. I think it would be a great step forward both for the railroads and for the public at large.

Commissioner GARRETSON. And if, as some indiscrete citizens will assume, big business owns the Government, where is the laborer?

Mr. MERRITT. I will admit your hypothesis always does not exist. So far as I can see at the present time, labor owns the Government.

Commissioner GARRETSON. We are merely trying to be partners. If the non-union—leaving that phase of it—were open shop, where a wood trim is prepared to pay as good wage and under as good conditions as the union shops, would there be any incentive to use the product?

Mr. MERRITT. What?

Commissioner GARRETSON. Would there be any incentive to use their products?

Mr. MERRITT. Yes, sir. Your shops, for instance, in Brooklyn pay as good a wage and conditions of employment are just as good, but the unions object to their product because they do not like the way in which they run the shop. The average wage scale is just as good, but there is no minimum.

Commissioner GARRETSON. That brings up a peculiar question. Our non-union shops, as a rule, are they less efficiently handled by their owners than nonunion?

Mr. MERRITT. I think your question is confused.

Commissioner O'CONNELL. I think you have that reversed.

Commissioner GARRETSON. Are union shops less efficiently handled than non-union?

Mr. MERRITT. I think so, usually.

Commissioner GARRETSON. In other words, a man that will deal with the unions has his faculties impaired thereby, or what?

Mr. MERRITT. No, sir. The union is very apt to insist upon a voice in matters of management, which really he should not intervene in, and as a result of the divided management you have taken from the employer, who has become the logical head by a process of selection, and so must be the most capable of running the business, and the divided control results in less efficiency.

Commissioner GARRETSON. Is any human entitled to more voice in his wage and the conditions of his service than the man who accepts the wage and performs the service?

Mr. MERRITT. Why, absolutely; the employer is entitled to more voice in certain things in the management of his business than the employees who work under him and give the service.

Commissioner GARRETSON. The owner?

Mr. MERRITT. Yes, sir.

Commissioner GARRETSON. Hasn't the eternal record of dealings between employer and employee shown the record of a gradually increasing instance of the right of the man to his voice and its gradual acceptance?

Mr. MERRITT. Yes, sir.

Commissioner GARRETSON. Is it not the line of progress instead of retrogression?

Mr. MERRITT. Up to a certain point; but, like all lines of progress, it can be carried too far. Very few arguments can be carried through to their logical conclusion.

Commissioner GARRETSON. That copy of the metal trades' conference that you were reading from, was that furnished to you by the metal trades' association?

Mr. MERRITT. No, sir.

Commissioner GARRETSON. How was it secured?

Mr. MERRITT. I think I secured that through our general council, Mr. Davenport. You know the American Federation of Labor has always been very generous in handing out its printed documents, and I have never seen any secrecy on its part, and this is one of the printed documents.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner BALLARD. In the law creating our body, in the last paragraph, it directed that we endeavor to inquire into the causes of industrial unrest and make certain recommendations, etc. Can you, in a few words, state what changes you would advise or recommend in the American Federation of Labor which would make them perhaps more acceptable to the manufacturers in general, or which would be likely to eliminate any of the immediate causes of friction?

Mr. MERRITT. The principal criticism from the employers' point of view is the effort to force out the outsider from industry. I am speaking now from the point of view of the employer, who tries to be tolerant and broad-minded in regard to this thing. He is unwilling in his mind to depart from what he believes the fundamental principles of individual rights in this country, and to admit that any organization aiming to obtain absolute control or monopoly over the opportunities of employment by driving out the outsider and the products of those who employ the outsider is right. If the American Federation of Labor would abandon that policy, and I firmly believe it could depend on that policy and still maintain its mission and service to society as a whole, there would be a great change of attitude on the part of the employers of the country toward it, and I think there would be a readiness in many instances, and a progressive readiness, to make collective agreements with the representatives of organized labor; but the employer to-day feels that organized labor is making war on him.

Now, that one keystone of the purposes and activities of the Federation is the cause in the minds of the people, that I come in contact with, and, Mr. Ballard, I come in contact with a great many in different employers' associations—it is the cause of a great deal of the conflict at the present time.

Commissioner BALLARD. Just one other thought. To go back to this well-worn subject of wooden trim. He said there were factories in Bristol, Tenn., where they can make the trim, and perhaps there are places in Michigan, Kentucky, and elsewhere. Those factories might be located in smaller towns where wood was cheap, where labor conditions, owing to rents, etc., living conditions might be cheap, and those people, whether unionized or not unionized, could make wooden trim cheaper than you can at New York City.

Mr. MERRITT. Yes, sir.

Commissioner BALLARD. As a matter of economy, if a man in New York City, by natural process can not compete, he better get out of business?

Mr. MERRITT. That is my idea exactly; and, furthermore, all arguments are against trying to protect the industry in a metropolis like New York, where working conditions are not the most wholesome.

Commissioner BALLARD. Is there any competition between the manufacturers in New York City and the labor unions, who control, to keep others who could make better prices and produce cheaper out of the market?

Mr. MERRITT. Absolutely.

Commissioner BALLARD. That is all.

Commissioner LENNON. Mr. Merritt, do you know what was back of the system that you spoke of—of collections against buildings as represented by employers' associations and some of the unions? Do you know what caused that?

Mr. MERRITT. Yes, sir; I think I do. It is the credit system and the matter of solvency of contractors in the building situation. It is a very difficult and embarrassing problem.

Commissioner LENNON. It came about because of the fact that people did work on the building and did not get any pay for it?

Mr. MERRITT. But that is the whole rule, of course—that if anyone has worked and does not get paid, the building, even though it has been sold out under foreclosure, shall not be completed. But, Mr. Lennon, there is no difficulty about the wage earner. He is practically always paid. A particular

clause; well, it is mutual and reciprocal in any way it is worded; it is primarily for the benefit of and primarily used by the employer.

Commissioner LENNON. Yes; but it has its bearing upon the interest and upon the wages of the employees as well, but in a more indirect way than it does so far as the contractor is concerned?

Mr. MERRITT. The law has surrounded the wage earner with pretty good protection in priority of liens, etc.

Commissioner LENNON. Have you ever been in Wisconsin, in any of the mills where trim is made?

Mr. MERRITT. In the offices only; I did not go through the mills.

Commissioner LENNON. Well, I have been through the mills, and I saw women and young girls, stripped to the waist, working in those mills. Well, while I am a law-abiding citizen, I felt like departing from law-abiding citizenship for a short time in order to correct some things that I saw.

Mr. MERRITT. The laws have been changed in Wisconsin very recently, and the women have been dismissed from the employment, and children above—I don't think the age limit has been changed—it was between 14 and 16, anyway—but the hours that children can be employed have been changed, so that the employment of children has been very much diminished.

Commissioner LENNON. I know it has. There is improvement being made, and because of the insistence of organized labor; at least, that is my view of it.

Mr. MERRITT. Well, I would be glad to have organized labor receive the credit.

Commissioner LENNON. I want to ask another question: Will you cite to us some instance in which strikes take place without a vote of their membership having been had?

Mr. MERRITT. In the Dompree-Harris case.

Commissioner LENNON. Dompree-Harris case?

Mr. MERRITT. Yes, sir.

Commissioner LENNON. Cite some others.

Mr. MERRITT. We never take a vote when we call a strike on buildings against trim.

Commissioner LENNON. Will you give us some of the building trades where that took place?

Mr. MERRITT. Well, what I wanted to say on that point particularly is this: According to the reports—and this is one of the things that it is not always easy to prove and prove the evidence——

Commissioner LENNON. Yes.

Mr. MERRITT. That a great many of those votes are taken under a condition which does not admit of a fair and unrestricted vote; and I can not believe but where there is so much smoke there is some fire, and it is to a large extent true. A great many stories come to my attention that may or may not be exaggerated, that men have tried to vote against a thing, and men have tried to be different, and they were swung by their organizers to do things that they did not want to do; and my idea was that protection against that would be a proper ballot, well protected, as are political ballots. I think that is practically what is done, isn't it, in the railroad unions, isn't it, Commissioner Garretson?

Commissioner GARRETSON. Individual ballots.

Commissioner LENNON. Individual ballots everywhere, as I know it; that is, the political ballot.

Chairman WALSH. That is all. Thank you very much, Mr. Merritt.

TESTIMONY OF MR. JOHN RICE.

Mr. THOMPSON. Will you please give us your name, address, and your present occupation?

Mr. RICE. John Rice; 142 East Fifty-ninth; home address, 523 West Fiftieth Street; general organizer, United Brotherhood of Carpenters.

Mr. THOMPSON. General organizer United Brotherhood of Carpenters?

Mr. RICE. Locally, yes.

Mr. THOMPSON. Have you been here all day?

Mr. RICE. Yes, sir.

Mr. THOMPSON. You heard the testimony of Mr. Eldlitz?

Mr. RICE. Part of it; not all—not since—well, I——

Mr. THOMPSON (interrupting). You heard Mr. Merritt's testimony?

Mr. RICE. Yes; some of it.

Mr. THOMPSON. You heard Mr. Outwater's testimony?

Mr. RICE. Yes.

Mr. THOMPSON. With regard to the suits brought in New York City on account of the refusal of the carpenters' union members to work with nonunion trim?

Mr. RICE. Yes.

Mr. THOMPSON. Why do the carpenters of New York City refuse to handle trim made by nonunion people outside of New York City?

Mr. RICE. Well, I might say that the carpenters are both inside and outside men. We have what is termed the shop carpenter and the outside carpenter. The outside carpenters simply assist the shop carpenter to get his day's work at all times by standing with him, because if he does not protect or try to assist the shop man, the shop man comes in competition to him on the outside if there is no work inside for him. I might qualify that by saying this: Several years ago conditions existed here where the shop men were compelled to become idle; could not get a day's work through the fact of the western contractors or manufacturers wherein certain conditions prevailed in their mills that without any question of doubt it would have shut up the entire New York mills where our men were employed if it were left to open competition. We had to simply protect our shop men or they would become further in competition with us on the outside. That was the first step in this movement.

Mr. THOMPSON. In other words, if I understand you correctly, the outside nonunion trim coming into New York was so much cheaper that the men could not work?

Mr. RICE. It was not a question of it being so much cheaper, but it was simply a question that the nonunion manufacturer underbid the union manufacturer by that slight margin which permitted him to take the contract.

Mr. THOMPSON. What, if you know, is the difference of wage paid by the nonunion mills, for instance, in Wisconsin and the union mills in New York City for wood trim?

Mr. RICE. Well, I can give you the comparison, but I can not give you the exact amount. I will say that the union mills in New York City and elsewhere, who have trade agreements with the organization, they work eight hours a day. The nonunion mills work 10 hours a day. The minimum scale, or an average scale, as agreed upon in the union shop, is on the basis of probably \$15 to \$18 in different localities; in the nonunion shop it ranges all the way from \$12 down, in some cases, as we have found it upon investigation, for 10 hours' work.

Mr. THOMPSON. Would you consider, Mr. Rice, that your union, and what is true of yours must be true of all other unions, that because "nonunion trim" was quoted at a slightly lower price, that would give the union the right to insist upon the contract being made which prevented the nonunion material from coming into any certain locality?

Mr. RICE. Well, that was not the reason. The main reason was us to protect, if it was possible, by insisting that our men be employed, our members. We have thousands of our own employees in these union mills, but it was the method that they used by underbidding, the nonunion contractors or manufacturers, underbidding by a slight margin and taking the work away, with the result that the union manufacturer notified us that he had no work for our men and laid them off. The result was, as I said, we had to find work for them. We had to take a stand to protect them, if possible.

Mr. THOMPSON. Well, this underbidding of the nonunion mills was consistent and steady, then?

Mr. RICE. Oh, yes; continuous.

Mr. THOMPSON. You would not feel, would you, that you would have a right to insist upon that kind of an agreement where occasionally a mill outside would underbid you on the work?

Mr. RICE. We certainly did. We insisted that every employer that agreed and desired to employ the union men on the outside, we simply insisted on that, or told them through agreements and otherwise, if you desire to employ us on the outside, we ask you to directly or indirectly employ us on the inside.

Mr. THOMPSON. Well, assuming that the wages paid for the nonunion trim and the cost of it would be generally as high as the union trim, but occasionally an outsider or nonunion manufacturer of wooden trim would ship in stuff cheaper, would you consider that a justification for such an agreement?

Mr. RICE. Oh, no.

Mr. THOMPSON. But, as a fact, you knew that the nonunion trim was manufactured under a state of working conditions and hours—that is, long hours, poor working conditions, and low wages—which must necessarily permit the nonunion trim to be always shipped in here away below what you could produce it for?

Mr. RICE. Poor——

Mr. THOMPSON (interrupting). That is the fact, is it?

Mr. RICE. In so far as the wages and hours are concerned, as I stated before, it was not a question of it coming in here so awfully cheap to the contractor that bought it; it was simply going below the margin of the figures of the union contractors of all kinds.

Mr. THOMPSON. Of course, you know, Mr. Rice, that these contracts are generally construed by the courts as illegal. I take it that you are aware of that fact?

Mr. RICE. It is so considered, as I understand it.

Mr. THOMPSON. What I wanted to find out is, what was the moving thing in the minds of the union men that made them feel that they should insist upon that trim not being placed by union contractors?

Mr. RICE. As I explained in my opening answer, it is the question of seeing, or trying to see, that our men who carry their cards with them on the inside be employed. We are trying to get work for them all the time. We have to do it in order to keep them at work, if it were possible.

Mr. THOMPSON. Your union carpenters in New York City live in the city, do they not?

Mr. RICE. They certainly do.

Mr. THOMPSON. They have their homes here?

Mr. RICE. Most of them.

Mr. THOMPSON. And their families?

Mr. RICE. Within the radius of Greater New York, and probably Jersey City.

Mr. THOMPSON. And their children go to school here?

Mr. RICE. Yes.

Mr. THOMPSON. And they offer themselves ready to do the work of New York City in the carpenter line?

Mr. RICE. At any and all times.

Mr. THOMPSON. What proportion of the carpenters of this city are engaged, if you know, in outside work and what proportion in inside work?

Mr. RICE. Well, it is about—in Greater New York there is about 65 and 35 per cent, or 60 and 40.

Mr. THOMPSON. 60 outside and 40 inside?

Mr. RICE. 65 and 35, or 60 and 40.

Mr. THOMPSON. What are the wages paid an outside man and what are the rates paid an inside man, if you know?

Mr. RICE. We have several scales of wages.

Mr. THOMPSON. Are those printed?

Mr. RICE. They are printed—in printed form.

Mr. THOMPSON. Could you furnish them?

Mr. RICE. Yes; I can give you a copy; but I can give it to you offhand.

Mr. THOMPSON. You can?

Mr. RICE. Yes.

Mr. THOMPSON. Well, will you give it?

Mr. RICE. In Manhattan the wages for the outside carpenter is \$5 per day; in The Bronx, Queens, and Brooklyn Boroughs the outside carpenter's wage is \$4.50; in Staten Island, or Richmond Borough, the wages are \$4. That is the outside carpenter's wage. In the shops we have two distinctive classes of wages—one is what we term the cabinet carpenter shop and bar fixture and fixture shops of that sort, where the wages in Manhattan is \$4 per day in the shop for eight hours and \$3.78 per day in the outlying boroughs, namely, Bronx, Queens, Richmond, and Brooklyn. We have also what is termed the supply trim mills. There is a wage scale established there in the city of Manhattan and Bronx of \$17 and 48 hours per week; in Brooklyn and Queens, \$15.50 and 48 hours per week. I might answer this that it is owing to the fact of the nonunion conditions or the competition in Brooklyn and Queens, wherein these certain employers who are instituting these suits against our organization, their conditions there are 10 hours and they pay any scale of wage they desire, being open shop, and we are compelled to permit our men to work there for \$15.50 scale and 48 hours in any union shop we have over there which are furnishing trim.

Mr. THOMPSON. Has your union got an agreement with the master carpenters' association here in New York City?

Mr. RICE. We had one up to January—December 31, 1913, which is now, I believe, lapsed, not having entered into a new one as yet.

Mr. THOMPSON. I think Mr. Outwater stated the fact in regard to that, did he not?

Mr. RICE. I believe he is partly right in that. It was owing to the fact that there were some little matters that were taken up in our own organization that we could not appoint our committees at the proper time and caused delay.

Mr. THOMPSON. He stated on the stand that the reason was that they did not want to make an agreement by which they would agree that—with you, that they would not use nonunion trim.

Mr. RICE. Well, he might say that.

Mr. THOMPSON. There was a deadlock on that proposition?

Mr. RICE. It might be true he said that, but I know up to two weeks ago that there had not been any committee meeting for the purpose of discussing a new agreement. Since that time I can not answer. They may have had a meeting or two—our committees.

Mr. THOMPSON. In this agreement that you did have with the master carpenters' association, that provided, at your instance, that the master carpenters should not seek to install nonunion trim?

Mr. RICE. Yes, sir; through the fact, if you will permit me to qualify that, that we offered them our services directly on the job, providing they would employ our men in the shop either directly or indirectly.

Mr. THOMPSON. You told me the reason before, Mr. Rice. I simply wanted to get at the facts of the contract. Now, with reference to your organization, what are you—well, you have stated that. How long each year on an average do carpenters on outside work get work?

Mr. RICE. Well, that is hard to say. This has been a bad year, and I would say that the percentage of this past year was very low; I would say about eight months.

Mr. THOMPSON. And a normal year?

Mr. RICE. A normal year—about nine months.

Mr. THOMPSON. Does your union provide for benefits—death, sickness, and accident?

Mr. RICE. Yes, sir.

Mr. THOMPSON. And also in strike cases?

Mr. RICE. Yes, sir.

Mr. THOMPSON. What is the initiation fee for the admission of members into your union?

Mr. RICE. The initiation varies in different localities. Speaking for New York City, it is \$20 for the new member and \$30 for a member who has formerly belonged and been dropped from the organization—reinitiation.

Mr. THOMPSON. What do you charge the member of your international union coming from another city?

Mr. RICE. May I just follow that along, that first question, and then I will answer the second. I want also to say that the international constitutional law permits an initiation fee as low as \$5 at any time. I want to say that at this present time we are dropping our initiation fee and probably will go on dropping our initiation fee to that low minimum in order to draw in and bring members at that low fee.

Mr. THOMPSON. Then you think the fee of \$20 may act in keeping men out?

Mr. RICE. Sometimes it does. We keep the doors open at all times to any man who desires to join.

Mr. THOMPSON. And your idea would be, in any union of craftsmen—take it in the building trades—that a high initiation fee would tend to keep them out?

Mr. RICE. It does to a certain extent. I don't speak positively as to that.

Mr. THOMPSON. What would you say as to an initiation fee of \$200?

Mr. RICE. Well, I will tell you. There are certain trades, of course, where a high initiation fee might be necessary.

Mr. THOMPSON. Why?

Mr. RICE. Well, the employers may, if the initiation fee is too low; sometimes the employers might get in and flood the industry and use them against the very organization of mechanics that really have fought to gain and create the conditions beneficial for that trade—steady mechanics.

Mr. THOMPSON. Has your union any by-laws with reference to the amount of work a man will be permitted to do in a day?

Mr. RICE. No.

Mr. THOMPSON. Do you know what the word "rushing" means?

Mr. RICE. Not except this—I will say this—I will qualify that—that if it is found at any time a foreman or superintendent attempts to turn around and rush the men and make them do—or slave the men or drive the men and make them do—more than any average man can do, we take the matter up and fight the issue.

Mr. THOMPSON. You have a by-law relating to "rushing," have you not?

Mr. RICE. I believe there is a little item in there that no man is permitted to act as a "rusher," because we have found these conditions I stated. And the reason of this thing is for this reason: We have found that certain employers may employ a man at an increased wage to act as a leader or a "rusher," and he may get out and do more than the average man could possibly do, and the employer may turn around and expect the other employees to do as much as his rusher. When we find such a condition, then we fight that issue.

Mr. THOMPSON. Who determines the fact as to whether a man has engaged in rushing—the union?

Mr. RICE. Well, usually; it is very easily determined.

Mr. THOMPSON. Well, I mean, who does determine it? Does the union do it?

Mr. RICE. The union takes the matter up.

Mr. THOMPSON. Does the employer have any voice in that?

Mr. RICE. He does, if he is a member of the employers' association. It is discussed in the joint trades meeting boards.

Mr. THOMPSON. Then where the employer is a member of that association, you then would not undertake to decide that issue without giving him a hearing?

Mr. RICE. There was a clause in the old agreement to that effect, that if any foreman or superintendent committed that offense, or any other of that kind, that we deemed a violation, we should prefer, or the men should prefer, charges against them in the trade board, the same to be taken up by the executive committee.

Mr. THOMPSON. But, I mean, in case of rushing specifically. If you believe a man is rushing on the job, and the employer is a member of the employers' association, would you take that matter up with the employers' association or decide it without?

Mr. RICE. We would take that matter up in the joint trade board, composed of both employers and employees.

Mr. THOMPSON. Your agreement provides—or, rather, did provide—with employers that there should be no limitation of output, did it not?

Mr. RICE. It does, or did. I don't know if it has lapsed or not.

Mr. THOMPSON. Are you acquainted with the working conditions in the non-union mills around Brooklyn?

Mr. RICE. Yes; I am acquainted with some of the conditions there.

Mr. THOMPSON. Does it differ from the conditions in the union mills?

Mr. RICE. It does; a whole lot.

Mr. THOMPSON. In what respect?

Mr. RICE. It has been proven that men were working there—married men—receiving \$9 a week for 10-hours-a-day work, or 59-hours-a-week work.

Mr. THOMPSON. That relates to the question of wages.

Mr. RICE. Yes, sir; wages and hours.

Mr. THOMPSON. You brought out the question of wages, I think, before?

Mr. RICE. Yes, sir.

Mr. THOMPSON. What other differences other than wages and hours that you have stated—what difference is there between the two mills?

Mr. RICE. The difference between the two mills over there would probably be, I would say, about 25 per cent.

Mr. THOMPSON. When you say 25 per cent, what do you mean—25 per cent of what?

Mr. RICE. The difference between the hours and wages existing in a union mill and as it exists in the nonunion mill.

Mr. THOMPSON. I am asking, not with reference to wages and hours, which you have already given, but other working conditions?

Mr. RICE. Why, other working conditions are about normal—the same. There is no difference in the working conditions.

Mr. THOMPSON. Is there any employment of women and children over there?

Mr. RICH. Not in this locality, but in the West they do. That we have investigated and found out to be a fact. In fact——

Mr. THOMPSON (interrupting). What did you find were the conditions in the western mills? What mills, and where, and what conditions with reference to the kind of people employed?

Mr. RICH. I will say that we investigated the Payne Lumber Co., who had, at that time, been suing out an injunction against the organization, and we found out of 3,000 employees, there were about 300 women and girls being employed there, and we found also that the moral conditions in that mill were depraving.

Chairman WALSH. We will now adjourn until to-morrow morning at 10 o'clock, promptly, to meet in this room.

(Thereupon, at 4.30 o'clock, of Monday, May 25, 1914, an adjournment was taken until Tuesday morning, May 26, at 10 o'clock.)

NEW YORK CITY, *Tuesday, May 26, 1914—10 a. m.*

Present: Chairman Walsh; Commissioners Garretson, Lennon, O'Connell, Ballard, and Harriman.

Chairman WALSH. The commission will be in order now. You may call your first witness, Mr. Thompson.

TESTIMONY OF MR. JOHN RICE—Continued.

Mr. THOMPSON. Mr. Rice, will you take the stand again? Mr. Rice, are you aware of the working conditions in the woodworking mills, the character of the work, the use of machinery, and so forth?

Mr. RICE. Yes, sir.

Mr. THOMPSON. So far as the use of machinery there and the working of machinery, is or is not that a dangerous occupation, in your opinion?

Mr. RICE. It is a very dangerous occupation.

Mr. THOMPSON. Do you know whether or not the men are injured frequently in the handling of such machinery?

Mr. RICE. Yes, sir; I can give you some data on that.

Mr. THOMPSON. Are you willing to give that data to the commission?

Mr. RICE. I belong to a local organization here that is composed almost exclusively of machine men; and out of the membership which we have of possibly 350 or 360, approximately there is about 80 per cent of those men who have maimed fingers—fingers cut off; and in some instances, almost half the hand—through following that vocation. Numerous injuries take place during the year. I want to say we had a committee appear before the compensation committee, which was held here in New York previous to the compensation laws going into effect, in order to show the dangerous character of the work which the men are compelled to follow in that vocation.

Mr. THOMPSON. That influences your opinion, does it not, as to the kind and character of the people that should be employed in woodworking mills?

Mr. RICE. Why, I don't understand the question.

Mr. THOMPSON. I mean to say from that, that you do not believe that women and children can properly be used around woodworking mills?

Mr. RICE. Absolutely, no, sir. They should not be employed in that capacity.

Mr. THOMPSON. Now, Mr. Rice, with reference to the restrictive policies of your union; that is, when you refuse to erect nonunion millwork, that is, in certain localities in New York City, as I understand, and relates to the territory south of One hundred and seventy-seventh Street?

Mr. RICE. Yes, sir.

Mr. THOMPSON. With reference to the territory outside of the boundaries of your particular area does your union refuse to handle nonunion material?

Mr. RICE. The union in those territories outside of those boundary lines, they always make an effort wherever it is possible to gain the work or get the work for its members.

Mr. THOMPSON. Well, how does it do that? What are the methods and tactics employed by the union to gain that point?

Mr. RICE. Usually our business agents or representatives, when they meet with the builders, they ask them and make personal requests upon them to give union labor a fair chance to get employment, and we ask them personally if they would give their contracts to union firms that do employ union labor.

Mr. THOMPSON. Well, now, with reference to that, assuming that the contractor does not accede to their requests in that respect, what else do they do?

Mr. RICE. In some cases, if a contractor refuses to take the question up with us or discuss it in any way, we give him the option if he desires to employ nonunion labor and get along and erect his material. We do not stop it. We never interfere with any man from using nonunion material or employing nonunion labor if he so chooses. We tell him personally, "If you can get along without our labor, do so. We are not compelling you to use our labor."

Mr. THOMPSON. But in such cases will your people work and erect nonunion millwork?

Mr. RICE. In some cases they do not, and in some cases they do.

Mr. THOMPSON. In some cases do they strike the job?

Mr. RICE. They may. It is according to what condition exists. It may be a condition on a job such as a public work. We understand the laws, the statutes, of the State of New York to provide that public work shall be performed under the 8-hour work law. Now, we often find nonunion mills accepting contracts from unscrupulous contractors trying to beat the game, as we call it, and doing the work in 10-hour mills, which we claim is a violation of the State laws. We try to bring the matter to a proper adjustment, but usually it is an expensive proposition, and the best method we have found was to refuse to handle it.

Mr. THOMPSON. That means you strike the job?

Mr. RICE. We strike the job.

Mr. THOMPSON. Now, in the case of private constructors, where a building is being erected for private persons, what would you do in that kind of a case?

Mr. RICE. Well, it is usually the case when we find a private constructor we usually only strike where this man has been cautioned once or twice or has had an agreement previously with our organization that he would employ union men directly or indirectly in the manufacture and erection of this material. Where we find that he breaks that tentative agreement which he makes with us, then we strike his work, because we believe that man is not living up to his word or his signature that he has signed to the contract with us.

Mr. THOMPSON. But take cases where he has not had a previous contract with you—

Mr. RICE (interrupting). We simply—

Mr. THOMPSON (continuing). But where you have made these demands once upon him you would strike that job just the same?

Mr. RICE. Why, any questions of that kind we usually caution him and warn him in a sense to employ union labor, both inside and outside, through the giving of a contract to a union firm rather than to those mills outside of the district. There are numbers of them.

Mr. THOMPSON. Do those mills have the same conditions you have in New York?

Mr. RICE. There are quite a large number of them break the eight-hour law outside of New York that direct the shipping materials here. There are numbers of them.

Mr. THOMPSON. Do those mills have the same conditions you have in New York?

Mr. RICE. There are quite a large number who work the eight-hour day outside of New York that directly ship material here.

Mr. THOMPSON. Do you erect their materials?

Mr. RICE. Absolutely.

Mr. THOMPSON. Without any question?

Mr. RICE. Without any question.

Mr. THOMPSON. You do not compel the mill owners to have mills here in New York?

Mr. RICE. No, sir.

Mr. THOMPSON. There is no arrangement that you have—that is, that your union has—with the mill owners of New York which compels only the use of millwork made in New York City and vicinity?

Mr. RICE. Absolutely none; because we would not tolerate anything of that kind.

Mr. THOMPSON. That is all, Mr. Commissioner.

Chairman WALSH. Do any of the commissioners wish to ask any questions?

Commissioner BALLARD. On that question of Mr. Thompson's, does that refer to the New York section or just certain sections of Manhattan and The Bronx?

Mr. RICE. That we insist upon union material?

Commissioner BALLARD. Yes.

Mr. RICE. It was conceded as a boundary line south of One hundred and seventy-seventh Street in The Bronx and all of Manhattan.

Commissioner BALLARD. In that section you insist on union material?

Mr. RICE. Yes, sir.

Commissioner BALLARD. Do you insist on the material that is made here in New York City?

Mr. RICE. No, sir.

Commissioner BALLARD. So long as it is union material?

Mr. RICE. That is all that is required.

Commissioner LENNON. There was some evidence submitted by Mr. Elditz pertaining to graft by representatives of the unions and sometimes by contractors, etc.; that is, for the purpose of graft, using the strength of the unions in order to obtain graft. Do you know anything about graft? Has that existed here in your time to any extent?

Mr. RICE. I can not personally say, except from rumor and hearsay, but my own personal experience I will tell you what happens, if you desire. I have nothing to hide.

Commissioner LENNON. That is what we want. We want to know the whole truth about the matter.

Mr. RICE. Following out my line of work, which was practically in trying to gain the work for our members in the shop and meeting with builders constantly, we found where they have given contracts with the possible idea of beating the game we usually find—in fact, I can say that in at least one dozen different instances I have been approached and offered a consideration for the purpose of closing my eyes to it.

Chairman WALSH. For the purpose of what?

Mr. RICE. Closing my eyes to the nonunion condition.

Commissioner LENNON. Who wanted you to close your eyes?

Mr. RICE. The men that were responsible, namely, the builders that got the contracts, etc., that violated it technically—our agreement they had agreed to with our organization.

Commissioner LENNON. Have you any reason to believe that that was done by any representatives of the union?

Mr. RICE. I can not say.

Commissioner LENNON. Of your own knowledge, you don't know?

Mr. RICE. I don't know of one particular case, to my knowledge, where I could openly say that I knew that this man or that man did receive a consideration of any kind.

Commissioner LENNON. Do you know of any cases where representatives of the union have approached contractors or architects or anyone connected with the furnishing of materials offering to use the strength of the union in their interest if they were paid for it?

Mr. RICE. No, sir; I know of no one case of that nature.

Commissioner LENNON. How do you govern the question of jurisdiction in the woodworking trade that the brotherhood covers? Is it different in New York from what it is in other cities? Do you try to govern your disputes as to jurisdiction differently here than it is handled in Philadelphia, or Chicago, or elsewhere over the country, or do you have a uniform system as to that?

Mr. RICE. In what sense do you mean?

Commissioner LENNON. I mean jurisdiction with other trades.

Mr. RICE. Jurisdictional disputes with other trades?

Commissioner LENNON. Yes.

Mr. RICE. I may say that here in New York the disputes probably are settled differently from what they are in Philadelphia; they are settled differently from what they are in Boston, etc. Each of those localities, in my opinion, have their own methods of settling.

Commissioner LENNON. Do you indicate by that that you believe that jurisdictional questions between unions can not be settled for the whole country alike; that there must be a difference in different cities?

Mr. RICE. The conditions are so varied in different cities that I believe it could not be accomplished by a national effort.

Commissioner LENNON. Then would you indicate to this commission by that that in the city of New York you would refuse to handle metal trim because of your dispute with the metal workers and in Chicago you would do the opposite, or in San Francisco you would do the opposite? Or that you would recognize their jurisdiction in one place and assert your jurisdiction in another?

Mr. RICE. You are speaking now of a question that we have taken up nationally. That is a question that nationally we stand together on.

Commissioner LENNON. On that proposition you have a national plan?

Mr. RICE. Yes, sir; I understood your former question to refer to a jurisdictional question—jurisdictional disputes, minor jurisdictional disputes, something which may crop up in this city and not crop up in another city, or crop up in another city, but not in a different city.

Commissioner LENNON. Were you a party in any way to the suits that have arisen here as between the brotherhood and some of the contractors? These suits?

Mr. RICE. You mean of the manufacturers?

Commissioner LENNON. Yes, sir.

Mr. RICE. Yes, sir; I have been named in most all of them.

Commissioner LENNON. You did not testify on that subject yesterday, did you?

Mr. RICE. I did to a certain extent; no, sir.

Commissioner LENNON. I do not remember that you did.

Mr. RICE. I did not in that case.

Commissioner LENNON. Tell us the origin of those suits, what they are and what is involved.

Mr. RICE. I may say, just as I explained in my opening remarks, that it was through the fact that the nonunion manufacturer, who was competing with the manufacturers or employers who employed union labor that a certain condition arose wherein the nonunion manufacturer, by some underbidding, slightly, gradually took away the work from the union manufacturer, who was paying the highest scale of wages and working less hours. The union men working in these various mills commenced to lose their employment, shops were being shut down through the want of work. These men, belonging to the same organization with the outside carpenter, carrying the same card, made an insistent demand upon the entire membership here for protection to try and get some of the work, with the ultimate result that the organization 10 or 12 years ago took up the question, and by the referendum of its entire membership here in Greater New York decided to support their shopmen by insisting that they would not use or handle the nonunion material unless manufactured by their shopmen, with the ultimate result that numerous strikes took place; in one case a large lockout took place between the carpenters and the National Employers' Association on that score. Another time we had no agreement for three years. I believe that was between 1906 and 1908, wherein that question between ourselves and the employers was the blocking stone, you may say.

Commissioner LENNON. And then these suits that grew out of that refusal, they came in the shape of injunctions and damage suits, did they not?

Mr. RICE. I was just leading up to that; yes.

Commissioner LENNON. Well, go on.

Mr. RICE. Then these manufacturers—I might say that we made some headway in our efforts to support our union men in the shops and get the work for them, with the ultimate result that the master builders signed a contract with us that they would use union material in order that they could use our union men. In other words, they agreed to use our men inside and outside, either directly or indirectly, through subcontractors. We took up the question here and ultimately settled it in this territory as described. We then took up the question in Brooklyn, with the same object in view, of trying to get the shows that were located in Brooklyn that employed our union labor a chance to get the work, as they were making the same complaints. Our members working over there were losing far more time than the average man working in any other locality. These complaints coming into the organization, we took the question up again in 1910, and the moment we attempted to take up the question and refused to handle this material a succession of applications for temporary injunctions was made by certain of these employers. The first one was the Newton case, then followed Bossert, Botchelcik, and several others over there. I believe at the present time there are two permanent injunctions and three or four temporary injunctions standing against the organization. That is the origin of the injunction suits in Brooklyn. I might say also that there was also injunctions started against the organization in Federal courts by the Payne Lumber Co. and others. This injunction was vacated, and the court of appeals or the circuit court of appeals of the Federal

court, I believe, dismissed the appeal. I believe, as Mr. Merritt has stated, the matter is on appeal to the United States Supreme Court.

Commissioner LENNON. Now, there is one other matter I wanted to ask you—

Mr. RICE (interrupting). Would you permit me to go ahead further on this question?

Commissioner LENNON. Yes; go ahead.

Mr. RICE. I would like to call the attention of the committee to this fact, that there is a peculiar coincidence there, that every one of these manufacturers who have sought injunctions are members, so far as we can determine and according to the statements and testimony in these trials, are members of this antiboycott association. They are also in the majority members of the Retail Lumber Dealers' Association of Brooklyn, or what is known as the Eastern Retail Lumber Dealers' Association. We have investigated certain little matters pertaining to that lumber dealers' association and, I believe, if you will remember rightly, that very association, which is so strenuously fighting organized labor and working their men 10 hours for a less wage and against the union materials, etc., were under investigation themselves by the Federal authorities for a combination in restraint of trade. That is a fact, according to the investigation started. Now, this, as I say—these are all members of this antiboycott association that is fighting us through court and trying to defeat our aims and objects. Our only aim and object is to gain the work and better our condition if possible. This very association is the one that is combating us at all times.

Commissioner LENNON. Suppose the materials that have been spoken of in Wisconsin—though that is not the only place where very bad conditions are alleged to prevail—suppose they were to put their mills on a good, clean basis in line with other union materials, would there then be any objection to handling their output if they became organized?

Mr. RICE. I don't believe there would, because the natural fact is this: When a mill or employer creates the same condition that exists in the union mills, without any fear or favor, I will say that he becomes a union mill through the fact that he himself asks his men if it is necessary to join the union.

Commissioner LENNON. I want you to tell us—there was a matter that arose yesterday that has to do with the ordering of strikes. Can you tell us what the law of the brotherhood is as to the members voting when a strike is to take place? Have you that clear enough in mind to state that?

Mr. RICE. In a question where it involves a general strike the question must be submitted to the referendum, and a majority vote must prevail before such action can take place. Where it applies to minor strikes, such as involves probably 8, 10, or 20 men, through the referendum of the membership, authority is given to the business representative to order those strikes or notify those men of nonunion conditions. Now, in making or framing our laws, the entire membership takes part and frames those laws. They say in certain clauses or certain sections of those laws, "We shall not work on nonunion material." Through that clause they authorize their agents to notify them of that fact, and the moment their agents notify them of that fact they know that they are violating the principles which they have obligated themselves to when they became members.

Commissioner LENNON. Well, then, the union by vote has authorized a representative under certain circumstances to call a strike?

Mr. RICE. Absolutely, at all times. It is not the representative; it is the membership of the organization. It notifies its servants that they must do thus and so as per our laws that we have passed.

Commissioner LENNON. Well, now, tell us as to how it works out in the cooperation between different trades in the building trades. Suppose the plumbers are in trouble, and they want the carpenters to go out and help them, where has the authority been vested and how has it been vested in your business agents to call your members out?

Mr. RICE. Through the same method. I might quote now when I say this, I will mention one organization in order to bring it out clear. When the carpenters' district council, which is composed of sixty or seventy-odd local unions in Greater New York, decided to join the building trades council they referred the question to its members, and its members decided to authorize its agents to make application to become seated in that body. Knowing the conditions, and when we become seated in there we obligated ourselves to stand by the other

trades in case they call upon us to assist them where nonunion men were being employed, we have done so, and the result is, as I said, it is through the referendum vote of the organization in notifying or instructing its representative to become seated that they obligate themselves as a whole to abide by any laws that the business representative is obliged to adhere to when he becomes seated in that body.

Commissioner LENNON. Will you furnish us with a copy of the constitution of the brotherhood?

Mr. RICE. Why, I can have you furnished with one of them.

Commissioner LENNON. Within a day or two?

Mr. RICE. Yes.

Commissioner BALLARD. When you create a strike of your union to protect some other union where they work nonunion men, what do you call that? Is that called a sympathetic strike or a secondary strike or what?

Mr. RICE. It is called a sympathetic strike. But I might go on and explain further in relation to the building trades council. It is not absolutely necessary that a man or any organization is compelled to strike. While we obligate ourselves to stand by one another on a question of that kind, certain conditions may arise or certain circumstances may be attached to that which will not be compulsory upon the trade who have their union men working there to take them out on that job. For instance, I will give you a clear case. As Mr. Merritt here called your attention to one case, I will contradict him very plainly, and I can back it up with absolute proof. He mentioned the Allowin Court job where the carpenters were on strike. He said that the other trades went out on strike on that job in support. The other trades went voluntarily on strike there for 24 hours, and through the fact of them being affiliated with the employers' associations through trade agreements they were compelled to go back the next day. The carpenters not being—or having an agreement with the employers' association at that time was the organization that was at loggerheads and each had a fight on its own hands. So that, you see, the explanation as rendered by Mr. Eldlitz on that point is clear and true. When a trade is outside of the pale of the employers' association it does not get the universal support of the other trades which normally applies in the case of the ironworkers, as it was expressed here and shown to you. Unfortunately, that condition exists. That is the reason that the numerous trades, in my opinion, are opposed to the plan of arbitration as it exists to-day.

Commissioner BALLARD. Why is it your organization does not work with the iron trade that you spoke of?

Mr. RICE. I mean, we do work with them.

Commissioner BALLARD. Well, why is it you do not support them?

Mr. RICE. We do wherever it is possible, but under our trade agreement with the employers' association, which existed up to January 1, 1913, in that trade agreement there is a provision, a specific clause, there shall be no sympathetic strike. The only way we could take that question up would be by bringing in the complaint or lodging the complaint with the executive body of that association, and asking them to take the matter up for consideration and give us some redress.

Chairman WALSH. Has anyone anything else? I will ask you, Mr. Rice, have you any definite policy with reference to the practices you have mentioned here about the employers attempting to bribe you to betray your fellows? That is, do you report that to the organization, or what is done about it?

Mr. RICE. Well, we have. I have reported it in numerous cases; in fact, if you can get a copy of the testimony in the Newton case you will find one employer who got up on the stand and testified that he attempted to bribe me, and when I refused he was very glad that I did, because he openly stated at the time that he realized that he had made a mistake, and that I could have gained a certain consideration without any trouble whatever.

Chairman WALSH. What is the Newton case?

Mr. RICE. It is a case against the organization for refusal to handle their trim, the Newton Co. being a manufacturer of sash, doors, trim, etc.

Chairman WALSH. Is it one of the cases mentioned by Mr. Merritt?

Mr. RICE. But that is not the case—excuse me a moment and allow me to explain. This is not the case, but one of the Newton jobs where there was trouble, but a different job entirely; but it was on nonunion work.

Chairman WALSH. Was it one of the cases about which Mr. Merritt testified?

Mr. RICE. No.

Chairman WALSH. Was Mr. Merritt attorney in the case?

Mr. RICE. Yes, sir.

Chairman WALSH. Was this man who attempted to bribe you a member of any organization or association?

Mr. RICE. No; he is an independent contractor.

Chairman WALSH. Have you ever brought charges against any members of the employers' association for practices of that sort, and attempts of that kind?

Mr. RICE. Well, I will tell you frankly. We realize the uselessness of trying to do such a thing.

Chairman WALSH. Well, some of these people that have approached you, were they members of organizations—

Mr. RICE (interrupting). No, sir; not as a rule. They are always independent.

Chairman WALSH. Now, what I want to get at, if possible, is, do you have any established policy when a man approaches you in that way? Do you report it always to your union in each individual case?

Mr. RICE. We do; we report the matter to our executive or our committees in our district, and make report that this employer, or that contractor, has attempted to settle the matter through financial consideration.

Chairman WALSH. Has the union any definite rule in regard thereto—any written rule or any provision in its by-laws or constitution referring to the matter?

Mr. RICE. No.

Chairman WALSH. Has the union any system of fining employers for failure to carry out agreements?

Mr. RICE. We have. Not a system of fines, but we have done this, which we believe was perfectly legal and legitimate: When a contractor or a manufacturer or any other employer of our men made a contract with us to employ our labor, etc., and has violated that contract, and we find it to be so and proven, when we have taken our men away if they desired again to have our men in certain cases we have insisted on them putting up a bond that they would live up to the faithful performance of the terms of their contract. In some instances these employers have violated it again and they have forfeited their bonds.

Chairman WALSH. Was the bond put up in cash?

Mr. RICE. In cash in certain cases, and in others it was put up by a bonding company.

Chairman WALSH. When it was put up in cash, in whose hands was the cash deposited?

Mr. RICE. In our office, into the hands of our district secretary.

Chairman WALSH. And who determined the amount of that which should be forfeited?

Mr. RICE. That was determined when the question was first taken up; for instance, if we found—

Chairman WALSH (interrupting). That is, you agreed on how much damages should accrue in case of forfeiture, is that correct?

Mr. RICE. Yes, sir.

Chairman WALSH. And in the cases where bonding companies put up the bond, was it paid without litigation in those cases where—

Mr. RICE (interrupting). Never attempted to collect on one of them; never had occasion to go that far. I may say that probably there have been only three or four of these cases, or five, within the last eight years.

Chairman WALSH. Now, in the cases where cash was put up in lieu of bond, who passed upon the question of the breach of the contract?

Mr. RICE. We passed upon it; when we found that he had violated it, and notified him of that fact.

Chairman WALSH. You notified them of that fact and said it was violated and took the money?

Mr. RICE. We did not take it; we kept it; we had it.

Chairman WALSH. Kept the money. Now, what was done with the money? Did it go into the general revenues of your union?

Mr. RICE. Well, it was used mainly to support the members that were out of work, or had quit.

Chairman WALSH. Now, prior to that, were those funds set aside in a separate account some place?

Mr. RICE. Well, that I can not say. That is a matter I can not answer, whether or no the office had set that amount aside.

Chairman WALSH. Who would know about that?

Mr. RICE. Probably our secretary.

Chairman WALSH. Approximately, what were the sizes of these bonds? How much was deposited in cases where cash was deposited? I just want to get the general idea of how large an amount it was.

Mr. RICE. In some cases it was \$100, \$200, \$500.

Chairman WALSH. What was the highest amount?

Mr. RICE. \$1,000.

Chairman WALSH. And the lowest amount?

Mr. RICE. \$100.

Chairman WALSH. And how were they forfeited? Were all of them forfeited, or a few of them, or approximately how many?

Mr. RICE. Why, in the case of the cash bonds, I would say there were about seven or eight within the last eight years, to my knowledge; and there was a——

Chairman WALSH. What percentage of the cash bonds put up were forfeited?

Mr. RICE. I am speaking of the amount of cash bonds forfeited; about seven or eight within the last eight years.

Chairman WALSH. How many were put up?

Mr. RICE. Perhaps about 15.

Chairman WALSH. Where is the money in cases in which the bonds are not forfeited?

Mr. RICE. Returned back to the employers.

Chairman WALSH. Are they put up for a definite term?

Mr. RICE. For a certain period.

Chairman WALSH. Fixed period or uniform time?

Mr. RICE. In a whole lot of cases it was definitely agreed by the employer that when he put up the bond that he would live up to the terms of his agreement as specified.

Chairman WALSH. For how long?

Mr. RICE. One year. In other cases—if you will permit me to explain it further in detail—it was put up as a guarantee that the firm would employ union labor exclusively for a certain period. For instance, when we run into a proposition where nonunion conditions prevail all around, where the employer—and that applied to the great big fixture concerns—where they employ nonunion men both inside and outside—of course, we would not work with the nonunion men, and when we quit our work the employer would come forward with the offer to unionize or employ union men within a certain period. The first time the question would be taken up with them and no bond of any description but his signature to the contract would prevail. If he then broke that and we found occasion to run into him the second time, then we would exact a forfeiture bond before we would deal with him.

Chairman WALSH. In the practice, was it ever the custom for the unions to put up a cash bond to the contractor?

Mr. RICE. Well, I don't know as we ever had any necessity, because we, as a rule, live up to the terms of any contract we make, because it applied only to the employment of labor on our side, and we have always supplied it.

Chairman WALSH. So that was not done? You never put up any cash bond?

Mr. RICE. We never had any occasion to.

Chairman WALSH. That is all.

Commissioner BALLARD. I want to ask you another thing. When you put up a bond, was that bond put up voluntarily, or was it exacted as a condition precedent to returning to work, or doing something of that sort?

Mr. RICE. If the firm desired our labor, they volunteered in most of these cases to put up these bonds, the same as I stated that they volunteered to settle with me personally for a consideration. It was all voluntary as to all matters.

Commissioner BALLARD. You said it was necessary to have a bond because sometimes they did not keep their contracts, as I understand?

Mr. RICE. Yes. There are a certain number of employees that we certainly at all times must persistently watch and keep tabs on because they are always trying to beat the game.

Chairman WALSH. That is all.

Mr. RICE. Could I be permitted to say one word? I note here that Mr. Merritt, representing the antiboycott association, has submitted a copy of Mr.

Justice Putnam's position on the Bossert trial relative to the injunction. I would like to ask to be permitted to submit a decision in a contempt proceeding in which they attempted to have me, as a representative of the organization, committed for an alleged violation of this order. Could I be permitted to submit Mr. Justice Crane's decision in this matter?

Chairman WALSH. We would be very glad to have it, indeed.

Mr. RICE. Because it bears entirely on this question of the right of union labor to strike.

Chairman WALSH. Just submit it to the stenographer.

(The document is and was in figures as following, to wit:)

Supreme Court, Kings County.

LOUIS BOSSERT ET AL. v. THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA AND JOHN RICE.

Walter Gordon Merritt, Esq., for the plaintiff; Charles Maitland Beattie and William P. Maloney, Esqs., for the defendants.

CRANE, J. The firm of Goldberg & Smith were constructing under contract with the owners a building at the junction of Monroe and Grand Streets in the Borough of Manhattan; Louis Bossert & Sons were furnishing, under contract with Goldberg & Smith, all the woodwork for said building, such as doors, sashes, window frames, and trim. John Rice was the agent and organizer of the United Brotherhood of Carpenters and Joiners of America, a labor union consisting of about 200,000 members, of whom about 40,000 worked in union mills and the others on buildings installing trim. Said Rice is now an agent and officer of this brotherhood which has a joint district council in New York and vicinity. It is a rule of the brotherhood or union that the members who work on buildings will only work on the trim made by their own members in union mills. If members violate this rule or mutual agreement, they are subject to a fine of \$10.

The carpenter mill of Louis Bossert & Son did not employ union men or members of the Brotherhood of Carpenters. Consequently the members of the brotherhood engaged to work upon the building heretofore mentioned refused to work upon learning that the trim and woodwork to be furnished them was nonunion work. An injunction has been obtained in an action brought by Louis Bossert & Son against John Rice and others representing the Brotherhood of Carpenters enjoining each and all of them "from conspiring, combining, or acting in concert in any manner to injure or interfere with the good will, trade, or business of the plaintiffs' copartnership, for the purpose of coercing plaintiffs to employ union labor either:

"First. By sending to any customer or prospective customer of the plaintiffs any letter, circular, or communication, printed, written, or oral, which, in terms or by inference, suggests that labor trouble will follow the use of materials purchased from plaintiffs, or from any person, firm, or corporation declared unfair or whose material does not bear the union label, meaning plaintiffs' thereby, or

"Second. By ordering, directing, requiring, or by compelling by any by-law, rule, or regulation or any act thereunder, any person whatever to refrain from or cease working for any person, firm, or corporation because they used material purchased of or furnished by plaintiffs, or by any person, firm, or corporation declared unfair or whose materials (sic) does not bear the union label, meaning plaintiffs thereby.

"But nothing herein contained is to be construed to prevent peaceable strikes, except those directed against customers or prospective customers of the plaintiffs, for the purpose of interfering with the good will, trade, or business of the plaintiffs' copartnership."

Subsequently to the obtaining and service of this injunction the defendant, John Rice, went to the building in question and spoke to members of his brotherhood at work on the nonunion trim, who thereupon ceased work.

This motion is made to punish the said John Rice for contempt in having violated the injunction and illegally interfering with plaintiffs' business.

If these carpenters to whom Rice spoke voluntarily left their work without any compulsion from Rice or his organization there was nothing wrongful in his acts. The courts can not compel men to work and they can leave for any reason they see fit, or without reason; and if it be that the carpenters in this case desired to comply with the rules and regulations of their brotherhood there is no law that can prevent them or could prevent Rice from informing

them that the trim was nonunion material. The injunction quoted from does not restrain such deeds, as the act prohibited must be under some compelling or directing by-law, rule, or regulation of the union. This could not include the giving of information to workmen as to the nature of the material they were at work upon, leaving to them the voluntary determination to stay or leave as they saw fit. No injunction could keep them at work, therefore their reason for leaving is immaterial as long as it is voluntary. What John Rice said to these men when they threw down their tools and left is not stated in the moving papers and it is left to hearsay statements to be inferred that he told them they would be fined, while answering affidavits of the men themselves state that they left the work voluntarily under no threats as soon as they knew the material was nonunion. The defendant Rice swears that he made no threats. Under these circumstances I would find, as a matter of fact, that the injunction had not been violated by the defendants proceeded against.

But assuming that the contention of the plaintiffs is correct and that John Rice did tell his men that the material upon which they were working was nonunion material, that they had agreed upon entering the brotherhood not to work upon nonunion material, and that they would have to comply with this rule of the union or be fined or expelled, would this be a violation of the injunction order?

The last clause above quoted from the injunction stated that nothing therein contained shall prevent peaceable strikes except those directed against customers of the plaintiff *for the purpose of interfering with the good will of the plaintiffs' copartnership*. The whole question turns, as it does in all these cases, upon the purpose for which the act is done. If it is for the purpose of injuring plaintiffs' business or its good will, it is illegal and within the terms of the injunction; if it be done for the purpose of legitimately advancing the interests of the brotherhood and of procuring employment for their fellow members who work in mills, or of procuring a market for such work, by refusing to handle trim not made in such mills, I can see nothing illegal in it, and the purpose is not within the terms of the injunction order.

It is certainly legal for a body of men to agree among themselves that they will not work under certain conditions or upon certain kinds of material. As men can not be compelled to work at all they may place any conditions they please upon their employment. They can, for instance, agree among themselves that they will not work upon carpenter trim which has not been made by their fellow members. This is a lawful means by which they place in competition in the markets the labor of their fellow mill workers or the product of such a mill. When at work upon a building in which carpenter trim is to be used these men, in carrying out their purpose and agreement, may quit work or refuse to work because the trim has not been made by men of their brotherhood. Unless by force, threats, or intimidation they are compelled to leave the work there can be nothing illegal in calling their attention to the fact that the trim they are handling has not been made by their fellow members, and that to continue working upon it would be in violation of their mutual agreements. It would not amount to force, compulsion, or intimidation to state to these men that they were perfectly free to continue at work upon this nonunion material if they desire, but that by so doing they could not expect to continue in the brotherhood with their fellow members and receive its benefits, and would therefore be expelled. (See the opinion of J. Holmes in *Vegetahn v. Gunther*, 167 Mass., 92, at p. 107, as to the meaning of "threat" and "compulsion"; also *Peo. v. McFarlin*, 43 Misc., 591.) If it be legal to form such a union with such a purpose and such agreements it certainly could not be illegal to expel a member because he refused to abide by the rules and agreements of the union.

Such is the basic principle of every religious, political, and social organization; men can not be compelled to join them, neither can the association be compelled to keep them after they refuse to abide by its reasonable rules and regulations. If these carpenters in question have legally agreed with their 200,000 fellow members that they will advance the interests of the 40,000 working in mills or others who desire to work in mills, by refusing to handle trim not made by such men, I fail to see anything contrary to law in giving force and effect to this agreement by informing members that the material they are about to handle has not been made in mills employing their fellow associates, that the rules of their order prohibit their handling it, and that if they do they will be expelled from the order or fined in accordance with its rules. So long as these men are left free to work upon the nonunion material if

they so desire and no force, threats, or intimidation are used to compel them to leave, it certainly can not be considered compulsion or intimidation within the terms of the law that they are reminded that they will be expelled or fined in accordance with their agreement. To enjoin such acts would be to destroy by law that which the law has declared legal, and, in fact, beneficial to society. To say that men may organize and refuse to work under certain conditions or upon a certain class of material and then compel the organization to keep in membership those who refuse to abide by its purpose is to destroy the organization.

If there be the power of expulsion there must of necessity be the lesser power to fine according to rules, provided the person desires to retain membership in the organization.

It is a question of fact and not a question of law which is the basis of all cases of this nature. If the purpose be to honestly and fairly advance the interest of the working men it can not be illegal to enforce the rules and obligations of the union, provided the member is left free to get out and work as he pleases.

If, however, the object of the order or the purpose of its actions under any rule or regulation be simply or principally the malicious injury of another or his property, then the agreement is but a common-law conspiracy. The question in all these cases is, as I say, a question of fact, which is the purpose aimed at.

The acts which I have assumed above to be legal are clearly distinguishable from all those acts which partake of the nature of the boycott. If the members of the union aimed directly at destroying Bossert's business, it would be illegal, and by refusing to work on his material while they were perfectly willing to work on other nonunion material of like nature, would be strong evidence of a purpose to directly injure his business and not to advance the interests of the union. If they sought to procure men of other trades to quit work for the owner of the building where Bossert's material was being used, or sought to procure the customers of the owner to refuse to deal with him so long as he used Bossert's material this would all be of the nature of a boycott, but there is nothing in the nature of a boycott so far as I have been able to find in the refusal of men to work upon or handle material not made by members of their own union.

It will be noted that these striking men in no way interfered with the business of the owner or contractor using Bossert's material; they did not prevent him from employing other carpenters not members of their union; they did not even try to persuade him not to employ such, neither did they attempt to persuade or prevent other tradesmen from working for such owner or builder or in any manner injure his business; they merely refused to work for him; that's all. In these particulars the case differs from all the boycott cases.

Much emphasis has been laid by counsel for the plaintiff upon the recent case of *Newton v. Erickson* (128 N. Y. Supp., 949, affirmed by the appellate division without opinion in 144 App. Div., 939). It was distinctly found, as a matter of fact, not as a matter of law, that injury to the plaintiff was the very result aimed at by the combination. There has never been any dispute about the law that a combination for the very purpose of injuring another was illegal. The facts vary with each case, and where a legitimate purpose and not a direct injury to another is apparent there is nothing illegal in the combination. As I have said, the opinion of the learned judge was based upon a finding of fact that the purpose was a direct injury to the party seeking relief, or as said in *Ertz v. Produce Exchange*, 79 Min., 140, "the interference was not to further any legitimate interest of workmen, but done maliciously to injure another." And again, "any number of men jointly having no legitimate interest to protect, may not lawfully ruin the business of another, etc." In *Lohse Patent Door Co. v. Fuelle* (215, No. 421) such a fact was specifically admitted, as the case arose on a demurrer to a complaint stating such direct injury to be intended.

The distinction between the *Newton* case and the facts as presented by this case is that the very result aimed at here is not to injure Bossert & Son, but to advance legitimate interests of the members of the brotherhood.

I believe that such acts as the plaintiff here claims the defendant, John Rice, and the Brotherhood of Carpenters to be guilty of have been recognized by the authorities of this State as being legal in that the purpose was apparently not to injure another, but to advance legitimate interests of their own. Such an authority is *National Protective Association v. Cummings* (170 N. Y., 315). It was there held that a labor union may refuse to permit its members to

work with fellow servants who are members of a rival organization, and may notify the employer to that effect, and that a strike will be ordered unless such servants are discharged, when its action is based upon a purpose to secure an exclusive preference of employment to its owners.

"It is only," says Judge Parker, "where the sole purpose is to do injury to another or the act is prompted by malice that it is insisted that the act becomes illegal."

In that case we have competition of labor. McQueed, the steam fitter, objected to, had his labor to sell. The members of the National Protective Association had their labor to sell. They refused to work where McQueed's labor was hired, and their purpose and the resulting strike were declared legal and in accordance with fair competition. I take it that material is entitled to no more protection than labor; that before the law labor and material are both property entitled to equal rights. In this present case carpenter trim which Bossert & Son have for sale is no more sacred than the labor and skill which McQueed had for sale in the above case. The Brotherhood of Carpenters say in this case, "40,000 of our members are in mills making carpenter trim which is in the market competing with Bossert's trim. In order to help these fellow members of ours keep their employment by marketing their product, as well as in procuring like labor for others in the mills, we refuse to work with or upon material not made by our men." Where is the distinction to be drawn in principle between this case and the Cummings case? One is the competition of labor and the other is the competition of manufacture. If the actions in one case are legal, so must be those in the other.

It may be claimed that it is very difficult to distinguish between a purpose to advance the interest of the members of an organization and the purpose to directly injure another man's business, but the distinction exists in spite of the difficulty and has been repeatedly stated in such words as are found in *Mills v. U. S. Printing Co.* (99 App. Div., 605, at p. 612): "There is a manifest discrimination between a combination of workmen to secure the exclusive employment of its members by a refusal to work with none other, and a combination whose primary object is to procure the discharge of an outsider and his deprivation of all employment. The difference is between a combination for the welfare of self and that for the persecution of another."

That men may combine and refuse to work with others who are not members of their union finds support in *Pickett v. Walsh* (192 Mass., 572) and *Gray v. Building Trades Council* (91 Minn., 171).

If it be legal to refuse to work with nonunion men and strikes may be called to oust them, so likewise may men refuse to work with nonunion material. Labor is as much property as woodwork, and the law which will not protect the one in this particular can not protect the other. It is only when the labor organization goes beyond this mere refusal to work upon nonunion material and by other acts seeks to injure a nonunion manufacturer that the law is transgressed. This rule has found expression in *Toledo A. A. & M. M. Railway Co. v. Pennsylvania Co. et al.* (54 Fed. Rep., 730), as follows:

"Ordinarily when such a combination of persons does not use violence, actual or threatened, to accomplish their purpose, it is difficult to point out with clearness the illegal means or end which makes the combination as unlawful conspiracy, for it is generally lawful for the combiners to withdraw their intercourse and its benefits from any person and to announce their intention of doing so, and it is equally lawful for the others, of their own notion, to do that which the combiners seek to compel them to do. Such combinations are said to be unlawful conspiracies, though the acts in themselves and considered singly are innocent, when the acts are done with malice, i. e., with the intention to injure another without lawful excuse."

Assuming, therefore, that the plaintiff's contention be correct and that John Rice went to the carpenters at work on the Grand Street building—members of his brotherhood—and told them that the trim was nonunion work; that to continue to handle it would be against the rules of the union, for which they would be fined; and that thereupon the men quit work—yet this was not a violation of the injunction, as it was a peaceable strike, for the purpose of advancing the interest of the brotherhood and its members, and not for the purpose of interfering with the good will of the plaintiffs' copartnership.

Motion to punish for contempt denied, with costs.

September 17, 1912.

(Signed)

F. E. CRANE, J. S. C.

Chairman WALSH. Anything else that you have that you think is pertinent to the questions that came up yesterday, in the way of transcripts or any documents that you believe throws light on the subject or refutes anything that has been said here, as well as the constitution and by-laws of your brotherhood, we would like to have you submit.

Is there anything else that suggests itself to you, Mr. Rice, by any of the questions which were asked you yesterday that would throw any light additional to the light already thrown on this subject?

Mr. RICE. There is one little matter.

Chairman WALSH. That you have not been interrogated about?

Mr. RICE. There was one matter that was not very strong. In addressing your commission Mr. Merritt made certain statements relative to the employers when they discharged their mechanics for being incompetent. I only want to say this, and call the attention of the commission to this fact: In my personal experience as a mechanic I have found that when the man who is fairly intelligent, understands his laws, and desires to abide by the constitution and by-laws of his organization, that when he attempts at any time to consistently abide by them, there are numerous employers that take advantage of that fact, and that man is discharged, either for being incompetent or he is not needed. I have had one experience in my time. I was out for nine months, for the simple reason that I went and told a man that I thought he was violating the law. I was discharged from the employ of that firm, and reinstated by the organization because I proved the case, but, unfortunately, when I left that firm I couldn't get a job for nine months afterwards. Every place—in fact, there is no name; I can not mention any name—but one individual employer deliberately told me to my face—he says: "Rice, I would like to give you a job, but," he says, "you are not wanted around in these shops, somehow. You better look elsewhere." He says: "You can go out and tell the organization, but I am going to deny it." Those are the very words he used to me. He says: "You are not going to get me the same as you got the other fellow."

I only give it to show that when a man attempts to live up and be straight—a straight union man—that there is discrimination shown in any number of cases. We have to deal with it every day, day in and day out.

In relation to that matter relative to the western shops where the employment of women and girls is being used, I want to say this: That we found, upon investigation, that numerous women and girls work in those shops; there was a certain percentage of them working on those buzz saws and woodworking machinery without any question of any man that has ever been into those mills, is one of the most dangerous occupations that anybody can follow. As I have testified here, in our organization we have a certain percentage of men, and it runs into 80 per cent, where they are maimed. There is not one of us that follows that calling that has not, at one time or another, got a slight defect on his fingers in some way. I have got one and I am very lucky [exhibiting his hand]. That is a cut from a shaper. When they employ women and girls to man that machinery I believe it is an outrage from a moral standpoint.

Mr. THOMPSON. I would like to ask you one question, Mr. Rice, but only one. Do you know whether or not any action has been brought against any of the Wisconsin mill manufacturers as the result of the Wisconsin law in regard to the employment of women and children?

Mr. RICE. I don't know of any personally; no, sir.

Chairman WALSH. Mr. O'Connell would like to ask you a question.

Commissioner O'CONNELL. I understood you to say yesterday that you were formerly delegate to the so-called arbitration plan.

Mr. RICE. No, sir; not me. I never was a delegate to the general arbitration plan.

Commissioner O'CONNELL. Was your organization a party to it?

Mr. RICE. Yes, sir; I will qualify that; I can say I was and I was not, because when I was elected or selected by the board of carpenters to represent them—

Commissioner O'CONNELL. That doesn't matter. It was simply the incident that I wanted.

Mr. RICE. In the general arbitration plan—

Commissioner O'CONNELL. Never mind. I will get at it later. You know that the arbitration plan did exist years ago?

Mr. RICE. Yes, sir.

Commissioner O'CONNELL. Its operations were stopped because of some trouble with the steam fitters?

Mr. RICE. Yes, sir.

Commissioner O'CONNELL. It is not now operative?

Mr. RICE. No, sir.

Commissioner O'CONNELL. But it is in some underhanded way, isn't it, dealing with the unions and operating?

Mr. RICE. It is operated now, according to my opinion, in a one-sided way.

Commissioner O'CONNELL. Doesn't its officers or officials or secretary meet with the officials of the union and treat with them now in troubles on buildings, etc.?

Mr. RICE. I would have to qualify that in order to give you a clear conception. When a jurisdictional dispute arises——

Commissioner O'CONNELL. I don't care about jurisdiction. Supposing a strike occurs on a building?

Mr. RICE. If they have a trade agreement with that particular association, for instance, if the carpenters should have a strike on a certain job wherein a member of the employers' association is the general contractor, the question would be taken up in the trade board of the Master Carpenters' Association, provided he was a member of that association.

Commissioner O'CONNELL. Does representatives of, for instance, your board of business agents I will call it—don't they deal with the officers of this employers' association?

Mr. RICE. No, sir; not officially.

Commissioner O'CONNELL. Not officially?

Mr. RICE. No, sir.

Commissioner O'CONNELL. But you do see them, don't you?

Mr. RICE. We do see them through the agreements with our independent organizations.

Commissioner O'CONNELL. Then the officers of the building trades association do not meet you officially?

Mr. RICE. No, sir.

Commissioner O'CONNELL. They do meet you?

Mr. RICE. They meet us as representing the organization individually, but not as members of the trades council.

Chairman WALSH. Is that all?

Commissioner O'CONNELL. That is all.

Chairman WALSH. We are very much obliged to you.

Call your next witness.

TESTIMONY OF MR. D. EVERETT WAID.

Mr. WAID. May I have the privilege of reading from notes which I brought with me?

Mr. THOMPSON. I would like to ask you some questions first, if you please. Will you give us your name and address and your profession?

Mr. WAID. D. Everett Waid, 1 Madison Avenue, and I am an architect.

Mr. THOMPSON. Are you practicing in the city of New York?

Mr. WAID. For the past 15 years I have been practicing in New York and about 10 years previously in Chicago.

Mr. THOMPSON. What has been the character of your work, if I may ask?

Mr. WAID. General practice, and also considerable consulting practice in which I have had to do with the construction of buildings on which my clients have made the loans.

Mr. THOMPSON. Has your work had to do with the section of the city principally south of One hundred and seventy-seventh Street?

Mr. WAID. Yes, sir; Manhattan from the extreme south to The Bronx.

Mr. THOMPSON. You say you have a statement that you would like to read?

Mr. WAID. Yes, sir.

Mr. THOMPSON. What is the nature of the statement, and what does it cover?

Mr. WAID. The statement was prepared in the main by the president of our organization, who happens to be absent from the city at the present time, coming at the request of your commission to testify and after consultation with the members.

Chairman WALSH. About how much of a transcript is there, Mr. Waid?

Mr. WAID. I think I could read it within 5 or 10 minutes.

Mr. THOMPSON. You may read it.

Mr. WAID (reading) :

LABOR CONDITIONS IN THE BUILDING INDUSTRY IN NEW YORK.

MAY 2, 1914.

UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS :

In response to the request of the United States Commission on Industrial Relations, the executive committee of the New York Chapter of the American Institute of Architects begs leave to present the following considerations with regard to the labor conditions existing in the building industry of the city of New York and neighboring territory. In presenting these views it is proper to say that the time allowed for the preparation of this statement did not permit of any formal action on the part of the architects as a whole. An attempt was made to get a report from at least 250 architects on these subjects, but it can hardly be claimed that the opinions here given would meet with their universal assent.

A. General advantages of a unionized building industry.—It is very generally recognized by the architectural profession that there are many advantages in well organized, well articulated labor conditions. A large city like New York requires a large supply of skilled men available at short notice at predetermined wages. Closed-shop conditions have existed in this city for many years and there is no doubt that they have conduced to better workmanship, in that they have attracted the best skill from other parts of the country.

A different opinion on this point is held by some architects who believe that skilled men are naturally attracted to the cities where better opportunities for employment are found; and that unions, while they raise wages, at the same time reduce efficiency.

A large percentage of the buildings being erected in this district are buildings which require high speed in execution and the cooperation of many different complex trades. It would probably be impossible to handle the building projects which are constantly being executed here were it not for well-organized unions in the building industry. The union-fixed labor rate, moreover, has the advantage that it enables the contractor to estimate in advance what his labor is going to cost and prevents the reckless construction methods and the reckless workmanship which would undoubtedly ensue if no fixed union rate were established and if any person could go into the market with any class of work to undertake the difficult building work of the city. It is unquestionably true that wherever the unions do not control the situation, in certain classes of building work in the outskirts of the city, there the workmanship is poorer and the danger of really reckless construction greater. While the unions undoubtedly help poor men to get good men's wages, it is also fair to say that the more skilled workmen attracted into the unions have amply justified, at least in certain trades, their larger wage. It is the experience of many architects that even in districts outside of New York where unions do not control the work and where cheaper labor may be employed, it is more profitable to secure city men at higher wage to do the work than to employ the local men at a lower rate, because of the larger output and greater skill of the former.

On the other hand, it is fair to say that there are some of the finer trades where the public has distinctly suffered from the complete unionization. Architects find occasionally when they are anxious to secure a particularly artistic result that the worker best qualified to produce that result is not permitted to install his work in any building in course of construction. The unions have practically disbarred many independent workers. There is an unquestionably unjust discrimination in the refusal of the union laborer to work with nonunion men or to work in a building in which any nonunion-produced product is installed. The public has suffered in that it has been unable to secure certain worthy and valuable products that otherwise would have been at its disposition. It is in the more artistic work that this is most noticeable.

B. Trade agreement restricting the quantity of the output.—It is difficult for the architects to prove the existence of such agreements. It is rather a matter of common knowledge. Some of these agreements are undoubtedly of temporary character and others have been abandoned apparently because they can not be enforced, or the competition of work done in other cities has forced their abandonment. Although we do not actually know at the present time of any such restrictive agreements, we see from time to time what appears to be their evidence. Whenever and wherever they occur they unquestionably increase the cost of work and are unjust to the public.

C. Monopolistic agreement between contractors' association and labor unions.—It is pretty well understood that agreements of this kind do or did exist in the plumbing trade, in the marble trade, in the tile industry, and in some of the others. Whatever the specific detail of such agreements may be they consist in the main of an arrangement on the part of certain associations of employers whereby they agree to employ only men of a specific union or unions, and in return the men of that union agree to work only for the trades association, provided that that work is available for them or there is demand for their services from such employers. It has been said that the men are at liberty to work for other employers if the organization employers do not need them, and, on the other hand, that employers are at liberty to take outside men, provided a sufficient supply of union men is not provided on their demand. For this reason it is claimed that the restrictive agreement in no way injures the public. As an actual fact, it is almost impossible for anyone outside the agreement to depend on the execution of work, since his men are apt to leave him at any time if there is call for them elsewhere. An outside employer may be unable to get any men at all if there is a general demand for workmen on the part of the association employers. In a city where the building trades are so completely unionized as in New York it practically forces a contractor desiring to do important work into the association. In the nature of things the association controls the trades and the work. Such agreements have unquestionably resulted in the suppression of competition. They have enabled contractors' associations to parcel out the work in their trades to their own members or to divide profits at the expense of the public.

D. Jurisdictional quarrels between unions.—One of the commonest sources of trouble in this city has been the jurisdictional fights between labor unions. There are constant changes due to new methods in the building industry. The carpenters, as an instance, find their work gradually decreasing owing to the adoption of metal trim. The trade is naturally anxious to secure for its union as much work as possible. Union metal workers and union carpenters call strikes on each other and cause delay and expense to the public. The pipe-fitting trades are frequently offenders in the same direction. It has been the experience probably of almost every architect after he has had work installed by one set of union men to be afterwards forced to tear it out and have it reinstalled by another set of union men. We have even had records of cases where union work had to be torn out a second time because a later decision assigned the work of installation to a union more powerful than the others. This is probably the most aggravating trouble that the building industry has suffered from in this city. It is absolutely unjust to the public and leaves it helpless.

E. The public has suffered from conditions that now exist in one other direction; namely, where members of powerful contractors' associations have agreed between themselves not to undertake to replace each other in the completion of contracts. This case arises frequently where the original contractor has been removed from a certain piece of work, whether for a good reason or not, and where it is necessary to get some one else to complete it. In some trades it is almost impossible to secure any other workmen to do the work whether working under a general contractor or not. There is undoubtedly a reason for such refusal in cases in which a dishonest owner has attempted to cheat a contractor by refusing to pay him. On the other hand, when a contractor fails to carry out his work properly, it is detrimental to the interest of the public to enable him to fight any enforcement of the contract, as he can easily do when he is certain that no one else will step in and finish his work for the owner. There are unquestionably such agreements in restraint of fair competition and fair work.

F. Recently there has been a new attempt looking to the spread of union control in the building industry, thus far not very successful. It is an attempt on the part of the building-trades unions to force the employment of union workmen for any work that is done in a building *after* the building is completed. While the unions have almost completely controlled the construction work of this city, it was assumed that once a building was completed the owner could thereafter employ anyone he pleased and do anything he pleased thereafter either with his own employees or others. An attempt has been made, some times successfully, within recent years to force such owners and their tenants after occupying their buildings to employ union house carpenters, union machinists, union fitters, etc. In some cases it is even attempted to prevent an owner from employing union workmen even if he is willing to do so unless

he employs them through the associations' contractor. The attempt has been made to enforce this condition through a threatened strike on the part of all union labor *before* the building is completed unless the owner agrees before such completion to unionize his shop or factory after the building is completed. Although this has not been always successful the plan threatens to be very serious if nothing is done to stop it.

* * * * *

To recapitulate: We have tried to indicate briefly the advantages of well-organized unionized building industry and have pointed out some of its disadvantages, particularly when union control is used for such purposes as have been mentioned in items B, C, D, and F. We believe that a comprehensive scheme of arbitration will be valuable in the building trades, provided that the public has a part in such arbitration, either through the architects or otherwise. We believe that any scheme which recognizes organized labor and organized employers should distinctly provide for the rights of the public. It should also provide for the particular development within the industry of original artistic or specially skillful workmanship. Wherever exceptional qualities appear in any particular field of production no agreement should be permitted which would suppress that original production nor prevent any man from preparing his special product freely and installing it wherever he can find a demand for it. We believe also that an attempt should be made in the building trades to develop a scheme whereby the differences in skill of the individual worker would be recognized. We believe it essential for the development of the art of building that while there may be a minimum wage established, that that minimum shall be so fixed as to make it possible and proper to recognize exceptional skill. The minimum wage should not be placed so high that the superior workman is kept down because the inferior workman receives more than the work justifies.

One additional point which we regard as very serious is the influence of unions against trade schools. Fear of an overplus of mechanics and a consequent lowering of wages seems to have caused the unions to have assumed a hostile attitude toward trades schools and resulting in an arbitrary interference with the right of a young man to choose his trade or even be permitted to learn any trade.

We are opposed to a system affecting any class of people which may subject our citizens to arbitrary rules which deprive them of their property or other rights without due process of law. We would therefore recommend that the unions be required to incorporate or otherwise to make themselves subject to the regulations of law. Under present conditions agreements or contracts are not always considered binding upon both parties.

Personally, permit me to say in conclusion, I have always believed in unions. Mechanics have the same right to organize that other people possess. They were entitled to a higher wage, and they have achieved it. But I have for years observed with profound regret that labor has been an apt pupil of capital in the unjust exercise of arbitrary powers, and labor's power, exerted as it has been in a leveling process, not only rewarded the incompetent with pay higher than they could earn but paralyzed the ambitions of the skilled. The result tends to destroy moral standards and will be deeply disastrous to our social fabric if not counteracted by some better motive.

I would like to say, Mr. Chairman, if I may, that two members of my organization are present. One Mr. L. C. Holden and one Mr. Julius Frank, both men of long and wide experience in New York City, and if you care to ask them any questions you may bring out the points which you care to.

Mr. THOMPSON. Mr. Wald, taking up the last question in that list of suggestions, first, with reference to the suppression of the ambition of the workers, aren't the wages which are established in the trades in New York the minimum rates? They do not put any limit upon the amount which the employer may pay to a skilled man, do they?

Mr. WALD. Perhaps not in theory, but practically I think they do. A contractor would find himself in trouble. Now, figuring in a general way, I know sometimes they do pay them, and sometimes they do it secretly to avoid trouble with poor help for fear there will be a strike, or if not a strike, such a demand on the part of others for the same wage that it will practically amount to the same thing.

Mr. THOMPSON. We have had some testimony here, Mr. Wald, by union leaders in the building trades of New York City with reference to the speeding up or rushing the workers, and they generally have prefaced that by stating the employer would give 50 or 75 cents a day extra to the workman to act as a leader. Would that come within what you stated, that there is objection generally by the

union to the payment of extra wages, and the minimum becomes, in fact, the maximum?

Mr. WAID. I had in mind myself the fact that the minimum wage is high for many of the individuals. It is too high for the work they are able to do, and it is so high that the contractor feels that he can not go higher than that for the highly qualified man.

Mr. THOMPSON. Then, in your opinion, the fact of the establishment of a minimum wage as established in the building trades in New York prevents the development of the extra ability which the workman may have?

Mr. WAID. Well, I am speaking in a general way. I would not be prepared to argue the matter specifically regarding any particular scale of wages, because I have not made myself familiar with them.

Mr. THOMPSON. What I want to get at is, whether the suppression of the ambition of the workers, whether it is the matter of skill or the quality of the work which it would limit?

Mr. WAID. The skilled man can turn out more work and do a finer quality of work, but has his incentive taken away by the fact the poor man who can do half as much, and that poorly, gets the same wage.

Mr. THOMPSON. In regard to the question, have you ever had the matter come up of the objection by the union to the skillful kind of work that a man has done? Isn't the objection generally rather to the quantity of the work he has done?

Mr. WAID. Yes; that is the chief regulation, not the quality. I am only speaking of the incentive being taken away to quality, but the real regulation, we feel, is the limitation of the amount of work which a tile setter is allowed to do in a day, or a bricklayer is allowed to do in a day.

Mr. THOMPSON. But there isn't any limitation of the ambition of the worker to do a fine piece of work?

Mr. WAID. Not at all.

Mr. THOMPSON. You spoke of instances where the unions have cooperated with the contractor to prevent the substitution of one contractor for another. In what trades does that exist, if you know? What specific instances have you of that?

Mr. WAID. I don't believe I am prepared to give any specific instance of that.

Mr. THOMPSON. Well, do you know whether it exists in the plumbers' trade, or not?

Mr. WAID. Will you repeat that question, please?

(The question was repeated, as follows:)

"You spoke of instances where the unions have cooperated with the contractor to prevent the substitution of one contractor for another. Do you know whether that exists in the plumbers' trade, or not?"

Mr. WAID. No. That result is brought about by the agreements among the employers and, so far as my own experience goes, I have not known of any. I don't know personally of any case where the unions brought about such results.

Mr. THOMPSON. Now, Mr. Waid, when an architect has a proposition placed in his hands by the owner to prepare plans and specifications for that contract, in the contract it is generally provided that the architect shall determine as to the character of the work done, and whether the contract is fulfilled or not, and as to whether the contractor has faithfully performed his contract in other respects. That is generally true, is it, Mr. Waid?

Mr. WAID. Yes.

Mr. THOMPSON. Now, the effect of this inside arrangement, as you stated, between the union and the employers, is to take away from the architect that power of disciplining the contractor, isn't that true?

Mr. WAID. It is, and the fact the contractor can not be disciplined because he knows he can not be displaced.

Mr. THOMPSON. That would be a very positive and definite interference with the power of the architect as the final arbiter of the matter.

Mr. WAID. Because a great deal of the difficulty in getting the work finished on time and all that and the manner in which it is done would depend on that.

Mr. THOMPSON. Now, can your association submit to this association definite instances where that has shown itself—instances that caused you or your association to feel that such agreement should exist between you and the contractors?

Mr. WAID. Well, I would not like to undertake it. I might, if the commission desires, undertake to get such testimony.

Mr. THOMPSON. Of course you can see, Mr. Waid, can't you, that any such agreement between a union and a group of employers would be a very detrimental proposition, so far as the general public is concerned?

Mr. WAID. Certainly.

Mr. THOMPSON. And if it has come to your attention sufficiently to warrant you in making that statement, or the members of your profession feeling that way about it, there ought to be some definite evidence of where some contractor has been attempted to be replaced by the architect or the owner, and other contractors have refused to do the work.

Mr. WAID. Well, if the commission desires, I will be glad to do anything in that way that I possibly can. The preparing of this information was somewhat affected by the fact that I am under a heavy burden, and am expecting to sail for Europe shortly, and I will do all that I personally can to try to get any information possible that you may desire, and also from other members of our organization.

Mr. THOMPSON. Do you know of any of your associates here that would know of any such instances?

Mr. WAID. I would like to have you give them an opportunity, if you request them; because both of them come into closer touch with the labor conditions.

Mr. THOMPSON. Now, Mr. Waid, you have spoken of jurisdictional fights as being of great hindrance to the public. Do you know anything about the working out of the old arbitration plan as to settling jurisdictional matters?

Mr. WAID. No; I have not had occasion to go into it with any detail at all.

Mr. THOMPSON. But you know of it?

Mr. WAID. Yes, sir.

Mr. THOMPSON. And you know, do you not, that they are trying to use the machinery of the old arbitration plan, without any agreement at all?

Mr. WAID. Yes, sir.

Mr. THOMPSON. You say you have offices in Chicago?

Mr. WAID. Yes, sir.

Mr. THOMPSON. Are jurisdictional matters settled better in New York or in Chicago?

Mr. WAID. I am not prepared to make any comparison. I have not been familiar with Chicago for the last 15 years.

Mr. THOMPSON. What is your consensus of opinion, if you have any, as to whether or not the New York plan has worked and does work to the greater settlement of jurisdictional fights than the plans followed elsewhere?

Mr. WAID. I don't think I am prepared to answer that question.

Mr. THOMPSON. With reference to that same subject, have you given it any attention to see what kind of machinery would be best to settle such fights?

Mr. WAID. No.

Mr. THOMPSON. Do you believe that such questions, as the one to which you have referred between the carpenters and the sheet metal workers, as to the placing of the metal in the building, should be covered for the whole country as well as New York?

Mr. WAID. I should doubt whether a question like that could be settled arbitrarily for the whole country. What might be satisfactory for one territory might be unsatisfactory for another, where conditions are different; and I believe that there ought to be some regulation—just speaking in a general way—through a Government officer consulting or negotiating with the representatives of the unions interested. I do not believe, for instance, as suggested in this memorandum you gave me, that the architect, although he has strong preferences, can always or would wisely, as a matter of general policy, specify just which trade should do a certain piece of work. For example, on a great many of these large buildings, I specify that the steel columns shall be plastered with Portland cement as a matter of protection for the steel from corroding. I would like to see that work done by the plasterers, because I believe from the nature of the work they can do it more economically and it would not be so expensive for the owners. But the bricklayers step in and say that it belongs to them and will not permit the plasterers to do it. That is a case where I think they are wrong, and I think there ought to be some equitable way or arrangement to settle it. And while I think it is wise for me to specify, if I could enforce it, that the plasterers should do it, in that case I might not come in to as close contact with it; and such questions ought to be decided rather as between the unions and the contractors, rather than by the architect.

Mr. THOMPSON. What is the difference between the wages of the two, plasterers and bricklayers?

Mr. WAID. Well, I could not say. I would not attempt to say just in a moment. But if they were the same wages, then I would say it would be more economical for the plasterers to do it, because of the peculiar kind of trowel and their manner of doing this work, and that they would do it better and more rapidly.

Mr. THOMPSON. Mr. Waid, it has been testified here by some of the other witnesses that they think that jurisdictional disputes could be settled only for each locality. Yet in one of the trades where that has been named, Mr. Rice has stated that his union makes a national demand all over country that sheet-metal work installed inside of a building shall be done by the carpenters. Wouldn't that very fact that his trade makes an actual demand, not only here but elsewhere in the country, call for a settlement of such a dispute by a national body, or one having a moral influence all over the country, taking into consideration the conditions elsewhere as well as here?

Mr. WAID. Oh, I think that would be very much better, that there should be some nation-wide authority.

Mr. THOMPSON. Now, it has been stated, however, by some of the witnesses, anyway, that in New York certain kinds of machines are used in work that are not used elsewhere. Wouldn't it be perfectly proper for a national body to take that into consideration and make a differential in New York?

Mr. WAID. I see no objection.

Mr. THOMPSON. Just as in coal mining, where the miners make a differential because of the thickness of the vein.

Mr. WAID. That is an example of what I mean. As I said, conditions vary in different sections, but I think there ought to be some general authority.

Mr. THOMPSON. Have you any instances where work has been parceled out among contractors because of their belonging to the same union? You mention that is one of the causes of your trouble.

Mr. WAID. Yes; I understand there are many cases, but I am not prepared to give specific instances.

Mr. THOMPSON. Do you suppose the members of your profession could give instances of that fact to this commission?

Mr. WAID. Yes; they might be very unwilling to do so.

Mr. THOMPSON. Well, I mean give them confidentially. Will you look into that, Mr. Waid, and see what can be done?

Mr. WAID. Yes.

Mr. THOMPSON. Mr. Waid, you have spoken about the monopoly which exists in the lumber, marble, and tile industries here by reason of agreements with employers. Do you know the reason of such monopolies—that they exist?

Mr. WAID. No.

Mr. THOMPSON. No reason at all?

Mr. WAID. No; except—well, the natural inference.

Mr. THOMPSON. Do you know the reason that moved the workers to make such agreements on the one part and perhaps insist on them in some instances?

Mr. WAID. I assume only that it was self-interest.

Mr. THOMPSON. Well, for instance, take the wood trim; take the evidence as testified to here where nonunion trim is manufactured in some States and shipped in here from mills where women and girls are used in the work and where they have a very low standard of wage for the workmen, such a wage as would not permit a mill worker to keep his family at work in New York City. Have you any opinion as to whether the union would be justified, from the standard of the protection of the workers in this part of the country, in fighting that condition?

Mr. WAID. It would be very natural for them to do so, but it would not justify them in doing so.

Mr. THOMPSON. I am not asking as to the legal question, but ethically.

Mr. WAID. Those wrongs ought to be righted by law and not by the unions of New York.

Mr. THOMPSON. But take, for instance, our system of law in this country, whereby no State can protect itself against commerce of that kind, but where it is bound to permit the free entry into its territory of goods from any other State, no matter what the conditions are. Isn't there, perhaps—or might not there be a moral justification for the union in placing restrictions of that kind,

so as to protect its members against such conditions in other localities or States?

Mr. WAID. I can see why they should attempt it.

Mr. THOMPSON. Even though legally wrong, might they not consider it necessary?

Mr. WAID. I can see why they might seek to protect themselves in such a case.

Mr. THOMPSON. You have spoken about restrictions which the union either openly or passively prescribes for its workers. Have you any instance that those cases in the trades or—

Mr. WAID (interrupting). Well, we often hear of such cases through the workmen, and of course, informally, through my inspectors. I could not state any particular case now from memory.

Mr. THOMPSON. That is a very important matter now, is it not, Mr. Waide?

Mr. WAID. A very serious matter.

Mr. THOMPSON. Now, wouldn't you think your profession, being so closely in contact with that matter and standing as the representatives of the owners and citizens, could produce information that would prevent public opinion showing how it operates—now, this commission has come here to New York for the purpose of making an investigation and getting this information. And now your association, which represents the builders and owners of property, perhaps we may get the same general information we already have, but I wish to say that we would appreciate it if you can present specific cases.

Mr. WAID. I think we can present specific cases.

Mr. THOMPSON. Well, would you see what can be done about that and submit it to the commission?

Mr. WAID. With pleasure.

Mr. THOMPSON. You referred, also, about restrictions about artistic work. What kind of work generally is that, painting, or decorative work, or marble-work, or what?

Mr. WAID. Or, possibly, bronze work, or decorative plaster work, for example. Sometimes decorative work is such as this ceiling work, which might be done in a factory or in a large studio and then shipped to the building ready to erect. And the unions have interfered with the erection of such work, saying the work, according to their rules, must be run in place. In some cases that would be very much more expensive and cause a great deal of hardship. I spoke of that as one specific instance I have known.

Mr. THOMPSON. Well, there must exist many instances of that kind in a large city like New York, and some kind of information could be gathered by your association.

Mr. WAID. I think so.

Mr. THOMPSON. Now, Mr. Waide, I am going to take up the question of graft. I think it is generally understood among people at large that where graft has to be paid, in many instances the owner has to stand the burden. What data have you in regard to that matter, as to whether or not that is borne by the employee, by the labor leaders, or how that is done?

Mr. WAID. I hear of such things through our contractors, but the evidence the architects, I think, could present I know in many a case would not be legal evidence. We hear of many statements which we hear and believe to be perfectly true.

Mr. THOMPSON. They do not come up to the architect through the contractors?

Mr. WAID. To the architects through the contractors; yes, sir. We hear of them, and sometimes through our inspectors, possibly, on the building.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Does the commission desire to ask any questions?

Commissioner GARRETSON. I have a few questions.

Chairman WALSH. Mr. Garretson will inquire.

Commissioner GARRETSON. Mr. Waide, your connection with the building trade is wholly that of overseer? That is, you are not a contractor in any way?

Mr. WAID. Oh, no; interested only in a professional way.

Commissioner GARRETSON. You appear in the construction, either as representative of the owner of the property or those who furnish the money?

Mr. WAID. Yes, sir.

Commissioner GARRETSON. In that capacity what has your experience proven to you in the matter of observations of agreement—that is, trade agreements—is the union or its individual members more prone to break the agreement than is the employer?

Mr. WAID. Well, I have no intimate experience that I could testify to in that connection. My impressions come largely from contractors, and I might be considered a little biased for that reason, or might perhaps be.

Mr. THOMPSON. Naturally, you hear more from the contractor than you do from the laborer?

Mr. WAID. Yes, sir.

Commissioner GARRETSON. Because your contact with him is much closer?

Mr. WAID. Yes, sir; much closer.

Commissioner GARRETSON. Well, has your experience with the contractors led you to believe that every statement that the contractor made is absolutely correct?

Mr. WAID. No.

Commissioner GARRETSON. Now, in the matter of influence that is exercised in this matter, of one contractor taking up and carrying forward the contract of another, you made the statement that the power of the architect was almost nullified by the existing condition, because the contractor felt safe in slighting his work, because of the fact that he could not be replaced. Haven't you a powerful weapon in the ability to influence the letting of future contracts to a man who does those things?

Mr. WAID. Oh, yes; there is certainly a moral weapon.

Commissioner GARRETSON. And a financial weapon?

Mr. WAID. Yes.

Commissioner GARRETSON. Because, if he openly fails to perform on account of his fancied immunity, you can reach him in awarding future bids.

Mr. WAID. The study is so large that the motive is not as strong as it should be.

Commissioner GARRETSON. Well, if your own craft was complete in its organization, it would be as wide as the territory of the contractor. I suppose that would be the natural thing?

Mr. WAID. Our private organization is a professional one, and not unionized, of such as the contractors' association. We do not have any blacklist or credit system or anything of that sort.

Commissioner GARRETSON. Well, it might improve your weapons, at least, if you took up more of their methods.

Mr. WAID. That might be.

Commissioner GARRETSON. Now, you speak of the righting of the conditions referred to in certain mills, and I understood you to say, as an example, that it should be righted by legislation, and not by the union. Do we gather from that that you are in consonance with the opinion of a certain illustrious gentleman who appeared before this commission a few days ago, that the true province of the worker is legislative—that is, Mr. Hillquit?

Mr. WAID. I did not read his testimony, but I think the worker has a right, as much as any other citizen, to influence legislation.

Commissioner GARRETSON. But has he any better right?

Mr. WAID. I don't take it he has any better right to punish the criminal, because that is to be done by due process of law.

Commissioner GARRETSON. But can he not, at the same time, by his practices, rescue the victim of the murderer?

Mr. WAID. Well, he may. That would depend on how that is defined.

Commissioner GARRETSON. Have you any idea what proportion of remedial legislation has been initiated and pressed to adoption by labor unions, both National and State?

Mr. WAID. No doubt it is very large.

Commissioner GARRETSON. Covering child labor, hours that women can labor, the whole safety-appliance system of the railways, sanitation—all of those questions—has not union labor been the originator and the greatest force in compelling the adoption of legislation of that character?

Mr. WAID. I have not looked into the statistics, but I have no doubt that it has been a strong influence.

Commissioner GARRETSON. I think you will find that they have exercised an ideal activity for the betterment of their conditions, as unions.

Mr. WAID. Possibly.

Commissioner GARRETSON. And where it became, from their standpoint, a proper exercise of the function, that they have exercised the legislative power?

Mr. WAID. Yes.

Commissioner GARRETSON. That is all, thank you, Mr. Chairman.

Commissioner BALLARD. Mr. Waid, our counsel asked you if you did not think that the unions in New York have a right to consider the conditions in the factories in other States, and if they found those conditions were insanitary or unwholesome have a right to boycott the material in those factories. I think you replied that you thought the unions would not have a right to do that, but they should do it through legislation and the State itself.

Mr. WAID. I can see that it would be very natural for them to do so if they had it in their power, but it is not the proper thing.

Commissioner BALLARD. Do you think if the unions could regulate the conditions in other States they might also do it in other countries? For instance, the marble industry in France, rugs in Persia, etc. Don't you think the unions in New York would have a pretty big job on their hands before they got through?

Mr. WAID. Rather; yes.

Commissioner BALLARD. You do not think they ought to have that right?

Mr. WAID. I have not any interest in that, nor can I see that they would have any specific motive for doing it.

Commissioner BALLARD. I understood you to say that the unions did not encourage trade schools and vocational education in the schools. Do you find that is true in New York?

Mr. WAID. I am afraid it is true in New York. That is my impression and belief.

Commissioner BALLARD. The commission will investigate that later, and I will not interrogate on that any further now.

Commissioner LENNON. Mr. Waid, let me see if I can get a little further information on this alleged restriction of output.

You have been engaged in the industries a great many years, and, of course, know the men. What is the productivity of the workmen on the building now as compared with when you first started as an architect?

Mr. WAID. Well, stated in percentages?

Commissioner LENNON. Approximately. In some way that we will get an understanding of it.

Mr. WAID. I have not undertaken to investigate that definitely. It is simply more a matter of knowing that men are not permitted to lay as many square feet of tile as they could reasonably do if they would try to put in a full day's work. I might answer your question by giving you one instance which occurs to me that I remember many years ago, at least 25 years ago, seeing brick masons who said they could lay from 2,500—from 2,000 up to 3,000. A man could lay 3,000 if he had a straightaway—he could lay 3,000 brick. If you can get the regulation of the union to-day you will find that it is probably not half that. I am not sure that they have a printed regulation, but I am sure from information that I have that they limit the number.

Commissioner LENNON. Do you believe the Woolworth Building over here could have been put up 25 years ago in the same length of time, with the same number of people that put it up when it was erected?

Mr. WAID. That might not be true and it might be true. It is hardly a fair comparison, because methods have changed in many ways; machinery and facilities of many sorts have changed.

Commissioner LENNON. I don't know as to all trades—that no man can know—but I know as to my own. Can there be any restriction of output in which the contractors are not also a party to a greater or less extent?

Mr. WAID. Why, yes. It seems to me the unions can make rules without consulting the contractors at all, and the contractors are powerless to force a man to do more in a day than the unions permit him to do.

Commissioner LENNON. In the case you have heard of you think it is purely a matter of the union and not with the cooperation of the contractors?

Mr. WAID. Yes, sir.

Commissioner LENNON. Mr. Ballard started to ask you something about trade schools. That is a subject that is dear to my heart. Do I understand that you believe the trades unions of New York City are opposed to vocational education and industrial training?

Mr. WAID. I am not prepared to be cross-questioned on that statement, because I have not the intimate knowledge or expert knowledge on that particular subject that this commission will want. It is only an impression that the architects have, and I believe it is general, that we have not as good facilities as I would like to see in the way of trade schools, and that the unions have discouraged them. That is the general statement. I don't know whether

their attitude is different now from what I have supposed it to be, or what it has been in the past.

Commissioner LENNON. Have you ever heard of the Society for the Promotion of Industrial and Vocational Education, the national society?

Mr. WAID. Yes, sir.

Commissioner LENNON. Do you know whether there is such a society in existence?

Mr. WAID. I have heard of it, I believe.

Commissioner LENNON. Are you aware of the fact that some of the most active spirits in that society are trade-unionists?

Mr. WAID. As I say, I have not given any—

Commissioner LENNON (interrupting). Well, I am asking these questions because I want to call your attention to a little wider investigation of the subject. Are you aware of the fact that the typographical union has a trade school?

Mr. WAID. I have no doubt that they have, but I have not had occasion to become specially interested in it.

Commissioner HARRIMAN. Mr. Waid, I would like to know from your point of view what is the chief weakness, if there is any, in trades-unionism from the point of view of the architect.

Mr. WAID. It has always seemed to me that the chief difficulty, the chief injustice, arises out of forcing a man into the union in order to get a job and of fixing a level of the wages so that the unskilled and the skilled man in one trade gets the same, and yet I have been looking at it from the union man's point of view and I don't quite see how he is going to avoid it. He has gone into the thing, got into that difficulty, into that injustice, and I sympathize with his point of view very strongly, but I still hope that some way can be seen out of that situation, which certainly works a gross injustice.

Commissioner HARRIMAN. Is there any other?

Mr. WAID. Well, the limitation of the amount of work to be done in a day, instead of leaving that to the ambition of the workmen, is another very serious matter that I mentioned. That comes with the points that are uppermost in my mind in connection with unions.

Commissioner O'CONNELL. From the statement you read it impressed me with the idea that you believe the general proposition, the best services are secured on dealings with the union because it had within it the best class of workmen and skill?

Mr. WAID. Yes.

Commissioner O'CONNELL. As a general proposition, you would be in favor of dealing with unions because of that particularly?

Mr. WAID. Yes.

Mr. THOMPSON. But you have a sort of a hesitancy that there is a restriction of the possibilities of bringing a higher skill or greater art out of the mechanic from some inherent source?

Mr. WAID. Yes. There are often men in artistic trades who for their own reasons choose not to belong to a union. They may not be in sympathy with it. They are discriminated against.

Commissioner O'CONNELL. Has the architect worked out any way approximately showing the number of days and weeks and months in a year the men in the building trades are employed?

Mr. WAID. Here in New York?

Commissioner O'CONNELL. For instance—

Mr. THOMPSON. Yes; or any place else, the average as to the continuation of work. For instance, taking out the lost time a man may have moving from job to job and bad weather would stop work in certain periods of the year, and other conditions.

Mr. WAID. We take that into consideration in allowing the time to construct a building.

Commissioner O'CONNELL. Well, do you believe the average work of building tradesmen would be certainly 10 months in the 12, or a year?

Mr. WAID. Well, I could not say as to what the average is. I suppose it is a matter of statistics that I have not at hand as to how much time each man misses. It varies a little, of course, but you refer to New York City.

Mr. THOMPSON. Do you suppose the incentive of steady employment on the part of the workman would invite his better effort toward his employer in production?

Mr. WAID. Yes.

Commissioner O'CONNELL. The fact that he felt he was going to be steadily employed if he gave better results to his employer, isn't that a stimulant to urge him on to greater production?

Mr. WAID. That is the one good of it as it stands now to me that the man who has the incentive to excel that he will keep his job when business is slack.

Commissioner O'CONNELL. The employer who makes a better situation for him, better treatment as to everything that goes to make his job more agreeable, will invite for himself the best workmen and secure for himself the best results?

Mr. WAID. Yes. In many cases they will carry him over when there is practically nothing to do, and keep him on salary. But those are exceptional cases, and among others, I think, that incentive is almost lost sight of.

Commissioner O'CONNELL. These charges of combination between the workmen to prevent the coming into the city of certain manufactured materials, the combination between the men and boss to prevent certain competition on both sides. Is there not a competition of that same character in your profession? I mean with the architects coming into New York City?

Mr. WAID. No; not that I am aware of.

Commissioner O'CONNELL. Haven't you any hesitancy or jealousy toward the outsider coming into New York?

Mr. WAID. There is something of that sort in Canada, but not in the United States.

Commissioner O'CONNELL. In Canada; it has not reached here yet?

Mr. WAID. No.

TESTIMONY OF MR. W. A. ROWAN.

Mr. THOMPSON. Will you give us your name, address, and position, please?

Mr. ROWAN. W. A. Rowan, 30 Church Street, New York City; contractor.

Mr. THOMPSON. Are you in business for yourself or with a firm?

Mr. ROWAN. With the firm of James Starrett & Co.

Mr. THOMPSON. They are building contractors?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. Is their work mostly in New York or do they do work everywhere?

Mr. ROWAN. Throughout the United States and Canada.

Mr. THOMPSON. Where is the principal work that they do? Located here, or generally around the country?

Mr. ROWAN. Generally throughout the country.

Mr. THOMPSON. What I am asking is, Mr. Rowan, do you do a great deal of work in New York City or not?

Mr. ROWAN. Very little.

Mr. THOMPSON. Have you had anything to do with jurisdictional fights?

Mr. ROWAN. I have.

Mr. THOMPSON. Personally, where have you had trouble in that respect?

Mr. ROWAN. Well, I don't know that it is confined to any one locality; it is generally.

Mr. THOMPSON. Have you had any knowledge or made a study of the methods of settling jurisdictional fights that were inaugurated in this city about 10 years ago by the employers' association, called "The New York arbitration plan?"

Mr. ROWAN. I don't know anything about it.

Mr. THOMPSON. You don't know anything about it?

Mr. ROWAN. No.

Mr. THOMPSON. Do you know the method which is now used in New York City with reference to the settlement of jurisdictional disputes?

Mr. ROWAN. No; I am not familiar with it.

Mr. THOMPSON. As I understand you to say, Mr. Rowan, in New York City, where a jurisdictional dispute arises now, that committee of the employers' association takes that matter up and relies on the respective unions to meet with their committees and tries to settle the matter, and then they suggest, if they can not settle it by conference, the matter go to a specific arbitration either with an equal number or with an umpire, preferably with an umpire; that in case that can not be done, or it is refused by the unions, then they would say to the union they will declare a lockout in those respective trades so far as they work for members of their association. That we understand to be the present situation in New York City, and I was advised that you were aware of that matter and had made some study and had some comments on it?

Mr. ROWAN. No, I made no—we are not members of the Building Trades Employers' Association, so I have no personal knowledge.

Mr. THOMPSON. Well, have you made any study of it so as to have any opinion as to whether or not it is a good method of settling jurisdictional disputes or not?

Mr. ROWAN. I don't think that it is.

Mr. THOMPSON. You don't think it is?

Mr. ROWAN. No. It merely disposes of it, if it disposes of it at all, for the immediate locality.

Mr. THOMPSON. Then you believe that there should be some body to dispose of it, not only for the locality but for the country, so far as can be?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. Some objection to that method of settling such disputes has been raised here by witnesses. They said, for instance, that in New York City some machines or implements are used in the construction of buildings and the preparation of materials which are not used elsewhere. They are used here because of the greater quantity of work that is done here. Don't you believe that a national body could make a differential or allowance in such specific instances?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. Do you think that the fact of the use of that proceeding would mitigate against the decision of disputes by a national body?

Mr. ROWAN. I don't see why it should, not if it is treated on its own basis. It only exists here. It would not conflict with anything anywhere else.

Mr. THOMPSON. The fact the large unions, like the carpenters' union, and the national union, have objection to doing the work for the metal trades building, wouldn't that be within that proposition?

Mr. ROWAN. That is national, perhaps.

Mr. THOMPSON. Have you studied the method of settling these disputes by the American Federation of Labor in the building trades department?

Mr. ROWAN. Came in contact with it; yes, sir.

Mr. THOMPSON. Do you think that method a good way of settling those disputes?

Mr. ROWAN. It would be were all trades affiliated with the American Federation of Labor and they had some means of enforcing their decisions.

Mr. THOMPSON. Well, are the employers consulted, or do they have any power of decision over jurisdictional matters by the building trades department of the American Federation of Labor?

Mr. ROWAN. As a general proposition I don't think that they are consulted.

Mr. THOMPSON. Then if they are consulted, have they any voice in the final decision?

Mr. ROWAN. No; no more than influence.

Mr. THOMPSON. How do you think a commission could be formed to pass on these matters for the country?

Mr. ROWAN. How it should be formed?

Mr. THOMPSON. Yes.

Mr. ROWAN. You mean how it should be created?

Mr. THOMPSON. No; not how it should be created, but what should be its constituent elements with reference to employees or employers or the public?

Mr. ROWAN. Well, it should be a commission composed of representatives of the employees, of the employers, and of what we term the owners; that is, the three parties at interest in the building proposition.

Mr. THOMPSON. Well, would your idea be to have a changing commission all the time, or a fairly permanent body?

Mr. ROWAN. Why, a fairly permanent body. That is to say, not subject to short terms of service.

Mr. THOMPSON. Then your owner would naturally have to be, in that case, a member of the general public?

Mr. ROWAN. Yes. It should be men who are not directly interested in the result of their decisions.

Mr. THOMPSON. Do you think it would add any weight to such a commission if it were formed at the instance of, say, the National Government?

Mr. ROWAN. I do.

Mr. THOMPSON. There is no way of enforcing the decisions in labor disputes except by moral suasion, is there?

Mr. ROWAN. No.

Mr. THOMPSON. You can not kill twenty or fifty thousand men because they did not happen to work in a certain way, do you think?

Mr. ROWAN. No, sir.

Mr. THOMPSON. Then, do you think there is any other way or any way other than that named which would have more moral influence than the institution of such a commission at the request or at the command of the National Government?

Mr. ROWAN. Not unless the labor organizations were consolidated into one organization and settled their troubles inside of their organization.

Mr. THOMPSON. Well, a suggestion of that method of the carrying out of that idea wherever it is possible could generally be done by this national commission, could it not?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. I mean, it would not necessarily have to assume all the work itself, would it?

Mr. ROWAN. No.

Mr. THOMPSON. Have you made any study of the possible settlement of jurisdictional disputes by the amalgamation of unions into basic industries?

Mr. ROWAN. Well, the amalgamation of the unions, of course, would eliminate a great many jurisdictional disputes.

Mr. THOMPSON. How could that be done, taking your present building industry as it is at present constituted? What specific amalgamation have you in mind that might accomplish the eradication of jurisdictional disputes?

Mr. ROWAN. Well, one method would be the dissolving of the different unions into what is called the basic trades or original trades.

Mr. THOMPSON. For instance, what are the basic trades?

Mr. ROWAN. For instance, on masonry all classes of unions that handle that class of material. For instance, brickwork, stonework, granite work, marble-work, concrete work, etc.

Mr. THOMPSON. Tile laying?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. Practically any trade that would use stone or cement?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. What other basic trades are there?

Mr. ROWAN. Well, steel, carpenter, and plumber, and steam fitter, or electricians.

Mr. THOMPSON. For instance, what I would like is the amalgamation just as you gave it as to the stone trades. What unions, say, like plumbers and steam fitters, could be amalgamated to become a basic trade-union? What would the plumbers' basic trade be and what other present trade would it include?

Mr. ROWAN. Well, as to that I don't know outside of the three trades—the plumbers, steam fitters, and electricians.

Mr. THOMPSON. You think those three could be amalgamated, could they?

Mr. ROWAN. Yes, sir.

Mr. THOMPSON. And what other basic amalgamations could be made, if you know, in the building industries?

Mr. ROWAN. The structural steelworker, the ornamental ironworker, and sheet-metal worker.

Mr. THOMPSON. You might follow that along with the others.

Mr. ROWAN. I haven't them all in mind.

Mr. THOMPSON. Have you had any experience, Mr. Rowan, with contractors' associations?

Mr. ROWAN. Very little.

Mr. THOMPSON. Have you any views with reference to their effect in building matters, particularly with reference to industrial questions—labor questions?

Mr. ROWAN. Well, we don't belong to the contractors' associations for the reason that they are purely local in character, and it would involve us in places other than a place where there might be a dispute that would be settled by local conference. For that reason I know very little of their practices.

Mr. THOMPSON. Why doesn't your firm do much work in New York?

Mr. ROWAN. Well, competition, I suppose.

Mr. THOMPSON. Any other reason?

Mr. ROWAN. No; I don't know of any.

Mr. THOMPSON. It has been stated here, Mr. Rowan, before this commission at this time, and also before the commission in Washington when they took up the question of collective bargaining, that to get the best results in labor mat-

ters there should be a very strong organization of employers and a very strong organization of workmen.

Mr. ROWAN. And a very strong fight.

Mr. THOMPSON. Well, we had it up yesterday and it was suggested that each would be in fear of starting a fight.

Mr. ROWAN. No.

Mr. THOMPSON. You don't believe in that?

Mr. ROWAN. No.

Mr. THOMPSON. Why don't you believe in it?

Mr. ROWAN. Well, take, for instance, the present trouble, the jurisdictional disputes, as one illustration.

Mr. THOMPSON. Well, how would the trouble over jurisdictional disputes affect that question, in your opinion?

Mr. ROWAN. Well, I assume if one organization took one point of view and the other organization took the other you would have a deadlock and you would have no controlling power.

Mr. THOMPSON. Well, the chances are that where you get a strong organization on both sides, and they fear each other, that they would come to some agreement; and I understand that is the reason why the people support that view. If that would occur—that strong organization on both sides—and would lead to agreement by which the source of dispute would be settled, then it would be a good thing, wouldn't it?

Mr. ROWAN. If it were made national it would be better than what we have.

Mr. THOMPSON. Even locally it would be good if it would effect that result, wouldn't it?

Mr. ROWAN. It would for the local people.

Commissioner BALLARD. I gathered from what you said that you are not members of the employers' association of New York City?

Mr. ROWAN. We are not.

Commissioner BALLARD. You were just saying, speaking about the association of employers on one hand and the association of unions on the other, perhaps not being the best conditions, would not make the best condition. What would you consider better?

Mr. ROWAN. The board of control that I referred to awhile ago.

Commissioner BALLARD. Do you feel that if the unions are organized the employers should also be organized?

Mr. ROWAN. Well, I don't know.

Commissioner BALLARD. You don't think it is necessary?

Mr. ROWAN. I don't think so.

Commissioner BALLARD. You don't think, then, that the unorganized employers, where a jurisdictional dispute would occur between two unions working for him—how is he going to protect himself at all if they could deadlock him for an indefinite time?

Mr. ROWAN. Of course, it is possible that happens for a period.

Commissioner BALLARD. Well, wouldn't he be better protected if he were a member of the employers' association, so that the unions would not stand for that?

Mr. ROWAN. If it were a national association, so that the decision would bind all over the country; but if it were a local association, so it would only bind in that particular locality, he might be in more trouble, coming in contact with other conditions.

Commissioner O'CONNELL. To follow up that thought, it ought to be of a national character, so it would apply all over the country?

Mr. ROWAN. Yes, sir.

Commissioner O'CONNELL. Do you think the workingmen themselves ought to decide their own jurisdictional questions, since they are the ones directly interested?

Mr. ROWAN. To a large extent I think that the question as between two trades ought only to be determined by those who are skilled in the trades involved.

Commissioner O'CONNELL. The American Federation of Labor, the recognized organization in the country, a decision of that body on the adjustment of a trade dispute—jurisdictional dispute—would be acceptable to the building employers?

Mr. ROWAN. Acceptable to us.
(Witness excused.)

TESTIMONY OF MR. C. G. NORMAN.

Mr. THOMPSON. Will you please give us your name, address, and business?

Mr. NORMAN. Christian G. Norman, Winfield Junction, Long Island.

Mr. THOMPSON. Your business, please?

Mr. NORMAN. Manufacturer of fireproof doors and windows.

Mr. THOMPSON. Are you a member of the association of manufacturers of metal-covered doors and windows?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Have you any office in that association?

Mr. NORMAN. Not at present.

Mr. THOMPSON. Have you had?

Mr. NORMAN. Yes; I have been president.

Mr. THOMPSON. For how long a time were you president?

Mr. NORMAN. About three years.

Mr. THOMPSON. When did your term expire?

Mr. NORMAN. About seven years ago.

Mr. THOMPSON. Seven years ago?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. How long have you been a member of that association?

Mr. NORMAN. Since its inception, about 1903.

Mr. THOMPSON. Have you held any other position outside of president?

Mr. NORMAN. I have in the greater association of the Builders Trades Employers' Association, but not in the association of manufacturers of metal-covered windows and doors.

Mr. THOMPSON. What office did you hold in the larger association?

Mr. NORMAN. Chairman of the board of governors.

Mr. THOMPSON. You held that now?

Mr. NORMAN. No, sir. I was chairman from April, 1910, to April, 1912, two years.

Mr. THOMPSON. How long have you been a member of that association?

Mr. NORMAN. Since 1903, when it was formed.

Mr. THOMPSON. You did not hear the testimony of Mr. Eldlitz yesterday, did you?

Mr. NORMAN. No, sir.

Mr. THOMPSON. Do you know of his views?

Mr. NORMAN. Very well.

Mr. THOMPSON. Are you and he in accord as to conditions?

Mr. NORMAN. On these subjects?

Mr. THOMPSON. I mean opposed to the old arbitration plan?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. And as to the present method of handling disputes in this city, then it is not necessary to go over the same ground with you?

Mr. NORMAN. No, sir.

Mr. THOMPSON. Have you made any study, or are you acquainted with the cost, if there has been any to the public, say, in the city of New York, take the public and the owners of buildings, caused by jurisdictional disputes?

Mr. NORMAN. Since 1903 they have been very slight. Prior to that time they were very expensive.

Mr. THOMPSON. Has the reason of their having been very slight been caused by the arbitration plan which was then inaugurated?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. In your opinion, it has worked out to the great lessening of jurisdictional trouble so far as the owner is concerned?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. In your opinion, that has worked out to the great advantage of your organization?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. So far as the order is concerned?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. And by settling disputes without strikes and lockouts. In regard to the dispute that was settled by this method in New York between the carpenters and the sheet-metal workers in reference to inside trim, I understand there is a decision on that question by Judge Gaynor, in which the carpenters were awarded the work?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. What is your opinion in reference to the relative efficiency of carpenters and sheet-metal workers who are performing the work?

Mr. NORMAN. First, I would like to explain to you how that decision was arrived at. That decision is not what we would term a final arbitration. The arbitration plan provided that where two unions contested for a certain piece of work the executive committee should determine if one or the other of the unions was in possession. If the executive committee found that they were not in possession, either one union or the other, they should send it to a board of arbitration with an umpire to determine who should determine who was entitled to the work. The executive committee in this case failed to agree, and the plan also provided that where they did fail to agree they should select an umpire. In that case Judge Gaynor was selected as the umpire.

Mr. THOMPSON. In accordance with the plan?

Mr. NORMAN. In accordance with the plan, because the executive committee failed to agree. The papers in the case—there were many motions and witnesses testified—one motion being that the work was in possession of the metal workers, and that the work was in possession of the carpenters' side. The matter was sent to Judge Gaynor, but there was a slip. We learned of it afterwards, that a representative of the carpenters and also a representative of the sheet-metal workers appeared before Judge Gaynor and requested him to settle this question once and for all as to who was to do the work. That was not in accordance with our plans and was not the question that was submitted to the judge, but nevertheless he wrote his decision. At that particular time the carpenters had been suspended by the arbitration plan because of their action on the Alvin Court job and some other jobs in the upper section of the city. The sheet-metal workers appealed and their appeal was laid over until the carpenters were reseated. The carpenters' application to be reseated in the plan was in, and 30 days thereafter the plan ceased to exist. After the plan ceased to exist the employers' association took the position, so as not to cause chaos in the city, to see that all decisions rendered during the time of the plan should be maintained until revised by competent body of the employers and employees. Therefore the carpenters began this work.

Mr. THOMPSON. It is your contention, then, that the only thing submitted to Judge Gaynor was which union was in possession of the work?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. And that he undertook to decide, however, which union—

Mr. NORMAN. Should perform the work.

Mr. THOMPSON (continuing). Should perform the work?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Was best fitted for the work?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Taking his decision as actually made, in your opinion, which organization was best fitted to do the work?

Mr. NORMAN. I believe the carpenters were best fitted to perform the work.

Mr. THOMPSON. Then you agree with Judge Gaynor's decision?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. And the sheet-metal manufacturers?

Mr. NORMAN. The trim manufacturers.

Mr. THOMPSON. Is your opinion in that regard generally concurred in by the manufacturers?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Then there is an agreement, you might say, an opinion at least between the manufacturers' association and the carpenters in reference to who should do that work?

Mr. NORMAN. There is no agreement, but there is an opinion.

Mr. THOMPSON. I mean it is the consensus of opinion?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. In case that that work had been given to the sheet-metal workers to do, would it throw members of the carpenters craft out of employment?

Mr. NORMAN. Not many.

Mr. THOMPSON. Would it have thrown them out if that work was—

Mr. NORMAN. No, sir; they could have gone to other carpenters' work.

Mr. THOMPSON. I understand.

Mr. NORMAN. Temporarily they might have been out of work; yes, sir.

Mr. THOMPSON. Because they would—the wooden trim would have been set by the sheet-metal workers?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. And this metal trim replaced the wooden trim?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. What class of mechanics did your company employ in the manufacture and preparation of metal trim?

Mr. NORMAN. Carpenters and sheet-metal workers and painters.

Mr. THOMPSON. What proportion about of each?

Mr. NORMAN. About 10 carpenters to 1 sheet-metal worker, and 1 painter to 25 carpenters.

Mr. THOMPSON. I mean, take, for instance, the factory end of it first.

Mr. NORMAN. That is the factory end I am speaking of.

Mr. THOMPSON. The work is all set up by carpenters?

Mr. NORMAN. All set up by carpenters.

Mr. THOMPSON. Is there a difference in the wages per day paid to sheet-metal workers and carpenters?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. What are the wages?

Mr. NORMAN. For a carpenter in Manhattan, they receive \$4 a day for shop work; sheet-metal workers \$5. Outlying districts, carpenters, \$3.78; sheet-metal workers, \$5 a day.

Mr. THOMPSON. Would the less price paid to carpenters in wages be an influencing factor in your arriving at your opinion that carpenters were best fitted to do that work?

Mr. NORMAN. No, sir; because in erecting the work they both receive the same wage.

Mr. THOMPSON. I mean the preparation of the work?

Mr. NORMAN. The preparation of the work was not involved in the case.

Mr. THOMPSON. It was not?

Mr. NORMAN. No, sir. Only the erection.

Mr. THOMPSON. In reference, Mr. Norman, to the settlement of jurisdictional disputes, you have heard what has been testified to here this morning, haven't you?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. In reference to that matter?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Do you believe that a national body could settle a jurisdictional dispute or all jurisdictional disputes better than a local union?

Mr. NORMAN. No, sir.

Mr. THOMPSON. What are your reasons for your opinion?

Mr. NORMAN. Every local in every city of any size has particular conditions. The employers start out with a certain basic proposition for the manufacture and erection of their work. They do not agree over the country—and what is done in New York City would not fit in San Francisco or in Chicago.

In New York, at the inception of the proposition prior to 1903, jurisdictional decisions were fought for and won by strike, and a certain line was established, a certain jurisdictional claim over certain materials. In 1903, in the formation of the plan it was not the purpose of trades employers' associations to take away from any organization what it has won up to that time, but we wanted to govern the conditions in the future along with the labor organizations. So we accepted those decisions when the labor men would come before the committee and tell us very plainly what the price was, what was paid for it. Also, we knew where there were strikes that lasted for weeks between the labor organizations without any—well, the employer or the owner was never consulted; he was no part of it at all. He merely has to stand still and wait until they get through, and it was a question of seeing who could get the most strength on each side. We accepted them and went along, and from that point handled every jurisdictional question that came up. I don't claim there was exact justice done; perhaps that point never will be reached, but the majority were satisfied that it was the best that could be done under the circumstances.

To get the work and stretch it over the whole country, the conditions in New York are one thing, and we might go to a smaller town in the West where there were not any mechanics of a particular craft. For instance, you take in our going over the country you will find that a bricklayer is a plasterer; you will find that the iron man is a metal lather, and so on, through all of the craft; you will find that the men take up more than one specific branch, the same as they do in New York. That is one reason why the mechanic in New York is more speedy in doing his work than the man is outside of New York, because

he follows one particular thing; he is like a piece of machinery, always doing one thing. I do not believe that any decision you make covering the country would be of any use whatsoever.

Mr. THOMPSON. You have heard what the last witness said, at least Mr. Rice?

Mr. NORMAN. Mr. who?

Mr. THOMPSON. Mr. Rice.

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Don't you believe that an actual body dealing with these conditions all over the country could properly handle these jurisdictional disputes?

Mr. NORMAN. That could be done to a certain extent, but not the whole situation.

Mr. THOMPSON. Are you acquainted with the methods of arriving at mining wages in the bituminous coal fields?

Mr. NORMAN. That is a different proposition.

Mr. THOMPSON. There are cases there where there are more than 100 differentials?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Even in one State?

Mr. NORMAN. Yes, sir; but in a building we have a different condition that you have in a mine or in any other one specific proposition. In a building you are bringing forty-odd trades together to put that building up, and each one has to fit into with the other. Now, you might reduce the number of unions. I don't think it would do very much good.

Mr. THOMPSON. That is referring to the basis—amalgamation of the basic trades?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Why would not that do good?

Mr. NORMAN. The more unions you have the more chances you have for leaders.

Mr. THOMPSON. What value is there to that?

Mr. NORMAN. You know, once they become leaders, they have to remain leaders, whether they are reelected or not.

Mr. THOMPSON. Is that the only reason that you have?

Mr. NORMAN. No. The specializing of it is really what it means—means more efficiency from the workmen themselves.

Mr. THOMPSON. What is there in the amalgamation to prevent specializing? Take the needle trade in New York City; it is done here in New York City.

Mr. NORMAN. There we have a case of set-up machinery and see how many you can kick out in a day—how fast the mechanic can make the machine run.

Mr. THOMPSON. Each local is a local of a particular kind of trade?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. A cutter is a cutter and he belongs to a cutters' local, and he can not sew and he can not run a machine?

Mr. NORMAN. No, sir.

Mr. THOMPSON. A machine man can not cut, nor can the cutter sew?

Mr. NORMAN. No, sir.

Mr. THOMPSON. And that is ramified into many other departments, for which they have separate locals?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Yet the garment workers are amalgamated into one trade, and do settle any disputes, as I understand it?

Mr. NORMAN. Don't we have the same thing with their district councils and from that into the other council that represents the A. F. of L., and the building trades council of the A. F. of L., and the A. F. of L. itself. I think you are getting them all together.

Mr. THOMPSON. From there into the national union, where they meet together in the same convention?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. After all, the international has much greater force?

Mr. NORMAN. Well, you might take your tile, mosaic, and marble, and say they all belong to one organization. In a great many cases they have the one employer, still you would lose those leaders, and you would have to take care of them.

Mr. THOMPSON. Assuming for a moment—forget about the leaders—assume that you haven't got them.

Mr. NORMAN. You will never be without them.

Mr. THOMPSON. Don't take that into consideration for a moment. Then there could be an amalgamation?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. Then it would be a good thing?

Mr. NORMAN. I believe it would.

Mr. THOMPSON. It would help out the jurisdictional disputes?

Mr. NORMAN. Yes, sir.

Mr. THOMPSON. That is all I have, Mr. Chairman.

Chairman WALSH. Are there any questions?

Commissioner GARRETSON. There is just one question, Mr. Chairman. Do leaders in other businesses suffer from the same weakness?

Mr. NORMAN. Somewhat.

Commissioner GARRETSON. That is all.

Chairman WALSH. Mrs. Harriman, do you want to ask any questions?

Commissioner HARRIMAN. No, thank you.

Chairman WALSH. Thank you very much, Mr. Norman.

Call your next witness, Mr. Thompson.

Mr. THOMPSON. Is Mr. Kelso here?

TESTIMONY OF MR. ALEXANDER KELSO.

Mr. THOMPSON. What is your name and residence, please?

Mr. KELSO. Alexander Kelso, 1989 Prospect Avenue.

Mr. THOMPSON. What is your business, Mr. Kelso?

Mr. KELSO. Carpenter.

Mr. THOMPSON. Are you working at the trade?

Mr. KELSO. At the present time.

Mr. THOMPSON. You are a member of the union?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. How long have you been a member of the union?

Mr. KELSO. Twenty-three years—twenty-three or twenty-four years.

Mr. THOMPSON. Have you ever held an official position there?

Mr. KELSO. I have been business agent for six years.

Mr. THOMPSON. When?

Mr. KELSO. 1907 to August, 1913.

Mr. THOMPSON. You are well acquainted with the jurisdictional disputes between the carpenters and the sheet-metal workers?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. Upon what basis do the carpenters claim the right to the erection of metal trim?

Mr. KELSO. In the evolution of the sheet-metal workers taking the place of wood, the same methods employed in the construction of the wood is applied to the construction of the metal. Putting on trim and the like. A carpenter can readily adapt himself to the method, such as trimming this door or this wall; a carpenter can put it up with metal readily. The skill required is for hanging a door, for instance, and that can be done by the carpenter; the carpenter can hang the metal door. Also in the erection of the trim.

Mr. THOMPSON. Do they need to use different tools?

Mr. KELSO. The carpenter uses the same tools he does in the erection of wood. In the cutting of the metal inside of the folding—the saw to cut wood he can file to cut the metal. He does not give it such a rake.

Mr. THOMPSON. Mr. Norman has stated here that in case that work had been granted to the sheet-metal workers it would have displaced a number of carpenters.

Mr. KELSO. It would have put a great many of our membership out of work.

Mr. THOMPSON. They say it is taking the placing of metal trim out of the hands of the carpenters.

Mr. KELSO. It would put a lot of carpenters out of work.

Mr. THOMPSON. It would put a lot of carpenters out of work who had theretofore been putting up wooden trim inside of buildings?

Mr. KELSO. Large buildings now in the course of construction are all sheet-metal trim. The Consolidated Gas Building, the Woolworth Building, it is all metal trim throughout. A metal trim around the door and metal picture moldings; in fact, it is all out of business.

Mr. THOMPSON. Have the sheet-metal workers done any of that work?

Mr. KELSO. Very little of it when you take into account the amount of introduction of material in the city.

Mr. THOMPSON. What are the reasons, if you know, that influenced Judge Gaynor in making a decision in favor of the carpenters?

Mr. KELSO. The judge gave an exhaustive hearing to the subject matter, and full consideration to both sides, and I believe he gave his decision on the merits of the question.

Mr. THOMPSON. There has been a contrary position taken by the sheet-metal workers' convention.

Mr. KELSO. Giving the jurisdiction of that work to the sheet-metal workers.

Mr. THOMPSON. What were the reasons for that decision?

Mr. KELSO. I can not tell.

Mr. THOMPSON. You don't know?

Mr. KELSO. No.

Mr. THOMPSON. Were you there at the time of the convention?

Mr. KELSO. I was not there at the time of the convention.

Mr. THOMPSON. What reasons, generally, are put forward by the carpenters for the right to do that work?

Mr. KELSO. I will explain that it is the adaptability of the mechanic, of the capenter, to put this material up and to conform it with the wood. He can readily adapt himself to the metal, and he cuts the molding in a miter box the same as he does the wood, and the same methods are employed in making that joint in the metal as in the wood.

Mr. THOMPSON. What reasons, if any, are put forward by the sheet-metal workers for their right to do that work?

Mr. KELSO. Because it is a metal.

Mr. THOMPSON. Is that the reason?

Mr. KELSO. Only reason I know.

Mr. THOMPSON. Only reason you have heard of?

Mr. KELSO. Only reason I have heard of.

Mr. THOMPSON. What proportion, if you know, of the carpenters in New York City are employed in putting up inside trim?

Mr. KELSO. You mean in sheet metal?

Mr. THOMPSON. Yes.

Mr. KELSO. I would say there would be 50 per cent of our membership.

Mr. THOMPSON. Fifty per cent.

Mr. KELSO. Yes, sir.

Mr. THOMPSON. What is the membership of your organization?

Mr. KELSO. In the greater city—in the five boroughs—the membership is 15,000. In Manhattan we may come down—well, to five or six thousand.

Mr. THOMPSON. What are the hours and wages of the carpenters in this city, if you know?

Mr. KELSO. The hours are eight hours a day and four hours on Saturday, making a total of 44 hours per week. The wages are 62½ cents an hour, making \$5 a day and \$2.50 on Saturday, or \$27.50 per week.

Mr. THOMPSON. What proportion of the carpenters, if you know, in New York City are organized and what proportion unorganized?

Mr. KELSO. I would consider the craft pretty well organized. There are a few men that are not organized. We are rapidly organizing the city, but there is an influx of immigrant carpenters, so that we have got always to start over and organize them, so that we have got a continual unorganized force in our midst that we rapidly take into our organization and make union men.

Mr. THOMPSON. That is more particularly true, is it not, here than other places?

Mr. KELSO. This city especially; it is the greatest seaport.

Mr. THOMPSON. What is the regularity of the employment of carpenters? About how much work per normal year will they average?

Mr. KELSO. In a normal year, I should say 10 months; last year, more. This year, from last fall up to the present time, we have had more idle carpenters than in the normal year, owing to the slackness of building.

Mr. THOMPSON. During the normal busy season is the membership pretty well employed?

Mr. KELSO. Pretty well employed. Just at this time we ought to have no idle members. The slack season is probably around January and February.

Mr. THOMPSON. Have you any carpenters idle now?

Mr. KELSO. We have now quite a few carpenters idle.

Mr. THOMPSON. What are the benefits which your union provides for its members in regard to sickness and accident and death and being out of work?

Mr. KELSO. The carpenters' union formerly was two bodies—the United Brotherhood and the Amalgamated Carpenters. At the beginning of this year, through a plan adopted by both organizations, we became one, or solidified. Now, in the Amalgamated he carries quite a great number of benefits not carried in the United Brotherhood, but in that plan—it is all known as the United Brotherhood of Carpenters for legal purposes—but this plan of the beneficiary system is still maintained with the carpenters' organization, or with the Amalgamated section.

Mr. THOMPSON. The benefits, or rather these assessments, are they compulsory or voluntary?

Mr. KELSO. The man joins the organization and——

Mr. THOMPSON (interrupting). When he becomes a carpenter does he become entitled to these benefits——

Mr. KELSO (interrupting). No; it is optional on the carpenter whether he wants to go into this beneficial system or not. He may go into a section where he does not pay as much dues, but he does not receive those benefits.

Chairman WALSH. The commission will now stand adjourned until 2 o'clock this afternoon, to meet upstairs in the council chamber at 2 o'clock sharp.

(At 12.30 o'clock of Tuesday, May 26, 1914, a recess was taken until 2 o'clock p. m.)

AFTERNOON SESSION—2 P. M.

Chairman WALSH. The commission will please be in order.

(At the instruction of the commission some letters, etc., were received and marked "Morton Exhibit 1, of May 26, 1914.")

TESTIMONY OF MR. ALEXANDER KELSO—Continued.

Mr. THOMPSON. Mr. Kelso, I believe that you had covered the question of union benefits and the right of the election of the member as to what he was to take?

Mr. KELSO. I did not go fully into the benefit system. I would further qualify and show the extent that the organization does go in benefiting a member.

Mr. THOMPSON. You may state that briefly, if you can, Mr. Kelso.

Mr. KELSO. In the organization belonging to the carpenters we have an out-of-work benefit; we have a sick benefit; we have an injured benefit on account of loss of tools up to \$150 in one claim. We also have an accident benefit, total-disability benefit of \$700, a partial-disability benefit of \$350. We have a superannuated benefit; that is, a member belonging to the organization 25 to 30 years could get what we call a superannuated benefit for life to the extent of \$2.80 a week. That does not bar a man from following his employment or following any employment as long as he does not receive more than one-half of the wages of the district in which he is working. He can be a watchman or follow the trade, but at a lesser remuneration than a mechanic that is active.

Mr. THOMPSON. He can follow the trade?

Mr. KELSO. He can; yes, sir.

Mr. THOMPSON. What salary or day wage is he permitted to take?

Mr. KELSO. After the man is superannuated he can take any salary that he can bargain with the employer.

Mr. THOMPSON. What proportion of the dues are taken out of those benefits, or are they extra dues?

Mr. KELSO. The dues taken from those benefits are 35 cents a week to cover that benefit, and we pay him 15 cents a quarter for what we call a contingent-fund benefit. No benefit is held distinct, or no contribution is held distinct. We put it under what we call a common fund.

Mr. THOMPSON. What right or voluntary action has a carpenter as to whether he will joint the benefit or not?

Mr. KELSO. He is asked when he joins does he want to come into this beneficial system, or what we call a trade section, which only protects him in case of strikes and the contingent-fund account.

Mr. THOMPSON. What proportion of your membership takes the benefit of that, if you know?

Mr. KELSO. A large proportion of them generally enter the beneficial system.

Mr. THOMPSON. Would it be 75 per cent or 80 per cent or 90 per cent?

Mr. KELSO. I would class it about 75 per cent.

Mr. THOMPSON. Seventy-five per cent?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. I understand from your previous testimony that the carpenters' union now have no trade agreement in New York City. Is that correct?

Mr. KELSO. We did not cover that, but it is so. At the present time we work under a lapsed trade agreement.

Mr. THOMPSON. How are the trade agreements usually negotiated by the union with the employers?

Mr. KELSO. By a committee selected from the joint district council of carpenters meeting a like committee of the employers' association—the carpenters employers' association.

Mr. THOMPSON. And agreeing upon the terms?

Mr. KELSO. And agreeing upon the terms.

Mr. THOMPSON. By conference?

Mr. KELSO. By conference.

Mr. THOMPSON. Do they, in case of a deadlock, ever submit the terms of such a contract to arbitration?

Mr. KELSO. I have never known them yet to submit it to arbitration. In the event of a deadlock we would adjourn and our committee would report to the joint district council the proposition that was put up by the employers, and they might then instruct them to modify the terms and have a further conference in order to bring about an agreement.

Mr. THOMPSON. Is that what you are doing now in New York?

Mr. KELSO. I believe that is contemplated.

Mr. THOMPSON. But has that so far been done?

Mr. KELSO. Not so far.

Mr. THOMPSON. Has your organization suffered in consequence by the fact that you have not now an agreement here in this city?

Mr. KELSO. No, sir.

Mr. THOMPSON. It was stated here that the workday of the carpenters is 8 hours and the wages \$5 per day; is that correct?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. In this city?

Mr. KELSO. Yes, sir; that is for Manhattan. We have a lower scale for the Bronx, Brooklyn, Queens, and Richmond. We have a scale of wages in Bronx and Brooklyn. It is \$4.50 for 8 hours, and in Richmond and Queens, I believe, \$4.

Mr. THOMPSON. What is the reason for the different wage scale?

Mr. KELSO. To my way of thinking, there is no reason. I believe it ought to be all a universal scale in those five boroughs.

Mr. THOMPSON. How is the wage scale here in your trade as compared with large cities, like Chicago, Philadelphia, and Boston?

Mr. KELSO. I believe we are lower than in Chicago. I would say slightly higher than in Boston. I believe we are a little lower than San Francisco; but in the other cities, outside of the ones mentioned, I believe the wage compares favorably regarding the amount of money.

Mr. THOMPSON. What is the wage, if you know, in Chicago and in San Francisco, the higher places.

Mr. KELSO. I believe, 65 cents an hour.

Chairman WALSH. How about St. Louis?

Mr. KELSO. I don't know whether they have an advance. I say now I think it is on the same rate as New York. It may be. I believe it is about the same.

Chairman WALSH. May I ask a question? Are you well organized in the southern cities, such as New Orleans?

Mr. KELSO. Well organized.

Chairman WALSH. What is the wage in New Orleans for carpenters?

Mr. KELSO. I couldn't give you that with any degree of accuracy; but I can supply it to you.

Chairman WALSH. Would it not be well, Mr. Thompson, to get from this organization the scale of wages and hours in all the cities?

Mr. THOMPSON. I think it is a good suggestion, Mr. Chairman. And I would like to ask you if you will see your officers and have them file with this committee, if they will, a list giving the wage scale in the different large cities in this country.

Mr. KELSO. I would suggest to the commission that if you will write directly to the general president, Mr. James Kirby, Carpenters' Building, Indianapolis, Ind., you will get it direct.

(The list referred to was subsequently submitted in printed form.)

Mr. THOMPSON. What examinations are required for entrance into your trade in this city?

Mr. KELSO. The examinations required are very slight, that an ordinary carpenter can pass. For some years we had an examining board and latterly the examining board was done away with. We had a referendum vote that has just come in, and they want the examining board reestablished before taking in candidates. But when it was in force any ordinary carpenter could pass it. If he was a floor layer or a framer—we have got tests along those lines—and if he was an interior man, working on trim, he was tested on those lines.

Mr. THOMPSON. What was the purpose of such examination, and what effect did it have on the efficiency of the members of the union?

Mr. KELSO. The employers' association—the master carpenters' association—have from time to time told us that the men that were coming seeking work as carpenters were not qualified to do the work. That was the first reason we put on the examination board. That was to show that when we admitted a man into the organization that he knew something about the rudiments of the trade; that he was not a man coming along who thought this was the easiest avenue to get work and who, when he went out into a building to work, they found he was not competent, and, in fact, ought never to have made application. It was simply to distinguish that the man was a carpenter that he made the application.

Mr. THOMPSON. Were there any tests in this examination which were placed there for the purpose of creating a monopoly on the carpenter trade in this city in the hands of the union?

Mr. KELSO. No, sir; no, sir.

Mr. THOMPSON. What is the initiation fee for new members of your organization?

Mr. KELSO. The initiation fee established in New York is \$20 for a new candidate. Apprentices, who wish to join the organization, in the first year of their apprenticeship, pay \$5, which entitles them to a membership card after they complete their membership term.

Mr. THOMPSON. Did you ever require a special initiation fee from any individual applicant?

Mr. KELSO. An ex-member, a member that has run out for some time, of course, we make him pay \$10 more when he rejoins.

Mr. THOMPSON. What is the reason for that?

Mr. KELSO. Well, the reason for that, he has left the organization for some reason or other and during the period he was out of it he has not been paying any dues, but he has been receiving the benefits indirectly from the organization.

Mr. THOMPSON. Isn't that true of a new member who comes into your organization?

Mr. KELSO. Well, we think an ex-member who has been in the organization ought to pay \$30.

Mr. THOMPSON. That is, in the nature, then, of a penalty for his having left the organization?

Mr. KELSO. Well, he left for some cause—thought he could get along without the organization.

Mr. THOMPSON. What, if you know, is the policy of your organization with reference to the admission of aliens and negroes in the membership?

Mr. KELSO. An alien can be admitted into our organization by declaring and taking out his first papers and by declaring his intention to the examining board. In regard to colored carpenters, we have a local in the city at the present time. There has never been any bar to admitting negroes into the organization.

Mr. THOMPSON. Have the traveling cards of journeymen carpenters been rejected on the ground of the color of the member?

Mr. KELSO. No; under the present system that the carpenters are working under in this country a carpenter can go from here to any part of England, Ireland, Scotland, or Africa with his card and be admitted into membership without any additional initiation fee.

Mr. THOMPSON. Well, have not cases come to your union upon which a member has been rejected on account of his being a negro—on his traveling card; hasn't that case been appealed to the national union, if you know?

Mr. KELSO. Prior to the district council, or the merging of the two organizations into one, there was a slight conflict between the two organizations; that is, the Amalgamated member, coming with a clearance card from England, was not regularly accepted by the United Brotherhood of Carpenters. They wanted him to leave that organization and join the other. But now that element of trouble has been done away with, with the two organizations coming under one general head.

Mr. THOMPSON. What was the decision, if you know, in that case where appeal was made to the national body?

Mr. KELSO. Referring to or regarding discriminations?

Mr. THOMPSON. Yes.

Mr. KELSO. I could not tell you as to that particular case. We have been fighting so many different cases; where a member came from another country and came into the district where that organization had established a local or a branch, there was no trouble whatever. But it was where he came into a district where that society had not established a branch or a local where the discrimination was.

Mr. THOMPSON. Directing your attention to the matter of apprenticing, we understand the by-laws of your organization allow only 1 apprentice to each 10 journeymen. Is that right?

Mr. KELSO. That is in the by-laws; yes.

Mr. THOMPSON. What is the reason for the limitation of the apprenticeship to that ratio?

Mr. KELSO. I don't know why that stipulation ought to be in the by-laws. Our hardest work representing the union is to get a lad into the carpenter shop to learn the trade. The employer as a rule don't want apprentices. We have never rigorously, although it is in the by-laws, enforced that rule. We have never yet barred apprentices from working or said there were too many with any one employer. In fact, our organization—we want the apprenticeship system; we try to encourage it, try to encourage our lads to join as apprentices, to take up night schools, drawing schools, and trade schools.

Mr. THOMPSON. Then your organization is not opposed to the industrial education or vocational training?

Mr. KELSO. No.

Mr. THOMPSON. Did you hear what Mr. Waid said this morning?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. Do you agree with his statement in that respect?

Mr. KELSO. No, sir. Some time ago Dr. Maxwell, the superintendent of public schools in this greater city, sent for a committee to the board of business agents of the different trades asking for their cooperation in regard to installing vocational schools, and a committee was appointed. I was one of the committee representing our industry. We gave Dr. Maxwell all the assistance possible, all the information possible, to establish those vocational schools. Some time later there was investigators sent out, I believe, from Federal investigators, studying up the different trades, requirements of the trade, and the tools required. During the course of my work going through buildings, I took one of the lady investigators through and showed her the different lines of work that we carpenters did, and cabinetmakers, and tools that were needed in the business here, so that we were not against vocational schools. We are rather in sympathy with them.

Mr. THOMPSON. Now, Mr. Kelso, do you know of any arrangement or understanding, written or verbal, between the employers and the unions in New York City by which it is attempted to give to the unions and to the local employers a monopoly of the building trade in this city?

Mr. KELSO. No.

Mr. THOMPSON. Have you ever heard of such a monopoly?

Mr. KELSO. No.

Mr. THOMPSON. Have you ever heard it was charged that there was such a monopoly established?

Mr. KELSO. No.

Mr. THOMPSON. You heard what Mr. Waid said in that regard to-day?

Mr. KELSO. I listened to Mr. Waid reading the paper; yes. A great many things there I did not agree with that Mr. Waid said.

Mr. THOMPSON. And this is one of the things that you did not agree with him?

Mr. KELSO. One of the things.

Mr. THOMPSON. Is there any limitation of output practiced or encouraged or insisted upon by your organization?

Mr. KELSO. No.

Mr. THOMPSON. In the agreement which you did have with the master carpenters it was provided that there shall be no limitation to the amount of work a man shall perform during his working day. In your by-laws it is provided, and these by-laws were in force and effect at the same time, "Any member that does an unreasonable amount of work or who acts as a leader for his employer for the purpose of getting all the work possible out of the men working in the same shop or job with him shall be fined, for his first offense, \$10; for the second offense he shall be suspended or expelled." Again it provides, "Any member found guilty of excessive work or rushing any job shall be reported by the steward of the shop, and each of them shall be ruled off the job and fined not less than \$10." How do you construe those several provisions—that in the contract and that in your by-laws?

Mr. KELSO. Covering the business agents for six years I never knew a charge being brought against a member under that section. I don't know why it is there. I don't know why it is written into our by-laws, because there is never anyone brought up on any one of those charges, doing an excessive amount of work or restraining a man from doing as much as he was able to. The general opinion is they all average up about the same at the end of the week or at the end of the day.

Mr. THOMPSON. Is there a sort of unwritten understanding among the members of your organization that a man should not work too hard on a job; should slow up?

Mr. KELSO. No.

Mr. THOMPSON. Then, what Mr. Wald said with reference to the building trade in New York in that respect does not apply to your organization?

Mr. KELSO. No.

Mr. THOMPSON. Is that true?

Mr. KELSO. That is true. Mr. Wald also stated, or read, that a mechanic that was efficient and could do a lot of work ought to get more money. I have never known of one yet, and I have known a good many bang-up mechanics in our business, who ever got more than \$5 a day.

Mr. THOMPSON. The reason, he said, for that was this: He said so many poor men who didn't earn \$5 a day got \$5 a day, that it has got to be taken from the good man. What have you to say in reference to that?

Mr. KELSO. Regarding a good and a bad man, it is hard to determine just what Mr. Wald meant. He may have meant a man that was good on the rough part of the work, but who was no good on the trim, and vice versa. If you take that man that was very good on cabinetwork and put him back to this rough work the other man is doing he would be just as much a loss as the rough man would be on his work. So I say they average up just about the same.

Mr. THOMPSON. In other words, you say, Mr. Kelso, there is a specialty in carpenter work?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. And what one man can perform well in one line he can not in another?

Mr. KELSO. Yes.

Mr. THOMPSON. Yet those men all belong to the same local union, do they not?

Mr. KELSO. Yes, sir.

Mr. THOMPSON. Do you ever have any jurisdictional fight over their work?

Mr. KELSO. No, sir.

Mr. THOMPSON. You might have if they belonged to different locals, might you not?

Mr. KELSO. We might.

Mr. THOMPSON. That is very probable, isn't it?

Mr. KELSO. It clears up itself.

Mr. THOMPSON. Well, yes; when they belong to the same locals.

Mr. KELSO. If a man is giving up or off a job and wants to take that class of work he applies for that class of work. Another man that does not want it, he passes it up and goes where there is a finer grade of work being done.

Mr. THOMPSON. Now, I asked you this morning with reference to the reason upon which you supposed or considered that carpenters had the right of putting up metal trim on the inside, and you gave some reason. I also asked you if you knew what the reasons were sheet-metal workers put forward why they

should have the work. Have you anything to add now to your previous statement?

Mr. KELSO. No; I think my previous statement covered the ground, the adaptability of the carpenter to follow that line of work, the tools required, and his system of working in wood readily takes him into the metals.

Mr. THOMPSON. That is all.

Commissioner GARRETSON. Mr. Kelso, is it also put forward as a reason in this jurisdictional question that the work of the trim is work that has from time immemorial been done by the carpenter, and, on account of the replacement of it by another material which is adaptable, should enable him to handle it, he asserts his right still to erect the trim?

Mr. KELSO. Yes, sir.

Commissioner GARRETSON. That is all.

(Witness excused.)

TESTIMONY OF MR. LOUIS J. HOROWITZ.

Mr. THOMPSON. Will you please give us your name, your address, and your business?

Mr. HOROWITZ. Louis J. Horowitz, 51 Wall Street, president Thompson-Starrett Co.

Mr. THOMPSON. That is a large construction company, is it not?

Mr. HOROWITZ. Yes, sir.

Mr. THOMPSON. Where do you do business?

Mr. HOROWITZ. All over the United States.

Mr. THOMPSON. And Canada?

Mr. HOROWITZ. Not yet.

Mr. THOMPSON. I rather thought that you were from the remarks that you made before.

Mr. HOROWITZ. No, sir.

Mr. THOMPSON. How long have you been with this company or in the construction business?

Mr. HOROWITZ. I have been about 15 years in the construction business; 11 years with Thompson-Starrett Co.

Mr. THOMPSON. During those 11 years, have you done work or has your company done work in the city of New York?

Mr. HOROWITZ. It has.

Mr. THOMPSON. Are you acquainted with the workings of what was called the arbitration system?

Mr. HOROWITZ. I am.

Mr. THOMPSON. In this city?

Mr. HOROWITZ. Yes, sir.

Mr. THOMPSON. From your point of view as a builder, did the workings of that arbitration system reduce the number of jurisdictional strikes?

Mr. HOROWITZ. It did.

Mr. THOMPSON. So far as you know, is there any other system in use in the other cities of the United States which has worked as effectively?

Mr. HOROWITZ. Not so far as I know.

Mr. THOMPSON. Do you have more or less jurisdictional troubles in New York City than elsewhere throughout the country?

Mr. HOROWITZ. We have less now.

Mr. THOMPSON. How do you account for that? On what reason or what grounds?

Mr. HOROWITZ. Because of the arbitration plan in the employers' association.

Mr. THOMPSON. From your experience, Mr. Horowitz, as a contractor and builder throughout the United States do you believe that a system of national arbitration or adjustment might be devised for dealing with the jurisdictional problem?

Mr. HOROWITZ. Yes, sir.

Mr. THOMPSON. Do you think that the fact that in New York City they might use some special machines or implements not used elsewhere—do you think that that fact would alter the value of a national body?

Mr. HOROWITZ. No; I think the entire situation might be adjusted to the extent of a national body.

Mr. THOMPSON. In other words, if they could take into consideration the local conditions and make differentials or allowances, say, for—

Mr. HOROWITZ (interrupting). Yes; and after a time they would have the conditions pretty much uniform.

Mr. THOMPSON. It has been stated here, Mr. Horowitz, by Mr. Rice, one of the business agents of the carpenters, that their international organization makes a demand for the installation of metal trim in all buildings wherever their union has an organization throughout the United States. Would not that fact in itself call for a national adjustment of that proposition?

Mr. HOROWITZ. Yes, sir; it would.

Mr. THOMPSON. Doesn't that same reason exist in many other trades?

Mr. HOROWITZ. Yes.

Mr. THOMPSON. It did between the plumbers and steam fitters, did it not?

Mr. HOROWITZ. Yes.

Mr. THOMPSON. Do you know of any reason why it would not be better to adjust jurisdictional matters by a national body rather than by local bodies?

Mr. HOROWITZ. I believe the adjustment in the first place should be left with the local bodies working under rules prescribed by the national body, and in the last analysis the national body should control.

Mr. THOMPSON. That is to say, where you had local bodies making adjustments there should be local bodies authorized by the national body?

Mr. HOROWITZ. Yes, sir.

Mr. THOMPSON. Working on a united plan?

Mr. HOROWITZ. That is right.

Mr. THOMPSON. It has been said here to-day that if the various unions in the building trades could be amalgamated into basic organizations it would save a great deal of jurisdictional strife. Do you know what is meant by that, and do you agree with it? That is to say, it has been said that if the plumbers and steam fitters and electricians were joined in one body it would be good.

Mr. HOROWITZ. But there is a great many cases for it—

Mr. THOMPSON (interrupting). And if the various crafts that are cutting and setting stone and marble and tile were joined together, all bodies using cement or dressing stone, that it would tend to reduce jurisdictional strife. Do you think that is true?

Mr. HOROWITZ. It is quite obvious; yes.

Mr. THOMPSON. From your experience with labor unions do you believe that if one international union had the control of disputes arising in the same line of industry they could better settle it than by having the present system or even the A. F. of L.?

Mr. HOROWITZ. I believe if the national body existed which had control over the unions, and if the employers in various cities made contracts with unions which were part and parcel of that national body, that a great many of the jurisdictional strifes would be avoided.

Mr. THOMPSON. Referring to the New York Employers' Association, Mr. Horowitz, for a moment, you were a member of that association up to 1905, were you not, your company?

Mr. HOROWITZ. Yes.

Mr. THOMPSON. At that time I believe you were put out, were you, to use a harsh term, expelled?

Mr. HOROWITZ. Expelled; yes.

Mr. THOMPSON. And you had a bond and that was forfeited?

Mr. HOROWITZ. Yes.

Mr. THOMPSON. And litigation is now pending as a result of that forfeiture, is it not?

Mr. HOROWITZ. No; we are again members of the employers' association; that litigation has been settled long ago.

Mr. THOMPSON. I understand that it has been settled.

Mr. HOROWITZ. Yes.

Commissioner O'CONNELL. What was the result of that litigation?

Mr. HOROWITZ. When we rejoined the employers' association they waived the right to collect on our bond.

Chairman WALSH. Waived the right to do what?

Mr. HOROWITZ. To collect on our bond.

Chairman WALSH. How much was the bond?

Mr. HOROWITZ. I think it was \$2,000.

Chairman WALSH. And, briefly, what were the obligations of it?

Mr. HOROWITZ. That each member of the association should abide by all the rules of the employers' association. The employers' association ordered a

lockout of carpenters, and the then managers of the Thompson-Starrett Co. saw fit to ignore the order.

Chairman WALSH. Did they attempt to forfeit the entire bond?

Mr. HOROWITZ. Yes, sir.

Chairman WALSH. That was in accordance with the terms, was it?

Mr. HOROWITZ. Yes, sir.

Chairman WALSH. That is all.

Mr. THOMPSON. To draw a parallel, Mr. Horowitz, you did not obey the order of the parent body, did you?

Mr. HOROWITZ. Order of the employers' association; yes, sir.

Mr. THOMPSON. They have taken you back in?

Mr. HOROWITZ. Yes, sir.

Mr. THOMPSON. The structural-iron workers refused to obey the rules of the same body, did they not?

Mr. HOROWITZ. That is, the employees; the unions; yes, sir.

Mr. THOMPSON. I mean the employers' association as well, together.

Mr. HOROWITZ. I don't know that the bosses in the structural-iron industry are at any loggerheads with the association.

Mr. THOMPSON. All right.

Mr. HOROWITZ. I think it is the unions.

Mr. THOMPSON. That is all, Mr. Chairman.

Commissioner O'CONNELL. You were members of the arbitration plan at that time, were you not?

Mr. HOROWITZ. Yes, sir.

Commissioner O'CONNELL. Were not the ironworkers members of the arbitration plan before the last strike was ordered?

Mr. HOROWITZ. Do you mean the unions?

Commissioner O'CONNELL. Yes.

Mr. HOROWITZ. Yes, sir; they were members of the arbitration plan.

Commissioner O'CONNELL. You were reinstated by the same people that had expelled you?

Mr. HOROWITZ. Yes, sir.

Commissioner O'CONNELL. And the ironworkers were expelled by them for a violation also of the rules?

Mr. HOROWITZ. Yes, sir.

Commissioner O'CONNELL. And they have not been reinstated?

Mr. HOROWITZ. Yes. I am not familiar with the facts attending that quarrel.

Chairman WALSH. Any other questions?

Commissioner GARRETSON. Would you consider, Mr. Horowitz, that the violation of a rule of this local body, employers and employees, by a union was a more serious offense than a violation of the rule by an employer?

Mr. HOROWITZ. No, sir; I do not.

Commissioner GARRETSON. Then you would hold the opinion that if an employer violated a basic rule, as was the case in this instance, and was reinstated that it was nothing but common equity that if no greater violation existed on the part of the union that they also should have been reinstated?

Mr. HOROWITZ. Yes, sir; I do.

Commissioner GARRETSON. That is all.

Chairman WALSH. Any other questions, Mr. O'Connell?

Commissioner O'CONNELL. No, sir.

Chairman WALSH. Any questions, Mrs. Harriman?

Commissioner HARRIMAN. No, sir.

TESTIMONY OF MR. JAMES LENNON.

Mr. THOMPSON. Mr. Lennon, will you give us your name and address and your occupation, please?

Mr. LENNON. James Lennon, 461 Brooke Avenue.

Mr. THOMPSON. What is your occupation?

Mr. LENNON. Business agent at the present time for the sheet-metal workers.

Mr. THOMPSON. How long have you been business agent?

Mr. LENNON. Since the fall of 1907.

Mr. THOMPSON. Were you business agent at the time of this contest between the carpenters and your organization over the installation of metal trim?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Upon what ground does your organization claim the right to install metal trim in a building?

Mr. LENNON. Well, because it is composed of sheet-metal work that is given to us in our jurisdiction claim.

Mr. THOMPSON. It is composed of sheet metal?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Is that the only reason?

Mr. LENNON. Well, from the inception of the work we done it here in New York City for four and a half years until a member of the employers' association started in that business, and at that time I visited his shop, and he told me and showed me where he was clearing away part of the machinery; that he was going to install machinery to manufacture this ornamental door and trim. He says—now this was Mr. Ipshoff—he says, "If I go into this business will other employers come in here and compete against me in this line of business?" I told him that was a question that I could not answer at the present time; that I would take it up with the organization that I represented, and I did so.

Mr. THOMPSON. Just a moment. What was this man manufacturing?

Mr. LENNON. He was prior to this time manufacturing kalamein work; that is, wood-covered doors and trim.

Mr. THOMPSON. Metal covering for the wood?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Was he putting it on the wood?

Mr. LENNON. It was drawn over wood by machinery.

Mr. THOMPSON. He was doing that work?

Mr. LENNON. That was a class of work he had done prior to this time.

Mr. THOMPSON. As I understand you, he was not installing it then?

Mr. LENNON. He was both constructing and installing kalamein work; that is, metal drawn over wood.

Mr. THOMPSON. I am trying to find out whether he manufactured it alone, or both manufactured and installed them?

Mr. LENNON. Both. He took a contract to manufacture and erect.

Mr. THOMPSON. How long had he been doing that?

Mr. LENNON. Oh, before my time. 1893, I believe, he started in the fire-proofing business. That is what I heard.

Mr. THOMPSON. At the time he was doing this work, was all the metal-covered wood being installed by members of your organization?

Mr. LENNON. No, sir. We never laid claim to the kalamein work, the installing of it.

Mr. THOMPSON. You never laid claim to the installing of it?

Mr. LENNON. No, sir. Not the wood covered with metal.

Mr. THOMPSON. But in the metal trim; I want to direct your attention to the metal trim as we now have it, which I understand is not wood covered with metal.

Mr. LENNON. No, sir.

Mr. THOMPSON. When was that first put in buildings here in this city?

Mr. LENNON. Around 1905.

Mr. THOMPSON. What union installed the work in the building?

Mr. LENNON. The sheet-metal workers.

Mr. THOMPSON. How long did they continue to install that work in buildings in New York City?

Mr. LENNON. From 1905 until the latter part of 1909.

Mr. THOMPSON. Then who installed it?

Mr. LENNON. Well, Mr. Rapp put carpenters on a job on the west side, and the employers' association took his side of it, and from that on, with the exception of one large job on the west side, three years ago last August, the carpenters have done the largest majority of the work.

Mr. THOMPSON. The matter was submitted to Judge Gaynor, wasn't it, and he decided in favor of the carpenters?

Mr. LENNON. Well, I have the minutes of those proceedings, the complaint, and what was tried, and the motions that were submitted to Judge Gaynor.

Mr. THOMPSON. Have you got his decision on it?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Would you be willing to give those to the commission?

Mr. LENNON. Later on I may. There may be some points I might need.

Mr. THOMPSON. I mean to-day. Would you let us have that?

(No response.)

Mr. THOMPSON. You may state in your own way what were the reasons upon which he gave that work to the carpenters?

Mr. LENNON. That I could not say. By reading his decision and reading the case that was presented before him he had no right to give such a decision. And I want to say in addition to that that in regards to Mr. Norman's statement to-day that the general plan of arbitration in New York never accepted Judge Gaynor's decision as their decision. I have that here on the record.

Mr. THOMPSON. Then you differ from him when he stated that Judge Gaynor's decision was accepted since the termination of the arbitration plan as a part of the common law?

Mr. LENNON. He stated that the employers' association made it as a decision, but the general arbitration from which it started never did acknowledge it as a decision.

Mr. THOMPSON. Of course, before the introduction of metal trim as part of the interior work in a building wood was used, was it not?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. And this wood was always put up by a carpenter?

Mr. LENNON. I believe so.

Mr. THOMPSON. Upon the introduction of metal instead of wood wherever that was substituted, if that was given to the sheet-metal workers' union it would take that work away from the carpenters, would it not?

Mr. LENNON. In all other cases where it was changed from wood to sheet-metal work the sheet-metal workers did the work. All that was original work, woodwork, and whenever it was changed the sheet-metal workers got it.

Mr. THOMPSON. The reason for the dispute over the installation of metal trim grows out of this evolution of the industry, does it not?

Mr. LENNON. The carpenters never disputed the sheet-metal workers right to do this work until a member of the employers' association put them to work on it.

Mr. THOMPSON. Is that true in other parts of the United States?

Chairman WALSH. Put who to work?

Mr. LENNON. What?

Chairman WALSH. Put who to work?

Mr. LENNON. Put the carpenters to work. We had done it, and wherever wood had been changed to sheet metal in New York, wherever the carpenters done the work we had them knocked off and we put our own men on it.

Chairman WALSH. Was that true of other parts of the United States?

Mr. LENNON. As far as I know. In accordance with the decisions that had been passed throughout the United States our men had to know that. In fact, I believe they are doing portions of it yet—mostly all parts.

Chairman WALSH. The decision of this matter, I understand, was made by the American Federation of Labor at its Tampa convention?

Mr. LENNON. Yes, sir.

Chairman WALSH. And the decision was in favor of your organization?

Mr. LENNON. Our international; yes, sir.

Commissioner O'CONNELL. That was the building trades department at Tampa?

Mr. LENNON. The building department of the American Federation of Labor.

Commissioner O'CONNELL. Upon what basis or grounds did they make the decision, if you know?

Mr. LENNON. Because a majority of the trades decided that the sheet-metal workers should do it instead of the carpenters.

Mr. THOMPSON. Do you know why they decided that was sheet-metal workers' work? What were the reasons that made them so decide?

Mr. LENNON. Why, that is the way it looked to me, that the sheet-metal workers were more competent than the other trades. If there was any alteration or change to be made in the material, in almost all cases it takes a sheet-metal worker to make such a change.

Mr. THOMPSON. Why, if you know, do employers prefer carpenters to do that work?

Mr. LENNON. Why?

Mr. THOMPSON. Yes.

Mr. LENNON. Because they can manufacture cheaper.

Mr. THOMPSON. Why?

Mr. LENNON. Because their shops are on the open-shop plan and they are not paying full wages for their material.

Mr. THOMPSON. Are not most of the carpenter shops and mills organized?

Mr. LENNON. Not all of them. Some shops I know of here in the territory which I cover are nonunion shops—especially trim.

Mr. THOMPSON. You mean the metal trim is nonunion made?

Mr. LENNON. In New York City.

Mr. THOMPSON. And that is the reason, in your opinion, the employers prefer carpenters?

Mr. LENNON. Yes. And so out in Chicago, the employers there are paying the prevailing rate of wages and the manufacturers both.

Mr. THOMPSON. Well, the sheet-metal workers would refuse to handle nonunion made sheet-metal work, would they not?

Mr. LENNON. Why, no. It is customary in all cases that sheet-metal work as a structural introduction for construction is handled by metal workers.

Mr. THOMPSON. Therefore, your members refuse to handle and erect nonunion made stuff?

Mr. LENNON. Well, I have not known where we have refused to handle stuff of that kind. It was customary and we tried to have working conditions which existed here between the employers and the rest of them to exist——

Mr. THOMPSON. Well, assuming some nonunion sheet-metal trim was made, either in New York by nonunion workers, or shipped into New York, but being made in nonunion shops, would your members install that?

Mr. LENNON. Provided he had unionized his shop.

Mr. THOMPSON. Suppose he had not unionized his shop?

Mr. LENNON. Well, sometimes they put it up; and more times we give them a fight on it. We haven't the power at all times.

Mr. THOMPSON. Well, isn't it true that the carpenters will erect nonunion material of that kind?

Mr. LENNON. Well, they are doing it.

Mr. THOMPSON. They are doing it. Do you know whether that fact has any weight with the employers in preferring carpenters to erect the work rather than the sheet-metal workers?

Mr. LENNON. Well, that I don't know.

Mr. THOMPSON. How many members in your trade have you in the city of New York, if you know?

Mr. LENNON. How many members?

Mr. THOMPSON. Yes.

Mr. LENNON. That is difficult to say.

Mr. THOMPSON. Well, in New York City?

Mr. LENNON. Two thousand three hundred or two thousand five hundred.

Mr. THOMPSON. How many men are there working at that trade in this city, if you know, which would include the nonunion workers, if there are any?

Mr. LENNON. Working at nonunion work?

Mr. THOMPSON. No; I mean how many metal workers are there altogether in New York City?

Mr. LENNON. That I could not give you an idea on.

Mr. THOMPSON. Are there many nonunion sheet-metal workers?

Mr. LENNON. Not in the building line.

Mr. THOMPSON. That you know of?

Mr. LENNON. Not in the building line.

Mr. THOMPSON. In other words, you are pretty well organized in that line?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Have you any trade agreements—your organization—and if so, with whom?

Mr. LENNON. Well, we have had trouble going on two years last October, and the employers had an agreement printed and submitted it to one of the—that is, the new organization that was formed against us—and the employers insisted that we live up to that. There is part of our membership at the present time does not believe in that agreement and don't want it, nor don't intend to live up to it.

Mr. THOMPSON. You say a dual organization was formed?

Mr. LENNON. We were locked out; yes, sir.

Mr. THOMPSON. Is that the dual organization in existence to-day?

Mr. LENNON. No, sir.

Mr. THOMPSON. When was the lockout terminated, and upon what condition?

Mr. LENNON. The lockout came in 1911—in November, 1911, and hostilities ceased in August, 1913.

Mr. THOMPSON. How did they cease?

Mr. LENNON. By both organizations coming together again—that is, the new organization and the old.

Mr. THOMPSON. And was there any agreement then made with the employers?

Mr. LENNON. Not by this organization; not by the new organization.

Mr. THOMPSON. Well, did the new combined organization accept the condition which the employers had requested two years before that?

Mr. LENNON. Well, that question is unsettled at the present time. As I told you, some of the members do not want to live up to that agreement. That is, they claim it was an unjust agreement that was made by one party and not by two; and it takes two to make an agreement. There is no signature from the labor side to that agreement.

Mr. THOMPSON. In other words, if I may state it in other words, when the employers formed this dual union and made an agreement with them, they forced the old organization to accept those conditions whether they liked them or not?

Mr. LENNON. They tried to do it; yes, sir.

Mr. THOMPSON. Well, so far, they have?

Mr. LENNON. Well, yes, they have done it to a certain extent.

Mr. THOMPSON. When you have made trade agreements with parties, how are they negotiated and arranged for?

Mr. LENNON. By a joint committee from the labor side and the employers' side.

Mr. THOMPSON. By the result of conferences?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. In the case of disagreement, where any had arisen, were they submitted to arbitration, or simply fought out?

Mr. LENNON. Well, you keep negotiating for a certain time, if you can, to see—we never submitted an agreement to arbitration yet.

Mr. THOMPSON. Never used that method?

Mr. LENNON. No; most times we settled it by negotiations, and one time we had pending a strike of 13 days.

Mr. THOMPSON. What was the working condition in your trade with reference to the length of hours and the wages?

Mr. LENNON. Eight hours a day, 44 hours a week, and at the rate of \$5 a day.

Mr. THOMPSON. In a normal year, about how much of the year would a member be supposed to work?

Mr. LENNON. Well, with sheet-metal workers, some members work steadily the year around.

Mr. THOMPSON. About what proportion would work steadily the year around?

Mr. LENNON. About 50 per cent.

Mr. THOMPSON. How steadily would the other 50 per cent work?

Mr. LENNON. Well, some work 6 months, 8 months, 10 months, and so on.

Mr. THOMPSON. Has your union got a benefit system in case of sickness, accident, men out of work, and death?

Mr. LENNON. They have a death benefit of \$500—\$100 from our international.

Mr. THOMPSON. Have you any benefit in the case of sickness?

Mr. LENNON. Well, no; but it is customary for us to loan money to a member in need, and in worthy cases they make donations to such members.

Mr. THOMPSON. Does the money that comes from the death benefit come out of the original dues or is it an additional assessment?

Mr. LENNON. An additional assessment.

Mr. THOMPSON. Has a member a right to the general benefit proposition or not, as he pleases?

Mr. LENNON. All the members are subject to the general benefit assessment.

Mr. THOMPSON. What examinations do you have in your trade for the admission of members?

Mr. LENNON. Well, the regular examination board.

Mr. THOMPSON. Have you got a regular laid-out scheme of examination?

Mr. LENNON. No, sir; there are different branches in all sheet-metal industry, and whatever branch you apply to, the members working in that line examine them.

Mr. THOMPSON. What is the purpose in the examination?

Mr. LENNON. To find out whether he is a sheet-metal worker or not.

Mr. THOMPSON. Is that examination ever used by your union to create a monopoly in that trade among your members?

Mr. LENNON. No, sir.

Mr. THOMPSON. What is the initiation fee that you charge?

Mr. LENNON. At the rate of 100 hours' work.

Mr. THOMPSON. What would that be?

Mr. LENNON. About \$62.50.

Mr. THOMPSON. Do you ever raise the initiation fee in the case of any individual?

Mr. LENNON. No, sir; that is the initiation fee.

Mr. THOMPSON. What is the policy of your organization with regard to the admission of aliens and negroes—

Mr. LENNON. How is that?

Mr. THOMPSON. Of aliens or foreigners and negroes?

Mr. LENNON. The only objection we have to aliens is that they are supposed to make application for their first papers, and if he makes that we have no objection whatever.

Mr. THOMPSON. Have you a copy of your by-laws and constitution here?

Mr. LENNON. No, sir.

Mr. THOMPSON. Have you a printed constitution?

Mr. LENNON. We are working on one at the present time for the new organization.

Mr. THOMPSON. In your by-laws passed, have you provided for a system of apprenticeship and helpers?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Will that subject be covered by your new constitution and by-laws?

Mr. LENNON. I believe so.

Mr. THOMPSON. And would you have any objection to sending a copy of the new constitution and by-laws to this commission when it is finished?

Mr. LENNON. I do not believe that there will be any objection to it.

Mr. THOMPSON. Will you do it?

Mr. LENNON. I will do my utmost to have a copy furnished.

Mr. THOMPSON. Will the members of your organization work for contractors who are not members of the contracting association?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. You have in your contract, or at least referring to your past contract, was there anything in your past contract which forbade your members working for whomsoever they pleased?

Mr. LENNON. Well, it was supposed to be submitted to a trade board, but I don't believe we ever submitted anything like that. We always furnished men anyway to anyone who is conforming to the working condition.

Mr. THOMPSON. Never had any trouble over that?

Mr. LENNON. On one or two occasions the employers had refused to take the matter up with us, but there was no decided action.

Mr. THOMPSON. Was there any arrangement between your organization and any employer or association of employers in this city by which you seek to give to the local employers the monopoly of the trade in this city?

Mr. LENNON. No, sir.

Mr. THOMPSON. Will your members install union-made material that has been manufactured elsewhere within this city?

Mr. LENNON. Yes, sir; if it conforms to the same rules as we have here—that is, if, under the same working conditions, the same hours and wages.

Mr. THOMPSON. Has there been in any case that you know of where the members of your organization have refused to install sheet-metal work in this city where it was made under union conditions by union men—the same union conditions that you have here?

Mr. LENNON. Not if it was made under the New York conditions.

Mr. THOMPSON. Does your organization insist that not only shall the work be made by union men under New York union conditions, but also that it shall be manufactured in this city?

Mr. LENNON. No, sir; the organization that I represent does not insist on that.

Mr. THOMPSON. Are you sure about that?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. For instance, to put it another way, if an outside manufacturer, say a man in Pittsburgh—a manufacturer of sheet-metal work, employing only members of your international organization and paying them the same wages and giving them the same hours and working conditions as those that exist in New York City, your members would then install that here without objection?

Mr. LENNON. Yes, sir; I believe they would. There is a case of that kind, but not in my district; another delegate's district.

Mr. THOMPSON. You say you believe they would?

Mr. LENNON. Yes, sir.

Mr. THOMPSON. Why don't you know they would?

Mr. LENNON. Well, I can only give my opinion for the organization. I don't know what the organization——

Mr. THOMPSON. Well, then, the practice of your organization is not such as to lead you to be sure about it?

Mr. LENNON. Well, to the best of my belief, if the material was manufactured under conditions in accordance with our international law, we would erect it. It would be a violation of our international constitution if we would not do so.

Mr. THOMPSON. Are there any limitations required by your union, either in print or understood among the members, upon the output of a worker?

Mr. LENNON. No, sir.

Mr. THOMPSON. Mr. Chairman, that is all, if you please.

Chairman WALSH. Does any one of the commission desire to ask any questions?

Commissioner LENNON. I wish to ask him a question or two.

Chairman WALSH. Mr. Lennon will inquire.

Commissioner LENNON. Mr. Lennon, have you heard or have you any knowledge of alleged graft among the representatives of your union and the business agents in this city?

Mr. LENNON. Well, it is a customary word, but I think it is passed around as a jest, more so than anything else.

Commissioner LENNON. You have observed nothing of that kind in your own experience?

Mr. LENNON. No, sir.

Commissioner LENNON. Either as to yourself or as to other business agents?

Mr. LENNON. No, sir.

Commissioner LENNON. I think that is all.

Chairman WALSH. Any other questions?

Commissioner BALLARD. Yes. Mr. Lennon, when Mr. Thompson asked you if there would be any reason why material manufactured in Pittsburgh under union conditions and wages could not be used in New York by your union, you said or stated that probably your union would, but another district might not use it. Did I understand that correctly?

Mr. LENNON. Another district?

Commissioner BALLARD. Yes, sir.

Mr. LENNON. No; I am in only one district here in New York, but the same rules apply everywhere in New York.

Commissioner BALLARD. Do you know, as a matter of fact, that throughout the entire New York City district that material made in union plants elsewhere would be put up by your union?

Mr. LENNON. Yes, sir.

Commissioner BALLARD. And you know of no cases where they have refused to do it?

Mr. LENNON. No, sir.

Commissioner O'CONNELL. Mr. Lennon, in connection with the organization of that dual union—you were formerly members of the arbitration plan?

Mr. LENNON. Yes, sir.

Commissioner O'CONNELL. The old organization?

Mr. LENNON. Yes, sir.

Commissioner O'CONNELL. And because you refused to accept the decision of the employers' association in the arbitration agreed upon by the mayor you were unseated or suspended from the arbitration plan?

Mr. LENNON. I did not get that quite right.

Commissioner BALLARD. How did you get out of the arbitration?

Mr. LENNON. Well, we got out at the time when it broke up on account of the steam fitters' trouble.

Commissioner BALLARD. Did the decision of Judge Gaynor have anything to do with it?

Mr. LENNON. No, sir.

Commissioner BALLARD. How did the employers come to organize the unions in opposition to the plan of arbitration?

Mr. LENNON. It wasn't in existence at the time the dual organization was formed. The employers locked us out on account of our going on a strike on the metal work on the Bankers' Trust Building, and they formed a dual union against us.

Commissioner BALLARD. They wanted to force you to agree to the carpenters erecting the metal work?

Mr. LENNON. Yes, sir,

Commissioner BALLARD. Because you refused to do that they organized the dual organization?

Mr. LENNON. Yes, sir,

Commissioner BALLARD. Which dual union has since become the one union in the building trades, has it not?

Mr. LENNON. Yes, sir,

Commissioner BALLARD. In your trade?

Mr. LENNON. Yes, sir,

Commissioner BALLARD. And you are now merged or amalgamated into that union?

Mr. LENNON. Yes, sir,

Chairman WALSH. How did the merger come about, briefly? Did you take this entire union into your organization?

Mr. LENNON. Well, no. Both organizations amalgamated, and the members that broke away from us paid up their back indebtedness or any moneys that they owed us and paid into the new organization.

Chairman WALSH. That is all; thank you, Mr. Lennon.

Call your next witness, Mr. Thompson.

Mr. THOMPSON. I find that in the making of this program we had counted on Mr. Gilbreth being here, and I understand he has gone away—sailed for Europe—and we have now reached the end of the witnesses who have been subpoenaed for to-day. As I suggested to you during the day, Mr. Chairman, there is a question of the painters here, who wanted to be heard; and, unfortunately, when we came back after the noon recess they were not in the room, but I see some of them here.

Chairman WALSH. Unless they are ready to testify——

Mr. THOMPSON. They are not quite ready.

Chairman WALSH. The commission will then stand adjourned until 10 o'clock to-morrow morning, in the reception room off the mayor's office.

(Thereupon, at 3 o'clock and 5 minutes p. m. of Tuesday, May 26, 1914, an adjournment was taken until Wednesday morning, May 27, 1914, at 10 o'clock

NEW YORK CITY, May 27, 1914—10 a. m.

Present: Chairman Walsh, Commissioners O'Connell, Lennon, Harriman, Ballard, and Garretson.

Chairman WALSH. Call your first witness, Mr. Thompson.

Mr. THOMPSON. Mr. Taggart, will you now please take the stand?

TESTIMONY OF MR. JOHN T. TAGGART.

Mr. THOMPSON. Give us your name, address, and business, Mr. Taggart.

Mr. TAGGART. John T. Taggart; address, 3020 Highland Avenue, Mount Vernon, N. Y.; business, metallic lather.

Mr. THOMPSON. Are you an officer in that organization?

Mr. TAGGART. Yes, sir; I am one of the business agents.

Mr. THOMPSON. What is the business name of your organization?

Mr. TAGGART. Metallic Lathers of New York City and vicinity, Local 46 of the Wood, Wire, and Metal Lathers' International Union.

Mr. THOMPSON. Is that the international union organized fairly well over the country?

Mr. TAGGART. I believe they have got something over 200 locals.

Mr. THOMPSON. In most of the large cities?

Mr. TAGGART. In all the large cities.

Mr. THOMPSON. Do you hold any other offices in connection with the business agents of New York City?

Mr. TAGGART. Well, I am president of the Manhattan Board of Business Agents, and president of the executive council of the Building Trades of Greater New York and Long Island.

Mr. THOMPSON. Are those two distinctive bodies?

Mr. TAGGART. They are two distinctive bodies; but they are under the jurisdiction of the executive council; that is, the Manhattan board is.

Mr. THOMPSON. What is the form of the Manhattan board and how is it composed; who are its members?

Mr. TAGGART. The Manhattan board is composed of, I believe, 32 different organizations all in the building line.

Mr. THOMPSON. How many delegates do they have to that board?

Mr. TAGGART. I believe about 62. Wait a moment—I will tell exactly.

(Witness here hands a pamphlet to Mr. Thompson.)

Mr. THOMPSON. Does this book which I have here in my hand, called the Executive Council United Boards of Business Agents of Greater New York and Long Island Building Trades, contain the organization—the constitution and by-laws of this Manhattan board?

Mr. TAGGART. No; that is not the constitution. That contains the names of all the business agents and their addresses and the organization that they represent within Greater New York.

Mr. THOMPSON. In Greater New York?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. That is the executive council?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. I believe you stated——

Mr. TAGGART (interrupting). Here is the constitution of the executive council.

Mr. THOMPSON. I will ask that these books be marked, the list of members of the executive council as "Taggart Exhibit 1" and the constitution is "Taggart Exhibit 2."

(Taggart Exhibit No. 1, booklet entitled "Executive Council of the United Boards of Business Agents of Greater New York and Long Island Building Trades," issued March, 1914, and Taggart Exhibit No. 2, booklet entitled "Constitution, Executive Council, United Boards of Business Agents," issued October, 1912, were submitted in printed form.)

Mr. THOMPSON. Now, this executive council has jurisdiction over the Manhattan board, has it.

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What is the Manhattan board and how many representatives has it?

Mr. TAGGART. About 62, I believe.

Mr. THOMPSON. The same as the executive council?

Mr. TAGGART. Well, I might explain that. There are five borough boards, the Bronx, Manhattan, Queens, Richmond, and Brooklyn. There is one delegate from each organization which composes the executive council—one member of each industry composes the executive council. Take the carpenters, for instance, in the Manhattan board of delegates, they have got about seven representatives. In Queens they have got about three; in Richmond two; Bronx three, and the same way with the other organizations. Now, I don't attend any of the meetings of Queens, Brooklyn, or Richmond. One of the other two delegates does that—of the metallic lathers.

Mr. THOMPSON. That is to say, so far as the Manhattan board is concerned, they are composed how?

Mr. TAGGART. Each industry has got one delegate to the council.

Mr. THOMPSON. What work does the Manhattan board do and what work does the executive council do?

Mr. TAGGART. The Manhattan board takes up all grievances for the Borough of Manhattan, such as nonunion men on a job, or jurisdiction between trades on a job; and the council—if the trade is not satisfied with the decision of the board, it has got a right of appeal to the council if it sees fit.

Mr. THOMPSON. So, so far as any matters brought up before the Manhattan board are concerned, the council is an appellate body?

Mr. TAGGART. Yes.

Mr. THOMPSON. What other functions does the council exercise?

Mr. TAGGART. The council does not exercise any other functions outside of that.

Mr. THOMPSON. Just acts——

Mr. TAGGART (interrupting). Just acts practically as an arbitrator over the boards.

Mr. THOMPSON. Is there an organization known as the cement league in New York City?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Has that got a constitution and by-laws?

Mr. TAGGART. It has.

Mr. THOMPSON. Have you got those with you?

Mr. TAGGART. No, sir.

Mr. THOMPSON. Are you a member of that organization?

Mr. TAGGART. Yes sir; I represent the lathers on that board.

Mr. THOMPSON. How many members does that board have?

Mr. TAGGART. That board consists of 10—5 employers and 5 delegates from the trades.

Mr. THOMPSON. What are the trades which are—

Mr. TAGGART (interrupting). The Brotherhood of Carpenters, the hoisting association of portable engineers, the cement masons, the cement workers, and the metallic lathers.

Mr. THOMPSON. Who do the five representatives of the employers represent, what trades?

Mr. TAGGART. They represent the masters' league of cement workers.

Mr. THOMPSON. Well, the master carpenters, for instance?

Mr. TAGGART. No, sir; they represent the masters' league of cement workers.

Mr. THOMPSON. What business ordinarily do the members of the masters' league of cement workers do?

Mr. TAGGART. Cement work.

Mr. THOMPSON. Well, what kind would that be?

Mr. TAGGART. Well, that is reinforced concrete—the entire building—cements, sidewalks, cellars, anything in the cement line.

Mr. THOMPSON. The carpenters would be used in that work for the forms?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. And other carpenter work?

Mr. TAGGART. And other carpenter work.

Mr. THOMPSON. And would the portable engineers be a party in that work?

Mr. TAGGART. Hoisting concrete.

Mr. THOMPSON. And your body is a party because it makes the laths?

Mr. TAGGART. In putting in the reinforced work and the wire—reinforced steel, iron, or wire.

Mr. THOMPSON. The structural-iron workers are not a member of that league?

Mr. TAGGART. No, sir.

Mr. THOMPSON. Over what territory has the cement league jurisdiction?

Mr. TAGGART. They are supposed to have jurisdiction over 25 miles of the City Hall, of New York.

Mr. THOMPSON. Now, you have already stated that the carpenters which are in this cement league are part of the International Brotherhood of Carpenters?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. And that is true of the other trades you named?

Mr. TAGGART. The carpenters, cement workers, cement masons, hoisting engineers, and lathers; they constitute that body.

Mr. THOMPSON. The carpenters, you say, have seven members on the Manhattan board?

Mr. TAGGART. To the Manhattan.

Mr. THOMPSON. How many portable engineers have you got?

Mr. TAGGART. Yes.

Mr. THOMPSON. How many cement masons go to the Manhattan board?

Mr. TAGGART. Two, I believe. They may have three, but I know of two.

Mr. THOMPSON. How many have the cement workers?

Mr. TAGGART. Three.

Mr. THOMPSON. And how many do you have?

Mr. TAGGART. Two.

Mr. THOMPSON. What is the usual attendance at a meeting of the Manhattan board, and how many generally are there?

Mr. TAGGART. Why, I believe they average about 35 or 40 delegates. At special meetings you can get the whole of them there.

Mr. THOMPSON. But I am talking about the average.

Mr. TAGGART. Yes; the average is about 35.

Mr. THOMPSON. Has there been a jurisdictional dispute between you organization and the structural-iron workers with reference to the setting of the iron rods in connection with reinforced concrete work?

Mr. TAGGART. There has been; yes, sir.

Mr. THOMPSON. When did that begin?

Mr. TAGGART. After the Tampa convention, building-trades department.

Mr. THOMPSON. Let's see, what year was that in?

Mr. TAGGART. I think that was four years ago, or five; I am not certain.

Mr. THOMPSON. What was done at the Tampa convention with reference to that subject?

Mr. TAGGART. The building-trades department took up the question between the bridge and structural-iron workers and the Wood, Wire, and Metal Lathers' International Union, and, as I understand it, it was referred to a committee, and the committee reported back that the work in dispute was in possession of the ironworkers, and the convention voted so—not unanimously—but the majority voted to uphold the report of the committee.

Mr. THOMPSON. Who at that time was doing that work in New York?

Mr. TAGGART. The metallic lathers. No one else ever done it.

Mr. THOMPSON. For how many years had you been doing that work in New York?

Mr. TAGGART. About 15 years.

Mr. THOMPSON. About 15 years?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Did your organization carry out the decision of the Tampa convention?

Mr. TAGGART. No, sir.

Mr. THOMPSON. In New York you did not?

Mr. TAGGART. No, sir.

Mr. THOMPSON. How is it done—carried it out elsewhere?

Mr. TAGGART. Not to my knowledge.

Mr. THOMPSON. Is there any other part of the United States where your international organization sets steel rods and cement work?

Mr. TAGGART. I believe there is, but I would not like to state it because I have no facts. That is, I did not personally see it myself.

Mr. THOMPSON. Are there any other cities where you believe that they do set the work?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What are they?

Mr. TAGGART. No. 5 of Detroit is supposed to have set it.

Mr. THOMPSON. What other cities?

Mr. TAGGART. No. 72 in Boston is supposed to have set the work. St. Louis, I believe, is supposed to set the work. Now, remember, this is only hearsay; I haven't got any proof of it.

Mr. THOMPSON. I understand, Mr. Taggart, that you have gone to each of those cities and personally examined the work?

Mr. TAGGART. Yes, sir. I am not a national officer.

Mr. THOMPSON. I am asking for your belief and from your common knowledge on that subject.

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. And you think that in the cities of Detroit, Boston, St. Louis, as well as in New York, your organization is setting this work?

Mr. TAGGART. I believe so.

Mr. THOMPSON. Did the structural-iron workers bring up the question in New York City after the Tampa convention?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. With reference to who should do this work?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Where was it brought up?

Mr. TAGGART. On the Polo Grounds.

Mr. THOMPSON. On the Polo Grounds?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. When and how?

Mr. TAGGART. When they were erecting the stadium at the Polo Grounds it came up in the board of delegates there. At that time we were members of the building trades department; that is, they had a department in here at the time.

Mr. THOMPSON. What year was that, at the Polo Grounds?

Mr. TAGGART. Three years ago.

Mr. THOMPSON. 1910?

Mr. TAGGART. 1910.

Mr. THOMPSON. Go ahead, Mr. Taggart.

Mr. TAGGART. And the proposition was brought up on the floor of business agents and the board of delegates decided that the work was in the possession of the metallic lathers' union. They always supported the metallic lathers

to maintain that, and the results were that the hoisting engineers and cement workers withdrew their men on the Polo Grounds until the metallic lathers were put on the work.

Mr. THOMPSON. How many delegates were there at that board of business agents?

Mr. TAGGART. I can not remember. I can get the record, but I don't remember exactly. I believe something like 70.

Mr. THOMPSON. Were they present at that time?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What proportion of the membership was represented at that meeting by the organization that now compose the cement league?

Mr. TAGGART. I believe they were all there.

Mr. THOMPSON. How many delegates did they have at that time, if you know?

Mr. TAGGART. Just about the same amount of delegates. The carpenters may have had two or three. I believe they had only four delegates on at that time.

Mr. THOMPSON. How many delegates were structural-iron workers at that convention?

Mr. TAGGART. Two.

Mr. THOMPSON. Of course it is natural that the international union of these various five organizations would support the contentions of their men doing cement work, and they did do that, did they not?

Mr. TAGGART. I believe so. I do not say the national organization does it. The local organization does.

Mr. THOMPSON. The local organization does?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What is the relationship between the local organization or labor unions here and the international, if you know?

Mr. TAGGART. I think everything is peace between us and our national organization, so far as I know. They receive the per capita tax every month.

Mr. THOMPSON. You know they get that?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Upon what grounds did this meeting you spoke of, which was held in New York and adjudicated that work in your favor, or gave you jurisdiction over it—on what grounds did they make their finding; that you were in possession of the work?

Mr. TAGGART. That we were in possession of the work since its inception, and at that time we had an agreement, which we have to-day, covering the work from the employers.

Mr. THOMPSON. What employers?

Mr. TAGGART. Master cement league, master league of cement workers and all independent employers.

Mr. THOMPSON. Is there any agreement with the larger employers' association in that respect?

Mr. TAGGART. The agreement with the master league of cement workers and our organization or wood, wire, and iron lathers and our association covers every member of the employers' association.

Mr. THOMPSON. By the mere fact that you have that original contract?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Prior to the smaller body?

Mr. TAGGART. They are a part of the employers' association, the same as we are a part of the delegates.

Mr. THOMPSON. I understand, but by reason of the fact that you have that contract with the cement league of employers the larger body stands for that contract?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What was the ground or reason upon which the Tampa convention of the building trades of the American Federation of Labor awarded that work to the ironworkers, if you know?

Mr. TAGGART. Well, I couldn't truthfully answer. I did not attend the convention, and I don't know.

Mr. THOMPSON. At the present time, then, there are two decisions in regard to your work—one made by the New York people upon which you operate and another made by the building trades department of the American Federation of Labor, which is supposed to operate here and all over the country.

Mr. TAGGART. That is right.

Mr. THOMPSON. Has the conflict of those two decisions led to any trouble in this city?

Mr. TAGGART. Not outside of the Polo Grounds.

Mr. THOMPSON. Has any trouble arisen over the Tampa decision elsewhere?

Mr. TAGGART. Yes, sir; trouble raised in Jersey—Newark, Jersey City, and the Oranges.

Mr. THOMPSON. Mr. Taggart, are all of the unions in the building trades members of the United Board of Business Agents?

Mr. TAGGART. No, sir.

Mr. THOMPSON. What unions are not?

Mr. TAGGART. The bricklayers are not in there; the bricklayers, masons, and plasterers, their international union nor their local, is not represented. The granite cutters are not in there; the free stone is not in there; what is known as the soft-stone cutter is not in there; the plasterer is not in there.

Mr. THOMPSON. Any other unions?

Mr. TAGGART. None that I can recall.

Mr. THOMPSON. What are the reasons, if you know, why those organizations do not belong to the association of building agents?

Mr. TAGGART. Well, the bricklayers' have never been, with the exception of about a year, in my experience. They have been in the board of delegates a year; that is, along 12 years ago, but the plasterers were suspended from the board of delegates for not living up to a decision handed down by the board in favor of the cement workers.

Mr. THOMPSON. So far as the bricklayers are concerned, their nonjoining is purely voluntary, is it not?

Mr. TAGGART. I believe so.

Mr. THOMPSON. There is nothing in your by-laws or constitution, or the attitude of your organization, to prevent them joining, is there?

Mr. TAGGART. Not that I know of.

Mr. THOMPSON. How about the plumbers?

Mr. TAGGART. The plumbers are not in there at the present time, but we have worked in harmony with the plumbers continually right along. I believe they withdrew their own organization because of some trouble with the steam fitters. The steam fitters sat in the board of delegates for years, and there was no trouble, and there was a decision handed down that took the plumbers out of the board. That was one of the Tampa decisions, too.

Mr. THOMPSON. And the plumbers in following the Tampa decision left the board?

Mr. TAGGART. I believe that was the cause.

Mr. THOMPSON. Nothing so far as your board is concerned.

Mr. TAGGART. I might say that when the council was formed the plumber was entitled to go in there, and he was invited to come there, but they could not agree with the delegate that was to go in there. The man that represents the industry in the council must be the choice of the remainder of the business agents in that craft. The business agents selected the man that represents them in the council.

Mr. THOMPSON. Are there any other organizations that you can think of now that are not members of that council?

Mr. TAGGART. Well, I might state the dock builder; he is not a member of the council.

Mr. THOMPSON. The dock builder?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. That is a special trade?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Not generally allied to the building trades?

Mr. TAGGART. Well, he is not affiliated with the building trades. He works on the buildings—he works there just the same as the rock driller—he drives the piles and foundations over New York.

Mr. THOMPSON. Why is not his organization a member of your council?

Mr. TAGGART. I do not believe he ever made application.

Mr. THOMPSON. There is nothing, so far as your council is concerned, that would keep him out?

Mr. TAGGART. Not in my opinion, there is not.

Mr. THOMPSON. How are disputes adjusted in the United Board of Business Agents?

Mr. TAGGART. The grievance is followed by the business agent who believes he has a grievance, and it is referred to what is known as the grievance committee. The grievance committee consists of five members of the board, elected at the election, to act as the committee on grievances for the board. No man

whose industry is supposed to be on one side or the other of the question can serve on that board.

Mr. THOMPSON. When you have questions that come up in that board like the settlement of these disputes, naturally the delegates who are in the cement league vote together on any question concerning that particular trade, do they not?

Mr. TAGGART. That particular trade; yes, sir; but not as a whole. I do not think you could get the delegates who are connected with the cement league to vote for some other thing, something for one of the organizations in the league that they did not think was right.

Mr. THOMPSON. But where any question comes up with reference to the league, I mean the organizations in the league, the league itself would probably determine—the unions would—as to what their action would be, would they not?

Mr. TAGGART. I have not known of any case.

Mr. THOMPSON. You have not?

Mr. TAGGART. No, sir.

Mr. THOMPSON. If any matter were coming up before the United Board of Business Agents which involved the work of the members of the cement league, they would go to that meeting, United Board of Business Agents, without any understanding or common agreement as to where they were to stand? What they were to stand for?

Mr. TAGGART. There has never been a case of it that I know of.

Mr. THOMPSON. You are pretty sure of that?

Mr. TAGGART. I am pretty sure of that. I have never entered any conference of that kind, because I always felt that if it was hoisting material, it belonged to the engineers; that if it was cement work it was cement work for the cement people; if it was carpenter work it was for the carpenter people; so no one would have to see me sit on it.

Mr. THOMPSON. What, then, is the purpose for the existence of the cement league, so called?

Mr. TAGGART. The purpose is to have all employers pay the rate of wages and the conditions throughout the 25-mile ratings. This master league of cement workers' board, it was formed to have stopped this trouble on the job.

Mr. THOMPSON. What trouble?

Mr. TAGGART. The trouble that we have had heretofore. Take, for instance, if you were the general contractor, you were going to use your judgment of who you should put on to put in the reinforced concrete work, you are going to use your judgment which engineer you would put on there, whether the portable engineer or the safety engineer, and you are going to use your judgment whether you are going to put on carpenters there or so-called handy men, the same as they use in the subway to-day doing carpenter's work.

Mr. THOMPSON. And also the same thing as to whether the employer wanted to use structural ironworkers in setting their rods?

Mr. TAGGART. There is not any of them using them.

Mr. THOMPSON. But that question would be just the same as the other?

Mr. TAGGART. Correct.

Mr. THOMPSON. And on those matters the trade-union members of the cement league would have a common understanding, would they not?

Mr. TAGGART. They would attend the meeting if any grievance was put in. Take a meeting to-day. One of the members of the employers' association, I believe they have something like 1,100 firms in there, if there is one of those people doing concrete work, the lathing, say, and he has some one on the outside of the members of our organization, I will certainly file a complaint against him.

Mr. THOMPSON. Assuming he is doing cement work, can you file a complaint in the cement league, and they take a certain stand on it? Assuming the other workmen are also union men and are part of this United Board of Business Agents, and they bring that question up before the council.

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. The union members of the cement league would vote together on that proposition, would they not?

Mr. TAGGART. I do not think it would reach the council, because the council in the by-laws has already gone on record in the formation of that council, to abide by all decisions handed down by the plan of arbitration while it was in existence.

Mr. THOMPSON. I do not think you understand what I mean. I evidently did not make myself plain. Assuming an employer was desirous of using some worker in connection with cement work; that the union members did not agree with him, then the engineers would file a complaint?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. That would come up before the cement league?

Mr. TAGGART. Before the trade board.

Mr. THOMPSON. Before the trade board?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Of the cement league?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. The cement league trade board?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Then that cement board would make its findings. Suppose the cement board made a finding that the hoisting engineers, the organization that was allied there, was the one that should be used; assuming for the purposes of the argument that the other engineers are members of the United Board of Business Agents?

Mr. TAGGART. They are.

Mr. THOMPSON. Assuming they should claim that work; they are not members of your cement league, and they want to be heard on that question of jurisdiction. Supposing they brought it up at the United Board of Business Agents, the union representative at that board of business agents who represented the members of the cement league would vote together for the hoisting engineers?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. That is understood?

Mr. TAGGART. It is not understood, but it is a fact. As stated before, I have never attended one conference.

Mr. THOMPSON. But that is the way it always works out?

Mr. TAGGART. That is the way it would go, I believe.

Mr. THOMPSON. You know, don't you, Mr. Taggart?

Mr. TAGGART. Well, I don't know.

Mr. THOMPSON. Have you ever known a case where it did not work that way?

Mr. TAGGART. Where the five trades in the concrete end of it?

Mr. THOMPSON. Where the men that voted together at the cement league voted differently at the trade board?

Mr. TAGGART. If it came up before the cement league it would not go to the board of delegates, for the reason that the employer would be instructed to employ portable hoisting engineers, and if he was not a member of the employers' association the case would never go there. No case gets before the trade board that the employer is not a member of there. We do not attempt to handle a case for some independent. No.

Mr. THOMPSON. But here is another engineers' organization, union organization?

Mr. TAGGART. Yes, sir; there are three in the board.

Mr. THOMPSON. They claim that work in the board of business agents. How would they be heard on this question of jurisdiction?

Mr. TAGGART. It would be referred to the grievance committee.

Mr. THOMPSON. Of what?

Mr. TAGGART. Of the United Board. The committee would take it and decide it; in 99 cases out of 100 it would be decided according to the trade agreement.

Mr. THOMPSON. According to the demand of the cement league?

Mr. TAGGART. No, sir. The trade agreement. They are all working under their agreement.

Mr. THOMPSON. Let me follow this out a little more closely. Assuming this question of jurisdiction came up before the cement league.

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. And you decided in favor of the hoisting engineers.

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Where could the engineers, the other engineers, make their claim of jurisdiction, before what body?

Mr. TAGGART. I think they could make the claim before the United—I should say the Manhattan board of delegates.

Mr. THOMPSON. At their Manhattan board of delegates, they would make their claim?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Would the Manhattan board have jurisdiction of that subject matter?

Mr. TAGGART. The Manhattan board would have jurisdiction—they would accept all complaints and refer them to the committee.

Mr. THOMPSON. I mean, do they have jurisdiction to hear that complaint?

Mr. TAGGART. Yes, sir; they have jurisdiction to hear it.

Mr. THOMPSON. Suppose that the grievance committee of Manhattan, of the Manhattan board, or the Manhattan board itself decided differently from the members of the cement league, decided that the holsting engineers were not entitled to that work, but that the other engineers were, which decision would have force and effect?

Mr. TAGGART. I see what you are getting at. That could be possible that there might be a decision rendered contrary, but there has not been up to date.

Mr. THOMPSON. There has not been up to date?

Mr. TAGGART. No, sir.

Mr. THOMPSON. If there had been, which would have jurisdiction?

Mr. TAGGART. That would be hard to say.

Mr. THOMPSON. It would be hard to say?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. It has not been fought out yet?

Mr. TAGGART. No, sir.

Mr. THOMPSON. But generally at the meeting of the Manhattan board those five members of the cement league voted together and have acted together?

Mr. TAGGART. Not always.

Mr. THOMPSON. I mean on questions involving their jurisdiction?

Mr. TAGGART. Oh, I suppose so; yes.

Mr. THOMPSON. Now, Mr. Taggart, referring to your own trade, what number of your trade are working in the city of New York?

Mr. TAGGART. At the present time?

Mr. THOMPSON. Well, at the present time; yes, sir.

Mr. TAGGART. About half of them.

Mr. THOMPSON. How much of a membership have you here?

Mr. TAGGART. Near 600.

Mr. THOMPSON. Are there any people working in that trade in New York that are not members of your organization?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. About how many, if you know?

Mr. TAGGART. Well, there might be 20 to-day.

Mr. THOMPSON. Twenty?

Mr. TAGGART. Yes, sir; about.

Mr. THOMPSON. That is about the usual number?

Mr. TAGGART. Well, sometimes there are probably 150 working that are not members of our local.

Mr. THOMPSON. The trade agreement you have already spoken of?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. That you have with the master cement layers?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What are the hours per work day and the pay per day in your trade?

Mr. TAGGART. Wages are \$5 a day for journeymen, minimum \$5 and foremen \$5.50. The hours are eight hours a day. Overtime after 5 o'clock till 8 the next morning, holidays and Sundays. Five and a half days a week.

Mr. THOMPSON. Has your union got benefits?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What are they and how are they paid for?

Mr. TAGGART. There is a benevolent fund in the local organization that pays a member \$7 a week if he is hurt on a building. The constitution says 10 weeks, but I have never known a case where it did not run along till he got better. And there is \$215 in case of death goes to the next of kin—\$100 paid by the national organization and \$115 paid by the local organization.

Mr. THOMPSON. Have you got an out-of-work benefit, too?

Mr. TAGGART. No, sir.

Mr. THOMPSON. And no strike benefit?

Mr. TAGGART. No, sir.

Mr. THOMPSON. No strike benefit?

Mr. TAGGART. No, sir.

Mr. THOMPSON. That is not usual, is it?

Mr. TAGGART. No, sir. We have never had it.

Mr. THOMPSON. Never had it?

Mr. TAGGART. No, sir; and never will, I don't think.

Mr. THOMPSON. Did you ever have any strikes here?

Mr. TAGGART. Yes, sir. We have had strikes; as many as any of them, I believe.

Mr. THOMPSON. How do you finance that?

Mr. TAGGART. We do not finance it. If a man is called out on a strike it is up to him to go and get another job.

Mr. THOMPSON. Have you an examination on entrance to your organization?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What does it consist of?

Mr. TAGGART. Consists of an examining board of seven men.

Mr. THOMPSON. Well, if you know, in a general way, what does the examination consist of?

Mr. TAGGART. The regular line of work; just the same as if you were on a building.

Mr. THOMPSON. What is the purpose of the examination?

Mr. TAGGART. To find out if the man is qualified to earn \$5 a day.

Mr. THOMPSON. And no other purpose?

Mr. TAGGART. No, sir.

Mr. THOMPSON. There is no desire to create a monopoly in trade?

Mr. TAGGART. No, sir.

Mr. THOMPSON. What is your entrance fee?

Mr. TAGGART. \$25.

Mr. THOMPSON. Is that ever raised in case of special applicants?

Mr. TAGGART. Well, I believe if a man was expelled there—I don't know if it was ever raised. No, sir; it has not been raised that I know of.

Mr. THOMPSON. So far as you know, it has never been raised?

Mr. TAGGART. There is a provision in the constitution to raise it, but it never has been raised.

Mr. THOMPSON. What is the attitude of your organization toward the admission of aliens and negroes?

Mr. TAGGART. The aliens, they must be American citizens or show their first papers. If a man produces his first papers up there he will be given an examination.

Mr. THOMPSON. How about a negro?

Mr. TAGGART. We have never had an application, although we have four or five locals in the South. I think they have never made application here at all.

Mr. THOMPSON. Is there anything in your by-laws or constitution to prevent it?

Mr. TAGGART. No, sir.

Mr. THOMPSON. In fact, there are members in the southern organization?

Mr. TAGGART. I believe one of our locals here, 308, has two or three. That is what—I don't know whether they are there now or not.

Mr. THOMPSON. Down South there are whole locals of them?

Mr. TAGGART. Yes, sir; several of them.

Mr. THOMPSON. Have you any rules in reference to apprentices?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. What are those rules?

Mr. TAGGART. The apprentice must serve three years. The first year, \$1.50 for the first day he goes to work; \$2 for the second, and \$3 for the third. The employer must pay him from the day he puts him to work up till the time is up, work or play; that is, in the iron furring and laths. There is no apprenticeship for cement at all. The master league of cement workers get no apprenticeship.

Mr. THOMPSON. What is the reason for that?

Mr. TAGGART. I do not think the employer would want him. I don't think he would want to keep him and pay him three years for some of the work he does.

Mr. THOMPSON. Does your union accept transfer cards from members outside of New York?

Mr. TAGGART. Yes, sir; provided they can pass an examination before this board.

Mr. THOMPSON. Is there any special fee charged?

Mr. TAGGART. No, sir.

Mr. THOMPSON. Is there any objection on your union card to working for employers not members of the cement league in this city?

Mr. TAGGART. The majority of employers we are working for to-day are independent; do not belong to organization.

Mr. THOMPSON. Right in this city?

Mr. TAGGART. Right in this city, right at the present day.

Mr. THOMPSON. Assuming that a cement work contractor from outside the city of New York should come into the city of New York to erect cement work and to bring with him cement workers who are not members of any organizations that are part of the cement league, would the other union bodies in New York strike the job?

Mr. TAGGART. Well, I couldn't tell you, but I would try to have them do it.

Mr. THOMPSON. You would try to have them do it?

Mr. TAGGART. Yes, sir.

Mr. THOMPSON. Has that ever occurred here?

Mr. TAGGART. Yes; it occurred over on a job in Englewood, N. J.

Mr. THOMPSON. What happened there?

Mr. TAGGART. Our men was put to work.

Mr. THOMPSON. The other union struck the job?

Mr. TAGGART. No; I can not say that they did. I seen the employer and I told him and showed him what the conditions were here in this locality, and he agreed to put our men on.

Mr. THOMPSON. Is there a sort of an understanding among the various building trades unions here, that in case that is done there would be trouble on the work?

Mr. TAGGART. No, sir; every grievance takes care of itself when it is put in.

Mr. THOMPSON. Do you believe there would be?

Mr. TAGGART. I would try to have it.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Are there any questions?

Commissioner BALLARD. I would like to ask a question.

In speaking about your union, if you were working on a job and a nonunion man came to go to work on that job, would he be allowed to work?

Mr. TAGGART. In some cases they do.

Commissioner BALLARD. But not if you could prevent it?

Mr. TAGGART. Well, the members of the organization, if they were on the job, they would retire and let them have the whole job.

Commissioner BALLARD. You would strike before you would let a nonunion man work with you?

Mr. TAGGART. If we couldn't get them to join the union; yes, sir.

Commissioner BALLARD. You say you have no strike benefits. If such a case should arise that a man got on a strike, you say you have no strike benefit, what they would have to do would be to get work elsewhere in some other place? Would they then take any kind of work they could get?

Mr. TAGGART. No, sir.

Commissioner BALLARD. What kind of work would they take?

Mr. TAGGART. Metallic lathing.

Commissioner BALLARD. Supposing there was no work of that kind?

Mr. TAGGART. They would have to be idle. We have three or four hundred walking on the streets to-day, probably that number.

Commissioner BALLARD. They are not trying to do any other kind of work?

Mr. TAGGART. They have not up to the present day.

Commissioner BALLARD. You mean that your men, when they are not doing anything at their trade they won't do anything else?

Mr. TAGGART. They have not, because it won't be possible. They are carrying one card. If they were a member of another union they would go to work at that job if they could get a good one.

Commissioner BALLARD. Are there no factories or street cars or work of any kind that a man could do if he does not hold a card in the organization?

Mr. TAGGART. I believe there is work here in the city, but they do not look for it.

Commissioner BALLARD. They do nothing else?

Mr. TAGGART. That is right. That is why they make such a fight against someone else getting part of the work.

Commissioner BALLARD. In placing this reinforcing in the concrete work, does the architect or contractor, or anybody have a man there to see that it is done right, and to show the men how to do it?

Mr. TAGGART. In the majority of cases; yes, sir.

Commissioner BALLARD. If they get to a point where they wanted some reinforcing done, they couldn't have anybody there put it in, but they must have a union member to do it?

Mr. TAGGART. They always have a man there; we always have a foreman on the job.

Commissioner BALLARD. There is no delay, then?

Mr. TAGGART. No, sir.

Commissioner BALLARD. In waiting for a man to show them how to do it?

Mr. TAGGART. No, sir.

Commissioner BALLARD. That is all, Mr. Chairman.

Commissioner LENNON. Mr. Taggart, suppose a nonunion man come on to the job and he says to the boss that he will join the union when he gets some money, would you strike him off?

Mr. TAGGART. No, sir; not if he is a practical man. It is not money we are looking for; we are looking for men who can earn \$5 a day. That is where we have difficulty at times when we are rushed—in getting men that the employer is satisfied with without working us into trouble.

Commissioner LENNON. If men come to this city from towns with international cards you make no opposition to their going to work, do you?

Mr. TAGGART. No, sir.

Commissioner LENNON. That is all.

Mr. TAGGART. I would like to make it clear that a member of the international organization who has ever been a member of our local, whether before we went into the international or while we were out, or at the present time, never is put to a second examination at all. There is just one examination for a man, and that examination is not closed. Any employer or man who is dissatisfied with something that he thinks is getting pulled off is welcome to go up there and look at the examination.

Commissioner LENNON. I do want to ask another question because of other evidence that has come before us. Do you know of any conspiracy—I don't know if that word was used in the evidence before, but something was used that means that—any conspiracy between the unions in the city of New York and a part or all of the contractors to put a fence around New York and let nobody else come in and get work or do work?

Mr. TAGGART. The statement is absolutely false.

Commissioner LENNON. You have never seen any evidence of anything of that kind?

Mr. TAGGART. I have never known of a case. Here is one of the greatest jobs in the city here was put up by an outside concern; there was no interference; I mean the Express Building down there. Hammerstein has just finished a theater up on Fifty-first Street; Wanamaker's store at Ninth Street. They are all out-of-town contractors. Steward Co., of Chicago, has come in and taken two or three buildings. He has not been interfered with. He can not show any conspiracy.

Commissioner LENNON. All right.

Mr. TAGGART. I want to state that statement is absolutely false, and the man who made it can not prove it.

Chairman WALSH. That is all, Mr. Taggart. Thank you.

TESTIMONY OF MR. C. F. MASSEY.

Mr. THOMPSON. Will you give us your name, address, and occupation?

Mr. MASSEY. C. F. Massey; 1441 Minford Place; occupation, housesmith.

Mr. THOMPSON. What are you—organizer?

Mr. MASSEY. Organizer of the International Association of Bridge and Structural Iron Workers.

Mr. THOMPSON. Are you located here in New York?

Mr. MASSEY. Yes, sir.

Mr. THOMPSON. How long have you been located here on that work?

Mr. MASSEY. One year, practically—11 months.

Mr. THOMPSON. Have you been aware of conditions in New York before that time in your trade?

Mr. MASSEY. I have been representing the organization as local business agent previously.

Mr. THOMPSON. For how many years?

Mr. MASSEY. About three years, off and on.

Mr. THOMPSON. Are you acquainted with the jurisdictional disputes between your organization and the metal lathers?

Mr. MASSEY. Yes, sir; thoroughly.

Mr. THOMPSON. Why do the ironworkers claim the placing of rods in reinforced concrete work?

Mr. MASSEY. The ironworker has always claimed the right to install steel and reinforced concrete, because it was no more and no less than a structure in itself, and the structural iron organization could never see any difference in that than any other part of the structure.

Mr. THOMPSON. Did you hear what Mr. Taggart said in reference to the fact that his organization had done that work in New York for years previous to the Tampa decision?

Mr. MASSEY. I did.

Mr. THOMPSON. Is that true or not?

Mr. MASSEY. In order to get that plain we would have to go back to the beginning. The ironworkers—I can recall being a member of the association in this town previous to the formation of the wire lathers' union. The present business agent, the union agent of the lathers, Mr. Taggart, was a member of our association.

Mr. THOMPSON. What was that association then?

Mr. MASSEY. Bridge and structural ironworkers.

Mr. THOMPSON. The same organization you have now?

Mr. MASSEY. Exactly. I stated that the present representative of the wire lathers was a member of that union, and there was considerable difficulty in arranging things satisfactorily to everybody, and the result was that we awarded, or, rather, gave to the lathers a charter under the jurisdiction of our organization.

Mr. THOMPSON. As a local?

Mr. MASSEY. As a local; subcharter; yes, sir; in the city of New York under the jurisdiction of the local No. 2 of the housesmiths and bridgemen's union. The question of jurisdiction did not arise. Under the working conditions arranged for in that subcharter by that organization both organizations had the right to work on any class of ironwork that went up in the city of New York; but the question of jurisdiction did not come up at that time. We worked along harmoniously under those conditions in New York until 1905. After the installation of the sublocal of lathers, Taggart was their business agent. I was representing the structural ironworkers. We worked along under conditions when it started. The wire lather worked the beam work, the driving of rivets, or stair work, if he agreed to it, or vice versa. The question of a decision had never been rendered to my knowledge—we were never represented in the arbitration of that class of work in the city of New York to my knowledge. Up until 1905 we risked the striking of a job against Turner Construction Co., on Bank Street, in New York, where they were installing the work with nonunion labor. Wire lathers had been fighting this company for a number of years, and were unable to do anything with them. I pulled the ironworkers off of the job this company was doing, and incidentally we went before the board of carpenters—executive board—and placed my grievance, and the carpenters withdrew all carpenters working for the Turner Construction Co. to compel them to put on structural ironworkers on that work.

Naturally, the Turner Construction Co. was sore on account of the strike, and they immediately sent for a representative of the wire lathers and signed an agreement with them, and that was in order to prevent doing business, I presume, with the people I represented and cause them trouble. That was the beginning of the trouble, although the question was asked me why I broke. Well, Delegate Taggart was that kind of a man—I did not consider it fair—and he asked me whether I had any objections to his men working at reinforced concrete. I told him I had not up to that time; I had never known of wire lathers working on reinforced concrete. While the conditions were different 99 per cent was inclosed by members of our association, with no objection from the representatives of the lathers' union at that time. This job on Bank Street that I referred to was entirely manned by members of the No. 2 structural ironworkers.

Mr. THOMPSON. How long ago was that?

Mr. MASSEY. That was about 1905. Up until August 12, when the fight started with the American Bridge Co., August 5, conditions were in harmony; we worked in harmony with the lathers up to that time—1905, the beginning of 1905 or early in 1906. I went off the road as actually representing the organiza-

tion and was off some five or six years, and during that time the organizations had split and, in some way I know nothing about, the wire lather was able to get an agreement with the employers' association of New York.

Mr. THOMPSON. That split, then, came about between the two parties as the result of the strike of your organization against the American Bridge Co., didn't it?

Mr. MASSEY. Yes, sir.

Mr. THOMPSON. That one that you referred to?

Mr. MASSEY. Yes, sir. That was the beginning of our trouble with the employers' association.

Mr. THOMPSON. That started out of the case of Post & McCord?

Mr. MASSEY. No, sir; the American Bridge Co. in New Haven.

Mr. THOMPSON. And it came into New York City in the Post-McCord fight?

Mr. MASSEY. Possibly; three months later. If you would care to have me go into that, I will go into it.

Mr. THOMPSON. No; you need not do it. I want to take up a few particular matters.

Mr. MASSEY. Our organization since that time has never been, as I said before, affiliated with the arbitration plan, and it has never been in any position to protest against anything that may be installed in the trade agreements for the other trades. There is not any organization that deals in, works on, metal that has not taken up matters of that condition, where the lather, elevator constructor, sheet-metal constructor, and practically all of them—

Mr. THOMPSON. In other words, what you say, if I understand you right, is that all the other unions dealing in metal have taken advantage of the fact that you have not any agreement in your trade?

Mr. MASSEY. No, sir.

Mr. THOMPSON. What is the difference in wages paid to the ironworkers and to the metal lathers?

Mr. MASSEY. None at the present time.

Mr. THOMPSON. None?

Mr. MASSEY. No, sir.

Mr. THOMPSON. Do you know any special reason, other than what you have stated, why the employers favor the lathers over your union?

Mr. MASSEY. Well, yes; I do; but it is hearsay—that is, it is information I have obtained from the employers themselves.

Mr. THOMPSON. What is it?

Mr. MASSEY. I have been advised by a great number of employers in the city of New York who are independent, who would prefer to employ members of our association on that class of work, because they believe it rightfully belongs to us and never could understand how the wire lathers obtained the contract, but, of course, hear of the striking of their work through those so-called concrete alliance people, consisting of the carpenters, cement workers, masons, lathers, and helpers.

Mr. THOMPSON. That is, the cement league?

Mr. MASSEY. Yes, sir.

Mr. THOMPSON. Do or do not those people work closer together in questions affecting the trade?

Mr. MASSEY. In questions of jurisdiction along those lines they work as one.

Mr. THOMPSON. Have the ironworkers ever lost a job in New York City as a result of that?

Mr. MASSEY. Lost the Polo Grounds.

Mr. THOMPSON. What?

Mr. MASSEY. We had possession of the Polo Grounds, I believe; in the neighborhood of 60 of our men working there when those trades mentioned struck the job, compelled the company to place members of the wire lathers' association on the work.

Mr. THOMPSON. Do you know of any instance where outside contractors have been discriminated against by the cement league?

Mr. MASSEY. I know of a job at Ninety-sixth Street and North River—a company from Albany came down here and brought a foreman, a member of our association from Albany, and employed members of our association from New York—at least he engaged them; whether they put them actually on the work or not I don't know; but the representative of that company informed me that the representative of the engineers, carpenters, etc., alliance informed him that if he did not put on lathers that their work would be immediately tied up.

Mr. THOMPSON. What is the reason, if you know, for the absence of an agreement between the ironworkers and the employers in this city?

Mr. MASSEY. The real reason, I believe, lies in the fact that the United States Steel Corporation—Mr. Corey—at one time stated, in conference with a committee representing our organization, that the policy of the United States Steel Corporation was open shop, and to anybody who knows conditions knows that the open shop in their eyes means closed shop against unions.

Mr. THOMPSON. Well, but the employers have an agreement with the metal lathers?

Mr. MASSEY. Correct. But the United States Steel Corporation does not come directly connected with the other trades like it does ours. Neither does the structural-iron workers.

Mr. THOMPSON. How does the United States Steel Corporation exercise or exert influence on the employers of New York City?

Mr. MASSEY. Well, it is more knowledge that I have obtained from contractors. I have been informed by a number of contractors in the city of New York, and I have been in their offices talking with them over conditions, and even they went as far as to make the statement that if Frank McCord knew I was in there talking to them he would put them out of business. Some very large contractors fear to do business with our organization because of what the United States Steel Corporation may do to them in restricting the deliveries, etc.

Mr. THOMPSON. You got the information upon which you base the claim that the United States Steel Corporation control this situation?

Mr. MASSEY. Why, it is general knowledge among the contractors in the city of New York.

Mr. THOMPSON. Could you direct this commission toward any place where evidence can be acquired more definitely in reference to this situation?

Mr. MASSEY. I do not believe I could. I believe anybody who had given me this information would deny ever giving it if they thought it would become public.

Mr. THOMPSON. Who in the United States Steel Corporation has charge of such matters, if you know?

Mr. MASSEY. Well, I don't know that now; we have not had any—Laughlin and people we used to do business with—Laughlin is dead, and the people who handled them before with the American Steel Co. are not the people who handle them to-day. But going back to the conference held with Corey and others in 1906 or 1905, they very plainly told us that that was their policy; that our organization—that was, they went as far as to say the fact that our organization had an agreement with the American Bridge Co. in the past that they would wink at their policy and continue their agreement under the conditions that we could not accept.

Mr. THOMPSON. Do you think the United States Steel Corporation would refuse to sell steel to a contractor who made an agreement with you?

Mr. MASSEY. No, sir; I do not.

Mr. THOMPSON. Do you think they would furnish steel?

Mr. MASSEY. I think they would furnish steel, certainly.

Mr. THOMPSON. How would they reach him?

Mr. MASSEY. Well, I know of a very large contractor who is a general contractor; he asked the American Bridge Co. for the lowest price on a large tonnage job and they quoted a price to him, and this man was known to be fair to our organization. They quoted the prices, but it was supposed to be the lowest price they would quote, and they quoted a much lower price to another concern who was a large competitor of theirs, but a firm who was unfair to our organization.

Mr. THOMPSON. Where would we get that?

Mr. MASSEY. I would again have to give you the name of the man who gave it to me in confidence—a general contractor.

Mr. THOMPSON. You say a very well-known firm in New York—nine-tenths of the people in the industry—know of this situation? Do you know anything more definitely known among them—some avenue of approach to that situation that we could follow up?

Mr. MASSEY. No, sir; I don't think so.

Mr. THOMPSON. You don't think so?

Mr. MASSEY. No, sir.

Commissioner BALLARD. You say the United States Steel Corporation is unfriendly toward your union, or the structural-iron workers. Why are they so unfriendly to the structural-iron workers?

Mr. MASSEY. Unfriendly to all unions. There is not a union in the country to-day that the United States Steel Corporation, take them all the way down, on the Lakes and in the mills, and bricklayers had their unions and previously existed, previous to the formation of the United States Steel Corporation as it exists to-day.

Commissioner BALLARD. Are not nearly all the building contractors in New York—don't they all use union labor, nearly?

Mr. MASSEY. Yes, sir; generally speaking, they always use union labor.

Commissioner BALLARD. Doesn't the United States Steel Corporation sell to all contractors in New York who want steel?

Mr. MASSEY. Yes, sir; but understand we have no agreement with any union contractor in the city of New York, independent or otherwise.

Commissioner BALLARD. You mean that the United States Steel Corporation understands that a contractor, if he is going to have any work done by your structural ironworkers' union, he will charge them more than to some contractor who has the work done by some other union?

Mr. MASSEY. I am only giving that—

Commissioner BALLARD. That is the way it seems?

Mr. MASSEY. Yes, sir.

Commissioner BALLARD. Therefore, the United States Steel Corporation does not discriminate against unions, but only discriminates against your union?

Mr. MASSEY. Yes, sir.

Commissioner BALLARD. I want to know why it is that the United States Steel Corporation has it in for your particular union?

Mr. MASSEY. Because we are the one organization that they employ directly.

Commissioner BALLARD. Do they employ your organization in their plants?

Mr. MASSEY. No, sir; the plants are nonunion with the exception of a very few.

Commissioner BALLARD. I thought you said you are the organization?

Mr. MASSEY. We are the organization that the United States Steel Corporation, through their subsidiary company, the American Bridge Co., are directly interested in. The American Bridge Co. employs members of the bridge and structural ironworkers all over the United States.

Commissioner BALLARD. Your union?

Mr. MASSEY. No, sir; none of our union.

Commissioner BALLARD. Then they want that company to get the business, is that the idea?

Mr. MASSEY. I beg your pardon?

Commissioner BALLARD. Then they want that company to get all the business?

Mr. MASSEY. That is only natural. It is one company.

Commissioner BALLARD. That would be your inference, then, that they give that company the preference, on the part of their organization?

Mr. MASSEY. The American Bridge Co. is the United States Steel Co.

Commissioner BALLARD. Then they want that company to get all the business?

Mr. MASSEY. Yes, sir; naturally.

Commissioner BALLARD. That is what I mean.

Mr. MASSEY. At the time we struck for \$5.50 a day, no, for \$5 a day in the city of New York, in the beginning of 1906, I had the promise of a number of the biggest contractors in the city of New York to sign that agreement. On Saturday afternoon I was told by everyone, with no exception, that they were afraid to enter into an agreement with us.

Commissioner BALLARD. It so happens that you think the contractors are unfriendly to your union?

Mr. MASSEY. They certainly are.

Commissioner BALLARD. Also that the other unions are?

Mr. MASSEY. I would not go that far.

Commissioner BALLARD. The cement union is?

Mr. MASSEY. That is self-preservation.

Commissioner BALLARD. They are unfriendly?

Mr. MASSEY. Possibly only when it comes to a dispute between us and the lathers; then they are.

Commissioner BALLARD. They work with you and strike—would strike if you want them to?

Mr. MASSEY. Possibly. I have never asked them.

Commissioner BALLARD. But in the quarrels between you and the lathers they have been unfriendly to you?

Mr. MASSEY. They simply lived up to the agreement they have entered into with us.

Commissioner BALLARD. That is all.

Chairman WALSH. Any other questions?

That is all; thank you.

Mr. THOMPSON. Mr. Taggart would like to take the stand again.

Chairman WALSH. Have you some statement to make growing out of the evidence you have heretofore given?

Mr. TAGGART. Yes, sir.

Chairman WALSH. Very good. Make it as brief as possible.

Mr. TAGGART. I would like to refute the statements just made.

Chairman WALSH. It is not growing out of your own testimony?

Mr. TAGGART. No; it is growing out of the statements he has made.

Chairman WALSH. We will have to ask you to excuse us; we can not do that.

Mr. TAGGART. At some other time will I have a chance to refute those statements? The statements are not correct. It is putting us down as strike breakers.

TESTIMONY OF MR. C. FREUDENTHAL.

Mr. THOMPSON. Give us your name, address, and your business.

Mr. FREUDENTHAL. Secretary of Steel & Masonry Construction Co., 233 Broadway.

Mr. THOMPSON. Mr. Freudenthal, was your company engaged in the erection of the Polo Grounds—in the cement work at the Polo Grounds—in 1910?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. Who did they first engage to set the steel rods and the cement work—what organization of workmen?

Mr. FREUDENTHAL. Structural ironworkers.

Mr. THOMPSON. Why did you engage that union there?

Mr. FREUDENTHAL. They were already on the job, putting up the steel—that is, the larger steel—and just a natural inference that they would go right ahead and put in the reinforcement.

Mr. THOMPSON. Were you stopped on that work?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. Who stopped you?

Mr. FREUDENTHAL. The metal lathers called a general strike.

Mr. THOMPSON. Who went on a strike?

Mr. FREUDENTHAL. The carpenters, who were employed by another contractor or subcontractor up there, and the hoisting engineers, and the cement workers.

Mr. THOMPSON. And the cement workers?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. How was that strike adjusted?

Mr. FREUDENTHAL. I believe influence was brought to bear upon the National Exhibition Co., who were the owners of the Polo Ground, to have the metal lathers do the work rather than to hold up; it didn't make any difference to us which one did it.

Mr. THOMPSON. So then you changed your work, did you—the men who were doing the work?

Mr. FREUDENTHAL. We had to.

Mr. THOMPSON. And put in the metal lathers?

Mr. FREUDENTHAL. We had to. It was a big job—was a rush job—and the owners asked us to do that.

Mr. THOMPSON. You did it at the instance of the owners?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. Was there any hearing on that matter by the trade that you know of?

Mr. FREUDENTHAL. Well, I couldn't say as to that.

Mr. THOMPSON. Is that all you know of the existence of a cement league—that you have mentioned?

Mr. FREUDENTHAL. That is all.

Mr. THOMPSON. You have had no experience with that since?

Mr. FREUDENTHAL. No; we did not.

Mr. THOMPSON. What reason, if you know, did the metal lathers give for claiming that work?

Mr. FREUDENTHAL. They just simply claimed it was their work—it was reinforcement of concrete.

Mr. THOMPSON. Have you any information with reference to a method of settling jurisdictional disputes?

Mr. FREUDENTHAL. Yes; I think it would be a very good thing if there were some way of settling a dispute among the various labor organizations and the employers or, in fact, anyone that was in, as the general contractor or the subcontractor, so that it won't hold up the work.

Mr. THOMPSON. Were you held up in that work at all?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. For how long?

Mr. FREUDENTHAL. Ten day or two weeks; something like that.

Mr. THOMPSON. What was the cost, if you know?

Mr. FREUDENTHAL. I couldn't state the exact figures, because it was a percentage job—that is, if we spend a dollar we get a certain percentage profit. The National Exhibition Co. were the owners and suffered the loss.

Mr. THOMPSON. How much did they suffer?

Mr. FREUDENTHAL. I couldn't say.

Mr. THOMPSON. A thousand dollars?

Mr. FREUDENTHAL. Oh, yes.

Mr. THOMPSON. You haven't any general idea?

Mr. FREUDENTHAL. Why, so far as we are concerned—then, about probably \$2,000 on the latter bill; but what their loss was in time, delay on the work, that I couldn't say.

Mr. THOMPSON. Are you acquainted with the work at all of the arbitration plan in New York City for the settlement of jurisdictional disputes?

Mr. FREUDENTHAL. No, sir.

Mr. THOMPSON. Do you do work elsewhere than here?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. Do you have less jurisdictional trouble here than elsewhere?

Mr. FREUDENTHAL. No. We don't get into any jurisdictional disputes. We practically don't have much to say in jurisdictional disputes. Two unions get to fighting, and we stop until they get through fighting.

Mr. THOMPSON. Where do they fight the most, here or elsewhere?

Mr. FREUDENTHAL. Well, our work appears most in the city, and out in the country they are not interested or influenced by any labor organization much.

Mr. THOMPSON. Do you work in Chicago, St. Louis, or Kansas City?

Mr. FREUDENTHAL. No. For instance, we have a job in Havana—several jobs. We have a job in Essex Junction, Vt. Outside of the big cities we are not bothered much with it.

Mr. THOMPSON. Well, you have not experienced much trouble with jurisdictional matters outside of New York City?

Mr. FREUDENTHAL. No.

Mr. THOMPSON. From your experience as a builder, do you think jurisdictional matters could be settled better by a national body than by local ones?

Mr. FREUDENTHAL. Why, that is a question whether it could be settled satisfactorily to the contractor and to the union without causing delay on the work; that is the main thing.

Mr. THOMPSON. Anything which would terminate delay would be what you are after, of course?

Mr. FREUDENTHAL. Yes.

Mr. THOMPSON. Have you any opinion as to whether that delay can be lessened by a national body or by a local body in each of the different cities?

Mr. FREUDENTHAL. No; I don't see myself how it could be.

Mr. THOMPSON. How it could be what?

Mr. FREUDENTHAL. How it could be avoided—delay on the work be avoided—by anybody.

Mr. THOMPSON. You think a local body is better fitted to handle jurisdictional disputes than a national body?

Mr. FREUDENTHAL. No.

Mr. THOMPSON. Do you think a national body would be better?

Mr. FREUDENTHAL. No; I don't think either one of them is better than the other. It all simmers down to the same point—the contractor is delayed while these disputes are going on.

Mr. THOMPSON. Most all of these jurisdictional disputes are generally carried across the country by the different international unions, are they not?

Mr. FREUDENTHAL. I don't know.

Mr. THOMPSON. You don't know?

Mr. FREUDENTHAL. No.

Mr. THOMPSON. That is all I have to ask this witness.

Chairman WALSH. Any questions?

Commissioner BALLARD. I would like to ask a question. You say you have more trouble in New York in regard to these jurisdictional disputes than elsewhere?

Mr. FREUDENTHAL. Yes; I say that is due to having mostly union labor in New York. In fact, it is nearly all union.

Commissioner BALLARD. When you work elsewhere you do not pay so much attention to the union—whether they are union men or not?

Mr. FREUDENTHAL. Yes; any man who comes along, if he can do the work and do it satisfactorily to the superintendent, it doesn't matter, he gets a job.

Commissioner BALLARD. In which place can you get work done quicker, better, and cheaper?

Mr. FREUDENTHAL. That is a question. The work varies so—conditions vary so.

Commissioner BALLARD. Ordinarily, you prefer to deal with union labor?

Mr. FREUDENTHAL. Yes; we prefer to employ union labor.

Commissioner BALLARD. Because it would be more convenient and more satisfactory?

Mr. FREUDENTHAL. Yes.

Commissioner BALLARD. This question of the cement league seems to be rather a complicated question. They seem to favor the metal lathers as against the structural ironworkers. Do you know why that is?

Mr. FREUDENTHAL. No; I don't know exactly why it is; but the effect is that there are more unions affiliated with them than there are with the ironworkers.

Commissioner BALLARD. There are?

Mr. FREUDENTHAL. Yes.

Commissioner BALLARD. Which would you rather work with?

Mr. FREUDENTHAL. It is optional with the contractor.

Commissioner BALLARD. There is nothing in the structural ironworkers to make the members prefer them to the other unions?

Mr. FREUDENTHAL. No.

Chairman WALSH. Is that all? Thank you, Mr. Freudenthal. Call your next witness.

TESTIMONY OF MR. JOHN R. ALPINE.

Mr. THOMPSON. What is your name, your address, and your occupation?

Mr. ALPINE. My name is John R. Alpine; I am general president of the United Association of Plumbers and Steam Fitters of the United States and Canada; general offices at Chicago; branch office in this city.

Mr. THOMPSON. That is the new get-together organization, is it?

Mr. ALPINE. That is the title of the amalgamated organization.

Mr. THOMPSON. Now, Mr. Alpine, you know there are a great many jurisdictional disputes between the steam fitters and the plumbers all over this country, are there not?

Mr. ALPINE. A great many; yes, sir.

Mr. THOMPSON. In New York as well as elsewhere?

Mr. ALPINE. Quite so.

Mr. THOMPSON. What was the cause of that struggle; how did it grow to be?

Mr. ALPINE. Well, the cause of the trouble was because of the fact that there were two organizations, each performing the same class of work and recognized by the American labor movement as being empowered to perform such work. That was one cause.

Mr. THOMPSON. Originally, in the early days, Mr. Alpine, the plumbers ran lead pipe principally, did they not, and the steam fitters ran the iron pipe?

Mr. ALPINE. Well, that is true more particularly of the early days than of recent days. The march of time and progress and evolution in the building industry as it refers to the pipe-fitting trades has brought about a condition where there is a far lesser degree of lead inserted to-day in plumbing than previously, and I presume that perhaps that fact has had something to do with jurisdictional disputes between the plumber and steam fitter.

Mr. THOMPSON. But it is not the sole cause?

Mr. ALPINE. It was not the sole cause.

Mr. THOMPSON. Originally did the jurisdiction which the plumbers had and the jurisdiction which the steam fitters had overlap a trifle?

Mr. ALPINE. Yes.

Mr. THOMPSON. They did?

Mr. ALPINE. Yes.

Mr. THOMPSON. What was the duration of the jurisdictional disputes between the steam fitters and plumbers and what extent of country did it cover?

Mr. ALPINE. Well, prior to the year 1889 there existed an international labor organization which comprised in its ranks plumbers, steam fitters, and gas fitters, which was known as the International Association; that was the title. In 1889 that association became known as the United Association, which is the association of to-day. And at a convention held in Washington, D. C., in October of 1889 the steam fitters became disassociated with the general organization and instituted an organization of their own; so that you could say that, whole prior to 1889 there had always existed differences of opinion with regard to working lines or demarcation lines, that after 1889 those differences became more pronounced because of the fact the two organizations were then in existence. From that time until—well, until a year ago, those jurisdictional strifes existed throughout the country.

Mr. THOMPSON. For a great many years?

Mr. ALPINE. Since 1889, and, as I say, prior to that, but more pronounced since that time.

Chairman WALSH. At this point the commission will stand adjourned until 2 o'clock this afternoon. We will meet at 2 o'clock in the council chamber, upstairs.

(And thereupon, at 12.30 o'clock of Wednesday, May 27, 1914, a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

Chairman WALSH. The commission will please come to order. Call your first witness.

Mr. THOMPSON. Mr. Alpine.

TESTIMONY OF MR. JOHN B. ALPINE—Continued.

Mr. THOMPSON. Mr. Alpine, I believe this morning you had stated something about the evolution of the plumbers and steam fitters' union and the evolution of the industry which has helped lead to the jurisdictional strife. You had not reached the point of where the unions have lately come together, as I believe they have. What negotiations were had between the two organizations that led to the amalgamation?

Mr. ALPINE. May I be permitted to tell that in my own way or by merely answering?

Mr. THOMPSON. Tell it in your own way, Mr. Alpine.

Mr. ALPINE. I have explained, and I assume the commission understands, that this particular jurisdictional dispute was quite generally recognized as being the most aggravated of all the jurisdictional disputes in the building industry. I mean by that that it occupied more time of the American labor movement, in convention and in other deliberations, and was resultant in more industrial disturbances than any other of the several jurisdictional controversies. It passed through all the various channels of labor movements until it reached the Atlantic convention of the American Federation of Labor in 1911. That convention determined that there should henceforth be but one organization of kindred trades or trades that might be regarded as dual in their nature. And at the Rochester convention of the American Federation of Labor, held one year later, that convention on roll call voted to revoke the charter of the international steam fitters which was regarded as dual in its nature to the United Association, the cause for that revocation being that the international steam fitters had failed to carry out the instructions of the convention preceding, or the Atlanta convention.

The difference, or the chief difference, prevailing between the steam fitters of one and the steam fitters of the other—and you understand that the United Association, while the controversy has been largely known as a controversy between plumbers and steam fitters, as a matter of fact the steam fitters prevail in both organizations—the difference being that one had only steam fitters and steam fitters' helpers in its ranks, while the other had plumbers, gas fitters, and steam fitters, as well as other branches of the pipe family, the chief trouble being jurisdiction of work, or where one overlapped the other. We found that

the question of settling that line of trade demarcation was not as serious as it appeared on its face. Almost immediately following the close of the Rochester convention, which convention declared for revocation of the charter of the steam fitters of the international association, local unions that were a part of that international association began to make overtures for admission into the United Association of Plumbers and Steam Fitters, the first city being Cincinnati, Ohio; and that amalgamation in that city was consummated. Then followed Milwaukee, St. Louis, Chicago, Kansas City, Philadelphia, Washington, Baltimore, and numerous other cities of lesser industrial proportions. I would like to tell the commission how that was done if I may.

Mr. THOMPSON. Yes; I would like to ask that question. How would the union make the overture; how was it addressed, to the international organization or the locals of the respective cities, or in what what manner was that carried out?

Mr. ALPINE. The overtures were made to the international office, declaring that they were willing and ready to enter into negotiations—and since the question of trade jurisdiction was the all-important question the details of their admission were easily arranged—we adopted this plan to bring about an understanding as to their trade lines: Committees were secured from the plumbers' local unions and the steam fitters' local unions. If there were other local unions in that city—for instance, if there was a gas fitters' local or a sprinkler fitters' local—committees were also created from them or through those local unions. They sat down at tables and determined between themselves just what their work consisted of. The international officers did not at any time, except in one instance, that being the instance of settlement here, to do with the disposition of the trade jurisdictional lines, or, in other words, we felt that the plumber himself was the better qualified to determine what was his work and we felt that the steam fitter, the man who worked with his hands, was better qualified to determine his work as well. And we permitted that to be done without any interference on our part. We were agreeably surprised how readily they settled a dispute that had been existing for a matter of over 15 years. And in no case did we have any trouble in determining upon these trade lines. The city of Chicago, where perhaps the contest had been more pronounced than in any other city, gave us reason to think that there we would have a considerable amount of difficulty fixing the lines of trade jurisdiction, but we were agreeably surprised there, and in a matter of 10 days, or thereabouts, they disposed of it there. And we have adopted that practice everywhere in all the settlements made except here.

Mr. THOMPSON. Now, Mr. Alpine, what is your reason or what opinion have you, from the fact that when there are two international unions existing or were existing they could not get together themselves during the 15 years of warfare, during which buildings were tied up, money was lost to the public, and several lives were also lost; is not that correct?

Mr. ALPINE. I am not willing to—

Mr. THOMPSON. I will withdraw that question.

Mr. ALPINE. I will be glad to answer it.

Mr. THOMPSON. We will leave that out of the question—it might involve another proposition—but for 15 years these two international unions apparently were not able to get together; but then, apparently with only the moral force of the American Federation, they decided that they could get together—it has only required the charter of one international union to be revoked that they got together—and that when the men were permitted to meet each other they got together, as you say, in very quick order and settled their troubles between themselves. Why was it that this struggle existed for so many years, in your opinion?

Mr. ALPINE. The very reason for that was because there were two organizations, each performing the same kind of work. I can illustrate that a little better, if you will. Let us take New York City. The steam-heating contractor in New York, where the international steam fitters held sway, did not confine his operations to New York alone, but, being a contractor of note and importance, did work in other localities. He would secure a contract—for convenience sake we may take some city in New Jersey, near by.

Now, the steam fitters of the I. A. were in control here, but that general contractor found himself with a contract on his hands in a locality where a different state of affairs prevailed, where the United Association was in control.

Now, the steam fitters of the United Association working in that town, or perhaps being out of work at that time, naturally resented the advent of the

New York steam fitters into their locality, since they were not carrying the same sort of a union card. And the result was that one union man struck against the other. There never was a time when we maintained or proclaimed that the steam fitters of the I. A. were not equally as good union men as any other form of steam fitters, but it was a question of affiliation. Now, as soon as the charter was revoked, then after they came into one body they carried the universal card and there was no longer objection.

Mr. THOMPSON. In other words, Mr. Alpine, the existence of two international unions covering the same industry created two hostile camps?

Mr. ALPINE. Precisely.

Mr. THOMPSON. The very existence of that?

Mr. ALPINE. Precisely.

Mr. THOMPSON. But when what you might call the national or international lines were broken down the men as human beings got together with each other they had in their respective organizations——

Mr. ALPINE. Yes.

Mr. THOMPSON. Just their own organization?

Mr. ALPINE. Yes, sir. We found the things thought to be insurmountable were easily gotten over after men had sat down and realized the importance of the subject.

Mr. THOMPSON. As you have stated, in the trades-union world this long-continued struggle between the steam fitters and plumbers, coverings, as it did, the entire country, was looked upon as the fiercest and most stubbornly fought industrial fight in this country?

Mr. ALPINE. I think that is quite generally conceded.

Mr. THOMPSON. Now, you say upon this amalgamation peace in the country generally is established?

Mr. ALPINE. Yes, sir. There is but one city now where amalgamation has not been consummated, and that is Boston, where I am expected to be to-morrow, for the purpose of completing the arrangements. They have practically agreed upon their trade lines there.

Mr. THOMPSON. One or two matters in connection with the getting together of the various locals. Would there be any difference in the voting power of the delegates of the two local unions when they came together, or was the matter determined, not by vote, but by simply getting together and mediating through their conference?

Mr. ALPINE. It would have been manifestly unfair to have had those matters decided by means of vote. Manifestly unfair because in many instances we had in some places as many as three local unions each having the same number of representatives that the steam fitters had, and consequently a question of vote would have resulted disastrously to the steam fitters, and we maintain that it had to be a unanimous conclusion.

Mr. THOMPSON. And through the efforts of mediation and conciliation?

Mr. ALPINE. Yes, sir.

Mr. THOMPSON. Is there any reason why amalgamation has been delayed in Boston that you care to state?

Mr. ALPINE. There has been no particular reason why it has been postponed in Boston other than the fact that this amalgamation process was quite necessarily a lengthy one, and it embraced so many localities, and our contentions were quite generally taken up, but I do not want to evade or to have it appear as though evasion was intended—I might say that, after all, perhaps there is a reason, perhaps there was a reason. In Boston some of the trades affiliated to the American Federation of Labor and its building trade department, and affiliated to the Federation of Labor, affiliated to the building trades department thereof, national, and not locally, in Boston, took sides in this controversy, taking the side of the steam fitters—for convenience sake, if you will let me say steam fitter and plumber, while the terms are not quite correct, it will perhaps expedite matters.

Mr. THOMPSON. Yes.

Mr. ALPINE. It took sides with the steam fitters on the Boston controversy; other trades taking the side with the plumber, and that perhaps has had to do with the keeping of them apart until this time.

Mr. THOMPSON. From your experience, Mr. Alpine, in the adjustment of this jurisdictional matter, and from your experience in Boston, are you of the opinion that this matter can be settled on a national basis better than on a local basis? If you do not understand the question, I will put it in another form?

Mr. ALPINE. I do not think I quite understand the question.

Mr. THOMPSON. It has been stated here, Mr. Alpine, by various men before this commission that there could not be an international adjustment of jurisdictional troubles, but that they ought to be left to the adjustment in each city or locality where the trouble might arise.

Mr. ALPINE. I understand your question now. No, I do not agree with that. There were none of our settlements made that were made as local settlements. They were all made under the auspices and provision of the international union, and we did find this: That a settlement made—and I am speaking of the pipe-fitting industry—that a settlement made, for example, in St. Louis, in all its details would not meet the requirements of a similar settlement made in Chicago only a matter of six hours away. In other words, Mr. Thompson, we had to be governed by conditions, by priority conditions as they obtained.

Mr. THOMPSON. Was there any trouble in your international union adjusting itself to the priority claims in the various cities?

Mr. ALPINE. No, sir.

Mr. THOMPSON. In other words, you could allow differentials at various points as the necessity of the case required?

Mr. ALPINE. The international union—our international union—was quite as tired of the controversy as the party of the other part and the public generally, and in as much as peace could be obtained in a certain locality, that was all the international union wanted, as since all parties to the controversy were satisfied.

Mr. THOMPSON. Then from your experience, Mr. Alpine, in adjusting this great jurisdictional controversy, the opinion which has been stated here by some witnesses, that it could not be done through the international organization, or national body, because it could not allow for these varying conditions, is not correct?

Mr. ALPINE. Well I would say that it was not correct as it applies to the instance that you are questioning me on now. The international union consummated all these agreements. When the men were negotiating their trade lines, we remained in proximity to the meeting so that in the event of there being a disagreement we might act as mediators and endeavor to bring about an adjudication; but there was no such opportunity offered us because they adjudicated between themselves.

Mr. THOMPSON. One reason, Mr. Alpine, for some of the witnesses stating that it could not be adjusted by a national body, was that in certain large cities, New York for instance, in certain of the trades machines were used which were not used elsewhere. Would the adjustment of that kind of a case, in your opinion, be an obstacle which could not be overcome?

Mr. ALPINE. I may be pardoned if I say that I do not think our international union has yet found any obstacle that we could not overcome. I believe we could overcome that. I do not mean by that that we have reached the millennium; that there are no obstacles not yet to overcome; that we have overcome those obstacles that appeared to be quite unsurmountable. We have no control over nor do we have any machinery except in supply houses that cuts threads on pipe, and those men are not organized and we have no jurisdiction over them.

Mr. THOMPSON. Now, Mr. Alpine, from your experience in this matter are you of the opinion that a national body having the confidence of the union workers and also of the public generally throughout the United States would be a good body to settle such jurisdictional matters as might arise in any particular trade or in any industry?

Mr. ALPINE. I would not care to be recorded as being willing to subscribe to that. You are speaking of jurisdictional internecine troubles between labor unions?

Mr. THOMPSON. Yes.

Mr. ALPINE. No; I would not be willing to admit that. I believe the American Federation of Labor is better qualified to dispose of its internal differences than any other agency could be.

Mr. THOMPSON. That is a national body, is it not—it covers the whole country?

Mr. ALPINE. Yes.

Mr. THOMPSON. I was not speaking of the public at the time, but it took the intervention of the American Federation of Labor acting as a national body to force, by the revoking of the charter, to bring about amalgamation of the two associations, did it not?

Mr. ALPINE. Yes, sir.

Mr. THOMPSON. It was brought about by two international unions themselves?

Mr. ALPINE. No; it was primarily brought about because of the revocation of the charter.

Mr. THOMPSON. Do you see now any objection to a governmental body of national scope which might work with, say, the American Federation of Labor, international or local union if that were a better way, or working with organizations which are affiliated with the American Federation of Labor, to adjust troubles?

Mr. ALPINE. Simply as an institution for mediative purposes?

Mr. THOMPSON. Yes; and conciliation.

Mr. ALPINE. So long as that did not tend to savor of arbitration of a compulsory form I can see no objection, so long as it did not take away from the labor man of this continent his right to adjudicate and determine these disputes.

Mr. THOMPSON. Just purely a body of advice and conciliation, you see no objection?

Mr. ALPINE. I would see none.

Mr. THOMPSON. What is the power, Mr. Alpine, which your organization has, or the American Federation of Labor, to enforce the amalgamation of these two unions which is taking place, in case the local union does not wish to comply with the amalgamation—it has no legal power, has it?

Mr. ALPINE. It has no legal power; no, sir.

Mr. THOMPSON. It has a moral power?

Mr. ALPINE. It has a moral power; yes.

Mr. THOMPSON. And that is simply a moral power, is it not?

Mr. ALPINE. Surely.

Mr. THOMPSON. That is the only thing?

Mr. ALPINE. Local unions are voluntary members of the international and the international are voluntary members of the American Federation of Labor.

Mr. THOMPSON. What power has a local union over its members? I am talking now of legal power—it has none to enforce them to do anything?

Mr. ALPINE. Moral power?

Mr. THOMPSON. Moral power.

Mr. ALPINE. Simply a moral power. It has the by-laws which govern and control the local unions.

Mr. THOMPSON. Now, assuming that there was a governmental body purely for the purpose of conciliation or assistance which could deal with this matter at the instance of the bodies, would that not bring to the field an additional moral influence, providing it was of such a character that it met with the approval of the public and of the unions?

Mr. ALPINE. Of such a character and of such a creation as would meet the approval of the public and local unions being of a mediative character, I presume that would add to the moral strength.

Mr. THOMPSON. Has there been any trouble in the city of New York, Mr. Alpine, in connection with the amalgamation of those two organizations of which you speak?

Mr. ALPINE. Well, yes; there has been. The amalgamation here has been of longer duration than in any other place. There have been more angles, but so far as actual trouble is concerned, less here than in Chicago, where it was most acute, and where at one time it was estimated that \$65,000,000 worth of work was on strike because of these controversies. Here the trouble assumed another form. I have told the commission how these trade lines were disposed of, and if I may assume, it would be easier for me to answer your question, if I may be permitted to do it briefly as possible in my own way.

Mr. THOMPSON. You may do so.

Mr. ALPINE. Every place else that we have heard mentioned, where settlements were made, the men did it themselves. The longest period being not in excess of two weeks. I do not want to be held figuratively to that, but 10 days or 2 weeks would embrace all the time occupied in Chicago, which city was the one particular place where it required any great length of time. Here in New York we undertook the same mode of procedure. Committees representing the steam fitters and steam fitters' helpers, committees representing the two plumbers' local unions on the island of Manhattan, and the plumbers' local union situated at Brooklyn, went in the meeting for the purpose of settling their trade disputes here, just as they have been settled in every other locality. They started in to meet on or about the 1st day of June, one year ago. They met weekly from that time until about the middle of January, a matter of seven months or over, and arrived at definite conclusions so far as a certain part of

the steam fitters' work and a certain part of the plumbers' work was concerned, but there were some five points of work upon which they disagreed.

It became evident that in New York we were faced with a condition that did not prevail in any other place, the condition being that the men could not agree upon what constituted their respective work, and feeling that amalgamation, so generally observed, had to be observed in New York, I, as one of the officers, together with General Organizer Leonard, who was here with me, determined that in event of adjournment of these committees sine die without having accomplished their purpose, a unanimous action, that we ourselves would undertake the task of bringing about the amalgamations, predicating our adjustments made upon agreements made in other localities by the plumbers and steam fitters themselves, and the committees failed to agree and we undertook the task.

Now, we found the situation here something like this: In certain portions of the country there were certain forms of work that the plumber conceded to be the work of the steam fitter without dispute. Take, for example, what is known in the trade as thermostatic fitting, a form of pipe for heating regulations. In every other part of the country that work was conceded to be the work of the steam fitter, but here in New York, because of a decision previously rendered, the plumber was in control of the work and was performing that work. There was a differential here in that one instance, and there were three or four other instances where such differences of opinion prevailed. Now, we created, or helped to create, an agreement here that held inviolate the work that the plumber, by priority of right, was performing and held control over, and having in mind the fairness to the steam fitter, we also observed his rights as they obtained in the matter, and we completed an agreement that was satisfactory to the steam fitters. The agreement made here in New York was a fairer, a more equitable agreement for the plumber than was made in any other portion of the country by the plumbers themselves. Or, in other words, the agreement that we entered into here gave to the plumber work in New York that he, the plumber, conceded to be the work of the steam fitter in other localities.

The agreement was accepted by the steam fitters, and the steam fitters' helpers were rejected by the local unions on the island of Manhattan, the plumbers' local unions, and accepted by the plumbers' local union located at Brooklyn.

In creating the agreement we endeavored to make local unions of plumbers parties to the agreement, but two of them refused to subscribe, and we went ahead with the amalgamation over their protest.

Shortly after that a movement was made with the master plumber or master plumbers' associations as complainant, a movement made in the direction of enjoining us from consummating the agreement.

Mr. THOMPSON. A movement in the courts?

Mr. ALPINE. A movement in the courts in the form of a bill of complaint. It was not a restraining order and did not restrain us from proceeding. The bill was not served until the amalgamation of both local unions of fitters and helpers had been consummated, but the bill was presented, and later—served later—service was rendered on me after I had concluded the amalgamation.

The status of the situation to-day is that that matter is in the court and I am not able to determine what angle it will develop, but I do know that the steam fitters, they are known locally as the Enterprise Association of Steam Fitters and the Progress Association of Helpers, are properly enrolled in the association as members thereof; that for the first time in 15 years there has been one organization representing the pipe-fitting family in New York. That agreement was ratified by the United Association, and we propose to see that it will be adhered to, notwithstanding the protest of the unions who have made such protest.

Mr. THOMPSON. What power have you to carry that out as against those local unions, if you care to say?

Mr. ALPINE. I do care to say. I want to state that there is not anything I won't answer. The power of the United Association, the laws of the United Association, are subservient to the laws of the American Federation of Labor, as a component part of that body. The American Federation of Labor declared for an amalgamation of the contending forces and that peace might be restored in the building industry. The United Association provides that its local union shall obey its laws and the orders of its officers. In this case the laws of the United Association and the instructions of that body to

its officers are to carry out the orders of the American Federation of Labor, and if there be a violation, in answer to your question, of the agreement made between the officers of the United Association and the Enterprise and Progress Associations, if there be a violation by any local union of the provisions of that agreement, suspension of that local union from the United Association will follow.

Mr. THOMPSON. Outside of such suspension, Mr. Alpine, what power have you to induce the local unions to carry that out?

Mr. ALPINE. Merely the power of moral suasion and the resorting to of all possible legal means to restrain them from violating the agreement, and then, in the event of suspension, reorganization by men who will obey the laws when they are issued.

Mr. THOMPSON. Did the jurisdictional struggle between the steam fitters and plumbers in New York City come up before the contractors' association, the large employers' association, which Mr. Eidlitz is a member of?

Mr. ALPINE. So far as I know it did not.

Mr. THOMPSON. They made no fight in that respect?

Mr. ALPINE. I assume building-trades employers' association of New York, composed of men actively engaged in the building industry, were fully aware of the negotiations that were pending, and the result of the negotiations, as well as the general make-up of the agreement arrived at, but that as an institution they had nothing to do with the creation of the agreement, nor do I know that it was brought to their body, not by me officially, and I question if by anybody else.

Mr. THOMPSON. You would not be prepared, I take it, to express an opinion as to how your international would handle that matter in case your method and the American Federation of Labor method of adjusting that jurisdictional dispute should conflict with a decision of the Building Employers' Association of New York City?

Mr. ALPINE. I would——

Mr. THOMPSON. I will tell you why I asked that question, Mr. Alpine. Mr. Eidlitz said in Washington, when he was before this commission giving testimony on the question of collective bargaining, at which meeting you were to be present——

Mr. ALPINE. Yes, sir; and I was unable to be there.

Mr. THOMPSON. He said this: "I think there are a number of trades there"—meaning New York City—"that if their national organization were to tell them 'it is for the best interests of our organization as a whole that you shall break with your employer,' they would say, 'We will be loyal'; they would say, 'We will take our chances.' The employees know when the employer tells them he will do thus and so he will come pretty near doing it. If they can get the employer to enlist with them, they will say good-by to the central body." Does that meet with your idea of the character and kind of union organization in the building trades in this city?

Mr. ALPINE. In answer to that question, Mr. Thompson, I don't know whether you want me to answer the question as you put it last or as in the first.

Mr. THOMPSON. Take it as I put it last.

Mr. ALPINE. I am bound to say that it does not meet my view of the matter. If upon my entry into New York to bring about amalgamation here I had found that the Building Trades Employers' Association was hostile to my attempts to carry out the orders of my organization, or the organization I represent in a smaller degree, I would have gone through with the orders of my organization and endeavored to organize, place into operation, a steam fitters' local of the United Association, no matter what form the opposition was in evidence. I would have been compelled to do that.

Mr. THOMPSON. There will be nothing in your plan, however, of amalgamation, as I understand from what you have already stated, which would prevent you from adopting a decision of the Building Employers' Association in jurisdictional matters?

Mr. ALPINE. In answer to that I would say I have a copy of the agreements of the various trades, which I brought with me, because I thought they might be of service to this commission. Among other copies, I have a copy of agreement made in New York. Now, if you are already provided with a copy of that, you will find a proviso contained in that agreement, to wit, that "decisions rendered by the Building Trades Employers' Association shall be observed as a provision of this agreement." Now, the reasons for that, there had been here, as elsewhere, a great deal of unrest between the plumber and the

steam fitter over jurisdictional questions; the building-trades employers had made several decisions governing those disputes. In some instances I am quite willing and free to say that those decisions of the building trades favored the local unions affiliated to the international of which I am the general president. But you understand that, of course, was prior to this amalgamation. Their decisions lean toward the other side, but as a whole I felt upon first inquiry, and still feel, that those decisions rendered by the Building Trades Employers' Association, as they pertained to our organization as a generality, were not unfair and were quite equitable. Having that in mind and not wanting to reopen all these disputes and start contests again, we agreed that those decisions should prevail.

For illustration take, for example, the question of thermostatic fitting. By a decision that was decided to be the work of the plumber, but in Kansas City, Chicago, Milwaukee, and almost every other place it was determined to be the work of the steam fitter. Now, the question of vacuum cleaning, this piping for air-cleaning purposes, here in New York the plumber had been and is still in control of that work; but in other localities it was either made optional with either party to perform, or in some instances the steam fitter was awarded the control of that work. Now, we did not want to open all those things, and we agreed to abide by the decisions rendered. If you will pardon me just a moment, Mr. Thompson, so far as local unions telling international bodies that they would sever their international relationship, I don't think that would obtain in our organization, and if it did I believe it would obtain only for a very brief time; that we would soon be able to bring about a clearing up of that situation.

Mr. THOMPSON. It has been stated here, Mr. Alpine, that one method—one good method, by some witnesses—of determining jurisdictional disputes was to get the various trades amalgamated into their basic trade. That is, what you have done in this trade, have you not—that is, the pipe trade? They all belong to the pipe family.

Mr. ALPINE. Yes, sir; we figured, and it has been our theory for all time, that all men who work at pipe fitting in its various forms properly belong in one organization.

Mr. THOMPSON. Does that include the electrical workers, too?

Mr. ALPINE. I am glad you have brought that out. That does not include the electrical worker, who does piping in conduit form, and which the American Federation of Labor has previously decided to be his, and we are quite willing to abide by the decision rendered.

Mr. THOMPSON. What other work does the electrical worker do besides the pipe fitting and conduit work?

Mr. ALPINE. I don't know that there is any other work that could be construed as being in connection with our jurisdiction. That is the only work that I can recall.

Mr. THOMPSON. But you still think, however, that the amalgamation of the various unions with the basic union is a good proposition to settle jurisdictional disputes?

Mr. ALPINE. I don't want to be understood as subscribing to any form of organization that might be regarded as what is commonly known as industrial organization.

Mr. THOMPSON. No. It has been stated here, Mr. Alpine, that all the workers who deal with stone in the various unions, construction and preparation, could be properly amalgamated in the one union, and that that would save jurisdictional troubles in that field. Do you agree with that opinion?

Mr. ALPINE. If you put it that way, Mr. Thompson, if that is the question and you omit reference to cement, marble, and tile work, and all that, which would give it a wider and more general scope, I would say that the stone trades—and meaning that merely; I would not like to be regarded as considering of the other material as coming under the general meaning of stone—the stone trades, I would say, ought to be in one organization; that their best interests could be conserved just as I believe the pipe trades—

Mr. THOMPSON (interrupting). Now, what would you include in the stone trades as you look at it now?

Mr. ALPINE. You refer to granite—soft stone and various other forms of stone that are used in construction work?

Mr. THOMPSON. But you would exclude from that marble slabs and tiling?

Mr. ALPINE. I think so.

Mr. THOMPSON. And in your opinion has the jurisdictional contests which have been waged in the years gone been very costly to the building industry?

Mr. ALPINE. There is not question about it. They have.

Mr. THOMPSON. Have you any opinion as to the public cost in round numbers?

Mr. ALPINE. I haven't any opinion that would be—I am not qualified to answer that so that it might be regarded as a matter of record. In our own controversy the loss in dollars and cents, as represented by the cessation of labor, is of such a magnitude that nobody has yet undertaken the task of computation.

Mr. THOMPSON. Do you think it would run into millions of dollars?

Mr. ALPINE. No doubt of it.

Mr. THOMPSON. In other words, it has been a very expensive proposition for the building trades?

Mr. ALPINE. Most assuredly.

Mr. THOMPSON. Workers and builders as well?

Mr. ALPINE. Most assuredly.

Mr. THOMPSON. I believe, Mr. Chairman, that is all.

Chairman WALSH. Any questions to ask Mr. Alpine?

Commissioner GARRETSON. I have one.

Chairman WALSH. Mr. Garretson wants to ask you a question.

Commissioner GARRETSON. In the settlement of their jurisdictional disputes, Mr. Alpine, I gather from your statement that your belief is that they can best be settled on general principles by the international or national body, leaving the details of its application to the local men themselves?

Mr. ALPINE. I am not prepared to say that that would be applicable in every trade or calling, but in our instance it proved to be.

Commissioner GARRETSON. So your experience as applied to your own affairs favors that method?

Mr. ALPINE. Yes, sir, Mr. Garretson. I was simply answering the questions as I inferred them as pertaining to my own particular organization.

Commissioner GARRETSON. Well, I wanted to get my own understanding of your intent, as I understood the question.

Mr. ALPINE. The reason for that—perhaps I might explain that so you would understand it a little more clearly. For instance, you take the city of St. Louis; the question was asked of me early if lead pipe was not less commonly used now than previously in lead plumbing. My answer was that that was true. There are some cities in this country where lead pipe obtains more than in the others. Now, St. Louis is one of those cities. Now, I could be a party to a trade agreement, and, because of the fact that lead pipe entered more largely into the plumbing installation of that city than it does in Chicago, the same agreement that pertained in St. Louis would not relate in all instances to Chicago, where iron had supplanted the lead.

Commissioner GARRETSON. It would not furnish a solution of the local conditions?

Mr. ALPINE. No, sir.

Commissioner GARRETSON. But if the methods of manufacture and erection were uniform in all points, then a uniform settlement could apply without difficulty?

Mr. ALPINE. Yes, sir; but it is not feasible in the settlement of this dispute.

Commissioner GARRETSON. No. Therefore the application to the details after the federation had given its edict are, in your judgment, best left to the men locally?

Mr. ALPINE. Yes, sir.

Commissioner GARRETSON. Now, under your methods of doing business, I wanted to know whether or not a local body—I suppose they are known by various names?

Mr. ALPINE. Local unions?

Commissioner GARRETSON. No; I mean local federated bodies, trade and labor assemblies, and such unions—

Mr. ALPINE (interrupting). Central federated unions?

Commissioner GARRETSON. Yes. Can a body of that kind and the unions which are its constituent parts enter into an agreement with employers, that agreement being in violation of the law or the edicts of the national or international unions of which they are a party?

Mr. ALPINE. I should say they certainly could not. They would not do it in the instance of our organization, and I never have known them to attempt it.

Commissioner GARRETSON. In other words, the powers of the national or international body takes precedence of any local power?

Mr. ALPINE. Absolutely.

Commissioner GARRETSON. If the condition that was cited here and referred to in answer to the question of Mr. Thompson, that the local unions of New York did assume the attitude that—if it came to a question between obeying the national union and the interests of the employer, would that practice, if common, be fatal to the interests of the union?

Mr. ALPINE. Quite naturally; it would destroy discipline. You would be placed in a position where you would be compelled to acknowledge, or rather to determine, as to whether the particular local union was the tail or the body of the kite; and it would not be hard in this case to determine it.

Commissioner GARRETSON. From the standpoint—I ask the question in regard to it because you are the general executive of the organization—

Mr. ALPINE. Yes, sir.

Commissioner GARRETSON. From the standpoint of the organization, a local man who advocated such a policy would be recreant, would he not?

Mr. ALPINE. Do you want me to answer that?

Commissioner GARRETSON. Yes; if you feel free to.

Mr. ALPINE. I am perfectly free to answer that he would certainly be regarded as such.

Chairman WALSH. Mrs. Harriman, have you some question you wish to ask?

Commissioner HARRIMAN. No.

Commissioner LENNON. I would like to ask him a question. I am going to ask you one question, Mr. Alpine—another question on the same line as Mr. Garretson. Isn't there an essential necessity for a national foundation to be laid of general principles governing the settlement of jurisdictional disputes before the local unions can work out the details?

Mr. ALPINE. I am very glad you asked that question. I don't know whether the commission is provided with a copy of our constitution or not. There is a proviso—it must not be understood. First, let me say, the mode of procedure that we adopted was because of abnormal conditions. It was the absorbing or the acceptance of a large body of men not yet affiliated, and who were coming in as collective bodies, and hence we adopted the means of settling those disputes before they entered, rather than settling them after they had entered. Now, you understand, wherever there are a sufficient number of steam fitters to properly conduct a local union, we issue to them and prefer that they should have charters and be chartered as steam fitters. But there are many smaller cities in this country where the steam fitters and the plumbers are together in what is known as mixed local unions. Now, you can readily imagine that in those mixed local unions we very frequently have a dispute arise as to what constitutes the work of the plumber or of the steam fitter. In some instances, where there are two local unions, one of plumbers and one of steam fitters, they sometimes come into conflict. And when that occurs a section of the constitution governs that, and if it be your pleasure, I will read it to you. Let me read the last portion of the constitution, the section referred to, and I will turn it over to your secretary.

"SEC. 127. The jurisdiction of the U. A. embraces all kinds and classes of pipe fitting, and the separation of the special branches of your craft is left to the wisdom and judgment of the members of our craft in their vicinities, to be decided by a board composed of members, two to be selected from each local branch of the trade which may be in actual dispute or who may lay claim to any particular class of work. In case the local committees of the special branches involved can not agree, it will be the duty of the general president of the U. A. to appoint an umpire, not locally interested, from each trade involved, and they shall take all evidence under advisement and render a decision. Failing to agree, the umpires so appointed shall forward all evidence to the general president of U. A. for a final decision."

I anticipate that the settlement of this dispute in the pipe-fitting industry means that contractors, general or otherwise, and the public generally, are not going to be called upon to settle any more disputes in the pipe-fitting industry; that they will be settled internally and between and among ourselves.

Commissioner LENNON. Mr. Alpine, a number of witnesses testified as to an alleged rule of limitation of output of workingmen. You have had a wide experience, have you not, and what have you to say on that subject—as to the limitation of the day's work and the limitation of the output of union men?

Mr. ALPINE. Well, I have heard of those things; but I am bound to confess that I believe they are comparatively nonexistent to-day. Local unions have local by-laws and they are required to send those local by-laws into the general office for approval or for consideration. The institution of the proviso like that would be a contradiction of our general law, and we could not accept such a local constitution. If those things do prevail, they are unwritten laws, and we do not know of their existence, although from time to time I have had employing plumbers and employing steam fitters profess that those things did exist. And I have assumed that it depended upon—if I might use a phrase—that it depended upon whose ox was being gored, the employer, feeling that the men were not doing a sufficient amount of work, and the men feeling such not to be the case. I don't know of any rule that prevails in any local union where it is made public in the local that such is the condition.

Commissioner LENNON. Mr. Alpine, how long have you been in the trade? I don't intend to find out how old you are.

Mr. ALPINE. Well, I was wondering if I was not going to give you a pretty good line—about 29 years.

Commissioner LENNON. What does your observation lead you to believe to be the output for the plumber and the steam fitter as compared with 25 years ago?

Mr. ALPINE. My observation is that the plumber and the steam fitter are doing more work to-day than they did 25 years ago.

Chairman WALSH. Commissioner Ballard would like to ask you some questions.

Commissioner BALLARD. You say the plumber and the steam fitter do more work now. Have they better tools and better facilities for doing work?

Mr. ALPINE. Yes; in some respects, yes; in so far as the iron-piping portion of the plumbing trade is concerned, they have better tools and better facilities to-day than they did 25 years ago. That is true of the pipe-fitting business generally. Where 25 years ago certain sizes of piping were cut on the buildings by hand, those sizes of piping to-day are cut by machinery, and tools have made some general improvement.

Commissioner BALLARD. What number of hours do the men work?

Mr. ALPINE. Almost a universal eight-hour workday.

Commissioner BALLARD. When does that begin?

Mr. ALPINE. At 8 o'clock in the morning and until 12 at noon—

Commissioner BALLARD (interrupting). If a man is out in the country 10 or 15 miles from New York City and has some work to be done on a steam radiator and he sends to have it done, where does the workman's time begin and where does this workman's 8 o'clock start?

Mr. ALPINE. Well, his time starts at 8 o'clock in the morning.

Commissioner BALLARD. Where must he be at that hour? Suppose it takes an hour from his residence, or a half an hour from his residence or home to his shop and an hour from his shop to where the job is. Where does he report at 8 o'clock in the morning?

Mr. ALPINE. He reports at the shop.

Commissioner BALLARD. He reports at the shop?

Mr. ALPINE. Those things are provided for largely in the local agreements made by the local unions and their employers; and it has been my experience that the men frequently—more frequently than otherwise—are quite willing to regulate their hours in such an instance contingent with the train departures and arrivals. But if a man ordinarily travels for an hour or two hours on a railroad and he has to use that hour or two hours prior to the time when he is entitled to report to work, somebody is going to pay him for the time of his travel.

Commissioner BALLARD. Then he works eight hours. That would be from 8 until 4 or 5? What time in the afternoon does he quit work?

Mr. ALPINE. Five o'clock is the hour, with an hour for lunch. Sometimes in some localities and in certain periods of the year—not in the large industrial centers generally, but in other places, and in some cases in the larger cities in the times of the year where the day is short and darkness comes before 5 o'clock—the employers make arrangements with their men to take only a half hour for lunch and stop a half hour earlier.

Commissioner BALLARD. But when the workman goes out to perform work of that kind, does he always take an apprentice with him, or helper, or does he go alone?

Mr. ALPINE. Well, that depends on the work.

Commissioner BALLARD. If the work requires it he takes him, and not otherwise?

Mr. ALPINE. Why, certainly.

Commissioner BALLARD. Suppose, for the sake of argument, that there are two repair jobs in one house and one is some work the plumber could do and at the same time the other is steam-fitter work, but either man could do it. Would it be necessary to have two separate men come there to do those two jobs that each one might not take over an hour?

Mr. ALPINE. I will have to answer that question by bringing forth some difference of relation as to the place that might occur in. If that happened in New York and a plumber undertook to do the steam fitting, there would be objection, or vice versa. We don't admit that the plumber has any right to do steam fitting, or that the steam fitter has any right to do plumbing. In some localities our men are members of a local union composed of plumbers and steam fitters. The plumbers and steam fitters agree jointly that either one or the other may perform a certain limited amount of their respective work for just such emergencies. But if you were to permit that to happen in New York or some of the other places where separate and distinct local unions of steam fitters and plumbers prevail, you would be getting yourself and ourselves into endless trouble because of our desire to protect the steam fitters and the plumbers.

Commissioner BALLARD. And then if in doing either character of work it was necessary to cut a hole through a wooden partition or a brick wall he would have to get either a carpenter or a brick mason?

Mr. ALPINE. No; you get either a carpenter or a brick mason. You will pardon me; I don't think it is intended, but I feel that that question is a trifle exaggerated. I do not believe a plumber—I know that a plumber or a steam-fitter would not send for a carpenter or a bricklayer to make a hole through the wall, because they would be quite as well qualified to do that as either of the others mentioned, and it would not be sensible for them to do it, and I am very positive they would not do that.

Commissioner BALLARD. They would make the hole themselves?

Mr. ALPINE. Yes.

Chairman WALSH. Mrs. Harriman, have you some question you wish to ask?

Commissioner HARRIMAN. Mr. Alpine, I would like to know if the so-called efficiency system has been introduced in any way among either the plumbers or the gas fitters' trades? I ask because of your speaking of their doing more work now than they did 25 years ago, and yet your hours are shorter than 25 years ago. I want to know why they are doing more work or a greater amount of work?

Mr. ALPINE. I can answer that, Mrs. Harriman, by saying, first, the efficiency system, as it is generally regarded, has not been introduced. The fact of the matter is that more work is being done than 25 years ago, and that can be attributed to the competition in the market—there are more men engaged at the trade—to the difference in material, and the fact that the general construction of buildings demands a greater production of work. There has been no introduction of efficiency plans. Now, take perhaps a better illustration, to be specific. In the plumbing business, where years ago lead prevailed, you have often heard the expression, I presume you have heard the expression, of wiping a joint, as it applies to the plumbing business, which means the joining together of two or more pieces of pipe by means of molding liquid solder. Now, that required time and patience, and consequently less work could be performed by that means than can be performed to-day where those same two or more pieces of pipe are joined together by means of screwed threads. That has its influence in the production of work and as it applies to the plumbing, speaking specifically.

Chairman WALSH. Any other questions?

Commissioner O'CONNELL. I just want to ask you one question, Mr. Alpine. I take it from what you say the jurisdictional fights, so called, in the pipe industry have practically disappeared, so far as the public is concerned? You have so arranged your affairs that disputes in the future will be adjusted internally and within your own organization?

Mr. ALPINE. Unless they happen with the machinists. Well, I did not mean that as a facetious answer, Mr. O'Connell. The means of adjusting those disputes now is within our own ranks, unless some other trade encroaches upon our jurisdiction. Then, of course, we will have to settle that with them.

Commissioner GARRETSON. Or you encroach upon somebody else?

Mr. ALPINE. Or we encroach upon somebody else.

Chairman WALSH. That is all, thank you, Mr. Alpine. Call your next witness, Mr. Thompson.

Mr. THOMPSON. Mr. Alpine, would you mind letting us have those agreements you have brought here?

Mr. ALPINE. I would be very happy to furnish them; they are the only copies I have here, and I shall be glad to let you have them if you will return them to me after you have gotten through with them.

Mr. THOMPSON. You don't mind our having them for some time?

Mr. ALPINE. No; I will be glad to do that.

Mr. THOMPSON. If you will, you may do that.

(All the papers at this point referred to were by the reporter turned over to Mr. Sullivan, of the commission's office, at the direction of Mr. Thompson. Agreements returned to Mr. Alpine.)

TESTIMONY OF MR. GEORGE H. MORRIS.

Mr. THOMPSON. Please give us your name and address.

Mr. MORRIS. George H. Morris, a member of the firm of Johnson & Morris, steam fitting, 538 West Twenty-third Street, New York City.

Mr. THOMPSON. You are a member of the master steam fitters' association, Mr. Morris?

Mr. MORRIS. Yes, sir.

Mr. THOMPSON. Were you at the time of the termination of the arbitration plan in this city the chairman of the arbitration board?

Mr. MORRIS. Yes, sir.

Mr. THOMPSON. At that time did a delegation of the ironworkers' union come to see you and ask you to intercede on their behalf to be admitted to the arbitration plan?

Mr. MORRIS. I recall five men coming to me who represented themselves to be such; I have no means of knowing whether they were or not.

Mr. THOMPSON. Did they offer to put up a bond of \$25,000 for their good behavior if they were admitted to the plan?

Mr. MORRIS. They did.

Mr. THOMPSON. And what did you say to those five men, if you remember, Mr. Morris?

Mr. MORRIS. That is a good while ago. To the best of my recollection I said that I did not think that I could be of any use to them, and they urged me to intercede for them, and I told them that I did not know in what capacity I could do so. And I finally agreed, as representing those five men, to present their statements to their employers, which I did.

Mr. THOMPSON. And what became of it, if you know?

Mr. MORRIS. Nothing.

Mr. THOMPSON. Your plan of arbitration, Mr. Morris, was not elastic enough to take in such a question as that, was it?

Mr. MORRIS. Why, the ironworkers had, by the joint action—permit me first to say this, that the method of voting in the arbitration plan was that the union side and the employers' side voted separately, and to carry any question there had to be a majority affirmative vote on both sides before any question was carried. And those ironworkers had been—I won't say expelled, but suspended from the board by the affirmative vote of each side voting separately. So that they were not members at the time. They wanted to be reinstated on the board.

Mr. THOMPSON. In other words, they did not come under your jurisdiction?

Mr. MORRIS. I could not see that they did.

Mr. THOMPSON. Now, Mr. Morris, something has been said here to-day in regard to the settlement of jurisdictional disputes. Mr. Alpine, whose testimony you have heard, favors the settlement of them by the international union, working preferably through the American Federation of Labor; that by doing that they can make allowances for local conditions. Have you any opinion on that subject?

Mr. MORRIS. I have.

Mr. THOMPSON. Do you favor what he stated, and if not, what is your opinion in regard thereto?

Mr. MORRIS. My opinion is that it would not work well.

Mr. THOMPSON. Why?

Mr. MORRIS. I don't think that any jurisdictional dispute is the exclusive property of either the union man or the employer. I think any question of that character, to be settled permanently, can not be settled unless both sides have something to say about it. It might be settled, but it would be settled by force rather than by agreement.

Mr. THOMPSON. Going back to the arbitration plan for the moment, Mr. Morris, why was that abolished? Was it on account of the fact that it was declared illegal by the courts?

Mr. MORRIS. No; the arbitration plan existed for seven years, and I think that any method which lasts for seven years in settling disputes between the labor unions and employers has served about as long as it is possible to keep it together. I think the fact that it lasted for seven years has as much to do with its dissolution as any one thing. Furthermore, this question of having suspended the iron workers and the painters and not taking them back, I think did have a considerable amount to do with the discontinuing of the plan. And there was another matter that I always felt brought about—tended to bring about—a dissolution, and that was that it was popularly understood that the labor side caucused during the night before the arbitration board meeting, the last year or two of the plan. I think that has had as much as anything to do with it.

Mr. THOMPSON. Who held the caucuses?

Mr. MORRIS. We understood that the union side of the arbitration board held a caucus the night before the meeting of the board, and consequently that many questions were prejudged before the meeting of the board.

Mr. THOMPSON. What was the acute dispute that caused the termination, if you know?

Mr. MORRIS. The steam fitters' strike. That was nominally the cause of the disruption, but I never felt that that was the real cause.

Mr. THOMPSON. Now, going back to the question of the settlement of jurisdictional disputes, you have said that you do not think that they could be settled properly without the employers being represented—

Mr. MORRIS. I would not like to say properly. I say "permanently."

Mr. THOMPSON. What interest have the employers in a jurisdictional dispute as to its manner of settlement?

Mr. MORRIS. Why, they have all the responsibility of being under contract to perform a piece of mechanical work for which they remain responsible in my particular business for two years under the contract terms, and probably for a longer time; but commonly. And certainly they should have some say whether a plumber or a steam fitter does the steam-fitting work.

Mr. THOMPSON. Assuming, Mr. Morris, that the unions have gotten together and settled that matter, and assuming that they made allowance for existing contracts that the employer had, what interest would that employer have in the settlement of the jurisdictional dispute?

Mr. MORRIS. Why, he would have this: I consider that the steam-heating business is a business involving more or less danger to life and limb, for which the contractor is directly responsible; and I think his judgment as to whether he shall use steam fitters to do steam-fitting work should go further than a majority vote of a Federation of Labor that perhaps knew nothing about the technicalities of the business. I think the employer is certainly a factor in the settlement.

Mr. THOMPSON. You say that the liability of a damage suit on behalf of the employer, because of the character of the workmen that do the work, justifies him being considered?

Mr. MORRIS. On behalf of the ability to work?

(The question was read by the reporter.)

Chairman WALSH. Against the employers?

Mr. THOMPSON. The liability to damage suit on account of the character of the men doing the work.

Chairman WALSH. Ask the question over again. I misunderstood it.

(The question was read by the reporter.)

Mr. THOMPSON. Mr. Morris, as I understand your answer—I want to get that clear—do you feel that the employer is liable to be called upon to pay damages?

Mr. MORRIS. Absolutely.

Mr. THOMPSON. Because of the character of the workmen doing the work?

Mr. MORRIS. Not the character of the workmen.

Mr. THOMPSON. I mean as to whether he does his work properly or not.

Mr. MORRIS. His ability to technically handle it, technical knowledge of what he is doing.

Mr. THOMPSON. What other reasons, in your opinion, would justify the employer in being considered?

Mr. MORRIS. Common justice.

Mr. THOMPSON. Upon what other grounds would common justice require him to be considered?

Mr. MORRIS. I think that would be enough.

Mr. THOMPSON. Are there any business reasons, because you are in business, because you have your plant, your organization going, you hold yourself out—

Mr. MORRIS. I think I can—

Chairman WALSH. Please read the question. It had not been finished.

(The question was read by the reporter.)

Mr. THOMPSON. To the public to carry on that business?

Mr. MORRIS. Yes, sir; there is that reason, and there is this reason: That the jurisdiction of trades in New York, and, I presume, in other places, has grown largely out of custom and a long period of men being familiar with their work. I have been in the steam business here in this city for 33 years, and when I first went into the steam business there were no unions, and many of the things we did then we do not do now directly because of the subdivision of trades. Trades have become more specialized, and I think it is of the greatest importance that in all trades involving any danger to life or property the employer should certainly have voice in the selection of the kind of mechanics that do his work, because he will certainly employ those that he thinks are best adapted to the purposes; and then by those same customs, of certain trades having the jurisdiction so many years, they have become skilled, and in another locality another trade might be skilled in their trade. Therefore I say that the Federation of Labor, and I say it without the slightest disrespect to their ability at all, but I do not think the Federation of Labor, or any other national body, can properly judge of local jurisdictional questions.

Mr. THOMPSON. Don't you think that they could take into consideration such matters as you speak of?

Mr. MORRIS. Why, yes; they could take some of it into consideration; but they certainly have not the knowledge and some of the facilities for properly judging of the conditions. Furthermore, a large body of that kind, without stating it as a fact, I should think that they would be influenced by other reasons. They would be influenced by their nearer acquaintance to one trade than to another. I think there would be great difficulty in giving a decision based purely on the true local requirements.

Mr. THOMPSON. Assuming that there were governmental, a national body upon which employers and employees had a representation, who were capable of taking evidence, hearing the employers and hearing the employees, do you believe that such a body could not consider the reasons that you have given and decide the truth from the evidence of the people?

Mr. MORRIS. If properly constituted, I do not say that they would not be competent. I think, however, that as we know now that every law case that goes to a Federal court is liable to take a long while in reaching a decision, I think before the time such a body would reach a decision the emergency of the case would have long since passed.

Mr. THOMPSON. That is all I care to ask the witness.

Chairman WALSH. Are there any other questions?

Commissioner LENNON. I want to ask one question: Out of the settlement of this dispute in the pipe-fitting trade, how does it affect your free choice of workmen? How do you think it may affect your free choice of workmen? You want steamfitters?

Mr. MORRIS. Yes.

Commissioner LENNON. How will this amalgamation and this settlement affect your free choice of getting steam fitters?

Mr. MORRIS. I do not see that it affects us in any way that we have not been, under the same conditions, for the last 30 years.

Chairman WALSH. Commissioner Ballard, have you any questions?

Commissioner BALLARD. You spoke of the ironworkers and carpenters both withdrawing from this amalgamating association at the same time?

Mr. MORRIS. No; the painters.

Commissioner BALLARD. The painters were subsequently reinstated, were they not?

Mr. MORRIS. No, sir; the arbitration board—the carpenters, by the way, also had them suspended, and they had made application for reinstatement, and that had been granted; but they had not actually again sent their delegate to the board when the termination of the board occurred. When the board discontinued, my recollection is, the housesmiths—that is, the ironworkers, we call them the housesmiths—and the painters were still out of the board.

Commissioner BALLARD. It has come to your attention why the ironworkers are still not affiliated, hasn't it?

Mr. MORRIS. I, being a member of the board of governors of the employers' association, I know that it is a fact.

Commissioner BALLARD. Why are they not?

Mr. MORRIS. Why are they not?

Commissioner BALLARD. Yes.

Mr. MORRIS. I presume only for the reason that they and their employers have no agreement and their employers do not recognize a union condition. The Building Trades Employers' Association, I have heard it said here that they were entirely a union proposition. That is not quite true, because there are nonunion conditions recognized there as well as union conditions.

Chairman WALSH. Is that all?

Commissioner GARRETSON. I haven't anything.

TESTIMONY OF MR. JAMES P. KNIGHT.

Mr. THOMPSON. Now, Mr. Knight, will you give us your name, your address, and your business, please?

Mr. KNIGHT. James P. Knight; conducting a plumbing business under the firm name of J. N. Knight & Son, at 221 West Forty-ninth Street.

Mr. THOMPSON. How long have you been in the plumbing business in New York City?

Mr. KNIGHT. Working and as an employer?

Mr. THOMPSON. Yes, sir.

Mr. KNIGHT. Forty-seven years.

Mr. THOMPSON. Have you heard the testimony of Mr. Morris?

Mr. KNIGHT. Yes, sir.

Mr. THOMPSON. With reference to jurisdictional matters?

Mr. KNIGHT. Yes, sir.

Mr. THOMPSON. Have you anything to say in regard thereto different from what he says?

Mr. KNIGHT. No, sir; I think not.

Mr. THOMPSON. It is stated, Mr. Knight, that the master plumbers and the journeymen plumbers have an agreement together that the journeymen plumbers will not install any plumbing fixtures that are not bought by the master plumbers; is that correct?

Mr. KNIGHT. The journeyman plumber, I do not think, is where the fixtures come from. The master plumber will not install fixtures that he does not purchase.

Mr. THOMPSON. So far as you know, will the journeymen plumbers in the city of New York install fixtures not purchased and installed by a master plumber?

Mr. KNIGHT. I have never seen that tested out. I think they would.

Mr. THOMPSON. You think they would?

Mr. KNIGHT. I do.

Mr. THOMPSON. You say you have never seen that tested out?

Mr. KNIGHT. I have not.

Mr. THOMPSON. Is it not a fact that the arrangement between your association and the plumbers provides that all plumbing fixtures must be purchased and furnished by the master plumbers? Otherwise a journeyman plumber will refuse to install or connect the same?

Mr. KNIGHT. I do not—no; he will. There is a—I would not, nor would a member of my association—would not attempt to install for you fixtures that you purchased.

Mr. THOMPSON. That is not the question. Doesn't the agreement, article 36 of section F of the agreement, that you have with the journeymen plumbers provide that they will not install it?

Mr. KNIGHT. I am not very conversant with it. Have you got the agreement of the journeymen plumbers with you?

Mr. THOMPSON. I have not got a copy of it here. I have the substance of it.

Mr. KNIGHT. I never heard of that being in there.

Mr. THOMPSON. Don't you think that an owner of a building in New York City could hire journeymen plumbers to install fixtures which he has purchased?

Mr. KNIGHT. That has been done within the last two weeks in New York.

Mr. THOMPSON. It has?

Mr. KNIGHT. Yes, sir.

Mr. THOMPSON. Where, if you know?

Mr. KNIGHT. I think it was done right on the corner of Elghty-first Street and Broadway.

Mr. THOMPSON. Elghty-first Street and Broadway?

Mr. KNIGHT. I think so.

Mr. THOMPSON. Do you know of any other instance of the kind?

Mr. KNIGHT. No, sir; I do not; but I do believe it is going on all the time, because I don't believe 50 per cent of the journeymen plumbers are union men in New York to-day.

Mr. THOMPSON. I am talking now solely about union men. Do you believe that union men would install such work for the owner?

Mr. KNIGHT. I think they have.

Mr. THOMPSON. Would you consider that installation a violation of the contract or agreement which your association has with the journeymen plumbers?

Mr. KNIGHT. I would think it was; yes, sir.

Mr. THOMPSON. You would?

Mr. KNIGHT. Yes, sir.

Mr. THOMPSON. Now, Mr. Knight, is there an agreement or understanding between the members of your association, or your association and the journeymen plumbers, or their association, that they will not work on a job that has been taken away from a master plumber, will not finish a job which has been taken away from a master plumber?

Mr. KNIGHT. I don't understand what you mean by that. I never saw a job taken away from a master plumber.

Mr. THOMPSON. Assume an architect, after a master plumber had been engaged to do the plumbing—

Chairman WALSH. Do you mean a member of the master plumbers' association?

Mr. THOMPSON. Yes, sir.

Assuming an architect had engaged a member of the master plumbers' association to install some work under a contract which gave him the right to determine the contract, if he thought the master plumber was not doing the work properly, if in a case of that kind an architect in New York City may still terminate the contract with any other master plumber, would a member of your association be permitted to carry on and finish that work?

Mr. KNIGHT. Providing the architect had brought it to the master plumbers' organization and they determined that the man was not doing his contract. We do not let one architect come in and dump us out the moment he feels like doing it. He might do it justly or unjustly.

Mr. THOMPSON. In case the architect should believe that the work was done improperly, and your association should decide that the work was done properly, have you any machinery or any provision for the determination of that question by an impartial tribunal?

Mr. KNIGHT. I don't know whether you would call it—we have an arbitration board—but whether you would call it an impartial one or not, I don't know. We think it is.

Mr. THOMPSON. How is it constituted?

Mr. KNIGHT. The committee elected by the organization.

Mr. THOMPSON. But would the architect have any voice in the selection of any members of that arbitration tribunal?

Mr. KNIGHT. No, sir.

Mr. THOMPSON. He would not?

Mr. KNIGHT. No, sir.

Mr. THOMPSON. Then the board which would determine that question would be a board appointed solely by your association?

Mr. KNIGHT. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Are there any questions?

Commissioner BALLARD. I have no questions.

Commissioner GARRETSON. Mr. Knight, you are a rather firm believer in the theories of and adherence of the alleged practices of labor unions, aren't you?

Mr. KNIGHT. No, sir. When they are fair, absolutely.

Commissioner GARRETSON. You utilize them in your own business?

Mr. KNIGHT. No; I never did.

Commissioner GARRETSON. If you do not I don't care to ask any further questions.

Commissioner BALLARD. In selling your plumbing fixtures, do you sell them to anyone excepting union men?

Mr. KNIGHT. Sell them to union men?

Commissioner BALLARD. Do you sell them to the union men ever? Can a union man come in to your place and buy any fixtures he wants?

Mr. KNIGHT. You mean a journeyman plumber?

Commissioner BALLARD. Yes.

Mr. KNIGHT. Oh, numbers of times.

Commissioner BALLARD. Do you sometimes sell them to any individuals who choose to come in?

Mr. KNIGHT. I never had any come in.

Commissioner BALLARD. That question came up. You say you would not sell them?

Mr. KNIGHT. I do not say I would not. With an employee I would not look for any profit; I would give them to him. Sometimes I give them to him absolutely and pay the bill.

Commissioner BALLARD. Supposing a man in his own house should break a faucet or piece of plumbing. Could he come to you and get the piece and put it in himself?

Mr. KNIGHT. He has done it a number of times. If a man has a little place and wants to put a faucet in I would be delighted to help him out.

Commissioner BALLARD. Any citizen in the city, anybody at all?

Mr. KNIGHT. Yes, sir; I am selling a sink to Prof. Johnson now, and he himself is going to put it in. I think he said on a Sunday.

Commissioner BALLARD. So you sell to any individual?

Mr. KNIGHT. That is what I am doing.

Chairman WALSH. Call your next witness.

Mr. THOMPSON. I want to ask one more question.

Chairman WALSH. Very well.

Mr. THOMPSON. I have a copy of the articles of agreement between the Master Plumbers' Association of the Borough of Manhattan and Local Unions Nos. 480 and 498 of the United Association of Plumbers and Gas Fitters. It states that the agreement expires December 31, 1913. Under article 17 of that agreement it is stated:

"It is also expressly agreed that no journeyman shall work or be allowed to work on any property where a member of the master plumbers' association has done work for which he has not been paid."

Was that article carried out?

Mr. KNIGHT. It is carried out.

Mr. THOMPSON. To-day?

Mr. KNIGHT. Oh, yes. If you do not pay me, why you can't get somebody else to go in and get stuck, too, you know, because they get scared. One is enough.

Mr. THOMPSON. That is all, Mr. Knight.

Chairman WALSH. That is all, Mr. Knight. Thank you. Call your next.

Mr. THOMPSON. Mr. Knight, may we have a copy of that agreement?

Mr. KNIGHT. I don't know where it came from. It is not mine. You are welcome to it, so far as I am concerned.

TESTIMONY OF MR. FRANK DEEGAN.

Mr. THOMPSON. Mr. Deegan, will you kindly give us your name, your address, and your business?

Mr. DEEGAN. Fred Deegan, secretary plumbers' union, Local 480, 1931 Broadway.

Mr. THOMPSON. You have heard Mr. Alpine testify in reference to the settlement of jurisdictional disputes between the plumbers and the steam fitters, did you not?

Mr. DEEGAN. Yes, sir.

Mr. THOMPSON. As the secretary of the Plumbers' Local No. 480, what have you to say with reference to that settlement?

Mr. DEEGAN. Well, I have nothing to say, only that our local union has rejected the proposition, the agreement.

Mr. THOMPSON. Why, if you know?

Mr. DEEGAN. On the ground that it gives some of the journeymen plumbers' work to the steam fitters.

Mr. THOMPSON. Do you know why that work was given to the steam fitters?

Mr. DEEGAN. No, sir; I do not.

Mr. THOMPSON. Do you know whether this agreement or adjustment gave to the steam fitters of the city of New York work they did not have before?

Mr. DEEGAN. Well, it gave them work that both of us were in the habit of doing, such as pneumatic tubing.

Mr. THOMPSON. Why, in your opinion, was that work given to the steam fitters?

Mr. DEEGAN. I don't know.

Mr. THOMPSON. You don't know?

Mr. DEEGAN. Probably because they have been doing more of it than we have, although we have a decision given to us by Judge John Henry McCarthy, declaring the work to belong to the plumbers.

Mr. THOMPSON. Now, Mr. Deegan, referring to your organization, how many members are there in New York City of your organization?

Mr. DEEGAN. About 850.

Mr. THOMPSON. How many plumbers are there in New York City, including members of your organization and nonunion people?

Mr. DEEGAN. I couldn't say.

Mr. THOMPSON. What are the working conditions of your trade here, the hours, and the wages?

Mr. DEEGAN. Eight hours a day, half day on Saturday, \$5.50 wages.

Chairman WALSH. Could you approximate the percentage of the journeymen plumbers of the city that are organized?

Mr. DEEGAN. No, sir.

Chairman WALSH. Into organizations?

Mr. DEEGAN. No, sir; I have no way of placing that.

Chairman WALSH. It was just stated a moment ago that probably less than 50 per cent are in the union. Is that statement correct or incorrect, in your judgment?

Mr. DEEGAN. I have no way of fixing that, but I believe there are as many nonunion men as union men, but not on the new buildings.

Mr. THOMPSON. With reference to the regularity of employment, in a normal business here, about how much work does a journeyman plumber have during a year? How many months' work?

Mr. DEEGAN. In the last year I should judge the average amount of work done by plumbers would be about 6 months out of 12.

Mr. THOMPSON. Take a normal year. I understand this is not a normal year.

Mr. DEEGAN. Since I have been secretary in the last three years business has been just about as bad. It has not been good for about three or four years.

Mr. THOMPSON. So far as you know, a plumber only has about six months' work in a year?

Mr. DEEGAN. Most of the plumbers.

Mr. THOMPSON. Most of the plumbers?

Mr. DEEGAN. Yes, sir.

Mr. THOMPSON. What examinations, if any, are required for entrance into your organization?

Mr. DEEGAN. A practical examination, such as wiping joints, picking out different fittings, and drawing up a plan, rough drawing.

Mr. THOMPSON. What is the purpose of such an examination?

Mr. DEEGAN. To find if a man is competent to earn the wages.

Mr. THOMPSON. Any other purpose?

Mr. DEEGAN. None that I know of.

Mr. THOMPSON. Of the men who apply for admission to your union, about what percentage are accepted, and about what percentage are rejected, if you know, have been during the last year?

Mr. DEEGAN. Most of them passed.

Mr. THOMPSON. Most of them passed?

Mr. DEEGAN. Yes, sir; but occasionally there are one or two who do not.

Mr. THOMPSON. You have no knowledge of percentages?

Mr. DEEGAN. No, sir; I couldn't state a percentage, but I have seen sometimes five or six candidates examined and two fail and most times all pass, because they know what they are going up against and they prepare for it.

Mr. THOMPSON. Is there any other reason for keeping men out of the organization when you have your examinations—that is, ulterior motive—like getting a monopoly?

Mr. DEEGAN. No, sir. Since I have been secretary, I think, seven or eight only have failed.

Mr. THOMPSON. What is your initiation fee?

Mr. DEEGAN. \$55.

Mr. THOMPSON. How is that payable?

Mr. DEEGAN. At the present, \$25 down and \$5 every week while the candidate is working.

Mr. THOMPSON. What position does your union take in reference to the admission of allens and negroes?

Mr. DEEGAN. I never knew a negro to make application. We have Swedes, Germans, and Irishmen. As long they can pass the examination it does not make any difference.

Mr. THOMPSON. Has your organization an agreement with the master plumbers' association by which you agree to work for no one else except a member of that association?

Mr. DEEGAN. Yes, sir.

Mr. THOMPSON. And you carry out the agreement?

Mr. DEEGAN. We do. We do work for nonunion, at least independent, bosses at times, but if there was an objection from the master plumbers' association, of course we would not work for them.

Mr. THOMPSON. Have you any provision in your by-laws limiting the amount of work a man may do in any day?

Mr. DEEGAN. No, sir. The agreement states that there shall be no limit to the amount of work done by a man.

Mr. THOMPSON. Has your union ever disciplined a worker in this city for hustling?

Mr. DEEGAN. I don't believe I remember a case since I have been secretary.

Mr. THOMPSON. Is there any provision in your by-laws which provides for such discipline, if your union desires to administer it?

Mr. DEEGAN. I don't think so.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Are there any questions? That is all, thank you.

TESTIMONY OF MR. THOMAS SULLIVAN.

Mr. THOMPSON. Will you give us your name, please, your address, and your business?

Mr. SULLIVAN. Thomas Sullivan; 122 Broadhurst Avenue; steam fitter by trade.

Mr. THOMPSON. Are you familiar with the conditions in the trade?

Mr. SULLIVAN. Quite well.

Mr. THOMPSON. And with the recent amalgamation of the steam fitters and plumbers?

Mr. SULLIVAN. Somewhat.

Mr. THOMPSON. Did you hear Mr. Deegan's testimony?

Mr. SULLIVAN. Very little of it.

Mr. THOMPSON. Did you hear that part of it which spoke of certain work that has been assigned to the steam fitters and to which assignment the plumbers objected?

Mr. SULLIVAN. No, sir; I didn't hear that.

Mr. THOMPSON. Is your organization satisfied with the amalgamation?

Mr. SULLIVAN. I believe so; according to their vote on the amalgamation, they are.

Chairman WALSH. I can not hear you.

Mr. SULLIVAN. I say I believe so; on account of their vote, I believe they are.

Mr. THOMPSON. How many members has your organization in it?

Mr. SULLIVAN. Somewhat less than 1,300. The membership changes—a little less than 1,300.

Mr. THOMPSON. One thousand three hundred?

Mr. SULLIVAN. Yes, sir.

Mr. THOMPSON. Does your organization cover the whole city of New York?

Mr. SULLIVAN. All the boroughs; yes, sir.

Mr. THOMPSON. How many nonunion steam fitters are there in the city, if you know?

Mr. SULLIVAN. Well, I am not acquainted with any of them, particularly.

Mr. THOMPSON. What percentage of the trade would you consider that was unionized?

Mr. SULLIVAN. Why, I believe that we are about a 90 per cent association. There may be a 10 per cent nonunion element around the boroughs of Greater New York.

Mr. THOMPSON. What are the rates they are paying and the hours per day in your organization?

Mr. SULLIVAN. Five fifty a day; eight hours.

Mr. THOMPSON. What do you pay for overtime?

Mr. SULLIVAN. Double pay for overtime.

Mr. THOMPSON. When, with reference to regularity of employment—about how much during the year, the normal year, does a journeyman seem to have work?

Mr. SULLIVAN. That is a pretty hard question to answer, because it is pretty hard to tell what the normal year is. Some years are boom years, and others are bad years; that is about the way it works out.

Mr. THOMPSON. Take this year, for instance.

Mr. SULLIVAN. Why, at the present time we have at least 50 per cent of our membership out of work.

Mr. THOMPSON. How about last year?

Mr. SULLIVAN. The same.

Mr. THOMPSON. Well, the year before, if you know?

Mr. SULLIVAN. The year before that, during the latter part of it, I should judge was a 100 per cent year during the last six months of it—during the last six months, running up possibly to the 1st of February, 1913. I think we had all our members working.

Mr. THOMPSON. Does your union provide for benefits for its members?

Mr. SULLIVAN. Only a death benefit.

Mr. THOMPSON. Is that paid out of the regular dues, or is it a special assessment levied upon the members?

Mr. SULLIVAN. An assessment upon the members.

Mr. THOMPSON. How much is the death benefit?

Mr. SULLIVAN. \$200.

Mr. THOMPSON. What kind of examination must the applicant undergo for admission to your union?

Mr. SULLIVAN. An ordinary blackboard examination—drawing examination on the blackboard.

Mr. THOMPSON. Of what would that consist?

Mr. SULLIVAN. Just of the rudimentary principles of steamfitting and steam-heating, and so forth.

Mr. THOMPSON. Well, give us one or two of the rudimentary principles that they demonstrate on the blackboard?

Mr. SULLIVAN. Connecting up boilers and connecting up radiators, and how to connect up an engine, and so forth.

Mr. THOMPSON. You would not do any actual connecting?

Mr. SULLIVAN. No, sir.

Mr. THOMPSON. Is this examination demanded from other union members coming from other cities?

Mr. SULLIVAN. Yes, sir.

Mr. THOMPSON. What percentage of candidates pass the examination, and what percentage fail, do you know?

Mr. SULLIVAN. Oh, I should judge that exceeding 90 per cent pass.

Mr. THOMPSON. What happens to a union member coming from another city who fails in the examination?

Mr. SULLIVAN. I don't remember a case of a union member coming from another city who failed, therefore I can not answer that question.

Mr. THOMPSON. Well, do you think he would be permitted to work?

Mr. SULLIVAN. How is that?

Mr. THOMPSON. Would he be permitted to work without a card from your organization?

Mr. SULLIVAN. If he was a union member coming from another city he would get a permit card to work as soon as he came in and he would take the examination later; and I don't remember of any of them being rejected on the examination.

Mr. THOMPSON. What, in your opinion, is the need of an examination of a union member coming from another city?

Mr. SULLIVAN. Why, to determine his qualifications.

Mr. THOMPSON. Well, do you suppose that your organization admits members to the union in other cities who are not qualified to practice the trade?

Mr. SULLIVAN. I don't know much about that. Speaking from past experience—we are now in a new policy in the new national association which we have not been in only the last month, practically, four or five weeks. Before that time we had no reason to doubt their qualifications, but still they took the examination, anyhow, as a matter of form.

Mr. THOMPSON. Are the books of your union ever closed to the admission of members?

Mr. SULLIVAN. No, sir.

Mr. THOMPSON. Is it a fact that permits are given to helpers by your organization to work as journeymen during the busy season rather than to admit new members to the union?

Mr. SULLIVAN. I believe there was an occurrence of that kind about three years ago; but it has not happened since that.

Mr. THOMPSON. Has not happened since?

Mr. SULLIVAN. No, sir; not as far as I can remember.

Mr. THOMPSON. Is there any particular reason why it has not happened since? Do you admit the new members now?

Mr. SULLIVAN. It is more than three years ago; I am not quite sure of the date, but it is several years ago.

Mr. THOMPSON. Well, in a busy season, if a new member came along, you would admit him upon examination rather than to issue cards to helpers? Is that true?

Mr. SULLIVAN. Most assuredly; most assuredly.

Mr. THOMPSON. How is your examination board made up? Who are placed on it?

Mr. SULLIVAN. Why, they are elected annually.

Mr. THOMPSON. Is an employer ever placed on your board?

Mr. SULLIVAN. Not on our board; no, sir.

Chairman WALSH. How many members?

Mr. THOMPSON. How many members has your board—examining board?

Mr. SULLIVAN. Twenty.

Chairman WALSH. How frequently do they meet, Mr. Sullivan?

Mr. SULLIVAN. They meet on call, Mr. Chairman. They meet on call—seven being called and five to serve, whenever there are candidates.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Any questions?

That will be all, Mr. Sullivan, thank you.

The commission will now stand adjourned until to-morrow morning at 10 o'clock to meet in the reception room opposite the mayor's office.

(Thereupon, at 4 o'clock and 17 minutes p. m. of Wednesday, May 27, 1914, an adjournment was taken until 10 o'clock a. m., Thursday, May 28, 1914.)

NEW YORK CITY, *Thursday, May 28, 1914.*

Present: Chairman Walsh, Commissioners Ballard, O'Connell, Lennon, Garretson, and Harriman.

(All of the morning session and a large part of the afternoon session was taken up hearing witnesses on the subject of mining industries of the United States. See testimony on that subject.)

TESTIMONY OF MR. BENJAMIN D. TRAITEL.

Mr. THOMPSON. Will you state your full name and your residence?

Mr. TRAITEL. Benjamin D. Traitel, Bretton Hall, New York City. York; my business is interior marble work.

Mr. THOMPSON. Your business, please?

Mr. TRAITEL. Long Island City, Borough of Queens, part member Greater New

Mr. THOMPSON. Is there a marble industry employers' association in this city?

Mr. TRAITEL. There is.

Mr. THOMPSON. What office do you hold in that?

Mr. TRAITEL. I am president.

Mr. THOMPSON. How long have you been president?

Mr. TRAITEL. I am in my second term—about a year and a half.

Mr. THOMPSON. Before that had you been a member of that association for any length of time?

Mr. TRAITEL. For a number of years.

Mr. THOMPSON. About how many years?

Mr. TRAITEL. Oh, perhaps a dozen.

Mr. THOMPSON. Mr. Traitel, it has been stated here by some of the witnesses that there is an agreement existing between the union and your association by which marble which is not cut in the city of New York or in the territory covered by that agreement can not be erected?

Mr. TRAITEL. There is no such agreement; I have the agreement here, printed.

Mr. THOMPSON. Would you be willing to file a copy of it with the commission?

Mr. TRAITEL. I have already done so, through one of your representatives.

Chairman WALSH. With Mr. Witte, Washington?

Mr. TRAITEL. Yes.

Chairman WALSH. We will have it marked.

(Received and marked "Traitel Exhibit No. 1.")

Traitel Exhibit No. 1, "Labor agreements of the Marble Industry Employers' Association of New York and vicinity, as of December, 1913, with Reliance Labor Club and Marble Cutters' Helpers, expiring July 1, 1915, the Whitestone Association, expiring July 1, 1916," was submitted in printed form.)

Mr. THOMPSON. I would like to have you state briefly, Mr. Traitel, the provisions in that contract relating to the erection of other marbles?

Mr. TRAITEL. We deal entirely with unions in the several branches of our industry under trade agreements. The unions refuse to set any marble that is prison made or made at the quarry, other than treads, platforms, and tiles, or that is made in Europe, other than that which is received by the Government as antiques. Now, then, we believe that the union is justified in the position that they take. We pay the highest wages in the United States, and because of that reason, perhaps, attract the most skilled workmen. In nearly all the other States in the United States where this class of work is done it is done at a very much lower price, with few, if any, of the shops unionized. The work that is made abroad is paid for in liras, where we pay for it in dollars.

Our taxes are higher here; land is costly; living is costly. The men must have and do get better wages than elsewhere. We employ no women in our work. In Buffalo they employ them at \$1.50 a day, where we pay \$4.50 to men. In other words, the conditions in the city of New York are such that if these men permitted the work made by low-priced labor to be brought into the city of New York there would be no employment for them here at the prices that are paid them, except the setting of the work.

Mr. THOMPSON. Assuming, Mr. Traitel, that marble was made in other States by union men, under conditions similar to those which pertain in this city, would the union men in this city erect such marble?

Mr. TRAITEL. I think they would; and I believe the employers would stand right with them on it.

Mr. THOMPSON. Is there anything in your agreement with the union in reference to that matter?

Mr. TRAITEL. Nothing except this, that anybody can become a member of our association who has a plant; and a plant is defined as an extremely small one—a rubbing bed and a planer, I think, which is practically only the very beginning of a plant. We want everybody in our association, if we can get them, for the reason that we make trade agreements with the unions, and we want the conditions uniform, so that in estimating we at least have a uniform cost of labor as a starting point.

Mr. THOMPSON. In regard to the admission of members to your organization, those people have to be engaged in business in this city, do they not?

Mr. TRAITEL. They have to have their plant within Greater New York.

Mr. THOMPSON. Now, Mr. Traitel, if a contractor or a marble manufacturer had his plant outside of the city of Greater New York, would he be permitted to carry on his business here under the conditions I have named, whereby he employs union men—

Mr. TRAITEL. The man who preceded me, and who was president of our association for a number of years, has his plant in New Jersey.

Mr. THOMPSON. But is the plant located within the territory of your agreement?

Mr. TRAITEL. Yes, sir. Within 25 miles.

Mr. THOMPSON. I mean to say outside of the territory covered by your agreement?

Mr. TRAITEL. We would not admit to membership a man whose plant is 25 miles outside of our territory. We have members in Newark, we have members opposite Fort Lee in Jersey. I think they are the only ones outside of Greater New York.

Mr. THOMPSON. But I want to be clear and definite on this question, because we have some previous testimony in regard thereto from an architect here. Assuming that an outside manufacturer, one beyond the boundary of your agreement, wished to come in here and desired to erect marble cut under union conditions and by union men, would he be permitted to do it?

Mr. TRAITEL. So far as the marble industry employers' association is concerned, they would have no voice in it so far as the union is concerned, I am inclined to believe that they would set work cut under the same conditions as it is cut here.

Mr. THOMPSON. It has been stated here that Vermont marble is practically shut out of the city of New York. If that is a fact, what are the reasons for it, if you know?

Mr. TRAITEL. Well, that is a broad statement, and it is not borne out in fact. Vermont manufactured marble, other than treads, platforms, and tile, is in a measure shut out.

Mr. THOMPSON. What do you mean by in a measure?

Mr. TRAITEL. Why, there is lots of it comes in and is set. It is not supposed to be set. The unions are not supposed to set it, because Vermont is entirely nonunion, entirely.

Mr. THOMPSON. And the reasons which you have given generally in justification of the contract which the union has made with your association, would apply in favor of the exclusion of such Vermont marble as is nonunion made, I take it?

Mr. TRAITEL. As is nonunion made, that is correct.

Mr. THOMPSON. In the year 1904, Mr. Traitel, did your organization here in New York, the Building Trades Employers' Association, make an agreement with the Builders' Exchange League, of the city of Pittsburgh, with reference to concerted action in dealing with union men at that time?

Mr. TRAITEL. I have no recollection of the nature of an agreement, if one was made. There may have been some kind of an agreement made, but I don't remember it. That is 10 years ago.

Mr. THOMPSON. I would like to ask you to look at the copy of an agreement which I hand you, and see if that would refresh your memory?

(A paper was handed to the witness.)

Mr. TRAITEL. If this is a true copy, with my name, I assume that it was made.

Mr. THOMPSON. Does it appear to be a true copy, so far as you can remember?

Mr. TRAITEL. It is 10 years ago. I will assume that it is a true copy, for the sake of the argument, sir.

Mr. THOMPSON. Now, Mr. Traitel, I would like to ask you to give to the commission the reasons and the purposes for the making of that agreement, and for how long a time it continued in force?

Mr. TRAITEL. All of the agreements, of whatever nature, that were made with the Building Trades Employers' Association at that time had but one object in view; that was to force the unions into an agreement to arbitrate all differences, and so eliminate strikes and lockouts. We started that in 1903, I think in July, and it was a fierce fight for a time, but we brought it around. We had a convention at which both sides were represented, the labor organization and the employers' sides, who framed an arbitration plan that, up to a very few years ago, gave us an industry with peace where before that we had had an industry with strife. That was the whole object of it; no other object.

Mr. THOMPSON. Is this agreement in existence to-day?

Mr. TRAITEL. No.

Mr. THOMPSON. When did it expire, and how, if you know?

Mr. TRAITEL. As a matter of fact, I don't believe that any agreement with Pittsburgh, or any other city, was ever put in force.

Mr. THOMPSON. Then it simply died from disuse?

Mr. TRAITEL. Never was made use of.

Mr. THOMPSON. You say, Mr. Traitel, that the agreement that you finally got with the unions here brought a greater measure of peace than you had had before?

Mr. TRAITEL. Yes, sir.

Mr. THOMPSON. And have had since?

Mr. TRAITEL. Well, it has brought us a great measure of peace, even though it has been overthrown. A great many unions still seem to be agreeable to work under it; that is, what is left of it.

Mr. THOMPSON. The troubles which you mostly had here were jurisdictional troubles, were they not?

Mr. TRAITEL. Before the organization of the Building Trades Employers' Association we had a great many jurisdictional troubles, but we, too, were troubled with unscrupulous, a few unscrupulous labor leaders who were exacting tribute. They were creating strikes, and for graft would stop the strikes, regardless of how it affected the men as long as it brought the money to their pockets. I want to say that there were but few, because I know many of the labor leaders of New York that I have always believed to be honest, and still so believe. There were a few we know of that were; we had some of them punished.

Mr. THOMPSON. Does that system of grafting of which you have spoken exist in New York to-day in your trade?

Mr. TRAITEL. Not in my trade, and I doubt whether it exists to any extent in any other. We have never been troubled in the marble industry with crooked men to deal with.

Mr. THOMPSON. Did you know of the work done under the arbitration plan?

Mr. TRAITEL. I helped to frame it.

Mr. THOMPSON. And of the disputes handled thereunder?

Mr. TRAITEL. I do.

Mr. THOMPSON. A great many of those disputes were jurisdictional disputes?

Mr. TRAITEL. A very large number.

Mr. THOMPSON. Have you an opinion as to the best method of handling jurisdictional disputes in the building trade?

Mr. TRAITEL. Through arbitration, with local arbitration boards.

Mr. THOMPSON. It has been stated here, Mr. Traitel, by some of the witnesses, that that could be handled best by local boards?

Mr. TRAITEL. I agree with it.

Mr. THOMPSON. Other witnesses have stated that it could be handled best by boards having national jurisdiction.

Mr. TRAITEL. I have no faith in national boards.

Mr. THOMPSON. Those national boards making allowance for local conditions?

Mr. TRAITEL. I don't believe that any national board could settle a jurisdictional fight, because that is what it is, satisfactorily to any of those interested in it. The people to settle trouble of that kind are three: The labor involved, the employer in the industry, and the public represented in some way, because all three are affected.

Mr. THOMPSON. Do you do work elsewhere than in this city, Mr. Traitel?

Mr. TRAITEL. Yes, sir.

Mr. THOMPSON. Are you generally aware of the conditions existing in the building trades throughout the United States? I do not mean specifically, but in a general way?

Mr. TRAITEL. I have a general knowledge; yes, sir.

Mr. THOMPSON. In a general way, the jurisdictional fight between the plumbers and the steam fitters has probably been the longest and most fiercely contested of all jurisdictional strikes in the building trades in this country, has it not?

Mr. TRAITEL. I think that is correct.

Mr. THOMPSON. Is it not a matter of fact that that, the fiercest of all the conflicts, was settled, and only apparently could be settled, by a national body, and that this national body in its settlement adjusted the settlements to the requirements and conditions in each city?

Mr. TRAITEL. I am not prepared to answer yes or no to that inquiry. The fight between the plumber and the steam fitter differs very materially from most jurisdictional fights; and, if you desire it, I can give you some concrete illustrations.

Mr. THOMPSON. That is all I have.

Chairman WALSH. If you could do that briefly, give some concrete illustrations just showing the difference, I would be very glad.

Mr. TRAITEL. The mosaic tessera, used for pavements, etc., up to a comparatively few years ago was made of either glass, marble, or stone, perhaps terra cotta, and was all set by what was known as the mosaic union, mainly Italians. Then there was introduced a small earthenware tile, vitrified, exactly

in dimensions and in general appearance like the material that the mosaic worker had been using for making ornamental work and settings. The tile setters claimed that was their work, because it was a clay product, and they were setting clay products. The mosaic worker, because it was termed mosaic tessera, claimed it as their work. I happened to be the first employer attacked who employed both sets of men. I told both sets that, inasmuch as it was an earthenware tile, I would leave it for the time being with the tile setter. At that time we had no arbitration board. I said, "Settle it among yourselves as to whether it belongs to one or the other, and I will then follow; give it to the trade that you determine through your central body that it belongs to." There was a determination first that it belonged to one side; later that it belonged to the other side. One side claimed that the other side paid more money for the decision. I know nothing about it. That was the clay. That never was really settled until the employers in the trade and the workmen in the trade came together, because the employer was as largely interested as the workmen. It was settled, and it has remained settled ever since.

The employers are qualified to know where the border line is, and the workmen are well qualified. When they can not agree a third disinterested party can be brought in and a brief presented on both sides, and that third disinterested party can determine; and in nearly all cases the men with whom we deal in New York, with whom we have trade agreements, have abided by those decisions. Arbitration is the spirit here to-day. Workmen demand it just as well as we employers demand it. In my trade we have a trade board. We bring everything together there; every complaint against the employer and against the men and thrash them out, and in almost every case settle them there. We have but one case, I think, that is going to an umpire—that is the case of a time clock.

Mr. THOMPSON. Take the case you state in your own trade. Mr. Alpine, the president of the International Plumbers' Association, stated that for years there has been strife in that trade in the various cities of the United States; that it has been a very fierce struggle, and yet in none of those cities apparently had that struggle been settled either by the two contesting union sides or by the employers, yet when a national body undertook to make that settlement by the cancellation of the charter of one of the unions, then then the members of the local union in the respective cities, with the exception of two cities in this whole country, settled the controversy inside of 10 days.

Mr. TRAITEL. I think perhaps the reason that it has never been settled here is because, in the first place, the plumber claims that the steam-fitter trade was an outgrowth from the plumber's trade, and I am inclined to think that plumbing was an industry before steam fitting was known. Because you will find that plumbers lead pipes through the baths of Caracalla, in Rome—I have seen them there. Both industries are most highly specialized here, more so, I believe, than anywhere else in the United States.

Mr. THOMPSON. I want to draw your attention to this fact, Mr. Traitel, that a very quick settlement has been made by bodies when they dealt nationally, which apparently could not be made when they dealt locally as two independent bodies, and that this adjustment was similar in its character and nature to the adjustment you speak of in your trade.

Mr. TRAITEL. Well, that is true of many trades besides the steam fitter and the plumber. They have been able to adjust their differences outside of New York and in New York, in which they have been more highly specialized and have contended for their independence.

Mr. THOMPSON. I just want to ask one more question. Do you think a governmental national body that could take up this dispute, or similar disputes, from the standpoint of the public, and that could work by way of mediation with either local bodies in New York or national bodies, if such was the case, and assist by adding the moral force of the Government to the settlement of the dispute would help in those matters?

Mr. TRAITEL. I do not. I have no faith in it.

Commissioner LENNON. Are there any existing jurisdictional disputes now in your trade in New York City.

Mr. TRAITEL. Well, so far as—I guess I will have to answer that in a little different way from what you have asked the question. The bricklayer, as you understand it, is now claiming all work in which a trowel is used in the setting of it. That would take in interior marblework as well as exterior work, brickwork, plastering, cement work, and wherever the trowel is used.

Commissioner LENNON. Has that demand become acute here in New York?

Mr. TRAITEL. Not in the city of New York. Outside of it, they are contending very much more determinedly for it.

Chairman WALSH. Are there any other questions?

Call your next, Mr. Thompson.

Mr. THOMPSON. I will call Mr. Carpenter.

TESTIMONY OF MR. THOMAS E. CARPENTER.

Mr. THOMPSON. Give us your name, your address, and your business, please.

Mr. CARPENTER. Thomas E. Carpenter. I reside in Brooklyn. I represent Barnard Gloekler & Co., of Pittsburgh.

Mr. THOMPSON. What is their business?

Mr. CARPENTER. Kitchen equipment supplies, butcher supplies, and refrigerator manufacturers.

Mr. THOMPSON. You employ sheet-metal workers, I believe.

Mr. CARPENTER. Yes, sir.

Mr. THOMPSON. When did you first come to New York to handle the business for your firm?

Mr. CARPENTER. A year ago last April.

Mr. THOMPSON. At that time, or since, have you had any trouble with the sheet-metal workers of New York City?

Mr. CARPENTER. We have had trouble ever since we have been here.

Mr. THOMPSON. Tell us, if you will, of the first instance of the trouble, when it was and what was the trouble.

Mr. CARPENTER. On the Grand Central Terminal Building in the installation of Mendel's restaurant. Our trouble was caused there by our concern being an open shop or nonunion concern. They demanded that we unionize our product before it could be set in New York, which we did.

Mr. THOMPSON. Who asked you to do that?

Mr. CARPENTER. The local unions of New York City.

Mr. THOMPSON. Well, who on behalf of the union, if you know?

Mr. CARPENTER. The delegate.

Mr. THOMPSON. Well, who? What person?

Mr. CARPENTER. Mr. Butler.

Mr. THOMPSON. Mr. Butler?

Mr. CARPENTER. Yes, sir.

Mr. THOMPSON. When did he see you? How far had you gone along with the work, if at all?

Mr. CARPENTER. We had practically completed half of the job.

Mr. THOMPSON. You mean in the erection here?

Mr. CARPENTER. In the installation of the goods.

Mr. THOMPSON. In the installation of the goods?

Mr. CARPENTER. Yes, sir.

Mr. THOMPSON. When was this, about?

Mr. CARPENTER. I should judge about—do you mean the month?

Mr. THOMPSON. Well, about when?

Mr. CARPENTER. About July of last year.

Mr. THOMPSON. What did you do then?

Mr. CARPENTER. In what respect?

Mr. THOMPSON. What did he say to you and what did you do?

Mr. CARPENTER. We simply told him that we would unionize our plant.

Mr. THOMPSON. And did you unionize your plant, Mr. Carpenter?

Mr. CARPENTER. We did.

Mr. THOMPSON. Then what happened?

Mr. CARPENTER. Then the question was brought up that we could not do business in New York without establishing a factory here.

Mr. THOMPSON. Who brought that question up, and when?

Mr. CARPENTER. It was brought up by the president of the local union, two delegates that I met, and by the international president of the sheet-metal workers.

Mr. THOMPSON. What did they say to you at that time?

Mr. CARPENTER. They said that we would have to place a plant in New York, establish one, and manufacture goods before we could do business in this city.

Mr. THOMPSON. What did you say to that?

Mr. CARPENTER. We took it under advisement for the time being, and then we agreed to place a plant here if we had to.

Mr. THOMPSON. Well, did you?

Mr. CARPENTER. We did not.

Mr. THOMPSON. Did you complete the installation of the work?

Mr. CARPENTER. We did.

Mr. THOMPSON. Did you have any further trouble there?

Mr. CARPENTER. Not on that particular job.

Mr. THOMPSON. Were any of the other building trades working there at that time?

Mr. CARPENTER. Yes, sir.

Mr. THOMPSON. Did they go on a strike?

Mr. CARPENTER. They did not; not on our account. If there were any strikes, I knew nothing of them.

Mr. THOMPSON. Then you were permitted to complete your work?

Mr. CARPENTER. We were. I might state, though, that we sublet the installation of our work to another concern in New York City, employing union men, and also members of the builders employers' association.

Mr. THOMPSON. Why did you do that?

Mr. CARPENTER. To avoid any troubles.

Mr. THOMPSON. And was that the reason, in your opinion, that you have had no trouble?

Mr. CARPENTER. It was.

Mr. THOMPSON. What has been your experience in that regard since?

Mr. CARPENTER. Well, I don't get that question.

Mr. THOMPSON. Have you sought to install any other work here?

Mr. CARPENTER. Yes, sir.

Mr. THOMPSON. Have you had any difficulty about it?

Mr. CARPENTER. Yes, sir.

Mr. THOMPSON. Where, and what was the difficulty?

Mr. CARPENTER. I might cite one incident that happened about 30 days ago on the Railroad Y. M. C. A. contract. We took the contract to install the kitchen and the refrigerators in that building. A little later on, after we had received the large contract, we were awarded the smaller contract for erecting a smoke-stack through the center of the building. Not having a shop in New York, we sublet the second contract to a member of the employers' association employing union labor. I left for Pittsburgh, and I had been out of the city about 24 hours before they struck the job and took the men off the building.

As I understand it, there is an agreement that no mechanics can be taken off of a job without bringing it to an arbitration board of the employers' association and the union, which was not done in this case, and I believe it was not done in this case on account of it being the Bernard Gloekler Co., of Pittsburgh. That is my personal opinion.

Mr. THOMPSON. Your company is not a member of the building trades association of this city?

Mr. CARPENTER. No, sir. We have applied for membership, but we do not maintain a factory in the city of New York, consequently we can not join this association.

Mr. THOMPSON. What is the condition of that work now, if you know?

Mr. CARPENTER. Continuing on that strike, it was declared off and the men were put back and we finished the work.

Mr. THOMPSON. Why was the strike declared off, if you know?

Mr. CARPENTER. That I couldn't tell.

Mr. THOMPSON. That you couldn't tell?

Mr. CARPENTER. No, sir. Possibly because they had no grounds for striking.

Mr. THOMPSON. Is that the only reason, or would you prefer not to tell the reason?

Mr. CARPENTER. That is the only reason that I know of. Although I might say that, in my opinion, and I have no proof, I think that our competitors in the city of New York have tried, through the influence of certain members of the sheet-metal workers' union, to hamper us as much as possible in doing business in this city.

Mr. THOMPSON. And that they do hamper you?

Mr. CARPENTER. And that they absolutely do.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Have any of the commissioners any questions?

Commissioner BALLARD. I would like to ask one question.

Did you say that your plant is now a union plant or a nonunion plant?

Mr. CARPENTER. It is now a union plant; yes, sir.

Chairman WALSH. Are there any other questions?

Call your next, Mr. Thompson.

Mr. THOMPSON. I will call Mr. Paulitsch.

TESTIMONY OF MR. FREDERICK PAULITSCH.

Mr. THOMPSON. Will you please state your name, your address, and your occupation?

Mr. PAULITSCH. Frederick Paulitsch, 843 Jennings Street, New York City.

Mr. THOMPSON. You are the local president of the sheet-metal workers' union here, are you not?

Mr. PAULITSCH. I am.

Mr. THOMPSON. For how long have you been president?

Mr. PAULITSCH. Since last October.

Mr. THOMPSON. Were you a member of the committee which called on Mr. Carpenter, the gentleman who has just testified?

Mr. PAULITSCH. I was, sir.

Mr. THOMPSON. Why did you call on him, and what did you say to him?

Mr. PAULITSCH. I called on him in the interest of my organization on the ground that his establishment at that time was nonunion, and that he was trying to do work in the city of New York to the detriment of my organization.

Mr. THOMPSON. Did he then, or did the company then make its plant in Pittsburgh a union plant, if you know?

Mr. PAULITSCH. They did organize their plant, as we are informed, through the firm and through our local in Pittsburgh.

Mr. THOMPSON. Did you then permit his work to be erected here?

Mr. PAULITSCH. We did.

Mr. THOMPSON. And you made no further objection?

Mr. PAULITSCH. No, sir; not at that time.

Mr. THOMPSON. At any later time did you make any objection to the erection of their work?

Mr. PAULITSCH. Well, we asked him at the time we met him first, told him that we would prefer that he establish a shop in the city of New York. He said at that time that they would take it under advisement. Later on, I met the representative of the firm, Mr. Gloekler himself, who assured me that on or about January 1 of this year they would establish a shop of that character in the city of New York.

Mr. THOMPSON. What interest had you, providing there were union men in their factory in Pittsburgh, in having them establish a factory here?

Mr. PAULITSCH. The interest that we have in that question is this: In the first place, 95 per cent of the members of our organization live in the city of New York, raise their families and educate their children here. We feel that we are in duty bound to take care of those men, so that they can find employment and be in a position to take care of their homes. Our work is a peculiar kind of work. We not alone erect, but we also construct. Therefore, most men that work at our trade settle in the city in which they work, because they are able to find both inside and outside work.

At that time the Gloekler concern was nonunion, had been so I believe for about 50 years, or since they have been in business. They had been paying their men, I understand, about 40 cents as a maximum wage per hour for nine hours. To come to an understanding with us, they agreed to unionize. They also agreed to put their men on an eight-hour basis, increasing their pay from 40 cents as a maximum to 62½ cents an hour for all work done to be erected in the city of New York.

We have an international organization that demands work to be erected in one town, that where the wages in the manufacture of that is less than in the town where it is to be erected, they must meet the wage of the town where the work is to be erected; but in a town where the wage is higher, we do not ask them to meet anything, because we know that they are paying it. To protect ourselves in that instance, we asked those firms to erect the shops in the city. We feel that when they erect their shops in the city of New York they would know then—that we would know then and that we are in a better position to know whether the men will receive our standard rate of wage rate.

You know it is a big jump for a concern to jump from a nine-hour basis to an eight-hour basis and to increase the pay of their men, as in this instance for this work in question, from about 40 cents an hour—that was the maximum—to 62½ cents an hour at an eight-hour basis. They have said they did that, and we believe they have. But we believe also that we are better able to control that end of the situation by having them establish a shop in this

locality. It is to the interests of our men, and I might say that it is to the interests of our employers, because our employers have their establishments here. They have the other expenses to meet, and everything else, and to do justice to them it is no more than right that their competitor, to my way of thinking, should be on an equal basis and in a position where all those who are interested in the situation know what is going on.

Mr. THOMPSON. Did you hear what Mr. Carpenter had to say in reference to the strike against that work in the Y. M. C. A. building?

Mr. PAULITSCH. I did.

Mr. THOMPSON. Who caused that strike, if you know?

Mr. PAULITSCH. I believe that one of our delegates told the men to refrain from erecting that work.

Mr. THOMPSON. On what account was the strike terminated, if you know?

Mr. PAULITSCH. I don't know how it was terminated. I understand that the work in question at this time had not been manufactured by the Gloekler people; it was manufactured by a concern that was a member of the employers' association of this city; and, according to an understanding that we have with our employers, we can not take our men out on strike without first having a hearing on the question in dispute. If we do take our men out on strike without having a hearing on the question in dispute, we are compelled to return them to work before there is a hearing had, and in this instance the delegate took this upon himself and ordered the men out without a having a hearing. He was ordered to return them, and I believe he did. I don't know what agreement the trade board came to on that question. I have not heard. I don't know whether they ever decided on it, but I understand that the reason that the strike was called was because of the unfulfilled promise of the Gloekler people to meet the request of our organization when we first negotiated with them—had negotiations with them.

Mr. THOMPSON. Mr. Paulitsch, if a manufacturer of sheet-metal work, with his factory outside of New York City and outside of the territory controlled by your organization—your local organization—should manufacture that sheet-metal work with union men, members of your international organization—

Mr. PAULITSCH. Yes, sir.

Mr. THOMPSON (continuing). Should pay them New York wages and give them New York hours and conditions, but had no factory here, would your organization seek to prevent the installation and the erection of that material?

Mr. PAULITSCH. No. I don't say that our organization will stop the erection or refuse to erect that work; but what organization will do, or does do, in a matter of that kind, is to request that employer to erect his shop in New York, and work along those lines.

Mr. THOMPSON. But, assuming, of course, that he does not do it. My question assumes that.

Mr. PAULITSCH. Yes, sir.

Mr. THOMPSON. That he does not build a plant here, or have a plant here, but goes right on and is intending to go on and supply sheet-metal work without a factory here; what would be the attitude of your organization?

Mr. PAULITSCH. Up to the present time, wherever that has occurred, we have continued the work of that nature, but not with the same spirit, I suppose, that it would have been erected had the plant been in the city of New York.

Mr. THOMPSON. What do you mean by "not erect it with the same spirit"? Do you practice sabotage?

Mr. PAULITSCH. The men always question—doubt—the statement whether the work was manufactured at the prevailing rate of wages. There is always a question of doubt.

Mr. THOMPSON. How do they question it?

Mr. PAULITSCH. Because of the difference in the pay in the most of the towns, due to the great difference in hours.

Mr. THOMPSON. How does that question affect the work? Do they work differently? Do they work less speedily? Or how does that influence their relations with the employer in that case?

Mr. PAULITSCH. Well, I don't know whether they work less speedily or not, but I do know that they complain on the floor of the organization about things and make the firm live more rigidly to the agreement where a firm, in all things like that—there are a thousand and one ways of doing things.

Mr. THOMPSON. In other words, they tried to make it to the advantage of the firm to establish its factory here.

Mr. PAULITSCH. Not exactly.

Mr. THOMPSON. The I. W. W. would probably call that the practice of sabotage inside the shop?

Mr. PAULITSCH. Probably it is.

Mr. THOMPSON. Have you an agreement with the employers' association in your trade?

Mr. PAULITSCH. We have.

Mr. THOMPSON. In which your members agree to work exclusively for members of the employers' association?

Mr. PAULITSCH. No, sir.

Mr. THOMPSON. That is all.

Chairman WALSH. At this point we will adjourn until 10 o'clock to-morrow morning. Mr. Carpenter, if you will come back to-morrow morning, if you wish to supplement your testimony, we will let you do it the first thing.

Mr. CARPENTER. Thank you.

(Thereupon, at 4.30 p. m., on May 28, 1914, an adjournment was taken until Friday, May 29, 1914, at 10 a. m.)

NEW YORK CITY, *Friday, May 29, 1914.*

Present: Chairman Walsh, Commissioners Garretson, O'Connell, and Ballard.

Chairman WALSH. The commission will please be in order. Call your first witness, Mr. Thompson.

Mr. THOMPSON. Is Mr. Carpenter here?

(No response.)

Mr. THOMPSON. Is Mr. Collins here?

Mr. COLLINS. Yes.

Mr. THOMPSON. May I state to the commission that the painters have requested that their matters be taken up here on the latter part of our program, and we waited until yesterday to assign them a place, as we thought we would have a little extra time for them; and now I would like to put them on out of the ordinary order.

Chairman WALSH. One moment. Have you finished with the witness that was on last evening?

Mr. THOMPSON. I had finished; but Mr. Carpenter asked the privilege of coming back.

Chairman WALSH. Is Mr. Carpenter here?

Mr. THOMPSON. I have called for him and he is not here.

Chairman WALSH. Now, we have a program here with a list of witnesses for Friday, beginning with Mr. Carpenter. Has this change about the painters been made since this list?

Mr. THOMPSON. The painters appeared here several days and asked for a hearing, and we looked over the program, and there is a little slack, as we thought, for yesterday, and we put them on; but, of course, they were crowded out by the hearing in regard to the Colorado situation.

Chairman WALSH. I was just going to say, what would be your idea or suggestion of putting the regular program through before we reach the painters to-day?

Mr. THOMPSON. That would be possible, Mr. Chairman; but as the painters were here all day yesterday in attendance—

Chairman WALSH. Were they intended to be called yesterday?

Mr. THOMPSON. Yes, sir; they were.

Chairman WALSH. Well, whatever you do is all right. Go ahead.

Mr. THOMPSON. Mr. Collins, take the stand.

TESTIMONY OF MR. JOHN J. COLLINS.

Mr. THOMPSON. Give us your name.

Mr. COLLINS. John J. Collins.

Mr. THOMPSON. Give us your residence, Mr. Collins, and your occupation.

Mr. COLLINS. My home residence is 232 East Eighty-eighth Street; my occupation is a painter; I am titled president of the New York District Council, No. 99.

Mr. THOMPSON. How long have you been the president of your organization?

Mr. COLLINS. Since the 23d of April—filling an unexpired term.

Mr. THOMPSON. Twenty-third day of April of this year?

Mr. COLLINS. Yes, sir.

Mr. THOMPSON. Were you president before that time?

Mr. COLLINS. Not of the district council.

Mr. THOMPSON. Well, what office did you occupy before that time?

Mr. COLLINS. I am president of a local of 1,000 members—a local of the district council.

Mr. THOMPSON. For how long?

Mr. COLLINS. I have been this latter term of six months. Previous term of four months—an unexpired term on the resignation—and then by election six months prior to that.

Mr. THOMPSON. How long have you been connected with the painters' union in New York City?

Mr. COLLINS. About 11 years?

Mr. THOMPSON. Do you know of its agreements with the master painters' association?

Mr. COLLINS. Yes, sir.

Mr. THOMPSON. Are you acquainted with the conditions of the trade in that respect?

Mr. COLLINS. Yes, sir; in detail.

Mr. THOMPSON. How many members has your organization in and around New York City?

Mr. COLLINS. Approximately 11,000.

Mr. THOMPSON. Is there any other organization of journeyman painters in this city?

Mr. COLLINS. There is an organization known as the international painters.

Mr. THOMPSON. About how many members has that organization?

Mr. COLLINS. Positively I don't know; they approximate sometimes 3,000 and multiply it to 12,000; but we have no exact knowledge; I haven't.

Mr. THOMPSON. Is that organization affiliated with the executive council of business agents?

Mr. COLLINS. No, sir; it is not; an independent organization.

Mr. THOMPSON. Is it affiliated with the American Federation of Labor?

Mr. COLLINS. It is not, sir.

Mr. THOMPSON. Is it affiliated with any union body?

Mr. COLLINS. Not as I know of. But it is assumed that they are members of the Hebrew Trades, designated as central-body trades here. I haven't that knowledge, but only that assumption.

Mr. THOMPSON. Is your organization part of an international union?

Mr. COLLINS. Yes, sir.

Mr. THOMPSON. What is the name of the international union?

Mr. COLLINS. Brotherhood of Painters, Decorators, and Paper Hangers of the United States and Canada, and practically one local in Hawaiian Islands.

Mr. THOMPSON. Affiliated with the American Federation of Labor?

Mr. COLLINS. Yes, sir.

Mr. THOMPSON. Did your organization at one time have an agreement with the master painters' association?

Mr. COLLINS. I don't know of them having a written agreement only with the interior decorators, known as the Fifth Avenue firms doing high-class decorating. We did have an agreement with them, but I have no knowledge of any agreement with the master painters, known as the house painters.

Mr. THOMPSON. Well, did your organization come under the scope of what is known as the arbitration plan of the employers' association?

Mr. COLLINS. We were part of the plan and connected therewith.

Mr. THOMPSON. Well, we understand from Mr. Eidlitz that that plan covered only organizations and unions that had agreements with the respective masters in the trade or industry?

Mr. COLLINS. That is true in particular, but not in whole. The plan provides for those without agreements can be affiliated. The plan stipulated that—the copy of the plan.

Mr. THOMPSON. Then when your organization came under the operation of that plan you were only partly affiliated with the actual written agreement, and that was with the interior decorators?

Mr. COLLINS. In part; yes, sir. But we were bound—I might qualify that answer by saying that we were bound by the plan as subscribing to it.

Mr. THOMPSON. How did you ascribe or subscribe to the plan?

Mr. COLLINS. We became parties to the plan by agreement. That plan of arbitration thereby entered into our agreement.

Mr. THOMPSON. Did you agree in writing?

Mr. COLLINS. Yes, sir; we agreed in writing, as an organization, to be bound by the principles of the plan and its operation.

Mr. THOMPSON. I see. Did you have any arbitration proceedings arise under that plan affecting your interest?

Mr. COLLINS. In October, 1905—October 20—yes, sir; only wages.

Mr. THOMPSON. What was the subject?

Mr. COLLINS. The question of wages.

Mr. THOMPSON. How was that determined under that plan, if you know?

Mr. COLLINS. On the 22d day of September, 1905, we made a demand upon our employers in and under the plan—namely, the organized employers—for an increase from \$3.50 a day to \$4, and \$4.50 for decorators. The employers denied our request, and it became a matter of arbitration under the plan. The arbitrators selected, two from the labor side, namely, two who were outside of their own trade, and the employers selecting two employers that were not interested. That was done in this case. Mr. Tucker, of the employers, and Charles J. Kelly, representing the employers, and Mr. Tom (?) McElligott, representing labor, and Thomas J. Whalen. That committee was called together by the plan which called for the question in dispute to be signed. The question in dispute was a question of wages. A counter proposition by Mr. Traitel, who preceded me here on the stand yesterday, was counsel for the master painters. I was counsel for the laboring men. And we stipulated a counter proposition that helpers be employed and that the day's work be stipulated for paper hanging, renewing the original proposition, and that we do piecework for a price list according to the quality of the goods and the day's work as I detailed previously. We objected to the introduction of anything foreign to the plan provided for. Section 22 specifically states, under the plan, that anything in the possession of a trade is not a subject of arbitration. We contended that arbitration would not be fair and equitable if there was the introduction of any matter other than the question prepared.

We disputed in the committee and the committee had referred it to the executive board, which I might say I was a member of for six months, and they stipulated—

Mr. THOMPSON. Just a moment. As I understand, there were two arbitrations, were there not?

Mr. COLLINS. Two arbitrations. There is a general arbitration board.

Mr. THOMPSON. But your matter came up for arbitration twice, did it not?

Mr. COLLINS. No, sir. First, primarily, it came before the executive board for their consideration upon complaint. We have a complaint under the plan, file a violation, or when it becomes a complaint it is in the same form as a violation, and the executive board of 12 consider the matter and then send to a special board, if they can not agree.

Mr. THOMPSON. To make clear what I have in mind, I will state this to you, that I have been informed and understand that your matter came up under this arbitration plan for arbitration, and that a finding was made in favor of your organization under the wage proposition; that then again the matter came up, how, I am not informed, some months later, on either the protest or request or petition of the master painters, but a new arbitration was had and there a finding was made in favor of the master painters on the wage proposition.

Mr. COLLINS. You have it quite right, counsellor. The question of the interior decorators, only a minority part of the plan had agreed without arbitration to grant our raise for some years prior to this arbitration and was in vogue, wages. They objected to being penalized for paying wages higher than the master painters; that the minority should not be subjected to the majority without receiving the same wages. There was no arbitration in that question. There was a prior one of which we were members, and we set in with the interior decorators and agreed to submit the whole question to the master painters and interiors decorators upon one demand. That grew out of the proposition which you mentioned.

This question went back to the executive board, which have a right to stipulate the question in dispute for arbitration under and by the provisions of the plan. The question then of Mr. Traitel, as counsel for the master employing painters, stipulated that unskilled labor be employed as in others known as helpers or improvers, to wash off ceilings, wash off woodwork, prepare the work, which is two-thirds of our work, preparatory work to the finishing coat. We denied the right of the general arbitration board or executive board to take from us anything that we took years of labor, energy, and toil to earn

and maintain. We strenuously objected—I did, as a member of the executive board. We then stipulated—it came back to the committee again on that point, and then they stipulated removing the objectionable part of the laborers and helpers and made a distinction without a difference, that rough work of washing off ceilings and walls, and that the question be submitted on those lines.

We still protested, but in order to show a part of fairness we signed the stipulation, in order to obviate any strike, which was uppermost in the men's minds, and as we had subscribed to the arbitration we wanted to be loyal, and the matter went to arbitration on October 20 and continued up until December when I, as counsel for the painters, requested an extension of two weeks, or about 20 days, as I was unable to go ahead and did not desire to place the matter with some one else unfamiliar with the case. We went down to Memphis, Tenn. Upon returning and later in the first part of January we took the matter up again and the question went on the same lines as previously stated. There are over 310 pages of documentary evidence taken by stenographers, the notes which I have before me, and in the interim a strike arose over the question. Let me qualify that: That the system of the plan recognized before any demand was made that the piecework was a fact. We had reason to believe that one firm in this city was paying day's work and hiring men for less than the stipulated conditions on which they had subscribed to the plan, which was a violation. That arose, and on coming back there was a strike. Unbeknown to me, Mr. Traitel objected. Mr. Eldlitz on the stand—I heard him the other day strenuously state that he refused to arbitrate with a trade that is on strike. We will grant that, but he did not state the cause. The violation was on the part of the people who had subscribed to the plan primarily, the employer, and the cause was there but did not show the effect.

I was opposed, as counsel, to any strike, didn't know anything of it, and immediately upon the adjustment of the matter a complaint was made in the regular order to the plan of arbitration through its executive board, that there was a violation, which is the law, an absolute law. The executive board, through the employer, took no cognizance of the strike, and no evidence offered that there was any violation, but the fact that the men were out on a strike of their own volition, the board, after investigation, ordered that the same conditions that prevailed previous to arbitration be restored. We immediately complied with the requirements. The hearing of it went on for a period of some four months. Mr. Eldlitz mentioned very specifically that the drawing of the matter of arbitration out in the settling of disputes is one of the features that is bad. It is very bad, which I will prove later. Then the decision came at the final end on February 6, 1906—October 20, 1905, it started; February 6, 1906, it concluded, and it was March of that same year before we got a decision from the umpire.

By the way, a deadlock, our committee deadlocked and laid aside and the employers did not agree. It was then sent to the umpire. The umpire was in Florida sojourning for some months. The trade was in a most chaotic condition. The plan was not put in immediate action, and they were probably in a frame of mind tending toward a strike, which nobody could allay. Mr. Smith rendered his decision about March of that following year, making practically a period of seven or eight months that this arbitration was going on. That decision rendered was that paper hangers were to do day's work; that the painters were to work \$3.50 a day, which they were already getting; that the decorators would receive \$4 a day; and that the helpers would be introduced to wash off ceilings and walls. That is the cause. The effect, a referendum vote was taken in our organization and we struck, a strike of approximately 7,000 men in this city went on strike, not against arbitration, not against the question of the decision upon wages, but against the violation, the taking of something and making us do something that we always had possession of—that is, the greater percentage of our trade was annihilation, taking away from us, and under the mandates of application or misapplication of the plan, was making us observe. It has been stated that the employers would never enforce that decision. It was there ready for enforcement, under the arbitration plan to enforce it.

Now, that is the plan of that arbitration.

I want to take up briefly to-day—we are in friendly relations with the employers of master builders—I am speaking of the master painters—and with our forceful action or aggressive action on the outside we have been able by trying to discipline some of the employers, and when I say discipline I say it advisedly, that employers that do not pay the wages, and there are many specu-

lators working for \$3 and \$2.50, and they take it at random upon a nonunion basis or open shop, and we try to have those men employed to join our organization and sign agreements, and try to be agreeable with them and in harmony, and we find often they even violate the agreement.

Mr. THOMPSON. Well, to go back to your arbitration proposition, I understand from your testimony you stated that you yourself agreed to this arbitration?

Mr. COLLINS. We subscribed to the plan of arbitration.

Mr. THOMPSON. Yes; subscribed to the plan; yes.

Mr. COLLINS. Yes.

Mr. THOMPSON. That you agreed to a restatement of the proposition of the road work.

Mr. COLLINS. No; we did not agree to that.

Mr. THOMPSON. Well, you said you agreed to that in order to go ahead with the plan.

Mr. COLLINS. I signed to make it a portion of our case. We did not agree to let the road work go on, but we still had our protest in, but we had no other course. I might qualify that, for I did not agree. The point that Mr. Eidlitz says, that this should be compulsory, if it were compulsory, we would have signed a paper and gone ahead.

Mr. THOMPSON. I understand that, but I want to get at the actual case and what was submitted to the umpire who made this decision.

Mr. COLLINS. The question submitted to the umpire was that paper in the case, which I would be willing to submit.

Mr. THOMPSON. He would have the right, would he not, under the plan of arbitration, to determine a case of a disagreement between both sides as to what was the condition of the trade prior to the time of the arbitration?

Mr. COLLINS. He would from the papers in the case.

Mr. THOMPSON. He would have the right to say whether piecework prevailed as a condition of the trade, or whether day work prevailed, would he not?

Mr. COLLINS. On the papers presented, yes.

Mr. THOMPSON. And that is a chance that you take in going to arbitration on that proposition?

Mr. COLLINS. We had no alternative; it became compulsory, other than in striking, and we did not want a strike. We took the line of least resistance.

Mr. THOMPSON. I just want to bring out the facts.

Mr. COLLINS. That is the fact.

Mr. THOMPSON. Where there is a question of fact to be determined and where there are two conditions in existence, the master painters contend day work prevailed in New York, and perhaps adduced evidence to show that, and you, on the other hand, contend that piecework prevailed, and probably have facts supporting that?

Mr. COLLINS. We did.

Mr. THOMPSON. It was up to the umpire to determine which one prevailed?

Mr. COLLINS. Yes; presented to the umpire.

Mr. THOMPSON. As to the preponderance of cases?

Mr. COLLINS. Yes, sir.

Mr. THOMPSON. Have you now an agreement or have you had at any time since that arbitration, with the master painters' association? I think you have said no.

Mr. COLLINS. We haven't any, but we have had five conferences of three-hour sessions pending toward an adjustment, and the only point interfering with them making an agreement to-day, the question of fine levied during the strike of 1908, that followed this other strike, and the question of temperament between both sides as to what would be the medium of cost.

Mr. THOMPSON. So far as you know, are both sides willing to come to an arrangement?

Mr. COLLINS. They are willing, aside from the referendum of our membership, that they object to taking off the fines, and the employers demand the fines be taken off. In other words, the employers agree to protect those men that stood by them during the strike, and the employees, the laboring men, contend they have a right to punish members of their organization for violation. A question of principle on both sides.

Mr. THOMPSON. Assuming that those members should agree that those fines would stand, you then would be willing to make an agreement and come under the general common law that prevails in the building trades to-day?

Mr. COLLINS. We would.

Mr. THOMPSON. That is all.

Mr. COLLINS. I want to state that I have a particularly important matter I would like to state to the commission. We have here, Mr. Chairman, in this city, a question of law, and as the commission is trying to determine a question of law for Congress, I would like to suggest we have a law here, or in fact, a case in point where \$180,000,000 is being expended upon a subway. That is, material and labor is involved. The painters had a hearing before the labor commission, or two hearings, and I presented the case to the labor commissioner deputy sitting, and they decided in our favor. The \$180,000,000, approximately 5 per cent, would give us \$9,000,000 for labor—painters. That work is being done now, and we are objecting, the painters are, to the fact that labor men are doing that work for \$2 a day painting the structural iron-work in the subway. We presented our case, and the labor commissioner decided they are just, and our decision was a proper one, but it was in defiance of the law, and he was only sitting in an advisory capacity, and it was sent then to the public service commission and they sat and took prima facie evidence as to the whole matter, which is a prima facie case, and they decided against us. The comptroller, who has control of the funds of the city, withheld the funds of the contracting party, and inside of 17 days from the hearing of the public service commission decision, the comptroller makes a decision in the same way.

Now, the point I am getting at, the labor commissioner under date of the 7th day of April, sent down an emphatic protest against the public service commission and against the comptroller for releasing any money in violation of their findings. They put another construction to it. The point I want to make is that, with a large operation in a municipality like this, with \$94,000,000 of the city money being expended, there isn't but about 30 per cent of the labor being paid even the standard wage of any trade. That is a broad statement that can be proven, and the painters desire and are going to take this case to the highest tribunal in this State. They are going to appeal to the governor, and appeal to every extent to win in this case. In fact, they have exhausted their remedy within the law—that is, within the law as provided in the municipality—and will take it to the State, and if the State commissioner can not decide which is a violation, we feel there is something evidently wrong. I have one case that took seven months to prepare, and we were granted the prevailing wage, the municipality pays the prevailing wage, which has been established by law and established by a matter of fact, and the commission states we have not made out a case.

Commissioner LENNON. Will you submit to us a statement of the case and documentary matter which has to do with it?

Mr. COLLINS. Yes, sir; I will get a copy of the labor commissioner's decision, and I might say I will be pleased to, and I will go to my office and have it forwarded to the commission to-day.

The other point I want to make is the fact that the labor commissioner's decision and the investigation I made personally with two witnesses, we were aided by the confidential agent of the labor commission, Mr. Whitney, and they submitted to the commission, they stated to him \$3 a day, but they found \$2.50 a day.

Chairman WALSH. We will be very glad to have you submit that information.

Mr. THOMPSON. Mr. Chairman, yes, sir. Mr. Hogan, official representative of the marble workers' union, asked if he might be excused on account of the other matters that were being heard, and I said he might and should appear to-day. I understand he is here now, and I would like to put him on.

Chairman WALSH. Put him on.

TESTIMONY OF MR. STEPHEN C. HOGAN.

Mr. THOMPSON. Will you please give us your full name, address, and occupation?

Mr. HOGAN. Stephen C. Hogan; business address, 409 East One hundred and forty-ninth Street.

Mr. THOMPSON. And your occupation?

Mr. HOGAN. Marble worker.

Mr. THOMPSON. Are you connected with the International Association of Marble Workers; and if so, how—what position?

Mr. HOGAN. General secretary-treasurer of the international.

Mr. THOMPSON. How long have you held that position?

Mr. HOGAN. Nine years.

Mr. THOMPSON. Are you acquainted with the conditions of that trade in New York City?

Mr. HOGAN. Yes; about as familiar with it as in any part of the country.

Mr. THOMPSON. It has been stated here, Mr. Hogan, on the witness stand, that the members of your organization will not set or erect marble that has not been made by union people. Is that correct?

Mr. HOGAN. In localities where union conditions prevail; yes.

Mr. THOMPSON. It has been stated, for instance, that you will not set marble, quoting from rule 5 of page 9 of the agreement which Mr. Traitel testified existed between your organization and his, it states:

"The party of the second part will not work any marble manufactured by convict labor or manufactured marble imported into the United States, except antique mantles, or marble furnished outside of New York for use in the vicinity of New York or vicinity other than domestic marble for tiles, treads, and platforms, not more than 2 inches thick; and such tiles, treads, and platforms shall not be convict manufactured."

Is that the rule of your organization?

Mr. HOGAN. No; it is not the rule of our organization. It may be—I understand that that is a local agreement?

Mr. THOMPSON. Yes; that is the agreement which exists between the local organizations and the employers' organization in the marble trade.

Mr. HOGAN. Well, the only restriction that we have is—the international organization against the handling of material is—that the same conditions must prevail in the manufacture as prevail in the locality in which it is to be set. That is the only restriction that we have.

Mr. THOMPSON. Then, Mr. Hogan, if marble should come into New York City manufactured in other States or cities of this country and not manufactured under the same conditions of trade which exist in New York City, then under your international rule your members would not set that marble. Is that correct?

Mr. HOGAN. Yes, sir.

Mr. THOMPSON. What is the reason for that rule by your organization?

Mr. HOGAN. Well, our reasons can be best explained by quoting the different rates of wages prevailing in other sections of the country and the rate prevailing in New York City. It is a protection that we have to the men engaged in the manufacture of the material in New York City against the competition of material that is manufactured under a lower rate of wages and under different conditions. Now, if you will follow me, I will give you the New York rate of wages in all branches of the industry. First let me say that our organization is composed of cutters, carvers, setters, polishers, bed rubbers, sawyers, and helpers. All those are different branches of the industry. Now, the New York rate of wages for the cutter is \$5.50; \$6 for the carver; \$5.50 for the setter; \$4.40 for the polisher; \$4.95 for the bed rubber; \$4.68 for the sawyer; and \$3.25 for the helper.

Now, the next highest rate of wages—we will take Chicago, which is about the next highest rate of wages to that paid in New York. The setter, the man in the building setting the material, his rate of wages is \$5.50; in the manufacture of the material the polisher gets \$2.75 for nine hours' work against New York's \$4.40 for eight hours' work; the bed rubber gets \$3 for nine hours' work against New York's \$4.95 for eight hours' work; the sawyer gets \$3 per day in Chicago against \$4.68 and for eight-hour day in New York.

Now, that is the highest rate outside of New York.

Then we have Boston, where it runs from \$8 to \$13 per week for the polisher against \$4.40 a day in New York.

Mr. THOMPSON. Per day?

Mr. HOGAN. Per day. And \$2 for the bed rubber against \$4.95. And all outside of New York is a nine-hour day against New York's eight-hour day in the shops.

At Baltimore—

Mr. THOMPSON (interrupting). Now, Mr. Hogan, let me direct your attention particularly to the Vermont marble. It is claimed that the restrictions against the Vermont marble constitute a real grievance.

Mr. HOGAN. Well, now, I will just talk on that subject. Here is a letter I received May 27. As soon as I was to be called I wanted to get the latest data in regard to Vermont.

Mr. THOMPSON. What is the date of the letter and who is it from?

Mr. HOGAN. May 27; from our representative up there; from a representative of the American Federation of Labor, and who is an organizer, and his name is Angelo Trubo. He has been up there since the 1st of April, getting the conditions and organizing in that locality. He writes me that the Vermont Marble Co. work 10 hours a day, 6 days in the week, except sawyers; they work 12 hours. The sawyers work day and night, divided in two gangs, machinery running continuously from 12 o'clock p. m. Sunday until 12 o'clock p. m. Saturday. Piecework system is in full force in Proctor in cutting and polishing departments; also in Fowler. The worker don't know the price of the work he is cutting until after it is finished, and if he complains he is told that if he is not satisfied he can go.

The journeyman cutter gets from \$1 to \$3, but \$2 to \$2.50 is the average; \$1 to \$3 per day and \$2 to \$2.50 is the average; polishers from \$1 to \$2; quarrymen, \$1.50 to \$1.85. In Center Rutland men are paid by the day, as a rule, and cutters' pay is from \$1.65 to \$2.50; one exception of \$2.60.

Now, that is the condition, and that is the reason that we can't see how we can protect the wages and the conditions in New York City or in any other locality by allowing the setting—of course, we allow it; can't help it; but if it comes in the only restriction is that our members don't handle it, unless it is manufactured under the prevailing conditions where it is to be set.

I just want to call your attention to this letter that I have. I don't say it prevails now, but it did prevail in—this is a magazine published in 1910—calling attention to the fact, in these quarries in Vermont, that during the time—

Mr. THOMPSON. Give us the journal and the article—the heading of the article, by whom it is written.

Mr. HOGAN. Written by Anna Hawkes Putnam, in reporting to the National Child Labor Committee.

Mr. THOMPSON. What National Child Labor Committee?

Mr. HOGAN. Why, it seems—here are some facts, briefly stated: The National Child Labor Committee conducted an investigation in Vermont during the summer, when a number of mills were closed, and also at a time when children might be legitimately employed at 12 years of age.

Mr. THOMPSON. What is the journal and the date of it?

Mr. HOGAN. 1910, December.

Mr. THOMPSON. What journal is it?

Mr. HOGAN. It is called The Vermonter—a State magazine, to take that report of the quarries—

Mr. THOMPSON. Is it a long report?

Mr. HOGAN. No; just a short item; just as they found things in the quarries.

Mr. THOMPSON. You might read it.

Mr. HOGAN (reading):

"Twelve boys between 13 and 16 were found in the marble quarries, and another 15 of the same approximate ages were discovered polishing marble, a process of rubbing the smooth marble with stones and sponges dipped in a solution of acid. This method of polishing is not just correct, but will give an idea. Some boys showed how the contact with the marble cut the hands, and the acid solution eats out part of the fingernails. The boys complain of sore fingers and sore throats from the dust."

That I introduce to show the conditions there during the time when the child-labor law does not affect them. They manage to get them into the factories in the manufacture of material, and that is the condition. The material manufactured under those conditions certainly we think we are justified in refusing to handle.

Mr. THOMPSON. Mr. Hogan, is the rule which your international union has, which you have just named, effective in keeping nonunion marble out of the city of New York, if you know?

Mr. HOGAN. Why, I don't know that it is. I have heard of several jobs that they have got away with here and in the vicinity.

Mr. THOMPSON. Will other trades strike a job at the request of your organization where there is an attempt to put in nonunion marble in this city?

Mr. HOGAN. I presume they would; yes. I would not say for certain; I believe they would.

Mr. THOMPSON. Do you know of any case?

Mr. HOGAN. No; I could not state any particular case just now. In fact, I don't believe there are many attempts made to put material or marble in here under those conditions. There is a job in the vicinity over in Jersey that they got away with. They said it.

Mr. THOMPSON. What do you mean by "got away with"?

Mr. HOGAN. Well, they succeeded in finishing the job.

Mr. THOMPSON. Without having trouble.

Mr. HOGAN. Well, they had trouble. Our members would not handle the material. He got them from wherever he could get them to set it.

Mr. THOMPSON. Mr. Hogan, I will direct your attention to jurisdictional disputes. Is there a jurisdictional dispute now between your organization and the bricklayers; and if so, what is it?

Mr. HOGAN. Why, there is a dispute between our organization and the bricklayers, they claiming that the setting of marble and stone on the interior of the building is a trade that belongs to them.

Mr. THOMPSON. Well, is that dispute in existence in New York City to-day?

Mr. HOGAN. It has not reached New York yet.

Mr. THOMPSON. Where is it in existence?

Mr. HOGAN. In Cleveland, Indianapolis, Kansas City, St. Louis, Philadelphia.

Mr. THOMPSON. Has there been any adjustment of that dispute in the cities you have named?

Mr. HOGAN. In Kansas City, yes, there is.

Mr. THOMPSON. How was it adjusted there? In whose favor and by what method, if you know?

Mr. HOGAN. Well, taking a letter received May 23—dated May 23—from our representative there, will probably explain it as good as I could. This is addressed to myself, secretary and treasurer. This is the letter [reading]:

"Last night at the building trades' council meeting a representative of the contractor and of the owner of the building being finished by masons appeared before the council and asked to have the marble workers put back. So this morning all masons were put off the job at 10 o'clock and our men got to work as well as all building trades' council crafts. We will have in our possession the 1st of June a letter signed by the president of the construction company, giving the reason for taking the masons from the job, which was incompetency. Practically all the marblework has to be reset. You will hear fuller details from our delegate to the building trades' council who acted in our behalf. Hoping you will send this item to all locals," etc.

Then from the Kansas City Post is a clipping—the last Saturday Kansas City Post—a clipping as follows:

"A strike begun three weeks ago at the Lathrop Building at Tenth and Grand Avenue, which affected the trades affiliated with the building trades' council, was settled this morning at the request of representatives of the owners of the building. The strike arose over jurisdictional disagreement between the bricklayers and the marble workers. Members of the bricklayers' union and other unions that have agreements with the bricklayers' union demanded that the general contractor give the marblework to the stone masons, who are part of the bricklayers' union, and that the contractors put the marble workers off the job, and the masons began setting the marble. The building trades' mechanics then struck, and since then the masons have been doing the work. Last night a representative of the owners of the building appealed to the building trades' council to put the marble workers back to work. He said the work of the masons on the marblework was unsatisfactory, and that some of the slabs they set would have to be reset. A committee of labor officials met at the building this morning and settled the strike, giving the marble workers full charge of the work. Under the union rules, other crafts went back by virtue of the agreement."

Mr. THOMPSON. In Kansas City is the bricklayers' union a member of the building trades' council?

Mr. HOGAN. Yes; I believe there is in the city a local building trades' council.

Mr. THOMPSON. Generally in this controversy which you have with the bricklayers, do the other building trades side with you or the bricklayers in the matter, or have they taken no side in the matter?

Mr. HOGAN. Well, they have, in some localities sided with us, and in others they have remained neutral—have not taken any action whatever, so far as going on a sympathetic strike.

Mr. THOMPSON. Your organization is affiliated with the American Federation of Labor?

Mr. HOGAN. Yes, sir.

Mr. THOMPSON. And the bricklayers are not?

Mr. HOGAN. No; they are not.

Mr. THOMPSON. Has that influenced any building trades organization to give—to side with you, if you know?

Mr. HOGAN. Has it influenced any?

Mr. THOMPSON. Yes.

Mr. HOGAN. Why, yes; I presume it has in some instances. They have gone on a strike in support of us as against the bricklayers and masons, claiming that the work belonged to us and that the masons and the bricklayers had no business to try to get the work. The local councils—local trades have taken sides with us in the controversy and different trades have gone off the jobs where the masons were setting marble.

Mr. THOMPSON. In the settlement of this Kansas City contest that you speak of you say the parties met there at the building and adjusted it. How was it adjusted, if you know? Did the bricklayers agree to the adjustment—have they withdrawn their contests there?

Mr. HOGAN. No. The owners and the builders evidently put the masons off the job and put the marble workers back to work without—I don't suppose the masons agreed to it.

Mr. THOMPSON. Then the conflict still exists in Kansas City on that point?

Mr. HOGAN. Well, I don't think it exists so far as that job is concerned. Of course, it is liable to come up at any time.

Mr. THOMPSON. But, so far as you know, the bricklayers in Kansas City still claim that work?

Mr. HOGAN. Oh, yes; they claim it everywhere, because it is a general order issued from their headquarters.

Mr. THOMPSON. It is a national claim?

Mr. HOGAN. Yes.

Mr. THOMPSON. And the claim on your part is a national claim?

Mr. HOGAN. Yes.

Mr. THOMPSON. And there has been no settlement of that conflict in any city by local unions, has there?

Mr. HOGAN. No; there have been two or three settlements on jobs just as I have stated—on different jobs that have been settled for that time; but it is liable—

Mr. THOMPSON (interrupting). But no settlement by the organization?

Mr. HOGAN. No, sir.

Mr. THOMPSON. By the local organization altogether?

Mr. HOGAN. No; the local can not settle it.

Mr. THOMPSON. In your opinion, Mr. Hogan, from your experience in this jurisdictional conflict, do you think the adjustment of it by each side would be the best way, or do you think it should be settled nationally, according to the national claim?

Mr. HOGAN. Why, I think it would have to be adjusted nationally, because it would only confuse matters if it were settled one way in one city and another way in another; that would not be any settlement, because our members travel, as a general thing; the setters of our organization do considerable traveling in their occupation. They don't find work in any particular locality to keep them engaged all the year round, and they have to travel from one city to another.

Mr. THOMPSON. Is there any city in which the bricklayers have control of that work, if you know?

Mr. HOGAN. Complete control?

Mr. THOMPSON. Fairly complete control.

Mr. HOGAN. No; there is not.

Mr. THOMPSON. Is there any city in which they do the considerable portion of the work?

Mr. HOGAN. Why, they have done a job or two in Cleveland. That is the only city that I have known that they have finished any work that has been accepted.

Mr. THOMPSON. What is the plan of your organization to meet this jurisdictional fight?

Mr. HOGAN. About the only plan we have is to keep our members from joining their organization.

Mr. THOMPSON. What is the plan or method of contest with the bricklayers meeting, if you know?

Mr. HOGAN. The bricklayer goes to the contractor and tells the contractor that if he does not—he will select a particular job and he goes to the contractor on that job and tells him if he does not employ masons to set the marble on that work they will strike his jobs throughout the country. In that way they have

frightened a good many of the contractors into turning over the work to the masons on these particular jobs. In places where they have refused to do that we are still working on the job.

Mr. THOMPSON. Then, as I understand your last statement, the bricklayers have influenced a great many contractors to use their men on that work?

Mr. HOGAN. Yes, sir.

Mr. THOMPSON. Has there been any attempt, either by the bricklayers' organization or by yours, to have a conference on that matter and to try and seek some method of settlement by mediation or arbitration?

Mr. HOGAN. We have had conferences before a subcommittee of the executive council of the American Federation of Labor, and, failing to agree among ourselves, a proposition was made by us to them. That proposition was that we meet jointly with representatives—representatives of the building trades department, representatives of the National Association of Marble Dealers, with whom the bricklayers have an agreement, and representatives of the bricklayers, and representatives of the marble workers—in a sort of a conference to see if some adjustment could not take place, some settlement be arrived at. They declined the proposition on the ground that it would act detrimentally to them. That is the only excuse they gave.

Mr. THOMPSON. When was that proposition made?

Mr. HOGAN. In January.

Mr. THOMPSON. Of this year?

Mr. HOGAN. Yes, sir.

Mr. THOMPSON. In your opinion, Mr. Hogan, do you believe that a governmental body having jurisdiction over the entire United States, such a body as would be approved of by organized labor generally and by the public generally, do you believe that they would have an influence, a moral influence, in adjusting just such disputes as we have now with the bricklayers—as you have?

Mr. HOGAN. I don't know what moral influence it would have, but it is my opinion that some such body, with power to adjust those things, would prevent a great deal of the trouble that is going on. Of course, in this case it shows very plainly it is simply one large, powerful organization that is attempting to take the work away from an organization smaller in numbers that has brought up the condition. They have built up the conditions of that organization.

In 1907, when the conditions were not anywhere near as good as they are at the present time, these certain officials of the bricklayers and masons conceded this work to us. In 1907—I might state that I have evidence here that in 1907 this organization conceded these very same things, this very same class of work, to us that they are now seeking to control.

Mr. THOMPSON. Mr. Hogan, one more question. Has your organization got any restrictions with reference to the admission of aliens or of negroes?

Mr. HOGAN. No, sir.

Mr. THOMPSON. You have not?

Mr. HOGAN. No, sir.

Mr. THOMPSON. Do the constitution and by-laws of your organization, printed copy, contain the requirements for membership, examination, and requirements of admission for trades, and also the apprentice system that you have?

Mr. HOGAN. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Are there any questions?

Commissioner LENNON. I have a question I would like to ask.

Mr. Hogan, is your international union continuously endeavoring to raise the standard of wages and the limitation of the hours in outside districts so as to even up with New York?

Mr. HOGAN. Yes, sir. We have been attempting to do that for the past 10 years.

Commissioner LENNON. Well, in case at some point where marble is prepared for buildings the same conditions prevailed as to wages and hours as in New York, would you then locally restrict the introduction of that material?

Mr. HOGAN. No, sir.

Commissioner LENNON. Suppose at some place in New York the same prices prevail for work as here, would you then in New York proscribe that material from entering into building here?

Mr. HOGAN. No, sir; we would not. Our laws would not allow it. In fact our laws provide that it will be admitted and set if manufactured under the same conditions.

Commissioner LENNON. This is an effort, then, on the part of your union to standardize the matter of wages and hours, is it?

Mr. HOGAN. Yes, sir.

Commissioner LENNON. And to get standardization according to the best conditions that prevail?

Mr. HOGAN. Yes, sir; that is the intent of the organization.

Commissioner LENNON. Has there been any continuous attempt on the part of the bricklayers that you are speaking of to induce or intimidate your members to join your organization, so that you would have the mechanics to do the marblework?

Mr. HOGAN. Yes. There have been attempts made. In fact, I have affidavits—I didn't think it would be necessary—but I have had affidavits from our members where they are told that if they want to work at their trade they have got to affiliate with the bricklayers' and masons' organizations.

Commissioner LENNON. Are you sure as to a statement that you made as to affiliation with bricklayers in Kansas City and the local council?

Mr. HOGAN. That they belong to the local council?

Commissioner LENNON. Yes.

Mr. HOGAN. Yes, sir; they do.

Commissioner LENNON. That is all I have.

Commissioner BALLARD. Mr. Hogan, you have been making an effort to have the wages as high and the hours as short in those other places, the same as they are in New York?

Mr. HOGAN. Yes, sir.

Commissioner BALLARD. How is it that you succeeded in getting them so high and so short hours in New York, and you could not get them the same elsewhere?

Mr. HOGAN. The New York locals have been in existence about 35 years, and the international has only been in existence since 1902, so the New York locals and several other locals that comprise the international organization practically had reached this standard before the international was formed, or within half a dollar of it a day, anyway.

Commissioner BALLARD. What are the wages in the trade here? What do you get?

Mr. HOGAN. \$6 a day for carvers, \$5.50 for cutters and setters, and \$4.95 for bed rubbers, \$4.40 for polishers, and \$4.68 for sawyers.

Commissioner BALLARD. Are those wages higher than the bricklayers' trade as yet?

Mr. HOGAN. Here?

Commissioner BALLARD. Yes.

Mr. HOGAN. No, sir; they are not; I think the bricklayer gets—in fact, I don't know what the wages of the bricklayers are.

Commissioner BALLARD. About the same?

Mr. HOGAN. About the same as the highest rate, I think, perhaps \$5 or \$6 a day.

Commissioner BALLARD. That is all.

Chairman WALSH. That is all. Thank you, Mr. Hogan.

Call your next.

TESTIMONY OF MR. JOHN W. GRIMMER.

Mr. THOMPSON. Will you give us your name, address, and your business, please?

Mr. GRIMMER. John W. Grimmer; business address, 242 East Twentieth Street.

Mr. THOMPSON. And your business?

Mr. GRIMMER. Hardwood finishing is my main business; hardwood finishing and painting.

Mr. THOMPSON. Are you officially connected with the master painters' association of New York City?

Mr. GRIMMER. President.

Mr. THOMPSON. For how long have you been president?

Mr. GRIMMER. About six years.

Mr. THOMPSON. About six years?

Mr. GRIMMER. Yes, sir.

Mr. THOMPSON. Were you president at the time that the arbitration matter with the journeymen's union came up?

Mr. GRIMMER. No, sir.

Mr. THOMPSON. The arbitration plan?

Mr. GRIMMER. No, sir.

Mr. THOMPSON. Were you a member of the master association at that time?

Mr. GRIMMER. I was.

Mr. THOMPSON. You knew about the conditions existing then?

Mr. GRIMMER. Yes, sir; I did.

Mr. THOMPSON. The decision at that time made by Mr. Smith was that lived up to by your organization or not?

Mr. GRIMMER. It was; that is, to a certain point, in regards to employing laborers. We did not employ any laborers.

Mr. THOMPSON. You did not employ any laborers?

Mr. GRIMMER. No, sir; we did not.

Mr. THOMPSON. In other words, you conceded that point to the organization?

Mr. GRIMMER. Yes, sir; we did.

Mr. THOMPSON. Of the union?

Mr. GRIMMER. Yes, sir.

Mr. THOMPSON. Was it lived up to by the journeymen painters?

Mr. GRIMMER. It was not.

Mr. THOMPSON. It was not?

Mr. GRIMMER. No, sir.

Mr. THOMPSON. Why wasn't it, if you know? And how did the master painters view their failure to live up to the agreement?

Mr. GRIMMER. I do not quite get that.

Mr. THOMPSON. I will change the question. In what respects were they not lived up to by the journeymen painters?

Mr. GRIMMER. They were dissatisfied with the decision of the umpire, Mr. Smith, and they struck against that, refused to work.

Mr. THOMPSON. What was the result of that strike?

Mr. GRIMMER. We formed open shop. Hired whoever we could get.

Mr. THOMPSON. Have you got the open shop in New York now?

Mr. GRIMMER. Some have and some have not.

Mr. THOMPSON. Some have not?

Mr. GRIMMER. Yes, sir.

Mr. THOMPSON. Has there been any attempt by your organization and by the organization of the journeymen painters to reach a new agreement?

Mr. GRIMMER. Yes, sir; last year, 1913, the latter part of the year.

Mr. THOMPSON. Was it successful?

Mr. GRIMMER. It was not. They refused to go further into the matter. We had three meetings. After the third meeting they still bothered some of the members, and our secretary wrote them a letter requesting them to keep their hands off the various jobs and let the members finish their work in peace during this arbitration plan or during the agreement plan.

Mr. THOMPSON. During your conference?

Mr. GRIMMER. During the conference; yes, sir.

Mr. THOMPSON. Did they do that?

Mr. GRIMMER. They did not. They simply telephoned us that all conference was stopped. They refused to confer any further with us.

Mr. THOMPSON. What time was that when they told you that?

Mr. GRIMMER. That was about December, I think.

Mr. THOMPSON. Of last year?

Mr. GRIMMER. Yes, sir.

Mr. THOMPSON. Have you had any conference since?

Mr. GRIMMER. No, sir.

Mr. THOMPSON. Or has your association had with the journeymen painters?

Mr. GRIMMER. No, sir; no conference whatever. The master painters' committee is still on the job, as we call it.

Mr. THOMPSON. Mr. Collins stated on the stand this morning that the reason his association was unable to get an agreement with yours was because of the fact that they had instituted or assessed some fines against the journeymen painters here in New York, and your association wanted those fines remitted; is that correct?

Mr. GRIMMER. Those were assessed against those members in 1905. During that arbitration that matter was struck to the bosses who were before them, because they thought the union was not right in going out on a strike. As we agreed to live up to the decision of the umpire, and they thought the union should also, and that is why these men stood by us?

Mr. THOMPSON. And that was the bone of contention or the point of discrimination?

Mr. GRIMMER. They claimed that was the bone of contention, but I don't believe it.

Mr. THOMPSON. What do you believe was the basis of the disagreement?

Mr. GRIMMER. Why, they would not continue the conference?

Mr. THOMPSON. Yes.

Mr. GRIMMER. It is sort of a lengthy story, but I may as well tell you. We took into our association about 19 members last summer from the Harlem district. They had an association of their own, but they gave it up and joined ours; and as I have been told by those men that they have been paying a system of graft to those walking delegates, and naturally when they joined our association that graft was cut off, because every one of our members is under a bond to live up to the rules of our association; and one of those is, of course, pay no graft.

Mr. THOMPSON. That is a pretty serious charge, Mr. Grimmer?

Mr. GRIMMER. I can not help it. These men told me so.

Mr. THOMPSON. What is the basis on which you make the charge?

Mr. GRIMMER. Because they kept on bothering those men; they bothered them because they would not pay anything. Those men came to me and told me.

Mr. THOMPSON. Bothered the 19 master painters?

Mr. GRIMMER. Not all; some.

Mr. THOMPSON. Some of them?

Mr. GRIMMER. Yes, sir.

Mr. THOMPSON. Have you ever taken that matter up with the painters' organization?

Mr. GRIMMER. We have. Of course, we have been through with the building trades association; we have compelled them to let these men alone as long as they were paying a fair rate of wages.

Mr. THOMPSON. Did you discuss it frankly?

Mr. GRIMMER. Yes, sir; in the open meetings.

Mr. THOMPSON. Do you believe that if it was not for that question that the conference would have continued and might have resulted in an agreement, is that so?

Mr. GRIMMER. Well, I think it would; yes, sir.

Mr. THOMPSON. Is it desirable to have an agreement in New York City?

Mr. GRIMMER. The master painters are perfectly willing to enter into an agreement with the union, providing the union will give us satisfactory proof that they will live up to it.

Mr. THOMPSON. What do you mean by giving you satisfactory proof?

Mr. GRIMMER. Because they have never lived up to any agreement to the present time. No matter what agreement, they have never lived up to it.

Mr. THOMPSON. What would you consider satisfactory proof to be?

Mr. GRIMMER. For instance, if they were to put up under bond and the State to compel them to live up to the agreement.

Mr. THOMPSON. How could the State compel the painter to live up to the agreement?

Mr. GRIMMER. The State could do a great many things by chartering them.

Mr. THOMPSON. Is it not, as a matter of fact, impossible for either the State or any body of men to compel men to work if they do not want to?

Mr. GRIMMER. They haven't tried that. That is not the point. Of course, you can not make any man work if he doesn't want to. He can not be compelled to work. You can take a horse to a trough but you can not make him drink. We do not claim that. If we agree to a certain thing, and they agree to it, they should carry out their part of the agreement and we will carry out ours.

Mr. THOMPSON. Let us make it concrete, Mr. Grimmer: Assuming that the painters would waive their claims on these 19 master painters, make no more demands for graft; assuming that they would waive the fines which they have assessed against those journeymen painters, and were willing to make an agreement with you, what would you request by way of proof that they would carry out their agreements in the future?

Mr. GRIMMER. Simply live up to their agreements, that is all. We can not force them in any other way. I do not see how. As man to man, that is about all.

Mr. THOMPSON. How would you make a contract if those two things were out of the way?

Mr. GRIMMER. Let them file a bond, or something of that kind.

Mr. THOMPSON. What betterment of conditions in New York City would such an agreement bring about?

Mr. GRIMMER. Well, I don't know as it would make them any better at the present time, because the competition in trade is too great, because we have boss painters in New York City that are paying \$1.50, \$1.75, and \$2 a day, and the union demands \$4 a day, and the majority of our members do pay \$4 a day to them, so far as I understand. Of course, we have made several requests of them at the conference which I do not think were unfair at all. Of course, one of the rules of the painters' union is not to work Saturday afternoons under any conditions, double time or no. We thought that was unfair to our association, because others do it, other boss painters do it around the city, and we are cut out of that work, so we have asked them to allow Saturday afternoon work in urgent cases. By that I mean by notifying the union that the men are going to work that afternoon.

And then to consider time and a half for overtime on old work and the other painters in New York City stand on regular time. A new building can be controlled very easy by the bosses and by the labor unions, but old work we can not control, and of course, we are handicapped by paying this double time; requiring the double time.

Mr. THOMPSON. And the unions would not agree to those two provisions?

Mr. GRIMMER. They have not so far. We have put it up to them.

Mr. THOMPSON. Referring back to that question of graft, what is the form of the alleged graft?

Mr. GRIMMER. Well, as the Harlem members told me if they had a row of buildings going up, painting an inside building it would have a certain price to be paid to the delegate and the corner building another price. Say, \$30 for an inside building and \$50 for a corner, large apartment, which was handed over.

Mr. THOMPSON. Which went to the delegate?

Mr. GRIMMER. I assume he was the man who went to look after the job.

Mr. THOMPSON. Can you give us the names of contractors who paid this graft, Mr. Grimmer? Would you be willing to do so?

Mr. GRIMMER. I could look them up. I couldn't offhand, because I haven't our membership book with us. I couldn't do it offhand.

Mr. THOMPSON. Will you furnish us with that information?

Mr. GRIMMER. Yes, sir; I will do so. I will have to get it from our secretary, who knows it pretty well.

(The information referred to is as follows: S. Weingarten, 960 East One hundred and fifty-sixth Street, Bronx; I. Weinstein, 117 Westchester Avenue; M. Daxe, 2019 Lexington Avenue; H. Denker, 23 East One hundred and eighth Street; J. Faber, 22 East One hundred and eighth Street; L. Fiskl, 22 University Avenue; Greenblat, 939 Intervale Avenue, Bronx; P. Stein, 897 Elton Avenue, Bronx; I. Middleman, 3200 Broadway; Carl H. Dabelstein, 156 West Ninety-ninth Street, secretary master painters and decorators' association.)

Mr. THOMPSON. Were not those demands, Mr. Grimmer, that \$30 for inside and \$50 for outside, were not they in the nature of demands for organizations and not the delegates?

Mr. GRIMMER. No, sir; I don't think so.

Mr. THOMPSON. For violations of the rules?

Mr. GRIMMER. I don't think it was the organization.

Mr. THOMPSON. You think not?

Mr. GRIMMER. No, sir; I don't think it was.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Ballard, have you any questions?

Commissioner BALLARD. No, sir.

Chairman WALSH. Are there any questions by any of the commissioners?

(No response.)

Chairman WALSH. Call your next witness.

TESTIMONY OF MR. DOMINICK D'ALLESSANDRO.

Mr. THOMPSON. Will you please give us your name, your residence, and your business?

Mr. D'ALLESSANDRO. Dominick D'Allessandro; 82 State Street, Albany, N. Y.

Mr. THOMPSON. What is your business?

Mr. D'ALLESSANDRO. International president of the Hod Carriers Building and Common Laborers' Union.

Mr. THOMPSON. Has that body organizations in other cities than New York?

Mr. D'ALLESSANDRO. Certainly; all over the country.

Mr. THOMPSON. All over the country?

Mr. D'ALLESSANDRO. Yes, sir.

Mr. THOMPSON. Is it affiliated with the American Federation of Labor?

Mr. D'ALLESSANDRO. Yes, sir.

Mr. THOMPSON. What is its present membership, if you know; and where are the principal cities in which it is located?

Mr. D'ALLESSANDRO. It has got about nearly 40,000, and located practically in every city of the country where there is a large city, of course.

Mr. THOMPSON. What is the general nationality of the membership?

Mr. D'ALLESSANDRO. There is all nations.

Mr. THOMPSON. All nations?

Mr. D'ALLESSANDRO. Yes, sir.

Mr. THOMPSON. What are the dues of the membership?

Mr. D'ALLESSANDRO. We receive only 15 cents per capita tax and 15 cents a month.

Mr. THOMPSON. Fifteen cents a month?

Mr. D'ALLESSANDRO. And we pay \$100 on death, in case the member dies, and pay \$100 benefit.

Mr. THOMPSON. How large is the regular local in New York City, if you know?

Mr. D'ALLESSANDRO. In New York? We made an attempt at different times, but it has been impossible to get any large local. Of course we have got a few small, but don't amount to much.

Mr. THOMPSON. Do you know the membership of all the locals in New York City?

Mr. D'ALLESSANDRO. Yes, sir. Not exactly, but approximately.

Mr. THOMPSON. Approximately?

Mr. D'ALLESSANDRO. Yes, sir.

Mr. THOMPSON. About how much?

Mr. D'ALLESSANDRO. About 10,000 or 11,000.

Mr. THOMPSON. Are there any independent local unions of common and building laborers outside of New York City?

Mr. D'ALLESSANDRO. Some cities; yes, sir.

Mr. THOMPSON. Are there any here in New York?

Mr. D'ALLESSANDRO. The entire city of New York. All the laborers of New York are independent.

Mr. THOMPSON. In other words, you have no local unions here?

Mr. D'ALLESSANDRO. I say I have a few small ones.

Mr. THOMPSON. I thought you said you had 11,000 here?

Mr. D'ALLESSANDRO. Oh, no. You asked me if I know how many laborers are organized in this city. I said about 11,000.

Mr. THOMPSON. About 11,000?

Mr. D'ALLESSANDRO. Yes, sir; but not affiliated with the organization I represent.

Mr. THOMPSON. What attempts have you made to organize the building laborers in this city?

Mr. D'ALLESSANDRO. It has been, so far as I am connected with the organization, since 1907, organized; an organizer has been placed in the city, and being spent the time of myself, and of course we organized the union, and after a little while the union has been compelled to retire because of the larger union compelling a strike against them and discriminate against them until they compelled them to return to the job.

Mr. THOMPSON. What are the names of the other labor unions in New York City, if you know?

Mr. D'ALLESSANDRO. Why, yes; I think it is—in the city you couldn't get no name—you got about seven names, different names altogether, one from the other. If you permit me to, I will go on and name, so we get some organizations that has got a name here in the city as dock labor, so many men handle all material—sand, brick, and all this unloaded from the boat.

Mr. THOMPSON. I mean organizations of laborers?

Mr. D'ALLESSANDRO. Yes, sir; connected with us.

Mr. THOMPSON. Connected with the buildings?

Mr. D'ALLESSANDRO. Not connected with the buildings. That is what we claim all these laborers. They have an organization, one excavating; then some organizations stonemason laborers; then there is another organization,

bricklayer laborer protective union, if I make no mistake; then there is another organization is the plasterers laborers' protective union; I don't think it is the correct name; but the laborers in the city are divided into six groups, and one group not recognize the other. If one of the members take from convict labor is going to work and work at stone so he is compelled to pay another initiation. If from the stonemason laborer, if he is going to attend the bricklayer he has got to pay another \$25 or \$30, whatever the initiation is, from that, and go attend the plasterer he has got to pay another \$25. So this group do not recognize each other.

Mr. THOMPSON. In other words, when a laborer in New York City wishes to follow his trade he must be a member of four or five different trades?

Mr. D'ALLESSANDRO. Six as a laborer.

Mr. THOMPSON. He has to pay a different initiation fee in each?

Mr. D'ALLESSANDRO. Yes, sir.

Mr. THOMPSON. And has to pay dues, too?

Mr. D'ALLESSANDRO. Certainly; of course; I think so; I could not make sure of that.

Mr. THOMPSON. How much does it cost, if you know, for a building laborer to pay an initiation in this city in the six groups?

Mr. D'ALLESSANDRO. Well, so far as I know, they use to ask for a hundred dollars one time. That was 1905. But the initiations to-day, those unions ask \$25. So it would be about between a hundred and a hundred and twenty-five dollars as a laborer.

Mr. THOMPSON. And what dues would he pay?

Mr. D'ALLESSANDRO. I could not say; some 50 cents and some 25 cents.

Mr. THOMPSON. A month?

Mr. D'ALLESSANDRO. A month. Now, if you permit me, you say, what attempt we made to get those unions affiliated, and why we did not; I did not finish to answer that question as I am interrupted. The reason we did not succeed to get the New York laborers affiliated with the international order which I represent, for example, the reason our laws says no more than \$15 initiation shall be paid and no less paid. That is our law, and we not permit, the international union not permit the men from excavating to go and do same kind of work say as attend bricklayer or attend plasterers without he pay another initiation fee; but with us a man proper to do such work can simply transfer from one local to another. And I suppose that is why the New York laborers did not become affiliated, because as soon as they do that of course they stop all those initiations.

Mr. THOMPSON. What is the condition of the building trades, rather of the laborers in the building trades of New York City, as compared with the laborers in the same trade in Chicago, for instance?

Mr. D'ALLESSANDRO. You mean to say what's the difference between the labor—

Mr. THOMPSON. The conditions of the work?

Mr. D'ALLESSANDRO. The conditions of work—oh, there is big difference in Chicago, where they got them affiliated about two years ago. Chicago one union. Here we got 11 unions in different sections of the city; but all recognize each other and make no difference if a man do excavating or attend a plasterer or begin the building, he belong in the same union, only the wages are different. If a man is digging to-day he gets one wage; to-morrow he attends a bricklayer he get different wages; but he belong in the same union. Now, here in New York, just as I said, a man attend a plasterer he must belong to the plasterers in order to be recognized by any other union as a laborer.

Mr. THOMPSON. Well, have you any comparison of the wages of the two cities?

Mr. D'ALLESSANDRO. At Chicago got better wages.

Mr. THOMPSON. What is the daily wage in Chicago of the hod carriers, say?

Mr. D'ALLESSANDRO. Three dollars to three dollars and twenty-five cents.

Mr. THOMPSON. What are the wages of the hod carriers in New York City?

Mr. D'ALLESSANDRO. Well, it is called \$3; but I don't know if he got it, but probably he gets \$2 or \$2.50. The plasterer laborers all, so far as I know, are \$3.25. I don't know if there is any change, of course.

Mr. THOMPSON. Does your organization make contracts with the employers the same as the bricklayers and carpenters, etc.?

Mr. D'ALLESSANDRO. Yes, sir.

Mr. THOMPSON. Have you such an agreement in Chicago and elsewhere?

Mr. D'ALLESSANDRO. Yes, sir; they got an agreement in Chicago and in other cities, too.

Mr. THOMPSON. Does your organization engage in sympathetic strikes in aid of the people they are working with and helping, such as the bricklayers?

Mr. D'ALLESSANDRO. Well, in latter cases, yes.

Mr. THOMPSON. And the same way as to the plasterers?

Mr. D'ALLESSANDRO. In latter cases, yes; that is, local.

Mr. THOMPSON. In other words, as the members of your organization are helpers in a sense of some of the other trades, you join with them in their strikes?

Mr. D'ALLESSANDRO. Of course. We are affiliated with the American Federation of Labor; and, of course, if the building trades got on strike here we go on the strike.

Mr. THOMPSON. Where your organization has had a strike of its particular business in any city—for instance, if the bricklayers or plasterers go out in sympathy with you—do you have to pay a benefit to the other trades?

Mr. D'ALLESSANDRO. No.

Mr. THOMPSON. You do not?

Mr. D'ALLESSANDRO. No.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. One moment. Mr. D'Allessandro, I notice your name is preceded here by a title?

Mr. D'ALLESSANDRO. Yes, sir.

Chairman WALSH. Cavalier?

Mr. D'ALLESSANDRO. Yes, sir.

Chairman WALSH. What is the occasion of your receiving that? I understood it had something to do with labor conditions in America and I thought I would ask you, if you had no objection?

Mr. D'ALLESSANDRO. Well, I guess I will say a few words on that line. When I land here I thought to be free. We been of that impression on the other side, that America was in a free country; and I found when I land here that a part of it, or a portion of the working class, not been free. I found that where the nation I come from, those laborers land here, the boss went after them on the dock, and he make promise to take them out to work at such and such a place and was asking them to pay so much for the work—say so much a week—say \$5 a man or 50 cents or something. In some cases those bosses, what are so called, go and hire, say, 200 or 300 men specially.

Commissioner LENNON. You refer to the peonage system?

Mr. D'ALLESSANDRO. Whatever you call it.

Commissioner O'CONNELL. Or the padrone system.

Mr. D'ALLESSANDRO. And the question of railroad fare—and he might say to those men, I got a job in New York, and the fare costs you so much, and you not to pay any money for the job, but only you got to pay the railroad fare. Those men start to collect railroad fare and they got them in the station and the leader is kept away and so if the man is not there they could not get on the train, but the railroad has been paid. So that I got tired of such thing, and I start to establish a society which we call the Italian Immigrants' Society, of which I been a president quite a time.

Chairman WALSH. Was the gentleman who testified here the other day connected with that society?

Mr. D'ALLESSANDRO. Might be from New York City, but I am from Boston, but in the same line, this society. So then I start to organize those men, and we start to give evidence against those padrones, and some of those have been sent to jail for three or four months, and one got six months, and some fined, and some is kept away from the city, and all cases like that; and this work has been continual and continual until one day the King sent me a medal. That is the way I got it.

Chairman WALSH. The King of Italy?

Mr. D'ALLESSANDRO. Yes, sir.

Chairman WALSH. Thank you, very much, Mr. D'Allessandro; it is all very interesting. What is the meaning of the title? It says here "Cav."

Mr. D'ALLESSANDRO. That is cavalier.

Chairman WALSH. And what does that mean in Italy? What order, in a general way?

Mr. D'ALLESSANDRO. Well, like what you call in England is a knight. A cavalier has been recognized by the King, and you could be admitted in any place to go, and all such stuff. I might be proud of a title, but it is a bigger thing there, anyway.

Chairman WALSH. Thank you, very much.

TESTIMONY OF MR. MICHEL ANGELO CONTESSA.

Mr. THOMPSON. Where do you live, Mr. Contessa?

Mr. CONTESSA. 437 East One hundred and fourteenth Street.

Mr. THOMPSON. What is your business?

Mr. CONTESSA. I don't understand English.

Mr. THOMPSON. Will the reporter please note the fact that Mr. Dominick D'Allessandro is acting as interpreter for Mr. Michel Angelo Contessa.

The INTERPRETER. Business agent of the stonemasons' labor, one of the locals.

Mr. THOMPSON. Business agent of the international union?

The INTERPRETER. No; local union.

Mr. THOMPSON. Isn't the name international union?

The INTERPRETER. No; it is not affiliated with anybody.

Mr. THOMPSON. I know that; I am aware of that fact. Never mind.

The INTERPRETER. It is the stonemason laborers.

Mr. THOMPSON. Has his organization any other locals than in New York City.

The INTERPRETER. No.

Mr. THOMPSON. How long has his organization been in existence?

The INTERPRETER. Since May 2, 1912.

Mr. THOMPSON. Is it a corporation under the laws of the State?

The INTERPRETER. He don't know.

Mr. THOMPSON. Has he been connected with the union from its beginning?

The INTERPRETER. No.

Mr. THOMPSON. How long has he been connected with it?

The INTERPRETER. About nine years.

Mr. THOMPSON. What officers has the organization at the present time?

The INTERPRETER. He is business agent.

Mr. THOMPSON. What other offices?

The INTERPRETER. Nothing else.

Mr. THOMPSON. Nobody else?

Commissioner O'CONNELL. He means, are there other offices in the local union?

The INTERPRETER. There is a president, vice president, and financial secretary, recording secretary, treasurer, and trustee.

Mr. THOMPSON. Who is the president at this time?

The INTERPRETER. Vido Capoadello.

Mr. THOMPSON. And who is the vice president?

The INTERPRETER. He only remembers his first name, Dominick.

Mr. THOMPSON. You don't remember the last name?

The INTERPRETER. No.

Mr. THOMPSON. What is the name of the secretary?

The INTERPRETER. Domaci Rafael, the name of the financial secretary.

Mr. THOMPSON. Is the financial secretary the custodian of the funds—the money?

The INTERPRETER. No; the treasurer.

Mr. THOMPSON. Who is the treasurer?

The INTERPRETER. Rocco Francoso.

Mr. THOMPSON. How long has he been treasurer?

The INTERPRETER. About two years and a half.

Mr. THOMPSON. How much money on hand, if he knows, does the organization have?

The INTERPRETER. It hasn't got anything.

Mr. THOMPSON. Is his organization affiliated with the International Hod-carriers and Common Laborers' Union?

The INTERPRETER. No.

Mr. THOMPSON. Why not?

The INTERPRETER. For the reasons they could not pay for the per capitas; they got no money.

Mr. THOMPSON. What is the membership of his organization?

The INTERPRETER. About 330.

Mr. THOMPSON. Has it ever been affiliated with the United Board of Business Agents of the Building Trades of New York City?

The INTERPRETER. No.

Mr. THOMPSON. Is it affiliated now or has it been at any time with any other labor body, if you know?

The INTERPRETER. It was at one time affiliated with the International Hod-carriers and Common Laborers' organization.

Mr. THOMPSON. That is your organization?

The INTERPRETER. Yes.

Mr. THOMPSON. When was that?

The INTERPRETER. That was in 1907.

Mr. THOMPSON. Why did they drop their affiliation with the international organization?

The INTERPRETER. For the reason they could not pay any more for per capita.

Mr. THOMPSON. Has it a printed constitution?

The INTERPRETER. Yes.

Mr. THOMPSON. Has he a copy of it here?

The INTERPRETER. No.

Mr. THOMPSON. Would he furnish this commission with a copy of the constitution and by-laws?

The INTERPRETER. Yes; he will send one.

Mr. THOMPSON. What is the principal nationality of the members of his organization?

The INTERPRETER. Any nationality, he says, can join—English. They are all Italians, because nobody else wants that work.

Mr. THOMPSON. What is the form of government in his organization?

The INTERPRETER. He says that they work eight hours a day and get \$2.80 a day, Saturday afternoon, 25 cents a month, and \$25 initiation.

Mr. THOMPSON. How often does his organization hold an election for offices?

The INTERPRETER. Every year.

Mr. THOMPSON. Does each member have the right to vote?

The INTERPRETER. Yes.

Mr. THOMPSON. Does his organization publish at stated periods a financial statement?

The INTERPRETER. Yes.

Mr. THOMPSON. How often?

The INTERPRETER. Every Friday.

Mr. THOMPSON. Every Friday?

The INTERPRETER. Yes.

Mr. THOMPSON. What does the statement show?

The INTERPRETER. He talks of the meetings every Friday, and the financial report every month.

Mr. THOMPSON. Every month.

The INTERPRETER. Every month.

Mr. THOMPSON. Is that printed?

The INTERPRETER. No; it is written, handwriting, in the book.

Mr. THOMPSON. Is it read to the members?

The INTERPRETER. Yes.

Mr. THOMPSON. Do they send a yearly statement of their financial condition?

The INTERPRETER. No.

Mr. THOMPSON. Does it furnish any written statement to the members, or, rather, is any written statement furnished to the members of the amount of money that comes into the organization for dues and initiation fees, and how the money is spent?

The INTERPRETER. No; only the secretary, in the meetings, read it from the book every month.

Mr. THOMPSON. Does his organization engage in furnishing employment to its members, and does it charge a fee for it?

The INTERPRETER. No; he says they will try to furnish work for the members, but only ask them initiation fees and a month's dues.

Mr. THOMPSON. Does a mason helper also work as a hod carrier, and a plasterer's helper, and in other unskilled branches of the trade?

The INTERPRETER. No.

Mr. THOMPSON. He does not?

The INTERPRETER. No.

Mr. THOMPSON. Just works as a stonemason's helper and nothing else?

The INTERPRETER. He could not go to work on the other.

Mr. THOMPSON. If a mason's helper, a member of his organization, wants to work as a hod carrier, or as a plasterer's helper, must he take out cards from those organizations?

The INTERPRETER. He has got to get a new card.

Mr. THOMPSON. What does he have to pay for those new cards at the other organization, if you know?

The INTERPRETER. He don't know how much he has got to pay; depends on what the other union's charge.

Mr. THOMPSON. Is it true that many of the workers, members of his organization, carry three or four cards with other organizations so they may work as laborers?

The INTERPRETER. He says yes.

Mr. THOMPSON. Has there been any movement on foot in New York City to have these other laborers' organizations, including his organization, to join with the International Hod Carriers Building and Common Laborers' Union of America?

The INTERPRETER. He says it has been talked over at different times, but nobody paid the money.

Mr. THOMPSON. Is the purpose of that to do away with the necessity of a laborer having many cards?

The INTERPRETER. So he could work everywhere without paying another initiation.

Mr. THOMPSON. That is the purpose?

The INTERPRETER. That is the purpose.

Mr. THOMPSON. What part does his organization take in that movement?

The INTERPRETER. He says it has been talked over for two or three different meetings, but there has been no vote to it.

Mr. THOMPSON. What is that?

The INTERPRETER. It has been talked over in the meetings for two or three times, but no vote has been taken.

Mr. THOMPSON. What is his attitude in that regard?

The INTERPRETER. You mean his attitude as an individual member?

Mr. THOMPSON. Yes.

The INTERPRETER. He is in favor of it.

Mr. THOMPSON. Does his organization have an agreement with the stone contractors' association in this city?

The INTERPRETER. Yes.

Mr. THOMPSON. When was it made?

The INTERPRETER. You mean the last one?

Mr. THOMPSON. Yes.

The INTERPRETER. This year, he says, he does not remember the month.

Mr. THOMPSON. Through whose help was that agreement made, through the mason mechanics?

The INTERPRETER. No.

Mr. THOMPSON. Did the members of his organization ever strike for an improvement of conditions?

The INTERPRETER. No. They stopped at one time, only a short time, about five years ago.

Mr. THOMPSON. Is Mr. Contessa engaged in any other business?

The INTERPRETER. No.

Mr. THOMPSON. Is he engaged or is he interested in any saloon in this city?

The INTERPRETER. No, sir; he says.

Mr. THOMPSON. What salary does he get in his office?

The INTERPRETER. He says he got one time \$25; now, \$12.

Mr. THOMPSON. What is that?

The INTERPRETER. At one time he had paid to him \$25 a week, but at the present time he gets \$12 a week.

Mr. THOMPSON. Is that all of the money that he gets from this organization?

The INTERPRETER. That is all, he says.

Mr. THOMPSON. Is that the only source of income that he has?

The INTERPRETER. He says he has got \$12 a week, and when they collect the first \$5 initiation it goes to him.

Mr. THOMPSON. How much money does he get from that source per week?

The INTERPRETER. Sometimes one, sometimes nothing.

Mr. THOMPSON. How much money did he get from that source this last month, if he knows?

The INTERPRETER. He don't remember.

Mr. THOMPSON. He don't remember. Does he know how much he got last year from that source?

The INTERPRETER. You mean the entire year?

Mr. THOMPSON. Yes.

The INTERPRETER. They didn't let him collect that last year; only a couple of months this year.

Mr. THOMPSON. He collected nothing last year?

The INTERPRETER. No.

Mr. THOMPSON. Why was his wage reduced, or his salary reduced, from \$25 a week to \$12?

The INTERPRETER. Well, at one time when he got \$25 a week the organization was big, and now it is small, so they reduced his salary.

Mr. THOMPSON. Where have you got your office?

The INTERPRETER. 346 East One hundred and twelfth Street.

Mr. THOMPSON. Is that a saloon?

The INTERPRETER. Yes.

TESTIMONY OF MR. PATRICK JUDGE.

Mr. THOMPSON. Mr. Judge, will you give us your name and address?

Mr. JUDGE. Patrick Judge; business address, 154 East Fifty-fourth Street.

Mr. THOMPSON. And your business, Mr. Judge?

Mr. JUDGE. Secretary-treasurer of the Plasterers Helpers' Protective Association.

Mr. THOMPSON. How long has that organization been in existence, if you know?

Mr. JUDGE. Since the 24th day of May, 1913. This is a new organization.

Mr. THOMPSON. What was its name before?

Mr. JUDGE. At the present time the organization is composed of three organizations, but prior to that all were at variance with each other; one of them was known as Form Local 87.

Mr. THOMPSON. I did not get that.

Mr. JUDGE. One organization that existed prior to the amalgamation was known as former Local 87, the other was known as former Local 28, and the other organization, which was the old organization, was known as plasterers' laborers, organized 1891—in May, 1891.

Mr. THOMPSON. What organizations of the old ones were you connected with?

Mr. JUDGE. With the old organization.

Mr. THOMPSON. With the old organization?

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. Were those others locals of that organization?

Mr. JUDGE. Not until 1907; we became affiliated then with the International union in 1897.

Mr. THOMPSON. What international union do you mean?

Mr. JUDGE. The International Union of Hod Carriers and Building Laborers.

Mr. THOMPSON. The one of which Mr. Dominick D'Allessandro is general president?

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. Are you affiliated with them to-day?

Mr. JUDGE. No, sir.

Mr. THOMPSON. When did you drop your affiliation?

Mr. JUDGE. We were suspended in March, 1909?

Mr. THOMPSON. For what were you suspended if you know?

Mr. JUDGE. Because they violated the constitution in so doing.

Mr. THOMPSON. Of what did that violation consist?

Mr. JUDGE. Well, it consisted in refusing to accept per capita tax that was in their possession for fully 33 days. They held the amount of money, which I forget exactly now; they held it in the office for 33 days, and at the expiration of that time it was returned to the local union with a letter stating that the per capita tax would not be accepted.

Mr. THOMPSON. Did they state why?

Mr. JUDGE. They stated that we were beyond the constitutional limit, and in the meantime, which we have proven since then in court, we were within the constitutional limits.

Mr. THOMPSON. What constitutional limit were you beyond?

Mr. JUDGE. They claimed that we owed over three months' per capita tax, and we did not owe three months for the reason that the money had been forwarded to them within the prescribed time.

Mr. THOMPSON. Is your organization willing to join the International Hod Carriers Building and Common Laborers' Union now?

Mr. JUDGE. No; I do not think so.

- Mr. THOMPSON. Does your organization interchange its cards with that union?
- Mr. JUDGE. No; there is no interchange of cards.
- Mr. THOMPSON. What jurisdiction does your organization claim?
- Mr. JUDGE. The Greater New York and vicinity.
- Mr. THOMPSON. For what kind of work?
- Mr. JUDGE. Pertaining to plasterers exclusively.
- Mr. THOMPSON. If a member of your organization wishes to work as a hod carrier, he must take out a card in another organization, must he not?
- Mr. JUDGE. Correct.
- Mr. THOMPSON. And if he wishes to work as a mason's helper, he must also take out another card, must he not?
- Mr. JUDGE. Correct.
- Mr. THOMPSON. And if a common laborer in this city wishes to work either as a plaster's helper, as a mason's helper, or as a hod carrier, he must take out additional cards?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. And pay an initiation fee?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. And pay dues?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. How many organizations of building laborers are there in this city, if you know?
- Mr. JUDGE. There are practically only two organizations; that is, the bricklayers' laborers and the plasterers' helpers. They are the only genuine organizations of laborers in New York City.
- Mr. THOMPSON. But there are also several others, are there not?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. Who are not genuine?
- Mr. JUDGE. They are other organizations created here.
- Mr. THOMPSON. Is your organization an incorporated organization?
- Mr. JUDGE. No, sir.
- Mr. THOMPSON. Have you a printed constitution and by-laws?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. Have you that with you now?
- Mr. JUDGE. Not at present.
- Mr. THOMPSON. Will you furnish a copy of that to this commission?
- Mr. JUDGE. I certainly will; yes, sir.
- Mr. THOMPSON. What is the initiation of your organization?
- Mr. JUDGE. The initiation fee is \$25.
- Mr. THOMPSON. To whom does that initiation fee go?
- Mr. JUDGE. To the organization.
- Mr. THOMPSON. Do you get any part of it?
- Mr. JUDGE. The applicant applies to the executive board, and his first installment is \$5, and there is six months allowed for paying the balance of the \$25. As a rule, it all passes through my hands.
- Mr. THOMPSON. Well, do you get any portion of that \$25 as your own fee?
- Mr. JUDGE. No, sir.
- Mr. THOMPSON. That all goes into the organization?
- Mr. JUDGE. All goes to the organization.
- Mr. THOMPSON. What is the principal nationality of your union?
- Mr. JUDGE. We are composed of all nationalities. There is over 50 per cent of them Italians. We have Germans, we have Irish, and we have negroes.
- Mr. THOMPSON. What is the present membership of your organization?
- Mr. JUDGE. Well, approximately, including permit holders, about 1,200 men.
- Mr. THOMPSON. At one time did you charge as much as \$100 for an initiation fee?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. When was that?
- Mr. JUDGE. In the prosperous years of 1905 and 1906.
- Mr. THOMPSON. Why did you charge so much for initiation dues?
- Mr. JUDGE. Because so many applicants appeared to be admitted into the organization that we considered it advisable to protect our members.
- Mr. THOMPSON. And that was the reason?
- Mr. JUDGE. Yes.
- Mr. THOMPSON. Does your organization have other offices?
- Mr. JUDGE. Yes, sir.
- Mr. THOMPSON. Who are they—I mean, what are the offices?

Mr. JUDGE. President, vice president, recording secretary, trustees, and an executive board of five members; six last year, but they decided on five for this coming year.

Mr. THOMPSON. How often does it hold an election?

Mr. JUDGE. Annually.

Mr. THOMPSON. Annually?

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. All members have a right to vote?

Mr. JUDGE. Correct.

Mr. THOMPSON. What are your monthly dues?

Mr. JUDGE. Forty cents.

Mr. THOMPSON. Does your organization publish a financial statement?

Mr. JUDGE. Well, the trustees go over the book quarterly, and that is read to the organization and recorded in the recording secretary's book.

Mr. THOMPSON. What do they read, that they went over the books, and found them correct?

Mr. JUDGE. The standing of the organization and income for the last three months and expenses.

Mr. THOMPSON. Is that ever printed or written and given to the members?

Mr. JUDGE. Not so far to my knowledge. This is its first year of existence.

Mr. THOMPSON. Now, your organization—in the other organizations was the financial statement ever printed and furnished to members?

Mr. JUDGE. Not to my knowledge.

Mr. THOMPSON. In this statement that is read to the members at the meeting, does it state how much money you are paid, and how the income is expended, the details of it?

Mr. JUDGE. Yes; it is all itemized.

Mr. THOMPSON. Can you furnish this commission with a copy of the financial statement that was read at the last meeting of the members?

Mr. JUDGE. I can furnish you with the last statement, which was handed in by the trustees.

Mr. THOMPSON. And read to the members?

Mr. JUDGE. Yes, sir. In fact, the whole of them, since last May.

Mr. THOMPSON. I would be pleased if you would do that.

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. What is your salary?

Mr. JUDGE. Twenty-five dollars per week.

Mr. THOMPSON. Is that all the money you get from the organization?

Mr. JUDGE. That is all the money I get.

Mr. THOMPSON. Or membership of the organization?

Mr. JUDGE. Or from anybody else.

Mr. THOMPSON. Does your organization maintain regular headquarters?

Mr. JUDGE. Yes.

Mr. THOMPSON. Where are they?

Mr. JUDGE. 154 East Fifty-fourth Street.

Mr. THOMPSON. 154 East Fifty-fourth?

Mr. JUDGE. 154 East Fifty-fourth.

Mr. THOMPSON. Does your organization furnish employment to its members?

Mr. JUDGE. Whenever they possibly can do so they will.

Mr. THOMPSON. Does it charge the members a fee for that?

Mr. JUDGE. Certainly not.

Mr. THOMPSON. The fact that they are members of the union is sufficient?

Mr. JUDGE. That is enough.

Mr. THOMPSON. What are the present hours and wages of the members of your union, if you know?

Mr. JUDGE. Wages are \$3.25 per day—supposed to be—and the hours are eight hours.

Mr. THOMPSON. What relation, if any, has your organization to the stonemason laborers' international union—the one just spoken of—and does your organization exchange cards with them?

Mr. JUDGE. No interchange of cards with any organization.

Mr. THOMPSON. What relation has your organization with the plasterers' union?

Mr. JUDGE. Well, we are directly affiliated with the plasterers, and all agreements on the arbitration plan are made through the trade.

Mr. THOMPSON. In other words, you act with the plasterers' organization?

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. In this city?

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. Is there any movement on foot at this time to have the various labor organizations in this city that deal with the building trades join together?

Mr. JUDGE. Not that I know of.

Mr. THOMPSON. Would you have any objection to that?

Mr. JUDGE. I am certainly always in favor of conciliation.

Mr. THOMPSON. What is that?

Mr. JUDGE. Always in favor of harmony.

Mr. THOMPSON. And of amalgamation?

Mr. JUDGE. Yes, sir.

Mr. THOMPSON. I think you have stated that your arrangement with the master builders' association is through the plasterers?

Mr. JUDGE. With the employing plasterers' association. Our agreements are all made through the mechanics of the industry—the plasterers.

Mr. THOMPSON. I see; that is all, Mr. Chairman.

Chairman WALSH. Anything else? That is all; thank you, Mr. Judge. Call your next, Mr. Thompson.

Mr. THOMPSON. Mr. Antonio Manzi, please take the stand.

TESTIMONY OF MR. ANTONIO MANZI.

Mr. THOMPSON. Where do you live, and what is your business?

Mr. MANZI. 2195 Belmont, in The Bronx.

Mr. THOMPSON. What is your business?

Mr. MANZI. I am business agent of the International Hod Carriers' Union. I used to be business agent of the Laborers' Union Protective Society about 10 years; bricklayers' helpers. I have been with the branch in the national union only about two months, and I represent them.

Mr. THOMPSON. Then you are not connected any more with the Laborers' Union Protective Society?

Mr. MANZI. No, sir.

Mr. THOMPSON. Has that gone out of existence?

Mr. MANZI. Not yet. I don't know how many members I am going to get yet. They are working together so far now.

Mr. THOMPSON. In other words, your desire is to bring the old Laborers' Union Protective Society to affiliate with the international organization?

Mr. MANZI. Correct; I am trying to do that.

Mr. THOMPSON. Does the old protective union have a printed constitution and by-laws?

Mr. MANZI. Not yet; we have a general constitution——

Mr. THOMPSON. I mean of the old society?

Mr. MANZI. Yes, sir; I supplied Mr. Sullivan with one.

Mr. THOMPSON. Why did you leave that organization and form this other organization?

Mr. MANZI. What is the reason?

Mr. THOMPSON. Yes, sir.

Mr. MANZI. Well, since the hard time come in New York—not only in New York, I think all over the United States—the general council, what we call the executive board of the Labor Union Protective Society, there have been some jealousy there; there developed the Irish element trying to throw down a good man, a fellow named Sullivan, general secretary; and those fellows won't pay no more per capita tax to the general council to pay the officers. I mean, so they can pay the general secretary and delegates. So all those locals, they refused to pay the taxation and they have been now without a delegate three or four months. They don't have no representation at all, in the first place, and, in the second place, those locals are all broke except two or three. No. 11, No. 5, and No. 10, they have a few cents, few pennies; the others all broke. They got debts; they can't pay no death benefit.

Mr. THOMPSON. How many members did that organization have?

Mr. MANZI. Altogether?

Mr. THOMPSON. Yes; in the past?

Mr. MANZI. Six thousand five hundred altogether.

Mr. THOMPSON. How many do you think it has now?

Mr. MANZI. Well, I think they only got now about 3,000; all run out.

Mr. THOMPSON. Who is the head of that organization?

Mr. MANZI. You mean general president?

Mr. THOMPSON. Yes, sir.

Mr. MANZI. Louis Malossi, an Italian.

Mr. THOMPSON. What other officers besides the president does it have—vice president, secretary, and treasurer?

Mr. MANZI. Correct—regular board.

Mr. THOMPSON. And the printed constitution and by-laws which we have is the by-laws and constitution for that organization?

Mr. MANZI. Yes, sir.

Mr. THOMPSON. What is the majority of the membership, if you know?

Mr. MANZI. To-day?

Mr. THOMPSON. Yes.

Mr. MANZI. I don't think it is more than 3,000.

Mr. THOMPSON. I mean what nationality?

Mr. MANZI. There are all kinds—Irish, Italians, Germans, Negroes, Jews——

Mr. THOMPSON (interrupting). Which has the most?

Mr. MANZI. The Italians.

Mr. THOMPSON. What is the membership?

Mr. MANZI. Two-thirds.

Mr. THOMPSON. Is the name of your organization given in your constitution and by-laws—the old body?

Mr. MANZI. Certainly. Everybody has got the by-laws and constitution.

Mr. THOMPSON. Did your organization, the old organization of the Laborers' Protective Society, issue financial statements to its members?

Mr. MANZI. They did.

Mr. THOMPSON. In print?

Mr. MANZI. Every six months; not printed, but just appointed a committee and audited the books and read that out in the meeting room, and that is all.

Mr. THOMPSON. What salary does the president get, if you know?

Mr. MANZI. Two dollars per meeting.

Mr. THOMPSON. Is that all he gets from the organization?

Mr. MANZI. That is all he gets.

Mr. THOMPSON. What salary does the business agent get?

Mr. MANZI. Twenty-five dollars.

Mr. THOMPSON. Is that the only money he gets from the organization?

Mr. MANZI. That is all.

Mr. THOMPSON. Is there any other officer who gets any salary or money from the organization?

Mr. MANZI. Well, the board of officers—the secretary, the president, the treasurer.

Mr. THOMPSON. What does the secretary get?

Mr. MANZI. All \$2 apiece—\$2 for each officer.

Mr. THOMPSON. Where are the headquarters of the Laborers' Union Protective Society?

Mr. MANZI. 229 East Twenty-seventh Street.

Mr. THOMPSON. Is that in connection with a saloon?

Mr. MANZI. Yes; it is upstairs; the saloon is on the ground floor.

Mr. THOMPSON. Has the headquarters of the union any connection with the saloon? Are any of the officers of the organization interested in the saloon?

Mr. MANZI. No.

Mr. THOMPSON. Is there any connection between the two?

Mr. MANZI. Connection what?

Mr. THOMPSON. Well, that's all. Are any of the heads of your organization interested in the saloon financially?

Mr. MANZI. Which saloon?

Mr. THOMPSON. The one beneath the headquarters?

Mr. MANZI. No.

Mr. THOMPSON. That is purely accidental, that the headquarters happened to be over a saloon, then?

Mr. MANZI. The hall over the saloon upstairs; yes, sir.

Mr. THOMPSON. What is the present rate of wages of that organization and the hours per day?

Mr. MANZI. They are supposed to get \$3. Some are getting \$3.25, some \$2.50 a day; but the boss gets an advantage, because we are not very well organized.

Mr. THOMPSON. I mean of the old organization.

Mr. MANZI. Supposed to get \$3, but they are not getting it. With the exception of a few bosses downtown, a good boss, they pay him a few dollars a day.

Mr. THOMPSON. Is the president of the local union that you now belong to the owner of a liquor store or saloon?

Mr. MANZI. No, sir.

Mr. THOMPSON. Has he got any interest in a liquor store?

Mr. MANZI. No, sir; he is working in the business, that is all.

Mr. THOMPSON. Working in the business?

Mr. MANZI. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Are there any questions, Mr. Garretson?

Commissioner GARRETSON. No, sir; thank you.

Chairman WALSH. Call your next.

Mr. THOMPSON. Mr. Dunn, the head of the bricklayers' international organization, Mr. Chairman, was not able to be present at the time.

Chairman WALSH. Is he here now?

Mr. THOMPSON. He is here now.

Chairman WALSH. Put him on—Mr. Dunn.

Mr. THOMPSON. I will ask the commission to forbear for a moment until I look back over the record.

Chairman WALSH. Who is the next regular witness—Mr. Frayne?

Mr. THOMPSON. Mr. Frayne and Mr. Donnelly, but neither of them are here.

Chairman WALSH. Yes; Mr. Donnelly is here.

Mr. THOMPSON. I would prefer to have Mr. Frayne and Mr. Donnelly appear at the same time, Mr. Chairman.

TESTIMONY OF MR. EDWARD DUNN.

Direct examination.

Mr. THOMPSON. Mr. Dunn, will you please give us your full name, your address, and your business?

Mr. DUNN. Edward Dunn, 239 East Eighty-fourth Street, New York City; financial secretary of the Bricklayers' Union No. 84.

Mr. THOMPSON. Are the bricklayers members of the United Board of Business Agents?

Mr. DUNN. No, sir.

Mr. THOMPSON. Why are they not members of the United Board of Business Agents, if you know?

Mr. DUNN. They have a trade agreement with the mason builders' association of New York City, and in that agreement it is understood that there shall be no affiliation.

Mr. THOMPSON. Why does that agreement provide there shall be no affiliation with the United Board of Business Agents?

Mr. DUNN. Well, on account of sympathetic strikes.

Mr. THOMPSON. It is true, is it not, that many of the unions who are affiliated with the United Board of Business Agents have agreements with their master employers?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. Then your agreement differs from the other agreements made by unions of the building trades with the master employers?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. Why is that in your case, that provision, whereas in other cases there is no such provision, if you know?

Mr. DUNN. I can not answer that question.

Mr. THOMPSON. You can not?

Mr. DUNN. No, sir.

Mr. THOMPSON. All you know is that it is in the agreement?

Mr. DUNN. It is in the agreement; yes, sir.

Mr. THOMPSON. How long have you been connected with the bricklayers' organization?

Mr. DUNN. Twenty-one years.

Mr. THOMPSON. In this city?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. Were you connected with it at the time the first agreement was made?

Mr. DUNN. No, sir.

Mr. THOMPSON. With the master builders?

Mr. DUNN. No, sir.

Mr. THOMPSON. You were not?

Mr. DUNN. No, sir.

Mr. THOMPSON. Do you know when this provision was first put in the agreement between the master builders and your organization, that they should not affiliate with the United Board of Business Agents?

Mr. DUNN. About 1888, I suppose. I am not positive of any date.

Mr. THOMPSON. That was before your time?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. As a matter of fact, generally throughout the country, your organization does not affiliate in the Central Labor bodies of the cities and towns where it is located, does it?

Mr. DUNN. I have no positive knowledge.

Mr. THOMPSON. You have no knowledge?

Mr. DUNN. No, sir.

Mr. THOMPSON. Is your organization, the international union, affiliated with the American Federation of Labor?

Mr. DUNN. No, sir.

Mr. THOMPSON. Do you know why it is not affiliated with the American Federation of Labor?

Mr. DUNN. The bricklayers of the country have taken a referendum vote voted not to affiliate in any way.

Mr. THOMPSON. Do you know the principal reason or argument upon which they refused to affiliate?

Mr. DUNN. No, sir.

Mr. THOMPSON. Have you got any idea why they do not affiliate?

Mr. DUNN. I suppose they consider there would be too much loss of time to protect themselves.

Mr. THOMPSON. In other words, they feel——

Mr. DUNN. They would be called upon by every organization to go on sympathetic strikes, and they are able to take care of themselves; that is my personal opinion.

Mr. THOMPSON. How large is your organization in this city?

Mr. DUNN. Do you mean Local No. 34?

Mr. THOMPSON. Well, all the bricklayers?

Mr. DUNN. About 9,000.

Mr. THOMPSON. About 9,000.

Mr. DUNN. Yes, sir.

Mr. THOMPSON. How steadily during the year are they employed? I mean to take a normal year. About how much work during a normal year does a bricklayer have?

Mr. DUNN. In the past year the membership worked on an average of about 40 per cent.

Mr. THOMPSON. Was that a normal year or below normal?

Mr. DUNN. Abnormal. Below normal.

Mr. THOMPSON. A dull year?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. During an average year, about how much time would they put in?

Mr. DUNN. About 65 per cent of the time.

Mr. THOMPSON. About 65 per cent of the time?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. What is the wage they receive in the city of New York?

Mr. DUNN. Seventy-five cents per hour.

Mr. THOMPSON. Eight hours a day?

Mr. DUNN. Eight hours a day, double time for overtime.

Mr. THOMPSON. Something has been said here, Mr. Dunn, with reference to the claim made by your international organization and marble fitting, but it was stated that no commission had as yet been brought up in this city in regard to that matter.

Mr. DUNN. That is positively so.

Mr. THOMPSON. That is true, is it?

Mr. DUNN. Yes, sir.

Mr. THOMPSON. Do you know anything about jurisdictional fights?

Mr. DUNN. No, sir.

Mr. THOMPSON. Except the claims of the international union?

Mr. DUNN. No, sir.

Mr. THOMPSON. Did you know about the arbitration plan which was in existence in this city for a number of years, since 1903 and 1904?

Mr. DUNN. Yes, sir. I happened to be a member of it.

Mr. THOMPSON. Were you in favor of that plan?

Mr. DUNN. No, sir.

Mr. THOMPSON. Why were you not in favor of it?

Mr. DUNN. Because I believed that it was an instrument gotten up by the employers to protect themselves.

Mr. THOMPSON. In which way?

Mr. DUNN. Why, against strikes and lockouts. That is, the employers' association formed the arbitration plan to protect themselves and force the labor unions to do their bidding.

Mr. THOMPSON. Does your organization to-day submit to the determination the questions arising in the trade to the executive board of master employers' association?

Mr. DUNN. We have a joint arbitration board.

Mr. THOMPSON. That is, with your own particular master masons?

Mr. DUNN. Yes, sir.

Chairman WALSH. We will now adjourn until this afternoon at 2 o'clock, to meet promptly at 2 o'clock in this room. Please return at 2 o'clock, Mr. Dunn.

Mr. THOMPSON. I might say I do not care to ask him any further questions.

Chairman WALSH. He can come back at 2 o'clock. There might be some questions arise. If it is convenient to Mr. Dunn.

Mr. DUNN. All right, sir.

(At 12.30 the commission adjourned, to meet again at 2 p. m.)

AFTER RECESS—2 P. M.

Chairman WALSH. The commission will please be in order. Call your next witness, Mr. Thompson.

Mr. THOMPSON. Mr. Donnelly.

Chairman WALSH. Mr. Dunn, I think, you had a question or two more that you wanted to ask.

Mr. THOMPSON. I was through with Mr. Dunn.

Chairman WALSH. Do any of the commissioners care to ask Mr. Dunn anything? Take the chair, Mr. Dunn.

TESTIMONY OF MR. EDWARD DUNN—Continued.

Commissioner LENNON. You stated before dinner that you did not like the plan of arbitration because it was not in the interests of the union. Did you consider it a plan in the interests of the employers?

Mr. DUNN. Yes, sir.

Commissioner LENNON. For what purpose?

Mr. DUNN. Well, in one instance I will cite that the dual organization was formed in the electrical workers, and this dual organization had a disagreement with their employers, and the executive committee of the general arbitration board appeared before the meeting of the dual organization and practically put them out of business—that is, through their statements.

Commissioner LENNON. Under what circumstances were the dual organizations formed by the employers who were in the plan of arbitration? What caused them to form dual organizations?

Mr. DUNN. Well, by the old-line trades failing to obey the executive orders of the committee or the arbitration board employers, and a new organization was formed.

Commissioner LENNON. Well, then, this plan, according to your understanding of the plan, might be considered compulsory arbitration?

Mr. DUNN. Yes, sir. Every union, I think, that was in the arbitration plan was compelled to sign it—to sign the agreement.

Commissioner LENNON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Dunn, did I understand you to say that your union was not affiliated with the American Federation of Labor?

Mr. DUNN. Yes, sir.

Chairman WALSH. And your personal opinion of the reason was what?

Mr. DUNN. Why, that we would be on the street most of the time.

Chairman WALSH. On account of sympathetic strikers, etc.?

Mr. DUNN. Yes, sir.

Chairman WALSH. Now, is it the policy of your organization to join or not to join building trades councils in various cities?

Mr. DUNN. I can not answer for any city except New York.

Chairman WALSH. Does it join the building trades council in New York City?

Mr. DUNN. No, sir.

Chairman WALSH. Are the locals permitted to join building trades councils if they desire to do so?

Mr. DUNN. I don't believe so.

Chairman WALSH. So that you would say, then, that the general policy of the organization is not to affiliate with any other unions?

Mr. DUNN. Yes, sir.

Chairman WALSH. Do you or do you not believe that it has been advantageous to the other building trades that have joined together in the way of getting better hours or better wages?

Mr. DUNN. Yes, sir.

Chairman WALSH. So that if all of the unions had adopted the same policy as the bricklayers' union, the general condition of the constituencies would not have been nearly so good? Is that correct?

Mr. DUNN. Well, the conditions are different in the bricklaying line.

Chairman WALSH. Is there any difference between the bricklayers and any other trade except that they are an old, strong, and wealthy organization?

Mr. DUNN. Yes, sir; they are the first on the building.

Chairman WALSH. You mean they are first on the building in the course of construction?

Mr. DUNN. Yes, sir.

Chairman WALSH. They come on before the building is excavated?

Mr. DUNN. Oh, no. I say they are the first of the structural trades to go on the building.

Chairman WALSH. Before the foundations are put in?

Mr. DUNN. No, sir. The foundations are only a minor part of some of the larger structures in a big city.

Chairman WALSH. That is all. Anything else by anyone? That is all, thank you, Mr. Dunn. Call your next witness, Mr. Thompson.

Mr. THOMPSON. Is Mr. Donnelly here?

TESTIMONY OF MR. SAMUEL B. DONNELLY.

Mr. THOMPSON. Mr. Donnelly, will you please give us your name, your address, and your present occupation?

Mr. DONNELLY. Samuel B. Donnelly, 25 Brooklyn Ave., Brooklyn; occupation, secretary of the Building Trades Employers' Association of the city of New York.

Mr. THOMPSON. How long have you been secretary of the Building Trades Employers' Association?

Mr. DONNELLY. Since October 1, 1913.

Mr. THOMPSON. What were you doing previous to that time?

Mr. DONNELLY. For four and a half years I was United States Public Printer.

Mr. THOMPSON. Located at Washington?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. Prior to that time, what were you doing?

Mr. DONNELLY. I was secretary of the building trades arbitration board.

Mr. THOMPSON. Practically the same building trades employers' association that you are now connected with?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. For how long were you secretary of the arbitration board?

Mr. DONNELLY. From the time of its formation in July, 1903, until December 1, 1908.

Mr. THOMPSON. It terminated in 1910?

Mr. DONNELLY. Yes.

Mr. THOMPSON. What office did you hold between 1908 and 1910, if any?

Mr. DONNELLY. None, in the city of New York.

Mr. THOMPSON. In a general way, are you acquainted with the character of the matters which came up before the arbitration board?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. Do you remember them?

Mr. DONNELLY. From 1903 to December, 1908; yes, sir.

Mr. THOMPSON. Were the majority of the matters that came up there jurisdictional matters?

Mr. DONNELLY. Fifty-five per cent were jurisdictional matters or disputes caused by jurisdictional questions.

Mr. THOMPSON. At least 55 per cent. The arbitration plan is the one, of course, that Mr. Eidlitz was connected with?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. And any statement he would make as to the formation of that arbitration plan would probably be correct, would it not?

Mr. DONNELLY. Probably; yes, sir.

Mr. THOMPSON. There has been a book prepared of the decisions of that arbitration board?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. That contains the decisions made during the time you were connected with it as secretary, do you know?

Mr. DONNELLY. Yes, sir. It does not contain all of the decisions made; it contains all of the decisions that were announced on jurisdictional questions, particularly.

Mr. THOMPSON. In regard to the method of arbitration which was embodied in the so-called arbitration plan, in your opinion, from your experience with it, was it a good method?

Mr. DONNELLY. It was.

Mr. THOMPSON. Do you think it to be the best method that could be adopted?

Mr. DONNELLY. I think it is the best method that has been tried in this country.

Mr. THOMPSON. Then you have no suggestions to make to this commission regarding any changes or amendments to that plan that from your experience you think should be made?

Mr. DONNELLY. Yes; I would make some changes had I the—if such duty devolved upon me.

Mr. THOMPSON. Well, have you got any suggestions to make now to the commission in respect thereto?

Mr. DONNELLY. The principal cause of complaint on the part of unions as to the working of the arbitration plan was as to the delays and the time that lapsed from the bringing of a complaint until the rendering of a decision by the executive committee or by an umpire. Frequently the executive committee would deadlock and would lay a case on a table and adjourn it, and in that way a decision would be postponed for, frequently, as long as a month; and in the trial of cases that were sent to an umpire, a voluminous and unnecessary record was frequently created which tended to cause delay in the hearing and which greatly prolonged the hearing of the case and made the work of the umpire more arduous than was really necessary. The plan could be improved by requiring the executive committee to either promptly decide a case or refer it to an umpire for decision. The plan could be improved by requiring an umpire to sit with the board of four when the case was being tried and to promptly render his decision at the conclusion of the hearing.

Then, one criticism was while the umpires were selected jointly by representatives of the contestants, the employers and employees, it frequently occurred that an umpire was selected whose experience was such that it rendered his task very great and it was frequently the impression that the umpires did not really understand the technicalities and the science of the art or mechanics of building-construction work; and it later become the practice, too, frequently, that those boards were deadlocked for some time in the matter of the selection of an umpire for the reason that after an experience with two or three attorneys the labor side objected to attorneys for umpires. At the present time it seems to be the opinion of those with whom I come in contact that it is really better to take the chances that a man might have some prejudice and select one who is familiar with the building industry and knows something about the technicalities of the different crafts.

Mr. THOMPSON. Did lawyers generally represent two sides of the hearing about this arbitration?

Mr. DONNELLY. No, sir.

Mr. THOMPSON. Then the records were not due to lawyers?

Mr. DONNELLY. No; but the records were due to a lack of knowledge of the rules of evidence, I might say. The voluminous records that were created were due to a lack of knowledge of the rules of evidence.

Mr. THOMPSON. Outside of the objections you have named, Mr. Donnelly, did the plan work fairly well?

Mr. DONNELLY. Yes.

Mr. THOMPSON. Did it settle, and settle fairly well, the jurisdictional matters which came before it?

Mr. DONNELLY. It did.

Mr. THOMPSON. Did it give a degree of peace to the building industry in this city?

Mr. DONNELLY. It did.

Mr. THOMPSON. You were aware of the condition of the trade before that time?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. Have you any opinion as to whether or not a local adjustment of jurisdictional matters is superior to a national adjustment? Or would you permit of the use of both methods?

Mr. DONNELLY. Well, the city of New York is the place in which innovations and new materials are first tried. In the city of New York, the subdivisions of the trades first occur. A local condition has been created, and local precedents have been established here, and that condition seems to be satisfactory to both employers and employees. In speaking of that condition, I refer to the subdivision of trades and specialties in the building industry.

In other cities of the country, particularly the smaller cities, the subdivisions have not become—they are not—necessary. I do not see a national, or decisions arrived at by a national board, adjusting disputes for the entire country, could deal fairly with New York and at the same time deal fairly with the conditions in Albany and Binghamton or Buffalo.

Mr. THOMPSON. What is there, Mr. Donnelly, in the fact that there is a higher degree of specialization in this city to prevent a national board from considering that specialization and making a local adjustment allowing for it?

Mr. DONNELLY. There is no reason why a national board could not consider it and make a local adjustment.

Mr. THOMPSON. The jurisdictional dispute between the plumbers and the steam fitters was probably the most bitterly fought and perhaps the longest fought jurisdictional trouble that this country has had in the building trades; is that not so?

Mr. DONNELLY. It is possibly the largest, but I don't think the most bitterly fought.

Mr. THOMPSON. It is of long standing?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. And it was a very serious dispute?

Mr. DONNELLY. Yes, sir.

Mr. THOMPSON. As I understand, from Mr. Alpine, who was on the witness stand here, that matter was adjusted on a national basis, but that in making that adjustment on a national basis allowances were made in each city for the local conditions existing there, and that presented, the fact that conditions differed in almost every city, no serious difficulty whatever; that practically all over the United States adjustments were made within two weeks' time.

Mr. DONNELLY. Those adjustments were finally made between two organizations that were willing to have the adjustments made.

Mr. THOMPSON. But for years they had not been willing; but, for instance, when the American Federation of Labor took away the charter of the steam fitters and the steam fitters were left simply with local unions, then they got together. But there had been a bitter fight for years.

Mr. DONNELLY. But the American Federation of Labor took away the charter of other national organizations and it did not result in a settlement.

Mr. THOMPSON. What are those other organizations? And what jurisdictional conflicts did they have?

Mr. DONNELLY. I know they expelled the brewery workers, and I think they expelled the carpenters.

Mr. THOMPSON. On jurisdictional matters?

Mr. DONNELLY. And from what I read in the papers the disputes have not been adjusted.

There is not any difference, though, between the national body making local—in principle between national body making adjustments and the disputes being adjusted nationally on a different basis in each city, and each city settle its own dispute locally, and in my opinion, providing the national officers agree that that procedure shall be followed.

Mr. THOMPSON. Then you have no objection to a national settlement, such as was made by the plumbers and steam fitters?

Mr. DONNELLY. No; I say, may the Lord speed such settlements and adjustments.

Mr. THOMPSON. Jurisdictional disputes are one of the worst features of the building trades, are they not?

Mr. DONNELLY. They are the most annoying form of dispute, and the dispute that arouses, you might say, the meanest instinct in man, that invariably results in the union man striking against a fellow union man, which is a very deplorable condition.

Mr. THOMPSON. If the governmental body with national scope were organized for the purpose of working as a body on mediation and conciliation, adding the moral force of the public to help adjust jurisdictional disputes, whether local or national, do you think that would be a good thing or not?

Mr. DONNELLY. Well, I don't think it would be satisfactory to the unions. They complain bitterly always of the delay with our local boards here, working purely locally, and it is my experience that a Federal board is the most deliberate body that we have in this country—the most deliberate type of body—and I feel that a Federal board would not be satisfactory to the trade unions.

Mr. THOMPSON. I am speaking solely of the effect of such a board from a moral standpoint—the standpoint of the moral force it would have in helping, either helping the people to locally settle it themselves or to settle it nationally. What would be the moral influence of such a body?

Mr. DONNELLY. There could not be any objection to the moral influence of such a body.

Mr. THOMPSON. Would not the moral influence of such a body, properly constituted, be great or be apt to be great?

Mr. DONNELLY. It might, yes; it might be great.

Mr. THOMPSON. But you have no decided opinion on that?

Mr. DONNELLY. No; I have had some experience with the circumlocutory methods of Federal boards and institutions.

Mr. THOMPSON. Something has been said here, Mr. Donnelly, with reference to the organization of dual unions by the Building Trades Employers' Association, when they have trouble with a union in an industry. What do you know about the organization of dual unions and what has been their use by the employers?

Mr. DONNELLY. Why, the first one formed was the housesmiths. When the arbitration plan was put in effect in 1908 the housesmiths refused to sign, and an organization of housesmiths was formed of the men who went to work, and it grew to such an extent that it was eventually the chartered housesmiths' union. International officers of the housesmiths' union took the matter in hand internationally and agreed to the arbitration plan, and the dual unions were then amalgamated. It was used in that case to force the existing union into line.

Mr. THOMPSON. That is, the structural ironworkers?

Mr. DONNELLY. Yes, sir; the first one formed. In 1904——

Mr. THOMPSON (interrupting). The result has been that the metal lathers have taken—or the housesmiths have taken jurisdiction of certain work and have kept it ever since; is that true?

Mr. DONNELLY. No, sir; the metal lathers' is not a dual union organized by the employers.

Mr. THOMPSON. That is not the one you had reference to?

Mr. DONNELLY. No, sir; the metal lathers, so far as labor ethics go, is a legitimate organization.

Mr. THOMPSON. Well, Mr. Massey testified here yesterday that the metal lathers were originally one local of the structural ironworkers, or housesmiths' union, as he called it, and that they separated on a piece of work here in New York, and since that time they have been a separate body?

Mr. DONNELLY. The metal lathers' union, as a number of other unions, have come into New York through the introduction of new methods and materials. When the metal lath was introduced and came into general use in the place of wood lath a force of men were employed to apply the metal lath. The men were not housesmiths. The housesmiths' union, as I recollect it, said: "We do not claim the work. You go ahead and do it, and we will recognize you as a part of us." And the metal lathers' union grew as the introduction of metal lath became universal, until the metal lathers' union became able to stand on its own feet. The growth of the concrete construction—the increase

in concrete construction and the use of iron and steel in reenforcing concrete was done by practically the same class of employers who were employers of the metal lathers; that is, the manufacturers of metal lath. They were the first people to apply it in buildings, and the manufacturers of metal lath also manufactured the iron used for reenforcing concrete. In that way the metal lathers naturally came on to the work of reenforcing concrete, and when it grew to amount to something then the housesmiths began to covet it, and no doubt it would have resulted in a jurisdictional dispute in New York had not the housesmith got into trouble sufficient to engage all his attention. The metal lathers' union—when the arbitration plan was formed in 1903—was working, I think, under an agreement with the cement masters' league, and the reenforcing of concrete is a specialty. It is not structural steel work.

Mr. THOMPSON. Going back to the question of that dual housesmiths' union, Mr. Donnelly, what has become of that organization?

Mr. DONNELLY. That organization—the members of that organization joined the local of the United Housesmiths and Bridgmen when the settlement of the dispute with the national union was arrived at in the winter of 1903 or spring of 1904.

Mr. THOMPSON. Has the institution of forming dual unions been used several times by the employers of New York City?

Mr. DONNELLY. I think every time there has been a strike dual unions have been formed; that is, during the arbitration.

Mr. THOMPSON. Generally the formation of the dual unions by the employers' association has been a successful proceeding, has it not?

Mr. DONNELLY. Well, as I understand, looking at the proposition from the outside, this seemed to me to be the situation: When the arbitration plan was formed—oh, the employers' association is an association of associations; and the associations of which the employers' association is composed—a majority of them—were working under agreements with the unions when the arbitration plan was formed.

For instance, the most powerful association affiliated with the employers' association is possibly the mason-builders' association. The mason-builders' association has been working under an agreement with the bricklayers' union for many years with an arbitration provision in the agreement, and they had frequently arbitrated with the bricklayers some conditions prevailing with the plasterers and some prevailing in the stone trade and with many other trades; and when these disputes broke out in 1904, and the unions struck against the arbitration decisions and no question of wages and hours was involved, it seemed to me that there was an appreciable number of existing unions that were anxious to go to work but would not go to work as nonunion men; and in order to get them to work it was necessary for the employers to say to them: "Form a union, and we will recognize you." So they would form the union and they would go to work, as they said, with cards in their pockets. That is, I think, what the real situation was; that is, that the dispute was so technical—of such a technical nature that it did not appeal enthusiastically to the members of the unions and appreciable numbers of them were ready to go to work.

Mr. THOMPSON. In such peculiar cases of dispute the union was a very effective defense or weapon, whatever you call it, was it not?

Mr. DONNELLY. Oh, yes; it enabled them to man the shop and go ahead with the work, certainly.

Mr. THOMPSON. As a matter of fact, has that plan of forming dual unions given to the employers in the building trades of New York City the controlling hand in the settlement of difficulties arising in the trades between the employer and the employee?

Mr. DONNELLY. I don't think it has.

Mr. THOMPSON. Don't think it has?

Mr. DONNELLY. No. I haven't noticed it had in the end any materially weakening effect upon the so-called legitimate union when they again got in arms.

Mr. THOMPSON. Mr. Eldlitz, when he was on the stand, said that they had not abandoned that plan. I forget whether he stated it had been used since the dissolution of the arbitration plan. Do you know whether that method was given up?

Mr. DONNELLY. I don't know.

Mr. THOMPSON. Has it been used in the sheet-metal workers, drawing your attention to that?

Mr. DONNELLY. Since the dissolution of the plan?

Mr. THOMPSON. Yes.

Mr. DONNELLY. I am not familiar with the facts in that dispute at all, I only know that a local was in existence. From the members of locals referred to in discussions at the present time I would conclude that a dual union had been formed at the time of that dispute.

Mr. THOMPSON. Do you believe in the plan of arbitration? I take it that you do, Mr. Donnelly?

Mr. DONNELLY. Well, I don't know of any better plan. The cloak and suit industry of New York, they say that they have the best plan, and I don't think it is any better than this arbitration agreement.

Mr. THOMPSON. Are you referring now to the old plan of the cloak and suit industry?

Mr. DONNELLY. I am referring to the present plan of the cloak and suit industry.

Mr. THOMPSON. Of course in your building trades the question of discharge never becomes an important item, does it?

Mr. DONNELLY. The question of discharge?

Mr. THOMPSON. Yes, of the employee; of the union workers?

Mr. DONNELLY. No; not unless——

Mr. THOMPSON (interrupting). You have closed shops, generally speaking, have you not?

Mr. DONNELLY. Well, the plan is based on that principle; yes.

Mr. THOMPSON. And of course, if you are not conversant with the kind of questions that arise in the cloak and suit industries which deals with such questions as discharge and discrimination in the kind or character of work and the place of work in the workshop and things of that type——

Mr. DONNELLY (interrupting). The building industry has been an organized industry for many, many years, and the conditions existing in that industry are much different from those existing in industries that are newly organized.

Mr. THOMPSON. Now, the cloak and skirt industry, as I am informed, has an arbitration plan a good deal like yours up to the first of this year, and which it was almost impossible to get the arbitration board together, and it took them a long time to get a decision from them. That was found to be absolutely unworkable to meet the questions they have, having what you might call a preferential shop, which was a shop where nonunion people could, as a matter of fact, work, which brought up a question of discrimination, of course, against union men. Now, in the plan of to-day they have a committee on immediate action consisting of an umpire and representatives of both sides that can give immediate attention to questions arising in that trade which would not arise in your trade, and requirements are different?

Mr. DONNELLY. Yes; but our executive committee was a committee on immediate action. The executive committee met weekly, and they had many special meetings. When a clear and plain violation occurred, when the representatives of the union complained of a violation that was unquestionably existing, then special meetings were held.

Mr. THOMPSON. Just one question. I did not want to go into that question except as you raised it yourself. Did these executive meetings of yours, which were held, you say, once a week—was there an umpire ready then and there to take part in the discussion and decide the question instantaneously, if necessary?

Mr. DONNELLY. No.

Mr. THOMPSON. That is the plan they have had in the cloak industry to meet their case?

Mr. DONNELLY. That is a suggestion I made a few minutes ago that would improve this plan.

Mr. THOMPSON. Well, now, that plan they already have in the cloak protocol which was made last January. I agree with your suggestion in that regard, and agreed with you when you made it. Now, Mr. Donnelly, it has been stated here to this commission that the Building Trades Employees' Association has persistently refused to admit the board of manufacturers' association to membership in its organization and that the Board of Manufacturers' Association of New York City is in consequence denied the advantage of your arbitration plan and the decisions that you have built up and is interfered with in the installation of its work in this city. What do you know about that, if anything?

Mr. DONNELLY. Well, I only know this: That the boiler makers' union decided to come under the arbitration away back in 1903 or 1904, and they received no encouragement, because we did not consider the boiler makers to be a building trade. We considered the boiler makers to be a shop trade; and

if the boiler manufacturers are a building trade, then they belong in some one of the existing associations of employers. I am of the opinion that they are a shop trade and not a building trade.

Mr. THOMPSON. How do you discriminate, for instance, between the boiler manufacturers and the sheet-metal manufacturers and installers?

Mr. DONNELLY. Why, the sheet-metal worker has been on the buildings, and the sheet-metal manufacturer has been employed on buildings since tin and metal was substituted for wood in the construction of roofs and ornamental building fronts, so that they are an old building trade.

Mr. THOMPSON. I understand that, Mr. Donnelly; but I mean in principle. I understand that the fact, so far as the possession of the trade is concerned, that that is probably true, but the largest percentage of the sheet-metal workers' work is done in the shop, is it not?

Mr. DONNELLY. It is now; yes.

Mr. THOMPSON. About 75 per cent, I believe you stated?

Mr. DONNELLY. Yes.

Mr. THOMPSON. And about 25 per cent of the work is erection and construction work. Now, would not about the same percentages, with very little difference, hold true in the boiler manufacturers' association, while the larger portion of the work is done in the shop, by far the larger portion, yet the installation and the erection of the boilers is actually part of the boiler makers' trade?

Mr. DONNELLY. Well, conditions are different for this reason, that the sheet-metal worker when he originally came onto the building construction, he had a small shop and very simple tools, as his craft grew the work in the shop enlarged and became—the sheet-metal shop became quite a factor in that way, and the mechanic—the journeyman sheet-metal worker—became a shop trade. The use of boilers in buildings was adopted or came subsequent to the use of sheet metal in its many and complicated forms and the boiler is an integral part of the heating plant and installed as a part of the heating plant and can all be done by existing organizations, such as the steam fitter. Now, the boiler manufacturer, as I understand it, delivers his manufactured article to the building and sets it up in place. He has little if any work to perform except to assemble the machine. The connecting of the machine and the trimming of the boiler and the connecting of the machine and trimming of the machine, the attaching even of the steam gauge, is work that is claimed by the steam fitter and the steam fitter will work for the boiler manufacturer. In fact, all of the trades now working on them would be pleased to work for any manufacturer who will employ them at the prevailing scale of wages, so that the fact he is not permitted to membership in the Building Trades Employers' Association does not shut him out of building contracts.

Mr. THOMPSON. That is to say, the fact that he can not connect up the boiler with the rest of the heating plant, does not prevent the boiler manufacturer from selling his boiler and installing it and placing it in the building?

Mr. DONNELLY. No; and he is doing it.

Mr. THOMPSON. Is he ever interfered with in that work in the installation of the boiler in the building by any of the local unions, if you know, in the building trades?

Mr. DONNELLY. You mean by interference? Do you mean by that, strikes against him?

Mr. THOMPSON. Yes; so they prevent him putting the boiler in the building?

Mr. DONNELLY. Why, no; if he employs union men to install it. I don't know what reason they would have for preventing him other than that, if he employed mechanics who were members of the union.

Mr. THOMPSON. In your opinion, Mr. Donnelly, if the boiler makers' association became a part of your larger association and undertook to install their boilers and connect them up, would it lead to another jurisdictional fight between the boiler makers' union, if they are employed, and the plumbers, is that your opinion?

Mr. DONNELLY. That is hard to say what it would lead to. We have all the trouble—we are not seeking trouble.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Commissioner Lennon would like to ask you a few questions.

Commissioner LENNON. Mr. Donnelly, you stated that you believed local conditions were such, particularly in New York, that a settlement of jurisdictional

matters could be had better locally than on a national plan; I understood you to say that. Does that apply to the typographical union?

Mr. DONNELLY. No. For the reason that the arbitration in the typographical union had its origin with the national union, and arbitration in the building trades originates—has originated in the past—the establishing of the principle of arbitration has been entirely local.

Commissioner LENNON. Well, the jurisdictional disputes that have occurred in the typographical union, has an attempt often been made to settle them locally, or was it made a national issue?

Mr. DONNELLY. Jurisdictional disputes?

Commissioner LENNON. Yes.

Mr. DONNELLY. I don't remember but one, to my great regret. That was a national dispute. But you see, in the building trade this is the condition; the basic work of the trade is not affected by these jurisdictional disputes. The bricklayer and the plasterer and the sheet-metal worker and the carpenter, 90 per cent of the work that they perform—95 per cent of the work that they perform—has never been in question. The jurisdictional dispute invariably arises from change in method or the use of some new material which is tried as an experiment. The man who introduces it employs the trade that he thinks is best adapted to install it, and if it proves to be a success and grows in volume, then there is a row about it; they all want it; and the dispute is in its inception purely a local one and a local—you must recognize precedents, and the precedents frequently that the unions by their own conduct have established, and those are different all over the country. And then, the decision often affects—a decision may require an employer to change his entire force or compel all of his employees to relinquish membership in a union of which they had been members a great many years and join another union, which is a disagreeable task.

Commissioner LENNON. Yes; disagreeable, but something has to be done sometime or another with these jurisdictional problems. Mr. Donnelly, is not the arbitration plan in building trades compulsory arbitration?

Mr. DONNELLY. Well, I don't know that you would call it compulsory. I was just trying to think of how to state it. The means of enforcing arbitration decisions are wholly those possessed by the employer and the means that he uses to enforce the decisions might be said to be the lockout; but in New York he has not had an opportunity to enforce decisions by lockouts, because the rows have been initiated by the union—the violation of the initiative has been done first by the organization invariably.

Commissioner LENNON. But when they took that stand—the unions—then the employers followed it by creating a dual union, didn't they?

Mr. DONNELLY. Yes, sir.

Commissioner LENNON. Isn't that compulsory?

Mr. DONNELLY. Yes. Possibly the reason they took the stand is this: That the employer is in position to get the decision, put it in effect, as he has the control as it were of the contract, and the general contractor has the power, for instance, or can induce the architect to say this work does not belong in Smith's contract. It is not the work of that trade; it has been decided to be the work of another trade; and it must go into Jones's contract who employs the men that it has been decided to do this work.

Commissioner LENNON. Mr. Donnelly, there have been several instances where witnesses have testified as to rumors of graft on the part of representatives of the union, and in some cases on the part of contractors. Have you ever heard of such rumors? I mean within recent times; I do not mean to go back years?

Mr. DONNELLY. I have heard such rumors. I have no personal knowledge.

Commissioner LENNON. You have no personal knowledge of it?

Mr. DONNELLY. At any time of any such payment of money? So far as the arbitration board and plan and scheme is concerned, from its inception until I ceased to be an officer of the board in 1908, I can say that, without any doubt, it was—the conduct of all its business on both sides was perfectly plain and free from coercion, intimidation, or bribery.

Commissioner LENNON. Did the carrying of the relations between the trades and the building operators under the plan—did it embody the idea, either expressed or because of their action, that they would not stand for anything of that kind; that, under the plan that a contractor found guilty of graft or a business agent found guilty of graft, they would be proceeded against in some way or another?

Mr. DONNELLY. Undoubtedly it would. The members of the arbitration board selected by the unions were men against whom I never heard a breath of suspicion, and I believe they would have taken very drastic action had they ever obtained evidence of corruption on the part of a business agent.

Commissioner LENNON. All right. That is all I have to ask.

Chairman WALSH. Commissioner O'Connell has a question.

Commissioner O'CONNELL. The arbitration plan is not now in operation?

Mr. DONNELLY. There is no board in existence. The board of business agents has announced as a policy that it will, so far as it is concerned, maintain the decisions of the arbitration board and the employers' position is that they are maintaining—continuing it as nearly as they can comply with its principles. While it is not in existence we have had two arbitrations of jurisdictional disputes during the past four months.

Commissioner O'CONNELL. Suppose an organization was part of the board of business agents who had been suspended from the arbitration plan, and a grievance affecting that organization came up, would your organization recognize the board of delegates and treat with them for an adjustment in behalf of that organization?

Mr. DONNELLY. We have recognized the board of delegates as recently as January of this year as the representatives of the union that was not working in agreement with its employers and was not recognized by its association.

Commissioner O'CONNELL. The painters' organization, I understand, is not in contractual relation with the association of painters. Suppose that organization had a grievance that was brought to the attention of your board through its business organization, would your organization treat with the proposition?

Mr. DONNELLY. Why, yes, sir. We treated with the painters' representatives directly up until about one month ago, when they called a number of strikes; and since that time there has been no communication.

Commissioner O'CONNELL. Suppose the representatives of the ironworkers were suspended by the arbitration plan and that they were represented through the board of business agents and came with a grievance to your organization, would you give consideration to that proposition?

Mr. DONNELLY. We arbitrated a question regarding the ironworkers two months ago.

Commissioner O'CONNELL. Have some of the employers' association organizations been suspended by your organization for want of compliance by the organization's orders?

Mr. DONNELLY. Not the employers' organization, but individuals have been suspended.

Commissioner O'CONNELL. They have been reinstated?

Mr. DONNELLY. Well, my recollection is that during the time the arbitration board was in existence that a number of employers were fined and one or two suspended; and I think one expelled for not living up to the decisions of the arbitration board. But to answer your last question the employers' organization at the present time, its officers and its executive committees are treating with and are recognizing any union that is a member of the unions that have a grievance with their employers, and some who have not. The statement—to quote one of its officers, is this—if you come here first and do not go around calling strikes, we will do everything we can to adjust the differences and settle the disputes. That is the policy.

Commissioner O'CONNELL. Largely based upon the adjustments that have heretofore been made under the plan?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. Would not, or could not, be based upon any new plan of adjustment?

Mr. DONNELLY. Only arbitration; that is all.

Commissioner O'CONNELL. And that arbitration would be how?

Mr. DONNELLY. Mutual.

Mr. O'CONNELL. By both sides selecting parties—

Mr. DONNELLY (interrupting). And those select an umpire; yes sir.

Commissioner O'CONNELL. In the formation of the arbitration plan and in the selection of the officers of the arbitration plan, they were mutually agreed upon by both parties, were they not?

Mr. DONNELLY. Yes, sir. The officers were elected semiannually and were agreed upon—each practically unanimously selected. That is, if the two sides deadlocked in an election, they appointed a conference committee and entered into an agreement—

Commissioner O'CONNELL (interrupting). Take the persons first selected in the arbitration plan, were they unanimously agreed upon by the employers and the employees?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. You are dealing indirectly with the unions now?

Mr. DONNELLY. Yes, sir; dealing directly with the business agents.

Commissioner O'CONNELL. Dealing directly with the organization?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. But not recognizing them as organizations?

Mr. DONNELLY. Yes, sir; we are recognizing all of them as organizations and the special organizations of the employers' association have agreements with all of them, except the painter and the house man.

Commissioner O'CONNELL. I understand you recognize them only to the extent as to those things formerly agreed upon by the arbitration plan—the things you mutually agreed upon in the days gone by.

Mr. DONNELLY. As to jurisdiction, yes, sir.

Commissioner O'CONNELL. Yes. I am now speaking about jurisdiction.

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. And anything new that came up on that would have to be settled upon the basis that was reached formerly?

Mr. DONNELLY. Yes, if the former decisions in any way affected it.

Commissioner O'CONNELL. Yes. Now, in that arrangement the employers and the employees had an equal say in the matter of the selection plan?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. In your present organization—in the recent selection of yourself as secretary of your own organization—you were selected solely by the employers?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. The employees had nothing to do with it at all?

Mr. DONNELLY. No, sir; but any arbitration, of course, must be mutual. I do not—neither do the employers—decide any jurisdictional questions other than those to which the decisions apply except through arbitration.

Commissioner O'CONNELL. Supposing they had a case of arbitration upon something that formerly fell under the arbitration plan, and the new arbitration board decided something directly opposite to what you had formerly decided, would your association agree to the entire change of that plan?

Mr. DONNELLY. No. No; the—

Commissioner O'CONNELL (interrupting). You would not abide by the decision of the arbitration in that kind of a case?

Mr. DONNELLY. It would not be possible for them to agree. In the first place any question that is clearly settled by the old decisions is settled finally and could not again go to arbitration.

Commissioner O'CONNELL. For all time?

Mr. DONNELLY. For all time. Any question that is doubtful as to whether the application of the old decisions—to which the application of the decision is very doubtful—would go to arbitration as a new case.

Commissioner O'CONNELL. And if I thought I had a grievance with the employers' association I would necessarily first sit down and read all the decisions that have been formerly rendered, to ascertain whether I had a grievance or not?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. Before I would be justified in bringing anything before you?

Mr. DONNELLY. Yes, sir.

Commissioner O'CONNELL. I don't quite see where my chance is. How many decisions are there, Mr. Ballard wants me to ask, that I would have to look over.

Mr. DONNELLY. Oh, only about 75.

Commissioner O'CONNELL. That is all, Mr. Chairman.

Chairman WALSH. Any other questions?

Mr. THOMPSON. Just one more question. I would like to ask a question—I am not sure whether it is in our record or not, Mr. Donnelly, but, as I understand, the facts were that at the time that the employers' association adopted this plan they locked the unions out generally in the building trades of this city?

Mr. DONNELLY. Yes; but there has been more than one plan.

Mr. THOMPSON. But the first—

Mr. DONNELLY (interrupting). Yes; in 1903 the employers locked out, and announced an arbitration plan as an ultimatum. The condition remained for about two weeks, and then a convention was held and the unions elected representatives; but they were all very anxious to have things settled, and an arbitration plan—what we call the original plan—was agreed upon. But in 1904—1905, I should say—a convention was called, to which all the unions and the employers' associations elected delegates, and adopted what we now call the arbitration plan, which was adopted mutually, without any condition which could be called coercive; and then that was adopted by the unions, and that is what we call the arbitration plan.

Chairman WALSH. Thank you, Mr. Donnelly. Call your next, Mr. Thompson.

TESTIMONY OF MR. HUGH FRAYNE

Mr. THOMPSON. Mr. Frayne, give me your name, your residence, and occupation.

Mr. FRAYNE. Hugh Frayne; general organizer of the American Federation of Labor; general office, Bartholdo Building, No. 2 East Twenty-third Street, New York City.

Mr. THOMPSON. How long have you been general organizer of the American Federation of Labor in this district?

Mr. FRAYNE. Since January, 1910.

Mr. THOMPSON. Are you acquainted with the old arbitration plan which existed in the building trades?

Mr. FRAYNE. I am.

Mr. THOMPSON. Are you in favor of arbitration?

Mr. FRAYNE. I am.

Mr. THOMPSON. Are you in favor of the plan of arbitration provided in that agreement?

Mr. FRAYNE. I am not.

Mr. THOMPSON. Why are you not in favor of it?

Mr. FRAYNE. Because the plan was composed of a number of dual unions from the union side; because the plan did not recognize the decisions of the American Federation of Labor or the building trades department; because it reversed the decisions of this authority; it dealt with national questions in a local manner, and it was impossible to get a fair decision, because the dual unions which were organized by the employers at the time when they had trouble with the regular, bona fide unions, these dual unions being the creatures of the employers, invariably voted with the employers on the plan which was passed by an equal number of employers and the unions; consequently the decision could only be in one way at all times—in favor of the employer. The arbitration plan consisted of an equal number of employers and unions—two from each body—and being so large and cumbersome it was ineffective, failing to render decisions upon important questions, thereby aggravating them more, and continuing on until the situation got so bad sometimes that it involved many trades in strikes because they had no decision rendered.

Mr. THOMPSON. And when the larger council did not settle a dispute didn't it go to a smaller body of members selected by each side and an umpire?

Mr. FRAYNE. It went to a smaller body known as the executive committee, composed of twelve—six from the employers and six from the union, known as the executive committee. These committees usually—especially on the employers' side—would have great influence with their employees on the board, on the general plan; and they would have influence enough many times with the unions who had the grievance and in that way the decision would either be held up or would go in favor of the employer.

Mr. THOMPSON. As I understand the plan, Mr. Frayne, when it came up before this general body of many members, if it was not decided there it went to an arbitration board, not of the executive committee of six representatives each, but to an arbitration board consisting of two people representing the unions not engaged in the trouble and two representatives of the employers and then an umpire?

Mr. FRAYNE. That was the last remedy. And the fact that they would then have to wait for the third party, namely, the umpire, would cause the case to be prolonged. The failure to have a quick body and umpire to decide them—these questions dragged on, and the result was that in many instances no decision had at all been rendered. For instance, as in the case of the painters, who placed some 65 cases before the board, and in almost every instance they got no objec-

tion, or if a decision was rendered it was against them. So that there wasn't any satisfaction whatever so far as the painters were concerned.

Mr. THOMPSON. What plan of arbitration would you suggest in the building trades of New York City?

Mr. FRAYNE. A plan of arbitration to govern the building trades, to establish anything near like harmony and prevent many of the outbreaks that we have, would have to be founded along the lines that it would, first, have to observe and be the decisions of the American Federation of Labor and the building trades department. Any plan that will reverse or fail to recognize the decisions of the highest authorities of labor can not do anything but create trouble. And the fact that this plan in New York treated national questions in a local manner, where employers who were able to do the work in New York under its operation had to do work in other large cities and meet with opposition because of decisions rendered by this plan, giving jurisdictions here that would not be recognized in other cities. To eliminate that a plan that would observe and live up to the rules of the American Federation of Labor and the department, I would say that three representatives from the employers, three from the unions, two of whom might be permanent secretaries representing each body, and an umpire to be selected by them, who would be a permanent umpire until such times as they might want to make a change under whatever conditions might be necessary, the two secretaries to act as a grievance or adjustment board to take up and receive all questions from both sides, many of which they could adjust without any arbitration, or even calling in the umpire; but in their failure to adjust the question, smaller matters may be adjusted with the cooperation of the umpire and the two secretaries; but in the larger questions they may call upon the two other representatives from the employers and the unions, making a board of seven people or three parties; this umpire to be a public man, posted on these questions. And I am quite sure that, along those lines, there could be established a uniform plan of cooperation that would not only apply to New York but would apply internationally along the lines of and not arbitrating—not the question of the constitution or the laws or rights of the international unions—but to arbitrate and decide upon the question in dispute, without interference with established law by the American Federation of Labor and the building trades department.

That is my opinion as a remedy to meet the present-day conditions.

Mr. THOMPSON. This body which you say could pass on matters nationally, as well as locally, would be under the obligation, in accordance with your plan, to carry out the decisions of the building department, building trades department of the American Federation of Labor?

Mr. FRAYNE. May I say that I omitted to say that this plan and preparation, to meet the approval of the American Federation of Labor and the department and the employer, the buildings trades employees of the country, so that a uniform understanding would be established, and when the question of jurisdiction came up, would not be in dispute other than the ruling and decisions that had been rendered by the American Federation of Labor and the department.

Mr. THOMPSON. You mean to say that, so far as decisions have in the past been made by the building trades department of the American Federation of Labor, this board should follow those decisions?

Mr. FRAYNE. Not only past decisions, which, of course, is past law, but future.

Mr. THOMPSON. What reason can you give, Mr. Frayne, why a body so constituted with employers and employees, and the public representatives, having a national jurisdiction, should submit to the decisions of a purely labor body?

Mr. FRAYNE. It would not be a purely labor body—the employers on the one side—

Mr. THOMPSON (interrupting). I mean, submit to the decisions of the building trade department of the American Federation of Labor, which is purely a labor body?

Mr. FRAYNE. And the employers' association, whom they might select as an executive committee representing the employers of the country.

Mr. THOMPSON. I do not believe I understood you then.

Mr. FRAYNE. In other words, it would have to be O. K'd by both of those bodies, the employers' representatives, on the one side, and the federation on the other.

Mr. THOMPSON. In other words, that the decisions made by this body should receive the approval of the American Federation of Labor and an association of employers?

Mr. FRAYNE. Yes, sir; the plan itself to be acceptable, which, of course, would embody and carry with it that they would not interfere with jurisdictions as defined by the American Federation of Labor.

Mr. THOMPSON. But if this plan of arbitration were approved by both employers and employees represented, as you stated, then I understand that this body so approved should abide by the future decisions of the building trades department of the American Federation of Labor. Am I correct?

Mr. FRAYNE. Yes, sir.

Mr. THOMPSON. Then why should this body, approved by the American Federation of Labor and by the employers on the other hand, have to follow in the future the decisions of the American Federation of Labor, purely a labor body?

Mr. FRAYNE. Unless they did that the jurisdictional disputes would again develop and create more trouble. The fact that the employers now, under the New York plan, when it was in operation, would grant jurisdiction to a union, grant that which had been conceded to it by the American Federation of Labor, created constant trouble and friction, and a great deal of the conflict in the building trades has been caused over jurisdictional disputes.

Mr. THOMPSON. Do you think, Mr. Frayne, that you could get the employers of the building trades of the United States to agree that jurisdictional matters should be decided solely by the American Federation of Labor?

Mr. FRAYNE. The only thing that they would have to agree to, would be that they would recognize the trade lines jurisdiction and demarcation, as outlined by the American Federation of Labor.

Mr. THOMPSON. That means the same thing. It means that whatever decision marking trade lines, that should be made by the American Federation of Labor, should be binding on this arbitration body, which means, in other words, that the employers should accept the decisions of the American Federation of Labor.

Mr. FRAYNE. I think that it would be just as logical that they would do that as to accept the plan that would carry with it that all those who were seated in the plan would be strictly union men, and that the unions would be bona fide unions. If they could subscribe to that policy, they could subscribe still further to the policy that they would not only recognize those unions as unions, but would recognize the lines of jurisdiction of their work.

Mr. THOMPSON. But at Washington, Mr. Frayne, when the question of collective bargaining was up in the building trades, Mr. Williams, the president or chairman of the building trades department of the American Federation of Labor, and the secretary of that department, were there as well as Mr. Eldlitz. Mr. Eldlitz then stated that the employers would never submit, and claimed that they had a large interest in the jurisdictional matters, to a decision being made wholly by a labor body in which they had no right to have a vote, deciding voice, or voting voice.

Chairman WALSH. What about it?

Mr. THOMPSON. In view of that, do you think that the employers, generally, throughout the country could be brought to accept a decision of the American Federation of Labor on jurisdictional disputes?

Mr. FRAYNE. I believe they could, by conferences, so that a thorough understanding could be reached. I know that during the past year and a half we have had a number of conferences with employers, contractors in the city. Among the number Mr. Eldlitz, Mr. Gompers, and several members of the executive council of the federation met them, and while it was informal in a way, a great deal of information was learned on each side, which demonstrated that it would be possible, after a series, perhaps, of those conferences, to reach a better understanding.

Mr. THOMPSON. Do you think, Mr. Frayne, that at the present time that the bricklayers would accept a decision of their contest with the marble workers, a decision made by the building trades department of the American Federation of Labor?

Mr. FRAYNE. I don't know, in view of the fact that they are not an affiliated union. They would feel that they are not obliged to accept any decision from a body with which they are not affiliated.

Mr. THOMPSON. Do you think they would accept a decision?

Chairman WALSH. He says no.

Mr. FRAYNE. I believe not. They would if they had agreed to arbitrate; of course they would. The difficulty would be to get them to arbitrate.

Mr. THOMPSON. Do you believe, Mr. Frayne, that the amalgamation of the building trades council into basic unions, such as the present amalgamation of the steam fitters and the plumbers, would do away with a great deal of the jurisdictional fights that occur?

Mr. FRAYNE. Yes. Wherever the unions are as closely allied as those two trades, I am in favor of them amalgamating and getting the jurisdiction under one head.

Mr. THOMPSON. From your knowledge of the building-trades work, have you any suggestions to make as to what amalgamation might take place to eliminate jurisdictional troubles?

Mr. FRAYNE. Well, there has been a discussion upon the bringing together of certain trades who are very closely allied together—for instance, the ironworkers, bridge and structural ironworkers, and the sheet-metal workers. There has been some talk about bringing those two organizations together. There have been efforts to bring the elevated structures and the machinists together. In fact, a plan had been reached at one time which for some reason had been rejected. There are a number of unions in the metal trades and in the building trades that are working closely together, and, I believe, it will be possible in time to amalgamate them and eliminate the jurisdictional disputes that arise at the present time because of the infringement upon work claimed by the others.

Mr. THOMPSON. Directing your attention to another matter for the moment, Mr. Frayne, Mr. Eidlitz said in his testimony in New York: "I think there are a number of trades there (in New York) that if their national organizations were to tell them it is better for the best interests of our organization as a whole that you shall break with your employer, they would say 'we will be alone and good-by.' They will say, 'We will take our chances.' The employees know that when the employer tells them that he will do thus and so he will come pretty near doing it. If they can get the employer to enlist with them they will say good-by to the central body.'" From your knowledge of the building trades unions in this city, is that true or not?

Mr. FRAYNE. To some extent under present conditions it is. There are a number of unions here who have profited under the present or under the old plan of arbitration because the employers had conceded them in work privileges that amounted to a great deal to them because of their cooperation with the employer. The employers forced this plan of arbitration on the unions after a lockout. The unions had very little to say about its making. It was prepared for them and read to them and they had to adopt it. In order to keep that going they had the dual unions and the cooperation of a number of unions that they favored by giving them jurisdiction and other privileges over unions that would not submit. The employers controlled certain unions, and with that control he might have some justification for making the statement, but I doubt whether he could make it effective. Still, there may be a few unions or a number desert their internationals to cooperate with the employer and be under his control. It would only be at temporary arrangement because they would come back again. It could not be lasting.

Mr. THOMPSON. Would you care to state what unions would in your opinion go with the employer and what unions gain an advantage through the arbitration plan over other unions?

Mr. FRAYNE. One of the unions that has gained an advantage through the arbitration plan is the metal lather, the stonecutter, the carpenter, the composition roofer, and the engineer—hoisting engineers. There may be others that I can not just recall. Those unions have had very little trouble because they have been conceded jurisdiction that the American Federation of Labor had denied them.

Mr. THOMPSON. Mr. Frayne, a good deal has been testified to here with reference to the restrictions placed by certain of the building trades upon the bringing of material to New York City, for instance, the wood trim, sheet-metal work, and marble from Vermont and other places. If such restrictions exist, and they are testified to here by the union men as well, what is the reason therefor, if you know, from a standpoint of the union?

Mr. FRAYNE. The position of the union in cases of this kind, they object to the bringing in of materials made under nonunion conditions. They object to bringing in work that is made possibly under unorganized conditions at from 25 to 55 per cent cheaper rate than that in New York. The principal objection is that employers and architects favor the bringing in of these cheaper materials, cheaper workmen, for the purpose of not particularly using that work, but for the general purpose of tearing down the established conditions that the unions have worked and struggled for years to build up. The union men feel here that they have been working for years and paying dues and assessments to build up an organization and establish conditions, the fact that they are domiciled here, have their families, and have to take care of them, that they

ought to be given at least first preference to do this work. The bringing in of the cheaper material, unorganized men, or men working at a much lower rate, means that they must walk the street. That is the principal objection that I find in regard to bringing in the material from other sources.

Mr. THOMPSON. The witnesses representing the union in these industries I have named have testified not only would their own members not erect or install such work, but that they themselves would do what they could to call out the workmen in other crafts on such buildings where they sought to install such material. It was testified by another witness here, a lawyer, that such action constituted a conspiracy or illegal restraint of trade. If that is true, Mr. Frayne, do you still consider that the unions were justified for the reason you gave in refusing to erect or permit that work to be erected?

Mr. FRAYNE. I believe that the unions are justified in taking such action to maintain their standing.

Mr. THOMPSON. Even though the action may be illegal?

Mr. FRAYNE. I would not be ready to say that it would be illegal, because it would have to depend upon the interpretation of the courts. I would say that they are bound to do this in order to protect their established conditions.

Mr. THOMPSON. That is all, Mr. Chairman.

Mr. FRAYNE. If you will permit me—

Chairman WALSH. Do you want to say something voluntarily?

Mr. FRAYNE. Yes, sir.

Chairman WALSH. Let Mr. Frayne finish.

Mr. FRAYNE. I was just going to make one small general statement, Mr. Chairman, that I had omitted, and which I think is very important in connection with what I say.

Chairman WALSH. Very good.

Mr. FRAYNE. The building trades employers of this city have encouraged the formation of dual unions for the purpose of preventing the regular unions from maintaining any particular standing with regard to their condition. They have encouraged independent unions in the way of building trades councils which, by the way, is not under the jurisdiction, neither is the board of business agents of the building trades department. It is not for a few years. This encouragement given to the dual unions has been responsible for a great deal and a majority of the troubles in this city for a number of years. The stonecutters had a dual union here for many years and there was a dual union of marbleworkers here for some 12 or 14 years, up until two years ago, which we finally adjusted. The union not only worked under the conditions stated in the plan of arbitration, but those who represented them would take the men to other localities to take the places of striking men in other localities, encouraged by their employers here to do so. And this condition began to grow until it became deplorable, so that there was really no established or fixed rule or condition here in New York in the building trades.

To-day there isn't any established condition or won't be until there is a plan established that is going to be fair and just to both sides. Employers have dominated the plan, wrote the plan, put it in operation, and the men hadn't any choice but to accept its decisions and rulings, and if they failed to do so, they found some way to compel them to do it. They were all-powerful, even to the extent of saying that they would have to obey them instead of obeying their national officers. But the best demonstration, the best evidence, that national authority over the unions in handling these questions is the settlement of the plumbers' and the steam fitters' controversy, which was settled after a long series of conferences. It was settled in a very harmonious manner without any hard feelings, hardships to anyone, and entirely satisfactory to all. That could not have been locally. It required the presence of the national officers here who would not only settle the question from the national standpoint but adjust it to fit local conditions. That can be done in every case, and when the building employers refuse to accept the decisions of the American Federation of Labor and the building trades department and at the same time want to put their authority to reverse the decision and say their decisions are all supreme, then they are doing the thing that they question the right of the highest authority of labor to do, namely, to specify and draw the lines of jurisdiction between these unions. The employers here have done that by reversing the decisions of the American Federation of Labor. That is all I care to say.

Commissioner GARRETSON. Assuming, for a moment, that all the organizations involved in a jurisdictional question were affiliated with the building

trades department, is there any other tribunal existing that is more competent to determine a jurisdictional contest that is made than the representatives of those trades who are working with these men every day and perfectly acquainted with the details of the business?

Mr. FRAYNE. No, sir; I would say there is not.

Commissioner GARRETSON. The employer may know as much but he can't know more?

Mr. FRAYNE. Correct.

Commissioner GARRETSON. Then it is only when there is one of the organizations who would not be affiliated that an unfairness could come out of it?

Mr. FRAYNE. Yes, sir.

Commissioner GARRETSON. Isn't the real reason underlying the refusal of the employers to accept such a decision, the decision of such a tribunal, lying in the fact that it would remove most of the incentive for the creation of rival organizations?

Mr. FRAYNE. Largely so. At the same time prevent the unions making any progress in the way of improved conditions.

Commissioner GARRETSON. Is it not true that if a local settlement or adjustment of jurisdictional questions became universal the country over, say as illustrated in New York, in Boston, in Philadelphia, in Chicago, in Frisco, and in New Orleans, that it would result in chaos and a virtually new alignment and eternal contest among the established organizations where there are any jurisdictional quarrels?

Mr. FRAYNE. If it was founded upon local conditions, yes; but if it was founded upon national lines, no.

Commissioner GARRETSON. I say the creation of a local tribunal in each of these points to settle all these questions?

Mr. FRAYNE. Yes, it would; because the decisions would be different, invariably, in all cases, making a complication that would be even worse than the original.

Commissioner GARRETSON. Is it fair to assume the employers are shrewd enough to be aware of that fact and play that game?

Mr. FRAYNE. I am quite sure that the plan of New York was created purposely to benefit New York employers, and that employers in other cities who would institute a plan, would institute it for the purpose of treating with their local condition irrespective of what might happen outside.

Commissioner GARRETSON. And if placed in effect in five different points, with the various decisions that could readily arise therefrom, dictated by the interest of the controlling party, half the unions on the continent could be disrupted?

Mr. FRAYNE. Without any doubt; without any question; that is bound to follow.

Commissioner GARRETSON. Do you believe from your experience in dealing with the question that many employers would be perfectly willing to play both ends against the middle?

Mr. FRAYNE. Beyond doubt; yes.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner LENNON. If the unions had complete control, would they refuse to use material or goods that might be shipped into New York made in non-union plants?

Mr. FRAYNE. Well, that would depend, of course, a great deal upon conditions.

Commissioner BALLARD. If there was some nonunion material shipped into a given locality where the unions were very strong, and that material came in from, for instance, a strike zone where men were on strike?

Mr. FRAYNE. It is possible that they would refuse to handle it, upon request or appeal from the men who were on strike in the locality in which the material was coming from, but there isn't a great deal of hardship or trouble in regard to the nonunion material except in extreme cases. These things would be a mere detail, and would gradually adjust themselves if the larger questions were adjusted, namely, the jurisdiction and the question of improved conditions and contracts between the employers and the unions, or the other things would gradually become eliminated.

Commissioner BALLARD. They would become eliminated, too, if all the plants in the country were unionized?

Mr. FRAYNE. Well, even with the employers themselves becoming agreeable to it, realizing that it would be the best method and the safest investment for them.

Commissioner GARRETSON. One other question I would like to ask, Mr. Frayne. This is purely a question of personal opinion, because, with the years of experience you have had, I should desire an expression on that basis. Which of the three conditions would you consider was best: A condition where the employer absolutely dominated the entire labor situation, industrial situation, as may be better; a situation where the laborer, through his union, absolutely dominated the situation; or an evenly balanced condition, in which both feared and respected the other?

Mr. FRAYNE. Without any attempt of taking sides with the union because I happen to be on that side as the representative, I would say that in all cases the union and its members would be more liberal and more fair in its dealings in every and any case, even though it was all powerful in the situation.

Commissioner GARRETSON. That is all, Mr. Chairman.

Commissioner BALLARD. May I ask one more question, Mr. Chairman?

Chairman WALSH. Yes.

Commissioner BALLARD. As an organizer of the American Federation of Labor, do you feel that there is necessarily an antagonism in the position between the labor man and the employers? Is it a necessary and unsurmountable antagonism?

Mr. FRAYNE. I don't believe that it is necessary to have an antagonism there. On the contrary, I believe that there ought to be a fair, liberal spirit of friendship and cooperation there in order to get the very best results. But if the employer attempts to, because of being an employer, attempts to dominate and expects to take more for himself than he is willing to grant the other side, then that antagonism is bound to show itself.

Commissioner BALLARD. Don't you think they are necessarily mutually dependent one on the other? Neither can live without the other?

Mr. FRAYNE. Well, under present conditions, there is no question about that. We claim, as representing the organized-labor movement of the country, that by the trade agreement we can eliminate a large percentage of the difficulties, troubles, that arise and improve the condition of our people and make it mutually beneficial and agreeable to the employer because of the contractual relations between them and the union. We court it; we seek it.

Commissioner O'CONNELL. Mr. Frayne, the impression seems to prevail on the part of nearly all the witnesses that we have had before us during the week that there is a more strenuous jurisdictional fight or condition going on all over the country, and particularly in New York. Is it your impression that the jurisdictional contest between organizations is more serious now than it was a few years ago?

Mr. FRAYNE. Considerably so; yes, sir.

Commissioner O'CONNELL. Is it not a fact that jurisdictional disturbances have been growing less each year for the past 10 years?

Mr. FRAYNE. That is true; yes.

Commissioner O'CONNELL. That the large jurisdictional fights that have taken place in this country during the past 10 years have been practically settled and adjusted and wiped off the books?

Mr. FRAYNE. A number of them; yes. There are still a number remaining, of course; but not as many as formerly.

Commissioner O'CONNELL. Is it not true that the tendency toward the amalgamation of allied organizations has been going on for several years, and that a number of amalgamations have taken place?

Mr. FRAYNE. That is true.

Commissioner O'CONNELL. And that procedure is being followed and going on now very successfully?

Mr. FRAYNE. Very successfully.

Commissioner O'CONNELL. And that plans are being outlined for the bringing together of a number of trades that are now closely allied, such, for instance, as the men engaged in the garment trades?

Mr. FRAYNE. Yes, sir.

Commissioner O'CONNELL. There is a tendency toward all the various organizations in the garment trades being amalgamated into one council?

Mr. FRAYNE. A movement has been on foot for some time and several conference have been held for that purpose, and while they have not finally agreed they have made considerable progress to that end.

Commissioner O'CONNELL. One of the largest and most bitter contests of the industrial world we have had has been one of the contests between the wood-working trades in this country, that lasted for a great many years, and that has been adjusted, and those trades have been amalgamated into the brotherhood of carpenters.

Mr. FRAYNE. That is true; the carpenters' trade, so far as the carpenter wood-work is concerned, has been practically settled.

Commissioner O'CONNELL. And very largely, then, isn't this great noise about jurisdictional contest rather a myth, making a mountain out of a molehill?

Mr. FRAYNE. I would say this in answer to that question, that if the employers will permit the American Federation of Labor and the building trades department to settle these disputes they will be settled much quicker and with a larger degree of satisfaction than they can be through any other method.

Commissioner O'CONNELL. The impression seems to prevail——

Mr. FRAYNE (interrupting). Pardon me until I finish, if I may.

Commissioner O'CONNELL. Yes.

Mr. FRAYNE. The fact that employers do not recognize those decisions, but rather encourage the opposite, is responsible for a great deal of trouble that we hear. Many of them would never be heard of if the employers would simply say, "We engaged you to work at this line of work, confining yourself to that line of work; we don't want any jurisdictional disputes; we will take as our authority for this the laws and rules of the American Federation of Labor," they would not—half of these questions would never come up, would never be heard of. The reason men still raise the question is because they are encouraged by employers who have selfish motives and want to control this work. They are all selfish in that respect, and hence the great trouble encouraged by jurisdictional disputes.

Commissioner O'CONNELL. You were asked a question by Mr. Thompson as to whether it would be fair to have the American Federation of Labor render jurisdictional decisions without the approval of the—at least agreement with the employers, whether it would be fair or not. Is it your impression that the employers—the large employers in the building trades in this country and the large employers generally, who deal with labor in their organized capacity—would be only too agreeable to the American Federation of Labor being the party to decide all questions of jurisdictional disputes?

Mr. FRAYNE. I am quite sure that that naturally would follow. While there are some now, and many who accept that authority now, there are some who don't; but if it was general——

Commissioner O'CONNELL (interrupting). And the some whom you refer to, are they not purely confined to local situations?

Mr. FRAYNE. Yes, sir; they are; their operations are purely local. They are usually local contractors who are the ones to evade.

Commissioner O'CONNELL. And is it not this situation that causes largely the jurisdictional disputes; that where there are organizations of employers such as the building trades council in this city, rendering decisions in opposition to the general decisions that have been rendered by the movement of this country covering local jurisdictions, that causes internal disturbances within the international and the movement itself?

Mr. FRAYNE. That is a fact, and I so stated, because in the reversing of a decision of the American Federation of Labor upon a particular line of work the contractor, if he happens to go outside of New York, while observing one line of regulations in New York goes to Chicago and finds that he is confronted with a dispute in the trades because the decisions rendered in New York are not the decisions in Chicago, Chicago observing the law and decisions of the American Federation of Labor.

Commissioner O'CONNELL. One of the gentlemen who appeared before us from the standpoint of the employers, speaking of the amalgamation of kindred trades and the reason that there was not greater progress made in that direction, said it was because the labor leaders could not be got rid of, that even if their position happened to become vacant because of amalgamation they still would have to take care of them, they, the employer. Have you known of such cases, or do you believe that the labor leaders have not gone into other walks of life or gone back into their trades?

Mr. FRAYNE. It has been my experience that the labor leaders have done the foremost work to promote amalgamation if they saw it was going to be passed for those whom they represented, and I have seen in several instances

where if the question as to what might become of them was raised they invariably eliminated themselves there and then, so that the question of the leaders being taken care of does not appear as one of the serious obstacles to bringing about peace and harmony in the trades. They are not so much—while they are interested in their job, they are not interested to the extent that they are going to sacrifice the interests of those that they are representing.

Commissioner O'CONNELL. That is all.

Chairman WALSH. Any other questions? Thank you, Mr. Frayne. That will be all.

Mr. THOMPSON. That is the end of the building trades subject.

Chairman WALSH. The commission will now stand adjourned until Monday morning at 10 o'clock to meet in this same room.

(Thereupon, at 4.10 p. m., the commission adjourned to meet on Monday, June 1, 1914, at 10 o'clock a. m.)

EXHIBITS.

JUDGE EXHIBIT NO. 1.

CONSTITUTION OF THE PLASTERERS' HELPERS PROTECTIVE ASSOCIATION OF GREATER NEW YORK AND VICINITY.

[Fred Scarlino, printer, 218 East One hundred and sixteenth Street, New York.]

CONSTITUTION.

ARTICLE I.

This organization shall be known as the Plasterers' Helpers Protective Association of Greater New York and Vicinity.

ARTICLE II.

The jurisdiction of this union shall be that of Greater New York and vicinity.

ARTICLE III.

SECTION 1. The officers of this society shall consist of a president; vice president; recording secretary; treasurer; sergeant at arms; two or more business agents, one of whom must be able to speak Italian; an executive committee of six members, two members of which must be able to speak Italian; and three trustees.

The executive committee and trustees to be appointed by the president.

SEC. 2. A member must be in good standing in the organization at least three months before becoming eligible to hold any office, and all candidates for office must be directly employed as plasterers' helpers.

ARTICLE IV.

The members of this union shall consist of plasterers' helpers. Every applicant for membership shall be vouched for by two members in good standing who shall be held responsible for him, his name to be presented in writing to the executive committee, together with the names of his vouchers and \$5 as part of his initiation fee, said amount to be refunded to the applicant should he be rejected.

ARTICLE V.

The initiation fee shall be not less than \$25, same to be paid within three months, or all money paid in to be forfeited to the organization unless the delinquent be excused by the executive committee.

ARTICLE VI.

The monthly due shall be 40 cents, payable in advance and from date of first permit.

A charge of 10 cents shall be made for each dues book.

ARTICLE VII.

Any candidate who shall fail to present himself for initiation within four weeks from the time of his election to membership by the union shall have his initiation fee forfeited, unless he can give good and satisfactory reasons for his delay.

ARTICLE VIII.

When a candidate has been elected to membership he shall be conducted to the president's stand and the president shall administer to him the obligations.

ARTICLE IX.

A member of the organization in good financial standing, apparently 50 years of age, and incapacitated from work through sickness or injuries of any kind, may, upon application for same, become a superannuated member of this organization. This privilege does not debar him or his beneficiary from a death benefit, providing that dues, fines, and assessments are paid within the prescribed time.

ARTICLE X.

A member being three months in arrears shall not be entitled to any benefits, and after six months in arrears shall cease to be a member.

ARTICLE XI.

All persons becoming members of this society shall assent to the following pledge: "I, ———, do hereby promise and pledge my word and honor as a man, in the presence of the members here assembled, that I will faithfully abide by the laws and regulations of this society as long as I may continue a member and remain within the jurisdiction of the same."

ARTICLE XII.

Eight hours shall constitute a day's work, and all time worked beyond eight hours shall be considered double time and paid as such; work done on Sundays and the following holidays, New Year's Day, Lincoln's birthday, Washington's Birthday, Decoration Day, July the Fourth, election day, and Christmas Day, shall be considered overtime. Under no circumstances shall any work be done on Labor Day.

When any of the aforesaid holidays fall on Sunday, the following day will be observed as a holiday.

ARTICLE XIII.

Members of this organization shall be paid up to date; no back time, no subbing, or part payment to be allowed.

SECTION 1. All employees shall receive their wages once a week. Every employer shall have a permanent pay day. All wages must be paid during working hours and in legal tender.

SEC. 2. On being discharged or laid off, members shall receive 15 minutes' notice, in order to gather up and clean their tools.

ARTICLE XIV.

If it can be proved by any member or members of this organization that another member of the same has imparted any information (to anyone not a member of this union) regarding the business transacted at its meetings, he may be fined or expelled.

Members who have been suspended or expelled for the violation of the constitution or the by-laws thereby shall have no claim whatsoever upon the organization.

ARTICLE XV.

Should any member of this organization be discharged by a tyrannical employer or his representative because of sustaining the rules in this union, it shall be the duty of the business agent to immediately report the same to the arbitration board through the J. P. S. for their action upon the same.

ARTICLE XVI.

Any member who gives his book or card to a nonunion man, in order to enable him to procure employment, shall be expelled from this union.

ARTICLE XVII.

No member of this union shall be allowed to injure the interests of his fellow workmen, either directly or indirectly. The leader of each and every gang of laborers shall be just and reasonable with his fellow workmen. He shall take no mean advantage of them. If it can be proved by the men with whom he has been working that he has been guilty of any act whereby the interests of his fellow workmen are in danger, he may be fined or expelled, or both.

ARTICLE XVIII.

Any contractor or his representative who employs a member or members of this organization, instructing him or them to come prepared for work, and afterwards disappoints either party, said contractor or contractors shall be required to pay said person or persons their wages for the time that they have been waiting to render services. Nothing less than one-quarter day's pay will be demanded or received in these cases.

ARTICLE XIX.

No member of this union shall accept employment on a job where a difficulty has arisen involving this union until all trouble has been adjusted. Members not complying with this article may be fined or expelled.

ARTICLE XX.

All charges for violations of the constitution or by-laws shall be made in writing. They shall then be referred to the executive committee, who shall consist of six members. The findings in the case are to be referred to the body for approval or disapproval.

ARTICLE XXI.

All fines shall be paid within 90 days after being imposed, otherwise no dues will be received. Dues will not be accepted until all fines are paid.

ARTICLE XXII.

Twenty-five members constitute a quorum for transacting the business of this union, also for a special meeting.

ARTICLE XXIII.

The senior employee, foreman laborer, or shop steward shall on each and every building demand an examination of the cards or permits. Those failing to comply with this article may be reprimanded.

Every member must have his card on the job for inspection.

ARTICLE XXIV.

Each and every member of this union is requested to cooperate with the delegate, wherever the interests of this union and its members are concerned.

ARTICLE XXV.

An officer who absents himself from three consecutive meetings shall cease to be an officer during the period for which he was previously elected, except through disability or sickness, or a good cause is shown.

ARTICLE XXVI.

All elections shall be made by ballot.

ARTICLE XXVII.

Members of this union may by a majority vote of all those present prescribe such rules and regulations as they deem fit provided that they are not in conflict with the terms of this constitution and by-laws.

ARTICLE XXVIII.

This constitution and by-laws may be amended by a majority vote of members present at a special meeting called on a two weeks' notice for that purpose and not otherwise.

ARTICLE XXIX.

The capital and other property of this union shall not be applied for the welfare of the members. As long as the union consists of seven or more members in good standing, it shall never be dissolved, nor shall the funds be divided or loaned, unless by a unanimous vote of members present at a special meeting and not otherwise.

ARTICLE XXX.

SECTION 1. A member not more than three months in arrears for dues and fines, having paid the regular initiation fee and in good financial standing for six months, shall be known as a beneficial member. On the death of said member there shall be appropriated the sum of \$80, and on the death of the wife of a beneficial member there shall be appropriated the sum of \$40 for funeral expenses.

SEC. 2. The friends of the deceased shall furnish a transcript of the certificate of death from the board of health to the secretary-treasurer before he shall pay any mortuary dues. When there are no relatives or friends, the president, treasurer, and secretary-treasurer shall take care of the funeral.

SEC. 3. No funeral expenses shall be paid for deaths outside of the United States, unless the funeral takes place in the United States.

SEC. 4. Under no circumstances will it be permissible to grant the death benefit for a member over three months in arrears.

SEC. 5. On the death of a member an assessment of 10 cents will be levied on all members of this organization.

ARTICLE XXXI.

All nominations shall be made on the first meeting prior to election. Nominations can only be made by members who are in good financial standing in this union.

All ballots shall be of uniform size, color, etc.

ARTICLE XXXII.

SECTION 1. The revenue derived from initiation fees, dues, fines, and assessments and all other legitimate sources shall be placed in a bank in the name of this organization.

SEC. 2. No money can be voted out of the treasury for any purpose unless by a proposition offered in writing two weeks prior to being acted upon.

ARTICLE XXXIII.

There shall be no voting by proxy; that is, voting on another member's book. A fine of \$5 will be imposed upon any member if detected.

ARTICLE XXXIV.

SECTION 1. Each candidate shall have the right to select a watcher in his interests, who shall be a member of this organization, but not at its expense.

SEC. 2. In case a tie vote appears a new ballot shall be ordered.

BY-LAWS.

ARTICLE I.

DUTIES OF THE PRESIDENT.

The president shall preside at all meetings of the society and preserve order; he shall have the casting vote in case of a tie; he shall decide all points of order subject to an appeal to the body; he shall take no part in debate while in

the chair; he shall sign all orders for the payment of money; he shall appoint all committees and act ex officio as a full member on all committees, and whenever the interest of the society calls for a special meeting he shall have power to call and advertise such meeting; he shall also have power to assign any delegate to special duty at any time, and for his services he shall receive the sum of \$2 for each meeting, and shall be elected for one year.

ARTICLE II.

DUTIES OF THE VICE PRESIDENT.

The duties of the vice president are, in the absence of the president, to assume and transact all such business as comes within the province of the presidential office, and for his services he shall receive the sum of \$2 for each meeting, and shall be elected for one year.

ARTICLE III.

DUTIES OF THE SECRETARY-TREASURER.

The secretary-treasurer shall charge all dues, assessments, and initiation fees to members' accounts, and shall credit members in due books provided by the union for all moneys received from said members; he shall balance each account quarterly and report to the organization the standing of each member; he shall pay all bills when duly authorized by the body and countersigned by the president and recording secretary; he shall keep a correct record of accounts between this organization and all concerns with whom it does business, and shall make a quarterly financial report of all receipts and disbursements; he shall file a record of all jobs in operation reported by the business agents, and shall furnish members on request with information as to the location of the same. His office hours shall be from 9 a. m. to 6 p. m. for the first five days in the week and from 9 a. m. to 2 p. m. on Saturdays. He shall deposit in a business bank a sum not to exceed \$1,000 for current expenses with a check system, and shall deposit all other moneys in a bank or banks designated by the union; he shall receive for the faithful performance of his duty the sum of \$25 per week, and he shall be bonded with a surety company for \$3,000.

ARTICLE IV.

DUTIES OF THE RECORDING SECRETARY.

The recording secretary shall keep a record of each meeting, and read the same at the next meeting; he shall file all papers, resolutions, and amendments; he shall record and report all fines inflicted to the secretary treasurer, record the receipts of the meeting and furnish the presiding officer with a list of unfinished business, and for his services shall receive the sum of \$2 for each meeting, and shall be elected for the term of one year.

ARTICLE V.

DUTIES OF SERGEANT AT ARMS.

The sergeant at arms shall be punctual in attendance, obey all orders issued to him by the presiding officer and strictly enforce the same, and for his services shall receive the sum of \$2 for each meeting, and shall be elected for a term of one year.

ARTICLE VI.

DUTIES OF THE BUSINESS AGENTS.

The business agents shall visit all jobs under the jurisdiction of this organization as often as possible. They shall see that all laws, rules, and regulations are lived up to, examine all books and permits, and for their services shall receive the sum of \$25 per week, and be elected for one year.

ARTICLE VII.

DUTIES OF EXECUTIVE COMMITTEE.

SECTION 1. The executive committee shall examine and investigate all violations of the rules of this union when properly brought before them, all complaints to be made in writing and must be specific; examine all candidates for membership; also notify the secretary-treasurer regarding fines, etc., when imposed and conditions of same, and for their services they shall receive \$2 for each meeting.

SEC. 2. Any member or members who may be found guilty of violating any of the rules of this organization, if said member or members feel aggrieved at the verdict of the committee, shall have the right to appeal to the society, and said appeal to be submitted in writing.

SEC. 3. It shall take a two-thirds vote of all members present to set aside or alter the decision of the executive committee.

ARTICLE VIII.

Any officer or business agent who absents himself from three consecutive meetings shall be suspended and another appointed by the chairman in his place unless excused through sickness.

ARTICLE IX.

Any officer or business agent doing extra work for this organization can not be compensated for same unless the bill is submitted to the body and approved by the same.

ARTICLE X.

SECTION 1. It is the duty of every member to strictly follow the rules of order—never to intentionally interrupt another member who is speaking. Should any member use ungentlemanly language during meeting hours he shall be called to order, and if said member does not comply he must withdraw from the room for that evening by order of the president.

SEC. 2. Should any member continue to disturb the meeting after being called to order or refuse to withdraw from the room when ordered to do so he shall be debarred from the meeting room for a term of three months for the first offense and for a term of one year after the second.

SEC. 3. Should any member leave his seat and assault a brother member during meeting hours it shall be the imperative duty of the presiding officer to order the expulsion of said member from the room, and he shall be debarred from entering the meeting for a period of one year and be subject to a fine such as the union may decree.

RULES OF ORDER.

RULE 1. No motion shall be subject to debate until it has been seconded and stated from the chair. It shall be reduced to writing at the request of two members in good standing.

RULE 2. Before putting the question the presiding officer shall ask, "Is the society ready for the question?" If no member rises to speak, he shall then put the question, and after he has put the question no member shall be allowed to speak upon it.

RULE 3. Any member having made a motion may withdraw it with leave of his second before it is stated from the chair, but not afterward without the consent of the meeting.

RULE 4. A motion to amend an amendment shall be in order, but to amend an amendment to an amendment shall not be entertained.

RULE 5. When a member is called to order he shall take his seat until the point is determined.

RULE 6. If two or more rise to speak at the same time, the presiding officer shall decide who has a right to the floor.

RULE 7. *Motions to have precedence.*—When a question is before the house the only motions in order shall be, first, to adjourn; second, to lay on the table; third, the previous question; fourth, to postpone definitely or indefinitely; fifth,

to refer; sixth, to amend; which several motions shall have precedence in the order in which they are named:

PRIVILEGED QUESTIONS.

(1) To adjourn; (2) to lay on the table; (3) the previous question; (4) to read a document or paper pending questions; (5) to reconsider. The preceding shall be considered privileged questions and not debatable.

RULE 8. When a motion has been made and decided upon it shall be in order for any member voting in the majority at the same or next meeting to move for a reconsideration thereof.

RULE 9. A motion to adjourn shall always be in order except (1) when a member is speaking; (2) when a vote is being taken on a question; (3) when it was the last preceding motion.

RULE 10. The yeas and nays upon any question may be called for by two members, and upon the assent of two-thirds present shall be taken. They may be called for at any time before the decision of the vote has been announced by the presiding officer.

RULE 11. When a majority is followed by a minority report after being read it shall be on the table until the other is presented, after which neither may on motion be considered.

RULE 12. All questions not decided here shall be governed by Cushing's Manual.

OBLIGATION FOR OFFICERS OF LOCAL ASSOCIATION.

I, ———, solemnly pledge my word of honor as a man that I will perform all the duties pertaining to the office to which I have been elected, as provided for in the constitution, and that I will turn over to my successor, when duly qualified, all documents and property in my charge.

ORDER OF BUSINESS.

Roll call of officers; reading minutes of last meeting; reading of communications; reports of committees; reports of business agents; unfinished business; new business; propositions for the good and welfare of the union; adjournment.

EXHIBIT 1.

AMENDMENTS TO THE CONSTITUTION AND BY-LAWS OF THE PLASTERERS' HELPERS PROTECTIVE ASSOCIATION OF GREATER NEW YORK AND VICINITY.

Amendment to article 1, section 1, page 3:

"This organization shall be known as the Plasterers' Helpers Protective Association of Greater New York and Vicinity.

"SEC. 2. Meetings will be held on the second and fourth Mondays of each and every month (holidays excepted) from 8 p. m. to 11 p. m. After the latter hour no business shall be transacted."

Amendment to Article III, section 1, page 3:

"The officers of this society shall consist of a president; vice president; recording secretary; secretary-treasurer; sergeant at arms; two or more business agents, one of whom shall be able to read and write the Italian language and also able to read and write the English language; an executive committee of five members, two of whom shall be able to read and write the Italian language; and three trustees, all of whom shall be elected annually."

Article III, section 2, page 4:

"All members must be in good financial standing in this organization at least six months, be citizens of the United States, able to read and write the English language, and be employed as plasterers' helpers for at least six months prior to nomination, before becoming eligible to hold office of any kind in this union. This latter clause does not apply to the offices of business agents or secretary-treasurer."

Article III, section 3, page 4:

"All candidates for office shall produce to the chairman and recording secretary at time of nomination citizenship papers. Anybody failing to comply with

the different sections of this article shall not be allowed to hold office of any kind in this union."

Amendment to Article IV, section 1, page 4:

"After the word 'rejected,' on the last line, add 'Anybody joining this organization under an assumed name or procuring either a due book or a receipt for money from anybody only the legal and authorized officers of this union, shall not be recognized or entitled to any benefit from this organization.'"

Article IV, section 2, page 4:

"Anybody who now belongs or may hereafter belong to a dual or hostile organization shall, upon proof of same, be expelled from this union."

Blot out Article V, page 4, and substitute the following:

"The initiation fee shall be not less than \$25, payable as follows: \$5 first installment and \$5 every month thereafter until full amount is paid. If not paid within six months all moneys shall be forfeited to this union."

Blot out Article VI, page 4, and substitute the following:

"The wages for all members of this organization (except those who are superannuated) shall be not less than \$3.25 per day. The monthly dues shall be not less than 40 cents, payable at all regular meetings of this union, or to secretary-treasurer from 9 a. m. to 5 p. m. daily.

Blot out Article VII, on pages 4 and 5, and substitute the following:

"Any candidate for membership who shall fail to report to this union within four weeks from the date of paying his first installment of initiation fee, shall forfeit all money paid to this organization."

Amendment to Article IX, page 5:

"After the word 'time,' on the last line, add 'Protection cards may be issued upon application for same on the payment of \$3 annually in advance to all who do not wish or who are unable to pay the regular initiation fee, and who have no desire to partake of the death benefit fund as provided for in sections 1, 2, 3, and 4, Article XXX, page 11.'"

Blot out Article X, page 5, and substitute the following:

"SECTION 1. A member four months in arrears shall be fined the sum of 25 cents, a member five months in arrears shall be fined 50 cents, and a member six months in arrears shall be fined \$1. All said fine or fines shall be paid before any dues are received by this union.

"SEC. 2. Anybody owing dues for seven or more months shall be treated as an ex-member of this organization.

"SEC. 3. Ex-members may be reinstated upon payment of half the regular initiation fee, payable as follows: One-fifth at the time of reinstatement and one-fifth every month thereafter until full amount is paid. If full amount is not paid at the expiration of six months all moneys to be forfeited to this union.

"SEC. 4. Ex-members shall not be entitled to any death benefit from this organization for a period of six months from date of final payment for reinstatement."

Blot out Article XII, page 6, and substitute the following:

"Eight hours shall constitute a day's work, from 8 a. m. to 12 noon, and from 1 to 5 p. m., 15 minutes allowed for preparing material before 8 a. m., and on patent material 15 minutes before 1 p. m., an equal amount of time to be allowed before ceasing work at 12 noon and 5 p. m.

"All other time to be considered double time and paid as such. Work done on Sundays and all holidays to be considered double time and paid as such.

"When a holiday falls on Sunday the following day shall be observed as a holiday.

"ARTICLE XII.

"SEC. 2. All scaffolds whereon plasterers work, if not constructed by plasterers, said scaffolds shall be built by members of this union.

"SEC. 3. Wherever stoves used for heating purposes wherever plastering is being done, the work of attending to same shall be performed by members of this union.

"SEC. 4. All refuse from lath, plaster, and mortar shall be gathered and removed from interior of buildings and all other structures by members of this union.

"SEC. 5. The handling of all material for plastering purposes, signaling for the hoisting and lowering of same, shall be by members of this union.

"SEC. 6. Whenever hand pumps are used where plastering is being done, same shall be operated by members of this union.

"SEC. 7. Whenever sand is screened on the premises or in the immediate vicinity for plastering purposes, it shall be done by members of this union."

Blot out Article XX, pages 8 and 9, and substitute the following:

"All complaints for violation of the constitution or by-laws shall be made in writing, read by the recording secretary, and then referred to the executive committee, consisting of five members. The findings in all cases to be referred to the body for approval or disapproval. It shall take a two-thirds vote of all members present to set aside or alter the decision of the executive committee.

"All fines (if any) imposed by the executive committee shall be paid before any dues are received by this union."

Blot out Article XXI, page 9.

Blot out Article XXVI, page 10.

Blot out section 5, Article XXX.

Blot out the word "not" on the second line, Article XXIX.

Amend Article XXXI, pages 11 and 12:

"All nominations shall be made on the first meeting prior to election, and all elections shall be by official ballot or ballots, same to be uniform in color, size, etc., and shall bear the union label.

"SEC. 2. All candidates must be in good financial standing on nomination night to have names recorded officially by this union, and must pay as follows (to help defray election expenses): For the offices of business agent or secretary-treasurer, \$1 each; all other offices 50 cents each; said amounts to be paid on nomination night. Any candidate refusing or failing to do so shall not have his name on the official ballot.

"SEC. 3. All outgoing officers to continue in office until newly elected officers are installed at next regular meeting after election.

"SEC. 4. The president shall appoint a board of inspectors consisting of seven members, all of whom must be in good financial standing in this union, whose duties shall be to attend to ballots, due books, ballot box, etc.

"SEC. 5. Any member owing four months dues shall not be allowed to vote. No dues will be received on election day.

"SEC. 6. In case a tie vote appears, a new ballot will be ordered and election held two weeks hence."

Blot out sections 1 and 2, Article XXXIV, page 12.

Amend Article III, by-laws:

Substitute "\$500" for "\$1,000" on the twenty-third line.

Amend Article X, section 2, page 17, as follows:

"Should any member continue to disturb the meeting after being called to order, or refuse to withdraw from the room when ordered to do so, he shall be fined the sum of \$1 for the first offense, \$2 for the second offense, and \$5 for the third offense, said amount or amounts to be paid before any dues are received by this union."

All other articles to remain in force.

Dated April 13, 1914.

JUDGE EXHIBIT NO. 2.

PLASTERERS' HELPERS PROTECTIVE ASSOCIATION OF GREATER NEW YORK AND VICINITY.

New York, February 28, 1914.

Financial standing Nov. 29, 1913 (total) ----- \$1,953.88

Nov. 29, 1913, to Feb. 28, 1914:

Dues ----- 2,034.20

Initiation and permits ----- 390.00

Dues and permits and initiation ----- 2,424.20

Expense for three months, Nov. 29, 1913, to Feb. 28, 1914 ----- 1,715.57

Income over expense, a gain, ditto ----- 708.63

Secretary-treasurer amount handled for three months, to Feb. 28,

1914—balance of cash on hand previous auditing ----- 153.88

For three months (ditto) dues ----- 2,034.20

For three months (ditto) permits ----- 390.00

INDUSTRIAL EDUCATION, APPRENTICE- SHIP, AND THE ADMINISTRATION OF CHILD LABOR LAWS

(For exhibits under this subject, see pages 1895 to 1903.)

COMMISSION ON INDUSTRIAL RELATIONS.

NEW YORK CITY, *June 1, 1914—10 a. m.*

Present: Chairman Walsh; Commissioners O'Connell, Lennon, and Garretson.

Chairman WALSH. The commission will please be in order.

Mr. THOMPSON. Mr. Chairman and members of the commission, at the request of Dr. Richards, we have decided to place the doctor on the stand out of the usual order.

TESTIMONY OF DR. C. R. RICHARDS.

Mr. THOMPSON. If the chairman please, the program for public hearings for the next two days includes the subject of the administration of child-labor laws and vocational training.

Dr. Richards, will you give us your name, your address, and your occupation, please?

Dr. RICHARDS. C. F. Richards, director of Cooper Union. Is that sufficient for the address?

Mr. THOMPSON. That will be sufficient. On conducting Cooper Union, do you run a school there? And if so, what kind?

Dr. RICHARDS. We have a day school, or day schools, and evening schools. The larger part of our work is the evening work. We had this last year 3,400 students, of whom between 2,500 and 2,600 are in the evening school and the remainder are in the day schools. There is a day school of technical science and a woman's art school and a woman's school of stenography, and a day school divided—the students are divided between those schools. In the evening we have, as I say, between 2,500 and 2,600 students this year, about equally divided between the technical classes on the one hand and what are called the art classes on the other, the latter being classes of drawing, molding, designing, etc.

Mr. THOMPSON. What do you include in this so-called training department?

Dr. RICHARDS. On that side the courses represent five-year courses in mechanical and civil engineering, electrical engineering, and industrial chemistry. In that respect the evening courses at Cooper Union are unique, in the fact that that particular kind of work—those five-year courses, where the students meet five nights a week, and to which entrance is gained by examination, are courses not represented anywhere else in the country.

Mr. THOMPSON. Doctor, for how long have you been director of the Cooper Union?

Dr. RICHARDS. Six years.

Mr. THOMPSON. And during all that time have you conducted those schools you speak of?

Dr. RICHARDS. Those schools, virtually on the same plan I speak of, have been conducted for 54 years.

Mr. THOMPSON. Before you were director were you connected with Cooper Union?

Dr. RICHARDS. Not with Cooper Union; no, sir.

Mr. THOMPSON. Doctor, have you made any study, or have you any opinion upon the effect of the limitation of hours of children employed in industry under 16 years of age—upon their chance of employment?

Dr. RICHARDS. I have come to a rather strong conviction about that from the working of the law in New York State—from my observation of the working of that law. That is the only case which I have had a chance to directly observe. It seems to me that in the case of New York City, wherever a law is rather drastic in its limitations of hours of employment, that the result is to

1803

cause employers to refuse employment to children between 14 and 16 years of age in the factory trades.

Mr. THOMPSON. What is the limitation in New York State in that regard now?

Dr. RICHARDS. The limitation is eight hours and employment not earlier than 8 o'clock in the morning nor later than 5 o'clock in the afternoon in industries.

Mr. THOMPSON. Well, generally speaking, what has been the effect of the refusal of an employer to employ children between those ages in this State?

Dr. RICHARDS. It has been to a considerable extent to turn children, in the first place, to turn children away from employment. Those children have not gone back to school, certainly apparently to a considerable fraction they have not gone back to school. They have either been, because of the refusal on the part of the factory employers to take them in, they have either gone into temporary jobs or they have played truant.

In the case of the investigation made by the Bureau of Labor of the State of New York in 1908, the staff of workers, regular staff of the bureau that were gathering data for that investigation, which was an investigation into industrial education, reported uniformly that in their visit to establishments about the State, and they went everywhere throughout the State, that the employers reported that these children between 14 and 16 years of age had been refused employment, and, upon inquiry as to what had become of them, they were very often told that they were not back in school and that they were in many cases not employed at all.

Mr. THOMPSON. Have you made any particular study, or have you taken any collection of data in that regard in New York City yourself?

Dr. RICHARDS. That is the chief and really only important direct source of information that I have, was during the progress of that investigation, of which I was in charge.

Mr. THOMPSON. Are you of opinion that the same conditions prevail in this city to a great extent? That is to say, that these children who get certificates from 14 to 16 and who are refused work because of limitation of hours are roaming about, neither going to school nor at work?

Dr. RICHARDS. The data at that time referred to up-State as we call it, the cities and towns more particularly up-State than it did to New York City, and my impressions were more strongly in reference to the up-State cities and not so much about New York City.

Mr. THOMPSON. You have no opinion as to that condition in this city in that regard?

Dr. RICHARDS. I have not from direct knowledge.

Mr. THOMPSON. From your study of those question, Doctor, what would you recommend to be done in that regard? And what, in your opinion, is the responsibility of the State?

Dr. RICHARDS. It seems to me that when laws restricting child labor are put upon the statute books, that it involves responsibility to take care of those children that are turned away from employment. It seems to me that those laws—child-labor laws—are one phase of the question; they are the negative side, the restricting side. It seems to me they bring responsibility to develop positive and constructive measures along with them. They are two phases of the one single question that is involved, it seems to me.

Mr. THOMPSON. You do not believe that those laws should be repealed, do you, Doctor?

Dr. RICHARDS. No, sir; I have no such idea.

Mr. THOMPSON. What form of responsibility, or rather what form does the responsibility of the State take in that regard?

Dr. RICHARDS. It seems to me it is largely an educational one.

Mr. THOMPSON. How would you develop that?

Dr. RICHARDS. It seems to me the largest resource educationally is to provide opportunities for vocational education for those children between 14 and 15 years of age. They will not go back to the regular schools, except under extreme exception in many cases. If they are to be benefited, it seems to me that the reliance must be in the direction of vocational education.

Mr. THOMPSON. Now, Doctor, what is your definition of vocational education as applied to schools and as distinguished from trade schools and part-time continuation schools?

Dr. RICHARDS. Well, I think a vocational education is that field of education which specifically trains for vocational efficiency, as distinguished from general education, which gives all-around education. You asked me to distinguish

between vocational education and trade. I should say that vocational education was the inclusive term, which included all training for vocation, whether high or low, but which always is based upon a selected group of students. By selected group of students I mean the students who have selected their particular vocations. They are then in a position to be dealt with by special means of instruction.

Mr. THOMPSON. Then, in your definition of vocational education, being inclusive and including trade schools, I take it it includes trade schools?

Dr. RICHARDS. Yes, sir.

Mr. THOMPSON. Is there a narrower and more restricted meaning sometimes applied to the term vocational education?

Dr. RICHARDS. The term vocational school has of late years been applied to some extent to those schools taking pupils between 14 and 16 years of age. It is rather an unfortunate use of the term, in my judgment, because it mixes up the narrower use with the broader term.

Mr. THOMPSON. In other words, it has no reference to what is to be done but simply to the ages?

Dr. RICHARDS. Simply to the ages; precisely.

Mr. THOMPSON. Then, in your vocabulary, the use of vocational education and trade education would simply be interchangeable terms?

Dr. RICHARDS. The vocational education being the broad term, including even the training of doctors and lawyers and engineers. The broad inclusive term. And trade schools, being one means of carrying out a phase of vocational education?

Mr. THOMPSON. By the word trade in the matter of education, Doctor, what do you include within that term?

Dr. RICHARDS. I would more easily define a trade school, if you will allow me.

Mr. THOMPSON. I would be pleased to have you do it.

Dr. RICHARDS. A trade school, under common usage, it seems to me, what might be called accepted usage, is a school taking students not below 16 years of age, and giving a training which attempts to provide a substitute of apprenticeship or for trading in practical work; that is, not attempting to provide a substitute for the whole term of apprenticeship, but in part, perhaps. Either in part or in whole.

Mr. THOMPSON. You said practical work. Of course, doctor's work might be practical work.

Mr. RICHARDS. Yes. That is pretty loose. One has to look pretty carefully at definitions.

Mr. THOMPSON. Let me see if this meets with your approval; if you applied the word trade to mean what is ordinarily understood in industry as craft, would that, or nearly, cover your meaning?

Dr. RICHARDS. It would come pretty nearly to it; yes, sir. It is difficult to define to-day in exact terms, at least, I find it so, what might be properly called a skilled trade, but the word craft that you have used comes pretty close to it, certainly.

The point of definition, sir, that I would like to emphasize about the trade schools is the idea that it takes workers at an age of not less than 16 years of age.

Mr. THOMPSON. I understand.

Dr. RICHARDS. And attempts to provide a substitute for apprenticeship, either in whole or in part.

Mr. THOMPSON. Would that include pupils who are in industry as well as those who were not?

Dr. RICHARDS. I should say not.

Mr. THOMPSON. You should say not?

Dr. RICHARDS. I should say in trades, in the generally accepted term, is one that takes beginners and prepares them for entrance into a trade.

Mr. THOMPSON. Have you any opinion as to the establishment of what are known as part-time continuation schools, day and evening, for children and adults in industries?

Dr. RICHARDS. Will you pardon me if I make a suggestion?

Mr. THOMPSON. Doctor, you may do that.

Dr. RICHARDS. In the line of your previous question you are leading up to the proposition in regard to the question of schools that might meet the situation in regard to the restrictions imposed by the child-labor laws, and on the document that the commission was kind enough to send me they asked the

question: "What kind of schools could meet this particular need?" May I be allowed to say a word in regard to that question?

Mr. THOMPSON. Proceed, Doctor.

Dr. RICHARDS. The types of schools, it seems to me, that can best accomplish proper systems in this situation are the day schools, taking students or pupils from 14 to 16 years of age; that is, from the time that they in this State now secure their working papers up to 16. Those schools, such schools at the present time, labor under a very confused number of titles, the vocational school that you have already referred to has already been applied to them, preparatory trade schools, and in the law of the State of New York they are called "general industrial schools." That type of school which endeavors to give a training which will develop practical skill in trade processes, some practical skill in trade processes, but more importantly acquaintance with trade processes, and some development of industrial intelligence, it seems to me, must be the main reliance for reaching this particular problem educationally. I would be glad to go on into that type of school if you want. But not otherwise.

Chairman WALSH. Yes; I wish you would, please.

Dr. RICHARDS. That type of school developed first in the State of New York, and at the present time there are quite a number. I am not sure of the exact number. There are at least 25 or 30 such schools. They were developed, first, in the city of Rochester, and they are represented to the largest extent in the up-State cities. Buffalo has at least five, Rochester has now at least four, and they are scattered about the State. These last four years in which those schools have been mainly developed have been industrially years of experimentation. They present quite a difficult problem, because those schools must be extensive enough in their instruction to draw pupils, to attract them, and to demonstrate that they are of some worth, while, on the other hand, they can not be carried to a point of extreme crystallization which would do injury to the boys and girls of that age. They are not physically or mentally in shape to be given extremely specialized instruction, nor is it to be expected that they will achieve any great degree of hand skill.

It should not be the aim of such schools to develop workers who are trained workers for industries who will, by virtue of that training, do away with training practical work. The term preparatory trade school, in my judgment, is a very good term for such schools. Their purpose is that the boy or girl may find their feet better in entrance into industries, with better equipment in knowledge, outlook, and in general sense of industrial quantities.

Mr. THOMPSON. Doctor, in that regard pick out some particular trade or vocation that may suit your illustration and say how you would have a child prepared to enter that vocation by a preparatory school.

Dr. RICHARDS. The prominent type of those schools is the first school established in Rochester, called up there a factory school, because it was established in a factory building. That school, as many of those other schools, has based instruction upon a group scheme. It took in boys to the general group of woodworking industries. For instance, now, those boys went in that school and they gained, in the shape of experience in handling tools, not only hand tools but mental tools, in the direction of carpenter work and cabinetmaking. Along with that they had instruction in drawing related directly to shop work. They had instruction in arithmetic in the direction of shop accounts and calculations; they had instruction in the elements of science—that is, in physics, in the mechanics, questions of the lever and the screw, and simple mechanical ideas; they had instruction in English, the writing of statements, and shop accounts; they also had English—some English—on what we call the culture side. That school gave those boys in that particular direction of the woodworking trade simply some understanding of the quantities involved in that and some skill of hand. So that they had a better chance for employment, and when employed they had a better chance for progress.

Mr. THOMPSON. After they have finished such a course, Doctor, then the opening for them would be to go into some woodworking mill and there learn the substantial part of the industry?

Dr. RICHARDS. Yes; to further and increase this training they had had in the shop school in the training, the practical work; precisely.

Mr. THOMPSON. And such school would be called preparatory or introductory to the trade?

Dr. RICHARDS. Precisely.

Mr. THOMPSON. Dr. Richards, I would like to have you state your experience and the opinions you have coming from them from the work you have done on night schools in reference to the demands of workers in industries for training related to vocations. Is there a distinct demand for the pupils in the night schools for vocational training?

Dr. RICHARDS. There is a very evident demand, a very obvious demand, that has been felt in the country for a long time, for the last 50 years, and that is training in the supplementary lines that connect with industry and which allow the worker to be better fortified and to progress in his work. Those lines are, first of all, in the direction of drawing—mechanical drawing, architectural drawing, free-hand drawing; and lines of that kind I think can naturally be said to be the most evident and continuous demand of workers in industries upon evening industrial schools.

Mr. THOMPSON. What trades or vocations would such a course of study be introductory of?

Dr. RICHARDS. Drawing comes into a great many trades, and consequently would be of value to a very large number. Such drawing, in my judgment, should be taught so as to be, as far as possible, specialized and differentiated according to the needs of the different trades, so that each worker would find—get the kind of drawing which is most helpful to him. Outside of the drawing, which I think has been always first in demand, there have appeared of late years other demands which there have been various growing attempts to meet on the side of mechanics—shop mechanics. Then, there comes the whole field of technical work, directly related to industry. In every trade, or in most trades and occupations, there is a certain knowledge which can be most easily placed at the disposition of the workers through regular instruction. That sort of thing is being gradually developed in this country, and technical classes, dealing with knowledge directly needed by the particular worker in different trades, is being developed.

Mr. THOMPSON. Give us a statement, Doctor, of some trade or vocation and the technical instruction that can be given in connection with it.

Dr. RICHARDS. Well, take the matter of the elevator. The steam engineers in various buildings in the city, office buildings in the city, the technical knowledge that is needed to thoroughly appreciate, or appreciate the economic quantities involved in the operation of boilers, engines, etc., can be taught in thoroughly practical shape in an evening school of that kind, and such classes are often not only valuable to the man in his employment, but such classes are valuable in regard to the man obtaining his license, his successfully gaining his license.

Mr. THOMPSON. What technical training, Doctor, do you give as applied to the vocations? I mean, do you give at Cooper Union?

Dr. RICHARDS. The situation at Cooper Union, as I have already remarked, is a little peculiar. Those five-year courses, requiring attendance five years at night, five nights a week, were developed at Cooper Union very early, and they have grown to very large proportions, and the institution has always, or has never had enough funds to do all it wanted to do, and it has confined its technical work in these years to those five courses, leaving out very important work which would be in the line that you have just asked about, that we have just been discussing; that is, classes in single subjects directly related to trades.

Mr. THOMPSON. Have you any opinion, Doctor, with reference to the institution of part-time continuation schools, day and evening, for children and adults, employed in industry?

Dr. RICHARDS. I am not quite clear, sir, about the terms. I know what the industrial part-time school is and the industrial evening school and a general part-time school such as most of the Wisconsin schools are, and general evening schools; but I am not quite clear as to what seems to be called a part-time evening school here.

Mr. THOMPSON. It is intended here, Doctor, in regard to general schools for general education.

Dr. RICHARDS. A part-time school, I might say, is the word that is brought into this mainly to indicate the fact that the worker already employed in industry is giving part of his working time to school instruction. That excludes evening schools. It makes two groups, part-time schools, on the one side, where the pupil is taking instruction in or as part of his working time, and evening schools.

Mr. THOMPSON. What is your opinion, Doctor, with reference to part-time day school and its use?

Dr. RICHARDS. It seems to me that the school is a very desirable school to encourage and to foster, by all possible means, for those between 14 and 18 years old, in industry. That school, however, will be of very slow growth because of the economic factors that are involved and the long time that it will take to educate the public and employers to the value of the workers being given this time out of the working-day to attend instruction. It seems to me that almost the ideal scheme to work for in connection with the workers that are in trades or industries are part-time industrial schools for those between 14 and 18 years of age and voluntary industrial evening schools for those 18 years of age and over; but that is an ideal which it will take a great many years for us to realize.

Mr. THOMPSON. Do you think the need is sufficient to justify the State in compelling the various communities to carry out such a scheme?

Dr. RICHARDS. It does not seem to me, sir, that that is the American way to approach the problem nor the expedient way nor the wise way either. It seems to me that the separate communities must be brought to a point where they realize the importance of such education before the State law compelling such schools is practical or desirable. Before the communities themselves can develop compulsory part-time schools within their limits, it seems to me there is a long period during which the public mind in those communities must be educated and the employers brought to a sense of the value of such schools. It seems to me only by those steps, bringing forth by experiment and certain examples, part-time schools where employers are found of sufficient foresight and appreciation of the situation to cooperate with the school authorities—only by such experiments can public opinion be developed and the community brought to the realization of all those schools. It seems to me such realization will be brought about first with those between only 14 and 16 years of age, and only very gradually will it be possible with those between 16 and 18 years of age.

Mr. THOMPSON. How would you organize such schools and would you foster the growth of public sentiment, and how would you control them?

Dr. RICHARDS. It seems to me first that a permissive State law allowing communities to establish such schools and allowing communities to develop compulsion, if they so desire, would be the first step, such as the law passed last year in New York State. After all, it seems to me there must be a period of experiment where the public-school authorities should endeavor to develop the situation in cooperation with the localities and develop possibility of cooperation with types of such schools.

Mr. THOMPSON. Would you put the control in the hands of the board of education—

Dr. RICHARDS (interrupting). Ultimately, I would put the control in the hands of the board of education—always, in case of such schools with an advisory committee consisting of laymen that are directly connected with the trades.

Mr. THOMPSON. I will ask you, Doctor, if such schools have been established in Lancaster in England, if you know?

Dr. RICHARDS. I do not.

Mr. THOMPSON. You say you believe that labor should be represented on the board of control of such schools—labor or industry. What do you mean by that—unorganized labor or organized labor such as unions?

Dr. RICHARDS. I should say organized labor, as that is the only practical way to reach the workers in the industries, and by men I mean the representatives of the employers and employees, and by employees I mean organized labor.

Mr. THOMPSON. In your opinion that would give a better control or management, or a fuller expression of opinion of the respective parties in the schools.

Dr. RICHARDS. I am thinking of that feature of it, and of course I am talking in terms now of the next 10 years. I am thinking of this committee as an advisory committee, the schools to be under the direct control of the board of education of the locality or community, and this advisory committee dealing with and assisting and cooperating with them.

Mr. THOMPSON. Would you give any power to this advisory committee, or would it be in purely an advisory capacity?

Dr. RICHARDS. I should be inclined to give that advisory committee a check upon the course of study and upon the employment of teachers.

Mr. THOMPSON. Have you anything else to say, Doctor, in respect to the last question—any other opinion which I have not brought out in my question—or regarding any other matters regarding what we have under examination?

Dr. RICHARDS. In regard to the State control of such schools, it seems to me also that the control of such a system of schools should be ultimately under the same authority that controlled the other schools of the State. But in that regard, also, it seems to me there should be an adequate board of education—State Board of Education—upon which representation of the industrial interests or the lay interest in industry, should be had; and if not had, there should be, in the case of State control, also an advisory board that should represent this same specific influence. That is, it seems to me, during the formative years—during the early years of industrial education, industrial schools, and all this experimental work—it is desirable to have special and more or less expert points of use represented close to the administration of such schools; but, on the other hand, it does not seem to me that American experience and American ideas upon all those questions point to anything except a central control by a single State authority.

Mr. THOMPSON. I would like to ask you one more question, Doctor. Have you ever given any consideration to the effect of industrial education on the industrial problem?

Dr. RICHARDS. By industrial problem meaning—

Mr. THOMPSON (interrupting). Meaning the unemployment, making men more capable and useful in their work, and thereby reducing, perhaps, the industrial unrest we have.

Dr. RICHARDS. It seems to me that is one of the direct—I was going to say indirect—but it seems to me that that is one of the direct objects, purposes, and possibilities of industrial education. Industrial education has for its object to make workers in the industry more efficient. Anything that raises the standard of efficiency must raise the standard of remuneration in the long run and must help to raise the standards of living. It seems to me industrial education is simply an essential part of any program in the solution of industrial problems to-day, as you have named them.

Commissioner O'CONNELL. To continue that proposition, are there any apprehensions or impressions among some labor men that the labor market may be overstocked?

Dr. RICHARDS. That is a big question, Mr. O'Connell. You know I have taken issue with that view for a good many years. The only way in which you could overstock the industrial market in the way of industrial education is to have trade schools throughout the whole country which would be turning out a large supply of workers to take the places of others. Now, the economic difficulties that are involved in attendance upon trade schools for boys over 16 years of age are so great that there will never be any large number of youths attend trade schools. "Never" is a pretty long while, but I think it is right, for they can not go to them, they can not sacrifice the income when they reach 16, which is the only time when true trade training, I think you will agree with me, can begin. They can not sacrifice the years needed for attending a trade school. They can not sacrifice the wage earnings. Now, that is the biggest thing of all which limits the possibilities of trade schools ever being any large element in affecting the labor market. In my judgment, if trade schools were established in every industrial community of this country, from the Atlantic to the Pacific, and they were made free, so that attendance upon them could be had by every boy and girl in the United States, the effect upon the labor market would be absolutely inappreciable, because they could not go there—they could not attend such schools.

Commissioner O'CONNELL. Now, Doctor, if a national association for industrial education has a certain policy outlined that you have been pursuing for some time—or what is the essential difference between the policy of your association and the policy of the people in Wisconsin in connection with this question? Just give it to us as you understand it, so we will have it on the record.

Dr. RICHARDS. Well, I know of no difference in regard to the policy of the National Society for the Promotion of Industrial Education as differing with those in the State of Wisconsin except that the board of managers of the society and the association in its annual convention at Philadelphia developed a statement of principles and policies that should underlie State legislation for a State system of vocational education. And in that statement the society affirmed the principle that all industrial schools or vocational education of whatever character should be placed under the control of the central educational

authority of the State and of the community. If I may read a paragraph to that effect [reading]:

"Effective administrative control on the part of the State of both vocational and general education requires the existence of a State board possessing sufficient powers effectively to supervise all forms of education receiving financial aid from the State. Should such a board not exist in any State, or should it be found that an existing board is unprepared to deal effectively with the establishment and promotion of vocational education, then it is expedient and desirable that such administrative board of control for vocational education shall be established until such time as a State board properly qualified to deal with such forms of State-aided education shall exist."

Now, in that the society have taken the point of view that it is wisest and best under American conditions for all the forms of education to be placed under a central State authority.

As I understand it, certain exponents of the Wisconsin industrial educational situation believe in a separate board of control; in so far there is a difference of opinion between their point of view and that of the society.

Secondly, I believe there is held by certain persons in Wisconsin the point of view that a compulsory law requiring attending on part-time schools is desirable. The society, as far as its board of managers are concerned, holds the point of view that I have tried to express here, that it is wiser to work through the education of the community before a State-wide compulsory law is put into effect.

Commissioner LENNON. Doctor, I want to ask you a few questions. The law creating this commission requires a study of the underlying causes of social unrest and the meager investigation that has been made, together with investigations to be had elsewhere, shows that about one-half of the great army of the permanently unemployed—that is, the people who do not work at all—are in that condition because of utter inefficiency. They have no opportunities as boys and girls to learn to do anything well. Do you think there is in this proposition of educational guidance and vocational training a possibility of alleviating that condition?

Dr. RICHARDS. Of alleviating, Mr. Lennon?

Commissioner LENNON. Yes.

Dr. RICHARDS. Yes. Not of solving it, or of entirely removing it, but of alleviating it; I should say yes, if you include in it also, in case of the cities, some good work in manual training in the elementary schools.

Commissioner LENNON. Do you believe the age at which children should be permitted to enter industries should be raised above what it now is?

Dr. RICHARDS. It seems to me that is a subject that can only be met by a fine knowledge of the economic quantities involved, as to whether it is practicable at any given stage, in any given State, to raise the compulsory age. In New York State it is evident that the law at the present time works some hardship; and the question, it seems to me, is simply a question of how soon we are going to be able, as a people, to move forward in this matter of compulsory school age. It seems to me that it will be carried forward, and carried forward with great gain in the same matter of efficiency and preparing for life gradually, up to the age of 16.

Commissioner LENNON. I understood you to say in answer to a previous question that your opinion was that not under 16 was a child ordinarily prepared to acquire a trade.

Dr. RICHARDS. A skilled trade.

Commissioner LENNON. Yes.

Dr. RICHARDS. In the sense of having them skilled in any degree adequate to the practicing of a trade for earning a livelihood; there can be a preparation before that, in my judgment, that will make the pupil ready to receive that training more effectively.

Commissioner LENNON. You have spoken of the matter of the trade schools and their inability to flood the labor market. Is that inherent in the attempt to teach a trade in a school instead of teaching it in a shop where the work is regularly going on and the boy is associated with the turning out of a product which is to be useful in itself?

Dr. RICHARDS. I think that is another point, Mr. Lennon. It seems to me there are two limitations—the trade schools, meaning by trade schools those which take students or pupils at 16 years of age to train them for the skilled trades as a substitution for apprenticeship—there are two limitations: One is the economic limitation, which I have already pointed out, which makes it a

hardship to attend such schools. Secondly, the impossibility of presenting a training in a trade school that shall be as effective as the training under commercial conditions. It does seem to me, however, that there may be a few trades wherein a trade school, for those above 16 years of age, where perhaps a year in length of time may serve a good purpose. Simply a term of about a year, which may go toward a good purpose and save time, so that when the worker or the boy starts into an apprenticeship he may be more ahead than if he had spent that year in industry. But that is the exception. Those conditions, in my judgment, are very few.

Commissioner LENNON. Should a boy or girl, having spent a year in one of those schools, do you believe that they should have credit on their term of apprenticeship?

Dr. RICHARDS. That has been my feeling, Mr. Lennon, that if such schools were administered by the public and supervised properly that they should be schools which should warrant that recognition. There are two "ifs" in that.

Commissioner LENNON. You know of many experiments. You may know of Prof. Snyder, in Cincinnati, I apprehend. What do you think of the system being attempted there as to being possible of general application?

Dr. RICHARDS. I know something of the experiment—or, rather, not now experimental work—carried out by the University of Cincinnati with the engineering students called the cooperative plan, which brings the young engineering students into the shops for a certain time, and then brings them back into the school for an equal time. I regard that as a most admirable scheme, and one that has demonstrated its efficiency; and whether that same principal can be extended to high-school pupils is an open question in my mind, because the condition varies very greatly. In the case of the engineering school student, in the first place, the man has definitely selected his vocation. He is training to be either a civil engineer, a mechanical engineer, or what not. He is also old enough to find his place in the shop, to adjust himself to the shop conditions, and to take hold in the shop with some efficiency. He has judgment, and he can take care of himself. Those conditions are different from those attending high-school boys.

In the first place, the high-school boy has not, in general, selected his vocation as clearly. He has not the development which allows him to go for this short time of a week at a time into a shop and find his footing as readily, to take his place without confusion and being an awkward element in the shop. Whether that principle will work out and be as successful in its application to high schools, it seems to me, still remains to be demonstrated. I would say, however, that it is an experiment and a principle of very great interest, and of very great importance; and it deserves a great deal of attention and support in order to find out whether it is not one of the very helpful ways of meeting one part of this problem.

Commissioner LENNON. Doctor, what would appear to you as the proper way to handle children who reach the age to go into an industry and after a short time lose their jobs, or quit work? Should there be some system of compulsory return of those to schools?

Dr. RICHARDS. It seems to me so. Without knowing just what the difficulties that might be encountered are, it seems to me, in principle, that that is the only way the State can carry out the principle of the control of children which it has not assumed between 14 and 16 years of age.

Commissioner LENNON. And those children, having gone to work at that age, indicate either that the child has become dissatisfied with what it is being taught, or the parents, probably, have become dissatisfied, and isn't there a necessity for some vocational training if the child is to be brought back into school?

Dr. RICHARDS. It seems to me so.

Commissioner LENNON. So as to cover that question.

Dr. RICHARDS. It seems to me so. And it seems to me the school that will meet that situation to a considerable extent is the all-day schools for those between 14 and 16. That is when this restlessness develops on the part of the boy, or the economic need develops. It is generally a mixture of both. We find often that the boy or girl could manage to go another year if he or she were sure of some benefit. Now, the only opportunity to develop instruction that will give that benefit is through all-day preparatory trade schools, it seems to me. If the boy or girl has gone into an industry then it becomes a question of attending a part-time industrial school.

Commissioner LENNON. Do you believe the State should assume the obligation to give all children the opportunity for that kind of education which will enable them to make a success of their lives?

Dr. RICHARDS. I believe so. I believe that has become pretty well recognized as a legitimate function of the State.

Commissioner LENNON. There has been some feeling—and perhaps more feeling than reason—on the part of organized labor men that they must have a large representation upon the management of vocational education or trade education as it comes under the State. Do you believe that is justified?

Dr. RICHARDS. I think that they ought to have representation, sir. I don't think there is any necessity for a large proportionate representation, as, in my experience, I have found representatives of organized labor, when small in number, are perfectly able to make themselves felt and to influence the situation; but that there should be representation—

Commissioner LENNON (interrupting). I know; I am on a school board and I know what we can do when we get at it. Thank you, Doctor.

Chairman WALSH. Mr. Garretson, did you desire to ask him something?

Commissioner GARRETSON. Yes.

Doctor, from your experience, has it appeared to you that, taking the boy at what is a derelict age, when he won't work and won't go to school, has it appeared to you that that has grown out of the fact that in a majority of instances, because he will neither work nor go to school, he has not found anything that would arouse his interest?

Dr. RICHARDS. In a very large number of cases that is, in my judgment, the cause.

Commissioner GARRETSON. Would not the applying of the idea that was referred to in the Cincinnati work to the high-school students, do this: It would weed out and develop unfitness, even if it did not develop absolute fitness in any large majority of instances?

Dr. RICHARDS. I think it would, Mr. Garretson, but the point that appeals to me is that this problem of industrial education is not primarily a high-school problem at all. If you observe this problem with the idea of applying it to the high school, you will never be able to alleviate it substantially, because the real problem of industrial education is concerned with that proportion of boys and girls that leave school at 13 and 14, before they leave the grade school, and they never reach the high school.

Commissioner GARRETSON. If there was a certain amount of manual training association through the lower grades, wouldn't it work out the same results?

Dr. RICHARDS. It would help.

Commissioner GARRETSON. It would enable a boy, if he were not fit, to find it out, or at least to determine where he did not fit?

Dr. RICHARDS. I think it would help. The whole question affecting the situation is one not only of developing knowledge at school, but also one of affecting the attitude of the boys and girls; and that question is so deeply involved in our whole American attitude toward life, our social attitude, that it has got to be more than the school; it has got to be the street and the family and all the influences, in order to bring the workers to an appreciation of the dignity of industrial careers. Now, manual training is simply one of the things that may effect it.

Commissioner GARRETSON. Wherever a good, healthy interest is developed in the direction of the boy's taste, you have solved the problem as far as that boy is concerned?

Dr. RICHARDS. I think so, to a large extent.

Commissioner GARRETSON. I got or understood one statement early in your testimony, that I would like a little fuller statement on. If I understood you, you took the position that in the question of vocational training as an entirety, you favor, if there is State legislation, that it be permissive instead of compulsory as to the establishment of State institutions, and you favored the educating of the community to a certain standard before it could be a success. Now, what I would like to know is, would that be your same attitude toward the public-school system if the public-school system were a nonaccomplished fact, as the other is? Now, is this not true that in the newer States, where a complete system of public schools existed before the community existed largely—I am speaking of the segregated community within that State, for instance, take a Western State that had only a limited number of inhabitants necessary for incorporation as a State, or admission, and the public school law virtually sprang into existence as Pallas did from the head of Jove—

Dr. RICHARDS (interrupting). Yes.

Commissioner GARRETSON. Isn't the best record as to education where the community has come into existence and found the law in existence aiming to educate the community, and isn't the worst result in the old community where the community has existed before the system of educational school law and the community has never come into full sympathy with the school law?

Dr. RICHARDS. I don't know that that is the result of the conditions you speak of. In the older communities we have, of course, the larger part of the poverty of the country and the larger share of immigration. It seems to me that those causes are much more operative than those you name.

Commissioner GARRETSON. You will find exactly the same thing, will you not, in that portion of the older States where immigration has not cut a figure? Isn't it true that, as a general proposition, the public school laws are most defective in those States which have not been affected by immigration to any large degree? Southern States, largely?

Dr. RICHARDS. Yes; but I suppose, taking the Southern States, may not they have been affected by other conditions in the South?

Commissioner GARRETSON. To a certain extent. I am not bringing this up as a determining factor, but it seems to me if you are to educate the community instead of putting the law there making the community act, it will not produce the result in anything like the same amount of time.

Dr. RICHARDS. Well, I don't myself, Mr. Garretson, see how you are going to do anything in the way of laws, unless you have the convinced sense of the community behind you. That don't mean that every man in the community is convinced, but it does mean that the best sentiment and spirit in the community believes in it. Here in New York City we have had long experience in regard to compulsory laws that are active here, and the experience is not one to make us believe very much in them, in many ways.

Commissioner GARRETSON. You take a whole system of compulsory laws, as for instance, those covering sanitation—I am just taking that as a sample—has your experience taught you that the bulk of communities have ever shown any interest in them until they had to do it? Some devastated community develops that interest; but the average community everywhere, only a few individuals in the community take an interest?

Dr. RICHARDS. Well, in a case like that wouldn't you say that the public sentiment of the State as a whole was pretty well developed on that point, although you might find some community who were not? I am in the dark there, Mr. Garretson; I don't know; I am simply trying to answer you.

Commissioner GARRETSON. Now, in the business I was engaged in a good many years, I was brought into daily contact with the personal sentiment of a large number of communities. For instance, I ran a passenger train into Shreveport at the time it was devastated with the yellow fever. There was intense interest in that and the surrounding community in regard to sanitation laws immediately following. But when you got a hundred miles away from there where they had not had it impressed upon the community, with the exception of a few individuals, they were sitting on the fence. But the enactment of compulsory laws pushed them over onto the side of the law, and they became operative; and I believe it is true in regard to the whole safety code, in those directions.

Dr. RICHARDS. I see.

Commissioner GARRETSON. That is what made me raise that point. I believe that if the machinery is established and is placed there, it will be taken advantage of by the very people who would oppose its institution unless they recognized it as a necessity called for by the law.

Dr. RICHARDS. On the other hand, take this question of the part-time schools; we have not enough knowledge in this country to develop any compulsory education law. There is no uniformity of conviction about these schools. There is no uniformity about procedure; we have only a few such schools in Wisconsin, and two or three in the rest of the country. It is no time at present to develop, in my judgment, compulsory laws until we learn more about them. We have not the data. We simply don't know how to do it. And we would, on the other hand, be doing very great injustice, it seems to me, both to the young workers and to the employer, if we should develop a compulsory State law requiring attendance upon such schools at this stage of the game.

Commissioner GARRETSON. There is a point right there, Doctor, that I want to draw your attention to—the misuse of a word on my part. I did it because

it had been used in regard—I was speaking of compulsory institutions and not compulsory attendance.

Dr. RICHARDS. Oh, to provide such things.

Commissioner GARRETSON. To provide for them, and not to compel attendance at them. That is where the misunderstanding is. It was improperly used without the explanation.

Dr. RICHARDS. Well, now, there is a permissive clause in the New York law which allows for the establishing of the schools for pupils between 14 and 16, and it has been on the statute books about four years, and Mr. Arthur T. Deane could tell how many schools there are at present in the State of New York, but that number is large. Now, there is an entirely new type of school which has developed under permissive legislation, and it seems to me that we may and should look for the same thing in regard to part-time education, if you want such schools, under permissive legislation.

Commissioner GARRETSON. I don't want, by my question, to give the idea that I have given an exhaustive study to this subject, or that I am an adherent personally of the compulsory system; but what I want is to draw out the different phases of that from a man who had been in the game.

Dr. RICHARDS. Well, New York, I know, in the last year, gives permissive opportunities for a city to supply such schools, and to compel attendance upon them. It seems to me that that is an excellent thing to do.

Commissioner GARRETSON. Then would you take the majority of the community under that permissive act, or a stated percentage?

Dr. RICHARDS. It lies in the community. This is the first step in New York State toward the development of part-time schools; and the law provides that communities shall be allowed to transfer from compulsory evening attendance such pupils—those pupils between 14 and 16 years of age that have not completed their school requirements, and to compel such children to go to part-time day schools.

Commissioner GARRETSON. It embodies both features of compulsion—that is, compulsion in regard to attendance, and compulsion in regard to the instituting of the schools.

Dr. RICHARDS. Yes; where the school is instituted it gives them permission to do that.

Commissioner GARRETSON. That is all. -

Chairman WALSH. That is all, Mr. Richards.

TESTIMONY OF DR. S. JOSEPHINE BAKER.

Mr. THOMPSON. Give us your name, address, and occupation.

Dr. BAKER. Dr. S. Josephine Baker, director of the division of child hygiene of the New York Department of Health.

Mr. THOMPSON. How long have you occupied that position?

Dr. BAKER. Since January 1, 1909.

Mr. THOMPSON. Does that department have the issuance of certificates of employment in this city?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. What educational test is made, if you know, before such certificate is issued, and by whom is it made?

Dr. BAKER. The law requires that the child must bring a so-called school record, showing that it has attended school at least 130 days previous to its application, or previous to its fourteenth birthday; and also that it must have passed through the sixth grade—sixth year of schooling. The law also provides that the officer issuing the employment certificate shall state that the child is able to read and legibly write simple sentences in the English language.

Mr. THOMPSON. And that is done by the health department?

Dr. BAKER. That is done by the health department; yes, sir.

Mr. THOMPSON. What physical examination is made and what standards are required for the issuance of the certificate?

Dr. BAKER. The State labor department requires, or the law requires, that each child shall be given a physical examination, and a form filled out, the type of form to be approved and furnished by the State commission of labor. There are no standards definitely applied by the law as to the type of physical disability that will prevent a child from working, except that the officer issuing the certificate must be satisfied that the child is physically well developed and physically able to perform the duties which he intends to take up.

Mr. THOMPSON. In determining that fact, what is the usual practice you develop in making the examination?

Dr. BAKER. Our usual practice is that when a child is suffering from a physical defect which is by its very nature permanent, where little hope can be held out of improvement, that application is refused at once. Under circumstances, however, where the child is suffering from a condition that may be easily remedied, our practice is to turn that case over to the school nurse, who takes it under her control, follows it up, and sees that the proper treatment be given the child, and the child may then be reexamined, and if, in the opinion of the physician, it is in sufficiently good physical condition, a certificate is issued. In that connection I may state that we have established a standard of height and weight—4 feet 8 inches and 80 pounds for a boy or a girl of 14 years. At that age the boy and the girl very closely approximate the same height and weight. The ordinary normal standards of height and weight of boys and girls 14 years of age of American birth are 5 feet and 90 pounds. Our standard is necessarily below that because of the preponderance of the foreign element, especially among the children, which shows quite a lack in height and weight, and yet they are normal physically.

Mr. THOMPSON. In addition to the height and weight what other tests or examinations are made by your department?

Dr. BAKER. I have here, and may offer you for the purposes of the record, if you care to have it, a form that is made out by the State commission of labor. It includes not only the height and weight, but a test as to the vision, a test as to any acute eye disease, the hearing, the rate of the pulse, the condition of the lungs, the condition of the heart, the condition of the teeth, the condition of the breathing, and of the pharynx and of the palate, and whether or not there are any enlarged glands. If a child is anemic, has a hernia, or whether or not it has been vaccinated, the condition of the spine, and any other abnormalities that may be discovered in the course of the examination.

Mr. THOMPSON. And this examination is made by a regular staff of physicians employed by your department?

Dr. BAKER. Yes, sir.

(A document was received in evidence and marked "Baker's Exhibit I."

The document referred to, Baker Exhibit No. 1, was submitted in printed form.)

Mr. THOMPSON. What examination, or what is done with reference to child hygiene as relating to the issuance of certificates by your department?

Dr. BAKER. Every child that is found to have a defect of any nature is given instruction in hygiene and any child that is found to be in need of treatment is, as I have already mentioned, put under the care of the school nurse and treatment is provided. This has developed into quite an extensive system, so much so that we have at the present time assistance through a philanthropical society, a home in New Jersey where boys are sent for periods of two or three months, boys suffering from malnutrition or anemia, so that they may have an opportunity to regain their health. It is purely voluntary on the boys' part, not compulsory.

Mr. THOMPSON. And then they are reexamined again?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. Before the issuance of a certificate?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. What instructions are given to children, if any, about hygienic matters as the result of the examination and what you may find?

Dr. BAKER. That is rather difficult to answer, because it depends entirely upon the nature of the case, but in general the instructions comprise the hygienic care of the body, and also instructions as to the necessity of better sanitary conditions or sanitary surroundings in the home, if those are apparent to be at fault.

Mr. THOMPSON. And that is given to those children which appear before you applying for the certificates?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. And evidences of age—what evidences of age does your department require before the certificate is issued?

Dr. BAKER. That is a matter that is determined by the State law, and at first the child has to have—you will find that under section 70, the provisions of the labor law of the State of New York. The law provides very definitely the order in which the evidence of age may be accepted. The child must, first

of all, present a record of its birth, if that is possible. If that can not be obtained, a friend or parent must make a signed statement that effort has been made to find it and they have been unsuccessful, and then they can present a sort of certificate of graduation. The third section allows for the presentation of a passport or baptismal certificate, and the fourth other documentary evidence, and that may include any evidence whatever. A report of the Census Bureau, an insurance policy, family Bible, or almost anything that would throw any light on the age of the child. The last section, however, is considered rather dubious, in that the law provides that the officer in charge of the issuing of employment certificates can not immediately issue a certificate on such evidence, but that the evidence must be sent to the board of health and considered by them, and they finally act upon it.

Mr. THOMPSON. From your experience in this department, have you an opinion of the conditions under which a child should be permitted to ask for a certificate? For instance, as to whether there should first be a promise of the place to the child before it comes for the certificate?

Dr. BAKER. I do not believe that that should be made a requisite. My experience has been that it would open the way to a very large amount of petty graft—that the child could obtain such a promise of a job on the payment of probably a small fee even when the job itself was not forthcoming. I think it would not be a restrictive measure, it would not have a restrictive influence, and it might be very harmful.

Mr. THOMPSON. When a child leaves a job, either voluntarily or is discharged, what would you have done with this certificate and what is now done with it?

Dr. BAKER. Under the present law it is kept by the child. It is kept during the period of employment.

Mr. THOMPSON. Would you change that law, or does that law meet with your approval?

Dr. BAKER. That is a part of the whole general law which, in this State, allows the certificate to be issued and goes for any job the child may get. There would be no advantage under the other provisions of the law in determining that certificate, because it would simply mean the issuing of another of exactly the same character.

Mr. THOMPSON. Under your present State law is it possible to follow up a child in industry to see whether he is going to school or is working, where a certificate has been issued?

Dr. BAKER. It is perfectly possible under the compulsory-education law, not under the labor law. The compulsory-education law provides a child must attend his school, even though he has a certificate, unless actually employed, and if that law were properly enforced it would provide a complete follow-up of children in industry.

Mr. THOMPSON. What would be your view as to the proper system of following up such cases as you mention?

Dr. BAKER. I think that system could be elaborated, or at least could be so enforced as to be entirely competent. The State labor department follows up almost all cases; that is, we notify them of the issuance of every employment certificate, and their inspectors are constantly inspecting mercantile establishments and factories to determine whether or not there are any children illegally employed. They are also responsible for the sanitary conditions under which the children work.

Mr. THOMPSON. What departments in this State deal with the issuance of the question of certificates and the following up of children and the inspection of factories where children are working?

Dr. BAKER. The State labor department and then the city education department and the city department of health.

Mr. THOMPSON. Do you believe that there could be a cooperation or a bringing together of those various agencies in better form than is now in existence in this State?

Dr. BAKER. Well, I think there are a few systems that could not be better. Undoubtedly there could be better cooperation, and yet it is very good as it is.

Mr. THOMPSON. Do you think it is sufficient to accomplish the purpose?

Dr. BAKER. I do not want to misunderstand. Are you asking me whether it is my opinion that the cooperation could be better or my opinion that this law could be worked out under one central body?

Mr. THOMPSON. First, do you believe a better system could be devised than those three departments? Would it be better if they were under one department and under one supervision—the supervision of one person, for instance?

Dr. BAKER. No, sir. I don't believe it would be better. I think that a little checking up is a good thing, and my experience has led me to believe that if all of these factories were under one control there would be a certain amount of laxness in the enforcement of the law.

Mr. THOMPSON. Aren't there places now where these various departments or divisions that deal with this question miss fire with one another?

Dr. BAKER. I can not definitely think of any at the present time. I may be permitted, perhaps, to tell you more definitely what I mean by a little checking up. As I said some time ago, the law requires not only that the child shall present a school record as evidence of sufficient education, but the law requires that the child shall have passed through a certain amount of schooling; that is, through the sixth year—and that it shall also be able to write legibly and read simple sentences in the English language, the last being in the health department. During the last three years there have been refused by the health department: In 1911, 325 children; in 1912, 239 children; and in 1913, 192 children, who had received from the department of education school records showing that they had passed through the sixth grade, and yet who were not able to read or legibly write simple sentences in the English language taken from the third-grade readers.

Mr. THOMPSON. In other words, children who had fallen down on the educational test?

Dr. BAKER. Yes, sir. In addition, we have had presented to us, notwithstanding the law, during the last three years 305 school records which in themselves did not live up to the amount of schooling required, so that the children were refused on account of what was determined insufficient tuition. This is a matter the superintendent of schools has given a great deal of thought to, and he has endeavored, I know, quite strenuously and with a great deal of interest to not have any children given school records unless they were educated within the meaning of the law. He has provided for special tests in the different schools, with a ruling that no children should be given school records unless the child had passed those tests. That accounts for the drop from 239 in 1912 to 192 in 1913; and yet in every safeguard that he has put on the matter there still are a considerable number of children who are not educated within the meaning of the law, and yet who present the school record showing that they have passed the requisite amount of schooling.

Mr. THOMPSON. Under your present system, how would children who have obtained a certificate of employment from your department, who have gone to a job, we will say, and have gotten it, and then have the job a week or a day or a month, what method is there now in existence for finding out either that the children are at work or that they are at school?

Dr. BAKER. That could be better answered by some one from the department of education. That is a matter which is under their control, under the compulsory-education law.

Mr. THOMPSON. Have you made any study, Dr. Baker, of the fitness of children of 14 to successfully cope with industrial conditions and have you any opinion in regard to that matter?

Dr. BAKER. I was going to say, if you mean making a study and doing the detail work myself, I have not; but I have been in close relation with detail work made by others, using the work as a basis. That work has not brought out one fact on which I will express an opinion, first. My opinion is that a child of 14, either a boy or girl, particularly a girl, is not physiologically fitted for work. I feel that there is a very serious danger in allowing girls of 14 to go out into employment practically unrestricted as to its nature, from purely physiological reasons.

Mr. THOMPSON. What amendments or what suggestions would you make in regard to limiting the right of a girl or boy to go out in industry?

Dr. BAKER. My opinion is that the boy or girl of 14 should not go out into industry. I think the child, both from economic reasons and from physiological reasons, should not work until he or she is 16.

Mr. THOMPSON. Sixteen?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. Would that relate to all kinds of work?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. Or would you permit them to do some kinds of work, and not others?

Dr. BAKER. I believe there is a possibility of their abusing the continuation school idea between 14 and 16 within—

Mr. THOMPSON (interrupting). I am speaking of the physiological condition of the child of that age?

Dr. BAKER. That is not so essential with a boy as it is with a girl.

Mr. THOMPSON. Would you limit a girl from getting any kind of employment until she is 16?

Dr. BAKER. I think it would be safer to do so; yes, sir.

Mr. THOMPSON. Is there not any work that a girl might be permitted to do that would be uninjurious, say, after she is 14?

Dr. BAKER. There are a great many questions, and in individual instances they would not work any hardship, but taken together, with the economic phase back of this whole child-labor question, I believe it is not necessary and, since it is not necessary, it seems to me unwise.

Mr. THOMPSON. Then you believe from the standpoint of the economic condition of the child it is not necessary for a girl to go into industry?

Dr. BAKER. An investigation—

Mr. THOMPSON (continuing). Before she is 16?

Dr. BAKER. An investigation was made here in New York State with some 327 families here, in New York City, by Mrs. Fernandez, who at that time was Miss Barrows, working in cooperation with the health department, and she, by applying the Government standard of family living, found that not more than 20 per cent went to work because of the economic pressure. The United States has made similar surveys, which are reported. It is reported in the report of the condition of women and child wage earners in the United States, and they show—the Government investigation shows—that only 25 per cent of the children who went to work were forced to do so through any economic conditions.

Mr. THOMPSON. What would you say with reference to that 20 or 25 per cent, as to what should be done where there was an economic necessity for the child to work?

Dr. BAKER. I presume that all matters of this kind are in the nature of a compromise, and one must consider whether or not the greatest good to the greatest number is being done, and I dare say we never could find conditions so ideal that we could take up any phase of industry or any class of people and reach the ideal conditions, but I believe that the smaller the number of children who are forced to go to work the better for all.

Mr. THOMPSON. Could there be anything in the economic condition of the family, as well as the education and health of the child, which would make their employment feasible and practical?

Dr. BAKER. Perfectly feasible.

Mr. THOMPSON. That would meet this condition, then, would it not, as you state?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. What opinion have you with reference to what the schools should be in reference to the training of children for industries?

Dr. BAKER. I should like to answer that, if you will permit me, with rather mixing it with another subject.

Mr. THOMPSON. Answer it in your own way, Doctor.

Dr. BAKER. I believe that is very closely connected with the reasons why children leave school to go to work. The average child, in my experience, leaves school to go to work because he is physiologically active. The boy or girl between 14 and 16 has a very definite need of expression. They want to do something with their hands. They are not content to sit quietly in the school and take what the school has to offer them under the present conditions. It does not represent anything to them, unless they are exceptionally bright, exceptional children with a desire to learn for the sake of learning.

There is also the reason that they see other boys and girls are working and making money, and they want to get out, and they leave school without any definite idea of why they do, except that it is the accepted sense; 14 years old you get your working papers and go to work. They are, almost without exception, so far as we have been able to determine, utterly untrained, and a great majority of them go into unproductive employment; that is, the so-called blind-alley job. Of those particular 327 cases that I was speaking about it was found that in 314 the jobs that the children got—there were 406 jobs involved—in all that 314 jobs there was no chance at all for the child to receive any training which would fit him for a better position in the future.

Now, if the school is going to supply that need it must, first of all, give the child something that is going to psychologically interest the child. It must give them a desire to work and be the kind of work he would like to do. It

must not be a hard and fast system which will put a boy into a carpenter shop when he would rather be a plumber. He must have some idea of his work, and if he starts into a carpenter shop, because he thinks he wants to, it must be elastic enough to permit him to go and try all the others of industrial training until he finds something that pleases him, or something for which he has some aptitude. I do not believe a boy or girl of 14 knows what he wants to do. I think the best example of the application of this system is the one worked at Gary, Ind., where the boy or girl is allowed to take up one vocation after another until they find the job they are fitted for.

Mr. THOMPSON. What have you to say in reference to what the school should do in part-time continuation schools for children in industry?

Dr. BAKER. I believe, first of all, the compulsory-education law should be raised to 16 years, without allowing the child to leave before that time, even with an employment certificate, and that the plan should be followed that is now being followed in a limited way, and that is, the so-called three-division plan of the last two years of the elementary grade. The child may spend those two years in a purely academic training, leading on up to the highest school grade, or may take a commercial course, or take an industrial course, giving an outlet for their preferences, and at the same time fitting them for industry and for commerce.

Mr. THOMPSON. What would you do, as I understand your answer, you did not cover the—

Dr. BAKER (interrupting). The continuation school I think is a problem that applies, as the previous speaker said, beyond the elementary school age. I think it could hardly be conducted during the time when the child was between 14 and 16.

One employer in New York is quoted as saying that there are no jobs for boys or girls under 16 that they ought to take. They are not sufficiently sure of their own ground, and I think they would be of very little value to any employer, a boy or girl of 16. After that age, I believe a continuation school is not only practical, but with the reservation that must be made from the employer's point of view, I am sure I don't know whether they feel it is economically possible, but I believe from the educational point of view it is a very excellent thing, industrially.

Mr. THOMPSON. Do you think they should be compulsory or not; that is, the establishment of them and the attendance in them?

Dr. BAKER. I should say the establishment of such schools should be compulsory with reference to a certain percentage of the population; but I also agree with Dr. Richards that it would be practically impossible to make the attendance of them compulsory.

Mr. THOMPSON. For what reason?

Dr. BAKER. Because they apply mostly to the boy or girl past the school age, and where the economic pressure—past the elementary school age and where the economic pressure is a little more marked and it is very largely a question of the employers themselves, of whether or not they could meet such an overwhelming demand.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Garretson, have you any questions?

Commissioner GARRETSON. No; I thank you.

Commissioner LENNON. Do you know of any study having been made in this country of the relative success of children entering industry at 12 and those entering at 14 and at 16?

Dr. BAKER. No, sir.

Commissioner LENNON. It has been made in some of the European countries. I have some of the data of that kind.

Dr. BAKER. I know nothing of that kind in this country.

Commissioner LENNON. Have you been taught by your observation and your contact with this subject that it is desirable to raise the age to above what it is now?

Dr. BAKER. Yes, sir.

Mr. THOMPSON. By your observation?

Dr. BAKER. I feel that there is no great necessity of the children working, and that the relation to the question that you are studying, that is the relation to the question of industrial unrest is a very important one. We are turning out each year in New York City some 40,000 untrained workers, children, with employment certificates, and the very large majority of them are totally unfit for any trade or any occupation whatever. They go into the very large majority

of those jobs which have no possibility of training them, and within a very few years they have reached adult life and are still earning a child's wage. They are not worth any more in the industrial market.

Commissioner LENNON. Where a child applies for a permit to go to work, would it not be well if the authorities had the right under the laws to investigate as to the economic necessity; and if they found none, to refuse a certificate for a couple of years?

Dr. BAKER. Yes, sir; I think it would be an excellent one.

Commissioner LENNON. So do I. I have been looking up the situation myself somewhat. Do you, in applying a physical examination, have it marked peculiarly as to the employment into which the child is to enter?

Dr. BAKER. The law does not provide for that, and, I think, mistakenly. I believe that certificates should be; and some leeway should be given to the issuing officer to restrict the nature of the employment. Some children could do light employment, and yet, for fear that they may be thrown into heavy work, we refuse to issue the certificate.

Commissioner LENNON. Where children change jobs and go into industry, I have been trying to discover why the State or the organized school system should not continue to look after those children. Why, I find, in New York, and Chicago, San Francisco, and wherever I go, that there is a laxness about looking after the children if they lose a job in a week or two weeks or a month. Isn't there some way we can cure that?

Dr. BAKER. The compulsory-education law provides a way. The child is supposed to be under observation until 16 years of age, and only to remain out of school so long as they are employed.

Commissioner LENNON. There are failures here in New York?

Dr. BAKER. My personal observation is that that law is hardly enforced at all.

Commissioner LENNON. That is all.

Chairman WALSH. How many certificates are there in the Borough of Manhattan? Do you know, offhand?

Dr. BAKER. I don't believe I could tell you that offhand. There are about 41,000 for the city.

Commissioner LENNON. Forty-one thousand?

Dr. BAKER. Yes, sir; that is for 1913.

Chairman WALSH. For Greater New York—all boroughs?

Dr. BAKER. The five boroughs; yes, sir; probably nearly half of those are in the Borough of Manhattan.

Chairman WALSH. That is all. Thank you, Dr. Baker.

TESTIMONY OF MR. JOHN H. WALSH.

Mr. THOMPSON. Mr. Walsh, will you please give us your name, your address, and occupation?

Mr. WALSH. John H. Walsh, assistant superintendent of schools, board of education.

Mr. THOMPSON. How long have you been in that position, Mr. Walsh?

Mr. WALSH. You mean the particular one of compulsory education?

Mr. THOMPSON. Yes.

Mr. WALSH. A year and a half.

Mr. THOMPSON. What connection had you with the department of education before that?

Mr. WALSH. Associate assistant superintendent; but this is a special assignment. There are eight of us that are assigned to different positions, and this was put in my charge September a year ago.

Mr. THOMPSON. What are the requirements of the law in regard to school attendance in New York City?

Mr. WALSH. The school law that all children between the ages of 7 and 16 must attend school for the full year unless they obtain employment on an employment certificate granted in accordance with the law.

Mr. THOMPSON. What number of officers have you got to perform the work of seeing that the law is fulfilled?

Mr. WALSH. One hundred and six, perhaps.

Mr. THOMPSON. What territory do they cover?

Mr. WALSH. The whole city—the five boroughs.

Mr. THOMPSON. In your opinion, are they able to cover the work pretty carefully and thoroughly?

Mr. WALSH. Oh, yes; easily. Too many, perhaps. The more officers we have the worse off we are. In Richmond, where we can do the work with two, they had 13 a few years ago.

Mr. THOMPSON. What is your reason for that, Mr. Walsh?

Mr. WALSH. My theory is that the truant is largely manufactured in the school by the teacher and by the opportunity. In the first instance, all cases of absentees should be dealt with by the teacher. She could ascertain the cause. Where they do otherwise they send down the roll call to the school clerk, who copies the name of every absentee. The thing goes peremptorily, if the truant officer is visiting the house all the time. In some schools the teachers go to the homes themselves and inquire as to the cause of the absence. In one school the teacher gets there before 12 o'clock. It breaks the heart of a hookey player to get caught in half a day. In the other cases, where too many cases go to the officer, he may not get around for a week, and you know we do not worry about a note that is four months off. We take more chances.

Mr. THOMPSON. How many pupils do you usually have in this city?

Mr. WALSH. Forty-five on an average.

Mr. THOMPSON. Isn't it possible for her to teach the school and follow up the children?

Mr. WALSH. She has only one or two that needs attention. She knows where the brother is or the cousin is. The efficient teacher has no absentees.

Mr. THOMPSON. There is a school census taken in this city?

Mr. WALSH. Yes, sir; there is a census board taking the census.

Mr. THOMPSON. How is that taken, and what does it comprise?

Mr. WALSH. The census board has been merged with the compulsory education board. On the 1st of May the new law went into effect. The old law required the census to be taken by police officers, but a couple of years they found the police officers were not satisfactory and now it is done by the enumerators of the permanent census board. They work in a district, but they have not covered the whole city as yet, perhaps, the second time. On the 1st of July, perhaps, we will start and use our attendance officers and help the enumerators and take up the census as far as possible and keep it going on up to it.

Mr. THOMPSON. Of what did that census consist, children or adults?

Mr. WALSH. Children up to the age of 18.

Mr. THOMPSON. Children up to the age of 18?

Mr. WALSH. Yes, sir; that is, the follow-up after they leave school.

Mr. THOMPSON. What supervision is there over the work of certifying to the educational requirements of children seeking employment certificates?

Mr. WALSH. You mean the examination by the board of health?

Mr. THOMPSON. I mean what supervision of your department, or does the board of education make?

Mr. WALSH. The board of education has a blank that the principal of a school fills out, stating that the child has attended 130 days in his school immediately following his thirteenth birthday or immediately preceding the date of application for the license, and that the child has finished a sixth-year course.

Mr. THOMPSON. Who issues that certificate?

Mr. WALSH. The principal of the school.

Mr. THOMPSON. Is there any supervision over such certificate by any department or the board of education?

Mr. WALSH. In no other than by the board of education, except that the district superintendent of a district is supposed to conduct an examination at which those children were examined. The law does not require that, but the rules of the city superintendent call for that. A child who has finished the sixth year can surely pass the board of health examination. The tendency of the principal is to get rid of a nuisance, and he crowds them on the sixth year overnight.

Mr. THOMPSON. What provision does the board of education make to catch just such cases and prevent the principal from doing that?

Mr. WALSH. The department of health generally notifies the city superintendent of the cases of the certificates refused for lack of education.

Mr. THOMPSON. Then the board of education relies upon the health department as a check upon that subject?

Mr. WALSH. Yes.

Mr. THOMPSON. Why, if you know, has not the board of education developed some closer check itself?

Mr. WALSH. Well, most of those people who apply for certificates of that kind, I imagine, are driven to it by stress of poverty. It is a condition; the father meets with an accident; there is no one on earth to work but that boy and that girl, and there is such a condition there that the principal rather weakly gives certificates of attendance.

Mr. THOMPSON. With that knowledge in the minds of the heads of the department of education, why don't they institute or employ some additional check on the action of the principal?

Mr. WALSH. I would not check that fellow. I would hope it could go through

Mr. THOMPSON. You would?

Mr. WALSH. Yes, sir. It is a condition and not a theory. I have it every day. Nothing in the house, no shoes to wear, no clothes. What are you going to do?

Mr. THOMPSON. Did you hear Dr. Baker's testimony to that, upon the examination of three hundred and fifty-odd cases, it was found that only 20 per cent of those cases were cases where there was economic pressure?

Mr. WALSH. Yes; but what is the individual going to do that is hungry? There is 100 per cent there before me.

Mr. THOMPSON. When the applicant comes for the issuance of a certificate, no investigation is made by the department or by the board of education to see whether there is any economic pressure?

Mr. WALSH. No, sir; not by the department as a whole. Miss Baker may be a little astray about some of those things. There was an old form of certificate in which the grade was not specified, and sometimes the principal used those. When Mr. Maxwell found out he sent an order not to use them. The principal did not have to state the grade in which the child was.

Mr. THOMPSON. Assuming a child comes to you and says, "We have no bread in the pantry, we are hungry, and I have got to go to work," I would judge from what you say that there is no investigation made of that statement by the board of education, and no means of investigation, but that you take the child's statement as a fact?

Mr. WALSH. A child is not at work, it is reported to us as not at school. We call on the parents and they tell us that the reason the child is not at school is because it has nothing to go to school with. We have in different schools ways and means of getting a pair of shoes or something of that kind, and we manage to do it. Occasionally we find how they are working some place making five or six dollars a week, it is my duty, perhaps, to order that parent taken before the magistrate's court. If this parent can show a case of poverty, no magistrate will convict that parent. There is no money to pay the fine if he is convicted.

Mr. THOMPSON. Does your department send out an investigator to see whether or not the statement of the child or statement of the parent is correct?

Mr. WALSH. We have a truant officer who does that. It is a part of his duty to get at the conditions. And that is confirmed by another man sent out for that purpose.

Mr. THOMPSON. Then you do make up a check?

Mr. WALSH. Yes, sir; as to the hungry part; yes, sir. But we have no means of relieving that.

Mr. THOMPSON. I understand that newsboys and other street trades are licensed?

Mr. WALSH. Yes, sir.

Mr. THOMPSON. Those children are licensed?

Mr. WALSH. How are they licensed? What supervision is there over them?

Mr. THOMPSON. The newsboy license is issued by the board of education, on the statement by the principal that the boy attends school regularly and is of the requisite age, under 12.

Mr. THOMPSON. You mean over 12?

Mr. WALSH. Over 12. A license is issued for him to sell after 6 and before 8 p. m. The other trades, I guess, are licensed in the mayor's office.

Mr. THOMPSON. What supervision is there by any department of the board of education or any other State department of such child?

Mr. WALSH. We have a squad of men to go around the streets to see whether the newsboys are licensed, to see whether they are selling after hours or not.

Mr. THOMPSON. How many men have you got?

Mr. WALSH. Perhaps five. There are, of course, 10,000 police who are engaged in that also, theoretically.

Mr. THOMPSON. How many licenses have been issued for that purpose in this State?

Mr. WALSH. I couldn't say. They are printed in the annual reports. They are issued by the superintendents, 23 of them throughout the city.

Mr. THOMPSON. Do you know about how many are issued each year?

Mr. WALSH. I couldn't guess. I see it from time to time.

Mr. THOMPSON. Does the labor department of the State report to your department of the board of education the names of children whose employment licenses have been revoked during the year?

Mr. WALSH. Not directly. We send one of our men around there once a week to get a list of their names. They did that formerly, but they prefer that we would. One of our men calls for the list and copies it.

Mr. THOMPSON. Do you consider that as an adequate check up of the certificate where canceled?

Mr. WALSH. Well, yes. I say that because the thing is confirmed a little by the census bureau. The census bureau keeps track of all those cases of nonemployment and posts us; that is, of the districts in which they are at work. We have that in addition.

Mr. THOMPSON. What is done in this case where the certificate is canceled?

Mr. WALSH. The boys go back into school. He is treated as a truant—put back into school.

Mr. THOMPSON. Do you know how many children are returned to school who are found with certificates of employment and still are unemployed?

Mr. WALSH. Practically none.

Mr. THOMPSON. Practically none?

Mr. WALSH. Practically none.

Mr. THOMPSON. Why is that the case?

Mr. WALSH. Well, we do not hear of their losing their positions. If we should happen by any accident to hear of the boy claiming he was looking for another job, it is only when the boy becomes a nuisance or is hanging around the streets that we know he is not working.

Mr. THOMPSON. Is it possible under the New York State law to follow up children who have had certificates?

Mr. WALSH. Not under the law as it stands. It should be modified.

Mr. THOMPSON. Has your department, the board of education, or your department in the board of education, or has the board of education itself got any power to follow up those cases?

Mr. WALSH. There is not any way that we can ascertain, in the first instance, where the child is working. In most instances it is among the foreigners, and they always assume we are inquiring for some ulterior motive, and they then will not know how to speak English. But the license ought not be issued to the boy, but to the school. The law makes it his property. If the law should read that it should be sent to the employer only when he has received a job, with the understanding that it is to be returned by the employer back to the school after he is out of the job, that would be much better.

Mr. THOMPSON. Then you would favor an amendment to the law, is that right, in that respect?

Mr. WALSH. Yes, sir; by all means. Just now the principal drops him from the school the minute he asks for his school papers, and takes his books away from him. He puts almost a premium on his absence. The boy ought to be on the books until he has a job, allowing him a certain length of time, an hour or so in the morning or evening, to go and look for a position.

Mr. THOMPSON. Do you believe a central bureau performing the functions of enforcement of attendance laws, taking school census, issuing employment certificates, vocational guidance, and placement, will result in greater efficiency of administration of child's labor laws?

Mr. WALSH. I assume the board should issue it. The temptation is to let them off too easily. I would rather have the outside body issue it; they have to determine the physical condition and they have to keep us straight in those other things. The only trouble is they are a little too strenuous about the birth certificate.

Mr. THOMPSON. The health department?

Mr. WALSH. Yes, sir. A man falls from a ladder and breaks his leg to-day. His family are keeping that child in school. The child is in the eighth grade, and she has to go to work immediately. She goes to the health department. The ages as gathered from the school records will show that she is 15 past.

But she has to send to Russia for a birth certificate, and that is not obtainable. They may be, but it is impossible almost for her to get it, and they have to wait until they send a letter to Russia and give it time for return—a reply in return. The people at the other end do not answer rapidly. They should use a little discretion when there is a condition that makes it essential.

There is a child born on a boat, and they can not furnish a baptismal certificate; but we can show that the child has been in school for 11 years, and she must have been 5 when she went in there. But that does not satisfy them. They stand on the law, which is impractical. There should be a lucid interval perhaps.

Mr. THOMPSON. In other words, you believe that the health department should be allowed more discretion?

Mr. WALSH. I think so.

Mr. THOMPSON. Or should exercise more discretion in the matter of issuing a permit?

Mr. WALSH. I think so. You know the length of time it requires to go to Russia and the conditions in Russia, and a good many of the hard cases come from there.

Mr. THOMPSON. Is it possible or probable that the present attitude of the health department in regard to issuing certificates on this question of age is caused by the fact that so many people try to get children's certificates who are younger than 14?

Mr. WALSH. Yes, sir; that is the case. Some of those people would make affidavit as to anything. But one of the troubles is with this passport business, to start with, where the facts are all there and it is clearly evident that the child is of the requisite age and has gotten beyond the school years required, there should be a little latitude.

Mr. THOMPSON. Do you think that whole matter could be handled better if those various functions which I have stated were put in one central bureau?

Mr. WALSH. No, sir.

Mr. THOMPSON. I mean if the central bureau was taken away from both the board of health and board of education?

Mr. WALSH. I think two things work all right. The board of education issues a certificate that the child has reached the requisite age, and the board of health must pass upon the health qualifications. It works in most instances——

Mr. THOMPSON. Have you any particular views in reference to the educational test, the physical standard, a child should have?

Mr. WALSH. None at all. The child should have those.

Mr. THOMPSON. As they are at the present time?

Mr. WALSH. Yes, sir.

Mr. THOMPSON. Do you believe a child should have the promise of a job or pledge of one before he has a certificate?

Mr. WALSH. The employer would not deal with him in that way.

Mr. THOMPSON. He would not?

Mr. WALSH. No, sir; but he should not be allowed to leave school. The boy can be given a card to state that he has a certificate which will be sent to the employer upon due notice. That would answer it. As it is, the employers do not accept them very much under 16, so that the thing is working fairly well.

Mr. THOMPSON. Have you any opinion or views as to the necessity of part-time education of children in industry?

Mr. WALSH. Well, this allowance of the so-called continuation class to take the place of evening school would be first rate. Those people who were most strenuous against the evening school are now willing to admit it was a serious blunder. A child working all day ought not to be compelled to study at night.

Mr. THOMPSON. How about part-time children in industry during the day-time?

Mr. WALSH. But that would be all right so soon as we can get the schools for it. We are just beginning the tests here now. We have not room enough for the other children.

Mr. THOMPSON. Where are you organizing and what have you done?

Mr. WALSH. School, public school 62 in Manhattan, 27 and 28. The principal has been authorized to start these last two years four courses. One perhaps is a commercial course, and then the other three are in different industries; that is, metal work and electrical work and woodwork. There is to be a nine weeks' course provided for those youngsters to see if they can find the thing that will suit them best, and when that is determined then they will spend the remaining part of the two years in that particular work.

Mr. THOMPSON. Referring to the time, part-time instruction for children who are already working, has anything been done here in this city in that regard?

Mr. WALSH. So far as it has been done, in the department stores, almost entirely; that is, Abraham & Strauss, Bloomingdale, Altman, and so on. The Hotel Astor—I think that is in the evening though for the chambermaids and others to learn English.

Mr. THOMPSON. Has the board of education anything to do with that?

Mr. WALSH. We furnish the teacher and they furnish the room. An hour or two hours a day for instruction. Those are for children not required to go to school. Generally girls.

Mr. THOMPSON. Have you any voice as to what might be done along that line generally by the State?

Mr. WALSH. Mr. Maxwell is studying that and some of my colleagues, and they are so much more intelligent than I am that I am letting them struggle with it, and then when they get through I will find it all right from them and claim it was my own.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Are there any questions?

Commissioner GARRETSON. Mr. Walsh, I notice you hold that the administration of the department of hygiene is a little strenuous in the application of those laws.

Mr. WALSH. They have to take the thing as they find it, but they could have the law modified I think and could realize that the length of time might be an insuperable barrier. They are allowed a physical examination by doctors, which would take the place of all this.

Commissioner GARRETSON. Has the department in charge of compulsory education in the city, on the other hand, ever been charged by anyone but the employer that wanted the children or the employees or the parents of the child with being too strenuous?

Mr. WALSH. No, sir.

Commissioner LENNON. Mr. Walsh, I want a better understanding of how the children get certificates showing that they passed the educational test. Do I understand that the principal of the school is the first party in charge there?

Mr. WALSH. He is the first party in charge of issuing the school certificate, making the statement that they have been so many days in school.

Commissioner LENNON. Does he make a personal examination, or refer to the records only?

Mr. WALSH. An examination has generally been held in the school, in the district, and he sends his children up on a specified date. That was under the old regulation where they were allowed to get those certificates at the end of the fifth year. Now, at the end of the sixth year, at the age of 16 years, it is not assumed that this examination is necessary, although the certificate still calls for it, because the board of health tests are so very simple that any child at all that has been in the school in the fifth year should be able to pass it. The State law requires that this instruction shall be had in the English language, in geography and so on. We get a class of girls over here from Germany, Austria, Italy, and some of those countries, and some of them are 14 years past and they have completed the elementary school across in their own country and in their own language of course. It does seem kind of a hardship to expect them to take out an employment certificate. Their language is deficient in English, but they have the geography and the mathematics. They may have had the English, and in many cases they have, but the law seems a little severe on them. It is to prevent people in this country from receiving instruction in foreign languages, but it mistreats those people.

Commissioner LENNON. Does the principal assume authority contrary to law to pass them anyhow?

Mr. WALSH. He issues that certificate, I suppose, without very much inquiry, except that the parent makes the statement that the child is very much in need of work, or that the parent requires his services.

Commissioner LENNON. What did you mean to indicate by the children who desire certificates having to go to some certain school to secure the certificates? Is it done by districts?

Mr. WALSH. Mr. Maxwell, to secure a little uniformity, called for this thing to be done in districts. We have 23 districts.

Commissioner LENNON. Yes, sir.

Mr. WALSH. We have district superintendents in charge of each. The district superintendent would designate the school in which the examination was

to be held on a certain date, and he would approve the questions that were to be put at that examination.

Commissioner LENNON. That is the principal at that particular school?

Mr. WALSH. The principal at that particular school would conduct it. He probably would not make the questions, necessarily.

Commissioner LENNON. What power of revision is there at any point in the school system? Has the district superintendent any power of revision over the issuance of a certificate by the principal of a particular school?

Mr. WALSH. Well, I have found some trouble in some cases—that there was not any standard for this examination. I found one principal complaining against the board of health for turning down one of his children, and I think under his own children the child got only 20 per cent in arithmetic and perhaps 30 in English. He made quite a farce of it, because there was not any rule saying that they had to reach a certain point. But this fellow was so troublesome it was anything to get rid of him.

Commissioner LENNON. In other words, it is anything to get rid of the children, because there is not room in the school?

Mr. WALSH. No, sir; because he is a nuisance. The truant is somewhat of an initiative and some some red blood, and they do not like them. They want a fellow that is chloroformed and who comes to life at——

Commissioner LENNON. I have not found any women teachers that way?

Mr. WALSH. Unfortunately, I have.

Commissioner LENNON. Would you advise this commission to recommend to the cities of the United States and to the several States the adoption of the same kind of a system that you have here as to an educational test before children are permitted to go into industries?

Mr. WALSH. I think it would be safe. I think it works all right with us.

Chairman WALSH. That is all, thank you.

TESTIMONY OF MR. GEORGE A. HALL.

Mr. THOMPSON. Mr. Hall, will you give us your name, your address, and your position?

Mr. HALL. George A. Hall; secretary of the New York Child's Labor Committee, at 106 East Nineteenth Street.

Mr. THOMPSON. How long have you been secretary of the New York Child's Labor Committee?

Mr. HALL. For 10 years, sir.

Mr. THOMPSON. Ten years?

Mr. HALL. Yes, sir.

Mr. THOMPSON. What is the work of the New York Child's Labor Committee?

Mr. HALL. It is a committee of private citizens of New York City and throughout the State interested in the whole question of the bearing of our child-labor laws, both in the statute itself and in its enforcement, and through investigators we make a study of both of these lines of work.

Mr. THOMPSON. Concretely, what do you do? What do your investigators do in regard to the enforcement of the administration laws?

Mr. HALL. Take, for example, the matter of the issuance of employment certificates, which has been under discussion this morning; our committee has in its employ two agents or investigators who give all of their time to the study of this work as carried on by the officials. They are located in the two offices—one in Manhattan and one in Brooklyn—where the larger number of employment certificates are issued. They are there through the courtesy of the department of health, and have no official standing or connection whatever with the department, and have nothing to do with passing officially upon the question. But they are there to assist in any way possible, especially to help untangle the difficulties which may arise with respect to the securing of proper kind of evidence of age by the parents of the children who come for employment certificates.

Mr. THOMPSON. Do they sit with the officers who pass upon those things?

Mr. HALL. They sit in the same room with them, but, as I say, they have no official authority to act upon or reject or approve of the evidence of age, or any other papers presented.

Mr. THOMPSON. Starting first a little out of order, with the question of the certificates of age, did you hear what Mr. Walsh had to say about the rigidity with which the law is enforced in this State?

Mr. HALL. Yes, sir. I heard that testimony, and I should enjoy making some comment upon it and presenting some other evidence which I have upon the subject.

Mr. THOMPSON. Unless you prefer to take it at some other time.

Chairman WALSH. I think maybe right now we will hear the comment on that, Mr. Thompson, briefly.

Mr. THOMPSON. Very well, you may comment on it.

Mr. HALL. The law is somewhat stringent, if you wish to call it that, with respect to the kinds of evidence of age to be presented, and the order in which it is to be presented. The law has been so framed, and the result of experience in this State and in other States in which it has been found that where the lesser kinds of evidence—lesser in value and conclusiveness—are allowable it is usual for the parent to follow the line of least resistance and furnish the easiest kind of evidence, which is usually the poorest kind of evidence. And in States where the law accepts those kinds of evidence or permits them the parents show a strong tendency to put their children to work under age, making the statement that they are 14 when they are not actually 14. In order to make sure that the child is of legal age, the law was made thus rigid. That is the reason that the birth papers are required, that being the best kind of evidence; and if you put all these kinds of evidence on the same plane and let them be alternate the chance is that the child will bring the poorer kind of evidence first.

Mr. THOMPSON. Take the case that Mr. Walsh stated.

Mr. HALL. With respect to the comments of Mr. Walsh, he has indicated that there is a great deal of trouble on the part of children, especially the foreign born, to secure satisfactory kind of evidence of age. That very point has been of greatest interest to our committee, as part of the work of some of our agents has been the making of statistical studies of just that point.

Mr. THOMPSON. Have you those studies there?

Mr. HALL. I have the results of them—a summary.

Mr. THOMPSON. We will be pleased to hear them.

Mr. HALL. We found that, during the year 1913, of 20,000 children who received employment certificates, 74 per cent presented birth-paper evidence, the best kind of evidence; this refers to New York City. And we also ascertained that of this 74 per cent, 29 per cent were foreign born and 71 per cent native born, and it was found that taking the entire number, 64 per cent presented perfectly satisfactory, good birth certificates. That answers, it seems to me, very well the statement that that is a very harsh law, because it requires the birth-paper evidence.

Mr. THOMPSON. Now, just at that point, he said that they were often compelled to furnish these birth certificates and could only get them at great delay.

Mr. HALL. There is delay in some instances, but which can very easily be overcome, and which has been overcome in many instances, through the foresight of the superintendent of schools of this city, Dr. Maxwell, who has made a recommendation or suggestion to the principals that where children are expecting to leave the schools to go to work at the end of the year that they advise them; then, at the beginning of the year to send for their birth papers, if they are to be gotten from a foreign country, and have them ready, so that they may get their certificates from the school when the end of the time arrives.

Mr. THOMPSON. You may go on with your statistics.

Mr. HALL. That, I think, covers on that one point the evidence with reference to this matter all that might be of interest to you now.

Mr. THOMPSON. What have you to say with reference to the conditions for obtaining employment—cities taking up the matter of requirements, educational tests, physical tests, and so on?

Mr. HALL. The educational test, it seems to me, is a matter of the highest importance, especially in this city; and I think, from the words of Mr. Walsh himself, you all recognize the need of just that test and the need of checking one city department on the other to prevent many hundreds of children going to work who have not met the very small and meager requirements of the law. The educational requirements of the law are requirements made on the average boy of 12 years old. The average normal child, promoted from year to year, would meet these requirements at 12 years of age. Those are the same requirements which are made of a child of 14 years who wishes to go to work, allowing him two years leeway for sickness, absence, or other reasons, and those are made the minimum requirements. They are requirements which must be finished—the six-year for all—and the law ought to be rigidly enforced.

Mr. THOMPSON. What have you to say as to the suggestion made that where a child seeks its certificate for employment on the ground of necessity that there should be an examination into the condition of that family?

Mr. HALL. I have no objection at all to that examination; but I do believe very strongly, however, that any situation such as may be represented with regard to the economic stress should not be a ground failure to enforce rigidly the law as to requirements. I believe there are plenty of agencies, both private and public, that are willing to help that family; and if there is the need that is claimed it can be taken care of. But our child-labor committee, which has been interested in this line as well as others, has found by its investigations through trained paid workers that there is not the amount of poverty that is claimed or is alleged here.

Mr. THOMPSON. What have you to say with reference to the physical tests made—examinations?

Mr. HALL. The physical test, it seems to me, is extremely desirable and should be enforced rigidly. I might say our investigations throughout the State showed that it is pretty well enforced throughout the larger cities; it is not so well enforced in the small towns, perhaps due partly to lack of equipment and partly to lack of supervision. There is now a State law which requires the State labor department to concern itself in supervising the work of issuing employment certificates throughout the entire State, and they have now the authority to go in and visit these officers and find how they are doing it and to help improve the work. I think that authority should be exercised to the fullest limit, because we know that in some of the smaller towns the children are receiving employment certificates who have not the proper requirements.

Mr. THOMPSON. You believe the requirements as conducted in this city are sufficient?

Mr. HALL. In the matter of physical tests?

Mr. THOMPSON. Yes.

Mr. HALL. I believe on the whole they are fairly satisfactory. I would like to see very much something established in the way of standards which might be rather uniformly adopted throughout the State. That would require, I believe, a study on the part, perhaps, of a commission of physicians—somebody adequately prepared to take it up from a medical standpoint.

Chairman WALSH. We will now adjourn until 2 o'clock p. m., to meet in this room, if you will come back at that time, Mr. Hall.

(Whereupon, at 12.45 p. m., an adjournment was taken until 2 p. m.)

AFTER RECESS—2 O'CLOCK P. M.

Commissioner LENNON. The commission will come to order.

Mr. THOMPSON. Will you please take the stand, Dr. Steinmetz?

TESTIMONY OF DR. CHARLES P. STEINMETZ.

Mr. THOMPSON. Doctor, will you please give us your name, your age, your occupation, and your profession?

Dr. STEINMETZ. Charles Proteus Steinmetz; age, 49; occupation, chief controlling engineer of the General Electric Co.; professor of electrophysics at Union University.

Mr. THOMPSON. How long have you been connected with the General Electric Co. in your capacity as chief engineer? Tell us about it.

Dr. STEINMETZ. I have been connected with the General Electric Co. since 1893; as chief controlling engineer since about 10 years.

Mr. THOMPSON. As chief controlling engineer, what are you called upon to do by the company, briefly?

Dr. STEINMETZ. Everything in engineering matters which is beyond the scope or province or ability of any other engineer.

Mr. THOMPSON. What is this Union College that you spoke of?

Dr. STEINMETZ. It is an American university, located at Schenectady, and founded somewhere in the eighteenth century; an old-established college.

Mr. THOMPSON. What work have you in connection there, or what chair do you occupy?

Dr. STEINMETZ. I have occupied the chair of electrical engineering since 1902, and since last year I am occupying the chair of electrophysics, which means that I am not able to devote so much time to the college work as I have before, and so have partly retired.

Mr. THOMPSON. Where did you receive your education, Doctor?

Dr. STEINMETZ. In Germany and in Switzerland—Universities of Breslau and Polytechnic of Zurich.

Mr. THOMPSON. In the course of your professional and educational careers, Doctor, have you considered the subject of industrial education or training for the young?

Dr. STEINMETZ. I have.

Mr. THOMPSON. Referring first to the question of prevocational training of children, what kind, in your opinion, ought it to be, and at what age should it begin, and what should be the grades of the pupils?

Dr. STEINMETZ. From my experience as consulting engineer, as university professor, and as past president of the board of education of my home city, I have come to the conclusion that vocational training—that is, teaching of a trade or the rudiments of a trade—should not be a part of the school curriculum in the grades of the public schools, but vocational training should begin after the pupil has graduated from the general education course of the public school, for the following reasons:

In former times education consisted of, and still now essentially consists for the masses of the people, of a general education as given by our public-school system. And it is special training in the trade, profession, or business which the young citizen intends to use in his life work.

Now, the former part of the education, the general education or instruction in all those subjects which the young citizen of to-day must have, and which are necessary before the pupil can begin to specialize in learning a trade, entering a business, or learning a profession. Now, this former, this general education part, has been given and is still given to-day very satisfactorily by the public-school system of the country. I therefore do not believe that there is any call for a reorganization of the public-school system. But the need is, as I shall show, for an extension of the public-school system. There is no call for a reorganization; but, in my opinion, based upon my experience, the public-school system or the grade schools of this country as represented by the better class of school organizations in those States where there is a reasonably efficient educational law, as in this State, in those cities where there is a reasonably efficient educational system, as in my home city, under those circumstances I do not think there is a possibility of a radical improvement in the general educational system; but this system, in my opinion, is, in general, entirely satisfactory; which naturally does not exclude that modifications and improvements should be made and will be made from time to time, and are being made.

For instance, some of the improvements needed in our general education system are, first, an improvement in the quality of the teaching staff by providing a more appropriate remuneration for the teaching staff, and thereby attracting a better and a higher grade of intelligence to the teaching in the common school.

Second, extension of the physical-welfare work. In short, a greater attention paid to the physical education of the pupil, comprising physical exercises on playgrounds and athletic fields and medical supervision and inspection. While this was not necessary in the bygone days of rural communities, in the colonial or postcolonial days, now, where the majority of the population is living or collecting into cities, the physical education of the pupil is becoming of increasingly great importance, and increasingly greater effort should and must be made to look after it, as equally important, if not in some cases more important, than the intellectual education.

That such improvement, in my opinion, is necessary is to more systematically introduce in all public schools within the grades, and not only in those which are more advanced, manual training and domestic science.

Now, I wish to expressly call your attention to the distinction between manual training and vocational education.

The purpose, as I understand it, in vocational education is to prepare the pupil for a trade or teach a trade, while in manual training what we endeavor to do is to give the pupil familiarity with the common tools of modern industries and enable him to drive in a nail straight without hitting his finger, and it enables a girl to bring a pot of water to boiling and know when it boils, which is not so well known to most of them.

Now, this manual training and domestic science is of importance to all pupils and should be mandatory, but especially of importance to those who do

not go into trades and professions—to the clerk and to the office man who has no chance afterwards to learn the handling of tools.

Therefore it is not of the character of vocational education; it is manual training.

Now, this should be placed in the grade schools and should begin in the kindergarten with the simplest manual-training exercises—paper folding, the use of scissors, with paper instructions, materials, and gradually extended through all the grades.

But vocational education, the preparation and teaching of a trade, does not, in my opinion, belong to the grade school.

Now, the public-school system has been severely criticized by a number of people under what I consider a very shallow song, for the reason that the graduate of the grade school has learned very many things, but has learned nothing whereby he or she might earn a living. Now, that is true, but the practice of general education of the grade school is not to enable the pupil to earn a living, but is to enable the pupil to begin to learn a trade or profession or business whereby he would be enabled then to earn his living.

Now, the second part of the education, then, consists in the learning of a trade, etc. Now, this second part has been taken care of in former times by private interests in the form of apprentice boys and similar education methods. By the constant development of modern industry, this apprentice clause, and with it all the chances of this second private education, have been wiped out, and this unsatisfactory situation which confronts our society to-day is not a failure of the general education system, but it is the collapse by the corporate industrial development of the special training and preparatory work for trade or profession.

Now, in my opinion, here, as in all cases where private enterprise fails, it is the duty of the community or society to step in and provide what private enterprise can not do or has become incompetent to do; that is, provide the means of educational training, or the teaching of an industry, but that must not be begun in the grade schools and during the time provided for general education.

The learning of a trade has been successful in following the general education in former times, and so it must remain, because the time devoted in the grade schools to general education is altogether too short to-day, and to sacrifice more of this time to teaching a trade or profession would be, in my opinion, suicidal, and therefore I am of the opinion that vocational training and industrial education should follow the education work in the grade schools and should not enter into a grade school at the sacrifice of the educational and manual training and domestic science, which are a part of modern general education and belong to the grade schools.

Mr. THOMPSON. Now, Doctor, it has been testified here by other witnesses, particularly Dr. Richards, that the vocational training should not be deferred until after the grade schools are finished, for the reason that the economic pressure is so great after a child passes the age of 16 that they would not be able to devote the time to vocational education necessary because of the need of earning a living. Would that affect your testimony; if it is a fact, would that alter your opinion in regard to what you have said?

Dr. STEINMETZ. No; it would not. First, it appears rather strange to-day, where all over the effort is being made to find some way where the hundred thousands or millions who have nothing to do, have no work, may find something where they can occupy them in doing work. We would do better to take care of that than to prate about the young people not having enough time to get an education.

Now, there is plenty of time for it, and we must get the time. Now, the time is there, and we think there is rather more frequently time when the surplus of labor, the surplus of available time on hand of the masses of people who work and have to work than a laxity of it.

In short, the times where there is a scarcity of available labor are much rarer than the times when there is a surplus. Now, it is argued there that the children can't get the proper education, because they have to go to work and earn their living. Now, first, there are the parents, and, second, there is society, which is eminently interested in having the citizens efficient and competent; and, third, it is not in the interests of society to turn out incompetent, unskilful, inefficient citizens, merely to save a year or two in the preparation by leaving them incompletely prepared.

The same argument may also be made against the eight-hour labor day, because if we get everybody to work 10 hours we can turn out so much work, and

industrial pressure is not so high any more as against 10 hours, you might say 12 hours, and you can extend that in the same argument, the same intelligent reasoning can be applied, to say that half or the majority of people should be locked in the factories, in barracks, should be fed there, and the men sent to work and come back again, because then they can turn out the most work. Now, that is all very nice, but, after all, we are all human beings, you and I and all the other people, and they have some rights as human beings, and industrial rights and other rights are really secondary to the rights of human beings.

Mr. THOMPSON. Well, Doctor, in case there was such a thing as an economic pressure and these boys 16 years of age, and they were under the compulsion to earn or partly earn their living, how would you have society meet that necessity of the boy or girl?

Dr. STEINMETZ. I agree that at a certain age the children, the young people, have to begin earning their living, and the age may vary, depending upon the social condition of the unfortunate. The rich man's son might well afford to go without earning his living up to 25 or so, while the poor man's son to-day has to start earning his living at 14 years of age, though I would make such concession that at 14 years of age under certain conditions the young people are permitted to devote a part of their time to earning their living; but at least up to 18 years of age they should remain under the control of the educational system.

Mr. THOMPSON. But how would you provide, Doctor, for the sustenance or maintenance of the young people who, say, have passed the age of 16 and who were not able to earn enough and go to school and get their vocational training? Would you have the State, have society as a whole contribute toward their support?

Dr. STEINMETZ. The contribution by society, by the State, is fair, and will undoubtedly come in the future. But considering only immediate possibilities, I don't think we could consider yet the feasibility of the idea that society should contribute for sustenance of the pupils, but I would allow the pupil at 14 years of age to go and accept employment and earn their living, or as large a part thereof as possible, provided that employment is such as to contribute to some extent to their education, and provided also that a part of their time is still devoted to education. In other words, I would make a law that the school age extend to the completed eighteenth year of the pupil, but that at 14 years of age those pupils which can show that their parents or they themselves need the income, which can bring a certificate from the superintendent of schools showing that they have passed a certain definite minimum grade, which can bring a certificate from the health physician, showing that they are physically fit to enter industries, then they would be free to enter employment, with a limitation that during the week a certain number of hours, say, five, as a minimum, must be set aside for educational work; that the employer must agree also, and also that that employment must be of a kind approved by the school system of the location.

Now, I believe this is feasible, and is no serious hardship. It gives the employer all the time of the employee with the exception of, say, five hours, and limits the employment to a very moderate extent, including only such employment as drudgery and as unintelligent piecework, which is not justified.

Mr. THOMPSON. Doctor, calling your attention again to some testimony we have had this morning, two things have been stated. One is that the limitation of the hours of child labor in this State by law has lessened the desire for the labor of children for the work, that children are not as desirable as help in industries, and in addition that in the opinion of the witness many children are under a great compulsion, say, by the time they reach the age of 16, to support themselves. Now, under your system, under your views, as expressed, the children would be limited in the places they could get, and, in addition to that, they must still be under the need, however, of earning their living. Might not that create such a condition as would prevent the working out of the scheme you have in mind, those two factors?

Dr. STEINMETZ. Yes, sir; it might in some cases, but there is one serious difficulty in such a scheme.

Yes; it may in some cases. There is one serious difficulty with such a scheme where it is applied for the age from 14 to 16 years, that the limitation or exploitation of children, by requiring them to leave industrial work for five hours during the week to get education, this is a serious inconvenience to the industry; and as far as possible there is and will be a tendency of the

employers of young people to avoid employing children from 14 to 16 years of age. Therefore we may have a very admirable law stating that children from 14 to 16 years of age shall not be exploited without any recourse, but when employed they should get five hours a week of general education, should not be employed more than eight hours a day, etc.; but the result would be that these children would not be able to find any employment, because the employers would prefer people above 16 years free from these limitations. This I realize; that is the very reason why I believe that such a law when applied to the age from 14 to 16 would fail, while it would succeed when applied to the age from 14 to 18. If you include in these restrictions young people from 14 to 18, that means that the industries must either not use any young people at less than 18 years of age, or must submit to what little inconvenience is connected therewith. Now, while it is no serious difficulty to the industry to omit employment of children from 14 to 16 years of age, there is such a wide field of useful work which young people from 14 to 18 years of age can do at a price and at a cost that is much less than what possibly would be acceptable to employees of over 18 years of age that it would give very different results. So that by placing the dividing line at 18 years of age, in my opinion, the economic advantage to the industry is in favor, in most cases, of employing children from 14 to 18 years of age with those restrictions which I mention, rather than employing young people of over 18 years of age without restriction. The difference in age is accepted or the four years' difference in age is sufficient to give this economic advantage, which would not be given between 14 and 16 years. And that is, in my opinion, the reason, the economic reason, why such a restricted child-labor law should be extended from 14 to 18 years and not to 16 years, because in the former case it is economically feasible from the point of view of the industry, while in the latter case it is not feasible, but would merely deprive these children between 14 and 16 of industrial employment.

Mr. THOMPSON. Have you taken up the question of the training of the young in the industries by the industries themselves, and have you given that any attention?

Dr. STEINMETZ. Yes, sir; I have. As you know, there is a very strong tendency to-day in the larger centers of population to establish trade apprenticeship schools and corporation schools. There is a national society, and has been the National Association of Corporation Schools, of which I have the honor to be the vice president. So that question has been very strongly discussed and considered, and many industries are operating corporation schools and are operating apprenticeship courses. It must be considered that modern corporate industries are based on extensive division of labor, and that in an apprentice course, which of necessity must combine various classes of labor, they have relatively short intervals. Such a course has no place in modern industry, and can not be combined with modern industry; but is inherently of the outside; is some philanthropic institution—a measure whereby the corporation endeavors to train skilled workmen, but not a part and which can never be an integral part of the corporation. There are, in my opinion, three different methods by which the second part of the education of the average citizen—the training for a trade, business, or profession—can be accomplished. The first is by the independent vocational schools or industrial schools, such as those a number of which have been established in various States and have operated very successfully.

Now, the establishment of such independent industrial schools is very desirable; but it, in my opinion, can solve the problem of industrial education to a very limited extent only. In those industrial schools the pupil does not get any pay, but must support himself in spite of working without any pay nevertheless. The industrial school, as far as I can find out as to any I have investigated, does not pay for itself, but has to be supported. Now, it is rather difficult, practically impossible, to establish industrial schools and support the pupils during their industrial training for those hundreds of thousands or millions which year after year require industrial training; and that limits the industrial school. The industrial school now operates by carrying out industrial education without being in the industry, and therefore it is extremely inefficient and that is its limitation.

Now, the second method in industrial training is the apprenticeship course of the industrial corporation. Now, this is somewhat more efficient economically, but the experience with such apprenticeship schools in our corporation or our company, although our company operates and has operated an appren-

ticeship course since very many years, and I am wholly familiar with it, the experience is that the pay which can be paid to the apprentice is extremely low; so low, that as a rule, there is considerable objection, apparently justified, from labor unions and others against working for such a low pay.

At the same time the work of the apprentice does not pay, due to the relatively short time which the apprentice can be kept at the same class of work; the short period which he can use for his acquired skill is not sufficient to pay for the loss in giving him the skill. Furthermore, it is due to the interference or inconvenience of this whole matter of operation in these schools where the apprentices do a little of all kinds of work, while within the big corporation there is a strict subdivision of labor. And that again makes the apprentice school rather inefficient, so that even at the low pay given the apprentice, economically it is not a paying proposition for the corporation. Therefore it is undertaken and can be expected from the corporation only for the purpose of training a larger number of skilled workmen; but not as a part of the regular business. While the old apprenticeship system of course in the days of small production was productive, the apprentice in early days paid by his work for his keep and whatever he earned, and a great deal of it was profitable then. Now, it is not any more. So you see this is another limitation. But to induce private corporations to maintain and extend apprenticeship courses, some inducement will have to be made to the corporations to go into that; and I believe the inducement could be by recognizing these apprentice courses as continuation schools.

In short, by accepting the apprentices as coming within the line of the pupils from 14 to 18 years of age. Under such supervision naturally which would guard against abusing this privilege. Now, the third method of taking care of industrial training is by allowing the pupil between 14 and 18 years of age to enter the industry with some limitations, which I will point out, by retaining school control over him up to 18 years of age, providing a limited number of hours of educational work for him during the week.

Mr. THOMPSON. Doctor, how would that school control be maintained over the pupil in one of these corporation apprentice schools that you speak of?

Dr. STEINMETZ. Either five hours a week of schooling would be given by instructors or teachers of the public-school system of the city—that means that these boys or girls are withdrawn from the factory or shop during five hours of the week to the schoolhouse; or, if so desired, the factory or industry combined may provide a teaching staff giving those five hours of instruction. This teaching staff, however, should come under the same rules and qualifications as those teaching in private or parochial or other schools that are not operated by the public-school system.

Mr. THOMPSON. In regard to the vocational work or training as apprentice that he would receive, that would also be under the supervision of the educational authority?

Dr. STEINMETZ. Where the pupil that is employed in an industry between 14 and 18 years of age I do not believe it is advisable or feasible to have the public-school system to control and take supervision or control over the vocational system, except to the extent of approving or disapproving of whatever class of employment the boy or girl enters, which must be reserved to the school system so as to guard against entering an employment where the boy or the girl can learn nothing. But there a very wide field must be left open, and the control is not advisable, because it would mean the public-system control of private corporations and private industries, which is not feasible yet.

Mr. THOMPSON. Now, Doctor, with reference to the vocational schools and the training the children receive thereby, would you provide for the control of those schools by the school boards which already exist, or would you have boards consisting partly of educators and partly of employers and partly of workingmen?

Dr. STEINMETZ. In my opinion the only feasible way and the only way which would not, in my opinion, very frequently lead to abuses much worse than the present condition is to place the educational work which is paid for by the community under one organization—our present educational system. Now, in conducting vocational schools our boards of education, our educational system, should be assisted by an advisory board or supervisory board, if you want to, taken from the industry—from employers and employees—but to have divided authority in educational matters would very frequently be fatal to the success of the educational system. There are very many places in this country—I refer to such as the many little towns in New England and all those small

industrial places along the Mohawk Valley, where the municipal administration is practically controlled by the local industry—where the local industry is owned by outside capitalists, so that the only principle there that is carried on is the local manager receiving orders from the headquarters in New York to economize and to increase the dividends, which means that the political system of those villages and municipalities is controlled by the industry.

Now, then, if we establish a secondary educational board consisting of both employers and employees, then either the employee's representative is really not the representative of the employee, in which case there will be a continuous disagreement and conflict, or the employee's representative, as is very commonly the case, are workmen from the ranks, nominated by their employers or the municipal authorities, favorable to the employers, and nominated because they are willing to approve anything that their bosses desire. Now, that would mean then that you would have an educational body under the control of the industry, which has the power to withdraw from the public school a great many of the pupils by carrying on this industrial education under conditions which usually would be unfavorable to general education and where an educational law is a step necessary to protect against abuses. In such cases the double educational government would just tend to throw the control of the educational system into the hands of the industry against which you want to protect the children from exploitation. For that reason I believe that the educational system of the country must be in charge. Furthermore we all know that political government is political, is changing, and very often of questionable character in all municipal, State, and national activities besides the Army and Navy.

The educational system of the country is that which is least affected by politics, because while the average citizen is more or less used to politicians playing with him, there is an inherent sentiment of the public at large against tampering with the educational system—with the schools. Therefore, in most places the schools and school organization is the strongest of all public organizations and least affected by politics in its unsatisfactory sense; and, therefore, if we can bring this improvement, the vocational education, under this one organization which will render it least under control of politics, it is a very great step again.

Mr. THOMPSON. Doctor, should the establishment of vocational schools be compulsory? And make your answer as brief as you can, Doctor.

Dr. STEINMETZ. To accomplish anything you must have an educational law requiring that between 14 and 18 years of age the children must remain under school control and receive a certain number of minimum hours of education; or if they can not find employment, spend all of their time under the educational system. Now, that means that we must provide educational facilities therefore, and so you see, as a matter of course and of necessity, an educational law extending the control of the school over the children from 14 to 18 years, such an educational law also requires compulsory establishment of continuation schools and provisions for vocational schools in whatever form they may be established. In many cases—

Mr. THOMPSON (interrupting). Well, Doctor, you are in favor of compulsory vocational schools?

Dr. STEINMETZ. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman.

Commissioner LENNON. In regard to the part-time schools, or the continuation school where the pupil will come five hours a week or more under the school system, what would you advise they should be taught during those five hours? What kind of instruction should they receive?

Dr. STEINMETZ. General instructions. That is reading, writing, arithmetic, etc.; but laying special stress on those branches of education which are especially important for the pupil's proposed trade.

Commissioner LENNON. Not the technique?

Dr. STEINMETZ. Not technical.

Commissioner LENNON. Of course it is not necessary to ask you, but you know the progress that has been made in some of the German cities regarding this vocational training or education. Is it not possible in this country, in your opinion, to approach something of the system of Munich or some of the other cities of Germany?

Dr. STEINMETZ. I am not so certain. I rather question whether it is advisable in this country to copy the old country, because the old country is established for such a long time, so that there the progress is only the progress of the population; while here we not only have to provide for the increase of popula-

tion, for the increasing and changing industrial requirements, but we have to create the very foundation. To illustrate, school-teachers: Here we have to educate not merely the additional school-teachers required by the increase of population but have to educate all of them, because the schools here are relatively still new.

Chairman WALSH. That is all; thank you, Doctor.

Doctor, was there any suggestion that you think you would like to make to the commission now that has not been developed by the questions? If so, we would be very glad to hear any suggestions you may have on this subject.

Dr. STEINMETZ. Now, the only suggestion which I would like to make is this: If in such vocational schools the supervision is under an industrial board which is advisory to the public-school system, this industrial board should consist of employers and employees. But in this case the employers represented there should be selected so as to be acceptable and satisfactory to all of the industries in that territory; and the employees should be selected by the employees and not nominated by the political organization which may be under control of one or the other; but they should really represent the employees. Their representative must be selected by their employees' organization—that is, by the unions or their trade assemblies. Otherwise we might just as well leave out the representatives of the employees, because even if they are chosen as such representatives fairly they would still be open to the accusation that they have not been selected by the employees and are therefore not proper representatives.

And the other suggestion I would like to make and draw your attention to, is the situation that this industrial development of the educational system of the country and training—perfection—has utterly collapsed. You still have the general education system on a better foundation than ever before, but the training in industry, but the trade—training in industry and trade—has utterly collapsed and can not be restored, and it now needs the efforts of society to place something under public control. That is extremely important, because I have no special training; the large majority of people which grow up, grow up without any trade or profession; that is, as far as the educational system is concerned, they are unskilled workmen. That is a very bad situation, more serious to-day than ever before, because we must realize that there is to be a very considerable dissatisfaction throughout the entire country; the masses of the people begin to ask to share in the Government. Now, we all realize that American Government has always been government by a small minority, consisting of a few intellectuals, a large number of property interests, and those men which have made public administration their business, and which we call the politicians or bosses; if we disagree with their views it is bad, but we are statesmen and leaders if we agree with them.

Now, at the present time the large majority of the people which have not taken much interest in former times in the Government of the country are beginning to take an interest in it and insist in participating in the Government. It is naturally—it is, a matter of necessity—unavoidable, if such a very large majority desires to have something; so we will get some time a democratic Government, where the masses govern the country. It depends upon us.

Chairman WALSH. Thank you very much, Mr. Steinmetz.

TESTIMONY OF MR. GEORGE A. HALL—Recalled.

Mr. THOMPSON. Mr. Hall, when you were last on the stand we had concluded the question of the physical test of applicants for employment certificates. Have you anything to say with reference to the conditions under which such certificates should be issued to children, as regards to whether they should be issued simply on the request of the child or whether they should be issued after some persons have pledged a job to the child?

Mr. HALL. I believe the parents should in all cases come with the children to make application for the employment certificate, to signify that they approve of the child going to work. But beyond that I do not feel that, in our larger cities, at least, it would be wise to exact a pledge of employment, special employment, before the child receives an employment certificate. I can conceive in a smaller town, with 100 or 200 people, that the issuing authorities might have no difficulty in knowing the employers and the employees, at least their names, but I can not conceive in larger cities, like New York and Buffalo, or even the second-class cities, I can not conceive of the issuing authorities being able to say whether or not the pledge brought is a bona fide pledge from the

name or from the signature of the person. Therefore I coincide very strongly with Dr. Baker's views this morning, that it probably is not a wise plan for New York State.

Mr. THOMPSON. You recall another question to my mind, which Dr. Baker touched on this morning, that, in her opinion, neither boys nor girls should be permitted to go to work until they are 16 years of age; between the ages of 14 and 16, that stage of their development, that it was not wise to have them work. What is your opinion in that respect, if you have any?

Mr. HALL. I feel that is largely a medical question, and a physician like Dr. Baker is better qualified to answer, but my general impression coincides with her view. I feel, perhaps, that it would be unwise to jump from a minimum of 14 to 16 or 18 without a gradual process, and I am rather inclined to favor increasing the educational qualifications rather than the minimum age. I think it makes a better argument, both for the child and for the public, to feel that they are getting more education, and taken say, through the course, until they are 16 or 18.

Mr. THOMPSON. From your study of the issuing of these certificates, have you any opinion as to whether or not a centralized bureau, combining the different elements that have been mentioned here to-day, would be better than to handle it by the three departments that it is now handled by?

Mr. HALL. I do not understand that in New York State, at least, three different departments handle the issuing of the employment certificates.

Mr. THOMPSON. They handle the question. The first two issue the certificate for educational qualifications; then comes the medical department, which makes an examination mentally and physically of the child; then comes the State department, which looks up to see whether or not children in industry have the proper certificates.

Mr. HALL. I feel that the New York law in that respect is a large one, as was expressed this morning by Mr. Walsh. It is responsible to have one department check another in those matters, and there might be, perhaps, some opposition, for example, to having the employment certificates issued by the school authorities on the ground that some of the schools—public schools, private and church schools—might object, and I think that there are various reasons why the present plan is the best plan, at least, for New York State.

Mr. THOMPSON. Did you hear Dr. Richards's views as to training children for industry?

Mr. HALL. I want to express my fullest approbation of his sentiments. I do not think I can add anything to what he said this morning. In fact, I fully concur in what he said.

Mr. THOMPSON. Is there anything else that you want to say?

Mr. HALL. I want to emphasize my own personal feeling, and I believe the feeling of the child-labor committee, in opposition to any amendment to the law which would allow the discretionary authority being visited in the hands of the law-enforcing officials. I feel very sure, in the matter of issuing employment certificates, for example, that the officials at the department of health do not want any such discretionary authority vested in them. It would be a burden day and night to them—the pleas for exceptions which would be made for all sorts and classes of people. I feel the more discretionary authority, oftentimes, the less the enforcement. So I feel that a rigid law is better, even though it does pinch in a few instances.

I want to add, also, to the record these facts:

The official reports of the New York State Labor Department for 1913 show that the inspectors of that department found at work in factories some 12,052 children in Greater New York; that the inspectors of the Mercantile Bureau Division within that department found something like 5,671 children at work in mercantile and other stores, all of those in New York City, and children under the age of 16, making a total of 17,723, or thereabouts.

The figures of the board of health—department of health—in this city show that for the year ending December 31, 1913, there are outstanding certificates—and by outstanding employment certificates I mean all that have not become invalid because of the child having reached the age of 16, so it covers most of the time of two years, but between 14 and 16, counting those whose certificates have not expired by the time they became 16, that total number outstanding certificates at the end of the year, December 31, 1913, was, according to the records of the health department, 61,345. The labor department found that there were working in factories and stores something in the neighborhood

of 17,000, and a little more, which leaves, roughly, a balance of 43,000 unaccounted for.

Chairman WALSH. How many?

Mr. HALL. Forty-three thousand. The question is, What has become of them? I think it is a very serious question, and one I have not been able to get any answer to, and I would like to get any information from any of the officials here on that point to-day.

Mr. THOMPSON. Do you believe in that regard, in regard to that very question, that what has been stated by some of the witnesses heretofore—I can not recall which ones—that the certificates should be filed with the school and not given to the child or given to the employer, but that cards be given to the child stating that the certificate is on file and stating where it is, and that then the employer should be under obligation to notify the school where the certificate is upon the termination of the employment of the child?

Mr. HALL. I think that is a matter of machinery, largely, but I do not see how it would be feasible to require the employer to return the card or the certificate, because there are so many employers in this city who are either ignorant or indifferent to laws of that kind, and the technical procedure of that sort, I believe, would not be followed in a large number of instances, and in order to make it effective you would have to penalize the employer, and it seems to me very doubtful whether our courts would convict in prosecutions of such a technical nature.

Mr. THOMPSON. Take instances where it should be left with the school; what have you to say as to that?

Mr. HALL. I have no objection to leaving the certificate with the school, but I believe there is another way of reaching this question of the child, whether he has left his employment. In the first place, the department of labor inspectors, as they go from factory to factory, from store to store, could get the names of those children who are employed illegally and who are, therefore, discharged; those names can be readily transmitted to the educational department, and the children can be looked over and returned to school. The children who leave before inspectors get there, it seems to me, they would have to be looked up in their homes in the census, or by the investigators, and I think that is one of the functions of the educational department.

I can not refrain from expressing my own personal amazement at some of the sentiments expressed by one of the men representing the department of education this morning. I think it is an affront upon the good intelligence of the citizens of this city that we have had in charge of the work of enforcing this law one who expresses the sentiments he expressed here this morning, and if it were not for the fact that that has been taken out of his hands and goes into the hands of a new bureau, I would like to enter even a stronger protest.

Commissioner LENNON. I would like to ask Mr. Hall if he does not believe there is a social responsibility for those 43,000 children that we have no record of? What has become of them?

Mr. HALL. I feel certain——

Commissioner LENNON (interrupting). That we must find some way of taking care of them.

Mr. HALL. I feel certain, and that is where the scheme that I had of the continuation schools comes right in.

Commissioner LENNON. What you told us as to here applies all over New York—the same laxity of insisting that children be put to the educational test required by law applies all over the State, as it seems to apply in the city of New York, according to Mr. Walsh's testimony?

Mr. HALL. Our investigation in the different cities seems to uphold that same condition in many of the cities. I will not say all of them, but a large number of them.

Commissioner LENNON. Well, are you prepared to assign a reason for that? What is the matter? Don't they believe in the law? Is the law inapplicable?

Mr. HALL. I can only suggest the reason which was suggested by Mr. Walsh this morning, that they consider the children nuisances and want to get them out of their schools.

Commissioner GARRETSON. Mr. Hall, do you believe that any law could have any value—that is, one covering this phase—if it was to be set aside every time that the parent asserts that there is economic necessity for it without going into the facts?

Mr. HALL. I don't——

Commissioner GARRETSON (interrupting). Should not the facts be known in every instance before the certificate is granted when that is the assertion?

Mr. HALL. I don't know whether I would want at this time to say that the granting of the employment certificate should be based solely—not solely, but in part, at least—upon an investigation that might be made into the economic needs of the family, as to whether or not the child should go to work and the earnings were needed?

Commissioner GARRETSON. But where that constituted the assertion upon which the request was based, would it not be well to determine whether it was true or false?

Mr. HALL. I think it would be very well to determine it; yes; but as to making it the deciding or controlling factor, I question the wisdom of that.

Commissioner GARRETSON. Could any law be a success if administered by those who have no sympathy with its object?

Mr. HALL. I don't see how it could.

Commissioner GARRETSON. Could these cards be surrounded—that is, considering this situation which is stated, where 43,000, I believe it is, there is no record of—could those cards be surrounded with a provision such as surrounds a probationer's card, that the holder of it must report to the schools at intervals or if employment ceased?

Mr. HALL. I think it might be a method worth trying. I don't know how well it would work out.

Commissioner GARRETSON. Of course, there would be difficulty in many instances in applying discipline, but would it narrow the circle surrounding these lost numbers?

Mr. HALL. I think if you had sympathetic officials in enforcing the law it would.

Commissioner GARRETSON. What is the general impression as you find it in regard to the application of the law governing, for instance, that department of the health machinery known as the hygiene department, that it is well administered and properly conducted?

Mr. HALL. I think, generally speaking, there is approval from all sides regarding the enforcement of that law, except from those who would like to see exceptions made.

Commissioner GARRETSON. Except from those who have an iron in the fire?

Mr. HALL. I think so.

Commissioner GARRETSON. Does the same sentiment exist in regard to the application of the compulsory educational law?

Mr. HALL. I can't say that it does.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. That is all, thank you, Mr. Hall.

Mr. THOMPSON. Is Mr. Gernon here?

TESTIMONY OF MR. JAMES L. GERNON.

Mr. THOMPSON. Give us your name, your address, and your occupation.

Mr. GERNON. James L. Gernon; chief mercantile inspector in the department of labor; age, 47.

Mr. THOMPSON. Your address, New York City?

Mr. GERNON. 381 Fourth Avenue.

Mr. THOMPSON. Can you tell us, Mr. Gernon, the scope and authority of the labor department with reference to the question of the administration of the child-labor law of this State?

Mr. GERNON. Yes.

Mr. THOMPSON. In your own language and briefly.

Mr. GERNON. The department of labor makes inspections and ascertains whether the children are under or over 14. If under 16 and between 14, they want to see the employment certificate issued by the board of health, and if there is none, why there is a record made of each instance where the child is employed without the certificate.

Mr. THOMPSON. Mr. Gernon, how long have you been chief mercantile inspector of the State?

Mr. GERNON. Six years in October.

Mr. THOMPSON. How many inspectors have you working in this city?

Mr. GERNON. Twenty now. In this city?

Mr. THOMPSON. Yes.

Mr. GERNON. We have 20 in all, the first and second class cities of the State. There are nine cities, three first class and six second class.

Mr. THOMPSON. Have you got any working exclusively in New York City?

Mr. GERNON. Yes.

Mr. THOMPSON. How many?

Mr. GERNON. Probably 15.

Mr. THOMPSON. Now, Mr. Gernon, the mercantile department or branch, what kind of establishment does that cover?

Mr. GERNON. It covers all mercantile establishments, business offices, hotels, restaurants, and apartment houses, and in the distribution and delivery of goods, telegraph offices, etc.

Mr. THOMPSON. Covers pretty nearly everything except factories?

Mr. GERNON. Yes, sir; so far as child labor is concerned.

Mr. THOMPSON. Are your inspectors able to cover the city of New York in the mercantile line in any given calendar year?

Mr. GERNON. No, sir. It is questionable whether we have been able to cover it in six years. We feel now we probably have covered most of the places, but it is very questionable because we can not do our work in any systematic manner owing to the inadequate force.

Mr. THOMPSON. Then, of necessity the check-up which your division makes of that question must be more or less loose, is that not so?

Mr. GERNON. Well, not loose, but it is not complete.

Mr. THOMPSON. Inadequate?

Mr. GERNON. Yes. We never pretend that we have covered the work thoroughly.

Mr. THOMPSON. What remedy would you suggest in that connection, the employment of more inspectors?

Mr. GERNON. Why, certainly, and a little better law.

Mr. THOMPSON. In what respect would you have the law improved, in your opinion?

Mr. GERNON. Well, do you mean in relation to child labor?

Mr. THOMPSON. In relation to the checking up of the employment of children in the mercantile industries of this city?

Mr. GERNON. Well, under the present law we can not check the children up. If they give us sufficient help, it is only a question of having enough inspectors to cover all the places within a given time. Even if we were to be able to cover it within a given year, in a calendar year, it is questionable whether we would get all the children. This is a big problem and there are many phases to it, but we find so many people who pretend to be in sympathy with child labor and who really are not; we might in that respect take our magistrates. Most every one of them will profess that they believe in the elimination of child labor, but when these cases are brought into court before them, why they demonstrate their feelings. If we had a sufficient number of inspectors, even with the present law, we could check up all the children. The labor law relative to child labor, in my opinion, should be greatly improved, and I say this from experience. And later on I can tell you something about where the 43,000 children are that are missing.

Mr. THOMPSON. Well, in reference to the improvement of the law, Mr. Gernon, what improvement would you suggest that you spoke of?

Mr. GERNON. Well, in the first place, from actual experience in talking with—I won't say how many, but it would be a thousand easily—merchants in this State, they tell me that the child is not fit for their occupations. They mean the child who comes from the average school of the State. This does not only apply to New York, but it applies to all other cities in the State. In my opinion, the school curriculum is not sufficient to fit children for industries, and I am eliminating the question of the factory and simply giving my views as to the mercantile establishments, which I am probably better able to speak of than the factories. Now, if this is true it is a very serious charge. It is not a charge that I make, but it is the testimony of the merchants of this State, and if it is true it is a very serious matter. I would say from my own personal experience the children that come into our office that in the main it is true.

Mr. THOMPSON. What is the form that this charge takes? In what, generally, do people say that the children are deficient?

Mr. GERNON. They say that if the child is used as a sales person it is not capable even of making out a simple sales check. In fact, some of the stores are

conducting schools to remedy the defects of the public schools. Then again the public-school system has established a continuation school in several department stores in the city.

Now, if a child at 14 who may go to work is not sufficiently educated, the sooner the State makes up its mind to keep that child in school until it is educated and fitted for industry the better it will be for the community. In this connection I would like to say that there are approximately 65,000 children in the State of New York who leave school before they reach the eighth grade or before they have the simplest kind of an education.

Mr. THOMPSON. In a year?

Mr. GERNON. In any given year.

Mr. THOMPSON. You agree, then, with the previous witness, Mr. Hall, when he stated that he believed there should be a higher educational policy requiring more children to have a certificate of employment.

Mr. GERNON. Yes; I believe—I believe personally from my own experience, and I have watched it very carefully—I believe that we should take the step immediately and prevent the children from entering employment until they are 16 years of age, with the idea of keeping them in school until they are properly educated so far as a child can be of that age. And, again, it might be well to say they can not enter employment until they have passed the elementary school or graduated from the elementary school, which in some cities of the State would mean they would be in school until they are 16 and in some instances later.

Mr. THOMPSON. Dr. Baker, when she was on the stand, stated she did not believe children should be permitted to work until they are 16 years of age, because of the physical reasons, and Dr. Hall stated that he would not make an age limit, but he would make a higher educational qualification, which of necessity would raise the age limit.

Mr. GERNON. Well, I agree with Dr. Baker. It is generally supposed by magistrates and others that the employment in mercantile establishments is just ordinary employment, that it does not require much labor, but we find from the loads that these children have to carry that they need to be physically fit.

Mr. THOMPSON. Then you would make an arbitrary age limit?

Mr. GERNON. I would make an arbitrary age limit of 16, and I would go further and prohibit the employment of children in any industry that did not show a future. That would eliminate the grocery store, the butcher store, and the likes of that who employ children simply for cheap labor. There is no future for the child if it is unfortunate enough to go into the grocery or butcher store. It works for a few months, or maybe a few years, and if it stays a few years at the expiration of the few years it asks for more money and then there is another child employed, and this poor unfortunate drifts along and, after awhile, we find him making up the congregation which stands on the corner idle without employment, has no education, hasn't been in any industry that would fit him for advancement.

Mr. THOMPSON. But if there was an institution for vocational training of any kind, it would obviate the objection that you name, would it not?

Mr. GERNON. Unless the vocational training was of a higher standing than any I have seen in this section of the country, and in many others, I would say no.

Mr. THOMPSON. Have you got any scheme of your own as to what kind of vocational training would be necessary, the least vocational training that was necessary to help the child along?

Mr. GERNON. I was interested in the doctor on the stand here, and I somewhat agree with him, that 16 should not be the limit. In many instances his proposition would be very good for children.

Mr. THOMPSON. It would be to carry the limit to 18.

Mr. GERNON. To 18, yes. That is the elementary education limit. The mistake that is made in the vocational schools that I have seen is this, the way they attempt to teach, I will try to illustrate briefly: Where they attempt to teach a child woodwork, the first equipment he will have is a surface planer. Now, we know in the modern development of the wood industry that a surface planer is a very handy thing to have around a shop, but you will never teach a boy to be a mechanic if he is going to depend upon a surface planer to plane a surface of wood. If they would teach the children to use tools, and it is just as essential to use tools properly—or it is just as essential to teach it properly as it is to teach a boy the technique of the violin, the handling of the violin,

if you are going to make a musician of him. This idea that anybody can drive a nail or anybody can use a saw, is all wrong, because we who have had the benefit of a mechanical training know it is just as essential to learn the business properly as it is to learn the general rudiments of an education. It is safe to say that 50 per cent, and that is a moderate estimate, that 50 per cent of the mechanics to-day can not use a hammer scientifically. They never were taught to use it scientifically. What the doctor says of apprenticeship, that the apprenticeship is fast fading away, nobody attempts, even with the apprenticeship to-day, to teach him the business properly so that even if a boy goes into some industry to be an apprentice, he is very lucky if he gets into an industry where somebody will take the trouble to really make a thorough mechanic of him. Then again, our mechanical pursuits are divided up into so many classes that it is impossible for a boy to learn them all, and he will never learn them in the school because they can't go over the scope of the industry. Now, I don't mean to say that a boy can not learn the technique of a business, that he can not be very well fitted for an industry. I belong to a trade that requires every apprentice to be 16 years of age, that he must have passed—graduated from an elementary school and that he must be enrolled in a school teaching the techniques of that business, and he must graduate from that school before he can be recognized as a journeyman. Now, that is in a practical line endeavoring to teach the boy something along the lines of the industry in which he is working.

Mr. THOMPSON. Mr. Gernon, what trade is that, and what school can the boy go to, say, in this city, that will help him out?

Mr. GERNON. Well, there are a number of schools. We endeavor—we did form an agreement with the department of education to take one of the manual training schools and make the curriculum for that course such as would meet the standard of our organization, our local.

Mr. THOMPSON. What trade is that, Mr. Gernon?

Mr. GERNON. Pattern making.

Mr. THOMPSON. Of course, you stated a little while ago—let me draw your attention to this matter of the vocational schools as you knew them as they actually existed in this city and elsewhere. You said they were not sufficient to give the boy the right kind of training. That is what I want to get at.

Mr. GERNON. One of the mistakes they made in this city, and they have made it in almost all of the cities that I have investigated, is they don't employ mechanics in the occupations which they are teaching. They are remedying that in this city to some extent. But I know of an instance in this city where they used their brass finisher to teach pattern making. Now, that is the inconsistency of the present system.

Mr. THOMPSON. Referring to the New York child-labor law and its administration, Mr. Gernon, you spoke of something about the bundles and the weights that children in mercantile establishments had to carry. What do you know about the extent of the medical examination required of children in industries in this State.

Mr. GERNON. Well, I don't know that I am very familiar with it so far as it applies to the health department, other than what the law requires, and I have seen some of it. I am a little too busy to spend my time with the board of health to see just how it operates.

Mr. THOMPSON. Referring to your department, what examinations do you make, and do you ever reject—do you ever revoke the certificates of employment on account of ill health?

Mr. GERNON. That is a provision in the law now, and I presume that when they—they have just organized the bureau of industrial hygiene, and I presume there will be quite some of that later on. I doubt if there has been at the present time. I don't know. There has not been a certificate rejected where it relates to a child who might be in a mercantile establishment. There has been none rejected or revoked.

Mr. THOMPSON. I believe, in your testimony about the grocer boy and the butcher boy, you touched somewhat on your observation of the industries that children sometimes got engaged in, and their opportunities there. Have you anything more to say along that line?

Mr. GERNON. Well, I said I would prohibit children from going into such mercantile pursuits as did not hold for them a future.

Mr. THOMPSON. How would you determine that, and how would you put it into force?

Mr. GERNON. It could easily be determined, I think, by the character of the mercantile establishment.

Mr. THOMPSON. Where would you place that power—in your department or the board of education or the health department?

Mr. GERNON. Well, as a broad proposition, I would prohibit a child from working in a grocery or butcher store on the general supposition, on the general knowledge that they could not, at the present time the industry could not, absorb the children that are working in connection with them, almost, if they lost half of their clerks, they could not absorb all of the children. For instance, we will find more children employed in a grocery store on Saturday than there are clerks in the store. Now, the general supposition is that the child only works on Saturday, but our knowledge shows that the child worked after school and many times all during the day.

Mr. THOMPSON. I think you have covered the line of questions I was going to ask you, Mr. Gernon, but I would like to ask you what has become of the 43,000 children; you stated you would like to reach that before you got through.

Mr. GERNON. As long as I can remember—I have had a good many years' experience in the department of labor—before I was chief of this bureau, I was inspector, and as long as I can remember the department that question was always asked, what becomes of the discrepancy between the number of children found by the labor department and the certificates issued. Now, it is true that lots of children get certificates and do go back to school. Not such a great many of them. But I believe that the discrepancy, allowing that the factory inspectors do not find them all, because you must bear in mind this fact, that these places have to be inspected in rotation and at no time has the department of labor had a sufficient number of inspectors to do any better than to inspect a place about once a year, and in the mercantile department we can't do as good as that. There are many of these 43,000 children in offices in New York. The percentage of children employed in business offices is much larger than most people imagine, and there are very few offices that haven't got a boy somewhere in connection with them. We are charged with the enforcement of the offices, but owing to the fact we can't cover even the mercantile establishments, we have not attempted to cover the offices in anything like a systematic manner. I think that if we could cover the mercantile establishments and all places to which the child-labor law applies, and we could do it within—well, if we could inspect them four times a year, I think we would discover the discrepancy that would make up for a whole lot of it.

Mr. THOMPSON. That is all, Mr. Chairman.

Mr. GERNON. Now, there was one thing that was asked here: Should the certificate be left with the school authorities? You must bear in mind that any certificate that is issued, to be practicable, should be the original document which carries the child's signature. You know these certificates are sold, to-day they are being sold in New York City. A child gets through with one. He will sell one to some other child, and they will change the date. Our inspectors are notified that wherever they find a certificate with the date altered they are to take it away from the child. We then place the burden on the child to prove that it is a proper certificate, and that it belongs to them, and we will return it to the board of health, and if they are entitled to it they will get it back. So that the only certificate which should be in existence is the original, with the child's signature. Many times we have to depend upon the child's signature to identify the certificate as belonging to the child. As a matter of last resort, that is what we fall back upon, and it is not so easy for them to copy those signatures so as to fool us. So that any other system would be, in my judgment, a mistake.

Mr. THOMPSON. That is to say, the certificate should be left with the employer for your inspector?

Mr. GERNON. It should be with the employer in every instance.

Mr. THOMPSON. Is there anything more you would like to say?

Mr. GERNON. I think that is all.

Chairman WALSH. That is all; thank you, Mr. Gernon.

Call your next witness, Mr. Thompson.

TESTIMONY OF MR. OWEN R. LOVEJOY.

Mr. THOMPSON. Will you give us your name, your address, and your position?

Mr. LOVEJOY. Owen R. Lovejoy: 105 East Twenty-second Street, this city; general secretary of the National Child Labor Committee.

Mr. THOMPSON. How long have you been secretary of that organization?

Mr. LOVEJOY. Seven years.

Mr. THOMPSON. I think we have already had some testimony as to this organization, have we not?

Mr. LOVEJOY. I am not sure.

Mr. THOMPSON. What is the field covered by the National Child Labor Committee? How long has it been in existence?

Mr. LOVEJOY. The National Child Labor Committee has been in existence 10 years. Geographically, its field is the United States.

Mr. THOMPSON. What subjects does it take up, and in what way?

Mr. LOVEJOY. Its object is to abolish child labor and to help secure adequate practical educational opportunities for children. It attempts to accomplish these objects first by investigation of conditions, by publicity of the facts discovered by drafting legislation and recommending to the various States, by lobbying with legislators to get bills through, by studying and criticizing wherever necessary and commending where possible the administration of those laws, and suggesting better methods of administration.

Mr. THOMPSON. It is a voluntary organization?

Mr. LOVEJOY. Entirely so.

Mr. THOMPSON. Supported by voluntary contributions?

Mr. LOVEJOY. Yes, sir.

Mr. THOMPSON. Now, in the work you do or the committee does, part of it is the administration of the child-labor law already established, is it not?

Mr. LOVEJOY. Yes, sir.

Mr. THOMPSON. What do you consider from your experience to be the best method or the best machinery for the enforcement of child-labor laws?

Mr. LOVEJOY. We believe that some plan of coordinating all the activities that are involved in the administration of child-labor laws under one department is the best method; whether it should be called an industrial commission, such as they have in Wisconsin, or a department of labor, with its advisory committee and its chiefs of departments, who are technical experts, as in New York, we are not particular what name is given to it, only so the principle of coordination is followed out.

Mr. THOMPSON. The testimony has been fairly general here to-day, Mr. Lovejoy, that so far as New York State is concerned it is inadvisable to join the department of health and the school department and the labor department together so far as they touch this enforcement of the child-labor law. I take it that your opinion from what you say is to the contrary.

Mr. LOVEJOY. I would hesitate to differ from the people who have testified regarding conditions here in New York City. And yet on one or two points that have been presented here I have the impression that the people have been frightened by the bigness of the city and been unwilling to undertake a plan of organization which has proven perfectly feasible and practical in other cities.

Mr. THOMPSON. Beginning with Dr. Baker and Mr. Walsh and Mr. Hall, they all seem to agree that it was advisable to have one department check on the other.

Mr. LOVEJOY. Well, the figures that have been shown here to-day would seem to me to indicate that this checking system has succeeded pretty definitely in excluding 43,622 children from view. And Mr. Gernon has attempted to explain where they are, and I have no doubt many thousands of them would appear on a frequent inspection of the offices in this city, but I don't believe 43,000 would appear in that or any other industry.

I believe, on the other hand, that many hundreds, probably many thousands, after they have had their first jobs for a few weeks and have proven themselves inefficient or become tired of it, are roaming the streets undiscovered either by the inspectors or the truant officers.

Mr. THOMPSON. Mr. Lovejoy, directing your attention toward the division of the enforcement of the law as now divided in New York, how does it create that condition? In other words, how would the unification of the whole system prevent them from still wandering the streets of New York?

Mr. LOVEJOY. I think the difficulty is not so much as to the machinery of the organization here as contrasted with what I mentioned in Wisconsin, as in a defect in the method of issuing and requiring the return of the certificate itself. And here I should—I especially had this point in mind a minute ago when I regretted to differ especially from Mr. Hall. I know the impression he has is due to the tremendous size of a problem in a city like this, but in Cincinnati

and in other cities of fair size the plan of refusing to issue any certificate to any child until the issuing authority has evidence that that child has a position in view and then requiring that that certificate shall be returned to the issuing officer as soon as the child leaves its job makes it possible, and in my judgment is the only way to make it possible, to keep track of that child. Whether that is done by a combination of independent effort or through one agency, I think, makes little difference.

Mr. THOMPSON. Well, Dr. Baker and Mr. Hall both stated that in that connection, particularly Dr. Baker, thought it would lead to a system of grafting, that for a small remuneration people would make an offer for the child's services.

Mr. LOVEJOY. That might be in a few instances, but it seemed to me it could be very easily discovered and could be made so unpopular in a short time that it would not be as persistent as this invisible army of 43,000 children. I don't believe we would have 43,000 instances of graft in a single year without some one protesting against it.

Mr. THOMPSON. Well, on your own statement, Mr. Lovejoy, you believe that if the inspectors could get around more often then you would probably find a percentage of these 43,000 in the offices?

Mr. LOVEJOY. Yes, sir; but I mean the part that could not be found.

Mr. THOMPSON. The part that could not be found?

Mr. LOVEJOY. Yes.

Mr. THOMPSON. Have you made any study of the operation of that law in Cincinnati?

Mr. LOVEJOY. Yes, sir; we have followed it very closely.

Mr. THOMPSON. In so far as you have followed it, so far as your experience there showed, is there this development of graft there?

Mr. LOVEJOY. I never heard of an instance of the kind. One of my associates, Dr. Klopfer, was instrumental in getting that law on the statute books and was in close association with the school authorities in Cincinnati for a number of years, and he has the highest regard for the operation of that law.

Mr. THOMPSON. Referring to the question of standards, what standards, in your opinion, should States adopt for regulating the employment of children in industries, taking the question of education, physically, the age, pledge of jobs and returning certificates, hours of labor, and the occupations to be restricted?

Mr. LOVEJOY. Following the order you submitted in the outline presented in your question, I would like to present to the commission in brief a copy of the uniform child-labor law drafted two years ago by the National Child Labor Committee and indorsed unanimously by the American Bar Association and recommended for adoption in the different States. I should like to present this with a few changes, however, as I may suggest them at this time, because this is—

Mr. THOMPSON (interrupting). We will be glad to have them, Mr. Lovejoy.

Mr. LOVEJOY. This is made up as a composite of laws.

Chairman WALSH. You might file it with the stenographer and have it marked "Lovejoy Exhibit 1," and in connection with it we will take the suggestion you are about to make.

(Received and marked "Lovejoy Exhibit No. 1.")

Lovejoy Exhibit No. 1, "The Uniform Child Labor Law, as approved and recommended by the conference of commissioners on uniform State laws," was submitted in printed form.)

Mr. LOVEJOY. As to education, we should recommend that a child should pass at least the eighth grade of the public-school curriculum before being put into industry. The uniform law suggests the sixth grade, which is very much higher than exists in a large number of States. Physically the child should be up to standards tested by medical inspectors under authority of the board of health, where there are such, or of the public schools, showing that the child corresponds to the normal child of the age represented as the age. We recommend that no child under 16 years should be introduced into wage-earning occupations. As to age we recommend that no child under 16 years should be introduced into wage-earning occupations. At this point I should like to follow very exactly the recommendations made by Dr. Steinmetz, with the exception that we should oppose the employment of any child under 16 years of age. And this, if I may say briefly, for the reason that not only the reasons that Dr. Baker suggested, of physical effect on the child, but especially because the child under 16 who enters industry enters the worst form of industry and under the worst con-

ditions. A recent report of the Government Bureau of Labor shows that, of a certain group of children under 16 who left school to go to work, 90 per cent of the boys and all of the girls entered the industries in which the average wages of the adult are \$10 or less a week.

Mrs. Fernandez, who recently made an investigation here for the public schools of this city, I remember in one group of 101 boys under 16 showed that 96 of them were in industries which the commission in its letter called blind-alley industries, industries that had no future, while only 5 out of the 101 were in occupations that offered any possibility for the future.

This standard has already been reached regarding girls in Ohio. Ohio, by the new law, has a 15-year age limit for boys and 16-year age limit for girls. The discrimination in favor of the girls is probably unfair to the boys, but was probably adopted as a compromise step toward the standard.

As to pledge, pledge of job, I have already answered in my former testimony. No child should be excused from school or have a certificate issued without a pledge from some employer to take the child.

And the certificate should be returned to the issuing officer when the child changes positions. This makes it possible to find the child within 48 hours, instead of having to wait for a year, or, in case of mercantile establishments, six years, until the small staff of inspectors happen to be around to the place where the child is employed.

The hours of labor for the children who must be employed under 16 years of age, until that standard shall be reached, the hours of labor should not be to exceed eight hours per day, and there should be taken out of this at least five hours per week for continuation part-time schooling.

All occupations should be restricted which are mentioned in sections 3, 4, and 5 of the uniform child-labor laws, such as occupations involving dangerous processes, exposure, and poisonous acids and gases, etc. There is a large list of occupations that have been worked out by experience in a number of the foremost States.

Mr. THOMPSON. Referring to the question, Mr. Lovejoy, of the vocational training of children, have you any views on the free vocational training to fit children for profitable employment?

Mr. LOVEJOY. I have a very definite view, though I can not claim any very great technical knowledge of the educational side of this problem. The National Child Labor Committee has been one of the earliest organizations in the field agitating for vocational education and for all forms of practical training in the school; but we have taken the position that our chief function was to call attention to the unsatisfactory curriculum and methods in the public schools, and urge, through cooperation with school men, the adoption of better standards, for the simple reason that our commission is very small and very poor. The public school system of this country is very large and costs something over \$400,000,000 a year. We have, therefore, taken the ground that the educational side of the problem is up to the \$400,000,000 crowd instead of our \$75,000 crowd.

However, on the specific question you ask we believe that—perhaps I should speak personally on this, because the trustees have not acted on the matter of prevocational training, though I believe they would indorse the expressions which I now give and the sentiments such as I have already many times given expression to. We believe that prevocational training should begin in the kindergarten, should continue through the school course, as Dr. Steinmetz said.

As to vocational training to fit the child for profitable employment, I assume that you mean by the question profitable to the child—or profitable to the industry?

Mr. THOMPSON. Well, it ought to be both.

Mr. LOVEJOY. In that case we believe that the course of training should be of a nature that should fit the child for a rather comprehensive knowledge not only of the specific trade into which he is to be ushered, but all kindred employment. I mean that we are not in favor of any kind of training that would at an early age force the child into a narrow specialty. That, it seems to us, is one of the dangerous tendencies in the agitation to-day for practical education against what is called the old-fashioned, general education. We have been allowing children of 14 or 15, or even younger, to drift into industries to their detriment, but it has been through oversight or carelessness. If it is now proposed that we shall have a system which shall definitely determine the future of the child, then it seems to us that we should be very careful not to allow the same thing to happen systematically that is now happening haphazard.

Mr. THOMPSON. Then you would agree with Dr. Steinmetz that the vocational training of the child should not begin until after the sixteenth year?

Mr. LOVEJOY. I would.

Mr. THOMPSON. Have you anything more to say on the question of vocational training before I come back again to the other?

Mr. LOVEJOY. Only this, as to the administration of that part of our educational curriculum. And here I think I need only indorse the position taken by Dr. Steinmetz that it should be absolutely under the control of those public agencies supported by the public and should not be dominated by any special interest. And this not only for the reason he gave, but also because in many communities the only kind of vocational training that would be offered, if it were dominated by a local industrial interest, would be a training to fit the child for that particular interest. In many instances the local industry would be the last possible thing to train the child for. The only thing to train him for would be something outside of his own community.

Mr. THOMPSON. In your study of the question of the enforcement of the child-labor laws do you feel that there is a need for uniformity of administration?

Mr. LOVEJOY. This seems to us very important. The lack of uniformity in State laws has been one of the great embarrassments to our work not only as an organization, but to those who are affected by the operation of the law itself. The adjoining States are hampered in the administration of laws as well as in enacting the law by these widely differing standards.

In the matter of administration, especially, we find that the widely differing standards operate nearly always to the detriment of the State that has the low standard. I know that there is a very popular sentiment that the States that have restricted hours of labor and have a high age limit are handicapped, because they are restricted in the question of labor, in the kind of labor they employ. I believe that is an erroneous position, because I believe that the more children employed the less profits in the industry, in the long run at least. But in these lower-standard States the administration is very much more lax than in the States with the higher standards.

After saying what I did a few moments ago about those undiscovered children in New York, I should like to say that I believe the administration in this State is very superior to that of many of the States, even with good laws.

In Ohio, Wisconsin, and Minnesota I think the enforcement is still better, because the problem is less complicated, but in contrast to that, if I may present two extreme cases, you will get the point which I feel ought to be emphasized. In Ohio no child may be employed until a pledge is secured by the issuing authority from some employer. The day the child is discharged or leaves the certificate is returned. There are very few infractions of the law. In contrast to that, take Georgia, where children may be employed for 11 hours per day at 12 years of age, or, if they are orphans or poor, they may be employed at 10 years of age. We have in our office photographs of certificates given by the ordinary, which the parent secures by simply making affidavit as to the child's age, and the carelessness with which those certificates are issued is indicated by one or two illustrations I should like to give.

Here is one of an ordinary, in a large mill town, in which he certifies that the child is 9 years old, instead of 10 as required by law, and another in which he certifies that the 9-year-old child has not completed the six weeks of schooling required by law, and yet, armed with this certificate, with these two certificates, those two little 9-year-old children went to the factory and readily secured employment, and there is no authority to interfere with that. They remain employed under those conditions.

Mr. THOMPSON. What would be the value, Mr. Lovejoy, of a Federal standard, first, in establishing a recognized national minimum; second, in stimulating backward States to advance; and, third, in tending to standardize administration methods?

Mr. LOVEJOY. We believe that the value of such a standard would be important from all these considerations: First, in establishing a national minimum, a Federal standard, for example, fixing a 14-year age limit and a 16-year-age limit for mines and quarries and dangerous occupations; fixing an eight-hour day for all children under 16, etc. We believe it would tend to develop public intelligence as to the error of employing young children more quickly than it can be developed through the sharpshooting method of trying to get laws in the different States alone.

In the second place, we believe it would stimulate the subnormal States to advance. There are nine States that, for one reason or another, employ children

under the age of 14 years. We believe that all those subnormal States would be brought up to the standard if the Federal law, such as we have proposed, were enacted, because when the occupations which come under the jurisdiction of a Federal law were raised to this standard there would be no motive for discriminating in favor of a purely local industry to employ children of a younger age. There are Georgia and the Carolinas and Alabama, the four chief cotton-manufacturing States, which we especially have in mind when I speak of the subnormal States, because they employ a larger number of children under 14 than any of the other States.

Mr. THOMPSON. Referring to this Federal bill, do you mean the Palmer-Owen bill?

Mr. LOVEJOY. The Palmer-Owen bill is the one I refer to, the Federal bill; it is House bill 12292, Senate bill 4571.

Mr. THOMPSON. In a general way, what are the standards imposed by that bill, and in what States have they already been adopted? And what is the plan of the administration of the bill?

Mr. LOVEJOY. Mr. Chairman and Mr. Counsel, I should like at this connection to file with the commission a copy of our pamphlet, No. 216, which contains a text of this bill, and a brief arguing for the bill; but let me summarize for your present purpose that the standards are as follows:

The bill provides no employer shall offer for shipment in interstate commerce goods produced in any mine or quarry by children under 16 years of age, or goods produced in any factory, workshop, cannery, etc., in which children are employed under 14 years of age, or in which children between the ages of 14 and 16 are required to work more than eight hours per day, or at night; those are the standards recognized in the bill. Under the first schedule, the 14-years-of-age limit in factories, I find here a number of States, without taking the time to read them, there are some 33 States, I believe, that have the 14-years-of-age limit already.

Mr. THOMPSON. What have you to say with reference to the plan of administration?

Mr. LOVEJOY. The plan of administration provided in this bill rests with a commission—Federal commission—composed of the Secretary of Labor, Secretary of Commerce, and the Attorney General, representing, as we believe, the two industrial elements most closely interested in the subject of labor and commerce, and also adding the technical knowledge that would naturally come from the Attorney General's office. Under their direction the administration of the law is in the hands of the Secretary of Labor, who, with his deputies, is directed to investigate and file with the United States district attorney in any district complaints against any violators of the law. In addition to that the Secretary of Labor, the State labor inspectors, the truant officers, or any other citizens are empowered to file such evidence with the United States district attorney, who, with that evidence, is compelled to institute suit.

(The pamphlet produced by the witness was here marked, "Witness Lovejoy Exhibit 2, received June 1, 1914.")

Lovejoy Exhibit No. 2, "The Federal Government and Child Labor," a brief for the Palmer-Owen child-labor bill, by Owen R. Lovejoy, was submitted in printed form.)

Mr. THOMPSON. Mr. Lovejoy, is there anything else you would like to say to the commission on the subject of the administration of child labor?

Mr. LOVEJOY. There is one other point I would like to mention which has been referred to a number of times. The question has been asked as to an investigation of the economic condition of families in which it is represented that children must be employed because of poverty. I should like to go on record as opposed to discriminating against any child because its parents are poor. If there is any standard that ought to be established for a child at all, it should cover with its protection the child of the poor parent who has not had a fair chance during his early years. Therefore, if the age is 14, it should be 14 for all children regardless of economic conditions. If it is 16, there should be no exceptions because of poverty. Society must find some other way to support the family rather than putting the burden of such support on the child who is poor.

Mr. THOMPSON. That is all, Mr. Chairman.

Commissioner GARRETSON. There is one thing I would like to know—what your experience is, as the outgrowth of your experience. We have had here to-day testimony from—now, that I don't know that I will use the exact terms,

but a bureau of industrial hygiene—we have had testimony from the administration of the compulsory-education law, and testimony from a bureau of the labor department, all in regard to phases of child reform connected intimately with the question of child labor and child education, vocational, or otherwise; in your opinion would laws of this character be better administered and would a more satisfactory result be obtained by a commission or department charged with the administration of all laws affecting juveniles, or by a series of departments such as have been here represented; and I have no doubt that while we have heard from three, there are a number of others in the State dealing with similar or with some of the phases of the same question.

Mr. LOVEJOY. I am not sure, Mr. Garretson, whether—I should answer that question directly. So much depends on personnel. My general feeling, however, is that the problem is very much more an industrial problem than it is a child problem. That is to say, my whole tendency is to exclude the child from industry. We become so accustomed in this country to an army of working children accompanied by an army of jobless men, that we fall usually to put them into juxtaposition. We rarely think of them together. They ought to be thought of together.

Commissioner GARRETSON. They are always relative?

Mr. LOVEJOY. They are always relative. The one is in very large part the cause of the other; because, as you doubtless know, well, a large number of those jobless men to-day are jobless because they had their jobs too young and are unfitted for any high-grade or continuous wage earning. Therefore, it seems to me that the problem is very much more an industrial problem than a child problem.

Commissioner GARRETSON. Now, another suggestion, somewhat foreign to the case. In your dealings and experiences as a representative of the child labor society, have you ever discovered the instances where men who have loudly proclaimed their devotion to saving the child from labor and who pay money to movements and associations for that purpose, still your investigations showed that those very men were exploiting child labor through their industries, or were interested in it?

Mr. LOVEJOY. We find a great many people who loudly proclaim their hostility to child labor in the abstract, who when it comes to a concrete instance, find themselves opposed to every kind of child labor excepting the kind that they employ. But I do not recall instances of those who have in any important degree aided the financial support of the organization I represent, who have taken this position.

Chairman GARRETSON. They usually avoid the payment?

Mr. LOVEJOY. Yes; their sins are all along other lines, probably.

Commissioner GARRETSON. That is all, Mr. Chairman.

Mr. LOVEJOY. May I also file with the commission, with its permission, one of the pamphlet publications of the child labor committee, No. 212, entitled "Eight Hour Day for Children," which contains a large number of quotations from merchants, manufacturers and others in the States where the eight-hour law is established, showing the industrial, social, and educational effects of this law.

Chairman WALSH. We are very much obliged to you.

(Mr. Lovejoy here presented to the reporter three pamphlets, which are marked "Witness Lovejoy Exhibits 3, 4, and 5, and dated June 1, 1914.

Lovejoy Exhibit No. 3, "The Eight Hour Day for Children," by Anna Rochester; Lovejoy exhibit No. 4, "More Protection for Working Children," by Owen R. Lovejoy; and Lovejoy Exhibit No. 5, "Constitution and By-Laws," all published by the National Child Labor Committee, were submitted in printed form.)

TESTIMONY OF MR. ELI W. WEAVER.

Mr. THOMPSON. Give us your name, address, and occupation, Mr. Weaver.

Mr. WEAVER. Eli W. Weaver, of the Boys' High School, Brooklyn, N. Y.; teacher.

Mr. THOMPSON. Are you chairman of the students' aid committee, New York City High School Teachers' Association?

Mr. WEAVER. I am chairman of that committee.

Mr. THOMPSON. Since what time?

Mr. WEAVER. Since 1908.

Mr. THOMPSON. In your capacity as such chairman have you had up the question of vocational guidance work in New York City?

Mr. WEAVER. We started out to see what we could do to help the boys, particularly from the high schools, who had to go to work to form some definite purpose and to make such business connections that might lead them to work out that purpose with the least loss of time and waste of energy. This is purely a voluntary committee, I might say.

Mr. THOMPSON. You have stated the origin. Now speak of the development, the methods used, and the results obtained.

Mr. WEAVER. The methods varied very greatly. This committee is composed of teachers doing this work voluntarily along with their regular work; and there was a representative in each one of the public high schools of the greater city; and while the work at the outset was approved, at the same time there was a feeling that the work should be organized on a larger basis, and it simply kept itself alive waiting for a proper official organization of the work. There has been pending, after the committee was organized, a recommendation of the city superintendent to take up the work officially, and there has been organized since a larger association, composed of groups that have been named vocational guidance associations, which should extend this work.

And there has been also recently organized in Brooklyn a separate organization of that kind, so that in the meantime these advisors in the high school have simply tried to do what they could with the most urgent cases that came to their knowledge. They have collected some information and published a number of handbooks for the guidance and help of children in selecting an occupation and finding proper business connections after they have selected, and in training themselves after they have entered an industry, for advancement in that particular line of work.

Those bulletins—about a score or more of those bulletins—have been printed at different times. The committee has also tried to find vacation employment, so as to help the children remain in school longer and to aid in their support by finding work in time of vacation or during the school term, so as to prevent their leaving school before they receive the equipment which they should receive.

Mr. THOMPSON. I believe the commission has copies of those bulletins.

Mr. WEAVER. I think all that are in print have been supplied to the commission. If not, I will see that you get copies.

Mr. THOMPSON. All right. Now, in your opinion, what have been the results?

Mr. WEAVER. Well, I feel that the results can perhaps be definitely illustrated by this: I take an instance which has just been called to my attention on Friday, because the boy came to me himself. He is with a large foreign business concern, in which he had been placed four years ago—a boy that had to leave school before he was finished or equipped for anything; was put into that business house in training, and he has succeeded so well that he has remained with the house ever since—and so he came along and said the house would like to have two more to follow in his footsteps. In that way we have made a connection with a large number of business houses where we have found the conditions for advancement satisfactory, and we have thus established what I should think are relations mutually profitable, both to the schools and to the business houses, in that way.

I can not say just the number of people, but sometimes we have provided for vacation work in some single schools for hundreds during the summer. In one school in which a tabulation was made the vacation earnings of the children amounted to \$22,000 last vacation, and another school \$11,000. Now, this vacation business experience was valuable. They were business connections that were advised by the counsellor of these children. They were asked to get this business experience so that they might correlate it with their school experience or help maintain themselves in school for a longer period, and in some of the poorer part of the districts it was a large item.

Children have been sent to farms in the near-by country—those that manifested an inclination for agricultural pursuits. Arrangements have been made and a special bulletin issued—I don't know whether you have a copy of that or not—published concerning the agricultural tendencies of the boys in the city high schools, and we have tried to help them work out those tendencies.

And in a good many of the schools a great deal of work is done, particularly in evening schools, particularly following up the boys who have gone into what is called blind-alley employment, so as to help them readjust themselves as soon as they get to maturity, and make them pass into other higher fields of work. In some schools a large number of pupils are under the direction of the vocation counselor after they have left the schools.

Mr. THOMPSON. This work is entirely voluntary?

Mr. WEAVER. Entirely voluntary work, and has no particular support or appropriation except the voluntary contributions that are taken up from time to time.

Mr. THOMPSON. And has this work been urged on the city school departments?

Mr. WEAVER. The committee of which I have the honor of being chairman, at a time after the first experiments were made, recommended that in each high school there should be at least one teacher who should have one hour a day for the purpose of advising children. The city superintendent indorsed our recommendation with the request that there should be a director appointed for doing this work for the entire city. That was in 1911, in his report. Since that the matter has been under debate as to the best method of approaching the problem. Various phases or forms of the problem presented themselves with more or less insistence, and there has been no general agreement among all parties as to the best way to approach it.

We presented our recommendations of the committee to the board of education, which has investigated rigidly the problem, and their recommendation is that the city shall appropriate \$15,000 for two years, I believe, for the purpose of making an investigation as to the extent to which helpful work may be done before the city embarks in the problem officially.

Mr. THOMPSON. Is there anything further that you would like to add to that question, in regard to the situation here, before I go to the question of the survey you made in Buffalo?

Mr. WEAVER. Well, I might say, personally—I am speaking entirely for myself—I don't believe that under the present conditions in the industries in this city that it would be a long time for us to hope to be able to take hold of the matter of vocational guidance except in the way of maintaining perhaps an experimental station for doing that with certain types of children, and then make it the basis for doing that work for other children of that type.

Mr. THOMPSON. Referring to the work that you did in Buffalo, you made both a school survey and an industrial survey. Briefly state what were these surveys and what conclusions have you taken from them.

Mr. WEAVER. I might say that at the request of the Buffalo Chamber of Commerce I received a six months' leave of absence from my school duties in this city, which I spent in that city. In that city there was organized a committee composed of representatives of the chamber of commerce and various social organizations and the schools. The schools had committed themselves to a broad general program of vocational education and vocational guidance, and they asked the chamber of commerce to furnish definite information in regard to the needs of the growing industries of that town; and at the request of the chamber of commerce I tried to make an industrial survey of the industries of the city. We tried to determine, for the benefit of the school officers, the possible needs of the various industries of the city in regard to the number of workers, the class of workers they desired, the kind of efficiency they expected, and how that efficiency could be best developed in the schools before going into the industry, or after going into the industry, and as to whether there was an indication that the industry was willing to pay for producing that efficiency or in such a condition that it was able to pay for producing the efficiency which it desired.

In connection with this survey of the various industries, we continued a survey of the various schools, to ascertain in what respect the schools were lacking facilities for such definite training as we discovered these industries would desire, and it is as to the result of that you asked me, I believe.

Mr. THOMPSON. Your conclusions, yes.

Mr. WEAVER. We covered a number of industries, and we communicated with the employers, and they asked that the survey of the city should be completed. The skilled industries have largely been completed; the other industries are being studied now, and the man who has been permanently put in charge of the bureau of educational guidance and industrial education is one who was formerly one of an efficiency syndicate, and he has taken up that work permanently.

The public schools have established vocational guidance upon the plan maintained by a number of English cities, more particularly Liverpool and Edinburgh; and the chamber of commerce has agreed that if these young people have to leave the school and go into industries before they have reached maturity, they shall be enrolled by the efficiency bureau of the chamber of com-

merce, and the director of the efficiency bureau of the chamber of commerce shall follow them up and shove them around and see that they get the training that they need in order that they may get all-around experience.

During last June we tried out the plan and we succeeded in enrolling all of the graduates from the schools and the high school, and aided in placing them in those industries that might be proper and best suited for them; and now those are being followed up this year.

Mr. THOMPSON. You have already stated your ideas as to the organization of vocational guidance in New York City. I would like to ask you now your ideas and views of the relation of wage standards to industrial education?

Mr. WEAVER. I have completed a bulletin which has now been approved by the directors of the Chamber of Commerce of Buffalo, in which we tried to determine whether there could be possibly discovered any formula wages which would prove that the industries generally were willing and ready to pay the community or the individual the cost of producing an efficient workingman. I believe I am safe in saying that the employers of this city and the employers of Buffalo make no distinction in employing recruits, as in favor of their scholastic or educational or technical equipment. That the boys who go out of the vocational schools there go into pattern shops, for instance, even though they have had two years pattern making, and are asked to begin at the bottom, just the same as though they had not had any training. The manager of one of these machine shops said that he never knew a boy, no matter what education he had, that was worth more than \$4.50 a week. We were not able to find that there was any discrimination. I feel that until there is such a discrimination it will be manifestly impossible to hold restless young people in their immaturity who, perhaps, not themselves, and whose parents frequently do not know anything about the conditions in the industry, long enough for them to get the training that is there. We tried, then, to determine whether the finished worker, whether the community as a whole, will pay satisfactory premium in favor of education for the man who has had time to demonstrate his usefulness. I think that was very remarkably exhibited in the survey that we made of the civil service of Buffalo. There we would take one complete body of workers and see or determine the relation between the number of applicants for the various positions and the number of appointees, and the number qualified, and compare them with the wages which prevailed in the different grades of work.

Now, it seems there that the city is paying a very high premium for advanced educational information. It seems that in the school of industry the city is paying a very high premium for advanced education by failing to discriminate in that regard. So that there will be a sufficiently large supply from which to select the more highly schooled and educated persons; and personally I feel that the point of contact, the real point, is to compel the industries generally to formulate more definite standards of requirements and correspondingly definite standards of wages so that there may be a right stimulus on the industrial educational force.

I emphasized that, and it was largely on that recommendation that the Buffalo Chamber of Commerce decided to make this bureau permanent and the present permanent director is a very skilled man in that line, and he has been employed to assist the employers of the city to fix the standards of wages which may be effective in this direction. And they are going to try to work up and formulate a scientific standard of wages. Now, that has been based largely upon information that we have collected.

Mr. Chairman, I believe that is all.

Chairman WALSH. The commission will now stand adjourned until to-morrow morning at 10 o'clock.

(Thereupon at 4.30 o'clock p. m. of Monday, June 1, 1914, an adjournment was taken until Tuesday morning, June 2, 1914, at 10 o'clock a. m.)

NEW YORK CITY, *June 2, 1914—10 a. m.*

Present: Chairman Walsh; Commissioners Garretson, O'Connell, and Lennon; also Mr. Thompson, counsel.

Chairman WALSH. The commission will please come to order. You may proceed, Mr. Thompson.

Mr. THOMPSON. Mr. Basford. Mr. Basford, will you please take the stand.

TESTIMONY OF MR. GEORGE M. BASFORD.

Mr. THOMPSON. Will you give us your name, your address, and your position, please?

Mr. BASFORD. George M. Basford; my home address is 134 Primrose Avenue, Mount Vernon.

Mr. THOMPSON. What position have you with the Mount Vernon public schools?

Mr. BASFORD. I am a member of the advisory board of the vocational school. It is a school of industrial arts.

Mr. THOMPSON. What is that?

Mr. BASFORD. They call it the School of Industrial Arts of Mount Vernon.

Mr. THOMPSON. Is that formed under the State law of this State?

Mr. BASFORD. Yes, sir.

Mr. THOMPSON. How large an advisory committee is that, and what are its component parts, if it is divided up into group of citizens?

Mr. BASFORD. As nearly as I can remember, there are five members of the board. I do not remember very much about it, because we have never been called together but twice since the board was formed, once to select, to help select a teacher for the vocational school in Mount Vernon, and again in order to pass on an improvement on the building. So far as being consulted about courses of anything of that sort is concerned, we have never been, officially?

Mr. THOMPSON. Does the act provide that you should be consulted?

Mr. BASFORD. I understand so.

Mr. THOMPSON. From what walks of life are these five members of that advisory board taken? I mean do they represent union labor, or manufacturers, or are they taken indiscriminately from the citizenship of the locality?

Mr. BASFORD. They represent employers in different industries, and labor is represented also, I believe.

Mr. THOMPSON. Then apparently from what you say, Mr. Basford, I would understand that no attempt has been made to have the different classes engaged in industry represented on that board?

Mr. BASFORD. I think an attempt was made; yes, sir. But, as I understand the board and its duties, it is a joke.

Mr. THOMPSON. Why? Tell us fully why you consider it so?

Mr. BASFORD. I understood when appointed as a member of that board that the board itself was to give its advice with respect to industrial education in Mount Vernon. It has not done so. It has not been called together for that purpose.

Mr. THOMPSON. Who has the power to call it together? The chairman or the school board, or who?

Mr. BASFORD. I understand the chairman of the school board, but as to the details of the law I am not well posted, because I have considered the thing as I said, a joke.

Mr. THOMPSON. Of course, it might be, Mr. Basford, that a member would have a right to call the board together.

Mr. BASFORD. I presume so, but if we were not wanted together for advice why should we do that?

Mr. THOMPSON. Mr. Basford, in connection with your work there and the position you occupy, have you made a study of industrial education and apprenticeship?

Mr. BASFORD. Not in connection with it in Mount Vernon; no, sir. In connection with my business, I have.

Mr. THOMPSON. What is your business that caused you to make that study?

Mr. BASFORD. Not my present occupation, but previous occupations.

Mr. THOMPSON. Well, what were they, Mr. Basford?

Mr. BASFORD. I was first the employee of a railroad.

Mr. THOMPSON. Of what railway?

Mr. BASFORD. Boston & Maine, to begin with. Following that the C., B. & Q., Union Pacific, Chicago, Milwaukee & St. Paul. Following that I had about 10 years—12 years—newspaper work as editor of a railway newspaper. During that time I gave most of my study to the subject of apprenticeship. Following that, eight years with the American Locomotive Co., most of the time as assistant to the president. I was directly responsible for the apprenticeship plan worked out for that company, and in that connection I assisted in a small way in some of the railroad developments along that line.

Mr. THOMPSON. What railroads?

Mr. BASFORD. I have tried to do, in an advisory way, in a friendly way, advisory way, with the New York Central, Santa Fe, and other railroad schemes.

Mr. THOMPSON. Was that in connection with this matter of apprenticeship?

Mr. BASFORD. Yes, sir. Never have been an employee of those companies for that purpose, but I have helped out with such advice as I was asked for.

Mr. THOMPSON. Well, from the studies you have made, that you have named, what kind of apprenticeship do you consider is necessary or adapted to modern industry?

Mr. BASFORD. I can not attempt to answer that question just as it is put, but if confined to the particular lines——

Mr. THOMPSON. State your views on that subject, generally, in your own way?

Mr. BASFORD. What are called the mechanical trades I have very definite ideas that apprenticeship should first insist on carefully selecting the boys; it should provide a short, intense course of not over three years; it should provide thorough shop instruction by men who have the time and the ability to teach the trades in the shop, under the shop conditions, and all the commercial conditions of life.

That is more than apprenticeship in the past ever meant. Apprenticeship in old times, of the old kind, consisted in keeping a boy perhaps four, perhaps five years, giving him the instruction grudgingly, for fear he might learn too fast and too much. To-day we should take these boys and with an intense course of three years, give them all that there is in the trade as quickly, as thoroughly as possible, by men trained to teach them. That is a thing which is not generally understood to go with apprenticeship. It makes all the difference in the world whether you have a trade training.

Just a word on this subject is too little; it takes a long time to explain just what I mean there, but that idea is now being carried out very successfully with the trade training in the trade, and I believe that trades can not be taught in school. I believe they can only be taught in the commercial surroundings and in the trade organization, the shop organization, or the industrial organization itself, where all the commercial conditions are present and where the work of the boys goes into the implement, the machinery that is used by the boys fellowmen.

Mr. THOMPSON. Taking up that subject, Mr. Basford, for a moment, Dr. Steinmetz yesterday said that the institution of apprenticeship schools or vocational schools by corporations must of necessity be a philanthropic work, for the reason that they did not pay; experience has shown that they did not pay. Does that agree with your opinion?

Mr. BASFORD. Not at all, sir.

Mr. THOMPSON. What views have you on that phase of the subject?

Mr. BASFORD. I think that apprenticeship in our mechanical trades has no element of philanthropy in it whatever. The result to the boys and to the employers are so certain and so direct that it is a straightforward business proposition on both sides.

Mr. THOMPSON. One reason that he gave for that, Mr. Basford, was that, because of the great specialization of industry in the mechanical arts to-day, it did not pay a corporation to take a boy through all the education that a man should have.

Mr. BASFORD. I do not know of a manufacturing establishment which does not supply a great deal more opportunity for teaching trades than are ever thought of being used, even the most highly specialized lines. I don't know that I fully answer that question.

Mr. THOMPSON. Well, going to another phase of the first question, wherein would such a school pay a corporation—you say it does pay?

Mr. BASFORD. I beg your pardon, I have not used the word school yet, except to say what I did not believe in.

Mr. THOMPSON. I see. Well, wherein would the system of apprenticeship teaching such as you describe pay the corporations?

Mr. BASFORD. It would pay a corporation manufacturing anything, in my opinion. It would pay a farmer; it would pay a plumber, cabinetmaker, paper hanger, painter, or anybody else who works with his hands.

Mr. THOMPSON. You say that you have not mentioned the name school in that regard. Now, you are speaking of this education that should be given an apprentice. How should it be conducted?

Mr. BASFORD. We hear a great deal about vocational education. I would like to make my position clear, that I do not think it is any use to talk of vocational education, vocational schools, except we have the apprenticeship as a basis upon which the schools should work after the boys are in the employment, for which they should work before the boys are in the employment. I will put the trade training entirely separate as an apprenticeship in the work itself. Well, let the schools bring the raw material, the product or raw material, for apprenticeship up to the school—up to the work, I mean. Let them take it afterwards, when they are in the work and in a continuation-school process, and carry the school work forward. The schools, in my judgment, should not attempt to teach the trades or any parts of the trades. We have two problems for the schools—first to prepare the raw material for vocational training. When the pupils are employed in their vocation to provide the continuation school which explains to the boy or the girl, for that matter; but I am not talking so much about girls, because this problem is too big and you have got to take one little part of it at one time and talk about it. Let the schools take the apprentice, nights or in the daytime, and provide the mental development that goes along with the manual development, explaining in the school the reason for the things that the apprentice does in the shop.

Mr. THOMPSON. Now, taking the apprentice in the shop, what control should there be over him? Whose control should it be—the corporation or the public-school control?

Mr. BASFORD. In the shop?

Mr. THOMPSON. Yes; in the shop.

Mr. BASFORD. Absolutely the corporation, in the shop. I believe it is the corporation's business to train in its own work its own employees, and you can not do a thing if you have any outside influence. That is one reason why the boy should learn the trade in the organization; he has got to be responsible to his foreman and has got to do a good piece of work to-day in order to come back on the job to-morrow. The sooner he learns that the sooner he gets his position to learn his trade and become a citizen; and that is a part of citizenship.

Mr. THOMPSON. You have not provided in your scheme for the cooperation of the public-school system or the schools with the manual work.

Mr. BASFORD. I have not done that yet, sir.

Mr. THOMPSON. I mean you have stated there should be——

Mr. BASFORD. There should be; yes, sir.

Mr. THOMPSON (continuing). A system of teaching following along with the manual work. Now, there necessarily would have to be a cooperation between the teaching body and the shop body, would there not, in order that the child might be getting his intellectual training along with the manual work? How would you bring that about?

Mr. BASFORD. I would bring that about in this way: We have not yet come to the point where the educators—the professional educators—as I see it, understand the shop boy. We have not gotten to the point yet where the public schools as they are now conducted, as I understand it, can do very much for that boy. That I believe to be the reason why the boy gets out of school and gets into active life. This corporation-school idea that has been developing so rapidly and so widely represents something to fill a gap. I think it is only temporary; but the corporations with which I have been connected and the ones which have done me the honor to ask my advice felt they had to have their own schools. And in time that work should be handed over to the public-instruction organization; but I think it would be a long time before the public educators understand the shop boy and what he needs to know well enough to be intrusted with that problem. I would like to take a minute right here to say that one company with which I have been connected has quit making a regular practice of taking even college men as engineers.

They have developed a corporation school for the development of engineers, taking high-school boys at the age of 16 and making engineers of them competent to design locomotives. There isn't a textbook in the course. I haven't the papers with me, but the course has now been developed about—in developing about six years, and the graduates are coming out very successfully. A highly specialized school, to be sure, but representing, in my judgment, what will be needed for not only the preparation of engineers in a highly specialized line of work like locomotive building, but something very similar will have to be developed also for the shop boy. That is now being done in various ways, with various degrees of success, by the corporation schools. I have here some of these

courses, as they are interesting enough—it is proved that they have been interesting enough to hold boys voluntarily for night-school service, night-school study, night-school work, after a hard day's work in the shop. We can not settle this thing here in a few minutes or anything like it, but I think if it were possible to reveal the size of the problem I would be very well satisfied.

Mr. THOMPSON. To address your attention, first, in order to lay a basis for your development, I would like you to touch on the question of how you would develop the public school with reference to that question. How would you have public schools take the place of the corporation schools, and how would you bring about, as I stated before, the cooperation between such public schools and the manufacturing plants wherein the apprentices work?

Mr. BASFORD. In the first place, the public schools must do as manufacturers and as merchants do—study the market of their product. The public-school people must ascertain first what is wanted of a boy. I think they are beginning to realize the importance of that. But if the public instructors—I think you will find perhaps few of them understand the life that a boy enters when he goes into the shop. I think the first thing to do is for the public-schools people to get in touch with that to understand the market for their product. These corporation schools are now advertising for boys, advertising in the country papers, and they are getting them in a haphazard way. I think the teachers of the public schools might know their boys well enough, and know also the employers of the boys somewhat, and get them together.

Mr. THOMPSON. In other words, Mr. Basford, you think that the public schools when instituted for this work should make a survey of the neighborhood as to the possible demand in the future for school boys?

Mr. BASFORD. The public schools as they are conducted to-day will never do that. They can't do it.

Mr. THOMPSON. I mean a school as you would have it organized. I understand that the present schools can not do it, but I am trying to get your ideas of what the schools should do that would take this work up.

Chairman WALSH. Mr. Thompson, may I make a suggestion? Mr. Basford seems to have some very definite and well-thought-out ideas along this line, and somewhat original, as I take it, from what he said. He dislikes to attempt to state it in the short time necessary to be given. I would suggest that Mr. Basford write out his entire plan, write out his entire outline, if you will, Mr. Basford, giving us the ideas that you have, and submit it to the commission.

Mr. BASFORD. I should be glad to do so.

Chairman WALSH. I think that would be more satisfactory all around.

Mr. BASFORD. It will take me all summer to do that, but I will be glad to do it.

Chairman WALSH. Well, then, if your plan is so comprehensive that it would take all summer, perhaps it is unworkable so far as our commission is concerned.

Mr. BASFORD. I think it is.

Chairman WALSH. Well, then, if you do it—all this is a part of what we hope to be the constructive work of the commission—and if you could take your time and do that, we will consider it a very great contribution to our work.

Mr. BASFORD. It is not because of the comprehensiveness of the plan but the simplicity of it; it is so difficult to put this in words so that anybody would really get what I mean.

Chairman WALSH. What do you think of my suggestion?

Mr. BASFORD. I would be glad to do that. I have a few words I would like to say, though, if I may.

Chairman WALSH. We will be glad to hear them. And then put your really definite plan in writing and submit it to us.

Mr. BASFORD. There are two things that I think the schools, the public, should do: One thing that the employer should do is to teach the trades. One thing I think the schools should do is to prepare the boys for those trades. I don't mean to say to attempt to teach a part of that and leave the manufacturers and employers to do the rest, but to prepare the mind of the boy for the trade. That can be done. I believe boys—by putting in something like wood-working in the schools, as in the way of manual work, to ascertain chiefly through that whether a boy is mechanically inclined or not, and it takes a lot of study to find that out. Whether the schools should be evening or day is another question.

You will find it very difficult to get manufacturers to take their boys out of active organizations for a certain number of hours every day to attend a school, and I am not absolutely sure that that ought to be done, or that it is neces-

sary. It has been proven that the work can be conducted without it. Speaking of boys all the time. After the boys are in school, then there is an opportunity to do what the corporations are now doing with the continuation schools. That would have to be handled, I think, by State or National aid in some way. It all depends on how this aid is administered. It ought to be controlled, I believe, by representatives of three kinds of people, very much as the Wisconsin law provides: One representative of the teaching profession, perhaps two representatives of the employers, and two of employees, making probably five, which would be the best number. I would give the chief weight to the manufacturers, the employers, and to the employees. With these people very carefully selected and the control of State or National funds placed in their hands to be used only in accordance with plans which in their judgment are wise, and with the understanding that they are used for vocational schools and will be used in such a way as to encourage real trade training, then you will be safe in discussing vocational education.

I don't believe we will make very much headway until some such plan as that is adopted—that State and National money can not be used except with the approval of the plans under which it will be used by some such board as I mention. The Wisconsin State law seems to contain many elements of strength, and is likely to be very successful if they will do one thing which I understand they have not. They have not themselves in Wisconsin felt quite satisfied with—if they will encourage apprenticeship to a greater extent.

Chairman WALSH. Commissioner Lennon would like to ask a question.

Commissioner LENNON. Mr. Basford, you mentioned regarding the careful selection of boys for apprenticeship. Will you in your paper indicate to us why and how, after this selection, what is to become of the boys or girls that do not mark up to the proper standing? Deal with that to some extent, will you? And you spoke in another instance of the kind of teachers—that they should be trained teachers who ought to teach the apprenticeship in the shop. Will you indicate whether you mean by that, training high-class knowledge of the trade and the mechanics of the trade, or whether you mean something besides that or in addition to that? And will you deal to such extent, as seems to you advisable, as to whether in these corporation schools the plan pursued is that of teaching specialties, or whether the plan is to teach the whole trade to the apprentice? Those three propositions interest me very much, and if you would deal with them to some extent when you come to submit your plan I will be obliged to you.

Mr. BASFORD. I can answer those in a second, if you like.

Chairman WALSH. Very good.

Commissioner LENNON. Then answer them now.

Mr. BASFORD. As to the boys who do not measure up, I think it is the business of any employer to find—particularly employers of a great many people—to try to find some place where almost anybody will fit. It can be done. We give great attention to steel, iron, brass, stone, copper, and all that. We give almost no attention to the human being, as to his qualifications for doing certain things. That, I think, is a charge that could be made against almost any very large corporation. And my idea is that apprenticeship trade training, vocational education, is only a part of the treatment of people in the employ of those large concerns or small ones. So far as the character of the teachers is concerned, I think the word "teacher" does not represent exactly what is wanted. An educator does. For the shopwork an expert machinist, one who not only can do a piece of work well but do it quickly, do it commercially, should be such a man as can show—has the ability to show boys how the work can be done. It is not at all difficult to get these teachers. The trouble is that after getting a teacher, and he shows his success in teaching, he is wanted for some important position right away, and he is taken out, to be passed on to some bigger job. So far as teaching the entire trade is concerned by the corporation schools, that, I think, goes without saying, that if the plan is fully understood and appreciated the corporation will teach as much as the pupil is capable of taking. Some can not go through a complete trade. Some have limitations which will make them stop short of that; but carrying them as far as they can go is the plan, and I think the enlightened employers taking this subject up are doing that.

Chairman WALSH. Commissioner Garretson would like to ask you a question.

Commissioner GARRETSON. Following that idea of the teacher a little further, Mr. Basford, is it not true that if the school develops, whether we speak of the vocational school or of the courses, which you have referred to as a shop, that the teacher is going to evolve possibly from the pupil of those schools

or courses, and it will be with the teacher in the industrial sense or the mechanic with the teaching sense that will come to the surface as an instructor along those lines?

Mr. BASFORD. Yes, sir.

Commissioner GARRETSON. The schools themselves, when they get to a certain stage, whether one type or the other, will develop the type of teacher which will be necessary to carry it forward to its best?

Mr. BASFORD. Yes, sir; I think so. But as to the teachers for these continuation schools, it seems to me to be necessary to get somebody who has gone through the same mental process of learning about the things that are done in the shop that the pupil himself has to go through. The college graduate does not necessarily have the greatest success in teaching a continuation school, such as the corporations, some of the corporations, are now conducting. The man, I think, who has the greatest success, the one who has had, to my notion, the greatest success, is the one who has learned what he knows himself largely by observation, reading, and questioning. He has that in his own experience which enables him to see how the boy looks at the thing that he does not know about.

Commissioner GARRETSON. And for a time, possibly, the gaps in his own experience might be bridged by the use of a portion of the practical mechanic?

Mr. BASFORD. Yes; and I think the practical mechanic will be the bright one. The one who understands, the one who has possibilities of mental development, will make the ideal educator for those continuation schools, and their work. I would not like to look to one who had grown up, come up through the normal, the regular way of training of teachers for successful teachers in this line so much as I would to the pupil who had come up through the school of hard knocks. Of course, you have to have intellect, but the understanding of the mind of the boy which would enable the teacher to have a micrometer caliper; we do not want algebra, geography, comic sections, descriptive geometry; we do not want to go into the differential calculus; we want the thing taught that the boy is going to do. It will be relative and narrow, but it will be relatively thorough. We have got to get over, in teaching these boys in these schools, the idea that we are going to teach them subjects, that you can hand them a block of algebra that is that long and that high and that wide, as much geometry and all those things, those other subjects, in the same way. You want to get at the boy in the boiler shop with the things that are around him, work in your algebra, geometry, trigonometry, if you please; but mainly arithmetic and common sense, using the things that the boy touches and handles every day. You give an idea of economy, get it into his mind up in the boiler house, the most difficult place in the world for training an apprentice; but ask him what a rivet weighs, learn him to figure out the weight of rivets, tell him how to find how many rivets he heats in a day, how many rivets goes into a boiler of a certain class; ask him why a rivet is heated, why it is not driven cold.

In that connection ask him what the mercury thermometer means. He will very soon see that a rivet is heated in order to extend it and when it is cold it contracts, and after it is drawn up it holds the plate close together.

In that connection, ask him how many rivets heat destroys every day, because he burns them; give him the cost of the rivets, and then ask him what percentage of the value of the rivets he destroys and let him figure out whether he is a useful citizen. You have got some mathematics then before him that he will remember. There are lots of unknown quantities that those boys can be made to figure out themselves that will make them so intensely interested in their work that your problems are easy after that. We have to understand the boy and get at him in the right way.

Commissioner GARRETSON. Might I ask you right there, for evidently you have been connected with railroads in their mechanical department?

Mr. BASFORD. Yes, sir; I was.

Commissioner GARRETSON. On this I want to talk of the school curriculum as it exists. Have you ever, as a practical man, used any formula that you learned in arithmetic in school, unless it was that based on the multiplication table?

Mr. BASFORD. No, sir. The engineers to-day confine most of their calculations to plain arithmetic. The trouble is to get the people to understand whether they ought to add or subtract, multiply or divide, and do it at the right time and in the right place.

I am rather antagonistic to the present methods of education. In the technical schools—I am a graduate myself of the Massachusetts Institute of Tech-

nology, in Boston. I profit by the experience that I had at that school. I came in contact almost at once with a so-called apprentice in a railroad shop. I saw how he was mistreated, and how he was used as cheap labor, how every bit of knowledge was kept away from him; how he was discouraged in every possible way. I made up my mind at that time that if I ever had a chance to use a word to help that poor devil I would do it. That boy that comes into shop, the son of somebody, the shopman, perhaps, may be of a tramp, has in him, if we give him the right training, the possibility of becoming the industrial leader of the future. He may be the leader on the labor side; he may be on the employer's side. It is from that class of people that the leaders of to-day have come, and it is that boy, I think, who needs our attention. And instead of trying to adapt him to our educational system, we ought to adapt our educational system to him.

Commissioner O'CONNELL. Do you believe that there should be any limitation of the number of apprentices?

Mr. BASFORD. Limitation?

Commissioner O'CONNELL. Yes, sir.

Mr. BASFORD. My answer to that always is this: Until we use the apprentice that the labor organizations now allow manufacturers, employers to have, the manufacturers have not a word to say about the limitations of apprentices. The best way to make the labor unionist let up in this respect is to make apprenticeship so important and so valuable that they will want to get all the boys they can into it. You have not done that yet.

Commissioner O'CONNELL. Are you familiar with the apprenticeship system on the New York Central lines?

Mr. BASFORD. I am.

Commissioner O'CONNELL. What do you think of that system?

Mr. BASFORD. I think it is excellent.

Commissioner O'CONNELL. Are you familiar with the system on the Santa Fe?

Mr. BASFORD. I am.

Commissioner O'CONNELL. How recently?

Mr. BASFORD. How recently?

Commissioner O'CONNELL. Yes, sir.

Mr. BASFORD. From its start.

Commissioner O'CONNELL. What do you think of that system?

Mr. BASFORD. I think it is excellent.

Commissioner O'CONNELL. Do you think those two systems are alike?

Mr. BASFORD. Yes, sir; they started alike; they have drifted apart.

Commissioner O'CONNELL. That is what I wanted to get at. How are they to-day?

Mr. BASFORD. The Santa Fe has held to its original plan, and the lines of the New York Central west of Buffalo have held very closely to their original plan. The lines of the New York Central east of Buffalo have made a change in their outlines of school work, and have taken their lessons of late—well, they started them on the original basis, they have taken them of late, I understand, from the International Correspondence School lines.

And this problem is so definite and is so important locally, each place being different from every other, each town being different, and the individuals being different, that I think the corporation school work is now serving a very useful purpose in developing that individuality which will help later.

Commissioner O'CONNELL. At what age do you think an apprentice ought to be admitted into the trade?

Mr. BASFORD. That is generally determined by the State laws. I think the boy ought to be good and strong before he goes into a shop, and I think—I would not vote for any very much earlier age than 16. You can take a boy in at 15 and not hurt him any.

Commissioner O'CONNELL. Do you think he ought to be put on probation for six months or a year?

Mr. BASFORD. In apprenticeship?

Commissioner O'CONNELL. Yes.

Mr. BASFORD. By all means. Every day he ought to be on probation.

Commissioner O'CONNELL. That is all I have, Mr. Chairman.

Chairman WALSH. Thank you, Mr. Basford, that is all. Call your next, Mr. Thompson.

Mr. THOMPSON. Mr. Williams is not here. We will have him at 2 o'clock.

Chairman WALSH. Call your next.

Mr. THOMPSON. I will call Mrs. Anna H. Wilcox.

TESTIMONY OF MRS. ANNA H. WILCOX.

Mr. THOMPSON. Will you please give your name, your address, and your present business?

Mrs. WILCOX. Mrs. Anna H. Wilcox; my home address is 106 Northern Avenue, Manhattan.

Mr. THOMPSON. And your position?

Mrs. WILCOX. Supervisor of continuation schools of New York City.

Mr. THOMPSON. How long have you been supervisor of continuation schools of New York City?

Mrs. WILCOX. I have been in the active work of supervisor only since the middle of April, but I have been working over the ground since last fall. We were not prepared to have an active supervisor in the field, because we did not have the classes.

Mr. THOMPSON. This is a new departure of the schools of this city?

Mrs. WILCOX. Entirely new and is still fairly in its experimental stage—an experiment which has proved a success, however.

Mr. THOMPSON. You have started some schools in connection with the department stores, have you not?

Mrs. WILCOX. Yes, sir; I have.

Mr. THOMPSON. You may state the number of schools and the names of the firms that are cooperating.

Mrs. WILCOX. Last October a department was started in Abraham-Strauss's department store in Brooklyn of 15 pupils. In February a class was started in Bloomingdale's, Manhattan, with 18 pupils. In April a school was started in Lozier's department store in Brooklyn, two classes, because there were so many of the youngsters there, the juniors as we call them, that the class had to be divided into two parts. There were 29 in that class. In May I opened classes in three stores—Matthews's in Brooklyn, Altman in New York, and Hearn's in New York. I have also under my charge four classes in the Educational Alliance, taken over by the board of education, which is a school for teaching English to foreigners, which has been in operation since 1908. The teachers who conducted those classes in former years were examined by the examiners of the board of education and passed and have been retained. The class is still in operation.

Mr. THOMPSON. In these schools what hours are allowed by the employers and where is the instruction given?

Mrs. WILCOX. In some of the stores, the stores that open after 8.30, classes form immediately and are conducted in some of the stores for one hour, some an hour and a half, and the longest period is two hours. In the stores that open at 9 some of the schools commence at 9, and some of the employers allow the pupils to come half an hour before the store opens and so have the advantage of the extra half hour and not take it away from store time.

Mr. THOMPSON. Well, where the time is taken off the store time are the children paid for that time?

Mrs. WILCOX. They are paid for the time in all cases.

Mr. THOMPSON. Even where they come ahead of time?

Mrs. WILCOX. Yes—no; they are not paid for that half hour. That was at the option of the children. They preferred to come. They were so eager to attend the classes that in order to get the half hour of extra instruction they volunteered to come half an hour before the store opened regularly. I have met with that spirit of enthusiasm among the pupils without exception and the spirit of cooperation among the employers; so that there has been a perfectly beautiful spirit of harmony right through.

Mr. THOMPSON. What subjects generally are taught and what teachers do you use?

Mrs. WILCOX. I found that the majority of my juniors have left school in the seventh and eighth grades; I think a majority in the seventh grade; and some have left school in as low a class as the fifth. You can understand that their grammar-school training was very much uncompleted, so we have taken up and tried to comply with the real significance of the word continuation, trying to go on from where they left off in the school without any of the frills that are put on in public schools and the studies have been in common practice, arithmetic, spelling, local geography as directly needed by the store's requirements, and English work. The English work is to develop their ability to speak correctly and speak fluently and easily, to write business and social letters, to

make bills and receipts, and to carry on a general business correspondence; to speak correct English, etc.

Mr. THOMPSON. What are the results of this kind of instruction so far?

Mrs. WILCOX. So far the classes have been organized such a short time that no large, definite results have yet been gained; but the promises are very good. In one class we had nine pupils who have gained advance in their pay directly due to their training in their class.

That class I conducted myself for two months and experimented on it, and very vigorously so; and did a great deal of intensive work, and I thought these nine children were deserving of increased salary and pleasantly but determinedly demanded it from the store, and they met my request very courteously; and in that same class I have five of those nine who were advanced in their positions—in one case a little girl who has been especially proficient and has just fairly eaten up the work I have given her—she has been advanced three times. And right here I would like to say that my work is as much individualistic as possible. I want to keep my class down to as small a number as the law allows—which is 15—so that the teacher having charge of the class can do individualistic work whenever it is necessary. And where I have had teachers who have been cooperative and understood and had the courage to do things never done before in the regular public-school work, I have found very delightful results.

You asked about my teachers. They are appointed from the regular eligible list from the public schools of New York City. That list I rapidly exhausted, I am glad to say, and I have had to advertise for teachers and that gives me an opportunity of selecting, and selecting with great care; and in every case where possible I have been selecting a married woman with children. Her credentials had to be those, of course, of regular teachers. I prefer the married women, because they have added to their intellectual training that peculiar sociological work that I think my work demands, and I have selected teachers who have generally shown themselves interested in sociological work and have broad vision; who have also a spirit of personal sacrifice, as it is a personal sacrifice, to conduct these classes so far, as the salary is small.

Mr. THOMPSON. I take it from what you have said that you feel there is great possibility in this work?

Mrs. WILCOX. There is an unlimited possibility.

Mr. THOMPSON. And that it is doing real good in the community?

Mrs. WILCOX. I have had the employers in the stores tell me that they see themselves the progress of these little individuals. I mentioned one store only where there had been advancements. There have been advancements in three stores in the positions that these children occupy. None of them, with one or two exceptions, are sales people. They are in the stock rooms, in the auditing department, and a large majority of them are what are called packers—or wrappers—the little girls who do up the bundles.

Mr. THOMPSON. From what you have said I take it the teaching of English helps these pupils to make out sales tickets, and have you any other observations as to such help that such schools can be in the particular business in which they are employed, by way of vocational training?

Mrs. WILCOX. There is only one field for vocational training for the department-store worker—that is, outside of the clerical offices—that is, the vocation of salesmanship; and I have my own ideas of what salesmanship is. I think it is very largely courtesy and common sense; and I have held conferences with my teachers after hours to get them to understand that if possible I want to have them incorporate in all of their teaching, in everything that the child does, to incorporate those two principles and constantly direct the child definitely toward the application of the work in their positions in the stores. For instance, a good deal of my arithmetic work is done on sales slips, and I make every lesson in arithmetic or in fact every occasion where they use either a pen or pencil, I make it a writing lesson. The time is so short, the work must be so intensive, that I try to combine several things in one; and a great deal of their arithmetic work being on those sales slips, they are cautioned to observe the rulings and to keep their loop letters from running into other lines and to keep the dollars in the dollars' column and to keep the cents in the cents' column, and the spelling correct. It requires a constant supervision of very sharp, bright, active, patient teachers to keep those things up to the standard, which I hold before them. I hold a very high standard before them.

Mr. THOMPSON. You have spoken about the fact that a great many of the children are in the seventh or eighth grade, or were when you took them up. Is there any limitation in age?

Mrs. WILCOX. I am supposed to limit them to 16; but where I find girls under size and undeveloped, I let them slip in and don't say much about it. They need it. That's what I mean by sociological work. I hope by the next term to have a great deal more latitude in the question of age so that wherever young people are employed in the stores and are inefficient, due to the lack of education, to allow them to come into my classes.

Mr. THOMPSON. Without any age limit?

Mrs. WILCOX. With a very elastic age limit.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Any questions, Mr. Garretson?

Commissioner GARRETSON. No.

Chairman WALSH. Or you, Mr. Lennon?

Commissioner LENNON. Do you give any instruction in the school as to salesmanship, the origin and composition of goods which the children handle, and other matters of that character?

Mrs. WILCOX. I expect, as this work develops, to take up a definite course in salesmanship in the study of textiles, the qualities of silks, qualities of cotton fabrics, manufacture of leather goods, and things of that sort that will enable the young sales person to talk intelligently about the article she may be handling for sale.

Commissioner LENNON. Where do you expect to get the teachers to give that kind of instruction? From the normal schools or out of the shops?

Mrs. WILCOX. I have not taken that up at all, because it is still in the future; and when the time comes I don't know where I will get teachers. I know I will have a very difficult time getting them.

Commissioner LENNON. That is all, thank you.

Mrs. WILCOX. I wanted to say just one word.

Chairman WALSH. Certainly. Any suggestions you think will be germane we will be glad to have.

Mrs. WILCOX. I have opened each class as it has been formed with a little list of what I call watchwords, and under these five watchwords, as they were originally, I have had the teachers develop their daily work, and this comes under the head of salesmanship. My first watchword is "courtesy," and the teacher has the class write the word courtesy at the head of the written papers for a week, or longer, if it seems to be necessary, in order to get them to understand in a proper sense the practical meaning of the word and to give practical examples of it in class.

Second, "accuracy"; third, "speed"; and, fourth, "punctuality." And with that word I have had trials and tribulations. These little workers are constantly late to the stores, and consequently they are late in their classroom, and I have had to insist on strict rules, and when one of them has been tardy three times she is dismissed from the class; but so far, since I made the rule, there have been no infringements. The fifth watchword was "loyalty." That was developed as the work progressed on account of some unpleasant discussions by the students in the classes about their employers. I insisted that while they remained on the pay roll they must be loyal to their employers. The last watchword is "responsibility," which was developed in one class. And I want to tell, just to show the caliber of the teacher who had charge of it, and to show what I require of the teacher, this one instance: She had charge of a class for about two months and had occasion then to remain away one day, and I appointed a substitute and went over to the class that morning to see how the substitute was taking charge, and he had not appeared; and this teacher before this had formed her two little classes. She had her classes divided into two sections and had formed them into a little club, with the election of a president and the other officers, and had told them in case the substitute did not appear and in case of any emergency for each little president to take charge of the class. When I got there the second class was in session, and I found absolutely perfect conditions.

That was not so much due to the children themselves as due to the atmosphere the teacher had previously created in the classroom; and I immediately developed the new watchword "responsibility," and tried to make each individual see that it was due entirely to the individual responsibility which the

child took that the class was conducted in just as good condition as if the teacher had been present.

Commissioner LENNON. I would like to ask one question—is it the idea of the board, as far as developed or indicated in any way, that this continuation work is to go on after, say, 16 or 20 or 21 years of age? Or are your present ideas limited to young children?

Mrs. WILCOX. Our present ideas and hopes are not limited, but we are limited by law. We can not compel children over 16 to attend school of any kind, but the hope and plan of the board is to have these classes and have the attending optional.

Commissioner LENNON. The law would permit that now, would it—optional classes?

Mrs. WILCOX. I really don't know whether the school board's rule would permit it, but we hope later on to be able to hold those classes, for we have found such need of them.

Commissioner O'CONNELL. I would like to ask, for instance, these watch-words that you selected—for instance, "loyalty" to the employer. What is taught in connection with that? What is taught? You say you employ the word "loyalty." What are you teaching in connection with the word "loyalty"?

Mrs. WILCOX. It is, of course, entirely a moral question—a question of fairness and squareness. If a child accepts the pay from a store and continues to work in the store she must not speak against her employer. If she feels she has sufficient grievance she should take it up with the employer and not continue to find fault with him without giving him the opportunity to explain to her what the reasons may be for his seeming offense.

Commissioner O'CONNELL. Are all the classes made up in keeping with the line of employment in which the children are engaged? For instance, the department stores, is the line of education governed largely by the business in which they are engaged—the occupation?

Mrs. WILCOX. They come from all the departments. The classes are formed simply of the juniors. They come into the store and they are employed in a number of departments, the wrappers or packers are employed in all departments where they can wrap packages. You can understand that there would be a great variety of departments. The stock girls, of course, handle the stock up in the stock rooms, but they are in training in the common branches because they are all insufficiently educated. They are insufficiently educated if they are under 16.

Chairman WALSH. That is all, thank you, Mrs. Wilcox. Call your next witness, Mr. Thompson.

Mr. THOMPSON. Miss Cleo Murtland.

TESTIMONY OF MISS CLEO MURLAND.

Mr. THOMPSON. Give your name, address, and occupation.

Miss MURLAND. My name is Cleo Murtland, assistant secretary of the National Society for the Promotion of Industrial Education, in charge of the work for girls and women.

Mr. THOMPSON. Your residence.

Miss MURLAND. 606 West One hundred and sixteenth Street is my home address.

Mr. THOMPSON. How long have you been assistant secretary for the National Society for the Promotion of Industrial Education?

Miss MURLAND. Since September 1, 1913.

Mr. THOMPSON. Have you in charge a factory school in the waist industry in this city?

Miss MURLAND. I have not. The plan which we have worked up is a proposed plan, which is pending.

Mr. THOMPSON. Will you describe this proposed plan, and how it came about that you have made it, and at whose instance?

Miss MURLAND. If I may put a little personal experience ahead of that—I have been for many years a public-school teacher—for six or seven years in close association with the trade on which this study is based. When I say this special trade I mean the power-operating trade of which the dress and waist industry is one branch. We have come to believe in this industry that there is little chance for the girls to get ahead unless they have some training. Many of the girls—the very, very large proportion of the girls—in fact, almost all of the girls,

because the proportion is so great—are not really touched by education until after they have entered the industry. We hope that condition will change; but that is the present condition, and this plan was worked out with the idea of dealing with present conditions. Since the girl can give very little time for education, for study, it was proposed that some part-time arrangement be made with a short unit of training. Twelve weeks has been used as a basis, which need not necessarily stand if 12 weeks is not the good unit for it. During that time it was proposed to train her beyond the job which she is already holding—to train her into something that requires greater skill, if she has greater skill, which needs to be developed, or greater earning power. The State of New York now provides for part-time training for girls and for boys in industry. It does not, however, make it compulsory; and for that reason there is some need for outside practice, to develop a scheme for the part-time training. This plan has been based upon an experimental plan outside of the public schools largely, because that is the way they have of beginning new things in New York—rather an established custom. This plan has tried to bring into the scheme a cooperation of the employers, a cooperation of the workers and of outside parties, planned somewhat after the protocol in the industry.

Chairman WALSH. Will you be seated, Madam? I think you will be more comfortable.

Mr. THOMPSON. I would like to ask you what has been done with reference to the two parties for bringing about their cooperation?

Miss MURLAND. There have been constant conferences between those people during the time this work was being done. Both sides have spoken somewhat favorably upon it, but as a body, as an official body, neither the union nor the manufacturers have given their final decision upon the matter. That is pending, and we expect a meeting to that effect in the early summer.

Mr. THOMPSON. This industry—you have this organization of employers and also a union?

Miss MURLAND. Yes; Local No. 25, it is called.

Mr. THOMPSON. And you are dealing with these two organizations?

Miss MURLAND. Yes; through their officers and their committees which they appointed to cooperate with us.

Mr. THOMPSON. But as yet there has been no decision?

Miss MURLAND. As yet there is no decision?

Mr. THOMPSON. By either side?

Miss MURLAND. By either side.

Mr. THOMPSON. In planning to give 12 weeks to this work, I take it you are planning that during the slack season?

Miss MURLAND. Yes; so as not to keep them out of the industry any longer than necessary.

Mr. THOMPSON. In the dress and waist industry they are pieceworkers generally?

Miss MURLAND. No; the smaller percentage are pieceworkers?

Mr. THOMPSON. Only the smaller percentage?

Miss MURLAND. Only the smaller percentage are pieceworkers, and the larger percentage are week workers.

Mr. THOMPSON. And in the work, however, of conducting that along this plan, you seek to take in the slack time during the seasons?

Miss MURLAND. And I take that as a detail which will work itself out more readily after the work is started.

Mr. THOMPSON. Perhaps it might be well if you would just as simply and as briefly as you can state your plan and scheme.

Miss MURLAND. I have taken the outline which was sent to me by the commission and I will follow that.

The description of the plan, the first, was an analysis of the industry and terms of education. That is to say, what is there in a trade that is not taught at the bench, that has sufficient background to make it worth while to set up a school for training the workers? That is vocational training, you see.

Second, to outline a course of study in part-time classes for girls employed in the work, and, third, a plan for financial support and the joint board of educational control. The preliminary investigation was very simple as to form. It was composed of a few fundamental questions which, with the analysis of the industry, would give a basis for an educational program that would command the interest and support of the workers employed in the industry, the confidence of the manufacturers, and the support of the public interested in the welfare of industrial workers.

The questions were as follows: What do the workers do? What are the occupations? What are the operations of the industry?

Second. Where do the workers come from? From school? From other lines of the operating industry? From allied industries? From other industries? Do they pick them up? Are they trained by the employer? Are they trained in the school? Are they trained before entering the trade and how do they get into the trade? How do workers learn the trade? What is the prevailing age of workers? What is the demand for workers, the number yearly? What is the possibility of and the chances for promotion? How far recognized by the trade does knowledge of one job lead to another more skilled and more highly paid? What are the wages, the possible earning ability? The wage as compared with the length of the season?

Elighth. The plan for a part-time school and course of study and organization of classes.

The third. Cooperation of the parties I have already given. In addition to the cooperation of the dress and waist manufacturers' association and Union Local No. 25, statistical information was furnished by Mr. N. J. Stone, of the wage-scale board of the dress and waist industry.

This information, as you know, was the result of a 1913 investigation of the whole industry. It was complete and accurate, and added greatly to the report. We had also the cooperation and support of those who worked in the industries, in the cloak and suit industries, which is one of the allied industries. I went into this industry, as I say, with seven years close contact with the industries. I believe very thoroughly in the industry. I think it has a great deal that is good in it. It is going to do a very great deal for our old traditional dressmaking, which has been handed down in the home. Methods in the business are good; they really can be good. The chances for the workers are very great. Wages are better in the main in that industry than they are in dressmaking, which is its allied industry. When I say dressmaking, I mean the kind of dressmaking that has been done chiefly by hand in the exclusively custom shop. The yearly demand for workers was a very difficult question to answer. Mr. Stone, who gave me the information I had on that fact, found it impossible to trace great numbers of the workers because of the shifting from one branch of the industry to another and the duplication of names. There might be many, many girls by the same name. Mary Goldsmith, for instance, or Mary Colletti, or perhaps 8 or 10 girls of the same name. The commissioner had no reason to know they were not the same girl, or that they were different girls, and they found it impossible to follow the girls entirely. They could only find definite information about girls who remained in the industry all the year. When, feeling that that was unsatisfactory and misleading information to give, they have declined to give definite information. They are willing, however, to say that 5,000 new girls are needed in the industry each year.

I analyzed the occupations and the operations in the industry, having run a machine myself, knowing quite a good deal about putting garments together, and I found it a relatively easy matter to do it. The operations, many of them, are simple; some of them are very complex.

The analysis of the processes of what the workers do gives the chance for changing from one occupation in the industry to another. I designate that as a line of promotion, because it is convenient. There is a line of promotion in the dress and waist industry. It is not, however, recognized to any great extent, because there has been heretofore a very large supply of green labor, and manufacturers have been using that labor, and not realizing that they needed to train their workers. The time has come now when they realize that they must train their workers, and the workers themselves realize—I found this out through my talks with girls employed in the industry—in order to get ahead they had need of greater training than they can get in one occupation in a single factory.

There are two types of girls entering the dress and waist industry—inexperienced girls who come directly from school and very frequently from the grades, some girls from the high school, and many of them from the grades, perhaps the seventh and eighth, and there are not so many sixth and fifth grade girls in the dress and waist industry as there are in some of the allied branches of the trade; that is, those branches of the trade where the work is less complicated.

There are also what we might call semiexperienced girls—girls who know a little bit about sewing, perhaps they picked it up at home, and perhaps they may have had some sewing in the schools. The inexperienced girl enters as

a cleaner or finisher. The cleaner's duty is to cut away the threads and trim away the raw edges of the cloth underneath the lace, and so on, and she is not a person who takes out spots, as the term would seem to mean. And the finisher, the finisher sews on hooks and eyes, a simple process that almost anyone can do. Am I too long?

Mr. THOMPSON. I would like to ask you some questions, and you may make your statement afterwards.

What courses of instruction do you intend to give in that school; briefly as you can.

Miss MURTLAND. Vocational courses. That means considerable time spent at the machine with correlated work in arithmetic and English and other subjects that can be included satisfactorily in such course.

Mr. THOMPSON. How do you intend to arrange the time?

Miss MURTLAND. This was on a half-time scheme; the girls in the factory a half day and in the schools a half day. They were to be paid a flat rate during their training time, during the period of training.

Mr. THOMPSON. How much?

Miss MURTLAND. Of \$6 per week.

Mr. THOMPSON. How did you intend that that school should be supported financially?

Miss MURTLAND. That school used to be supported by three parties. The proposal is that the manufacturers' association bear one-third of the expense, the union one-third, and outside influence, public persons, through a committee of the National Society for the Promotion of Industrial Education. Those people already have their funds ready and are most willing to help.

Mr. THOMPSON. When you speak of the board of control, do you mean the board of control of those three elements?

Miss MURTLAND. Of those three elements. I have three charts here.

Chairman WALSH. Will you kindly submit the charts so that we may put them in the record.

(The four charts were received in evidence and marked "Murtland Exhibits 1, 2, 3, and 4.")

Murtland Exhibits 1, 2, 3, and 4 were submitted in printed form.)

Mr. THOMPSON. That is all I have, Mr. Chairman.

Chairman WALSH. Call your next.

TESTIMONY OF MR. LEWIS A. WILSON.

Direct examination:

Mr. THOMPSON. Will you give us your name, your address, and occupation?

Mr. WILSON. Lewis A. Wilson; address, 728 Morris Street, Albany; occupation, inspector of vocational schools.

Mr. THOMPSON. There is a law in this State providing for educational schools, is there not?

Mr. WILSON. Yes, sir.

Mr. THOMPSON. And for State aid?

Mr. WILSON. Yes, sir.

Mr. THOMPSON. Briefly state how that is carried out?

Mr. WILSON. The law provides for State aid for four types of schools: The general vocational school, and that is general training for boys between the ages of 14 and 16 years; trade schools for boys of the age of 16 years; agricultural, mechanical arts, and home-making schools, and part-time continuation schools, and evening schools. The State aid is two-thirds of the first teacher's salary and one-third of each additional teacher's salary, with a maximum of \$1,000. State aid for each teacher.

Mr. THOMPSON. That is the extent of the State aid?

Mr. WILSON. Yes, sir.

Mr. THOMPSON. To what extent have such expenses been stipulated in this State? First, how long has the law been in effect?

Mr. WILSON. The law went into effect June, 1908, and was revised in 1914 by this last legislature. At the present time we have 34 general and industrial trade schools. We have an attendance, an average attendance of about 7,000 pupils; we have 36 State-aid agricultural schools or department—and by a department I mean a division of a regular high school, with an attendance of 1,500 pupils. We have one part-time school and one continuation school, and one continuation school with an attendance of about 40 pupils, and we have approximately 18,000 evening vocational school pupils.

Mr. THOMPSON. Scattered throughout the State?

Mr. WILSON. Yes, sir; making a total of 26,500 vocational pupils in the State.

Mr. THOMPSON. What control, what body has control of such schools; and if there are advisory bodies, how are they arranged and used, and what is their effect?

Mr. WILSON. The school is under the control of the local school authorities. The advisory board is planned to give aid in developing courses of study and in the shaping and building of schools. This advisory board is subject to the call of the chairman of the board. As a rule he cooperates with the superintendent of schools, or principal of the vocational school, and calls the committee together. The State has certain rules and regulations which they use in approving schools, but the burden of proof rests upon the local community.

Mr. THOMPSON. In connection with the advisory board, is the law so framed that the advisory board must be heard from?

Mr. WILSON. No, sir; it is so framed that it is necessary to have an advisory board. It does not state as to the meetings or methods of organization.

Mr. THOMPSON. In your supervision over the State of these schools, what is done to see that there is a working harmony between the advisory boards and the superintendents of schools or the regular school body?

Mr. WILSON. Well, in most communities the superintendent of schools holds a monthly meeting with the advisory board. But, to be perfectly frank, in some cases the advisory board is simply an honorary board and takes no interest whatever in the schools. When the meetings are called they do not attend, and for that reason oftentimes meetings are not called.

Mr. THOMPSON. Did you hear what Mr. Basford said this morning?

Mr. WILSON. I did.

Mr. THOMPSON. Apparently he feels that the advisory board is dropped by the other party.

Mr. WILSON. The advisory board has the power to hold their own meetings and make their own recommendations, which they do in many cases.

Mr. THOMPSON. They have that authority?

Mr. WILSON. Yes, sir.

Mr. THOMPSON. What progress has the vocational education made under this legislation in the city of New York?

Mr. WILSON. In the city of New York?

Mr. THOMPSON. Yes, sir.

Mr. WILSON. A very, very small progress in the city of New York.

Mr. THOMPSON. How do you account for that?

Mr. WILSON. Well, in my opinion, the whole vocational movement is set back by the attitude of the average schoolman. I think the average schoolman is opposed to the vocational education. I think the supervising official, not New York especially, but in all parts of the United States, is opposed to vocational education.

Mr. THOMPSON. Why, if you have any opinion?

Mr. WILSON. Yes, sir; I have a personal opinion. I feel that the old line of education—it is really necessary for it to justify itself, and they are afraid that vocational education will take away their positions. I think the school authorities—the schools need to be reorganized, and for that reason I think they are fighting the new form of education. However, I do think this: That the average schoolman seems to feel that vocational education simply means trade education; that trade education will reach a very small number of the pupils, and for that reason he feels that it is not plausible to organize vocational schools.

Mr. THOMPSON. Is there a pretty general feeling of that kind among the people interested in vocational education, that the old-style school-teacher is opposed to it?

Mr. WILSON. Yes, sir.

Mr. THOMPSON. And on that account do you feel that questions of vocational training or education should not be placed entirely in the hands of the old-style teachers?

Mr. WILSON. Will you repeat that question, please?

Mr. THOMPSON. From what you have said, do you believe that vocational training should be taken out of the hands of the old-style teachers?

Mr. WILSON. I do. While I believe the old-style teacher can contribute to the vocational movement, I feel that the control of the vocational schools should be under an entirely different type of schoolman.

Mr. THOMPSON. What kind of a type, and how would you operate a system of vocational schools, if you have an opinion on that subject?

Mr. WILSON. Well, a man who has had practical experience, who knows industrial conditions as they are, a man who is capable of eliminating some of the nonessentials in school work and bring the vocational movement up to the industry, making a point of contact between school and industry. As it is organized at the present time, there is no point of contact. Sixty-five per cent of the boys and girls leave school at the age of 14. The trade will not take them until they are 16, and it means that for two years the boys must wander the streets and have no trade and do such work as messenger boys and delivery boys.

Mr. THOMPSON. In reference to the control of such a system, would you have any boards of business men and employees?

Mr. WILSON. Yes, sir.

Mr. THOMPSON. And how would you organize such a board, if you have an opinion?

Mr. WILSON. I would have the board made up of representatives of various occupations, both of employers and employees. Then I would appoint subcommittees for each trade of each line of work offered in the vocational schools, having the subcommittees made up of an employer, two employers and an employee, or two employees. I do not feel that one advisory board can advise in the establishment of large trade schools. I feel it is necessary to have subboards or subadvisory committees to get different ideas.

Mr. THOMPSON. Mr. Basford said on such a board he would have two representative employers, two of employees, and one educator. Dr. Steinmetz said yesterday that in the case of the employees he would not have them selected either by political parties or by any general body of citizens, but in order to keep them from corporate influence he would have them selected by organizations of labor, purely as such. What have you to say in reference to both of those ideas?

Mr. WILSON. In the first place, I think the idea of having two members from labor organizations and two members from the manufacturers and one man is perfectly sound. It is rather hard sometimes to get the right kind of men to take an interest in school work. They seem to feel that the school is out of touch with industry, and in many cases they are interested in their own apprenticeship schools, and it is rather hard to get those men to take the interest in school work. But I think it is necessary to have men of big, broad viewpoints and to spend some time in working out courses and plans for school work, and I would think that the suggestion that the laborers' side suggest certain men or certain names would be very satisfactory.

Mr. THOMPSON. Of course, Dr. Steinmetz is a chief consulting engineer of a very large company.

Mr. WILSON. Yes, sir.

Mr. THOMPSON. And he gave one reason that the local industry could control the vocational education of a community was that it would be practically education along that one line of business. Does that appeal to you as an objection to the appointment by the ordinary politician to the membership of a board?

Mr. WILSON. No, sir; I think it is advisable to train for the local industry, if they have a future. In case they are not unskilled I would say not to train them.

Mr. THOMPSON. Have you any views in regard to the relationship of vocational training to the industrial and social needs of the State?

Mr. WILSON. There is not any question but what there is a decided lack of skilled workmen. I think what Mr. Basford said this morning about the corporations developing their own apprenticeship schools is simply the result of the lack of skilled workmen. I feel that they have come to see the necessity of having men who are qualified to do skilled work, and it seems to me that the school in giving boys first a general training along perhaps servile lines, which we call prevocational, and then allow them to specialize in some special trade line, will do much to relieve the situation.

I do not feel that the corporation school will solve the problem, when 65 per cent of the boys and girls leave school at the end of the sixth year and can not enter industry until 16 or 17 years of age; it seems to me the school has a very decided and clear-cut problem to face.

Mr. THOMPSON. Have you any views as to the compulsory part-time school for children between 14 and 16?

Mr. WILSON. Our law provides at the present time for a compulsory part-time school by local option. That is, a city may decide to have a compulsory part-

time continuation school, but we only get State aid for trade-extension work. There are three departments—the general continuation work, which deals with academic subjects; the second, the trade preparatory, to prepare them for trade; and, third, trade extension. Our law provides simply for State aid for extension work. The law is really very unsatisfactory.

Mr. THOMPSON. In what respect would you change that, and how would you take care of the children you speak of?

Mr. WILSON. I would change the law so as to give State aid for all departments of continuation work. The law of Wisconsin gives State aid for all kinds of continuation work; the law of Massachusetts was revised last year, and they gave State aid for all types of continuation work; and I imagine we will do the same thing in this State next year.

Mr. THOMPSON. In your opinion, would that take care of the children between 14 and 16 who are on the streets?

Mr. WILSON. Take care of all children between those ages; yes, sir.

Mr. THOMPSON. Have you anything more to say on that particular subject?

Mr. WILSON. I think that law is only a temporary arrangement. I think eventually our compulsory-attendance law will be increased to compel all boys and girls to attend school until they are 16, and then the continuation school will take care of the girl until 18.

Mr. THOMPSON. Do you believe in such a law?

Mr. WILSON. I do; yes, sir.

Mr. THOMPSON. That seems to be the general view of the people in this State that are connected with education; isn't that practically true?

Mr. WILSON. I think so. I think not only people connected with education but people who are interested in industry.

Mr. THOMPSON. Have you any views with reference to the question of the relation of industrial education and industrial unrest?

Mr. WILSON. The subject of industrial unrest is rather a hard subject to discuss. My own personal opinion is that the industrial unrest, to a large extent, has been caused by the development of highly specialized machinery in industry. A man who is a very small part of a large concern feels dissatisfied, and really causes a certain amount of dissatisfaction and unrest. I think the people who are trained in vocational schools or who have had a certain amount of trade training will feel their connection with all parts of industry. They can feel that they are a part of the big development of industry, and see their relation to the other parts, and I think it will do a great deal to relieve the unrest.

Mr. THOMPSON. Is there anything further you would like to say?

Mr. WILSON. No, sir; I think not.

Mr. THOMPSON. That is all.

Chairman WALSH. Are there any questions?

Commissioner LENNON. I would like to ask a question.

Chairman WALSH. Very well.

Commissioner LENNON. Mr. Wilson, which field of operation do you believe has the largest possibilities of usefulness—continuation or part-time schools or vocational schools?

Mr. WILSON. Well, I think the continuation and the part-time schools have a much larger field than the all-day vocational school.

Commissioner LENNON. The experience in these schools that you have recited, that you have a number of, would that indicate to you that the acquiring of the trade in the shop was preferable to acquiring it in the school?

Mr. WILSON. No, sir; I don't think so. I think if the trade work is properly organized, if it were possible to learn a trade in the shop, it is perfectly satisfactory; but it is not true. A large per cent of the people working in the large shops are working on piecework. They will not take the time to teach a boy to operate a machine. They simply teach him in many cases how to do the work and not why, and it seems to me the school will have to meet the shop condition halfway and teach the boy why.

Commissioner LENNON. Is it not possible and probable that the State will intervene to protect her children that go into the industrial life, that they must be taught?

Mr. WILSON. It seems to me it is advisable to do that; yes, sir.

Commissioner LENNON. I notice most of the men and women who speak on this subject have something to say about skilled and unskilled workmen.

Mr. WILSON. Yes, sir.

Commissioner LENNON. What appears to you to be the obligation of the State to give the necessary training to the unskilled workman, to the man that uses

the shovel and the pick? There is just as great a proportion of men who do that work that don't know how to do it as there are of skilled machinists. What are you going to do with those people?

Mr. WILSON. Personally, I believe that any educational system can well afford to make a man a better workman, regardless of his job. If he is digging a ditch, it seems to me we can teach him how to dig a ditch just as well as we can teach a machinist how to properly handle his tools.

Commissioner LENNON. In your judgment, they are entitled to consideration?

Mr. WILSON. I think so; yes, sir.

Commissioner LENNON. What trades are being taught in the schools now in this State?

Mr. WILSON. Various forms of woodworking, called carpentry, cabinetmaking, pattern making, molding, electrical work, machine-shop work, printing, plumbing, bookbinding.

Commissioner LENNON. Well, that is sufficient. Have they been long enough in existence to judge as to efficiency of the students after they go out into industry?

Mr. WILSON. In some cases; yes, sir.

Commissioner LENNON. Have they made good?

Mr. WILSON. They have made good, absolutely; that is, I should say 80 per cent have made good.

Commissioner LENNON. That is all.

Commissioner O'CONNELL. How long have they served? You certify that John Smith is a machinist when you turn him out?

Mr. WILSON. No, sir. They serve two years in vocational schools as a rule, and in some cities we have agreements whereby one who serves two years in a vocational school will receive one at the end of his apprenticeship. Serves two years in school and receives one year's credit on his apprenticeship training, starts in at the beginning of the first year out of school at \$9 a week; the second year he receives \$12, and at the end of two years he receives a bonus of \$100 in cash for taking the course.

Commissioner O'CONNELL. You say that the cause of the industrial unrest, in your opinion, is largely because of specialization. Still you say we are not sufficiently supplied with skilled mechanics. How do you place those two together? Are we going to go on with the one side specializing and the other side making skilled mechanics for which there will be no employment?

Mr. WILSON. If a man is only a specialist, he is a very small part of a large trade. If he has had general all-around training and then specialized, he can change from one machine to another without the loss of efficiency. When another man leaves a machine he can gradually work up the ladder. But the man who specializes on a lathe has to stay on that machine his entire life unless he wants to go to another and work up again. The boy who is not offered a chance to get that training——

Commissioner O'CONNELL. Isn't there a possibility in some one or two or three trades that they are going to make a specialty of in the schools? For instance, machinists. There is no school that I know of in the United States that has not something to do with machinists in their make-up.

Mr. WILSON. Yes, sir.

Commissioner O'CONNELL. That trade seems to be a common trade for all schools. If they pick that out and are going to start it in all schools, in every city and town in the United States, what is going to be the inevitable result? If all the whole machinery of our country is going to be turned into the training of machinists——

Mr. WILSON. As an illustration, in Gloversville, N. Y., we have a school in glove making, which is just as essential for that town as a machine shop would be in New York City. The idea is to organize a vocational school to train pupils for the dominant industry for that particular community. For that reason we would not have a machine shop in a town that did not employ machinists.

Commissioner O'CONNELL. That is all.

Chairman WALSH. That is all. Thank you, Mr. Wilson.

Call your next witness, Mr. Thompson.

Mr. THOMPSON. Is Mr. Winslow here?

(No response.)

Chairman WALSH. I received a note saying that he was out of the city and will not be back until Wednesday

Mr. THOMPSON. I have called all of the witnesses, and we have no witnesses here. There are three, and if they come this afternoon we would like to hear Miss Watson and Mrs. Brown.

Chairman WALSH. Are they here now?

Mr. THOMPSON. They are not here now.

Chairman WALSH. Has there been an arrangement with them to be here at some hour?

Mr. THOMPSON. An arrangement with them to be here this afternoon.

Chairman WALSH. The commission will now stand adjourned until 2 o'clock. We will meet at 2 o'clock in this room.

(Thereupon, at 11.45 a. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS—2 P. M.

Chairman WALSH. The commission will please come to order. Call your first witness, Mr. Thompson.

Mr. THOMPSON. Is Dr. Maxwell here?

Mr. Tompkins is the only witness here, Mr. Chairman. Will you please take the stand, Mr. Tompkins?

TESTIMONY OF MR. ROSWELL D. TOMPKINS.

Chairman WALSH. Mr. Tompkins, a few days ago Mr. D. E. Waid, an architect, was upon the stand and made this statement: One additional point which we regard as very serious is the influence of unions against trade schools. Fear of an overplus of mechanics and a consequent lowering of wages seems to have influenced the unions to assume a hostile attitude toward trade schools, resulting in an arbitrary interference with the rights of a young man to choose his trade or even be permitted to learn a trade. Now, after the hearing you told me you would undertake to gather a little data which you would give to the commission later on the attitude of trade-unions of New York City, especially toward vocational training and education. I wish in as concise and complete a way as possible you would make your statement.

Mr. TOMPKINS. Mr. Chairman and members of the commission, I might state that I took exception to those remarks made by Mr. Waid, as he is not able to speak at all for the members of building-trades unions. In fact, I don't know that I have ever seen the gentleman myself, and naturally if he is not attached to us he don't know anything about the inner workings of the council of the United Board of Business Agents.

I might state that about three years ago we were approached—that is, the office end of it—by a committee of ladies representing the vocational educational survey of this city. At that time they presented a sort of program that they would like to get the cooperation of the building trades on to bring the matter up before the different unions, and I might state that they were ably assisted by not only myself, as secretary of the board, but by every member of the boards. We even furnished the committee of ladies with a printed directory, at their request, and I notified various members of the board of business agents to meet them in conference to take up their respective crafts and the best way of bringing the matter before their union, and eventually it led around that we made an arrangement with Dr. Maxwell, of the department of education, to take the matter up with him in reference to instructors and how the examinations were held for the practical crafts in the building trades. I might say that Dr. Maxwell was very courteous to the committee. I was a member of that committee, and we spent a very pleasant hour and a half, probably, in talking this matter over and what could be accomplished with cooperation. Up to that time we had no information that cooperation was desired by either the department of education or the vocational education survey of the building-trades union. Naturally, of course, being ignorant of cooperation being desired, we knew nothing of what was going on until we were approached, and we immediately then took the matter in hand.

I might state, then, that the result of our conference with Dr. Maxwell was that, I believe, John Shields, or Alexander Shields—that is, the superintendent of the evening trade schools of the city of New York; I might not have his name right; Shields, I think, is his name—we received a letter from him, and he outlined in that letter that they would like to have the cooperation of the buildings-trades unions in their trade schools. I will state I was appointed then a committee by the board to visit the Murray Hill Evening Trade School, which is situated in East Thirty-eighth Street between Second and Third

Avenues, and I was very courteously received by the principal of that school, Mr. Morris E. Siegel—taken all through the different classrooms—and at the same time that I guaranteed them that in making my report back to the board that the building trades were, according to our conferences with Dr. Maxwell, would give all the cooperation possible. I reported my visitation to the Murray Hill Evening Trade School and what I had seen, and recommended that the matter be taken up with the various unions affiliated with the executive council, which was done.

I will state that I have here many letters from the Murray Hill Evening Trade School, from the department of education, our correspondence with them, and also the circular letters that we issued to our affiliations. In the last winter's class in the Murray Hill Evening Trade School there were three classes organized from the electrical workers' union apprentices and helpers, and the instructors were selected from the electrical workers' union on examination, and I might state that in four or five other crafts that they would have taken up a classroom for their apprentices and helpers if the material had been furnished by the city of New York. For my own craft, which is tile laying, I will state that the committee that visited on behalf of the tile layers' unions in this Murray Hill Evening Trade School, they reported back that there was no appropriation to purchase the materials necessary for the work of the students of that class. Well, it would be an impossibility for any union in the building trades to take and furnish the materials to a vocational school. The craft that I represent—while I was not a member of the committee, I had acted as a committee of the board and investigated for them the trade schools or vocational schools. I will say for my own craft that it would be impossible to furnish the tiles, sand, and cement, which would be the main component parts to learn that trade, to be used by the students, as it would be a costly experiment, and it would be costly in any line for the union to take and furnish those materials. We believe that if a vocational school is to be established by the city that the city should make appropriations for all materials necessary. We are fully convinced that cooperation will be given, providing those requirements are met. We know that if the materials are furnished, we know that the students in those classes there will get the best of teaching. We know that the examinations which Dr. Maxwell informed us would be held amongst practical men, we know that that has been a fact, because on March 1 application blanks closed, I believe, for the next season, which commences in October, for the teachers to be taken from that competitive class.

I may say further that a good many people are under the impression that a trade-school student or trade-school graduate—I am talking now of private trade schools, not vocational schools of the city of New York under the department of education—that just as soon as they put in a term or two in those trade schools they get a diploma or certificate certifying their competence to do this or that, and they lost sight of the fact that in the majority of the trades in the building line there are certain requirements of apprenticeship and of the helper system that you must serve so many years either as an apprentice or a helper at that industry before you can take an examination in order to advance yourself to journeyman. That is true, I know, in the tile layers' association, and it is an international rule. You must serve four years as a helper. I can go back to the time when I myself became a member of the tile layers' union, which was organized in this city December 5, 1883. Three years prior to that I was working at the trade, before the union was ever formed in this city, and at that time any helper that had served three years, up to the time the organization was formed in this city—three years was the requirement before ever he had a chance to handle any tools for any employer; and there were very many in this city at that time. Since that time the international union has established the four-year term for a helper. The tile layers here of New York have established and permit an improver, and a tile layer will make a request for an improver, and I believe all the building trades follow that system, and if a practical man is allowed to take an examination for instruction I believe the cooperation may be had whenever asked for at any time at all; that it will be given willingly.

Chairman WALSH. Do you want to ask any questions, Mr. Garretson?

Commissioner GARRETSON. No.

Chairman WALSH. Or you, Mr. Lennon?

Commissioner LENNON. No, sir.

Chairman WALSH. That will be all then, thank you, Mr. Tompkins.

Call your next, Mr. Thompson.

TESTIMONY OF MR. ARTHUR WILLIAMS.

Mr. THOMPSON. Give us your name, address, and your position, Mr. Williams.

Mr. WILLIAMS. My full name is Arthur Williams; my address is Fifteenth Street and Irving Place, and I appear here as designated in the subpoena, president of the National Association of Corporation Schools.

Mr. THOMPSON. Do you occupy that position?

Mr. WILLIAMS. Yes, sir.

Mr. THOMPSON. For how long have you occupied that position?

Mr. WILLIAMS. I am nearing the end of my second term as president, having occupied the position since the organization of the association.

Mr. THOMPSON. How long are the terms, please?

Mr. WILLIAMS. One year, Mr. Chairman.

Mr. THOMPSON. And the association has been in existence about two years?

Mr. WILLIAMS. Just about two years; yes, sir.

Mr. THOMPSON. What other positions do you occupy, Mr. Williams?

Mr. WILLIAMS. I am president of the American Museum of Safety, and professionally I am an electrical engineer.

Mr. THOMPSON. As an electrical engineer, are you connected with any company or corporation?

Mr. WILLIAMS. Connected with the New York Edison Co., but not as electrical engineer so much as in a business relationship.

Mr. THOMPSON. How long have you been connected with the New York Edison Co.?

Mr. WILLIAMS. Since 1885. I might say that that company was not organized as far back as that, but I have been connected with the New York Edison Co. from the time it was organized, and prior to its organization I was connected with its predecessor company, the Edison Illuminating Co., of New York, since 1885.

Mr. THOMPSON. In the course of your connection with the Edison Co., has the need of corporation schools come to your attention?

Mr. WILLIAMS. I don't know that it was so much my connection with the Edison Co. that the need for the corporation school came to my attention, because a large electric light and power company, such as the New York Edison, would naturally draw to it a very high grade of employees, to a certain extent college men, and also to a certain extent it would naturally draw to it the pick of men and of women who were engaged in earning their livelihood.

Mr. THOMPSON. What was the reason for the creation of the National Association of Corporation Schools, if you know?

Mr. WILLIAMS. I don't know that I could answer you otherwise than by deductive process of reasoning. The New York Edison Co. started a technical school about seven years ago for the education of its own employees along various highly developed technical lines.

Mr. THOMPSON. That was not a school for the youth?

Mr. WILLIAMS. Yes, sir; it was a school for any employee of the company, young or old, who might desire to perfect himself in the electrical art. It was a school with the widest course of instruction given by experts, partly in the theories of electricity, partly in the theories of electrical engineering, in the theories of machine and dynamo construction, of heat and various natural phenomena, and partly in the operating of the plants of the company, to insure a very high grade of service on the part of the employees.

That appeared to be so successful in securing a larger personnel mentally and, I might say, personal development, rounding out of the men of the company in that direction, that we decided to extend the work into a field that had not been previously covered by any industrial school; that is, in the commercial department, practically, with the thought that men could be developed, educated, or trained along so-called commercial lines, which had not theretofore been apparent.

We studied the subject, however, both here in this city and in other cities, and came to the conclusion that there might be—probably would be—the same chance for personal development along commercial lines. By that I mean along the lines of developing men and, to a certain extent, women who could properly represent a large corporation before the public. Then we started the school. That was later followed, having shown the movement to be a very great success, by the starting of an accounting school, in which bookkeepers were taught the higher work in accounting; and all these three departments in

specialized industrial training having proven so great in value, a great deal of attention was attracted to them. Through that it seemed well to join in the movement to organize this national association.

I think that fairly represents the process by which the movement was organized a few years ago.

Mr. THOMPSON. In other words, the impetus or original idea came from the Edison Co.?

Mr. WILLIAMS. Yes; I think, without attempting to take undue credit—I do not want to say that the original idea came from the Edison Co.—but I am of the opinion that the thought of cooperative effort, the desire for bringing together in some organization the knowledge that was being acquired on the subject, perhaps first suggested itself to the men of the Edison Co. who were engaged in this educational work.

Mr. THOMPSON. Will you tell us, as briefly as you can, the scope and the purpose of the organization?

Mr. WILLIAMS. The scope of the organization and the purpose—well, the scope of the organization—the intended scope is to be as nationally as practicable and to cover as many departments of industry as can be brought into this association. The membership to-day covers—I think there are 76 large corporations in the membership, and they represent 33 different lines of industrial activity in the country. The capital, the aggregate capital of the membership, I am told, is in excess of \$2,000,000,000, and the members have pretty near 1,000,000 employees.

Mr. THOMPSON. Have you got a list of the companies with you?

Mr. WILLIAMS. Yes, sir; I haven't it with me, but I can furnish it to you.

Mr. THOMPSON. Would you be willing to do that?

Mr. WILLIAMS. I would be very glad to do it; yes, sir.

Mr. THOMPSON. Proceed.

Mr. WILLIAMS. The purpose of this movement, first, is not to touch upon any organized educational movements in existence to-day. While we do not agree in the objective of some of our educational activities altogether, the basic purpose of this movement is to carry, broadly, education into the ranks of the industrial workers of the country, to take it to men who otherwise would have no opportunity to become trained especially in their own industry, and very broadly, at least to a certain extent, as men might become trained who have the advantage of the university or the high school.

Mr. THOMPSON. The need for such a school I think you have stated, so far as the Edison Co. is concerned. Is there any addition you would like to make to this statement, covering other industries, or covering the Edison?

Mr. WILLIAMS. Well, I don't think I need to add anything in regard to the electric-light industry. I think that industry, as a whole, is very much favored, in that it attracts to it naturally a very high grade of employee, but when you take into consideration this fact, which I understand to be a fact, that less than—that less than 6 per cent of our entire population ever gets any educational opportunity beyond the average graduating point of the elementary school; that is to say, whatever education they may acquire after leaving the elementary school, to the extent of about 94 per cent of our entire population, the extent is the result of the accident of their environment. When you also recall that modern industry, because of the highly specialized state into which it is growing, has taken out the old-time continuation school, which was the apprentice system, I think the mere appreciation of those facts will irresistibly suggest the necessity for carrying some kind of general as well as vocational education into the ranks of the industrial workers of the country.

Mr. THOMPSON. In a general way, take these schools in other lines of industry than yours, what sort of training would they be expected to give? Would it be more particularly what the old apprenticeship system should have been, or would it include other things than merely the instruction in the trade?

Mr. WILLIAMS. I don't think the old apprentice system will ever come back, because there is not the need for it with highly specialized machine development in industry to-day; that is, you take the old-time compositor of type, he was a man who served a long course of apprenticeship, and became very broadly trained, if not—in fact I think I am justified in using the word he became very broadly educated, and I think he stood as a type for practically all industry where the continuation school as represented by the old-time apprenticeship system was followed. The typesetter to-day has taken his place—a man simply pushes the buttons and turns out the type.

Therefore I do not think that the old-time apprentice education will come back into industry, because of the highly specialized machine development which is a necessary part of industry to-day. Therefore my thought of industrial education is that it should seek to broadly train the industrial worker. Then not only along industrial lines; for instance, in the association we feel that our educational work should be divided into three classifications:

First. Health, which should include hygiene; recreation, and all matters which bear on the subject also.

Second. Vocational guidance, which should include hereditary tendencies, natural aptitudes, and all other factors which should enter into the probable selection of a life work. Of course, the latter refers to the younger man rather than the older man. The changing of employment from one position to another as his work indicated was better suited for him.

Third. Knowledge. This classification should be subdivided into two sections: First, general knowledge. Here only so much be taught as has not been given to the employee in the public schools. Second, specific knowledge. Under this classification should be taught those things which pertain directly to the company with which the employee is engaged, such as, for instance, the scope and organization and the policies of his corporation.

Any man who understands the scope of an organization, a large industrial corporation to-day, in that fact alone has a very broad and desirable training.

Mr. THOMPSON. Relating to trades or crafts or industries requiring technical skill, would you have the second a separate proposition or part of the industry to be worked out in the shop?

Mr. WILLIAMS. Where the shop is large enough, where the employer is strong enough, I personally favor an employees' school; but where that is not possible I am of the opinion now that I favor vocational schools, supported possibly partly by industry, partly by the State, or entirely by the State, which really means after all that they are being supported by industry, though less directly; but I think in any event the best spirit of the industry, specifically, as well as this effort toward a more general education after the graduating age of the general elementary school, should be the general objectives of this so-called industrial educational movement.

Mr. THOMPSON. Mr. Basford, testifying on the stand this morning, said that, in his opinion, from his experience as an engineer connected with railroads and having studied this question, that it would be better to take the young man—he was speaking more of the young man—into shops, have them work alongside of trained and experienced workmen who understood their craft, both in the sense of knowing how to do it and how to do it speedily, commercially he stated, that he thought that was better than to take them into school. What would you say specifically on that point?

Mr. WILLIAMS. I am of the opinion that the good workman is not necessarily a good teacher and—

Mr. THOMPSON. At that point let me say that he also added that a workman who had the human instinct and who had the teaching instinct should be picked out, if there were such workmen, who not only had the capacity, ability in the craft, skill, but also the instinct to show and demonstrate to the young men. With that kind of workmen he thought that that progress could be made.

Mr. WILLIAMS. Well, if a young man studying a trade is placed alongside a journeyman in that trade, in the first place he is very apt to repeat all the errors of that journeyman, if there are any. Of course you find very good journeymen who are perhaps perfect in their art; the percentage is not large. Confining my answer to the vocational training at this point, I wish to say that a specific industry would be very much more efficiently conducted by the apprentice who received his basic training from one who, understanding the industry, was also a teacher, and who spent his time not altogether at his particular work, but, being acquainted with his work, also made a study in educational movements. That is in reference to the specific industry. But the association with which I am connected stands not only for that, but at the same time an effort to give a much broader training to the student, to the apprentice, so that as the years go by he will be able to broaden out, as the apprentice of old could do as he grew, and become himself a foreman, a superintendent, a manager, and eventually an employer with a broader acquaintance with general matters which affect human life. And you see that additional training could not be given by a man—I mean to say excepting in special cases—by the man who himself is working at a bench.

Mr. THOMPSON. Perhaps, in justice to Mr. Basford, I ought to say that he further stated that in addition to this teacher worker, a man selected both for his art and his ability, there should run along supplemental to that a course of instruction, vocational in its character, which should be carried on by the public schools, and that by the dovetailing of those two they could furnish this broad development that every child, every boy, should have. That was his idea, of developing instead of having separate schools, which I rather gather is your idea. And to give you another idea, so that your mind will be directed to it, he stated that in that way he believed that this development of corporation schools could be made, and must be, a paying institution; whereas Dr. Steinmetz on the stand yesterday said that corporation schools could not be paying, but ought to be a philanthropic effort made by those in industry.

Mr. WILLIAMS. I should like to go back and draw your attention to this fact, which, I think, is a very important matter: The journeyman who is working could work with far less efficiency if he is really teaching an apprentice. He would lessen greatly his own output if his teaching was thorough, and I am of the opinion that no journeyman can teach who is not either a natural or trained teacher.

Now, I am absolutely opposed to any form of vocational training in the so-called elementary schools. I think the present-day objective of the elementary school is of a past generation. I don't think it is entirely modern; but, on the other hand, I think it would be committing a great wrong to growing children, boys and girls, say, under the age of 16—I prefer to put the age at 18—to at that time attempt any vocational teaching. I think they are entitled then to as broad an education as can possibly be given to them without any attempt other than that which results from their own aptitude to shape their minds in a vocational sense.

Mr. THOMPSON. Does your objection go to the point of prevocational training?

Mr. WILLIAMS. To the point of what?

Mr. THOMPSON. To the point of what they call prevocational training?

Mr. WILLIAMS. Well, in the sense that no effort should be made toward vocational training prior to the graduating age of the elementary school, I am unalterably opposed to it. Now, you have got to eliminate the exceptional boy or girl from any such statement as that; but I am speaking broadly. I am speaking of the 800,000 children in the New York public and parochial schools.

Now, to the suggestion that corporation schools either must be made to pay or can not be made to pay, I am not in accord. I am very frank in admitting that the vocational schools—that is, the industrial vocational schools connected with our association—I am of the opinion, pay and pay handsomely their employers. There seems to be abundant evidence of that kind, that training greatly increases the effective—and when I say effective I mean the efficiency—that goes into the treasury of the concern, of the worker, has been placed as high as pretty nearly—well, one man in whom I have a great deal of confidence says he increases his average efficiency, based, of course, on theoretical calculations, from about 27 to 67 per cent, and assuming 100 per cent as being possibly attainable in his industry.

Now, so far as the corporations are concerned, I think they have got to justify the expenditure in vocational training, or in broad training and broader training, on the ground that it is going to pay for itself and perhaps a little more than that in the increased efficiency of the employee. But at the same time the employee himself gets a very much larger benefit from any educational effort of that sort following the completion of any well laid out educational course. Then, again, I think there is a very large benefit to society at large, so that while the principal benefit is that the thing shall pay from the standpoint of the employer, there are also two other elements of benefit to the individual and to the society, or to the State, that can not be left out of consideration.

Mr. THOMPSON. What share should the employees have in such schools, in your opinion, in the management?

Mr. WILLIAMS. Well, all of the schools connected with the association are really managed by employees—employees guided by their executives—but indirectly, at least, so far the guidance has come from men whose life profession is teaching.

Mr. THOMPSON. That is not what is meant by the question. The men who do guide these schools are reputed to represent the officers of corporations. Now, taking the employees as a body, should they be permitted to appoint representatives on a board of governors who control and guide these corporation schools?

Mr. WILLIAMS. Well, so far as the employees are concerned, I always favor using any special ability they have, if they have it, along educational lines. I should recommend using it. And, then, I favor also creating an alumni of the employees for the better guidance of this educational effort. But, in the ultimate development of this plan—because I think it has come to stay—I think it is going to be a permanent part of our educational methods, either as now laid down or as it may develop in the future; I think myself that it should be very largely guided by the best educational minds of the country, partly—

Mr. THOMPSON (interrupting). But in the selection of these minds, Mr. Williams, would you permit the workingmen of the corporations to have a choice?

Mr. WILLIAMS. Oh, very gladly. In fact, I should favor at least a three-cornered selection—a selection by educational authorities, by employers, so that they might be sure that the direct purpose of their own work might become well known to their employees, and by the employees themselves—I mean the better class of employees.

Mr. THOMPSON. How would you put that into effect, Mr. Williams? What machinery would you create, or are you intending to create, to give the employees a voice in the selection of the teachers and in the selection of the curriculum of the school?

Mr. WILLIAMS. I am of the opinion that this profession is going to lead to a new profession, a new teaching profession in industry, and that the corporations will employ these teachers for this purpose from available sources. Now, that any improper influence of the employee could get into a teaching force of that kind, I can not believe.

Mr. THOMPSON. Let me put it a little more concretely to you. Assuming that the United States Steel Corporation should start several schools of this character in its various plants nearby, and they had a committee of five, say, to run these schools, select the teachers, and decide upon the course of instruction, etc. Would you advise the Steel Corporation, as president of this national association of corporation schools, that they should form this committee of five in such a way that the workingmen of the United States Steel Corporation should elect two of the members, we will say, the corporation to appoint two, and that the one representing the public should be appointed as an educator and the fifth man.

Mr. WILLIAMS. I should see no difficulty whatever to such a course, but it is fair—I think I may frankly confess our association has not been able to satisfy itself as to the course of teaching, the best course of teaching to be followed. But assuming that an improved course could be selected, I mean the whole organization and method of teaching, and the things to be studied from year to year, that that whole thing had been pretty well planned out. It is a thing we have been trying to do for the last year or two.

Mr. THOMPSON. I may state Mr. Williams, that that was substantially, if I understand it correctly, the idea that Dr. Steinmetz, the vice president of your association, suggested.

Mr. WILLIAMS. Yes, sir.

Mr. THOMPSON. And also the ideas of Mr. Basford, who appeared this morning. You see no reason to object to those ideas?

Mr. WILLIAMS. I should say of joint management by the employees.

Mr. THOMPSON. Yes.

Mr. WILLIAMS. On the contrary, I should personally favor that course.

Mr. THOMPSON. Do you think that the State, through the public-school authorities, should exercise or attempt to exercise any control or advisory attitude toward such schools?

Mr. WILLIAMS. I think all the corporation schools should be identified with the State and the National Government educational organizations. I think that very desirable.

Mr. THOMPSON. What kind of information do you think the public schools should furnish with reference to vocational training where such training is taken up by special public schools?

Mr. WILLIAMS. Are you speaking now of the secondary course or the elementary schools?

Mr. THOMPSON. I understood that you stated that the elementary schools should not take this up at all, that they should confine their efforts to teaching the children a broad, basic education; therefore, I take it that any vocational training to be done by the public should be done in supplementary schools. Now, what course or what kind of schools should they organize, in your opinion, to handle that question?

Mr. WILLIAMS. To a certain extent, so far as I have been able to find, the attendance at the secondary schools devoted to vocational training in percentages is very small, while in some instances rather large numbers are given the percentage is exceedingly small, and while I have been impressed to a certain extent by certain trade schools I have never felt myself that the plan of organizing educational secondary schools where specific trades are taught will be successful unless the whole thing is entirely reorganized and carried out on a plan that has never been before attempted, with one or two possible exceptions.

Mr. THOMPSON. Well, have you any views as to such reorganization and what should be done?

Mr. WILLIAMS. I strongly favor, and I believe we will eventually come to it, the system under which, after leaving the elementary school, every boy and girl will receive a compulsory vocational training, perhaps somewhere between the age of 16 and 20 years.

Mr. THOMPSON. Do you believe that these schools should be instituted by compulsion of the State? Do you mean that the State should compel communities to establish such schools?

Mr. WILLIAMS. I am inclined to feel that that is the only way to obtain, generally, educational training.

Mr. THOMPSON. Would you also make the attendance by the pupils compulsory?

Mr. WILLIAMS. I think that is the only way to get them to go. I don't like the idea of making it compulsory, but if it is not made compulsory I don't think the objective will be accomplished.

Mr. THOMPSON. With reference to continuation schools, that is to say, part-time schools for children in the industries, between the ages of 14 and 16 years, what are your views with reference to such schools?

Mr. WILLIAMS. Well, I am personally very much opposed to children going into industry between 14 and 16. I think it is bad for the individual and bad for the State. Of course, any system which alternates between employment and education is bound to be inefficient; and while I am very much in favor of anything which adds to the education of boys and girls which have to go into industry between 14 and 16 I will favor and do favor that method of education which I believe is being followed in several New England cities, whereby the boys and girls go to school one week and work the next. I think that is very efficient, and as a tentative matter commends itself to me; but I don't think that will have a prominent place in the industrial system of this country.

Mr. THOMPSON. What do you think of children having an hour, for instance, taken out of the industry?

Mr. WILLIAMS. I don't think an hour, in that sense, would amount to anything. Now if I might call to your attention one very great advantage of the corporation school, which so far as I can see is obtained in no other school system, it is that the lesson which the employee gets through the school to-day he applies to-morrow, and it is not a long distance between. It is not a case at the age of 14 of his saying I am to do this sum in arithmetic or to know this place in geography which I may need to know when I am 27; but he gets his lesson to-day and puts it in operation to-morrow—that is, what he learns to-day becomes effective to-morrow—and I think the efficiency of that education is higher—the practical efficiency—for that reason above any other.

Mr. THOMPSON. Practically in the corporation schools how much time is given to the schools?

Mr. WILLIAMS. The time varies. I think the minimum would be about three hours a week throughout the year. I personally favor corporation schools being conducted on the employer's time, which means that the employer pays for the schooling.

Mr. THOMPSON. Is that done to any great extent?

Mr. WILLIAMS. To a certain extent. Now, if you carry on your corporation school at night, then the student goes to school in that State of mental and physical fatigue which results from his employment. There are certain lines of educational effort—for instance, one of the schools I am connected with is going to teach in the future year public speaking; and in that case the attendance will be optional, and the instruction will be given at night.

Mr. THOMPSON. What are your views with reference to the relation of industrial education to industrial unrest?

Mr. WILLIAMS. I am of the opinion that the present day industrial unrest results from the doing away of the old-time continuation school; that is, the apprenticeship training. You recall that lasted three to seven years and resulted, in my opinion, in a very well trained mentality. Now, that has been practically

eliminated from our great industrial centers, and to a certain extent, though not entirely, I attribute industrial unrest to the elimination of that form of education; and I think something else has got to be put back in the place of that in the lives of our industrial classes.

Mr. THOMPSON. In reference to the evils growing out of overspecialization, how are your schools meeting that?

Mr. WILLIAMS. Well, the evils that have grown out of overspecialization are purely personal. Society at large has benefited by the extreme specialization, getting more for the same amount of money and enabling them to regard as necessities to-day what were luxuries of yesterday. And I think there should be something to replace what has been taken out of the lives of the workers by the elimination of this apprenticeship system, and that will tend greatly to lessen the evils which so-called overspecialization has brought.

Chairman WALSH. Thank you, Mr. Williams. Mr. Garretson would like to ask you some questions.

Commissioner GARRETSON. Mr. Williams, you just used a phrase that the evils growing out of overspecialization was individual, while society itself profited from it. Can society, in the last analysis, ever profit from the individual evil of a great number of its members?

Mr. WILLIAMS. It can not. I think society, as a whole, is dependent entirely on the condition of the units of which it is made up.

Commissioner GARRETSON. There can be no really ideal condition exist in society as a whole until the ideal condition can also touch the greater portion of the members who compose it.

Mr. WILLIAMS. I should like to see it touch every member who composes it—young and old.

Commissioner GARRETSON. But it must of necessity touch the majority——

Mr. WILLIAMS (interrupting). Must touch the vast majority.

Commissioner GARRETSON. Before there is a truly good social condition.

Mr. WILLIAMS. That is my opinion; yes, sir.

Commissioner GARRETSON. Now, isn't it barely possible that a considerable portion of the unrest that exists at the present day is due to the unemployment of the specialized man, because he has no ability to secure and follow employment in other lines—has had no training for it?

Mr. WILLIAMS. I think you are entirely right. I think that it one of the evils that this educational movement will tend to correct.

Commissioner GARRETSON. But in reality there is a reaction on society at large or on the State, to use that term, from the present industrial method that is being employed of specialization?

Mr. WILLIAMS. I think that is entirely so.

Commissioner GARRETSON. Now, in the evolution of the industrial or vocational teaching, whatever it may take, is it not true that the type of teacher that will be most desirable to carry it forward to fruition will be evolved by the school itself, a combination of the trained mind or trained teaching faculty with a practical mechanical ability?

Mr. WILLIAMS. I am inclined to agree with you; yes, sir.

Commissioner GARRETSON. I used a phrase a moment ago——

Mr. WILLIAMS. Will you pardon me just a moment. I am of the opinion that the teacher of the future should be first of all a teacher in a very broad sense, with a very well developed personality and with thorough acquaintance with the thing he is going to teach. I suppose that is all covered——

Commissioner GARRETSON (interrupting). With absolute practical knowledge.

Mr. WILLIAMS. Practical plus theoretical; not wholly practical.

Commissioner GARRETSON. I used evidently an ill-chosen expression—with thorough practical knowledge coupled with theoretical knowledge.

Mr. WILLIAMS. Yes, sir.

Commissioner GARRETSON. You used the term "inefficient." First, you stated you were personally strongly opposed to the vocational schools—that is, the principle of the vocational school, I think possibly was the term employed; that is, that teaches the child from the ages, say, of 8 to 14 or 16 or 18, as the case may be, before the practical side of life is commenced; and you also opposed the students putting in a certain time in employment for wage and a certain amount of time in school on the basis that it was inefficient. Do you apply the term "inefficient" to the education of the child or to the employment, the ability to earn, the making of a future industrial unit?

Mr. WILLIAMS. I think the inefficiency is perhaps three-cornered. I think it is inefficient from the standpoint of the employer, which means industry. It is inefficient from the standpoint of the student in acquiring knowledge where the school course is broken up by a shop course, and vice versa. Though I think a great deal of good comes from it, you understand, I do not condemn it. I think it is a stepping stone for the future. I think it is also, speaking broadly, inefficient to take children and put them in industry at that age of life. I think that is one of the social problems of the day, how to avoid it.

Commissioner GARRETSON. Now, here is the thing that has appealed to me. I would like your opinion on it right in that connection, because you have made a study of it in the form that I have not. You take the average child from the age of, say, 6 or 8 up to 14 or 16; is it not ordinarily true of the average child that he would absorb as much knowledge—I am using “knowledge” now in the sense of education—as much education in the same period, if one or two hours per day were put in in what is virtually a manual-training school, where one would rest the child from the other? Because that same peculiarity develops itself in men. Don't you think they would really get as much book knowledge in the same period, if an hour or two of the day's service was given to a manual-school routine? They would get certain practical knowledge that would devolve or rather determine their future fitness as mechanical and non-mechanical, for instance, at the same time they absorb the knowledge that they would absorb if there was no mechanical training connected therewith.

Mr. WILLIAMS. Well, I think it is very nice to be handy in the use of tools and things of that sort; but as I understand—I am speaking with a very great deal of diffidence, because naturally this is one of the very great problems before the educators to-day. But I am opposed personally toward any systematic effort in children of, say, between 6 or 8 and 14 or 16 tending toward the selecting of a vocation. I think that time should be spent in securing the present-day elementary school training—broadened out; that is, in the effort to develop personality, which, in my judgment, is of far more importance than to teach a child the handling of tools. The bringing out of politeness, the development of character, the development of the human side of the boy or girl of those ages; and that is largely left out of the present-day elementary training. I think that is far more important than any effort to shape at that age in life the vocational tendency.

Commissioner GARRETSON. In your opinion, then, that tendency would not foster individualism more than the ordinary school course does?

Mr. WILLIAMS. It might foster individualism. That is not so bad. But it would tend to force upon the child at the age when it should be developing, it seems to me, in other directions, the acquiring of proficiency in a vocation. I think the earliest time at which a boy or a girl should have that important question forced upon him or her is from 18 years upward.

Commissioner GARRETSON. One other question. Early in your statement you touched upon the fact that schools of this character, from your viewpoint, it would be well at least if they were partly supported by the employer and partly by the employee. Then, you rather qualified that by the statement that if it was supported by the State it was in reality supported by the industry. Now, if, according to the view expressed by you, the management of these schools, the choice of the curriculum and of the instructor and of the other measures connected with that is to be in a degree entrusted to the employee, do you know of any form or any machinery by which the employee could voice in an independent, uninfluenced way his sentiments, except through the machinery of his organization; that is, in general?

Mr. WILLIAMS. I think almost any employee—in fact, we are most of us prone to say that we haven't a chance to be heard, but I think the whole world is so anxious to have good information on this subject, or any other subject tending to improve the conditions surrounding him in life, that anyone who has a light can find an opportunity to show it.

Commissioner GARRETSON. Well, I have known some instances—it seems to me I have instances—where a man did not get that free untrammelled right of expression until after he was superannuated. In most cases, I grant you, he has an opportunity, but not in some cases.

Mr. WILLIAMS. I think the very investigation you are making to-day is evidence of the fact that the lights have been seen.

Commissioner GARRETSON. Oh, they are shining more brightly at any rate than they were 10 years back.

Mr. WILLIAMS. Well, I don't think where a man has got a message that is going to improve industrial conditions, or, broadly speaking, the conditions which surround him in life, when he has a message that has merit in it, he is not going to be suppressed. It is going to find the light of day.

Commissioner GARRETSON. That is all; thank you, Mr. Williams.

Commissioner LENNON. I just want to ask one question. In that Edison school, does the common laborer—the fellow that handles the pick and shovel—if he desires to have the benefit of your school, can he be admitted?

Mr. WILLIAMS. He would be received with open arms.

Commissioner LENNON. There are some places where that is not true, I hear.

Mr. WILLIAMS. There is no opportunity of any kind open to one man in that company that is not open to every man or woman in the employ of the company.

Commissioner LENNON. I will ask one other question. You expressed very plainly your opposition to continuation schools from 14 to 16. Suppose the State would undertake along the right lines continuation schools for boys and girls in an industry from 18 to 25, would your opposition still remain as strong as at the younger age?

Mr. WILLIAMS. That becomes a secondary school. I am speaking only of boys from 6 or 8 to 14 or 16. Beyond 18 boys and girls—I speak of those, of course, that are going into industry—are able to select, but I think, perhaps, 25 is too high a limit.

Commissioner LENNON. That is all.

Mr. WILLIAMS. Mr. Chairman, the national association has its proceedings of last year—its first and last conventions held at Dayton, Ohio, the next convention taking place next week—and I have taken the liberty of bringing several volumes here, and if you wish I might leave them with you as tending to show the nature of that work.

Chairman WALSH. I thank you very much, Mr. Williams. You may give them to the secretary.

Call your next, Mr. Thompson.

(Mr. Williams left with the commission two copies of the Proceedings of the First Annual Convention of the National Association of Corporation Schools, which are each marked "Witness Williams, Exhibit 1, June 2, 1914.")

Williams Exhibit No. 1, "First Annual Convention of the National Association of Corporation Schools, September 16-19, 1913," was submitted in printed form.)

TESTIMONY OF DR. WILLIAM H. MAXWELL.

Mr. THOMPSON. Give us your name, address, and occupation, if you please.

Dr. MAXWELL. Board of education; address 500 Park Avenue, New York City.

Mr. THOMPSON. You are the superintendent of schools in this city?

Dr. MAXWELL. I am.

Mr. THOMPSON. For how long, Doctor, have you had that position?

Dr. MAXWELL. Since 1898.

Mr. THOMPSON. There are some vocational schools established in this city, are there not, under your direction?

Dr. MAXWELL. Yes, sir; at least I suppose you would call them vocational schools.

Mr. THOMPSON. In regard to prevocational education, what, in your opinion, should the public schools provide in that respect?

Dr. MAXWELL. The most important thing, in my judgment, in the way of prevocational education consists of the ordinary studies of the public school—arithmetic, drawing, reading, writing, spelling, geography, history, and manual training.

Mr. THOMPSON. In manual training, Doctor, what do you include?

Dr. MAXWELL. I include under the term manual training any exercise that trains the hand to carry out the mandate of the brain.

Mr. THOMPSON. Such as sawing, hammering?

Dr. MAXWELL. Drawing.

Mr. THOMPSON. Drawing?

Dr. MAXWELL. Penmanship, any exercise with tools.

Mr. THOMPSON. That would include all that you would consider prevocational training?

Dr. MAXWELL. Yes and no. It would include all that I should regard as necessary for the brighter pupils, for those who are not retarded in any way. It would not include all that I should regard as necessary for those who reach the age of, say, 14 before they complete the elementary school course.

Mr. THOMPSON. What extra education would you give such pupils, Doctor?

Dr. MAXWELL. I should say that such pupils should get in some way the rudiments of a trade and more intensive work in drawings, particularly mechanical drawing, and such mathematics as naturally belong to the trade that they study.

Mr. THOMPSON. What would you do, Doctor, for those pupils who leave the school at the age of 14 and go into industry by way of giving them an education, particularly with reference to vocational matters?

Dr. MAXWELL. We have established in this city three schools for boys and one for girls of that class, in which we give a course of from one to two years. It goes without saying that those schools provide for only a very small fraction of the vast number of boys and girls of this character.

We have established in our evening schools evening trade schools for those who are engaged in various trades and which are very largely patronized. I do not think that this provision is at all sufficient.

Mr. THOMPSON. That is, the evening-school provision?

Dr. MAXWELL. The evening-school provision or the day-school provision, in the way of vocational schools.

Mr. THOMPSON. In the day schools you mean the part-time schools?

Dr. MAXWELL. We have not any part-time schools in this city.

Mr. THOMPSON. What schools do you call those that are in existence at the department stores?

Dr. MAXWELL. Those are continuation schools. We send teachers, we have some 9 or 10 of those classes, and we provide teachers when the class is organized and the demand appears to exist for it.

Mr. THOMPSON. What distinction, Doctor, do you make between part-time schools and continuation schools?

Dr. MAXWELL. I regard our evening trade schools, for instance, as continuation schools. They continue the work. The continuation classes in the department stores are intended to supply elements that are lacking in the training of the boys and girls who have gone into salesmanship or accounting.

Does that answer your question?

Mr. THOMPSON. In your division of schools, Doctor, do you have any schools called part-time schools?

Dr. MAXWELL. We do not.

Mr. THOMPSON. You do not?

Dr. MAXWELL. We do not; no, sir. By the part-time school I understand a school in which the pupils will be in school one day, the next day in a mercantile establishment, or one week in school and the next week in a mercantile establishment, or possibly some of the hours of the day in one and some of the hours of the day in the other. We have no schools of that character.

Mr. THOMPSON. It has been stated, Doctor, on the witness stand to-day that the progress of vocational schools under the New York State law has been much slower in this city than in other parts of the State. If that is so, what is your idea and reason therefor?

Dr. MAXWELL. I have no reason to believe that such is the fact.

Mr. THOMPSON. It was stated to be so by one of the members of the State board of education who was on the stand this morning.

Dr. MAXWELL. I didn't know that we had a State board of education.

Mr. THOMPSON. I may have the name wrong; Mr. Wilson was the man, Doctor.

Dr. MAXWELL. I thought he was President of the United States.

Mr. THOMPSON. I see you are thinking of a different man, Doctor. I will help you out. Lewis A. Wilson, Doctor?

Dr. MAXWELL. I haven't the honor of the gentleman's acquaintance.

Mr. THOMPSON. Who appears to be, as testified, at least, connected with the division of vocational schools, Department of Education, State of New York.

Dr. MAXWELL. Oh, yes. I presume he is a gentleman employed in that department. The department of the commissioner of education.

Mr. THOMPSON. He stated so.

Dr. MAXWELL. I have never met the gentleman that I know of.

Mr. THOMPSON. He gave some figures here that are a part of our records, Doctor, which showed and fairly justified his statement, that of the thousands of children engaged or taken care of in vocational schools many times the larger number were in schools outside of this city, and I wondered if you had anything to say in that regard.

Dr. MAXWELL. There is one thing that possibly should be thought of in connection with any such statement. We have in this city many private or semi-public institutions of very high character, such as the Pratt Institute in Brooklyn, the Mechanics' Institute of New York, Cooper Institute, the New York Trade School, which do very effective work, very excellent work. They are probably unsurpassed in this country, so that the opportunity for young men—and the Pratt Institute, also, for young women—in those institutions are very great.

Mr. THOMPSON. Now, Doctor, is an institution of the character you have named—I didn't get the name clearly and definitely, and I would not dare repeat it—are they open to the children of the poor without tuition?

Dr. MAXWELL. So far as I know, I do not think the Cooper Institute charges any fee. I think the others do. I think the others do, but they are all of a very advanced character.

Mr. THOMPSON. Is there any opposition, so far as you know, on the part of the board of education—if that is the correct name—of the city of New York against the establishment of vocational schools in this city?

Dr. MAXWELL. There is not at the present; no, sir. The only trouble has been to get the money.

Mr. THOMPSON. Then, if Lewis A. Wilson stated that his opinion was that there was opposition here by the old-style school-teacher to the institution of vocational schools, in your opinion he was not correct?

Dr. MAXWELL. In my opinion, he is not correct.

Mr. THOMPSON. In regard to the management and control of vocational schools, Doctor, have you any idea as to where the control should be vested; in what kind of a board, if it should be a board, and as to what elements of society and classes of men should make up the membership of such board?

Dr. MAXWELL. I see no reason why the control of that work should be taken from the board of education.

Mr. THOMPSON. If the control of such work was in the hands of the board of education, should there be—as the law now provides, I understand—an advisory board or council, consisting of employers and of workingmen to co-operate with the ordinary school board in the selection of teachers and the deciding of the course of studies?

Dr. MAXWELL. I think such a board would be very advisable.

With regard to the selection of teachers, you are possibly aware that under the charter of the city of New York all teaching positions, with the exception of a very few that are exempted by the charter, all teaching positions are filled by competitive examinations.

Mr. THOMPSON. Those examinations, Doctor, are conducted upon a list of questions or tests prepared by some one else?

Dr. MAXWELL. Are prepared—I don't know whom you mean by some one else.

Mr. THOMPSON. I mean by some one other than the applicants for the position?

Dr. MAXWELL. No applicant prepares the questions.

Mr. THOMPSON. Therefore those questions are prepared by other people, and would it be wise to have an advisory board upon which there might be workingmen and employers who would have some voice in the preparing of those tests for teachers?

Dr. MAXWELL. I should not like to give an opinion upon that, because it is something I have never tried.

Mr. THOMPSON. In your opinion, Doctor, would it be wise to have a compulsory State law compelling communities throughout the State to establish schools for vocational education?

Dr. MAXWELL. I am not prepared to take that position yet. I think it is better to let this work go. And, by the way, if I may add something to what I have already said.

Chairman WALSH. You may, Doctor.

Dr. MAXWELL. The term vocational training, which means preparing for a calling, should not, in my judgment, be confined to preparing for mechanical art. For instance, we established in New York City the first purely high school of commerce in America. We now have two such schools. In those two schools there are now between 6,000 and 7,000 students. The schools devote their entire time and energy preparing for commercial pursuits. They are not able to supply the demand of the business men of this community for their help. I do not see why those should not be called vocational schools, just as much as a school that teaches carpentry or plumbing or electric wiring.

Mr. THOMPSON. Well, in your vocabulary they would be so included, would they not?

Dr. MAXWELL. They would be so included.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Commissioner Garretson would like to ask you a few questions.

Commissioner GARRETSON. Dr. Maxwell, what is your school term—nine months?

Dr. MAXWELL. Sir?

Commissioner GARRETSON. What is your school term—nine months?

Dr. MAXWELL. The school term is 10 months; almost 10 months.

Commissioner GARRETSON. One witness opposed the idea of vocational schools, although you have defined them virtually as manual training, on the ground that the entire time of the child up to a certain age should be given to the acquirement of knowledge and that that should not be abridged. As a practical educator, do you believe that a child in the school term would acquire any less book knowledge if an hour of the day was taken up in manual exercises, as you define manual training?

Dr. MAXWELL. I am quite sure it would acquire just as much knowledge.

Commissioner GARRETSON. Just as much?

Dr. MAXWELL. Just as much.

Commissioner GARRETSON. In your opinion, is not the tendency of the child to become track sore, or stale, broken up by the manual training in which he is interested?

Dr. MAXWELL. Yes, sir. I have been fighting for that idea for 25 years.

Commissioner GARRETSON. The same idea develops itself in the man?

Dr. MAXWELL. Yes, sir.

Commissioner GARRETSON. As well as in the child?

Dr. MAXWELL. Yes, sir. And I have had to stand the abuse of advocating fads and frills because I have held that position.

Chairman WALSH. That is all; very much obliged to you, Doctor.

Call your next witness, Mr. Thompson.

TESTIMONY OF MR. EDWARD F. BROWN.

Mr. THOMPSON. Give your name and your address and your business, please; your occupation.

Mr. BROWN. Edward F. Brown; 105 East Twenty-second Street; social worker.

Mr. THOMPSON. Are you vice president of the International Child Welfare League?

Mr. BROWN. Yes, sir.

Mr. THOMPSON. Have you had occasion to study the question of child labor?

Mr. BROWN. I have, both as special agent of the National Child Labor Committee, for whom I have traveled extensively, studying at first hand conditions under which children work, and now as vice president of the International Child Welfare League. I have occasion to direct in an advisory capacity special investigations into the subject of child labor.

Mr. THOMPSON. Have you yourself had any personal experience in that line?

Mr. BROWN. I have. I have traveled approximately 45,000 miles in the last three years studying the children working in the mines and in the factories, in mills and workshops of all kinds, in all the States practically this side of the Mississippi.

Mr. THOMPSON. Have you seen children working in those places?

Mr. BROWN. I found children, some as young as 5 years of age, working in the oyster canneries of the Gulf Coast States. I found children of 11 and 12 working in the coal breakers of the anthracite coal region. I found children of 5 years of age and upward working in the vegetable canneries of New York, Vermont, and Delaware. I found children in the cotton mills of the South, many of them under 12.

Mr. THOMPSON. How late have these investigations of yours been made?

Mr. BROWN. All within the past three years; three and one-half years.

Mr. THOMPSON. In any of those States were there child-labor laws, if you know, prohibiting such children from working?

Mr. BROWN. In all the States there was some standard of child-labor laws, although some of them were very low. In the State of New York, where we are presumed to give the working child the maximum of the law's protection, even

here up to last year children as young as 5 years of age were to be found working in the vegetable canning sheds of the up-State factories. In the city of New York, in the unregulated industry of the home, home working—that is, the employment of children in the homes—working on things for factories, manufacturing children's dresses, cracking nuts in the homes, or working on garments of all kinds, and, in some cases, working on food supplies.

Mr. THOMPSON. Take these children that you say were as young as 5 years working in the oyster canneries, Gulf Coast States; what States were those?

Mr. BROWN. In Mississippi, Alabama, Florida, and Louisiana.

Chairman WALSH. What locations were they there? What were the various cities?

Mr. BROWN. Well, in Biloxi, Miss., children as young as 5 years of age were found to work as early as 3 and 4 o'clock in the morning. These children come down to the South from Baltimore largely, in large groups, whole families being contracted for by padrones. They are housed on the premises of the canners, and as the cargoes of oysters come in the children are awakened sometimes as early as 3 o'clock in the morning and taken out into the shed to shuck the oysters or to pull the shrimp.

Mr. THOMPSON. What other places could you name?

Chairman WALSH. What nationality are these children?

Mr. BROWN. They are largely Poles and Bohemians, although a great many Americans—local Americans—work in those industries.

Mr. THOMPSON. What other places outside of those two you have named?

Mr. BROWN. Pass Christian, Miss.; Dunbar, La.; Appalachicola, Fla.; Bayou St. Louis, Miss.; and all through the Gulf Coast States, almost within a stone's throw of one another, these canneries are located.

Mr. THOMPSON. If you know, do the laws of those States permit children of 5 years of age to be employed in industry?

Mr. BROWN. In some of those States their laws prohibit the employment of children, such as in Mississippi, where the law prohibits the employment of any child under 12 years of age. That law is ineffective in so far as the legislature has failed to provide the means with which to enforce that law. In Alabama, for instance, where children are prohibited from working under a given age, I think it is 14, the factory inspection department is in the infancy of its organization. They have there, for instance, the inspection of jails, almshouses, and factories, merged in one department, and the force of inspectors is so small that it is impossible for them to give attention to all the factories and canneries in the State. That is true not only in the South, for I may go on even to the North, in such places as Vermont, where they have child-labor laws, and they have practically no enforcement of them.

Chairman WALSH. Have efforts been made in any of those States to make appropriations or to have the laws more adequately enforced?

Mr. BROWN. Efforts have been made by various agencies, notably the National Child-Labor Committee.

Chairman WALSH. Do you find lobbies in opposition?

Mr. BROWN. Very strong lobbies, Mr. Chairman. We find that while the majority of manufacturers are opposed to the exploitation of children in industry, a small group of manufacturers who are very aggressive frequently invade the legislature and threaten the legislators with the removal of their business outside of the State if laws are passed to prohibit the employment of children in industry. In the glass industry in Illinois, for instance, it had often been said that if the children were taken from that industry the industry would have to move out of the State. The child-labor laws were passed, and a recent investigation disclosed the fact that the glass industry in Illinois is very much more prosperous to-day than it was—at the time of the investigation two years ago—than it ever was under the old régime of freedom to employ children.

Chairman WALSH. Has your organization taken any part in the effort that has been made in Maryland lately to modify the child-labor laws with respect to the canneries and the sales of newspapers?

Mr. BROWN. The National Child Labor Committee, I understand, was active in Maryland last year. I don't know exactly.

Chairman WALSH. I interrupted you a moment ago. Just go ahead with your narrative.

Mr. BROWN. Yes. On the question of enforcement, the futility even, the two weak points in the enforcement of child-labor laws, has been the fact that politicians are frequently chosen as the agents of the State to enforce the law, and, second, that the grants for the enforcement of the child-labor laws have

been so niggardly as to almost nullify in all States where these factory laws were enacted. Even in the State of New York we have the shameful fact of having some of our supervisory factory inspectorships exempted from the operation of the civil-service requirements. Not very long ago we had one of the very best men in the New York State Labor Department practically thrown out to make room for a more or less political appointment. I refer to Mr. John R. Shilladay, who was the secretary of the New York State Industrial Commission. We found that these two points—the relationship of politics to the enforcement of the labor law and the niggardly grants on behalf of the legislature—nullified high standards of child protection in industry.

Chairman WALSH. Have you made reports to your organization on the conditions that you found in these various places?

Mr. BROWN. Such reports have been made.

Chairman WALSH. Have they been printed?

Mr. BROWN. They have been printed, many of them, and many of them are on file now.

Chairman WALSH. Could you give us the reports that you have made, or place us in the way to copy them, so that we could get at the facts actually as you found them in these different places?

Mr. BROWN. I refer to a pamphlet published by the National Child Labor Committee entitled "The Child's Burden in Oyster and Shrimp Canneries"; to an address delivered before the American Association for Labor Legislation at Boston on the machinery for enforcing labor laws in the United States; to the proceedings of the national child-labor conference at Jacksonville, Fla., published by the National Child Labor Committee, 105 East Twenty-second Street; to an article in the American Citizen of last year on "Federal child-labor legislation." There are many more, Mr. Chairman, and I should be glad to place a complete set of them on file with the commission if you so desire.

Chairman WALSH. I wish you would, please. Are the industries engaged in the canning business, in the oyster business, and in the vegetable-canning business, usually carried on in corporate form?

Mr. BROWN. In what form?

Chairman WALSH. Corporate form.

Mr. BROWN. Very frequently. In the South the firm of—the largest firm operating is a corporation very many times having been convicted in the United States court—from records I have personally examined—for violation of the Sherman antitrust law and for violations of the pure-food acts.

Chairman WALSH. What is the name of the corporation?

Mr. BROWN. The Dunbar, Lopez & Dukate.

Chairman WALSH. Have they an office in New York?

Mr. BROWN. I think not. Their main office is in New Orleans, La.

Chairman WALSH. Have any of these corporations an office or a director in New York, that you know of?

Mr. BROWN. I don't think—I don't know that any have. I should be glad to make a search during the time the commission is here and present the commission with any list.

Chairman WALSH. Well, we will be here at least two weeks, and I would like you, if possible, during that time to give us the names of any directors that live in the cities of New York, Philadelphia, or Boston.

Mr. BROWN. I could be very glad to. While we are on that point, Mr. Chairman, I want to speak of that very fact—the absentee proprietorship, I might call it, of industry and the futility of passing child-labor laws in one State, while those who are responsible for the employment of children reside in another State. I had occasion two years ago to appear before the senate committee on labor at Columbus, Ohio, to protest against an exemption which the canners wanted, an exemption to employ the women in their canneries for an unlimited number of hours. The canner there said that they were opposed to child labor and they were not on the same moral plane as the New York canners, because the New York canners did employ children. They said that they were opposed to it because it was morally wrong. Now, as a matter of fact, they were opposed to it theoretically because Ohio grows very few beans for canning purposes, in the snipping of which children are largely employed, but the president of the Cleveland Humane Society, who lived in Cleveland, Ohio, was the owner of a factory in the State of New York, where we found children of 6 years of age employed snipping beans.

Chairman WALSH. Who was that? What is his name?

Mr. BROWN. Mr. Haserot.

Chairman WALSH. What is his first name?

Mr. BROWN. Samuel. He resides in Cleveland and operates a canning factory in Gowanda, N. Y. That is a reason why I believe State legislation to restrict children from working has failed miserably with this imaginary boundary line on one side of which it is perfectly moral to do a thing and on the other side perfectly immoral.

Chairman WALSH. Perhaps you have some views on this point with respect to the efficacy of a national law covering the question of child labor?

Mr. BROWN. I believe that that is the only method of regulating this, of abolishing this national evil. I believe that we will have to have State laws to supplement any national legislation such as is now before Congress in the shape of the Palmer-Owen bill, which, by the way, I think is a very effective weapon to abolish child labor.

Chairman WALSH. Briefly, what is the Palmer-Owen bill?

Mr. BROWN. The Palmer-Owen bill provides that no interstate carrier shall transport goods in the manufacture of which children under 14 years of age have been employed or children between 14 and 16 who have not passed a certain requirement. Might I place on file, Mr. Chairman, that bill and a brief supporting it?

Chairman WALSH. We will be very glad, indeed, to have it.

Mr. BROWN. I will offer it now.

(Received and marked "Brown Exhibit No. 1.")

The above exhibit was submitted in printed form.)

Chairman WALSH. That was filed yesterday by another witness, that bill, with the brief.

Mr. THOMPSON. And the brief was also filed with it, was it not?

Commissioner GARRETSON. Yes.

Chairman WALSH. It will not hurt to have another one.

Mr. BROWN. I believe the commission would have ample justification for a recommendation favoring such Federal legislation of this kind.

Chairman WALSH. The ground is pretty well covered in this brief, is it, that goes with the copy of the law?

Mr. BROWN. I think so on that point. If there is no question to ask, I should like to say a word about the relation of unemployment, if I might, to child labor.

Chairman WALSH. Yes; you may.

Mr. BROWN. I believe that in the large army of unemployed we have a direct and very intimate relationship to child labor. The child who early in life for any reason at all is forced to go out and work interfering with its education, blunting its sensibilities, must inevitably fall into the unskilled labor class, the class from whom we draw largely our intermittent and underpaid workers. A recent investigation in the city of New York showed that nearly 50 per cent of the men who applied at the municipal lodging houses were those who left schools to go to work at 14 years of age or thereabouts. That study was just completed by the charities commissioner, and I think is available if the commission wishes to get at it. I think the fact that the child must go out into industry to compete with the adult, which brings down the adult's wage scale to the level of the child's, frequently results in a large number of adults being thrown out of work. They are the unemployed and the unemployable.

Chairman WALSH. Does your organization do any work along the line of notifying the individual controlling the ownership of these corporations as to conditions in other States?

Mr. BROWN. I understand that the International Child Welfare League, particularly its president, Mrs. Wallston Hall Brown, recently made the suggestion that we try through public education to bring before the people, those who are responsible for those conditions, by publishing the firms who employ children, and in some way, perhaps, boycotting them.

Chairman WALSH. Could you give us the names now of the individuals and corporations who are the owners, publicly, the owners of the industries in those various States?

Mr. BROWN. I think not. I do not have in mind now the exact names and locations, although a great many of those names are now on file with the National Child Labor Committee.

Chairman WALSH. Could you get us up a list and call back here at some time which you may fix with Mr. Thompson's staff, or with Mr. Manly, giving us a list, as near as you can get it, from your records, of the names of the corporations and individuals, the States in which they operate, and the

typical cases that you have mentioned? For instance, the ones that have the children under 5, the ones that have the children under 14, in States where the law exists but is not being properly enforced, etc., those typical facts which you have mentioned here?

Mr. BROWN. I should be glad to provide such a list before the commission leaves. Such a list would be very interesting as showing, I think, the fact that Massachusetts, with its high standard of protecting children who work, must compete with low-standard factories in such States as North and South Carolina and Georgia, where children under 14 may work, and for whom the southern cotton-mill owner pays a low child's wage, while in Massachusetts they must employ adults.

Might I add an instance of interstate traffic in children which occurred in the State of Massachusetts?

Chairman WALSH. Yes.

Mr. BROWN. Six miles from the State line of Massachusetts there is a town called North Pownal, in Vermont. In Massachusetts mills we are unable to find very many children who are employed in violation of the law, while when we passed over the State line into North Pownal, we found children 9 or 10 years of age working 12 hours a day.

Chairman WALSH. In what industry?

Mr. BROWN. In the cotton-mill industry.

Chairman WALSH. Whose industry is it? What place is it?

Mr. BROWN. There is only one mill in North Pownal.

Chairman WALSH. Do you remember the name of the concern?

Mr. BROWN. It is some print company; I do not recall the exact name. There were two children whom we found who were living in the State of Massachusetts, who were unable to get work in the State of Massachusetts, owing to the restrictions, but who did work in Vermont where there were no restrictions.

Chairman WALSH. Have you the name of that concern in the records of your office?

Mr. BROWN. Yes, sir; I shall be glad to provide that.

Chairman WALSH. Do you want to ask any questions, Mr. Garretson?

Commissioner GARRETSON. No, sir.

Chairman WALSH. Mr. Lennon, have you any questions?

Commissioner LENNON. No, sir.

Chairman WALSH. Mr. Thompson, do you think of anything else?

Mr. THOMPSON. No, sir.

Chairman WALSH. Thank you very much, Mr. Brown.

Mr. THOMPSON. I will call Miss Watson.

TESTIMONY OF MISS ELIZABETH C. WATSON.

Mr. THOMPSON. Will you please give us your name, your address, and your occupation?

Miss WATSON. Elizabeth C. Watson. My residence is 119 Washington Place, and I am special investigator.

Mr. THOMPSON. For whom?

Miss WATSON. Just at the present time I am special investigator for the International Child Welfare League.

Mr. THOMPSON. How long have you been acting as investigator for them?

Miss WATSON. Since March 18.

Mr. THOMPSON. For whom were you investigator before that time?

Miss WATSON. I have been investigator for the National Child Labor League; the Massachusetts Minimum Wage Commission, the New York State Factory Investigating Committee—the New York State Factory Investigation Committee—and in the fall of this last year, 1913, I investigated, as a convict in Auburn Prison, for the New York State prison reform commissioner.

Mr. THOMPSON. Have you had occasion as an investigator to investigate the canneries?

Miss WATSON. I went to the canneries on the Gulf coast, on the Gulf and Atlantic coast, on March 18, 1914.

Mr. THOMPSON. What canneries are those, oysters?

Miss WATSON. They are canning oysters and shrimps—the so-called cove oysters. The raw oysters I did not investigate, because children are not employed in canning raw oysters. The work is too difficult. They are employed

in opening what are called cove oysters. The oysters are steamed and it partly opens the oysters, and the child can very easily scrape the oyster out into the can.

The investigation was carried on from the southwest coast of Louisiana through Mississippi, Alabama, Georgia, and South Carolina.

Mr. THOMPSON. Did you find that children were employed in those canneries to do the work?

Miss WATSON. I found that wherever children could be employed in the canneries, they were employed. The youngest child I found at work was 3 years old.

Mr. THOMPSON. Where was that?

Miss WATSON. In Biloxi, Miss.

Mr. THOMPSON. In whose cannery?

Miss WATSON. In the Barataria cannery.

Mr. THOMPSON. How many hours a day did that child of 3 years work, if you know?

Miss WATSON. I saw it working for six hours.

Chairman WALSH. What doing—what did the child do?

Miss WATSON. The child was shucking oysters. The oysters are steamed and that partly opens the shell, and then you take a knife and scrape the oyster out of that shell. The child was too small to hold a knife in its hands; it did it with a stick. I was working in that cannery that day for six hours. The child worked all the time I was there. It was so small it could not reach the car, and it stood on a box. The canners provide the children with boxes to stand on.

Mr. THOMPSON. How many other young children did you see at that cannery, and about what were their ages?

Miss WATSON. In that particular cannery there were 51 children at work. There were, I think, 38 children under 10 years of age.

The time of work varies. It is very difficult to keep track of exactly the number of hours a child works. There are five distinct groups of people working in the cannery. There are the Polish people, who come from Baltimore; they go to work when the whistle first blows at 3 o'clock in the morning, and they are at work at 4.

The native Baltimore people go in a little later. They go in from 5 to 5.30, all of them taking their children with them.

The natives, the southern people, go in at 7 o'clock.

The Austrians, who have become settlers in that community—Austrians and Austro-Hungarians—go to work at 7. And the negroes about 7 to work till 6 at night.

Mr. THOMPSON. Those children below 10—about what were the ranges of their ages, if you know?

Miss WATSON. I can't tell you exactly.

Mr. THOMPSON. Three, I take it, was the youngest?

Miss WATSON. Three was the youngest child I saw working. I saw children 14 months and 2 years old sitting in a car, sitting there being cared for by the children, playing with oysters. They were not actually working.

Commissioner O'CONNELL. Sort of training those as beginners.

Mr. THOMPSON. Vocational education.

Commissioner GARBETSON. Prevocational education.

Miss WATSON. I would like to say right here that the children who were playing about the canneries, who have to go there because there is no place else to keep them, are playing shucking oysters; they are imitating this thing, so that when they are old enough to do it they will know how to do it. It is good training in that direction.

Mr. THOMPSON. About what was the age of those children under 10 years of age?

Miss WATSON. They began at 5 years and run up to 6, 7, 8, 9, and 10. The largest group was between 7 and 10.

Mr. THOMPSON. What kind of housing do the canneries provide for their people? What is the general condition of the canners?

Miss WATSON. The houses are of three kinds. There is the so-called camp, which is usually a long row of shacks, housing anywhere from 12 to 18 families. Those shacks usually consist of two small rooms; each one has a window and a door opening on the outside. There is what is known as the tenement, a very large frame building, usually, which will house anywhere from 20 to 30 families of one family to a room, always.

Then there is the ordinary dwelling house, which is converted into a tenement house, and in those we find a very large proportion of the rooms are dark rooms, because they have been built for family houses, and when they are subdivided in order to convert them into tenement houses some of the rooms are dark. They divide large rooms into two.

While I was in Biloxi working in the factory there was a fire in one of those tenement houses, an ordinary dwelling, which had been converted into a tenement house, and in that house there were seven Polish families living. The women in those families did not wish their children to work in the cannery, so they left their children at home, locking them in the house, because if they went to the cannery the employer would put them to work. During the early hours, somewhere about 7 o'clock, there was a fire, and the children very narrowly escaped being burned to death, but some of the neighbors knew they were there and got them out.

Mr. THOMPSON. What is the sanitary condition of those houses or shacks?

Miss WATSON. They are unspeakable.

Mr. THOMPSON. What is that?

Miss WATSON. They are unspeakable. The sanitary conditions are worse than anybody could imagine. The camp I stayed in, while I was working—it was raining, and it looked like a basket. The bed was a wooden bunk, built into the wall. A little Spanish moss, the moss that grows on the live oak trees down there, was thrown onto this to form a mattress. The bed was immovable, and it poured rain all night long. There was no part of that room that was not soaking wet. They couldn't even light the fire the next morning because of the wet. Every person in that row of houses went to work the next morning in wet clothes, women and children.

Mr. THOMPSON. Where do the people buy their supplies that work in the canneries, if you know?

Miss WATSON. That depends. If the cannery company has a company store, then they buy their goods in that company store.

Mr. THOMPSON. Is that compulsory, do you know?

Miss WATSON. Where they are owned by a company, or where the company own a store, yes. In some of the canneries they are permitted to buy outside if the company has no store, but where there is a company store they are obliged to buy inside. One woman told me about buying some bread outside the company store, and she was told if she did not buy her goods in that store she would lose her job, and they would refuse to pay her fare back to Baltimore.

Mr. THOMPSON. What about the prices in those stores?

Miss WATSON. We paid 10 cents a loaf for bread, which we could buy outside for 6, and 15 and 18 cents a can for condensed milk, which could be bought for 10 cents outside. Children's shoes were anywhere from \$1.50 to \$2 inside in the company's stores, which could be bought for from \$1 to \$1.25 outside.

Mr. THOMPSON. Generally, what does the work of those people consist of? Is there any night work or anything of that kind?

Miss WATSON. The women sometimes have night work. The general work is shucking the oysters. The oysters are put into the car and go into the steaming oven. They are left in the oven 15 minutes and they come out and you put your knife inside and scrape the oyster out. The children and women, as a rule, work at shucking, but there are a number of women who work in the packing house, in packing goods, and those women invariably work until 11.30 and 12 o'clock at night. Sometimes, if there are a number of boats in and they are pressed for help, a woman who has shucked oysters all day, and from 4 o'clock in the morning until 5.30 in the afternoon, will go in the packing house and will pack until 11.30 and 12 o'clock at night. Sometimes those same women will have to work on Sundays. During March and April, on six different Sundays, the women worked from 2 o'clock in the morning until 11 o'clock at night, going back to work the next morning at 2 o'clock again and working until 11 again.

Commissioner O'CONNELL. How about the earnings of the women and children?

Mr. THOMPSON. In other words, the women who went to work at 2 o'clock in the morning, and worked until 11 o'clock that night, were compelled to get up the next morning and go to work at 2 o'clock?

Miss WATSON. Yes. Then the following Monday afternoon, when one group of those women were found sitting down on packing boxes, because they were too tired to work any longer, the owner discharged them.

Chairman WALSH. What owner discharged them?

Miss WATSON. Do you want his name?

Chairman WALSH. Yes.

Miss WATSON. Lopez.

Mr. THOMPSON. Where is his place of business?

Miss WATSON. Biloxi, Miss. He runs the Barataria cannery.

Chairman WALSH. What is Mr. Lopez's first name, do you remember?

Miss WATSON. Lazarus.

Commissioner O'CONNELL. He lives in Canada?

Miss WATSON. The cannery.

Commissioner O'CONNELL. This is in one of the canneries?

Miss WATSON. Biloxi, Miss.

Mr. THOMPSON. What wages do they get?

Miss WATSON. It varies with the size of the oyster. Five cents a pot; it is a tin can.

Mr. THOMPSON. The oyster fixes the wage?

Miss WATSON. The oyster fixes the wage. There is a pot which holds anywhere from 5 to 7 pounds, depending on the cannery again. Five cents a potful for anybody who lives in the cannery. I presumably lived outside of the cannery camp, so I received 10 cents for the same amount.

Mr. THOMPSON. What amount of work would the ordinary adult woman be able to do? How much could she earn in a day?

Miss WATSON. When the oysters are small they can earn very little. During the early part of November and running up until Christmas, a woman and five children, for that number of weeks, made \$3 a day. After that they fell down, \$2, \$1, 50 cents a day, and latterly, just when I was down there working, they were only making 50 cents a day.

Mr. THOMPSON. The woman and children combined only earned 50 cents a day while you were there?

Miss WATSON. While I was there.

Mr. THOMPSON. And at the most only earned \$3 a day?

Miss WATSON. Yes, sir.

Mr. THOMPSON. For six workers?

Miss WATSON. Yes, sir.

Commissioner O'CONNELL. Did their father work, too—the man?

Miss WATSON. Yes, sir. The padrone, when he goes to Baltimore, tries to get a family, the father who will work in the dredging of the oysters, or in the cannery, removing the shells and cleaning up the cannery; a mother and as many children as they possibly can take down with them. They take the family as a unit; the padrone gets a dollar a head.

Mr. THOMPSON. Do they take the Italians?

Miss WATSON. No, sir; the Polish people and the native Baltimoreans.

Mr. THOMPSON. And do the native Baltimoreans submit to the padrone?

Miss WATSON. They have; I think they are not going to.

Mr. THOMPSON. What schooling do the children get, if any? What provision is made for the schooling?

Miss WATSON. No provision is made by the cannery for the schooling. There are schools along the coast. In Biloxi there is a public school. About 200 out of 300 in that school are called Bohemians, on account of their habits, not on account of nationality. They are Polish, Austrians, and Americans. There are 200 go to school sometime during the school year, but the attendance is very irregular, and very rarely do they go beyond the second reader. I talked to the teachers, and they said when the canneries first opened up in the fall the children could neither use pencils nor pens on account of sore hands. There is an acid in the shrimp which takes the skin off their hands. If they had their knuckles cut, any little abrasion of the skin, the acid in the shrimp causes it to fester. I have seen children with their hands a mass of festers. I have seen babies down there with the whole side of their face festered.

Mr. THOMPSON. Do they continue working with their hands in the industry?

Miss WATSON. Yes, sir. One day when I was working at my oysters there was a little girl with one mass of sores. The woman had overweight, she had more than she needed to have in the can for 5 cents, and the woman on the weighing scales put the oysters on the shelf and she took her hand and put them back in the sack.

Mr. THOMPSON. Are the children able to judge a bad oyster from a good one?

Miss WATSON. There is no necessity to. We put everything in.

Mr. THOMPSON. Everything goes in?

Miss WATSON. Yes, sir.

Commissioner O'CONNELL. I know now why I do not like oysters.

Mr. THOMPSON. One oyster is as good as another?

Miss WATSON. One oyster is as good as another. When I was shucking I asked the man next to me, who was a Filipino, I noticed the oyster was bad, and I said, "What shall I do with it?" And he said, "Put it in. They will give you a ragging if you throw it away."

Commissioner O'CONNELL. Are there colored people employed?

Miss WATSON. Yes, sir; but very few. They are put in a different part. They do not work with the white people.

Chairman WALSH. What is the reason for that? Do not they adapt themselves to the industry?

Miss WATSON. I do not believe the colored people would put up with the conditions.

Commissioner O'CONNELL. That the white people do?

Miss WATSON. Yes, sir. I do not think the colored people would.

Commissioner O'CONNELL. That is to their credit.

Miss WATSON. Yes, sir.

Mr. THOMPSON. Is there much sickness in the camp; if so, how is that taken care of?

Miss WATSON. There is considerable sickness in the camp. There are a tremendous number of babies who die every summer there. A good many people have pneumonia. Of course that comes about from the housing condition. They get soaking wet. One family was let down this year because the child had had pneumonia and the woman stayed home to nurse it and was out of the cannery for six weeks. When the time came to bring them back to Baltimore they refused to bring her back.

While I was down there there was a man next to me working on my car, just returned from having had the smallpox.

Mr. THOMPSON. Have you made any investigation of the mills?

Miss WATSON. Yes, sir. And went back to investigate the mills.

Mr. THOMPSON. Where was that?

Miss WATSON. I went back to Alabama and Georgia. I visited mills in Alabama, Georgia, South Carolina, and North Carolina.

Mr. THOMPSON. What nationality, as a rule, are the people who work in those mills? What are the conditions under which they work?

Miss WATSON. They are the so-called poor white people. They are really mountain white people. They are really the truest Anglo-Saxon stock we have. They come from the mountain sections where there is no work, and go down to work in the mills.

Mr. THOMPSON. Under what conditions do they work? What is their pay and hours, if you know?

Miss WATSON. Well, the mill villages are just about as bad as the canneries, excepting just a little bit worse, because the canneries at least have the sea and the sea air and fresh air. The mills have not. The mills—they work in closed quarters. The canneries are open and the sea air goes through, fresh.

Mr. THOMPSON. What proportion of children work in those places?

Miss WATSON. It is very difficult to give the proportions, because you see there are a very large proportion of men working in the mills and cleaning the cotton and dyeing and that sort of thing. I think the proportion would have to be the proportion of the spinning room. I think a quarter of the spinning room would be children. All the doffing is done by children.

Mr. THOMPSON. What ages are the children?

Miss WATSON. That depends upon the child-labor law and the evidence of age that the mill superintendent asks for when he takes the child on. The children in Alabama are supposed to be 12 years of age. I saw children who, at least physiologically, were at least not more than 9 or 10. They were small. It is not necessary to present a birth certificate, or any particularly authentic evidence of age when they apply for a job. The mother or the father can swear the child is 12 years old, and the child can go in and go to work.

In one mill in Alabama, the largest mill there, owned by an ex-governor, and, by the way, a man who has just been defeated for the governorship, when I was there visiting in his mill had 22 children under 12 years of age. Many of those children—

Mr. THOMPSON. What is his name?

Miss WATSON. Do you want it?

Mr. THOMPSON. Yes.

Miss WATSON. I will tell you in one second. It has just gone from me. I will have to look it up. I think it will come back to me in a moment.

Commissioner O'CONNELL. Alabama?

Miss WATSON. Yes, sir; he was an ex-governor.

Commissioner O'CONNELL. How long ago?

Miss WATSON. He has just been defeated. Comer was his name.

I want to tell you something right here, that in Alabama the legislature only meets once in every four years. This governor, this ex-governor, was a Prohibitionist, and naturally, when the legislature did meet, it was interested in legislation on prohibition, rather than in prohibition of child labor; consequently, Alabama had a very poor child-labor law. The Alabama child-labor law says that no child under 12 years of age shall work in a mill, but they can work in any other place they like. I saw children in department stores in Alabama who were not over 9 or 10 years old. I saw children in a hosiery factory who could not have been over 8 or 9 years old. The law only applies to mill children.

Mr. THOMPSON. Take the mills you visited, what other mills would you like to speak of?

Miss WATSON. I visited in Alabama and in Georgia; and I visited in one of the show places in Georgia, and a very beautiful mill town, a very old and broad welfare work. The mill had its own school which, by the way, was closed, had been closed since the 1st of May, because it was too hot for the children to go to school, but they had all gone into the mill to work; and they were there when I was there; and they were all making cotton for Uncle Sam. They were making the heavy drillings that is used for the Navy hammocks. That particular mill makes Navy cotton, and has made Army cotton.

Mr. THOMPSON. How young were those children?

Miss WATSON. There were children 12 years old and over—12 to 16. There were a large number of children who were 12 years old who did not look to be 12 years old.

Mr. THOMPSON. Who did not look to be 12 years old?

Miss WATSON. Who did not look to be 12 years old.

Mr. THOMPSON. How many hours a day do those children work in that mill, if you know?

Miss WATSON. The whistle blows at 3 o'clock in the morning?

Mr. THOMPSON. What time?

Miss WATSON. At 3 o'clock; but they are not supposed to be at work; they are supposed to be at the mill door at a quarter to 6. At 6 o'clock the machines are working, and they work steadily until 6 o'clock at night, with the exception of 45 minutes at noon, when they go home for dinner.

Chairman WALSH. Why does the whistle blow so early?

Miss WATSON. So as to get them up. The southerners are not very active, and they give them plenty of time.

Mr. THOMPSON. If I understand you correctly, children alleged to be 12 years old, but who do not look the age, are working in the mills in this country making cloth for the United States Navy, and they are compelled to start at work at 6 o'clock in the morning and finish work at 6 o'clock, working 12 hours, with the exception of 45 minutes for luncheon?

Miss WATSON. Yes, sir.

Mr. THOMPSON. Is that correct?

Miss WATSON. Yes, sir.

Mr. THOMPSON. What is the name of the mill and where is it located?

Miss WATSON. Anchor mill, located in Rome, Ga., but there are several others in Georgia doing exactly the same thing, only they are not particularly making goods for the Navy; they are making for the Army. And there is also one in South Carolina doing the same thing.

(A statement relative to the Anchor mill is printed as "Anchor Mill Exhibit.")

Mr. THOMPSON. Have you brought the attention of your society to the mill at Rome, Ga., Miss Watson?

Miss WATSON. I beg pardon?

Mr. THOMPSON. Have you brought the attention of your organization to this mill at Rome, Ga.?

Miss WATSON. No; I have not.

Mr. THOMPSON. When did you make that investigation?

Miss WATSON. I have just completed it; just returned.

Mr. THOMPSON. What information have you that you would like to give to this commission as to the employment of children in the mills in the South? Are there children that use snuff? And what is the physical condition of the children?

Miss WATSON. Oh, I have been in the child-labor work for the past eight years, and I have never seen any condition anywhere equal the mill children. They are stunted in growth, apathetic, and listless; and in no place outside of Auburn Prison have I seen either women or children as apathetic and absolutely uninterested in anything in life as the mill people are. There is nothing that interests them at all. I spent a whole Sunday in a mill village and could not get them interested in anything. I talked with one woman and spoke about the noise of the machinery in the mill, and she said: "Oh, I don't notice it." She didn't notice anything else, either. The only thing that appeals to them is highly emotional religion. They will go to the Salvation Army meeting or the Holy Rollers. The people or society or church that is highly emotional appeals to them, and nothing else does. The children there that go to the schools can not learn. I have talked to teacher after teacher in the schools in whole villages, and they say that the mill child simply hasn't the capacity for learning. They can not learn. I visited one little night school—a mill school—provided for the children at night which is absolutely inhuman; for no child who works in the mill from 6 o'clock in the morning until 6 o'clock at night has any business to go to school at night. The teacher said the children fell asleep, and she let them sleep. She thought it did them more good than trying to teach them, because they could not learn, anyway.

Mr. THOMPSON. What is the general social life in those villages, if you know?

Miss WATSON. Well, there is none as far as I can make out. The people, after they leave their work and go home, they sit out on the porch in a listless fashion. Nobody plays. I have never seen a child playing down there. Nothing appeals to them—in particular, the women. The women spend most of their time just chewing snuff. I asked them why they chewed so much snuff, and they said it helped them to get through the day.

Mr. THOMPSON. It is said that the mill owners permit them to play ball between the time of doffing. Did you see anything of that?

Miss WATSON. I saw none of it at all. I went in some of the best mills and I saw no children out playing on the outside. I did talk with and see a number of children, but they were inside, and not outside playing. They were outside in the mill rooms, but these rooms are both hot and humid. It takes both heat and humidity to weave cotton. The children stand on their feet all the time. None of them ever sit down. I saw one little child who was 12 years old and her feet were tied up in cotton. I noticed that she had taken her shoes off, and she was sitting outside on the stairway, and I asked why she was not at work, and she said that she had worked until she felt as though her backbone was going up through her head and she just had to stop. I found another little girl lying on the floor in the space between the spindles resting because she was tired. Both of these children—one claimed to be 14 years old, and I think she was, but physically she was not any bigger than a child of 10. She had a face as lined as a woman of 40; and that child can neither read nor write. She has worked since she was 9 years old. She began her mill life in South Carolina, where there was no child-labor law; and when they got their law, she went down to Alabama and worked; and when they got their law there, she went over into Georgia.

Mr. THOMPSON. Is there anything further that you would like to state with reference to your work?

Chairman WALSH. Has anyone any questions?

Commissioner O'CONNELL. Did you find any marked or distinct lines drawn between male and female in these camps and mills and places?

Miss WATSON. None at all.

Commissioner O'CONNELL. No differentiation at all?

Miss WATSON. No.

Commissioner O'CONNELL. Will you furnish this commission with a list of these places that you visited—towns and mills and factories?

Miss WATSON. I will furnish them. I can give it to you now.

Commissioner O'CONNELL. Take your own time.

Miss WATSON. I will do so; yes, sir.

Commissioner O'CONNELL. All the names and places put together and give them to the commission?

1894 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Miss WATSON. Yes, sir.

Chairman WALSH. How soon could you give us this last report you say you have not filed yet with your organization; when will you file that report?

Miss WATSON. I can file it by Friday morning.

Chairman WALSH. Could we have a copy of it so as to make a copy of it?

Miss WATSON. Yes, sir; surely.

(The report referred to is printed in "Hearings on the Child-Labor Bill (H. R. 12292) before the Committee on Labor, House of Representatives, Sixty-third Congress, Second Session.")

Chairman WALSH. Thank you.

Mr. THOMPSON. That is all we have to-day, Mr. Chairman.

Chairman WALSH. The commission will stand adjourned until 10 o'clock to-morrow morning in this same room.

(Whereupon, at 4.15 p. m., Tuesday, June 2, 1914, an adjournment was taken until 10 o'clock a. m., Wednesday, June 3, 1914.)

EXHIBITS.

BASFORD EXHIBIT.

JOSEPH T. RYERSON & SON,
New York, July 7, 1914.

Mr. F. A. DELANO,
President Chicago, Indianapolis & Louisville Railway,
Transportation Building, Chicago, Ill.

DEAR MR. DELANO: When testifying before the Industrial Commission in New York I was asked to prepare in writing a statement of opinions expressed before the commission on the subject of vocational education. I have done so and send you the notes which I have made as brief as I could, with request that you kindly place them before the commission, if in your judgment they are worthy.

I have tried to present two things—apprenticeship and the function of the school men—without obscuring these issues by details.

As I understand it, the commission desires to suggest legislation. I am convinced that legislation should be along the lines which I suggest, namely, control of national funds by the commission which would make those funds available to States having similar commissions, the funds to be available only for communities which will meet the three requirements suggested in these notes.

Yours, very truly,

G. M. BASFORD.

VOCATIONAL EDUCATION—WITH PARTICULAR REFERENCE TO BOYS AND MECHANICAL TRADES.

[By G. M. Basford, July, 1914.]

More satisfactory progress toward permanent success in vocational education will be made when each of the various vital factors involved is employed to do its own particular part to best advantage in coordinated, cooperative effort. Part of this problem is up to the public. Part of it is up to employers. Part is up to the young recruits for vocational service.

For some years of worrying about industrial training the writer suggests the following principles as pointing out the next steps to be taken toward a solution:

1. It is the duty of the public properly to provide preliminary preparation of young persons for life work whether for "professions" or for "vocations." As to vocations it is the function of the public schools to prepare the raw material for vocation training. It is also the function of the public schools to provide means whereby the pupils will be most intelligently guided vocationally. This involves close contact and cooperation between public-school educators and the employers who provide the market for the school product. When these educators come to know this market and when employers and educators cooperate in their common problem—it may be said that a real start has been made in vocational education. All concerned are too far apart. Each has a great work to do. They must get together. When the public schools are ready to recommend their product individually to specific employers because of thorough knowledge of that employer's problems, then—

2. It is the duty of the employer to provide trade training for those recruits in the trade, vocation, or occupation. This the writer believes to be a necessary part of the cost of producing goods. He believes that the only way to

teach trades vocations or occupations is in the work itself. When professional educators begin to cooperate with employers they will begin to see the fallacy of attempting to teach trades in schools. Trade schools will be the rock on which vocational education will be wrecked if those who are most vigorous in this movement do not take heed of the dangers and get into the safe channel. That safe channel is apprenticeship. Employers who have any thought to the future can not safely longer delay the issue of apprenticeship or its equivalent in every trade, vocation, or occupation. Apprenticeship interest is awakening, but it is coming too slowly. Public educators will give it great impetus when they quit trying to teach trades in schools and when they recommend their graduates to employers who will establish or have established apprenticeship. This applies to great business like that of the General Electric and American Locomotive Cos. It applies also to the plumber, the blacksmith, the tinsmith, carpenter, printer, paper hanger, and all the rest, in the small community. These all need apprenticeship, but many of them do not know it. When one plumber begins to get all the business in town that is worth having, simply because he has properly provided apprenticeship in his trade for a boy or two who have come to him strongly recommended by the school men of the town, then vocational training will take an important step in that town. By apprenticeship I mean trade training to the limit of the possibilities and facilities of the employer. I mean that in small and large concerns some one be delegated to teach the practice of the shop, or on the work wherever it is, some one who has time to do so because it would be his chief duty to do so. Will it pay? It has paid in each and every case where it has had the least chance, and the writer believes apprenticeship to be the best paying scheme any employer can adopt.

3. When boys are actually parties to apprenticeship the public has its second educational opportunity. Corporation schools are now meeting a need that apprenticeship has developed. These schools testify to the distance between public educators and vocational needs. Even new schools have been required because professional educators were so far out of touch with the times. These corporation schools include some models of extraordinary merit for elementary and grade schools and even for colleges. In my opinion no technical school or university has in use a better plan or scheme than that whereby the American Locomotive Co. for the past six years has trained its engineers at Schenectady, N. Y. Professional school men should lose no time in studying the merits and methods of these corporation schools which are now doing work that really belongs to the public to do in the form of continuation schools. Corporations will be glad enough to turn their school over to the professional school men when these men have caught up with the times in school matters.

4. In some States public funds are now available for vocational education work. The New York State scheme I consider a failure. The Wisconsin scheme would be more nearly ideal if it compelled specific standards of apprenticeship as a qualification for State aid. It is my opinion that State or national financial aid for vocational schools must be conditioned upon apprenticeship so that no public funds can be obtained by a community until the employers of that community have established satisfactory apprenticeship. Not until this is accomplished is it worth while to consider vocational school efforts.

Suppose we put national funds in the hands of a commission of three men, (1) an employer; (2) a representative of employees; (3) a professional educator—all of these men being selected because they are really big men and because they have thoroughly studied and, therefore, understand this problem. Then suppose we suggest a similar commission for each State that wishes to promote vocational education. If these commissions control State and national vocational education funds they will control the methods. I would recommend that the national commission be restricted to grant funds only to States having proper commissions and laws that will permit those State commissions to grant State and national funds only to communities which will do these three things:

(a) Revise school plans to include preparation for learning trades, vocations, and occupations. This must necessarily include close cooperation between the school men and employers.

(b) Compel employers to provide apprenticeship with true and thorough trade training as the basis for continuation-school work. This is a duty of the employers to the community and to themselves and to the country. Remember that Germany owes her industrial position first, to apprenticeship, and, second, to educational development accompanying it.

(c) Provide continuation schools for those apprentices to continue their studies in connection with their employment. When a community has actually complied with these requirements to the satisfaction of such a commission it may safely be trusted with public funds for vocational work, but (as I see the problem) not until it has done so.

The problem of vocational education is so simple as to be generally misunderstood. The greatest difficulty is to get employers to look into the future and to prevent school men from living entirely in the past.

These notes are prepared to emphasize the vital force of apprenticeship, without which vocational education will not succeed, also to indicate that this problem is for employers, the public, and professional educators to attack cooperatively. It must not be left to the schoolmen who have only a part to perform and who are not to-day prepared to perform it. The factors must get together. I believe that they may best be gotten together through commissions and the control of funds.

BROWN EXHIBIT.

**BUREAU OF WELFARE OF SCHOOL CHILDREN,
New York, June 8, 1914.**

The CHAIRMAN UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS,
City Hall, New York City.

MY DEAR SIR: When I appeared before the commission on June 2, to testify regarding conditions under which young children are employed in industry, you requested me to furnish you with a list of employers of such children, together with copies of various studies made while I was an agent of the National Child Labor Committee. May I suggest to you that, inasmuch as all of this data is on file in the office of the National Child Labor Committee at 105 East Twenty-second Street, a direct request to them would undoubtedly result in immediate compliance. I should be glad to undertake to do this personally were it not for the fact that I am no longer engaged in child-labor work, and demands for time in my own work are so great that it is impossible at present to spend much time on this problem.

Very respectfully, yours,

EDWARD F. BROWN, *Superintendent.*

NEW YORK, June 9, 1914.

Mr. EDWARD F. BROWN,
*Superintendent Bureau of Welfare of School Children,
105 East Twenty-second Street, New York City.*

MY DEAR SIR: Your favor of the 8th instant was duly received.

As suggested, I shall call upon the office of the National Child Labor Committee for the data which you were kind enough to mention to us.

I thank you for the suggestion.

Very respectfully, yours,

_____, *Chairman.*

**THE INTERNATIONAL CHILD WELFARE LEAGUE (INC.),
New York City, N. Y., June 12, 1914.**

Hon. FRANK P. WALSH,
*Chairman United States Commission on Industrial Relations,
Room 1220 Municipal Building, New York City.*

MY DEAR MR. WALSH: Since writing you on June 8 regarding the list of firms employing children I have collected some information on this point which I respectfully lay before you. You will find inclosed herewith a list of firms operating in the States of New York, Georgia, Mississippi, and Florida, all of whom have been found to employ children. The details of the employment of these children are to be found in—

(1) The second report of the Factory Investigating Commission, 1913, volume 2. On page 579 you will find a full report of children who were employed in the canning industry in New York State.

(2) *The Child's Burden in Oyster and Shrimp Canneries*, by Edward F. Brown and Louis W. Hine, published by the National Child Labor Committee, 1913.

(3) *Child Labor in the Canning Factories of New York State*, by Edward F. Brown, published in bulletin of the National Child Labor Committee.

There are also on file in the office of the National Child Labor Committee a number of reports which have not been printed, but which are available for use.

You will be interested particularly, I am sure, in a study of wage standards in tenement home work which I made and which is reported in chapter 7, appendix 4, of the second report of the New York State factory investigating commission, 1913, volume 2, page 739, entitled "Embroidery Home Workers of New York City." I want to call your particular attention to the table on page 750 of this report, which shows the wages earned by families in the embroidery trade. I am sure you will be astounded to see in this tabulation that there are some family groups who, working at home, have earned as little as 8 cents a day.

If there is any further information which I can furnish you with, I know you will feel free to call upon me.

The report of the State factory investigating commission can be procured on application from the commission, the address for which is room 1332, 22 East Seventeenth Street, New York City.

Very sincerely, yours,

EDWARD F. BROWN, *Vice President.*

EMPLOYERS OF CHILD LABOR.

NEW YORK STATE CANNERIES.

Hamburg Canning Co.: Akron, Eden Center, Hamburg.	Haserot Canneries Co.: Forestville, Gowanda.
Burt Olney Canning Co.: Albion, Medina.	Le Roy Canning Co., Le Roy.

WATSON EXHIBIT.

119 WASHINGTON PLACE,
 New York City, October 21, 1914.

SECRETARY UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS,
 Field Headquarters, Chicago, Ill.

DEAR SIR: Inclosed you will find a copy of my report¹ and excerpts from my daily dairy upon which the report was based as submitted to the Labor Committee of the House on May 22, 1914. I was under the impression the president of the International Child Welfare League had forwarded you this report shortly after your hearing in New York. I am sorry you had to write for same.

My cannery list is not at immediate hand, but the worst one is at Lake Shore, Miss. Others equally bad from point of child labor, long hours, and bad housing conditions are:

Dunbar, La.

Barataria, Biloxi, Miss.; very bad housing; owned by Lazarus Lopez.

¹ Printed in hearings before House of Representatives Labor Committee, Sixty-third Congress, second session.

1900 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Biloxi Canning Co., back bay section of Biloxi, Miss.
Sea Food Co., Biloxi, Miss.; has many child laborers.
Dukate Co., Biloxi, Miss.; many, many children; long hours for packing-room workers.
Pass Christian cannery; many child workers.
Port Royal, S. C.; lots of child workers; frightful housing conditions.
Hoping these addresses will be of use to you, believe me,
Sincerely, yours,

ELIZABETH C. WATSON.

ANCHOR MILL EXHIBIT.

ANCHOR DUCK MILLS,
Rome, Ga., June 11, 1914.

Mr. R. C. RUTTER,
Chairman United States Industrial Commission,
Washington, D. C.

DEAR SIR: Referring to the inclosed clipping¹ from the New York World of June 3, we note that Miss Watson testified that material for the uniforms worn by the United States Army and Navy is made by a mill in Rome, Ga. Now, the truth is there is only one cotton mill within the corporate limits of Rome—i. e., the Floyd Cotton Mill—and from our knowledge of that mill it could not make duck or drills, either, for the Army; and the agent states that they never have made any of this cloth.

This mill, Anchor Duck Mills, is just outside of the city limits, with a portion of its tenement property inside the city. Now, if the witness did not refer to the Floyd mill, then we suppose this mill is the one referred to, since there are no other mills in Rome. If this is true, and the witness had reference to this mill, we want to say that her testimony is false from start to finish, and we will make affidavit to the fact that we never made a piece of the goods named. It appears very unjust that your committee will accept statements of the kind referred to and not give the accused mill an opportunity to refute the charge.

Very truly, yours,

ANCHOR DUCK MILLS,
C. E. McLIN,
Secretary and Treasurer.

JUNE 16, 1914.

Mr. C. E. McLIN,
Secretary and Treasurer Anchor Duck Mills, Rome, Ga.

DEAR SIR: Your letter of the 11th, with clipping from the New York World, at hand. I take pleasure in attaching a copy of the testimony given by Miss Watson, in which your mill is mentioned. The commission will be glad to hear anything you may have to say in connection with the employment of children in your mills, child labor being the point at issue, rather than the question of whether or not the output of the mills goes to the Government or not.

Very truly, yours,

_____, Secretary.

ANCHOR DUCK MILLS,
Rome, Ga., June 23, 1914.

LEWIS K. BROWN,
Secretary United States Commission on Industrial Relations,
Washington, D. C.

GENTLEMEN: We are in receipt of your favor of the 16th, inclosing copy of Miss Watson's testimony before your commission relative to working conditions at our mill, for all of which please accept thanks.

We suppose it is in order for us to doff our hat to Miss Watson for the way she refers to our mill town, school, and welfare work, which we do, but her statement contains so many errors that we almost doubt whether or not she is correct in this statement. However, we are sending you by parcel post a lot of photos¹ of our property, in order that your commission may form some idea of the conditions under which our mill people work.

¹ Not printed.

We recall now the occasion of Miss Watson's visit to our mill. She stated that she had been to Alabama attending the marriage of her cousin, after which she came to Rome in an auto; she had missed her train connection. She stated that she had never been in a cotton mill, and requested the privilege of using some of her spare time looking through our plant. Now, we are going to make statements we can verify by affidavit if requested to do so by your body.

Miss Watson's statement that the school closed May 1 on account of the warm weather is correct. We are sending you copy of the school roll in January and April, showing how the attendance had fallen off. Miss Watson's statement that all the school children were in the mill at work is absolutely false, as only 5 out of 46 of the school children went to work in the mill after school closed; and we might add that 1 of the 5 earned for week ending June 13, \$12.83. This boy is 15 years old.

With reference to the hours of work, the witness is wrong again. The statute of Georgia prohibits us working over 60 hours per week, and we comply with this law, which permits us to divide this 60 hours as each individual mill may elect. Our mill people want a half holiday on Saturday, and to accommodate them we begin work at 6 a. m. and work until 5.45 p. m. (not 6 p. m., as the witness states), except 45 minutes for dinner. This we do for 5 days, and work only 5 hours Saturdays.

The witness's statement that the whistle blows at 3 a. m. is false; it blows at 4.30; and we do this as an accommodation to those who have been accustomed for years of depending on whistles of mills rather than their own time-pieces. The writer has often thought this habit a nuisance and would like to discontinue it.

With reference to the age at which children work, we do our best to comply with the law in this respect. Our last report to the Labor Commission of Georgia on January 1, 1914, showed five children of 12 years employed, and those under circumstances such as the law directs. We were employing about 400 people in January, when this report was made. We had, therefore, less than 2 per cent of children 12 years old, and if you were dealing with conditions such as we are, and not theories alone, you would say that it is better for this small percentage to work for an honest living rather than beg, steal, or starve.

We wonder why Miss Watson did not tell your body about our lodge hall, our free bathhouse, with its swimming pool, shower baths, etc.

The writer has in his desk some letters written to him by the school children last winter and I am sending you a few of them; they speak for themselves. The school children were in the habit of writing these letters every week or two, as the teachers thought it good training for them. The only correct statement made by the witness is that the school closed May 1 on account of the warm weather. The enrollment of the school was 79 in January and 46 in April. We pay about three times more per capita to educate our mill children than the State appropriates per capita for the county schools; not only do we furnish free school, free bathhouse privileges, free pasturage for the operatives' milch cows, but we sell them ice at 25 cents per 100 pounds, delivered at all the houses in our village.

We thank you for your patience, but we could not well make this statement shorter.

Yours, very truly,

ANCHOR DUCK MILLS,
By C. E. McLIN,
Secretary and Treasurer.

OUR SWIMMINGPOOL.

Mr. McLin has had a Swimmingpool built for the Anchor Duck Mills and the school children and it is going to be very nice. Mr. McLin is going to have ferns put in it and that will make it look very nice and cool. They have four shower baths and I think that will be the nicest of all. Inside it is eight feet deep and is concrete and is 50 feet long and 30 feet wide and is going to be steam heated so that we can go in summer or winter and we are all going to buy our own bathing suits and learn how to swim.

OUR FLAG.

The shape of the United States flag is oblong and it is red white and blue.

The stripes are red and white, the corner where the stars are, is blue.

The stripes are straight across the flag.

And the stars are up in the right hand corner and are white on the blue.

There are thirteen stripes and they represent the first thirteen colonies along the atlantic coast.

There are forty eight stars and they represent the forty eight states in the whole United States.

ROME, GA., *Feb. 12-19-14.*

DEAR MR. McLIN: I certainly do like our swimming pool. I have not missed any of my lessons this month Miss Lucy got me a new Copy Book The one that writes the Best gets a prize. We sure do have a good time at recess. We have a long recess Miss Lucy read us some stories this morning.

Well I will close for this time

GRACIE MAGILL

2nd Grade.

ROME, GA., *February 17, 1914.*

DEAR MR. McLIN: I want to tell you how we like our swimming pool. It is as nice as can be. We went to see the boiler the other day they were using it. We thank you very much for having it put there. We girls are going in. We are just crasy to go. We went to see the water Friday I turned the showers baths on Vinnie Mae and wet her hair good. I think it will be nice when you get the ferns put in Mr. Gordan Hight and Mr. McGee went in last week they said they to froze to death. It is eight feet deep and fifty feet long.

I want to learn to swim.

Your friend, .

BRATTEN

STATE MEDIATION AND ARBITRATION OF INDUSTRIAL DISPUTES

(For exhibits under this subject, see pages 1954 to 1961.)

COMMISSION ON INDUSTRIAL RELATIONS.

NEW YORK CITY, *June 3, 1914—10 a. m.*

Present: Chairman Walsh, Commissioners Garretson, O'Connell, Lennon, and Harriman.

Francis H. Bird, superintendent of Division of Public Agencies, examining for the commission.

Chairman WALSH. The commission will please come to order. Is Mr. Lundrigan here? I understand he is in a hurry to get away.

TESTIMONY OF MR. JOHN LUNDRIGAN.

Chairman WALSH. Please state your name, age, and residence.

Mr. LUNDRIGAN. John Lundrigan.

Chairman WALSH. Your age?

Mr. LUNDRIGAN. Fifty.

Chairman WALSH. Residence?

Mr. LUNDRIGAN. Buffalo.

Chairman WALSH. What is your occupation, Mr. Lundrigan?

Mr. LUNDRIGAN. I am the general superintendent of the industrial department of the International Paper Co.

Chairman WALSH. How long have you occupied that position, Mr. Lundrigan?

Mr. LUNDRIGAN. Three years and eight months.

Chairman WALSH. Prior to that what was your occupation? If you will kindly briefly give your business history, we would be obliged.

Mr. LUNDRIGAN. I was for nine years and six months previous to that—well, I had so many different titles it is somewhat difficult to enumerate all of them, but I was part of the time nominally and part of the time actually chairman of the New York State Board of Mediation and Arbitration.

Chairman WALSH. During the nine years prior to that time?

Mr. LUNDRIGAN. Nine years and six months.

Chairman WALSH. What was your business originally before you held any such position?

Mr. LUNDRIGAN. I was a railroad conductor.

Chairman WALSH. In what part of the country?

Mr. LUNDRIGAN. Erie Railroad, New York State.

Chairman WALSH. Now, Mr. Bird, you may proceed.

Mr. BIRD. Mr. Lundrigan, in 1906 I believe there was a strike of longshoremen in New York State and in the States bordering on the Great Lakes. Will you kindly tell us about the difficulties you had in intervening in that controversy?

Mr. LUNDRIGAN. Well—the strike I presume you refer to—I am not too clear on the date, but that was the general strike of marine engineers and longshoremen, firemen, etc.?

Mr. BIRD. Yes, sir.

Mr. LUNDRIGAN. In fact, a general strike on the Great Lakes?

Mr. BIRD. Yes.

Mr. LUNDRIGAN. Well, as far as the State of New York was concerned, while we suffered very severely from the effects of the strike, particularly at the port of Buffalo, which is to a very large extent the point of breaking bulk for most of the lake traffic, when we undertook to see what could be accomplished under the statutes under which we were operating we found that we were absolutely without jurisdiction. In other words, we found that no responsible officer of any of the employing corporations lived or maintained an office in the State of New York. That was equally true of all of the labor organizations involved. The longshoremen's organization has since moved its headquarters into New York State, but at that time it was in Detroit.

Mr. Joseph Bishop, the secretary of the Ohio State board, is entitled to whatever credit might be due for having made what we thought might be an effective effort toward mediation or conciliation. He sent a letter to the chairmen of the several boards of arbitration of, I believe, six States bordering on the Lakes, suggesting that we undertake to hold a joint conference for the purpose of seeing whether or not we could effect mediation or conciliation. And before I forget it, one fact there is that we discovered, or think we did, and one that I think should occupy the attention of you gentlemen particularly, was that even though none of us had jurisdiction we also discovered that the Federal Government had no jurisdiction. In other words, as it read at that time, did not apply to water transportation. I think that is the situation at the present time.

In addition to that, we were confronted with the proposition that perhaps an international situation was involved. But, however, we met—I will say before going any further, I do not want to bother you gentlemen with details. If you want them I would be glad to give them.

Chairman WALSH. We would be glad to get them, as briefly as possible. Please give the detail of one typical case.

Mr. LUNDRIGAN. Just this: The boards of the six States met and organized and put in three weeks in an effort to effect conciliation, at least to the extent of getting the parties to the dispute in the same room with each other to talk the matter over. We were not only unsuccessful, but it was necessary that I make a special trip to New York and appeal to the Hon. Seth Low, who at that time was the president of the National Civic Federation. We asked his help, which he very generously volunteered, making a special trip to the city of Cleveland, and did succeed in securing an interview for those representatives of the six great States involved on the part of the Lake Carriers' Association, but we did not succeed in, even, as I said before, getting the two contending forces in the same room; conciliation absolutely failed.

It seems to be one of the cases where there should be some Federal agency for meeting the situation.

Mr. BIRD. You might say, then, in this case, in the first place, that the State machinery was unable to assist in the administering of affairs; and in the second place, the Federal Government could not come in, because it was something that had to do with water transportation; and in the third place, the only means of bringing these groups together was through private agencies; and the conclusion would be that there should be some public machinery to handle such controversies as that.

Mr. LUNDRIGAN. I don't want to be misunderstood. The private agency did not succeed in bringing the parties to the dispute together, but simply succeeded in getting that courtesy for the different State officers, so far as the employers were concerned. We had no difficulty in securing all the information we desired from the representatives of the different national labor organizations. They presented us with oral and written information which, so far as we know, were the facts. My conclusion would be that it is very essential that the Government provide some direct agency for a compulsory investigation of disputes of that character.

Mr. BIRD. Do you remember how long the fight lasted?

Mr. LUNDRIGAN. Well, it was acute for practically two seasons of navigation.

Mr. BIRD. Would you say the cost of that strike amounted to near a million dollars?

Mr. LUNDRIGAN. Well, I would imagine, inasmuch as the receipts at the port of Buffalo alone during the months of July, August, and September usually amount to above a million bushels of grain a day and the proportion of iron ore is much larger, I would say that the loss at the port of Buffalo was much greater than that. I do not consider that I am competent to estimate the actual loss.

Mr. BIRD. But you are willing to say that there was a large loss?

Mr. LUNDRIGAN. This traffic might have been moved by rail or some other way; I could not say as to that. But provided it was not moved, there must have been an enormous loss.

Mr. BIRD. Now, in 1910 there was a second interstate controversy in which you were interested, was there not, the International Paper Co.'s troubles? Will you tell us, please, the size of the International Paper Co. and the extent of its operation? What States were involved in the strike?

Mr. LUNDRIGAN. The International Paper Co. operates in five States, and has what amounts to 31 separate plants or units under 24 separate local managements. Its general offices are in New York State. The general offices

of the three principal labor unions involved in that controversy are also in New York State.

Chairman WALSH. What were the labor unions involved—the three labor unions involved?

Mr. LUNDRIGAN. Well, they were the International Brotherhood of Paper Makers, the International Brotherhood of Pulp, Sulphide, and Paper Mill Workers, and the International Brotherhood of Stationery Firemen. I do not think that is just exactly the title. I think they call themselves stationery firemen, water tenders, etc. I am not clear on just what this correct title is.

Commissioner GARRETSON. That is Mr. Healy's organization?

Mr. LUNDRIGAN. Yes, sir; we are at the present time doing business with several other organizations who have comparatively a small number of men, in our mechanical trades in our plants; but I will say that those were the large and important organizations.

Mr. BIRD. How did it happen that New York State became interested in this controversy? What was your official connection with it?

Mr. LUNDRIGAN. Well, of course, we tried to be interested in all of the important controversies that arose during the time that we were on the public pay roll; and I presume that it was simply following the natural order of things. I recall quite distinctly at the time the trouble originated that our organization at that time was such that one of the members of the board besides myself was located at the Albany office, and the other member was located at the New York suboffice permanently.

Mr. BIRD. What were the first steps that you took after this controversy?

Mr. LUNDRIGAN. The first steps we took when the strike originally started in the Hudson River Mill at Corinth was that one of the members of the board immediately went to the scene of the strike which, so far as we knew at that time, was purely local.

Chairman WALSH. Where was that?

Mr. LUNDRIGAN. At Palmer Falls, or Corinth, N. Y. The other member who was located in New York City went to the general offices of the International Paper Co., and in both instances we did practically all that we were employed to do; that is, so far as the formal part was concerned. We, of course, offered our services in the way of mediation and conciliation. In a very few days the strike extended from one plant to another, until it finally became general, extending over the entire international territory, although, I believe, there was one or two plants in which there was no serious interruption of operations.

Mr. BIRD. What were the results of your offer of mediation and conciliation?

Mr. LUNDRIGAN. Well, there was a condition there then that I, of course, was unusually familiar with. The original situation was that the labor unions had been at war with each other. The labor unions concerned in that particular case had been at war with each other, and they took turns, for several years before that, getting at war with the company, and the usual situation was when trouble occurred, why, the fellows that they were not fighting, why, they helped fight the company, or the fellow that was fighting the company—not for any love of the company at all, but as a sort of reprisal on the other fellow. That seemed to be the situation.

Commissioner GARRETSON. A jurisdictional war?

Mr. LUNDRIGAN. It was to some extent, Mr. Commissioner. The facts were that a few years before that what is known as the pulp and sulphide workers' organization, and numerically the larger of the two, was a member of the paper makers' brotherhood, was one organization, and a few years before then there was a secession, or a new organization formed, which left a very bitter feeling. In 1908, for instance, the paper makers were on strike, and the feeling was so bitter between the two organizations that the pulp and sulphide workers refused to go on strike.

The result was, or rather, the effect of that was, that it helped to lose the strike on the part of the paper makers. Of course, we were in continual negotiation with the company. We soon learned that the individual mill superintendents were operating under a system which was controlled by the central office, so that we realized whatever we might be able to accomplish must be done through the general office or general officers of the company. The situation became so grave, particularly in New York State, and the military having been in arms for some time in order to preserve the peace and more or less rioting, that we determined, although we were practically without any resources so far as any particular State money or fund was concerned—and I

might say, in passing, very little in any fund—between the commissioner of labor and myself we decided that it was necessary that, both from the standpoint of avoiding public criticism and with the possible hope that something might develop that might result in a settlement of the trouble, that we would hold a public investigation.

Mr. BIRD. Can I interrupt just a moment? How were your friendly offices received by the labor interests?

Mr. LUNDRIGAN. I will say this, that so far as my personal contact with all the parties was concerned, they were very pleasant. They always used us very pleasantly and courteously, and, apparently, gave me the information we had any reason to expect from either of the parties.

Mr. BIRD. How did it happen, then, that it was necessary to call in the military, that affairs came to such a state as that?

Mr. LUNDRIGAN. Well, the International Paper Co. had undertaken to operate its plant, and for that purpose had brought strike breakers, as they are commonly termed, together with such of their own men as were willing to return to work, or who had continued at work, they were endeavoring to operate their plant, and, of course, claimed that they were operating them to a very large extent. In fact, they claimed at the time this investigation started—I think the statement of the company, which I have in my pocket here, made the assertion that they were producing about 85 per cent of normal product.

Mr. BIRD. How did the military happen to come in? At whose request was the military sent in?

Mr. LUNDRIGAN. Well, now, I don't recall just exactly, but I think it was at the time it was on account that there had been a dynamite explosion at the Hudson River mill, a stick of dynamite was apparently thrown into a coach containing some of those imported workmen, and while it did no damage to any individuals, it shattered a part of the car and looked like a somewhat serious situation. I believe there had been quite a number of assaults in that and other localities, particularly in Palmer Falls.

Mr. BIRD. Did the governor think that was sufficiently important to send in the military, or did the military come in at the request of the company?

Mr. LUNDRIGAN. Well, I guess the situation was—I am not quite clear on that, but I guess the situation was that the International Paper Co. served notice on the county authorities that they would hold them responsible for the protection of their property, and I think, although I would not want to state it as a fact, that the sheriff of the county, perhaps, requested the governor. I don't know, of course, what the governor thought.

Mr. BIRD. Now, if the International Paper Co. was shipping in men to take the place of the men striking, it would seem, would it not, that they were not willing to mediate?

Mr. LUNDRIGAN. Well, they, of course, contended there was nothing to mediate, so far as that was concerned. They contended that they had been in friendly conference with their employees, and all that sort of thing, that they were ready and willing to treat with them, but they would not recognize the union. You see, they had had, I presume, as large a variety of trade agreements—based on different construction and principle—as any corporation I have had the good fortune or misfortune to come in contact with. They seemed to have a mania for making agreements. They came to the point where they made an agreement with the pulp and sulphide workers' organization, and the firemen's organization in 1908, and refused to make an agreement with the paper makers' organization on the ground the paper makers' organization had been unreliable in their dealings with them in the past and, as they claimed, had broken their previous agreement.

Mr. BIRD. Now, in tendering your friendly offices to the labor interests, you found that they were unwilling to mediate because they wanted their unions recognized; was that the idea? They refused to mediate unless their unions were recognized?

Mr. LUNDRIGAN. I don't believe I just understand.

Mr. BIRD. In tendering your friendly offices to the labor interests; that is, the different unions who were on strike, did you find that they refused to mediate on the grounds that they wanted their unions recognized?

Mr. LUNDRIGAN. Well, they did not refuse to mediate. The facts were, as the case then stood, the International Paper Co. refused to deal with the men who were then the international officers of the labor organization. And as I started to tell you, the move that, you might say, was the next step to this 1910 strike, was the fact that there had been, as it turned out afterwards, an

amalgamation, or, rather, a sort of alliance established between the Brotherhood of Paper Makers and the Brotherhood of Pulp, Sulphide, and Mill Workers.

In other words, they had buried the hatchet, and the International Paper Co. evidently looked on that as a breach of faith on the part of the sulphide workers with whom they had an agreement which amounted to a closed-shop agreement, in words, at least. Therefore the International Paper Co. served the required 60 days' notice on the Brotherhood of Pulp, Sulphide, and Paper Makers terminating the agreement, which, I suppose, the labor unions looked on as a war measure on the part of the International Paper Co.

Mr. BIRD. Well, now, how did your board go to work to handle the situation? The mediation proceedings having failed, what was your next step?

Mr. LUNDRIGAN. My next step was to get the consent of the commissioner of labor to hold a public investigation.

Mr. BIRD. Now, did you have powers to hold a public investigation?

Mr. LUNDRIGAN. Not without the consent of the commissioner of labor.

Mr. BIRD. But, with the consent of the commissioner of labor, did you hold—could you hold an investigation whether or not either party to the controversy was willing?

Mr. LUNDRIGAN. Yes; we assumed that power. We believed we had it.

Mr. BIRD. In other words, you had compulsory powers of investigation with the consent of the commissioner of labor?

Mr. LUNDRIGAN. Yes.

Mr. BIRD. Would you tell us how you used those compulsory powers, briefly?

Mr. LUNDRIGAN. Well, we naturally had a pretty complete knowledge of the different individuals who were taking an active part in the strike in the State of New York, and we simply set a date for beginning the hearings, designating the place where the trouble started, the village of Corinth, and issued subpoenas to all of those individuals. In addition to that, we, of course, issued a notice to the different officers of the employing corporation and the several labor unions involved, and made the broad general statement that this did not exclude anyone from giving information; that we were anxious to get all the information we could.

Mr. BIRD. Could I interrupt you a minute? Had you ever used these compulsory powers of investigation before—your board?

Mr. LUNDRIGAN. No; we had threatened to several times, but we never had used them.

Mr. BIRD. This, then, was your first experience with this procedure?

Mr. LUNDRIGAN. Yes. It was the second—well, it was the third time investigations had been started by the State of New York, and, as a matter of fact, there never has been one completed. This investigation never was completed. The Hoe Printing Press Co., I think, in 1899 or 1900 and the grain scoopers' strike on the Great Lakes, or at least at the port of Buffalo, at the same time, I think, in 1900, I don't think that in either of those cases the board had ever got so far in its procedure as to have called a witness. The mere fact that an investigation was about to be had was sufficient to induce the parties to get together in some form.

Mr. BIRD. In other words, you found that a very valuable, that potential power, or a sort of concealed weapon?

Mr. LUNDRIGAN. Yes.

Mr. BIRD. Well, now, how could you get to work to gain your evidence and make this investigation? Would you mind telling us briefly, please?

Mr. LUNDRIGAN. Well, we were pretty fortunate. In the first place, we had a little system of our own which we developed for securing advance information as to strikes and lockouts. In addition to that we had in the labor department at that time a Mr. Fitch, who is now, I believe, connected with the Sage Foundation.

Mr. BIRD. Mr. John Fitch?

Mr. LUNDRIGAN. Yes. And as soon as this was determined on I asked Mr. Fitch to make a trip over the different localities in the State of New York where this company operated and secure all of the data that it was possible along certain lines. The information that he secured was of a good deal of help to us in shaping the inquiry itself. But we did quite a number of things that were forced on us to some extent. In fact, some of the attorneys called on me as chairman of the board and wanted to know what the rules of procedure were to be, etc., and I told them that, in the first place, if any attorneys were to be there it was to be distinctly understood that they were to be there as a matter of courtesy and not as a matter of right; and that so far as the

regulations under which the investigations would be conducted, that we intended to make such common-sense rules as might apply to any other particular situation that arose, and that we would even reserve the right to reverse our procedure if the occasion required, and that we would simply take the responsibility. We did not see any other way.

Well, I assumed that we were making a precedent, creating a possible rule to follow, and, as I said before, we tried to avoid a repetition of testimony as much as we could without in any way curtailing anyone's right to be heard. We insisted on the elimination of personal controversies, and, so far as was possible, matters that were entirely foreign to the dispute itself.

We claimed and exercised the right to go back as far as we saw fit with reference to any causes leading up to the dispute. We simply went on and examined the witnesses that we had summoned, and several who volunteered. We gave the company the opportunity to present evidence if it saw fit, insisted that nothing should go into the record that was not placed there under the oath of some one.

Mr. BIRD. What was the result of this investigation? Did you make a report or recommendation?

Mr. LUNDRIGAN. Well, we held a hearing in the village of Corinth and consumed I think two days and a part of another one in the city of Glens Falls. We adjourned for the purpose of making a report, which we were required by the statute to do within 10 days. I believe the same night, or the following day, a personal request was made by two—I think three—of the international officers of the labor unions that we make another effort at mediation and conciliation. It came out in the conference that Mr. Lyons, who was then commissioner of labor of the State of Maine, was in conference or negotiation with the officers of the International Paper Co. with, it was stated, a very bright prospect of effecting at least a conference between the company and its striking employees, or their representatives.

Under those circumstances, we positively declined to undertake any further mediation or conciliation, and particularly in view of the fact that we had repeatedly stated to all of the parties to the controversy that we had exhausted all of our resources and powers of mediation or conciliation, before we started the investigation. But, however, I felt the responsibility was too great to not make every effort possible. I telegraphed Mr. Lyons stating what I had understood, and asking him to reply promptly, which he did. In a very short time I received a reply back saying I had been misinformed as to his efforts in the direction referred to. Thereupon I agreed to undertake to arrange an interview between the responsible officers of the company and the officers of the employees, and found the company willing to meet with anyone other than those with whom they had the previous controversy. We finally arranged to meet some of the other international officers in a preliminary conference, which resulted in a general conference of the striking employees. There was 36 delegates, I think, and practically every plant was represented. This conference continued here for five or six days, and I think exactly 10 days from the day the investigation was started, the day we began taking testimony, a formal agreement was signed settling the disputes in all of the plants of the companies in which all unions were recognized, and have since been doing business with the company.

Mr. BIRD. When you refer to the commissioner of Maine, there was another difficulty, of this being an interstate difficulty; if any other labor people had interfered your work would have been useless?

Mr. LUNDRIGAN. When it gets down to a question of fair treatment and official courtesy, you couldn't very well interfere with some other State, where some other State had an interest that you were not familiar with.

Mr. BIRD. In regard to the military, did they withdraw as soon as you started this compulsory investigation, if you remember?

Chairman WALSH. What is that?

Mr. BIRD. The military—did they withdraw when this compulsory investigation was started?

Mr. LUNDRIGAN. I think not. I want to say that in the information we had been able to gather from one source or another we had quite a number of criticisms and complaints of the military itself, and we simply turned copies of all that correspondence over to the commanding officer and informed him of this hearing, and simply told him it was for his information and such use as he saw fit to make of it. We did not hear anything more of it.

Mr. BIRD. If it would have been possible for your board to have started a compulsory investigation immediately after the dynamiting, do you think that would have prevented the military from coming in if you could have set the wheels to going?

Mr. LUNDRIGAN. I couldn't say as to that.

Mr. BIRD. Do I understand, as the result of this compulsory investigation, the two parties to the controversy finally came together?

Mr. LUNDRIGAN. Well, it would be perhaps a little egotistical to say that that was true, but I doubt very much if any one would contradict that that was the direct cause of bringing about a settlement of the dispute.

Mr. BIRD. However, it really did start things going, did it not?

Mr. LUNDRIGAN. Oh, yes; it was the direct result—this conference was the direct result of that investigation, no doubt about that.

Mr. BIRD. Now what was the result of the experiments of the International Paper Co.? Since the investigation have the labor troubles been any more or have they disappeared?

Mr. LUNDRIGAN. Well, I will tell you: When this amicable settlement was reached, we stated to all of the parties before they separated that notwithstanding the fact that there was ten hundred and odd pages of testimony that we took which disclosed some, what I would call, very deplorable conditions on both sides, that no good could come from making an exhaustive or detailed report, and it was agreed that we would simply make a general report touching on the general phases, conditions, and history of the trouble itself. Incidentally we incorporated in that report a paragraph in which we stated that we believed that it was just as essential that large employers of labor, especially where their plants were isolated from the general management itself—that it was just as necessary that they have some responsible officer in charge of their industrial affairs, as it was that they should have some responsible officer in charge of the buying of their raw material or the selling of their products; or words to that effect. I don't remember just the language of it. And the International Paper Co. sort of took me up at that proposition. In other words, they wrote me a letter in which they quoted that paragraph and wanted to know how it could be worked out; and, to make a long story short, they finally wound up a few weeks later by putting it up to me to work it out. So I have been engaged in that effort for them since October, 1910, and this strike ended on the 14th of May. Now all our contentions—and we have them and always will have—are thoroughly and fully investigated these days.

We start on the theory that no matter how ridiculous an assertion, a claim, or contention made on the part of our employees individually or collectively, may appear that it may be wholly, and it probably is partially, true and whether it is or not that it is just as much to our interest to show that it is true as it is to show that it is not true. Because if it is true, there is something wrong with our management. If it is not true, it will be a discouragement to our employees to be presenting ridiculous complaints. We did have a great many of them that looked somewhat ridiculous to me some few years ago; but we have very few now, and none of them look very ridiculous.

Mr. BIRD. Now, as the result of that experience with mediation and arbitration and investigation, I would like to ask you your opinion as to compulsory investigation. What would you consider an ideal way of going about on investigation? Do I understand that first you would make a preliminary survey and get a line on the proper witnesses?

Mr. LUNDRIGAN. Well, I think with a properly equipped commissioner or board of arbitration in each State that you will not need any preliminary survey at all, because you will be in touch with the situation before the strike occurs.

Mr. BIRD. Would you be kind enough to outline what you think would be a properly equipped board?

Mr. LUNDRIGAN. I would call a properly equipped board one where, in the first place, you had absolute power of compulsory investigation, and where you had—

Mr. BIRD (interrupting). What would those powers include, please? Subpoenaing, I suppose?

Mr. LUNDRIGAN. Right to subpoena witnesses and—well, practically a copy of the New York State law on that subject would be good enough, so far as that part of it is concerned. I am very strongly of the opinion that the individual or set of individuals, in case you had a commission or a board, should not be subject to the approval of anyone, as to whether or not they should have such an investigation. I believe, in the first place, the men who are intrusted with

that power and authority should devote all of their time to keeping in touch with the industrial situation in the territory over which they had jurisdiction; and in doing that that they should be paid something like reasonable compensation for it.

Mr. BIRD. Now, what would you call reasonable compensation for it?

Mr. LUNDRIGAN. Well, I should say that the men who act as a board of mediation and arbitration in the State of New York should receive as high salary as any appointive officer in the State of New York.

Mr. BIRD. And, I understand, subject to the governor only?

Mr. LUNDRIGAN. Yes, sir.

Chairman WALSH. What is that highest salary?

Mr. LUNDRIGAN. Fifteen thousand dollars.

Mr. BIRD. Now, you are in favor of a board receiving a salary of \$45,000?

Mr. LUNDRIGAN. Well, I have no particular pride of opinion as to whether it should be a board of three or a single commissioner. I believe a single commissioner with a proper field organization could promote in this or in any other State in a very few years a situation where you would practically have, so far as things entirely local are concerned, what would amount to a local arbitration board.

Mr. BIRD. What do you mean by field organization?

Mr. LUNDRIGAN. Why, I mean an office staff. Why, when I first took charge or assumed charge—the statute did not give me charge of the board of mediation or arbitration for the first four years I was in the department. But the commissioner of labor at that time—there was a commissioner of labor statistics and that was his particular position to which I was originally appointed. The other deputy commissioner had been the State factory inspector and he was very much interested in that work, and the work was so enormous in volume that it would be impossible for him to give any of his time to this; but the statute itself provided that the commissioner of labor would be in charge of the work of mediation and arbitration and the second deputy, which at that time was myself, was supposed to have charge of the bureau of labor statistics. Well, as a matter of fact, they just simply said to me, "Now, you will have to look after this mediation and arbitration proposition." Why, we did not have a clerk; not a clerk. I used to arrange with the man who generally opened the mail—or rather who received the mail and answered the telephone, and so forth—I used to arrange with him to open the mail, if any came, and I let him know as nearly as I could where I would be, and I told him to let me know if anything important occurred. That was the way we were doing business when we started in. And I will say, in passing, that I don't know that you can—in fact I know you can not heap any particular criticism on the law or the system at that time. It was simply the lack of general interest on the subject; because just previous to that they had a board of three commissioners which was a separate institution, and one of them was the editor of a newspaper and the other one—well, I guess two editors of newspapers and one labor man. Well, I guess the labor man devoted a good part of his time to the business of the board; and the other two men I guess devoted all the time they could without neglecting their own business too much. That is the reason I make the point that if we are going to have anybody engaged in doing this, what I consider very important and responsible business, you have got to have some one who has the individual incentive of compensation—we might just as well call things by their right name—to devote all of his time and energy to it; so that he is not waiting to make a preliminary survey after a strike has occurred, but so that he is so closely in touch with the industrial pulse of the State that he knows almost to a certainty where there is likely to be a strike. I think we pretty nearly knew it when I left the department. I take it we pretty nearly knew everywhere there was likely to be a strike before it occurred; and I think perhaps the department does now. I am entirely out of touch with it myself. I have not even had an opportunity to have a personal talk with the gentlemen doing that work.

Mr. BIRD. They will have an opportunity shortly to describe the way they do their work now. Now, would you take up this independent commissioner of labor system, or do you think it should be closely connected up with the labor department?

Mr. LUNDRIGAN. Well, I believe the labor department, and especially as it has been officered for some years, is in thorough accord and sympathy with this subject; but during my experience there we were simply handicapped by being underpaid and because the general fund from which to draw was so

meager that there was nothing in a financial way to do this business with. The way I would have the arbitration officers coupled with a department of labor, I would have them just as closely coupled as they possibly could be coupled by statute; something along the lines that the compensation commission is at present. Now, for instance, the commissioner of labor is ex officio member of the compensation commission, and his field force is available for all the research or study that the compensation commission deem necessary to make through that avenue or in that direction. I would by no means separate them, because it would be simply a duplication of statistical and other work, which is entirely uncalled for and might be confusing. I would go further and say that if it were constitutional—which I very much doubt—I would like to see the whole thing coupled with the Federal Government, because, except in the building trades and in local transportation, a very large percentage of our important disputes are interstate so far as the operation being carried on in more than one State or the principal marketing being done in more than one State or the principal purchasing of its raw material.

Mr. BIRD. Granted, Mr. Lundrigan, that it was possible for the Federal Government to enter into State controversies where big business was involved, what kind of a Federal organization would you think would be adequate to handle such a proposition, and would you have one independent mediator or would you have a commission of mediation and investigation or arbitration, or how would you get at it?

Mr. LUNDRIGAN. Well, I said some time ago—I believe, as with the State officer, I believe the Federal officer who has charge of this general subject certainly should not be tied down or handicapped by any other duties or responsibilities except something incidental to this. Now, we all know that it is almost a joke when the Federal Government starts out to investigate general conditions as to the result of strikes. They come along about five years after the difficulty is over with, and of course the employer says he did not have any trouble at all; just a little flurry, and a few of the men quit, and he filled their places immediately, or he says, "Why, we made a trade-union agreement; that is all there is to it." The employee, if the strikers lost, and whether or not the particular men who happened to be secretaries of the different locals or even international men, they die or pass into oblivion frequently.

So the information is—I won't say valueless, but very misleading. The public gets it about seven years old, when it is printed, and—well, of course I may have a prejudice against statistics, because that was the first public job I ever was appointed to and I never worked at it, but I have taken some interest in industrial affairs one way and another during a good part of my life, and I am frank to say that I can not understand the statistics that the Government and the States get up. I can not get any reason out of most of them—perhaps some people can; perhaps they are valuable for students of social economy—but I make the positive statement, and you can verify it very easily, that not 1 per cent of the men actually engaged in industry, workmen and employers, read them; and I do not believe that 50 per cent of the 1 per cent understand them when they do read them.

Mr. BIRD. You referred a short time ago, Mr. Lundrigan, to the fact that you would need a staff that would constantly be collecting facts for you in regard to controversies and pending controversies—a staff to collect those details and that material. Would you not call those statistics?

Mr. LUNDRIGAN. Well, those would be available through our Bureau of Statistics of the State of New York. I think, perhaps, the State of New York—perhaps I may be a little bit prejudiced, too—but I think, perhaps, they have the most comprehensive and capable statistical information on this subject of any State that I know of, because it is fresh.

Mr. BIRD. You consider that valuable?

Mr. LUNDRIGAN. Yes, sir.

Mr. BIRD. Then you would not condemn statistics if properly handled?

Mr. LUNDRIGAN. I would condemn them only from the point of getting laboring people—anything like a reasonable per cent of them—to understand them.

Mr. BIRD. If those statistics were put in such way so that people could understand and get them on time they would be valuable.

Mr. LUNDRIGAN. Oh, no doubt, and they would no doubt be valuable to a man naturally, such as would be upon a board of arbitration of a particular State or the commissioner of arbitration of the United States, if there were one. They would naturally be men who could study those and could understand them; but those things actually 6 or 7 years old are absolutely of no account.

Mr. BIRD. Then if the Federal Government should collect statistics promptly, get them out promptly, and get them out in a way that the ordinary man could comprehend them, you would favor the handling of statistics?

Mr. LUNDRIGAN. Yes, sir.

Mr. BIRD. You would favor the same Federal body of mediation having such an office connected with it, or working through the bureau of labor statistics to do that work?

Mr. LUNDRIGAN. Yes, sir; if it was done promptly.

Mr. BIRD. Did you say whether or not you would favor a single man or a body of men to act with this mediation body?

Mr. LUNDRIGAN. My idea would be this, and the same thing would apply to a State generally. You take this great State of New York, or the Federal Government, and with the variety of enterprises, variety of occupations, large number of technical or detail questions that might come up in connection with one controversy that would not occur at all in connection with another; for instance, we will say—with an investigation you could do that with your own force, but where you might possibly resort to an arbitration, that this single body could designate an arbitration board, but he naturally would know individuals who are competent and familiar with the particular questions at issue; but I believe that we are abusing this term arbitration a great deal; I believe that the average arbitration, without any investigation, is very apt to work just as much harm as it does good. I believe that, in justice to the arbitration board or commission, if one is created, that, instead of asking them to go out and get all of the information or to jump at a conclusion, any conclusion they see fit, that there should be a thorough investigation of any dispute that is important enough to be arbitrated before it is arbitrated.

And my best judgment is that, if it were the well-established policy of this or any other State and of this Government, and if everybody knew that just so sure as an important strike would interfere with the public convenience or safety, or even pleasure, if they knew that the moment that was interrupted, that on account of a strike or a lockout, that a thorough, impartial investigation would ensue, without any reference to whether anyone wanted it or not, that it was simply the obligation of some State or Government officer to institute it forthwith, I believe you would have very few important labor disputes, and where you did they would not be very troublesome; there would not be much difficulty in determining who was at fault.

Mr. BIRD. Do you think it would be possible for this Federal body to cooperate with the different State bodies?

Mr. LUNDRIGAN. I became so much interested so that, as a result of this experience we had in connection with this Great Lakes dispute, where there were six boards of arbitration represented, we all felt more or less discouraged over the outlook, but we decided that—well I gave a little talk on that down at the convention at Washington, which the *Annals*¹ was kind enough to want to publish, and I gave it to them—we decided that it was going to be practically necessary that there be a closer cooperation between the different State governments. And one of the things we decided we would do would be to undertake to form amongst ourselves a national or an international association of the men who were elected or appointed to do that work in the different States and the Dominion of Canada. Our main object was to secure uniformity and cooperation.

Now, I make the assertion that to-day no State or Federal Government knows, or ever will know, anywhere near reliable statistics with reference to, for instance, the telegraphers' strike, or with reference to the International Paper Co. strike in 1910, because statistics were collected in some States in one way and at one time, and in other States in another way and at another time, and some of the States perhaps were not collected at all. We got so far that we got an interest in that subject to the extent that we held a convention a year later, and I think we had 16 States and the Dominion of Canada represented. I left the department about that time.

I believe that is one of the very important things that should be done.

Chairman WALSH. Is there a record of that effort, giving the names of the States and Territories up to that time?

Mr. LUNDRIGAN. What?

Chairman WALSH. Is there a record of that effort, giving the names of the States and Territories up to that time?

¹Annals of the American Academy, Sept., 1910.

Mr. LUNDRIGAN. Yes.

Chairman WALSH. Could you give us a reference to it by any memorandum that you have there?

Mr. LUNDRIGAN. I have a copy of it. I presume I could find the particular report. It is printed in one of the bulletins or reports.

Chairman WALSH. Would you be kind enough to give us a reference to it so we could get at it, or furnish it to the commission?

Mr. LUNDRIGAN. Yes, sir; I would be very glad to do that.

Mr. BIRD. That is all I would like to ask.

Chairman WALSH. Would you like to ask some questions, Mr. Garretson?

Commissioner GARRETSON. Yes, sir.

Chairman WALSH. Commissioner Garretson would like to ask you some questions.

Commissioner GARRETSON. Mr. Lundrigan, I shall assume that you are fairly familiar with the old Erdman Act?

Mr. LUNDRIGAN. I am not so familiar, but I have read it several times.

Commissioner GARRETSON. Are you familiar with the Newlands Act, its successor?

Mr. LUNDRIGAN. No; except as I have read it in the newspapers.

Commissioner GARRETSON. Not with its practical working?

Mr. LUNDRIGAN. No, sir.

Commissioner GARRETSON. Are you familiar with the working of the Canadian compulsory investigation acts?

Mr. LUNDRIGAN. I am not.

Commissioner GARRETSON. In reference to your statement that you believe in a compulsory investigation, the reason I desired to know if you are familiar with these acts, was to know whether or not you knew what the comparative results of action under those processes brings about?

Mr. LUNDRIGAN. I was speaking of State action, Mr. Commissioner.

Commissioner GARRETSON. Well, in your opinion, has it grown to a state where, on account of the fact that the marketing of the product of any great industry has become interstate instead of intrastate, and on account of the fact that the raw material is drawn largely from interstate sources; and the large combinations of labor have their plants interstate in character that, year by year, this whole question takes on a greater interstate aspect than heretofore, and in consequence that the real lessons for the methods to be followed, must be drawn from national plans instead of from State plans, isn't that true?

Mr. LUNDRIGAN. I should say so; yes, sir.

Commissioner GARRETSON. That being the case, it becomes almost a necessity, does it not, to draw conclusions from national methods in preference to State methods as to furnishing a satisfactory solution of the large problems in mediation or arbitration?

Mr. LUNDRIGAN. Yes.

Commissioner GARRETSON. Have you ever given any thought to the fact that the Canadian Dominion compulsory-investigation acts make it virtually impossible for large bodies of men or large or different owners at the same time to get any action on a matter that they desire attention to?

Mr. LUNDRIGAN. I was not aware of that.

Commissioner GARRETSON. Did you ever follow the record—you were formerly a railway conductor—did you follow the record as established in 1910 as between the time consumed in the settlement of the wage contest under the Dominion act for three roads, and the comparison of time that it took in the United States under the forms of the Newlands Act—not the Newlands Act, then the Erdman Act, in settling 75 properties, and the comparative amount of time used on the 75 properties and on the 3?

Mr. LUNDRIGAN. I don't know that I paid any particular attention to it.

Commissioner GARRETSON. Would you favor a system where it absolutely required more time to get action, by one-third, of 3 cases than on 75?

Mr. LUNDRIGAN. The system that I would favor, Mr. Commissioner, is that the public officer—I am talking all the time from the standpoint of the public officer—

Commissioner GARRETSON. Yes.

Mr. LUNDRIGAN. That the public officer charged with the enforcement or conduct of the laws of conciliation, mediation, and arbitration would have no choice; that he would be the man who would be compelled to investigate. I firmly believe that that is the correct principle.

Commissioner GARRETSON. The Canadian act does not make it obligatory, does it, upon the officer to act on his own volition?

Mr. LUNDRIGAN. I think not.

Commissioner GARRETSON. He can act upon the demand of either party, or of any municipality affected by what might be the result of the threatened strike?

Mr. LUNDRIGAN. Yes; that I think is——

Commissioner GARRETSON (interrupting). And he can refuse to investigate, also, can he not?

Mr. LUNDRIGAN. I believe so; yes.

Commissioner GARRETSON. Do you believe from your experience that a tribunal, national in its character, created for the purpose of mediation or arbitration, can be utterly independent of any other channel of government or any other machinery of government, precisely as is the case at the present time with the Newlands Act, the commission thereunder, or the Interstate Commerce Commission—a separate function of government, responsible only to the head of the Government, the President?

Mr. LUNDRIGAN. Yes, sir.

Commissioner GARRETSON. Do you believe that a body in control of—not necessarily in control, but in an advisory character, composed equally of commercial and manufacturing interests; in other words, commerce and representatives of employees, as given expression through the ordinary form of the unions, that an advisory body of that kind acting in conjunction with a bureau or by whatever name it might be called, of conciliation and mediation, could exercise a moral influence that would be of value in compelling by moral forces only both employer and employee to submit themselves to the good offices of an agency of the character named?

Mr. LUNDRIGAN. Unquestionably; I absolutely believe in that. I believe that in fact, that is what I referred to in my statement as creating local conciliation or arbitration agencies.

Commissioner GARRETSON. I don't know; maybe I misunderstood you, Mr. Lundrigan; I rather gathered from one statement that you favored the providing of arbitrators by appointment by some tribunal, Government or State, as the case might be. Did I understand you correctly?

Mr. LUNDRIGAN. I meant mediators or conciliators.

Commissioner GARRETSON. The words are so often confused?

Mr. LUNDRIGAN. Yes.

Commissioner GARRETSON. But bear in mind that I draw the line sharply, because I have been mediated oftener than any other man on earth.

Mr. LUNDRIGAN. Yes.

Commissioner GARRETSON. But do you believe, either as a labor man, as a State official, or as a representative of a corporation, that the appointment of arbitrators, not mediators, by any tribunal, Government, or otherwise, that did not permit the men to have a voice in the choice of those arbitrators in the ordinary way, would ever be received under any terms by laboring men?

Mr. LUNDRIGAN. Oh, no. If I used the word "arbitrators" in my original statement I simply misspoke myself.

Commissioner GARRETSON. Well, I think that you used the word arbitrator, and knowing some of your opinions, I was rather surprised.

Mr. LUNDRIGAN. Well, if I did, I wish it would be changed or stricken out.

Commissioner GARRETSON. One other question that I simply want to ask you from your experience in the Lake Carriers' Association strike.

We have some testimony from officers of that organization or its successor, and I simply want, if you will offer an opinion, an expression of opinion, do you consider the Lake Carriers' Association, in its relation with its employees, a purely philanthropic association?

Mr. LUNDRIGAN. Well, I did not at that time, Mr. Commissioner.

Commissioner GARRETSON. Have you any reason to believe that their methods have changed enough to put them in that class?

Mr. LUNDRIGAN. I am not familiar——

Commissioner GARRETSON (interrupting). It has not been brought to your attention if they have?

Mr. LUNDRIGAN. No.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Any more questions.

Commissioner LENNON. I would like to ask one question.

Chairman WALSH. Yes; Commissioner Lennon would like to ask a question.

Commissioner LENNON. In your performance of your duties as a mediator,

where did you find the greatest difficulty to bring about a conference, on the side of the workmen or on the side of the employers?

Mr. LUNDRIGAN. Why, my experience is a good deal like that of a consulting physician. Neither side wanted to see you until he was licked, and then the fellow that was licked always wanted the State to come in and settle the thing.

Commissioner LENNON. Will you tell us whether or not there have been any serious difficulties in the paper trade since you have been in your present position?

Mr. LUNDRIGAN. No; we haven't had any trouble whatever since then.

Commissioner LENNON. Well, now, Mr. Lundrigan, I went all through that fact of that paper makers' contest and know all about it. Will you tell us as to your duties now in your position which you are now holding, so we may see what comes out of it. Tell us what you have to do?

Mr. LUNDRIGAN. Well, I practically—I report to the vice president in charge of manufacturing, and I believe I might state that I have practically outlined and put into effect the present industrial policy of the company.

Commissioner LENNON. Well, if complaints arise, where do you come in?

Mr. LUNDRIGAN. Well, we have a pretty complete system; in the first place, we try to maintain uniform conditions in all of our plants. In each plant the local superintendent is absolutely in charge. We are working under a mutual bargain or trade agreement with some seven or eight labor organizations. It is a joint agreement, so that there is no conflict as to understanding between the different organizations. And a paragraph of that agreement is devoted to the system of handling complaints and grievances. It reads, in substance, like this: "That whenever a local complaint or grievance occurs, it is to be presented to the local superintendent in writing," which we assume through the usual methods that labor unions have for approving of those acts. "And he shall render a decision within 10 days, stating what disposition he has made of the case, or whether he has referred it to the general management."

The local superintendent has absolute authority to decide any local complaint or grievance that don't conflict with our standard rules and his instructions. If an appeal is taken to the general management the general officers of the labor union are also notified, and that is about where I come in, after the appeal from the local superintendent. In other words, I represent the general offices of the International Paper Co. in that particular phase of the business. If we are unable to reach an agreement, arbitration is provided for, but we never yet have had to go to an arbitration.

Commissioner LENNON. And you are the intermediary after the first decision?

Mr. LUNDRIGAN. Not intermediary at all. I represent the company absolutely. It is just simply a case; it is an additional department of the company's manufacturing business; that is all. If we were to resort to arbitration of anything of that sort, some one else would be brought in. I simply would represent the company.

Chairman WALSH. That is all, thank you, Mr. Lundrigan.

Mr. Richards, could you make it convenient to come on the witness stand at 2 o'clock sharp?

Mr. RICHARDS. Yes.

Chairman WALSH. We have another witness here, and I would like to go through with you without interruption. That would be perfectly convenient, will it? Mr. Lynch is absent and can not be here until to-morrow.

Mr. RICHARDS. Yes.

Chairman WALSH. Will you call Mr. Howe?

TESTIMONY OF MR. FREDERIC C. HOWE.

Chairman WALSH. What is your name, please?

Mr. HOWE. Frederic C. Howe.

Chairman WALSH. And what is your business or profession?

Mr. HOWE. At the present time I am director of the People's Institute.

Chairman WALSH. Where do you reside?

Mr. HOWE. New York City.

Chairman WALSH. How long have you resided in New York City?

Mr. HOWE. Four years.

Chairman WALSH. Prior to that time where did you reside, say, for the past 10 years?

Mr. HOWE. Cleveland, Ohio.

Chairman WALSH. And what was your occupation prior to becoming connected with the People's Institute?

Mr. HOWE. Immediately prior to that I was a professor in politics at the University of Wisconsin. Then prior to that I was a member of the tax commission of the city of Cleveland. Prior to that I was in the State Senate of Ohio for three years. Prior to that I was in the city council and chairman of the finance commission of Cleveland, and during that time I was practicing law in the city of Cleveland.

Chairman WALSH. How long did you practice law, Mr. Howe?

Mr. HOWE. Fifteen years.

Chairman WALSH. Have you in these various positions which you have held, been brought in contact with the industrial problem as a whole?

Mr. HOWE. Yes; in a great variety of ways. I was president of a manufacturing concern, secretary of another manufacturing concern that did a very large business. For 15 years I was secretary and treasurer of another large industry. So that I had actual contact with labor conditions in Cleveland, which is a highly organized industrial center. On several occasions I have been abroad, making a study of social, economic, and industrial questions.

Chairman WALSH. Have you or have you not written upon governmental and industrial subjects?

Mr. HOWE. Yes; I have written several books.

Chairman WALSH. What are they, please?

Mr. HOWE. The first book was on Taxation and Taxes in the United States; the second was on The City, the Hope of Democracy; the third was The British City; the fourth was Privilege and Democracy in the United States; the next was European Cities at Work; and another, rather obscure book, was The Confessions of a Monopolist, which was written from my own experience as a practitioner.

Chairman WALSH. As you are aware, the law which creates this commission, requires that we shall attempt to seek and discover the underlying cause of dissatisfaction in the industrial situation, and also the effect of industrial conditions on public welfare and the rights and powers of the communities to deal therewith.

Now, directing your attention to this particular provision of the law, Mr. Howe, I would like to ask you, if you can state in a broad way, what you deem to be the significant or large cause for an industrial unrest that exists? If so, please state it, your opinion, from your observation and your work?

Mr. HOWE. Mr. Chairman, as I have followed the testimony given before the commission, it would seem to me to take two general lines: One, an attempt to deal with the situation as it exists, as though that were a permanent condition, subject to such amelioration and improvement as is possible from amelioratory legislation. It was an acceptance of the capitalistic system and the division of society into employers and employees as a permanent and necessary and remediable condition. That seemed to be one assumption and the line of testimony of certain groups.

And the other line of testimony and assumption was that this system should be abolished and in its place a system of socialism should be introduced, and so far as I know those are the two general lines of assumption which have prevailed in the testimony before the commission. At any rate, I will assume that that is true, because I am quite clear that there is another alternative which tens of thousands of people, probably hundreds of thousands of people in the United States and in other countries, accept as just as complete a social program as socialism itself, but which avoids all of the possible evils of a socialistic society which is highly organized and regimented and ruled from above, for both of those proposals involve a large degree of action by the Government.

Socialism, of course, involves the ownership by the State and the control by the State of the means of production; and the other system of amelioratory legislation means that we will have a lot of things like labor exchanges, like minimum wage, like shorter hours of labor, to improve the condition which everybody accepts is bad, but which in its essence will remain unchanged.

Now, I don't believe in either of those philosophies, but I do believe in the philosophy which, for 25 years, has gone under the name of the single tax in this country, or the taxation of land values in the British colonies. And that philosophy is an industrial philosophy. It is a social philosophy, just as much as it is a financial philosophy. By many people it has been assumed that that

was merely a means of getting a revenue under a more just system than that which now prevails; but to those who belong to the school of which Henry George was, of course, the father, it is a complete social philosophy based on industrial liberty, industrial freedom, rather than industrial socialism. And it appeals—those who believe in that philosophy feel that under it all kinds of remedial legislation mentioned would not be necessary; that the wageworkers' position would be so completely changed in the school of contest that he would be well able to take care of himself, for he would no longer be a dependent; he would no longer have only one alternative. He would be a freeman, a free-man industrially. And the trouble with the labor problem, according to the single taxer, is that there are always, and of necessity must be always, more men hunting jobs than there are jobs to go around, and that low wages are the result of 10 men chasing 9 jobs; in which the man out of employment always keeps down the wages of the man in employment. And it is the knowledge on the part of the employing classes that there is a big residuum of men that can always be relied on, can always be called in, that enables them to keep wages at the competitive point. Or, to state it in another way, labor is always competing with itself, and its competition with itself is the thing that keeps down wages.

Now, we believe that the taxation of land values would completely reverse that position, and that then capital would compete for labor; employers would be chasing men; and that that reversal of the situation would tend to a constant increase in wages until the wage earner secured the full product of his toil.

Twenty-five years ago, when Progress and Poverty first appeared, the college professors and students of the subject laughed at it, and protested against it, and assailed it as a wild theory. Within the last five years men like Prof. Adolph Wagner, in the University of Berlin, the most eminent financier in that country, has accepted the underlying principles of the single tax, and has advocated it in a modified way throughout Prussia. There has been an imperial law passed, which accepts its essentials. The Lloyd George budget in 1909, the discussion of it, was opened up. Lloyd George himself said: "This is not a finance measure; this is the beginning of a war on poverty by which we will break up the large estates in England and reverse the industrial situation and create jobs."

In western Canada for rather different reasons, but for the same philosophy, the single tax has been applied in part as it has in Australia; and in Australia and western Canada, so far as I know, there is a substantial unanimity of approval of this change in the taxing system from all classes, unless it be the land speculators.

Definitely what that proposal is is very simple. It is the simplest of all proposals, and it is the simplest of all social philosophies. Its very simplicity makes people incredulous about its efficiency, but most big social remedies are simple, and if they were not simple they would not be good for much; they would not be effective. And the single tax is simple.

In a State like New York it could be inaugurated in part by a law of about an inch, three or four lines, which would provide "All taxes on houses, improvements of all kinds, personal property, shall be abolished." And with that law taxes for local purposes and for State purposes would settle down to the land. For national purposes the single taxers insist that all Federal taxes on consumption, on internal revenue, on the customs and tariffs should also be abolished, for they carry that philosophy and freedom to its natural consequences, and say a man should have a right to trade where he will. They are free traders, and their two axioms are free trade and free land. Cobden was both; he was a great free trader and a great free lander. The great philosophers prior to the French Revolution, Torguet and De Nemours—the men who laid the foundation for the French Revolution—believed in this system in part; and Adam Smith also laid some foundations for it.

The single taxer would have all taxes off every other conceivable thing and put on the land. Not the land either, but on land values, for they differentiate between land and land values. A very important distinction. And they point to the city of New York, in which the land values have increased from what the Dutch paid for it, \$24, to \$4,500,000,000, just the value of the land around this little spot that you can hardly find on a map is \$4,500,000,000. It is very much more than that if you take all the land into consideration.

That is the biggest individual trust in the world. It is three times as big as the total capitalization of the United States Steel Corporation, against

which there is so much legislation; but here in New York is a valuation three times, but which has come from the growth of population, the concentration of industry; the fact that this is the clearing house of the world has made the land values of this little spot worth the colossal sum, worth four times the total value of all railroads in this State.

If the people moved away there would not be any value here. And to such an extent is it recognized as social value that we know now that every baby that is born adds \$800 to the value of the land. Every emigrant who comes to this port adds \$800 to the value of the land. It is reflected in the census returns, just as people come here land values shoot up. And single taxers base their philosophy on the essential justice of society, getting what belongs to society; on society assuming for its own revenue that which society produces; on first taking the social values before we take individual labor values; on land values or social values. You will find that in the German reports, you will find it in the Imperial discussion in the Reichstag, that practically everybody treated the unearned increment as a social value properly to be taxed.

We found in Cleveland on the tax board that whereas the population had increased 190,000 in 10 years the land values had increased \$190,000,000, or almost identical with that in New York, almost \$1,000 per capita.

Now, what is true of land values in this city is also true all over the country. The United States Steel Corporation is capitalized at \$1,500,000,000, and Mr. Charles Schwab, when he was on the stand at Washington in the Industrial Commission, I think it was 1903 or 1893, said that the capitalized value of their iron-ore lands in their capitalization was \$800,000,000. That was just a few years after that great stretch of land in northern Michigan and Minnesota was not worth more than \$1 an acre. It was a scrub-room space; it was nature's deposit that took hundreds of millions of years to make the Bessemer ores there, and yet men were permitted to own it, and because it had a practical monopoly of the iron ore of the United States it put the capitalization on it that it saw fit, and they said men will have to use iron ore for generations and generations, and we will capitalize the use of ore for 50 years at \$800,000,000. They capitalized the coke fields of Connellsville in the same way.

Other resources like oil and gold and silver, the coal fields of Colorado, the anthracite coal fields of Pennsylvania, have all been capitalized in the same way at any figure that the owner saw fit to put upon them.

It has been computed that out of the total wealth valuation in the United States of \$125,000,000,000, 60 per cent of it is not wealth at all, but land values, socially created land values. And the single taxers would assert that that belongs to all of us, and that it should be used by all of us. It should be done by taxation, which is the easy way to approach it, and the natural way to approach it, and then use this colossal revenue for social purposes.

As an indication of the value of ground rent, the Osage Indians in the Indian Territory, according to the report of the Secretary of the Interior, that tribe of several thousand get an income of \$600 apiece, or about \$3,000 per family, merely on the royalties of their lands. The Government adopts a qualified single tax and levies a royalty on that land, as it might have done for all the lands in the United States, and puts all those Indians in a condition of affluence by keeping the products of nature for all the people.

We made that partially impossible by the system of land laws—we have made that particular policy impossible by the land laws, but we have not made it impossible to do the same thing by taxation.

Now, we are not very much interested here in that philosophy as a tax philosophy, but the adequacy of it as a fiscal measure is represented by the fact that the ground rents in New York alone are \$250,000,000 a year, and that is a burden on labor and, reduced down to a family basis, it means that every family of five in Greater New York has to pay every year about \$200 to \$250 just in ground rent, and that is a cause of poverty. They pay rent on the one hand, ground rent, and taxes on the other; and if we take that burden off the backs of labor all over the United States, running into the billions of dollars, in taxes alone, collected from labor and put it on ground rent you would relieve industry and labor and business, merchants of all classes of all that tax on industry and labor. And we would start out with a tremendous gain from that source alone.

But the single taxers are not very much interested in the money that would be gotten. That is so secondary that it is a different question altogether from the social philosophy of the single tax.

The mere money that would be gotten, the hundreds of millions of dollars that would come from the land-value taxation, from the taxation of ground rent, is, to my mind, inconsequential in comparison with the great gains that would come to our life, to our society, to industry, and that is what I will try to direct my testimony to now, and I want to state just what would happen if we abolish all taxes on houses and improvements and things which are created by labor and wealth of that kind and putting that tax on land values. And I will take New York City here as a concrete example.

Now, there are three classes in the division of wealth. There is the landlord class, the capitalist, and the laborer; and I am going to discuss that philosophy from the point of view of each. First, what would happen by the taxing of land values to the landowner.

Well, he would have to pay much more taxes, that is quite obvious, for the tax on land values, like the tax on incomes, is the one tax which can not be shifted; it has to be paid by the landlord. John Stuart Mill admits that. All of the economists admit that the tax on land stays where it is put and can not be put upon the tenant. So, first, there will be a very great shifting of the burden of taxation from business and wealth and the products of labor to the landlord. Second, the tax on land would check speculation. And land speculation is one of the greatest industrial curses in the country. Here in the city of New York there are at the present time, according to the figures as to taxes and assessments, where we think all the land is used, there are 200,000 pieces and parcels of land with nothing on them. They are bare and naked. Those, for the large part, are over in Queens and Kings Boroughs. That land a few years ago was worth two or three hundred dollars an acre. To-day it is held from \$20,000 down to \$5,000 an acre. Practically nothing has been done to increase the value of that land, except that babies have been born and people and transit lines have been built. Now, those 200,000 pieces of land would house 2,000,000 people; and I can not admit with some people that people are housed when they are living two, three, and four in a two-roomed tenement. That is not housing and homing people; that is herding people worse than cattle. And there is room in this great city to house half of our population in decent homes if they merely use the land, and the only way you can bring that land into use is to make it impossible for men to hold it idle. It seems to me to be obvious that nature or society, a properly ordered society, should not permit men to hold land out of use; should not permit it—God's first gift to everybody—and allow anyone to put a fence around it and say nobody shall use it, for all our wealth comes from that, our food, our clothes; and to permit the absolute ownership of land and to say it shall not be used, is like saying to mankind you shall not live. That statement, in effect, means that the people in New York must live in tenements, as they do, because the land is being held out of use, which should be used. If we tax that land and increase the burden on the speculators and those who hold it, one of two things must happen, and both good. Either the owner must use it or he must sell it to some one who will use it. I think Lloyd George says in one of his budgets: "This budget means building a fire behind land speculators," and that is what the land tax does, it builds a fire behind the men who, like dogs in mangers, sit on the land and do not use it.

Now, if men use it, or sell it to some one who can use it, it must be used either for building houses or for gardening, and probably for a long time to come for building houses. And that brings the discussion down to the wage-worker. What is going to happen to him? Why, he is going to be given jobs and going to begin to reverse that situation which prevails at the present time by which there are more men than jobs, by creating more jobs than men; and if we tax land so that each individual piece and parcel begins to call for men, to advertise for men, to call aloud for men, there would be work in abundance right here in New York for hundreds of thousands of men for a long time to come. But, of course, it would not stop there. It would be applied to suburban lots and agricultural lands and mines and resources.

Just as there is a lot of land in New York that is not used—so with this country, with greater resources than all of Europe combined. The population in this country at the present time, or at the last census, was 30 per square mile. There are countries of Europe where people live 300 to the square mile. It has been computed by Dr. Franz Oppenheimer, who was over here, and who is a professor in the University of Berlin, that people could live comfortably 600 to the square mile, instead of 300. We know that all the population of Germany could be put in the State of Texas—65,000,000 people, and still leave room for Switzerland. That shows the sparsity with which America is peopled, and

shows the untouched resources here, waiting for labor to get busy on them; and that is only agricultural land. All through the West are coal fields which are held out of use. In Pennsylvania the anthracite coal fields are owned, but are not permitted to be used.

There are all kinds of minerals all over the country which are just owned; and we could apply this same land tax to agricultural land, taking the tax off the buildings on the farms, and off the farm products and off the cattle, and placing it upon the farm land in the same way. We assume that America is a country of home owners, and yet about half our people are tenants, even in the great State of Texas, to such an extent has tenancy come in, that they are organizing in that great State a revolt against landlordism—in Texas! The census shows that less than 50,000 men own estates aggregating 200,000,000 acres; that is a fourth of the cultivated area of the United States, owned by a population of less than a small town. That 200,000,000 of acres is divided into larger estates than those of Great Britain. One-fourth of all our agricultural land or property is owned by just a handful of people, and we are going to have a state of density of population and unfavorable agricultural conditions like those of Ireland and England.

Now, if we tax those great estates—if we tax agricultural land and not merely 1 per cent or $1\frac{1}{2}$ or 2 per cent but 3, or $3\frac{1}{2}$, or 4 per cent, or whatever is necessary, it will make the owners use it. There would be a suction of men out of the cities, and there would be the creating of jobs all over this country. I think the newspapers would be filled with advertisements calling for men to work, because men would either have to work their estates, or give them up to those who would work them. It would be like discovering not only a new continent, but half a dozen new continents, to bring all of the land of America into real use by the people.

Now, as to the effect of that on labor, I think it is quite obvious.

Chairman WALSH. I will say for your information that there is an abundance of time, Doctor, because we do not adjourn until 12.30.

Mr. HOWE. Well, to complete my statement relative to the landlord, why, as an element in the distribution of wealth and industrial lines, his share in the produce would gradually tend to diminish under the land tax, until ultimately it would disappear altogether. Ultimately, the ground landlord would get nothing. The share he now takes—which has been estimated at two thousand million dollars to three thousand million dollars in the United States, would go to society itself; would go to our cities and States and Nation; and he would disappear, and the only elements, the only claimants in the wealth produced would be capital on the one hand and labor on the other. And then we would have a relatively simple, easily seeable problem of the employer and the employee struggling for all the wealth that was produced.

Now, what would happen as between those two contestants? The share either of them would get would depend altogether on the relative strength in the struggle, his relative power in the contest. If capital still retained its present power, if the employer still retains his present position of ascendancy in which he would also have a residuum of the products of labor, if he could always whistle and a hundred men would come to his establishment, if he was sure that outside of the packing houses, outside of the mines, outside of the mills, outside of the factories, there was always a lot of men clamoring to get in under that new system, then capital would still continue to be the dominant factor in industry.

If that position was reversed and labor became free—and, frankly, I hope for a society in which labor will be absolutely free, in which we will not look upon this cast-like division between employer and employee as a necessary distinction, in which men and women and children will have hope before their eyes all the time, in which a man can live through life without the necessity of accumulating great wealth, because of the fear for his children, in which every human being will know that there will be an amplitude of jobs, of employments, of wealth, not only for him in his old age but for his children and for his children's children. And that seems to be the ideal state of society, not only for the workers but for the employers; not only for employers but for capital and for every class; and they would be willing, if they only saw that, even to give up the privileges they now enjoy because of the greater happiness that would come to the privileged classes.

And that vision was just as clear to Henry George, and to Tom Johnson, and to Sam Jones, and to thousands and thousands of men who see that kind of society. I heard Tom Johnson, who had accumulated \$3,000,000, say that

he would willingly give away all of his wealth, as, in fact, he did and sacrificed it in his fight in Cleveland—willingly give it all away if he only felt his children would enter the world with a free field and no favors.

And after we had gotten rid of this one element in distribution and production—land—we would have a struggle between capital and labor. Which would be the strongest? I think labor would inevitably. Inevitably it would be the ascendant factor in the situation, because there will always and forever, so long as the tax continued and increased, as the social wealth was increased, and as births increased and population increased, there would always and forever be more jobs than men, and we would find that we could take care of a thousand million people in America with ease under a condition which opened all our resources all the time to the man who is best fitted to use them. And certainly for a century to come, under such a system that forced the men to use the land and employ men upon it, there would be this alternative to the working classes which would enable them to assert their independence, to be free, to take or to leave any job that was offered to them.

We have some examples of that situation; nothing like an approach to the condition which would result from this tax reform, but we have some suggestions of it. We know that in the thirteenth century, when the black plague had reduced the working population in Great Britain one-third, Parliament enacted a law which made it a penal offence for a man to demand more than a few cents a day for his labor, and imposed penalties among which were cutting off their hands, and imprisoning, and others, but they could not keep down wages, and wages shot up, and shot up, and shot up in that society.

Another example at the present day is Denmark, which has constantly, for the last 50 years, been trying to open up the land for use for the people; and the State provides so that a man can borrow \$9 out of every \$10 to buy a little farm, and every workingman in Copenhagen and other cities knows that he can either go out to a farm and get employment or he can get a farm of his own at any time he wants to. And men tell me, and the same is confirmed by my own observation, that there is practically no poverty in Copenhagen, a city of something like a half million inhabitants; practically no misery; certainly not as we understand it. There is none of that ignorance, depraved misery in the countryside. I have never been in any country in which the rich and the poor appeared to enjoy life so much. Where business men knock off as many hours a day to go to a restaurant or to their homes to play, because they felt that there was not any fear of poverty in that country.

And the workingmen on the streets have the same appearance of self-respect in their faces, the same sense of freedom, because of the official action which has been going on for a generation by the State to abolish poverty on the one hand and ignorance on the other.

Raymond Robbins, who went to Alaska some years ago, described in miniature a single-tax condition, although he was not conscious of it. He said that before a decree of court turned over the gold mines to private ownership men in the town where he was were earning \$15 a day, because they had access to the mines and went down and dug \$15 worth of wealth out of the soil. And on a certain day the decree of the Federal court transferred the ownership of all that land to a private corporation, and the next week wages went down to \$5 a day. Instead of being free men they became employees. Not only were wages prior to that decree \$15 a day in the mines, but wages all over that section for clerks, for waiters, for cooks, for employees of every kind, were \$15 a day. These men could always go out and earn about that much by their own individual exertion. And after the mineral resources were made private property wages in the mines went down to \$4 or \$5 a day and, also, they went down all over the rest of that territory, because free access to nature was closed.

I think that is as good a test of what would follow under single tax as could be found.

I want to distinguish this philosophy, which is a social philosophy like socialism from socialism, and also from the kind of society which prevails at the present time.

Socialism, as I understand it, is a philosophy which distrusts competition, which is hostile to competition, which feels that competition is one of the curses of the present day. I believe in competition, I believe in liberty, I believe in freedom; and while I admit that there are wastes in competition I think the gains so far outweigh the wastes that we can gladly pay for the wastes. And there is a philosophy of single tax, industrial liberty, rather than industrial paternalism of any kind—a liberty born of free land and free resources on the one

hand and freedom to trade on the other; a liberty which involves taking all the taxes now borne by labor off of labor. For up to the recent tariff bill enacted, including the income tax, the United States collected six hundred million dollars from internal-revenue system and the customs; and almost every dollar of that six hundred millions was paid by labor. It was paid, for the most part, by the poor. It was a tax upon the breakfast table. Sugar was a large contributor and wool. Indirect taxes are always a burden on the poor and a burden on labor, and since the Civil War we have collected, all told, probably three thousand million dollars, for the most part collected from the poor, \$3,000,000,000 of revenue. That is the cause of poverty, for it comes out of the poor; and we would shift that burden onto the land values just as we shift the other taxes on labor. I don't know, Mr. Chairman, that I have any further statement to make.

Chairman WALSH. Just one thought, now, that grows out of the adoption of a simple law, as you say, about an inch long, that would take all taxes off personal property. Do you believe that a public sentiment could be obtained to back such a philosophy in our time—to back the philosophy which would support such a law in our time, considering the present institutions of property in law, as well as property in personalty?

Mr. HOWE. Well, I remember when a man who believed in woman's suffrage was a unique man, and a man who advocated municipal ownership was likely to be stoned, and a man who talked of the initiative, referendum, and recall—when it was talked about as a new drink. Yet in 5 or 10 years that has all passed, and these problems are now receiving our earnest and general and respectful attention, and I sincerely believe that it will only be a few years until people will be talking about the taxation of land values, much as they are now talking about woman's suffrage and about these other measures.

Chairman WALSH. You think it is coming?

Mr. HOWE. Yes; I think it is coming.

Chairman WALSH. I hear much said upon the witness stand here as to what might be called the collision between property and personal rights, between property and human rights. Doesn't that meet that acute phenomena? Isn't that the acute phenomena right there that this would have to deal with—present property rights—would have to deal with property individuals already have as distinct from a philosophy that would extend democracy, for instance, in those departments you have mentioned, like the initiative, referendum, and recall, and the extension of suffrage to women, etc.?

Mr. HOWE. Yes; but it is simply a means of approaching that question.

Chairman WALSH. Observing, as you doubtless have, the outbreaks in the different States in the Union as typified in western Virginia, Michigan, and Colorado, what would your observation be, if you made any, as to the more acute industrial unrest where the laborers have to primarily deal with natural resources, like taking the mines and coals and metals from the earth and lumber from the forests, etc.? Have you noticed that that seems to have an effect that makes the unrest more marked and the outbreak more savage, as it were?

Mr. HOWE. I think there is no doubt but what our worst industrial wars are mining wars. I have no doubt, either, that that is due to the fact that the men who own the resources have a more complete dominion over the men that they employ than the men who are merely engaged in industry.

Chairman WALSH. Have you some questions, Mr. Garretson?

Commissioner GARRETSON. Yes; I would like to ask him one or two.

Chairman WALSH. Mr. Garretson would like to ask you some questions.

Commissioner GARRETSON. Doctor, how long and how completely have single-tax theories been effective in portions of Australasia; that is, either Australia or New Zealand?

Mr. HOWE. They have not been operative there at all at any time; I mean as single taxers understand them. What has happened, they have taken the tax off of houses and improvements and placed it on land. Now, single taxers say that that is not single tax; that is merely an approach to it. That has been in operation, I should say, for 12 or 15 years.

Commissioner GARRETSON. Has it gone any further than that in any of the western Provinces of Canada?

Mr. HOWE. Vancouver, I think it was, about 10 years ago conceived the idea—I don't know why or how—of reducing the assessed value of houses and improvements by 25 per cent, so that the land was assumed to be assessed at full value and improvements at 75 per cent. Then people observed that reduction in the assessed value of the improvements and said: "This looks pretty good; let's cut the assessment of the improvements down to 50 per cent of the value."

And each time they reduced the assessment of the improvements—I have been there, but I am quoting the reports of the tax commissioner of Minnesota and other bureaux—immediately there was a stimulus to business. More houses were built, capital coming even from America, and then they liked that, and they reduced it again 25 per cent; and that resulted in a great stimulus to building. Then they took the taxes off of improvements and buildings altogether, and each change was followed by a very great stimulus in building. It is said that wages increased, that the hours of labor were shortened, that home ownership was promoted because land speculation was broken up and men could buy land very much more easily than they could theretofore. And, so far as I know, there is no suggestion on the part of any of those cities of any desire to change. For Vancouver's action was followed by Alberta and Victoria and Westminster and almost all the western Canadian cities, and more recently whole Provinces have adopted it. And those results followed in those towns where they have reduced the taxes on improvements or increased the taxes on land.

Commissioner GARRETSON. What class of labor in that territory has either been increased in wages or reduced in hours on account of this phase?

Mr. HOWE. I qualified that statement by saying that that is what I have heard. I have heard through a man up there that they increased the wages and reduced the hours of work.

Commissioner GARRETSON. It is Alberta that has put it in as a Province?

Mr. HOWE. Yes, sir.

Commissioner GARRETSON. Is there a greater paradise on earth for the land speculator than in Alberta?

Mr. HOWE. I expect that is true; and the single taxpayer would say that what has happened is just exactly what was expected to happen; that there would be a similar self-building and speculation; there will be so much prosperity in those towns that they will stock and create a kind of a labor vacuum, and they will draw people from the western towns—western American towns—and so many people will come in there that the additions to the population and the additions to business will continue to increase land values faster than the small imposition of a tax would reduce speculation. I think that is obvious, that if you can get more people to come than we had before, that you will have a continual increase in land values.

Commissioner GARRETSON. In other words, your saving clause is, then, that if it was universal there would be no place to draw from?

Mr. HOWE. That is part of it.

Commissioner GARRETSON. That is, then you would have no vacuum?

Mr. HOWE. Yes, sir. Two per cent of land values of a town like New York, or possibly 2½ per cent, would not affect the land speculator much, because it would affect all industry and all labor so much that prosperity would contribute more and more money to the landlord. The tax would have to be very much heavier than that to kill the land speculator.

Commissioner GARRETSON. Does history show an instance where, after the tendency to urban congestion, which is exhibited to-day in this country as well as in other countries, had commenced, that any means, legislative or otherwise, was ever devised that checked it?

Mr. HOWE. You are asking my historic opinion?

Commissioner GARRETSON. Your opinion as an economist?

Mr. HOWE. I don't know of any case except the Dark Ages after the fall of Rome.

Commissioner GARRETSON. Barbarism has always again disseminated the people?

Mr. HOWE. Yes, sir.

Commissioner GARRETSON. How long a time did Rome—the western Empire—give to the question of driving the populace back to the land?

Mr. HOWE. Well, it gave about three centuries.

Commissioner GARRETSON. Of continuous edict or legislation in one form or another?

Mr. HOWE. Yes, sir. But it never succeeded. They assassinated every man who tried to enact it very long.

Commissioner GARRETSON. Isn't the same true, in greater or less degree according to the completeness of our records, of each case?

Mr. HOWE. Yes, sir; I think so.

Commissioner GARRETSON. It always preceded the downward decline of a nation?

Mr. HOWE. Well, I should say that land monopoly was the cause of the fall of Rome, the decay of Greece, and that it was privy to the cause of the decay—the cause of the French Revolution.

Commissioner GARRETSON. But one of two or three effects, whatever the cause was, always was urban concentration?

Mr. HOWE. Land monopoly.

Commissioner GARRETSON. That was always one of the effects preceding decline, wasn't it?

Mr. HOWE. I think so; up to recent times.

Commissioner GARRETSON. We have not had any fall of nations in comparatively recent times?

Mr. HOWE. No, sir.

Commissioner GARRETSON. That is all, Mr. Chairman.

Mr. HOWE. I would like to say a word about that.

I believe in the city. I think the city has always been the center of civilization. I think it always will be. Civilization would begin to relatively decay if we went back to an agrarian life. I am not interested in the single tax as a philosophy of farming. Far from it. I am not interested in an agrarian policy of petty land owners, not at all. This is a philosophy of industry. I think there are a lot of people who would like to go to the land and work it if the land were free. A great many of them would go to the land if they could make more money on the land than they could in the shop. But I believe in the city, and I do not want people to live in the country, because I think the country has always been a backward rather than a progressive form of life, and always will be, because society exists by cooperation, by the division of labor; it differentiates; and the city is what I should encourage rather than the country.

Commissioner GARRETSON. Can the city live without the country?

Mr. HOWE. No; of course it can't. But I think agriculture is a most backward industry, and I think it is absurd for a farmer to raise chickens and pigs and horses and cows and potatoes and corn and all on one farm. I can not think of any greater waste.

Commissioner GARRETSON. I don't understand.

Mr. HOWE. It is the greatest sort of waste for an individual farmer to produce 20 different things on his farm and spend the whole 12 months of the year at it. The farm is what it was 50 years ago, and industry is ahead of what it was five years ago. That is in the East.

Commissioner GARRETSON. It would be a question purely of the value of the bucolic life, and possibly that would not enter into this.

Mr. HOWE. I think this is aside——

Commissioner GARRETSON (interrupting). And unless the chickens and cattle and grain are raised, what becomes of the city?

Mr. HOWE. Well, I suppose that is part of this same discussion.

Commissioner GARRETSON. Unless we come to the tabloid life, at any rate?

Mr. HOWE. I think the taxation of land values, which, of course, involves destroying land values, so that the only value land has is its annual rent, that the necessary result of that would be the intelligent and economic use of land. Under those conditions, if land were suited for raising butter and eggs, for a great city, instead of each family raising a dozen eggs a day, we would have a dairy farm; we would have a chicken farm; we would increase the efficiency of an individual worker three or four fold, just as in going down to Philadelphia you pass a great dairy farm down there. What is the name of it?

Commissioner HARRIMAN. Walker Gordon.

Mr. HOWE. Walker Gordon? There is a type of up-to-date agricultural industry where that is enjoyed, and under that title. And that suggests to me an up-to-date twentieth century farm, while this petty farming of the old type, I think, will have to go, and ought to go.

Commissioner GARRETSON. Have you ever lived on the farm?

Mr. HOWE. No; but I have worked on a farm.

Commissioner GARRETSON. How about the biproducts?

Mr. HOWE. You mean the manure and fertilizer?

Commissioner GARRETSON. Every quality of it, the utilization of it for the product of just what you have derided—the dozen eggs.

Mr. HOWE. I should say that that was best conserved by this kind of intelligent farming.

Commissioner GARRETSON. And what disposition is made of the biproducts that would produce the dozen eggs and dozen chickens?

Mr. HOWE. That would be left on the farm itself.

Commissioner HARRIMAN. I want to ask you one question, which may sound very unintelligent, but I would like to know, if it were possible to insert that clause in a State law, "all taxes upon houses and improvements of all kinds and personal property should be abolished," how long after that would a change for the better in industrial conditions be noticed, do you suppose?

Mr. HOWE. Almost immediately. In Ohio, it is always stated in Ohio as a fact that every time—they used to assess property every 10 years in Ohio, but now they assess it every four years, and it is a common statement in Ohio that there is a great building boom in Ohio with every revaluation for the purposes of taxation. In other words, after values are put upon the tax books duplicate the taxes are increased, and immediately men get busy to use their land which they previously speculated in. So I think it would be immediate. Just as a great rebuilding of New York followed a change in the assessment in 1903.

In that year we put land on the tax duplicate at a hundred cents of its value. We put it clear up in the new assessments. And New York has been rebuilt since 1903 because it was more costly to keep land idle and speculate in it than it was before, and that is just a suggestion of what would follow.

Commissioner LENNON. The opponents of the philosophy of the single tax make a great deal of the claim that its application would destroy the individual home owning, especially in the cities and larger towns because of the rental value making it more costly to own homes. What do you think about that?

Mr. HOWE. I think the reverse would be true. As a matter of fact we have hardly any home owners now. There are only four people out of a hundred in Manhattan who live in their own homes. In other manufacturing cities about 20 per cent of the people are home owners. Under the single tax, a man would not have to buy his land; he would only have to build his house, and he can go to the community and say "I want this piece of land," and all he would have to pay would be \$20 or \$30 or \$50 a year as ground rent.

Commissioner LENNON. How would he be protected in the continuity of the holding of that?

Mr. HOWE. Just as he is at the present time.

Commissioner GARRETSON. By paying his tax?

Mr. HOWE. In the taxes on that land. For instance, if a man wanted to live in a house on the corner here where land values are \$10,000 a front foot or \$20,000 a front foot, I think single tax in that particular situation, just at the present time, would push him off, and something else would grow up. There would not be any difference so far as that is concerned.

Commissioner LENNON. It would not be taken away from him, though, if he continued to pay the rental value of the land?

Mr. HOWE. No.

Commissioner LENNON. That argument is used very strongly.

Commissioner O'CONNELL. What becomes of the improvements, the amount he has put on the land?

Mr. HOWE. Well, now, let me see. If a piece of land becomes so valuable under the present system that a man has to move off it, he, of course, moves off; and I think that under a properly organized system in which society took all of the ground rents society would say when the values increase and the economic use of a site change, society would say to the tenant, now, you have been a good citizen, you have improved your site, but economic uses have changed for which you are not responsible. Now, whoever takes your corner must pay you for your improvement. If you are crowded out somebody else must pay for your improvements.

Commissioner O'CONNELL. But in the case of the small man with his home, he has a small home. Circumstances of being out of employment or a thousand and one things, may make it so that he can not pay the rent. Now, what becomes of him?

Mr. HOWE. Well, if he can not pay the rent at all, do you mean?

Commissioner O'CONNELL. Yes.

Mr. HOWE. Why he would forfeit his home just as he does at the present time.

Commissioner O'CONNELL. No protection at all on that system?

Mr. HOWE. I think that society would probably under those circumstances, when they say, "We are the sole ground land owners" if the man were unable to pay his rent, society would say to the tenant who came in, here, you must buy that improvement or must pay rent for that improvement.

Commissioner O'CONNELL. Well, his protection is in a sympathetic society.

Mr. Howe: His protection is in the law, just as it is at the present time; yes; only all men at that time would be in the same boat. And it is probable all men would pass a law for the protection of all of them.

Commissioner O'CONNELL. You think human nature would be better under those conditions and more sympathetic?

Mr. Howe. I think when men all have the same economic interest there isn't any difficulty in getting a law to protect all men under those circumstances.

Commissioner O'CONNELL. It would be a case not of being the thief and stealing the goose from the common, but being the thief and stealing the common from the goose?

Mr. Howe. I don't know as—

Commissioner O'CONNELL (interrupting). As the single-tax theory to-day, we consider the man who steals from the land, steals the goose off the land, as being the thief.

Mr. Howe. You mean the man who takes the ground rent is the thief?

Commissioner O'CONNELL. Yes; but in your theory it is the thief who steals the land from the goose?

Mr. Howe. Not at all; no, sir. You come to New York to live, and immediately you come here you create a thousand dollars of value, which under the present system is contributed to some one else. Under the single tax, when you come to New York, instead of paying an annual ground rent—or instead of contributing value to somebody else, you would contribute it to yourself. It is the present system that is confiscation. I am charged \$50 or I am charged \$250 for my family just for coming to New York. The value which I create is taken by somebody else. Under the single tax it would be taken by society and used for my benefit. The present system is confiscatory. The new system is justice.

Commissioner O'CONNELL. Speaking of the possibilities of improved conditions of the workingman, the laborer, the one idea being brought out is that his wages would be increased, and from his increased wage he would be able to live under better conditions, better homes, and better surroundings.

Mr. Howe. Yes.

Commissioner O'CONNELL. Under the theory of single tax, the ports are thrown open to the workers altogether all over the world, free port, free entry, and everything free?

Mr. Howe. Free trade; yes.

Commissioner O'CONNELL. Free trade absolutely?

Mr. Howe. Yes.

Commissioner O'CONNELL. With increased wages, with doubled wages, or tripled wages under the single tax?

Mr. Howe. Yes.

Commissioner O'CONNELL. That is held out to the men all over the world to come to America, because we have doubled and tripled wages, and the ports are open to you, and anyone can come in. What effect is that going to have on the nine men who you say are looking for the eight jobs?

Mr. Howe. You mean from immigration? There is going to be the effect of more immigration?

Commissioner O'CONNELL. Yes.

Mr. Howe. I have no doubt that increased prosperity means an increased birth rate and probably an increased immigration. Of course, the immigration question is entirely aside from this question, and always will be dealt with. If you work frankly and courageously go the limit and completely tax land values until land had no value except for use, why, I would not fear immigration at all. Immigration to my mind is only to be feared under the present restrictive system, in which all opportunities for work are owned, and the increasing immigration merely increases the competition of labor for jobs which do not exist. But I think under—

Commissioner O'CONNELL (interrupting). The theory does not make any different arrangement as to ownership of the tools of production the workman must work with.

Mr. Howe. No; it does not attempt to have society own the tools.

Commissioner O'CONNELL. So then they must be owned privately?

Mr. Howe. Yes.

Commissioner O'CONNELL. And privately, the man who owns them privately can say as to the wage and hours that he will work, if he is in a position to do so?

Mr. Howe. Yes.

Commissioner O'CONNELL. And labor gets the free markets of labor of the world, and labor comes in because of this improved condition——

Mr. HOWE. Yes.

Commissioner O'CONNELL. There is no means, under your theory, to check that at all?

Mr. HOWE. Well, of course, America will always have that independent of this. The immigration question is just as—I think it just as much aside from the question of single tax as is eugenics. If America wants to close its doors it can do so, but I don't think it would be necessary to do so if we opened all the resources of America and invited the world to come in, because I think every individual produces more wealth than he consumes; otherwise we never would have any progress.

And if each individual is working at the thing he is most fitted to work at, he will consume, say, \$700 and will produce \$1,500 worth of wealth. The trouble is at the present time a large number of men are working at a thing that they are not fitted to work at.

Chairman WALSH. Professor, I believe you stated that the single tax ultimate proposal is that the workers shall have the full product of the toil of his own hands?

Mr. HOWE. Yes.

Chairman WALSH. I noted that exact statement was made here as a basis of the socialistic philosophy?

Mr. HOWE. Yes.

Chairman WALSH. They are at one in their ultimate objects, then, in certain essentials?

Mr. HOWE. They are at one in the ultimate objects, yes; they are both social philosophies.

Chairman WALSH. The commission will now stand adjourned until 2 o'clock, to meet at 2 o'clock sharp in this room.

(Whereupon, at 12.50 a recess was taken until 2 p. m.)

AFTERNOON SESSION.

Present: The same as before, and Mr. William O. Thompson, counsel for the commission.

Chairman WALSH. The commission will please be in order. Call your witness, Mr. Thompson.

TESTIMONY OF MR. WILLIAM C. ROGERS.

Mr. THOMPSON. Will you please state your name, Mr. Rogers?

Mr. ROGERS. William C. Rogers.

Mr. THOMPSON. Your address?

Mr. ROGERS. Capitol at Albany.

Mr. THOMPSON. And your occupation?

Mr. ROGERS. Chief mediator of the department of labor of the State of New York?

Mr. THOMPSON. How long have you been chief mediator of the department of labor of this State?

Mr. ROGERS. Since 1910.

Mr. THOMPSON. Since 1910?

Mr. ROGERS. Yes, sir.

Mr. THOMPSON. How long has that department been in existence?

Mr. ROGERS. Well, the State board of arbitration was created in 1886, as a separate board, but in 1901, under the reorganization at that time of the department of labor, it became a bureau of the department of labor.

Mr. THOMPSON. Had you any connection with the department of labor or the board of arbitration prior to 1910?

Mr. ROGERS. None at all.

Mr. THOMPSON. What had been your experience in that regard prior to that time?

Mr. ROGERS. For eight years just previous to my service in the labor department I had been connected with the State board of charities in two capacities. The last four years was as superintendent of State and alien poor, and previous to that as inspector of charitable institutions throughout the State.

Mr. THOMPSON. Do you know why the bureau of mediation and conciliation was established?

Mr. ROGERS. At the time it was established there was a growing belief that the creation of such a bureau in the State of New York would be of service in minimizing and preventing the losses incident to strikes.

Mr. THOMPSON. What was the development of the work of the bureau?

Mr. ROGERS. The growth of the work was rather slow at first, I think, so far as I have been able to ascertain. A number of causes conspired to produce that effect. I think perhaps the chief one was perhaps the same one which interfered for so many years with the success of the Government mediation work under the Erdman Act, lack of understanding and appreciation of the purposes and possibilities of the work.

Mr. THOMPSON. To what extent has the bureau used its compulsory power of investigation, as in the case of the strike of the International Paper Co. in 1910?

Mr. ROGERS. Well, there has been a considerable increase since 1910 in the frequency with which the board has used its compulsory powers of investigation. During my first year as chairman of the board, I think, we made but one investigation, and in one or two cases used the power to investigate as a lever of approach in settling strikes, without, however, having to come to the formal investigation. But since that first year there have been two or three actual investigations each year. Last year there were three, I believe.

Mr. THOMPSON. Describe the present powers and duties of the bureau in brief.

Mr. ROGERS. Well, as a bureau of mediation and arbitration we are authorized and directed by law to approach the scene of every strike or lockout which threatens or actually occurs and do our best by mediation to secure a speedy adjustment of the trouble. Then in case the matter can not be adjusted in that manner, and the commissioner of labor deems it advisable, the board has authority to hold a formal public investigation, such as I have mentioned.

Mr. THOMPSON. What is the present policy of the bureau in regard to compulsory investigation, mediation, and arbitration?

Mr. ROGERS. That question is a little hard to answer just in those terms. Personally, I am strongly opposed to anything which savors of compulsory arbitration, as that term is generally understood. I think it would be very wise, indeed, if we could have more public investigation of serious labor disputes than we have had in the past. I think it really ought to become an expected thing that where a serious strike occurs, so that the interests of the public at large are affected, it ought to be the expected thing that the State would intervene and ascertain by formal public inquiry just what the trouble is about, so that the people at large, on whose support and sympathy the success or failure of every strike depends, may know from an authoritative source just what the trouble is about and just what prevents the parties from getting together.

Mr. THOMPSON. You mentioned compulsory arbitration. What is the present policy of the bureau in regard to compulsory investigation, mediation, and arbitration?

Mr. ROGERS. Well, as to compulsory arbitration, we are entirely opposed to it. Neither party to the dispute, neither the labor interests nor the employer's interest would consent, I think, in this State, or, indeed, in this country, to anything that savored of compulsory arbitration. As far as the use of the word compulsory is concerned in relation to mediation and investigation, I think it ought to be used in a very guarded and limited sense. The compulsion ought to be on the State board, as it is now in this State, and not on either party to the dispute, that also as it is now in this State. In other words, our powers are unlimited as to what we shall investigate. If the commissioner of labor deems it advisable to have an investigation, we can go ahead and investigate, and we have the full power of the supreme court, as far as the development of information is concerned. Our findings, however, are only binding in so far as they might sway public sentiment. There is nothing compulsory about the findings of the board on either party to the dispute. And that, I think, is just as it should be.

Mr. THOMPSON. What has been the character and results of intervention of the bureau in industrial disputes?

Mr. ROGERS. Our work is chiefly in line of ordinary mediation. It is only occasionally that where a dispute is serious enough to require our presence that we fall by mediation and peaceful adjustment to bring about a settlement of the strikes sooner or later. We are not easily discouraged. We are not

dependent in any way upon the wishes of either party in regard to withdrawals from the scene. It is our duty, under the law, to stay on the ground and keep on in an effort to settle the strike, and sooner or later the auspicious moment comes, and the favorable terms are developed under the existing circumstances which are acceptable to both parties, and the settlement is very usually attained as the result of our efforts. But in the rare occasions where those means fail, I think the public investigation is an excellent further method to pursue.

Mr. THOMPSON. To what extent, in your work, has the intervention been at the request of both parties to the controversy, or either party?

Mr. ROGERS. Well, since I have been connected with the work, we have frequent requests, sometimes from both parties, more often from one or the other. I should say that there have been something like 10 or 12 such requests each year.

Mr. THOMPSON. In forming boards of arbitrators the law states that two so designated shall appoint a third. Has there been any difficulty in the practical working out of this provision?

Mr. ROGERS. Well, the only difficulty is that it is always hard for the two arbitrators who are, of course, representing the two parties to the dispute, they are naturally prejudiced in favor of each of his own side. It is, of course, hard for them to agree on the third man, but it is not a hardship which is insuperable in any way. I think it is a very proper method, and usually gives very good satisfaction. The third man sometimes disappoints one party or the other. That is inevitable and to be expected, but it is the best plan, I think, that so far as local arbitrators are concerned, could be devised.

Mr. THOMPSON. In case a controversy arises over the interpretation of the decision of the board of arbitration, is there any procedure by which the disputed questions may be referred to this board or settled by some other method?

Mr. ROGERS. Not in those terms. We are, however, authorized to act as arbitrators in any dispute and, therefore, that would include acting in that capacity in a dispute which arose over the interpretation of an agreement. That, within my recollection, however, has not occurred. Frequently, however, where we have found ourselves parties to a settlement, we have been appealed to later to rule on some disputed points that have arisen in a discussion of the terms of settlement.

Mr. THOMPSON. Under the present provision of the law is it possible to dispose of grievances and disputes promptly?

Mr. ROGERS. Usually it is. We have a force of five men in our bureau, mediators, and that number have ordinarily been just about right to handle the pending dispute. There have been one or two occasions when strikes have been more or less epidemic, that we have wished that we had more hours in a day and more men in the bureau. Last year, for example, there were several months we had a large number of disputes pending at one time, and more than one of us could not at any time go to any one dispute.

Mr. THOMPSON. What method does the bureau have of keeping in touch with threatened strikes and lockouts?

Mr. ROGERS. We rely chiefly on information which comes to us from our friends, both in the labor movement and in the associations of employers, who keep us informed of the conditions of the trade in their localities. We rely a good deal on the newspaper reports, which cover these things pretty thoroughly, and we have more or less information from our own force of factory and mercantile inspectors, who are scattered throughout the State and are under instructions to report any disturbance that they may hear of to the home office at Albany.

Mr. THOMPSON. Does the bureau of mediation and conciliation collect industrial statistics which may be used by arbitration boards in coming to a decision, or are such statistics available from other sources?

Mr. ROGERS. The bureau does collect strike statistics and statistics in regard to trade agreements to as large an extent as is practicable, and publishes those statistics in our regular departmental bulletins. The department of labor also has a well-organized bureau of statistics, which collects prevailing wage statistics and cost of living statistics and other items of information which are valuable, either for our own board or for any local board in matters of arbitration, and those statistics are frequently used in that way.

Mr. THOMPSON. Is the present personnel sufficient to handle the work of the bureau efficiently, and is the appropriation sufficient?

Mr. ROGERS. I am personally very well satisfied with the efficiency of the men who are assisting me in this work. I think our appropriation is thoroughly ample at present. It has not been so in the past, but the present legislature has given us an increased appropriation, both as to salaries and for expense allowance, so that with the single exception that I think it would be wise to have a standing appropriation available—distinctly made available for public investigations—I think we are thoroughly well provided for.

Mr. THOMPSON. What are the present defects of the mediation and arbitration law, and how could it be improved?

Mr. ROGERS. Well, there is one slight defect, I think, in the fact that we have no method by which we can really rely on getting immediate or advance information on strikes. I think it would be wise to develop some method by which the quickest possible information might reach the bureau from all parts of the State, so that the efforts of the mediators need not be delayed until when a strike is seriously threatened or actually necessary. Sometimes now a rather serious strike might, conceivably, be in existence a day or two before the newspaper reports or other information would reach us. I think it is desirable that the executive officer of each city or county should be required to forward to the department of labor immediate information of any strike which takes place within his city or county. Then, of course, we would have full cooperation of the executive and officers and the mediation department in getting quickly upon the scene. Very often a strike can be settled when it first occurs much easier than it can a day or two later.

Mr. THOMPSON. Mr. Chairman, that is all.

Chairman WALSH. Did you have some questions, Mr. Bird, you would like to ask?

Mr. BIRD. One little question.

Chairman WALSH. Very good. Just put them yourself.

Mr. BIRD. In your labor controversies, Mr. Rogers, do you ever come in contact with the I. W. W.?

Mr. ROGERS. Yes; we have had dealings with the industrial workers on two or three occasions.

Mr. BIRD. Was such an occasion that of the Little Falls strike?

Mr. ROGERS. Yes.

Mr. BIRD. How did you handle that situation?

Mr. ROGERS. That was one of the most difficult and troublesome situations that the bureau has had to deal with since I have been in charge of it. The strike extended for several weeks, and there was a sort of dual control of it. One branch of the strikers at first were under the guidance of a regular trade union connected with the American Federation of Labor, but the most of the strikers had previously been unorganized, and when they did organize they organized under the guidance of the Industrial Workers of the World. We had no difficulty at all in securing a settlement pleasant to both the employer and the representative of the American Federation of Labor, so that their men, after a very short time, went back to work, but the Industrial Workers of the World were unwilling to accept those terms of settlement, although they were offered to them at the same time that they were to the American Federation of Labor employees.

I recall that the industrial workers kept their men out about two months longer, and the situation from the standpoint of the public became so acute finally that the commissioner of labor ordered the board to proceed there and hold a formal public inquiry.

Mr. BIRD. In other words, you used your powers of compulsory investigation?

Mr. ROGERS. Yes; and we did hold such a hearing. I think our testimony was taken in three days, and we allowed the employees to present their story and their complaint in full, and on the final day we had the testimony of the employers and were pleasantly surprised to find that they were willing to make, as developed by their testimony, a very substantial and pleasing offer to their former employees in regard to returning to work at a slightly increased compensation, and without raising the issue at all of their membership in this Industrial Workers of the World organization. We reduced that testimony to a proposition which the employers signed and authorized us to present to the body of strikers, and we called a mass meeting of the strikers for the following day and presented it to them, and it was unanimously accepted, and they returned to work.

Mr. BIRD. Do you consider that is a feasible method of procedure in dealing with such a controversy; that is, getting the union men together and putting the proposition up to them?

Mr. ROGERS. It is feasible where it can be done; it is not always practicable.

Mr. BIRD. That is on one occasion, though, where it worked?

Mr. ROGERS. Yes, sir. In other words, the Industrial Workers of the World, in that particular case, were interested, for ulterior purposes, in keeping that controversy alive just as long as they could.

Mr. BIRD. What were those ulterior purposes?

Mr. ROGERS. Why, that is impossible to say. I might have a guess about it, but it would simply be a guess. I don't think they wanted a settlement of that strike. They wanted to prolong it. That is their propaganda. They regard the strike as the natural, logical revolt of the workingman against the present system of employment. A return to work is a return to slavery. You have heard that talk from the pulpits of the I. W. W. frequently. So that I think they did not desire a settlement until the strike had gone so far that they realized they could not prolong it any longer, then they were willing to consent that the men should accept the terms we secured for them.

Mr. BIRD. Those powers of compulsory investigation that you have, have they been of use to you as acting as a sort of weapon which you could commonly use, but you did not commonly use? You say you have five men handling these controversies. Does the fact that the parties to the controversies in which you enter know you have that power to use; does that help you any?

Mr. ROGERS. Very materially. It has been the direct cause of an immediate settlement in a number of instances. For instance, last year in the Buffalo street-car strike, a very serious strike which tied up the transportation of the entire city of Buffalo, grave disorder existed in the city, and the situation appeared very serious until the board of mediation and arbitration was ordered by the commissioner of labor to proceed to Buffalo and hold a formal inquiry. We arrived in Buffalo in the evening of that day and issued our subpoenas for beginning the investigation the next morning. And overnight, by working all night, we were able, through cooperation with the mayor of Buffalo, to secure an immediate settlement of that strike, simply because we were on the ground to hold a public investigation.

Mr. BIRD. Now, a question in regard to that organization. You think that your present organization is a good one, where you have a bureau of mediation in the department of labor, or do you think that mediation activity should be separated—that it should stand up with itself?

Mr. ROGERS. I regard our present system as the ideal system.

Mr. BIRD. Now, why?

Mr. ROGERS. Well, chiefly because it is a labor problem, and locally belongs in the department of labor. Then, too, the work is so related to the information which a labor department is able to develop on a number of other points that the connection with the department of labor is vital and very convenient.

Mr. BIRD (not distinctly audible). Suppose there was need of mediators, would it be possible to utilize any other members of the labor staff?

Mr. ROGERS. We could pick out some very good men from other bureaus who would be very serviceable as mediators.

Mr. BIRD. What would be, in your opinion, the qualifications of a good mediator?

Mr. ROGERS. Well, he must be an honest man of experience in the relations between labor and capital; he must be a man of tact and quick judgment. He must be a man who will inspire and retain the confidence of both parties to disputes—a man who is not easily discouraged.

Mr. BIRD. Is there any particular previous training which you think he should have, or is it a matter of personality?

Mr. ROGERS. Well, it is largely a matter of personality. Of course, there is—the necessary experience may be gained in several ways. I regard it as a very valuable training for a man to have had executive experience in labor organizations. Several of our mediators have been international officers of different labor organizations. I do not think all of them should necessarily be actively connected with the labor movement, but it is certainly an excellent thing that many of them have had that experience.

Mr. BIRD. Well, then, you would say that a combination of these men would be best?

Mr. ROGERS. Probably.

Mr. BIRD. Now, you spoke of one of the defects of the present bureau of mediation not having any way in which to get quick information. Now, how would you go to work to get that quick information?

Mr. ROGERS. It has been tried in several States, I believe, to have it compulsory on the mayor of the city or the sheriff of the county to furnish immediate information by telegram to the commissioner of labor or the board of arbitration of any strike in the city or county affected.

I do not believe it has worked very well. It might work if it were obeyed and observed. It would certainly be a great help to us to have that information quickly.

Mr. BIRD. Now, in your reports for the last few years I notice that where your intervention has been without success among the reasons given are that the employers did not want to recognize the union; and I notice this cause has been decreased from year to year. What has been the reason for this decrease?

Mr. ROGERS. Well, I think the main reason for the decrease is the better understanding which is had now of the purposes of organized labor, and the fact that organized labor is pretty well recognized as having come to stay.

Mr. BIRD. Do you think the force of public opinion has anything to do with that?

Mr. ROGERS. Very materially; yes. In fact, nowadays, the public generally sympathizes, I think, with the desire of men to organize. They say the employers organize without hindrance, and if the men wish to do so why shouldn't they?

Mr. BIRD. In your latest report you make a suggestion as to enlarging the powers of the bureau. Will you kindly give us your suggestions as to the reasons for that recommendation?

Mr. ROGERS. Yes; but before I do that I would like to make one statement in regard to the question you just asked about the decrease in the number of disputes relative to the recognition of the union. I think a second and almost equally great reason is the fact that that issue is not so forcefully presented now—not so much insisted upon by the union representatives themselves; that is, there is a clearer idea of just what is meant by recognition of the union. The term is more of a misunderstood thing than the thing itself. I think, generally speaking, what is desired by the employees who strike when they present a demand for recognition of the union—the most that they really mean to insist on is permission to organize and exist as an organization and permission to present, through their own committee, their grievances to their employer. The phrase “recognition of the union” has created a good deal of unnecessary disturbance, I think. Now, your other question in regard to increasing the activity of the bureau in disputes involving public utilities—that is a much harder subject to handle. It is pretty well recognized, I think, that the third party to the strike—the public—is more deeply interested in a dispute which involves a public utility than they are in the ordinary trade disputes affecting a private manufacturer. The public is the chief party in some of the disputes involving public utilities. That is worked out in the Government bureau under the Erdman Act and the Newlands Act so that there is practically recognition of that responsibility. So that although it is not compulsory on either party to call in the Government mediators, yet normally it is compulsory on them to do it because the Government bureau has successfully mediated in practically every dispute that has arisen in the last few years since the Government bureau has become active. So that now it almost goes without saying that if any dispute arises on any railroad, one side or the other, or both, will call in the Government mediators and both parties know that the public would seriously blame either party regardless of the merits of the dispute, which permitted an actual strike to occur on a railroad involving interstate commerce without calling in the Government mediators. That same thing will be true with the State boards as rapidly as they develop and gain a reputation for honesty and capacity for making fair settlements. In this State we do not have any street car strikes, for instance, without the organized street car men calling on the bureau first. It is a sort of understood thing with them that they will give us the information before they attempt to call a strike. And, as a matter of fact, in the last four or five street car strikes that have occurred they have given us the information before the strike occurred. And that ought to be true of certain public utilities, not, I think, as a matter of legal obligation, but of moral obligation.

Mr. BIRD. Just what is the nature of the recommendation in regard to that?

Mr. ROGERS. I would like to see the law changed so that both parties to a public-service dispute would know, if it were a serious dispute, seriously affecting the public, I would like to have both parties know that a public investigation was coming within five days if the disputes were not adjusted. I would like to have that as sure to follow as the morning is sure to follow the night.

I would like to have it also expressed by the legislature, as the desire of the people, that either or both parties should call in the State board of mediation for adjustment of a threatened strike before permitting the actual strike to occur.

Mr. BIRD. Would that in that connection be following the Canadian experience?

Mr. ROGERS. Well, the Canadian act makes it illegal for the strike to be called before calling on the services of the investigators. I would not want the State legislature to go as far as that here. I should simply want them to express their wish, that the men or the company should call on the State for adjustment before subjecting the people of the State to the inconvenience of the loss of transportation or public service.

Mr. BIRD. As the result of your experience, would you say that the tendency for interstate disputes in New York, in which New York is concerned, was to increase or decrease? In other words, are interstate disputes increasing with which you come in contact?

Mr. ROGERS. They are not frequent enough so that I could say whether they are increasing or decreasing.

Mr. BIRD. Have they caused you any difficulties?

Mr. ROGERS. Yes, sir; there have been some rather serious complications.

Mr. BIRD. Can you tell us, briefly, of one instance?

Mr. ROGERS. Well, three years ago we had a very serious strike on the New York Central lines, involving the boiler makers of the entire system. That strike began at the Collinwood shop, near Cleveland, and extended rapidly overnight to all the other shops between Boston and Chicago, including New York. And that chiefly affected New York State, because three-fourths of all the men were employed in the big shops in New York State, but equally, as far as the interests of the public were concerned, it affected the people of Illinois, Ohio, Indiana, Michigan, Massachusetts, and parts of Pennsylvania and Ohio.

Mr. BIRD. How did you handle that?

Mr. ROGERS. On account of the fact that the central offices of the railroad were here in New York City it was convenient for our bureau to act as the chief intermediary in that dispute, although a representative of the Ohio board was here for a part of the time.

Mr. BIRD. Would you think it would be advisable for the Newlands Act to be extended to all railroad employees?

Mr. ROGERS. I do, very decidedly. Not only to railroad employees, but to steamship and Great Lakes employees, any employees engaged in interstate transportation, regardless of whether it is on railroads or on waterways, including express companies, telegraph and telephone companies, doing interstate business.

There is a very large field of usefulness for a Government board of mediation and arbitration similar to the Newlands Board, by having very much enlarged powers.

Mr. BIRD. Would you enlarge the personnel of that board to counteract the larger activities?

Mr. ROGERS. Yes, sir; that would require a number of men for routine work. There ought to be an available appropriation for temporary appointment in grave emergencies of additional men, besides.

Mr. BIRD. Do you think it would be advisable for such a body to have an advisory board, made up of so many employers and so many employees to assist it from time to time?

Mr. ROGERS. Yes; I think such an advisory board could be very good, of very good service, indeed.

Mr. BIRD. Do you think that such a body should be supported as the present board of mediation and arbitration is, or should it be connected with any Government department?

Mr. ROGERS. My own idea, as I said before, I think our New York State plan is the ideal plan, from my point of view. I think they might very readily follow that in the creation of a Government board, making them subordinate to the Government Department of Labor.

Mr. BIRD. That is all.

Chairman WALSH. Are there any questions?

Commissioner GARRETSON. I would like to ask a question. Mr. Rogers, your description of a mediator is one who could inspire confidence in himself from both the interests with whom he has to deal?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. If you will take, not the average employer, but the employer of the type who is bitterly opposed to the recognition of union agencies dealing with his employees, what would be the result, in your opinion, of a man acting as mediator who himself had been an officer of a labor union and who would naturally be a man holding the opinions for which the employer was fighting, presupposed to be saturated with union-labor opinions, in approaching an employer of that kind as a mediator?

Mr. ROGERS. I think, generally speaking, our mediators who are former labor leaders have had so much experience as labor leaders that if they have any prejudices along the lines of the labor movement they are able to conceal or subordinate such prejudices at an appropriate time. That does not interfere very often with a man's success. The labor leader has gained a capacity by his very leadership of dealing with the representatives of the employers.

Commissioner GARRETSON. If that is true, I believe that mediation on interstate railways has gone as far as it has in any other channel on the continent?

Mr. ROGERS. Very successful; yes, sir.

Commissioner GARRETSON. I mean it has had as wide an experience, too?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. I suppose you would assume that the men who have been the subjects of mediation from that source could be held to hold rather intelligent views on that point, drawn from experience?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Moreover, the representatives of the employees in that case would conform as fully as any men in the business could to the description that you have given to the man of experience, because the executives of those organizations have all been at it for a good while?

Mr. ROGERS. The only other experience which would at all compare with it would be that of the representative of the employer on some local arbitration board who had several years of experience in dealing with labor committees.

Commissioner GARRETSON. Then, how do you explain the undivided attitude of the representatives of 100 railways, a large number of whom had gone through mediation at various times, and the executives of organizations that had been mediated, that the Government should not appoint a mediator who belonged to either class, and that the law should be drawn to make the department of mediation and conciliation and arbitration absolutely independent of either commerce or labor? That was the consensus of opinion without dissent?

Mr. ROGERS. At the same time I am surprised at it, and I dissent from it.

Commissioner GARRETSON. How is that?

Mr. ROGERS. I dissent from that view.

Commissioner GARRETSON. How do you explain that attitude? Those men were drawn on experience, wide experience, at that; and they were so strongly wedded to it, were they not, that they carried it clear to the President against the opposition of the members of the Government?

Mr. ROGERS. I still believe that the practical experience in nine cases out of ten is the best sort of training for a mediator.

Commissioner GARRETSON. I do not think anybody would question that, but the thing is to find the ground of mutual confidence through which influence can be exercised, is it not?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. And take this comparison: Take a man in the railroad service who has been the head of an organization for 25 years, 20 years, 15, have you ever—I suppose that in many of its phases you have come against railway officials in regard to mediation?

Mr. ROGERS. Yes, sir; a good many of them.

Commissioner GARRETSON. Have met men who in many of their phases were familiar with the interstate phase of it?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Have you ever seen one who accepted one of those men as mediators?

Mr. ROGERS. I think I have.

Commissioner GARRETSON. Could you name the road, or would you care to?

(No response.)

Commissioner GARRETSON. I do not want to ask anything unfair, Mr. Rogers. Mr. ROGERS. I would rather not name one. I did not have any particular road man in mind.

Commissioner GARRETSON. No.

Mr. ROGERS. I simply mean as answering your question in the spirit in which it is asked; I think I have met several railroad presidents and general managers who have expressed to me a great deal of confidence in certain individual labor leaders with whom they have come in contact.

Commissioner GARRETSON. But when there are vast property interests involved, as are always involved in those cases—

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON (continuing). Or, as nearly always—

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON (continuing). Because the greatest of them are wage movements, would they accept the service of a man in that character who they believe to his finger tips was in sympathy with the demands of the men?

Mr. ROGERS. No; naturally, they would not accept him. For instance, as a third member of an arbitration board.

Commissioner GARRETSON. No; but I mean just as a mediator, leaving arbitration wholly out of the question. Nor do you believe this, any railroad official whose future depended, in the opinion of the men, on his devotion to the managing standpoint, do you suppose the men would ever accept him as a mediator in good faith?

Mr. ROGERS. Not at all.

Commissioner GARRETSON. Consequently, is not it proof of the fact that the man who comes from either of the recognized channels is handicapped as a mediator?

Mr. ROGERS. That is perfectly true.

Commissioner GARRETSON. Is that not the explanation of the attitude of the managers and presidents of the railroad companies and the chief executive officers of the interstate organizations who were parties to the framing of the Newlands Act?

Mr. ROGERS. I presume that is the exact case.

Commissioner GARRETSON. In regard to the attitude of men who have an eminent reputation for fairness—I can cite one man who has retired from the managing world, Mr. W. C. Brown, of the New York Central. Are you aware of the fact that Mr. W. C. Brown was the spokesman for the New York railways in advancing that view to the President?

Mr. ROGERS. Yes, sir; I understood so.

Commissioner GARRETSON. Do you know what Mr. Brown's reputation personally has been in the labor world for many years?

Mr. ROGERS. It happens that he was the particular man I had in mind a moment ago.

Commissioner GARRETSON. And still no stronger representation was made. Are you aware of the fact that no stronger representation was made to the President of the United States on that point—of making this an independent bureau, as was the Interstate Commerce Commission—than was made by Mr. W. C. Brown?

Mr. ROGERS. No, sir; I didn't know that.

Commissioner GARRETSON. The record will demonstrate that. It is that phase of the question that led me to ask on what your other belief was founded.

Mr. ROGERS. I want to qualify a little what I have said. My answers were intended, or at least I had them in mind, as applying more exactly to a State bureau of mediation and arbitration rather than the formation of a Government bureau. A Government bureau dealing, as the Newlands Act—as the railroad bureau created under the Newlands Act does—purely with railroads, meets the solid dividing line of a railway interest and the railroad men's interests. Our State interests cover railroad shop employees, men engaged in the city service, men engaged in public utilities in the different localities of the State, men engaged in manufacturing and mercantile pursuits in every walk of life, and a united opposition would not be developed to the selection of men as I have indicated.

Commissioner GARRETSON. But isn't this true in regard to a large part of that industry that you represent—namely, the shopmen, the carmen, the trackmen on a railway—that the only question involved is as to whether or not they would properly a little later come under a Federal bureau and be dependent on a court decision that these men, although located in a given point or engaged

in interstate commerce by reason of handling equipment that is engaged in interstate commerce?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. That is what it is all dependent upon?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Consequently that list, undoubtedly before the lapse of many years, will be carried under the Federal board, will it not?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Then the question arises, Must a lesser State question necessarily follow the precedent of the greater Federal question in finding a solution if a Federal bureau and the State bureaus are to work in accord and in unison with each other and utilize their energies together? Isn't that true?

Mr. ROGERS. It must have that tendency, certainly; but I should never consent to the proposition that an experienced employer who had been engaged in the settlement of disputes as representing the employers and an experienced labor leader who had been engaged in the settlement of disputes representing labor were thereby forever disqualified for service as a mediator, because my own experience has been exactly to the contrary.

Commissioner GARRETSON. Do you agree with this—

Mr. ROGERS (interrupting). When I say my own experience, I do not mean my personal experience.

Commissioner GARRETSON. I am talking about your official experience.

Mr. ROGERS. Yes, sir; in my official capacity.

Commissioner GARRETSON. I assume that you have seen this condition exist—I am talking from the standpoint of organizations that always mediate before a strike—you have seen the tense situation where the two interests were absolutely at cross-purposes, and the situation had gotten where an inadvertent word would put the men on strike?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. In other words, they would run away with the situation?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Of what use in a condition like that would be a man as a mediator against whom either side felt that he was prejudiced against them? Could he come in with value in the face of the tenseness?

Mr. ROGERS. No, sir; a man coming in when a situation is tense like that must be known as an unprejudiced man.

Commissioner GARRETSON. And he must have the wisdom of the serpent?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. And the patience that Job got his reputation on?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Is the value of the man as a general proposition determined from the greatest emergency that he confronts, or from the ordinary situation?

Mr. ROGERS. The value to whom?

Commissioner GARRETSON. To the public and to both interests, who are likewise a part of the public?

Mr. ROGERS. Well, it is very much like the strength of a rope being judged by its weakest point.

Commissioner GARRETSON. By its weakest point?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Is not the man that can meet the greatest emergency the type of man that is most desirable for the purpose?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Under all conditions?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Therefore, a man who might be good under ordinary conditions, where the strain and tenseness did not exist, who would be good under those circumstances, would be useless when the strain did exist and he would not have the same value as the man who was available under those circumstances?

Mr. ROGERS. Yes, sir.

Chairman WALSH. One question.

Was there, or was there not, a great deal of public pressure brought to bear in the Little Falls controversy for a compulsory investigation by the State, from outside sources?

Mr. ROGERS. I do not recall any considerable amount of public pressure.

Chairman WALSH. Do you recall any pressure from outside? Did anyone wait on the commission, or anything of that sort, or wait upon you?

Mr. ROGERS. I believe the idea of having a public investigation was suggested once or twice by persons who had been at Little Falls investigating the progress of the strike and the conditions under which the people were working.

Chairman WALSH. Do you recall who they were?

Mr. ROGERS. I do not by name; no, sir.

Chairman WALSH. Did they represent any organizations that you recall?

Mr. ROGERS. I can not recall just what it was. I know there were some social workers who had been up there appealed to the department for a public investigation. However, the investigation had been determined on previous to that appeal. The appeal for the investigation did not cause it.

Chairman WALSH. Commissioner Lennon would like to ask a question.

Commissioner LENNON. Mr. Rogers, are you at all familiar with the records of the labor organizations of this country as to the settlement of industrial disputes by conciliation and mediation, as to who brings them about?

Mr. ROGERS. I make something of a study of those figures; yes, sir.

Commissioner LENNON. Are you aware of the fact that, as near as they have been able to develop actual data, 90 per cent of the successful mediation and conciliation is done by the officers of the trade-union movement? Not disputes that reach you; I mean, disputes between the unions that never reach a board like yours?

Mr. ROGERS. I presume from general information that is a pretty fair estimate.

Commissioner LENNON. I want your view on this question: We hear nearly every man holding a position like yours speaking of intervention with conciliation and mediation and possible arbitration where the interests of the general public become involved. Why should that be true as to large numbers of people, and why should not the same intervention of the State take place if there are only two people on strike? Why are they not entitled to the same consideration of the State as the largest body of men that could possibly be involved in a State?

Mr. ROGERS. Logically, the same argument would apply to the small strike that would apply to the large one.

Commissioner LENNON. Then your idea would be that a department like yours would grow as opportunity and means and everything else permit so as to cover, wherever it was called in, either the large or the small controversy?

Mr. ROGERS. Ultimately I hope to see strikes be the exception rather than a frequent rule.

Commissioner LENNON. That is all.

Chairman WALSH. Are there any other questions?

Commissioner GARRETSON. I want to ask Mr. Rogers one thing.

Mr. Rogers, you are familiar with the Lemieux Act?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. With its application and methods?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. The Lemieux Act provides, does it not, that either party must—the employer before proceeding to lock out his men, or the men before proceeding to strike—make application for the board of investigation?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. It further provides that any municipality upon the line of a railroad or interested in any industrial dispute can also make application?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. But it does not make it obligatory upon the minister to hold the investigation?

Mr. ROGERS. No, sir.

Commissioner GARRETSON. It is discretionary with him whether he holds it or not?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. It also provides that neither interest can change the status while the investigation is being held?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Is it not a fact that under its actual working the employer does utilize that period to reinforce himself against a strike that will

take place if the verdict of the investigating board is not favorable in any degree to the men?

Mr. ROGERS. They undoubtedly make preparations for a strike.

Commissioner GARRETSON. In other words, recruit men to replace them?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Have you kept any data or collected any to show you the amount of time that intervenes?

Mr. ROGERS. It averages about 30 days, as I am informed.

Commissioner GARRETSON. Although it will far exceed that, will it not?

Mr. ROGERS. In certain cases; yes, sir. The more important the case the longer it is apt to take.

Commissioner GARRETSON. Were you connected with the department in 1910?

Mr. ROGERS. Yes, sir; the latter part of 1910.

Commissioner GARRETSON. At the time of the wage movement in the East of 1910 by the conductors and trainmen?

Mr. ROGERS. Yes, sir.

Commissioner GARRETSON. Do you know the amount of time that was consumed in disposing of that question on the 3 Canadian railways while 77, I believe it was, in this country were disposed of?

Mr. ROGERS. I don't recall exactly now how long it was; a considerable time I know.

Commissioner GARRETSON. Are you aware of the fact, or do your figures show you, that it took far more time to dispose of the 3 there than it did of the 77 here?

Mr. ROGERS. I believe that is the fact.

Commissioner GARRETSON. I suppose your experience has taught you something of the psychological moment, as it is fancifully described?

Mr. ROGERS. Very decidedly.

Commissioner GARRETSON. Could any greater weapon be placed in the hands of the employer than an enactment like the Lemieux Act to destroy action in concert, absolutely concert by the men?

Mr. ROGERS. I have heard that objection made to it by labor men.

Commissioner GARRETSON. If it took three months longer to dispose of 3 cases under the Lemieux law than it did to dispose of 77 under the Erdman Act, how long, in your opinion, would it have taken to take care of the 77 cases had they existed under the Lemieux Act?

Mr. ROGERS. No doubt that it would have taken a considerable time.

Commissioner GARRETSON. And if they had already had a hundred cases they would have cases unfinished even on the judgment day, wouldn't they?

Mr. ROGERS. It would have worn out everybody's patience, I think, at least.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. That is all, thank you, Mr. Rogers.

Commissioner GARRETSON. Allow me to correct the record. I referred to the Lemieux Act. Allow me to insert "The Dominion compulsory arbitration act." I used the localism that is used on the other side for it.

TESTIMONY OF MR. TIMOTHY HEALY.

Chairman WALSH. What is your name?

Mr. HEALY. Timothy Healy.

Chairman WALSH. And what is your occupation?

Mr. HEALY. Coroner.

Chairman WALSH. How long have you lived in New York City?

Mr. HEALY. In this State?

Chairman WALSH. In this State; yes.

Mr. HEALY. Thirty-three years.

Chairman WALSH. How long?

Mr. HEALY. Thirty-three years.

Chairman WALSH. How long have lived in New York City?

Mr. HEALY. All of that time pretty much.

Chairman WALSH. All of that time? What position did you occupy prior to your election as coroner?

Mr. HEALY. President of the International Brotherhood of Stationary Firemen.

Chairman WALSH. How long were you president of that organization?

Mr. HEALY. Twelve years. I hold the office yet.

Chairman WALSH. I would like to know, Mr. Healy, whether or not you have had, as an official in that organization, any experience under the New York mediation and conciliation laws?

Mr. HEALY. No; I have had none directly.

Chairman WALSH. Has your organization ever had any appeal to them?

Mr. HEALY. No.

Chairman WALSH. In any controversy?

Mr. HEALY. No.

Chairman WALSH. Are you in favor of compulsory investigation of labor disputes?

Mr. HEALY. No.

Chairman WALSH. You note that it is simply a compulsory investigation?

Mr. HEALY. Yes; not compulsory arbitration.

Chairman WALSH. Not compulsory arbitration, but a compulsory investigation?

Mr. HEALY. Yes. I favor compulsory investigation of disputes.

Chairman WALSH. But I take it from your other answer, you are opposed to compulsory arbitration?

Mr. HEALY. Absolutely.

Chairman WALSH. Have you made a study in your capacity as head of this organization of the present State law of mediation and conciliation in the State of New York?

Mr. HEALY. Well, no; I haven't made a study. Know it in a general way, that is all.

Chairman WALSH. Could you give us any line upon whether or not that law in your opinion could be improved in any way?

Mr. HEALY. Well, I have my own ideas about that.

Chairman WALSH. Well, we will be very glad to have them, Mr. Healy.

Mr. HEALY. The present law, it seems to me, has for the past few years done quite some good in the investigations they have made. They have at least enlightened the public as to the points at issue. Now, I don't know what improvements could be made. I have heard that the State don't give sufficient men; that the board might be enlarged.

Chairman WALSH. Did you hear the testimony of Mr. Rogers given just a few minutes ago on that subject? Were you in here?

Mr. HEALY. I did not catch that. Not that particular point. I guess I was not here.

Chairman WALSH. Well, go ahead, then?

Mr. HEALY. I have heard complaints that the State don't pay the salaries to the men that they are entitled to. Outside of that I don't think—

Chairman WALSH (interrupting). You could not suggest any improvements in the law, then?

Mr. HEALY. Not to make suggestions. I haven't given it thought enough.

Chairman WALSH. That is all. Do you wish to ask any questions? Mr. Bird would like to ask some questions.

Mr. BIRD. I just want to know what experience you have had, whenever you came in contact in this State, in regard to arbitration and mediation; was it in 1910 in the International Paper Co.?

Mr. HEALY. I have had no experience.

Chairman WALSH. He says he has had no experience whatever.

Mr. HEALY. The only strikes I did have, the members of the board have come around and wanted to know if they could be of any assistance, and more than that I never came in contact with them.

Mr. BIRD. Have you ever had any experience serving on committees? Haven't you had some experience with the National Civic Association?

Mr. HEALY. The National Civic Federation?

Mr. BIRD. Have you any suggestions to offer as the result of your experience with that federation as to arbitration or mediation? Have you any suggestions?

Mr. HEALY. I haven't any suggestions to make.

Chairman WALSH. That is all, thank you, Mr. Healy.

The commission will now stand adjourned until to-morrow morning at 10 o'clock, to meet in this same room.

(Whereupon the commission adjourned to Thursday, June 4, 1914, at 10 a. m.)

NEW YORK CITY, *June 4, 1914—10 a. m.*

Present: Chairman Walsh, Commissioners Lennon, Garretson, Harriman, O'Connell; Counsel W. O. Thompson; Mr. Francis H. Bird, superintendent division public agencies.

Chairman WALSH. The commission will please be in order. Call your witness, Mr. Thompson.

Mr. THOMPSON. Mr. H. F. Stimpson.

TESTIMONY OF MR. H. F. STIMPSON.

Mr. THOMPSON. You may state your name, place of residence, and occupation.

Mr. STIMPSON. H. F. Stimpson; 1055 Dean Street, Brooklyn; consulting engineer.

Mr. THOMPSON. How long have you practiced your profession as consulting engineer?

Mr. STIMPSON. For the last two years, directly, and for a good many other years in connection with engineering organizations.

Mr. THOMPSON. Will you please name some of those organizations?

Mr. STIMPSON. The Universal Audit Co. of New York; the Emerson Co., of which Mr. Harrington Emerson is president; the Roberts & Abbott Co. of Cleveland, Ohio; the Westinghouse-Church-Kerr & Co.; Dodge & Day, Philadelphia; the General Electric Co.

Mr. THOMPSON. Mr. Stimpson, have you something to say on the proposition of where the money goes to, whether to the small storekeeper?

Mr. STIMPSON. The subjects on which I asked a hearing in the letter addressed to the commission are related to that proposition. As I conceive it, the purpose of the commission is expressed in a document which I received about the time of its appointment, from which I read: "The commission shall seek to discover and to point out the underlying causes of dissatisfaction in the industrial situation."

The causes may be divided into three groups, speaking from my knowledge of industrial matters of something over 30 years. First, the difficulty of obtaining employment and remaining in employment; second, the characteristics of the conditions under which work is done; third, the results of effort as embodied in what the wage or salary earner is able to secure with his wages. The second of those matters is being handled by what are generally termed "welfare workers." They are largely matters of direct arrangement between the worker and the employer, and I shall not ask the commission to give me any time on such. But I will ask the commission to give me a little attention on the first subject. The difficulty of securing employment, in my judgment, is not a matter of bringing the job and the man together, but it arises out of the fact that there are not enough jobs, and the reason that there are not enough jobs is because the purchasing power of the great majority of our people who are salary or wage earners has been artificially limited. There are only 198 hours in a week—7 times 24; and a man obviously can not work continuously. So that the maximum amount of time in which he can work may be now considered from 60 to a few more hours.

Now, it obviously follows that if the representation of his exerted efforts, which we term the wage, is unduly minimized when he goes to exchange it for the result of the effort of others—in other words, if he is asked to give up several times as much wage as he should for what he has to buy, it follows that his purchasing power is very greatly restricted, that that means that the market—the amount of goods which can be sold—is lessened, and that means that the chances for employment of other people is reduced. I conceive that the present business depression is totally unlike any other depression. It is a condition I have foreseen and prophesied for a number of years. It arises from the fact that the prices charged by the merchandisers, whether that means the sales department of the manufacturer, one of the wholesalers, the middle man, or the retailer have been so inflated—that is to say, increased out of all relation to any actual cost, that the purchasing power of the great majority of the people has become exhausted like a farm that is continually worked without fertilizing; and, in my judgment, it is an extremely serious condition. The remedy for that, obviously, must be some step which will prevent such an inflation of prices and that will automatically create a greater demand on the part of the people who are employed, so that there will be a great increase in the openings for others as workers. It is not a thinkable condition that dealers should refuse to sell to

people who come to buy from them or that manufacturers should refuse to make up orders which they get; but all of those things spring from the consumer. The producer exists for the benefit of the consumer, and not the consumer for the benefit of the producer. The need for the producer originates in the requirements of the consumer. In the present day a great many people are concerned in operations which do not directly touch the land. There is a long chain of operations between the land and the final consumer. And so when the people who conduct these operations can not secure a market for their property—that is to say, their energy—they are powerless to exist; and their simply going back to the land will not help that, because the things which are directly and completely produced from the land are very few.

Now, that has to do with the narrowing of the market for labor. Now, that narrowing causes people to be in a continual state of anxiety and mental agony and unrest, even when they have employment, because they don't know when they are going to be thrown out of it and they are fearful of the consequence of being put out.

On the other hand, the man who is employed finds that his work is continually bringing him in less and less returns in the shape of commodities or services or otherwise, because of these inflations. To show what these inflations mean, I will instance one or two things of which I have rather direct knowledge.

A member of my family was asked to pay in the millinery department of a department store of this city six times as much as she was asked to pay in another department, in the same store, on the same day, for the same thing, and which was the normal home of that article. In other words, a fabric which belonged in the upholstering department, where they were perfectly willing to sell for 15 cents a yard, when it was transported down to the millinery department, where it did not belong normally, was marked up to 85 cents a yard, and she would have paid it if she had not been a good shopper.

Suppose her to have been a working girl, working for 15 cents an hour, not experienced in shopping, she would have naturally gone to the millinery department; she would have given up six hours of wages for a yard of this fabric; and that would have meant she would have had five hours less wages to spend. In that case it would have meant a narrowing of the market, so far as she was concerned.

In a leading article of the *Iron Age*, published last August in support of the argument there should be a chemist attached to the purchasing department in an organization, it was stated that a certain compound had been sold to this company for hardening steel springs and for which they paid \$5 a pound. Becoming suspicious of the price, they got an analytical chemist and he examined the mixture and he found it was a mere mechanical mixture or stirring together of two chemicals, which could be bought in the open market for 5 cents a pound, and which had simply been mixed up and put in a package and sold for \$5 a pound.

I was told by one of the vice presidents of a brass manufacturing company in Connecticut that he paid \$1.25 for a certain raw material, in the shape of metal, laid down at his factory; that included the mining of the ore in the Rocky Mountains, the smelting of it, and the transportation across the country. To that he added \$2.25 of manufacturing cost, which he said included 15 cents profit, making a total cost at the factory of \$3.50. He told me he had traced the product down to the vicinity of New York and had found that the fixture cost the house owner between \$12 and \$15, and all that was done was to ship it down here, have it handled by the wholesaler or jobber and screwed into place by a plumber.

I have a letter sent to me by the firm of J. K. Rice, Jr., & Co., 36 Wall Street, dealers in securities. The letter was entirely unsolicited. It refers to the operations of the Singer Manufacturing Co. It states that that company was incorporated in 1863 with a half a million of stock, was increased in 1873 to \$1,000,000, to \$10,000,000 in 1887 (I would ask the commission to note that particular date, \$10,000,000 in 1887), to \$30,000,000 in 1900, and to \$60,000,000 in 1910, each increase being made by distributing stock dividends.

Cash dividends have been paid each year since the early days of the company, though a complete record before 1898 is lacking. But since 1898 cash payments to stockholders have totaled over \$93,000,000 on a \$10,000,000 capitalization. It is not improbable that surplus and reserve funds have grown to something over \$55,000,000 since the last stock dividends in 1910.

Now, that means that since 1898, or in 15 years, the company has taken out of the public in the way of profits, distributed and otherwise, \$148,000,000, which is nearly 1,500 per cent on the capitalization prior to 1898.

If that is in the form of paper issued to conceal excessive profits, it means that they have taken out 1,500 per cent profit as against a normal profit of about 150 per cent; that is, 10 per cent for 15 years.

If, however, the profits have been invested in plant and equipment, it means that the difference between \$10,000,000 in 1898 and \$60,000,000 at the present, or \$50,000,000, have also been extracted from the community; so that in that case there would have been extracted nearly \$200,000,000 of net profits on a capitalization of \$10,000,000.

Now, gentlemen, my contention is that as long as the arbitrary method of valuation or setting prices goes on, it does not make any difference how fast a man's wages are raised, the merchandiser can raise the prices so much faster that the man is absolutely no better off in the end than in the beginning. In the old days of absolute monarchy the monarch valued various things which he might want on the basis of desirability, suitability, duty, utility, or anything of that kind.

The question of cost did not enter his head. He did not have to figure cost. We have continued to value things in that way. We do very fine bookkeeping, but our unit price—the cost price per unit, such as a foot, pound, bushel, or hour—is arbitrary. It is not based on any scientific reasoning, and while we have discovered that we can not trust each other to coin money because—I am speaking of metal money—man might make money out of anything he could get and put upon the community counterfeits which would endanger the soundness of transactions, we have not realized that an arbitrary, unscientific, inaccurate, impractical determination of unit values is a counterfeiting of prices which is just as dangerous as the counterfeiting of money. And therefore I claim that the remedy for this condition is the scientific valuation by a properly constituted Federal bureau on the basis of exerted effort of all service, and hence of commodities produced by service. My attention was directed to that originally by some investigations which I made, in which I found that the value in New York of a unit of electric power was 2 cents, the value of the same amount of power obtained from an animal was over 20 cents, and the cost of the same amount of power obtained from a dock laborer was over \$2. Now, under the present conditions, whenever the cost of power, which is the essential element of any cost, has been decreased, the effect has been to add it to the profit of the dealer rather than to decrease the cost to the consumer. It operates exactly as the tariff reduction has operated; the European dealer or the dealers on this side have absorbed the reduction and added it to their profits, and no saving to the consumer has resulted.

And in support of that I should like to read very briefly from some articles written by Mr. John Moody, 35 Nassau Street, from the periodical entitled "The Public," which is published in Chicago.

Chairman WALSH. Would you just please submit those? We have made it a sort of rule here, Mr. Stimpson, that where a document is offered that the document itself be given, because we are abstracting all these hearings and all the commissioners are reading them.

Mr. STIMPSON. Very good.

Chairman WALSH. You can make any verbal comment on it in your time, of course, but submit the document later.

Mr. STIMPSON. He makes the same statement that I do. He says that in the new capitalization the value of the stock is based on what he terms its "earning power." In other words, the amount which those who conduct the enterprise are able to extract from the public. I do not call it earning power. I call it "stealing power." I don't think it is wise to mince matters. If a man can buy a thing for 5 cents, and, without adding materially to its characteristics, can sell it for \$5, I think that is stealing, and I think that the dividend-producing power on that kind of a transaction is false economy, dishonesty, immorality, and ruinous to the safety of this country, and it is absolutely impossible for the individual to fight that condition.

I have said to the Central Labor Union that no actions of theirs, as a union, in the way of getting an increased wage could permanently benefit them, because of the immediate increase in the prices which they are asked to pay, and also because the increase of wage they obtain is usually paid by their fellow unionists who purchase the commodity; whereas if through their Congressman

they caused the proper Federal action to be taken the water would be squeezed out of these prices. This would be practically the same as an increase in their wages, but it would not detrimentally affect all of the people who came into the question afterwards.

That, Mr. Chairman, is in brief the thing which I wanted to bring to your attention.

The matter of industrial unrest is not a matter to be remedied by labor exchanges. We must remove the artificial restriction on the market in which labor may be sold, and we must bring about such conditions that a man will not have to work harder to earn the price of a thing than he would to make it himself. That condition is unthinkable, when you go back to the principle of the exchange of effort, but when a man has to work 5 or 10 or more times as hard to earn the price of a thing than to make it plainly there is something wrong and something which can not be defended.

Chairman WALSH. Mr. Garretson would like to ask you a question.

Commissioner GARRETSON. You made the statement, Mr. Stimpson, that the bringing of the man and the job together would not have any effect on the question of unemployment, because it was based on the fact that there were not enough jobs?

Mr. STIMPSON. I meant to convey the idea, Mr. Commissioner, that that was a very minor proposition; that undoubtedly there are some vacant jobs for the men, but I do not think there are more than a very few per cent of the number of idle men. I don't think if you got all the jobs for all of the men you would handle the question of unemployment.

Commissioner GARRETSON. Well, then, if means were devised for bringing the men and such jobs as are open together it would minimize unemployment to the actual surplus of men over jobs, wouldn't it?

Mr. STIMPSON. Surely. I don't want to be understood as objecting to that plan, only as trying to bring out that the other thing is a great deal more important.

Commissioner GARRETSON. Has your investigation on this subject led you to the conclusion—I am only going to deal with one form of merchandiser, the retailer—that a large part of the added cost of commodities that are consumed daily—that is, the necessities of life—is caused by a multiplication of retailers, with the result that each retailer expects to get his living and a profit from a very small volume of sales, instead of from a reasonable volume of sales, if the number was not needlessly multiplied?

Mr. STIMPSON. I think that is true, that there are a great many small enterprises, such as grocers, where the normal profit from their volume of trade would not equal the living of the man who conducts the business. I think that is perfectly true.

Mr. GARRETSON. And he has to have an abnormal rate of return from his gross to give him a living, let alone a profit?

Mr. STIMPSON. That is true. I will speak, if I may, in relation to my own grocer. He is a young man whose father conducted this small business for a great many years in this locality. He is working hard, I know from personal observation, all day himself. He keeps his men busy. But I have understood from what I think is good authority that his profits are very very small. That is—

Commissioner GARRETSON. His gross profits?

Mr. STIMPSON. His net profits.

Commissioner GARRETSON. I mean on his gross business?

Mr. STIMPSON. Yes. Are a long ways less than 10 per cent. Now, in any enterprise of that kind there are certain functions which have to be exercised and which one man can exercise over a great many people as efficiently as over a few.

Commissioner GARRETSON. You mean that his profit of 10 per cent is a net profit after overhead is paid?

Mr. STIMPSON. That is my understanding.

Commissioner GARRETSON. Well, what does that mean? What percentage of cost on the individual article is necessary over what he pays for them to bring him that net result?

Mr. STIMPSON. Well, that I haven't information enough to answer. My understanding of the per cent I spoke of was on capital invested.

Commissioner GARRETSON. Certainly. Net results.

Mr. STIMPSON. Yes.

Commissioner GARRETSON. In other words, if he did a business of \$30 a day to get anything out of it he would have to have \$15 in the form of increase over his cost, virtually 100 per cent?

Mr. STIMPSON. Well, that is a statement which I should not like to either assent to or dissent from.

Commissioner GARRETSON. Well, it would be a necessity if he met the charge of his business, would it not?

Mr. STIMPSON. In a general way the question is too indefinite to answer. There isn't data enough there to form that opinion.

Commissioner GARRETSON. From a clause in your letter, the third clause, where you take the position that there should be scientific valuation by the Federal Government of all property, including labor, do you consider human labor as a commodity?

Mr. STIMPSON. No; because a commodity is a union of inert material and effort. But I do consider human labor as property, just as the power which the Edison Co. sells is property.

Commissioner GARRETSON. Isn't that the idea underlying slavery?

Mr. STIMPSON. No. The Edison Co. is in the business of liberating solar energy from the coal which it burns in its power plant, and it sells that power to people to do with what they want to with it. Every man, physiologically speaking, does exactly the same thing. He liberates solar energy from the food which he eats. He is very much in the position of a farmer. The farmer has raised crops. If he can't dispose of them before they decay, it is a loss. The workman can no more store his energy at present than the farmer can store apples indefinitely. If he can not utilize that, as you might say, within 24 hours, it is a loss to him. But it is property just the same as the power which the Edison Co. sells is property. Now, my contention is that that property, the basic element of energy of which steam, electricity, water power, human labor, and other things are manifested—I am speaking technically now——

Commissioner GARRETSON. Yes.

Mr. STIMPSON. That that property is the vital element of all property which we exchange, and that the laborer, the wage or salary earner, for his own protection, should insist that means be provided whereby he might either measure or secure the measurement of the property which he has to sell, so that he might know whether he gets the equivalent in the process of exchange.

Commissioner GARRETSON. In other words, on this purely technical ground which you take, the Edison Co. owns the machine and releases the solar energy in one instance and the man leases the human machine that releases this energy to somebody else and takes a wage therefor?

Mr. STIMPSON. Yes.

Commissioner GARRETSON. And the machine and the man are put on the same plane in your system?

Mr. STIMPSON. Well, the man, in my estimation, is the spirit which lives in the body; it bears the same relation to the body that the engineer does to the locomotive. The power which, as you might say, runs the man is a spiritual power which comes to the mind; the power which runs the man's body is the latent power in the food he eats.

Commissioner GARRETSON. Has there ever existed an industrial system, Mr. Stimpson, where the owner owned the body that he did not also dominate the spirit?

Mr. STIMPSON. If by owner you mean another individual, as in slavery——

Commissioner GARRETSON. Or leaseage.

Mr. STIMPSON. I don't gather the connection of the word leaseage.

Commissioner GARRETSON. Well, under the wage system, drawing the illustration of the man to the machine, if the Edison Co. owns the machine another employer leases this human machine for the time being and pays a wage therefor for the time period which he employs him.

Mr. STIMPSON. It seems to me that the trouble is, if I may use the word, with the lowered view of the laboring man. I don't think he rises to a sense of his own dignity. I consider the laboring man as a man of exactly the same plane as the employer. The laboring man, the spirit, the real man, lives in the body. By that body he transforms the energy of food into energy which may be employed to push a truck or anything else. He is a manufacturer of power exactly on the same plane as the Edison Co. He has a perfect right to sell his product, and that is what he does sell, to anybody he wants to. The trouble is that at present he does not know how to measure his own product. He is taking some one else's word for the measurement, and he gets the worst of the

deal. And because his education is not sufficient to enable him to protect himself, my position is that the Federal Government should protect him, protect his interests or enable him to do it.

In other words, it would come down to this, that when a man went to perform an operation he might call for the Federal tariff or expression of values of that operation, just as you can go down to the railway station and call for the tariff of fares so that the ticket agent can not charge you \$10 for an \$8 ride and put the other \$2 in his pocket. And there would be no question about the wage, because the energy required for a certain operation does not change as long as the operation does not change. On the other hand, when he goes to exchange his wage for a commodity in the store he could call for the tariff of values there, so that he could be sure that the translation was equal, that he got the equivalent of what he gave. That is just the point I want to bring out.

Commissioner GARRETSON. Just one more question: Hasn't your system in its totality had an exact prototype in the history of the world?

Mr. STIMPSON. I don't think it has ever had, because that question of values has never been determined on that basis, so far as I know.

Commissioner GARRETSON. Was not the old payment in kind, where the man received so many pounds of stuff for so many hours of service, exactly what your system contemplates?

Mr. STIMPSON. No, sir.

Commissioner GARRETSON. That is all.

Chairman WALSH. That is all, thank you, Mr. Stimpson. Call your next witness, Mr. Thompson.

Mr. THOMPSON. I will call Mr. James M. Lynch.

TESTIMONY OF MR. JAMES M. LYNCH.

Mr. BIRD. For the purposes of the record, Mr. Lynch, will you please state your name, address, and present occupation?

Mr. LYNCH. James M. Lynch, Albany; commissioner of labor of the State of New York.

Mr. BIRD. How long have you been commissioner of labor?

Mr. LYNCH. Since last October.

Mr. BIRD. What was your occupation previous to that time?

Mr. LYNCH. Previous to that time I was president of the International Typographical Union.

Mr. BIRD. How long were you president of the International Typographical Union?

Mr. LYNCH. Thirteen years.

Mr. BIRD. In the testimony brought out yesterday by your chief mediator, Mr. Rogers, he referred to the fact that industrial controversies in New York were handled sometimes by single mediators and sometimes by a board of mediation and investigation. Your law reads that the board of mediation and arbitration shall inquire into a controversy if the commissioner of labor deems it advisable. Now, I would like to ask you when you deem it advisable to have this board of mediation and arbitration investigate such controversies?

Mr. LYNCH. When we deem it advisable to have the mediation board itself act?

Mr. BIRD. Yes, sir.

Mr. LYNCH. When the difficulty or threatened difficulty is of sufficient importance to justify that action, and when the individual efforts of the arbitrators have failed—the individual efforts at mediation have failed.

Mr. BIRD. Do I understand, first, you send in an individual mediator?

Mr. LYNCH. We send in the individual mediators when a strike threatens or after the industrial disturbance has taken place. Then we send, if necessary, the entire board, still endeavoring to adjust the matter through mediation. Then, if that fails, and the industrial disturbance is of sufficient importance to justify an investigation, we hold a public investigation.

Mr. BIRD. Do you consider this method of public investigation a good thing?

Mr. LYNCH. Why, yes; I think it is a good thing.

Mr. BIRD. Now, what advantage has it been to your department? Mr. Rogers brought out the fact yesterday that some of the disputes with which he had to do were oftentimes settled, he thought, in part because you had that club behind you, which you could use and which you often did not need to use.

Mr. LYNCH. Because we have that power, rather than club. We have that power to conduct an investigation and determine the facts. The facts, naturally,

make it clear to the public who is responsible for the continuance of this disturbance.

Mr. BIRD. Is it a fact that you have used that power more and more in the last few years?

Mr. LYNCH. Well, we have used it, the records show, more in the last few years than formerly, because the power has been given to the board only in recent times—the power of compulsory investigation.

Mr. BIRD. Now, in cases where you intimate you are going to use this power, from the testimony yesterday it was brought out that a settlement was very readily made frequently. Is that settlement because employers feared the results of the investigation or because the employees feared the results of that investigation?

Mr. LYNCH. That would again depend on the circumstances that might surround a particular threatened industrial disturbance or actual industrial disturbance. I should say that if the employer was wrong—that is, if his position was not justified—or if the union itself was wrong in its position and was not justified—that is, if either one of them was refusing to arbitrate—that rather than have those facts brought out they would get together and adjust the disturbance.

Mr. BIRD. In other words, both sides to the controversy respect public opinion. Is that your idea?

Mr. LYNCH. Most assuredly.

Mr. BIRD. And if the State has the machinery by which public opinion can be brought to bear upon the controversy some disputes could be adjusted which could not be adjusted otherwise?

Mr. LYNCH. I would say that would be true; not only some disputes, but nearly all the important disputes.

Mr. BIRD. Do you consider, Mr. Lynch, that the best kind of organization, of a bureau or board of mediation and arbitration, is that where the bureau of mediation is connected directly with the department of labor, as your organization is? Do you consider your organization——

Mr. LYNCH (interrupting). The best kind of a bureau?

Mr. BIRD. Yes; or would you prefer to have it separate? Do you think——

Mr. LYNCH (interrupting). In the State it should be a part of the department of labor; that is, if the State is to exercise that function it should be a part of the department of labor, as it is at the present time.

Mr. BIRD. Now, what are the advantages of such an organization?

Mr. LYNCH. Well, the same advantage that links up all the other activities of the State that concern industry and interest the wage earner in one department with a commissioner who has power to do certain things.

Mr. BIRD. Could you state specifically some of the advantages?

Mr. LYNCH. Well, I can not see the disadvantages. If you give me an idea of what you have in mind as to the disadvantages, perhaps I could make it clear. I mean, it has no disadvantages. The present organization of the bureau of mediation is as nearly perfect, I think, as it can be made. It is a State function, and part of the department of labor.

Mr. BIRD. Now, are there any defects in the present law, or any recommendations which you have in mind as to the improvement of the bureau of mediation and arbitration, or your functions connected with the bureau of mediation and arbitration?

Mr. LYNCH. Not at the present.

Mr. BIRD. Do you have any trouble with the settling of interstate disputes?

Mr. LYNCH. Interstate?

Mr. BIRD. Yes, sir; where employers or employees of one State are connected with a controversy which spreads over a number of States.

Mr. LYNCH. That would be in connection with the railroads.

Mr. BIRD. With the railroads, or any big industry which has a number of plants.

Mr. LYNCH. Well, we do not attempt to handle a railroad dispute, and so far as any other industry doing an interstate business with plants in different States is concerned, we have no difficulty with that. The General Electric Co., for instance, with a plant in Schenectady, or any other corporation with plants in various and different cities of the State, because there the difficulty is localized.

Mr. BIRD. But a railroad is not localized, but extends from State to State. You have had difficulty, have you not, with railroad disputes?

Mr. LYNCH. One instance since I have been commissioner.

Mr. BIRD. Do you think the Federal Government should have its powers enlarged so as to include all employees in connection with the railroads?

Mr. LYNCH. If the Federal Government is to handle the matter, I think it should handle all employees connected with that industry.

Mr. BIRD. Do you think the Federal Government should handle employees connected with other big industries under the Constitution?

Mr. LYNCH. By the same machinery with which to handle the railroads?

Mr. BIRD. By some Federal machinery.

Mr. LYNCH. That is rather an indefinite proposition. I should not like to commit myself to a proposition that the Federal Government should have the right, or should enact a compulsory arbitration law, for instance.

Mr. BIRD. Suppose the board of mediation and arbitration, as it has been created and exists at present, was enlarged, with practically the same powers, would you consider such a kind of machinery proper?

Mr. LYNCH. Well, it seems to me again that is rather a large question for an affirmative or negative answer.

Mr. BIRD. Well, put it this way. In New York State there was a department of labor, and a bureau of mediation and arbitration connected with the department of labor. Now, if there were a board of mediation and arbitration separate from the department of labor, do you think we should enlarge the powers of this board, as is the case with the Federal board?

Mr. LYNCH. I think it should be connected with the department of labor.

Mr. BIRD. Why?

Mr. LYNCH. Because of the same reasons that make it advisable that the board of mediation and arbitration in the State should be connected with the department of labor. That is the department that handles these matters, and they are more or less related, and it is the proper department, in my opinion, that should have charge of matters of that kind.

Mr. BIRD. That is all, Mr. Chairman.

Commissioner GARRETSON. Mr. Lynch, do you believe, regardless for a moment of what department it might be connected with, that a desirable method of administering mediation and conciliation would be the institution of a Federal agency of some reasonable type, either an extension of the present Newlands method, or the creation of a tribunal somewhat similar in character, acting in concert with the State agencies, and dealing with all questions arising that were interstate in any way in their character, either as to location, service, output, or kindred questions would be a desirable method of dealing with conciliation and mediation?

Mr. LYNCH. I can readily agree to the affirmative of that question because of the use of the reasonable powers of such a board; that would be in accordance with my opinion of what would be the reasonable powers of such a board.

Commissioner GARRETSON. If the powers were, in your opinion, reasonable, would it be, in your opinion, a desirable method?

Mr. LYNCH. Any agency with prestige and authority that can step in at the proper time and bring the disputants together, would be a good proposition, in my opinion.

Commissioner GARRETSON. Do you believe that all corporations or combinations that are interstate in their character should be brought under, as, for instance, the Lake Carriers' Association that was cited yesterday, which does business in three or four different States; the General Electric Co., I believe, also does; the International Paper Co.—do you believe that enterprises of that character should properly be brought under the Federal jurisdiction or remain as at present, under State jurisdiction?

Mr. LYNCH. They could be very properly brought under Federal jurisdiction under the reasonable methods that you suggest.

Commissioner GARRETSON. How is that?

Mr. LYNCH. They could be very properly brought under Federal jurisdiction under the reasonable methods that you suggest.

Commissioner GARRETSON. Now, do not misunderstand my attitude. I would be as quick as yourself to oppose any compulsory form, nor would I term any compulsory measure reasonable; but describing the powers that the present Newlands board have, do you believe that they could deal more satisfactorily with problems arising in these interstate organizations that I have named, than the States can?

Mr. LYNCH. They could, where the difficulty extends from one State to another State.

Commissioner GARRETSON. Yes.

Mr. LYNCH. Where the difficulty is localized I believe that the State board could act as efficiently as a Federal board.

Commissioner GARRETSON. But wherever the result is felt in more than one State—or the action takes place, probably is a better term—is in more than one State, then it could be handled better by Federal jurisdiction?

Mr. LYNCH. Where the action takes place in different States, I believe it could.

Commissioner GARRETSON. Is it not true under the States system the contestants—possibly sometimes the labor involved and possibly the employers—do play one State against another, on account of that divided jurisdiction that now exists?

Mr. LYNCH. In industrial disputes?

Commissioner GARRETSON. Yes. That they will make one representation to one State board and another to another?

Mr. LYNCH. I think that would be quite likely. I have no knowledge of that, actually.

Commissioner GARRETSON. It could easily be done?

Mr. LYNCH. The same thing occurs in connection with the application of the labor laws, the threats of manufacturers or those who represent the manufacturers to move out of the State, and all that.

Commissioner GARRETSON. That is all, Mr. Chairman.

Mr. LYNCH. Which they have done, by the way.

Commissioner GARRETSON. By the way, one thing there. The fact is, in your experience, in regard to State legislation on various subjects, you have always found that the stuffed club that was invariably wielded against reasonable legislation in favor of the wageworker alone?

Mr. LYNCH. I have almost invariably found that the threat to move to some other State has been made in order to defeat legislation that was humane and beneficent in its purposes.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Have you any questions, Mrs. Harriman?

Commissioner HARRIMAN. No, sir.

Commissioner LENNON. Mr. Lynch, how is the board of mediation in the State of New York now named? How is it selected?

Mr. LYNCH. How is it named?

Commissioner LENNON. How is it selected?

Mr. LYNCH. It is selected by the commissioner. The present board of mediation and arbitration, however, has been in office for some years.

Commissioner LENNON. Is there anything in the law as to the selection of this board that they shall be partly representative of labor and partly representative of employers, anything of that character?

Mr. LYNCH. No, sir.

Commissioner LENNON. If a national board, with similar powers, having to do with interstate commerce, were established, what would you think of a provision that such board should represent the employers and the employees?

Mr. LYNCH. Well, that would depend largely on the number that would constitute the board, in my opinion.

Commissioner LENNON. Well, say a board of 7, or 9, or 15?

Mr. LYNCH. I don't know that I would be in favor of that provision with an odd-numbered board. With three representing the employees and three representing the employers, and one representing the public, we might say, and one independent arbitrator, because I am of the opinion that in nearly all instances the decision would be made by the chairman of the board.

Commissioner LENNON. Do you believe that men should be, or women, as the case might be—we might have to have some women on the job—should be selected for their fitness, for their tact, and for their general character, rather than because of their particular affiliation with any body?

Mr. LYNCH. Yes, sir; I believe that would be the ideal board.

Commissioner LENNON. What has your experience been as to the success of trade unionists who have had opportunities as officers of national or international unions as mediators? Have they been moderately successful under your observation?

Mr. LYNCH. Speaking of my own trade?

Commissioner LENNON. Yes.

Mr. LYNCH. The International Typographical Union, which has had an agreement with the American Newspaper Publishers' Association for more than 12 years—we have been highly successful in connection with mediation and arbitration, and, so far as my knowledge goes, and I have had some opportunity for observation, in all instances where the arbitration agreements are made between employers' associations and the unions, they have been successful.

Commissioner LENNON. Would you not hold to the view that such board as the one in the State of New York, or a national one, if created, is to supplant the work of mediation and conciliation that is now done by the unions direct with their employees?

Mr. LYNCH. No, sir. My instructions to the mediators of the State are that the employer and the employee are to settle these difficulties, if it is possible to get them together to do it. That is the best form of settlement.

Commissioner LENNON. Your answer would indicate that you believe that these boards are to step in where the ordinary method of mediation and conciliation have entirely failed between the organizations?

Mr. LYNCH. Yes, sir.

Commissioner LENNON. And then there should be this resort for the protection of the public?

Mr. LYNCH. Yes, sir.

Commissioner LENNON. That is all I have.

Chairman WALSH. Are there any other questions?

(No response.)

Chairman WALSH. That is all, Mr. Lynch, thank you.

EXHIBITS.

LUNDRIGAN EXHIBIT.

INTERNATIONAL PAPER Co.,
30 Broad Street, New York, June 4, 1914.

Mr. BASIL M. MANLY, Chief of Staff,
United States Commission on Industrial Relations,
Room 1226, Municipal Building, New York City.

DEAR SIR: During my appearance before the industrial commission yesterday one of the commissioners requested of me that I furnish the commission with my report as member of the New York State Board of Mediation and Arbitration on the so-called Great Lakes dispute which occurred during the season of 1908..

I am inclosing herewith copy of the June, 1909, Bulletin of the New York State Department of Labor, which contains this report in full and which will be found on pages 132 to 158 inclusive.¹

I am also inclosing copy of the address delivered by myself at the convention of the several State boards of arbitration held at Washington, D. C., in March, 1910.

Each of these are sent for the information of the commission, and trust that they may be of some use to you.

* * * * *

Yours, very truly,

JOHN LUNDRIGAN.

[Copy of address delivered March, 1910, before National Convention of State Arbitration Boards at Washington, D. C., by John Lundrigan.]

So far as I am aware this is the first general conference of public officials which has undertaken to deal with the subject of labor disputes. It had its inspiration through the efforts of the members of a joint conference, acting as a joint board of conciliation, composed of representatives of the State boards of arbitration of Ohio, Indiana, Illinois, Wisconsin, Michigan, and New York, which during the summer of 1909 sought to effect conciliation in the general dispute then existing on the Great Lakes.

Through the information gleaned and experience had during a series of meetings the participants became so thoroughly convinced of the necessity for a larger degree of cooperation and a better understanding of methods that it was unanimously decided to promote and hold at least one general international conference. Without any existing organization and with facilities limited to the volunteer services of a few individuals, the mere gathering together of this representation has been no light task. Necessarily the program was left so elastic and open that none of the participants need feel restricted as to scope or subject in either presentation of papers or discussion. The question of whether or not a permanent organization should be formed, and if so its character, was intentionally left open for the determination of this conference. Therefore, what I have to say will be general in character, presenting within my limited capability some of the, to my mind, more important practical features of the general needs, wants, and experiences embodied in the field of industrial effort having to do with labor disputes.

As I understand it, the general object is, so far as may be, to render more effective the facilities now existing for conserving industrial peace so far as

¹ The report referred to, "New York Labor Bulletin, June, 1909, issued under the direction of John Williams, commissioner of labor," was submitted in printed form.

relations between employer and employed are concerned. In other words, the promotion and enlargement of the principles and practices of conciliation, mediation, and arbitration in disputes between employer and employee. It is to be assumed that we are all practical men seeking a practical solution—perhaps improvement would be better—of the existing situation together with a larger degree of success in the ministration of our official duties. Therefore, it is well to look over the record of past experiences with a view to pointing out the obstacles encountered and with the hope, and in some degree the expectation that at least partial remedies may be suggested.

Governmental, provincial, and State laws are enacted, construed, and executed—I almost said in a spirit of confusion—to say the least without any active consultation or cooperation between the separate governmental agencies. For instance, we find 25 States having some form of statute law dealing with this subject and charging its execution or enforcement to certain State officers, the provisions of no two statutes being alike. Titles of officers, together with their methods of procedure, compensation, number of executive officers, etc., are so out of harmony or proportion as might well cause one unfamiliar with our general system of government to wonder whether or not the several States occupied harmonious or antagonistic governmental relations with each other. The blame or responsibility for this condition rests on no one and nowhere in particular because of the fact that until within the present generation there appeared to be only few occasions when it seemed either wise or necessary that Government should interfere directly with industrial relations between employer and employed.

With the latter-day growth of industrial effort through the consolidation and amalgamation of productive agencies represented by the employing interests as well as the employees' unions and associations, we are face to face with the fact that industry has eliminated State lines in every sense of the word so far as development and direction—I think I could say control—are concerned, subject only to certain police powers and taxation for that portion of its plant or capital within certain State lines. The workingmen's combination or organization has long been interstate—but really more intrastate or local—in character than most large employers, owing to the generally known fact that, especially in matters which might result in an interruption of industry in the form of a strike, the smallest factor—that is, the local organization directly concerned—must exercise original jurisdiction or decision and their course or action be sustained by the national or international body, whereas in the case of an employing corporation which is apparently a State corporation having plants or facilities in other States, the controlling corporate authority can, at its pleasure, cause the cessation of industry in any of the States where it operates.

Then comes the third estate, the general public, which is made up, I take it, very largely of employers and employees. This interest is supposed to be the special charge of governmental agencies and its welfare and protection their first duty. What the public as a whole seems to want at this time is publicity; that is, as I understand it, positive, accurate, public official information. Believing that when this is promptly had public sentiment will compel a reasonable solution, my judgment conforms to this idea, at least to the extent that if the expected relief does not ensue Government will have at hand the necessary information to create and apply such legislative and executive remedies as conditions warrant. No one will fail to grasp the necessity for cooperation and uniformity in both manner and method of carrying out this principle.

For instance, in the case of a corporation engaged in telegraph, telephone, or express business, or the manufacture of steel, iron, paper, and many other commodities, the corporation may be a State corporation with its executive offices in one State and its productive departments and energies in several other States. It is possible that a large part of the industry may be interrupted on account of a strike or lockout, and that there may be no interruption in the State where executive authority exists. Under such circumstances at the present time there is no possible legal method of securing accurate information. I doubt whether or not one can be established except through Federal authority, although it might be possible—if all State agencies had the authority to investigate now vested in some of the States—to conduct a cooperative investigation: i. e., each State investigate that portion of the industry involved which was actually within its own jurisdiction. And here will be seen the necessity for uniform authority, and especially uniform methods, together with actual cooperation with the other State governments and the Federal Government as well; and while on this subject I can not say too emphatically we should also

do everything in our power to encourage and secure the assistance and cooperation of any and all civic bodies which are not engaged in open warfare on the principle of industrial collective bargaining as well.

In the first place, there should be written into the public records of our national industrial life definite information, commonly termed "statistics," showing the loss of industrial energy caused by strikes and lockouts, together with causes, methods of termination, etc. It may be contended that this is done at present. My answer is, this information is at best collected and computed without any reference to uniformity of system or method as between separate States or subdivisions of government. It is true the Federal Government undertakes to collect and compile this information at separated intervals, but is nearly always confronted with the situation that the dispute and very often the active participants, especially the representatives of the employees, have passed into oblivion before the work is undertaken. I strongly urge on this conference the importance and value of uniform methods in both collection and compilation of statistical information on this subject, and recommend that a committee be appointed to consider the systems now in vogue with the object of recommending to this conference, or later to the participants therein, methods which will have a uniform basic principle and, as nearly as possible, similarity of detail. The logical sequence to this recommendation is also an argument for—in fact, demonstrates the necessity for—cooperation between separate State boards and between State and Federal departments in the collection of information. I refer to disputes interstate in character, as, for instance, the national strike of telegraph operators three years ago, the International Paper Co. strike of last year, and the hat makers' strike of the year just closed. I venture the opinion that no bureau or department has or ever will have reasonably correct statistical data on those or similar disputes, mainly due to two causes—lack of uniform methods and absence of cooperation as well as dearth of resources. Hence I trust this conference will, so far as possible, encourage and promote the principle and practice of cooperation between the several States and with the Federal Government. A volume might be written on this subject, but, in order to touch on other important subjects, I am leaving details for presentation by others or discussion by the conference.

Practically speaking, we will now assume we have discovered the existence of a strike or lockout. We have provided and are putting in practice a comprehensive system or method of securing and compiling the statistical information. Other States in which a portion of the industry may be located are cooperating with us in this direction. But what about making an effort to terminate or adjust the dispute? I think you will all agree this is something of a poser. Every man who has had practical experience will join me in the contention that there is no hard and fast rule to go by, and in the light of experience I can not refrain from suggesting a comparison which occurs to me, inspired by the remark of an old consulting physician in a case of serious illness. He looked the patient over carefully, asked numerous questions, and later said: "Well, the patient is going to recover, but," he said, "do you know, I would give up the business of a consulting physician if I could afford it, because I am scarcely ever called in until there is no help for the patient, and when death ensues I head the list of physicians in attendance." So with the public official; he is not wanted, often not tolerated until one of the parties to a dispute is at the end of his other resources, then said party demands that said public agency interfere, but the other party says the dispute is dead. That is human nature, I might say human selfishness—possibly human suspicion—and after all, we might present the same attitude in the other fellow's place. Consequently it is up to the public official who seeks to intervene in labor disputes with the limited authority at present vested in such officials to conduct a continuous campaign of demonstration to his constituency, embodying the positive propositions of ability, courage, and integrity; ability standing for actual and practical knowledge on the general subject of industrial disputes and courage to demonstrate that fact, prepared after reasonable inquiry to make some positive recommendation or suggestion to meet or overcome the questions in dispute, and if necessary to take the responsibility for criticizing the position, attitude, or contentions of either or all parties to the controversy. It goes without saying that no one who has the appearance of prejudice or bias or whose personal or official integrity is even doubtful can engage successfully in work of this character. Summed up, there is no place in an industrial dispute which has assumed the form of a strike or lockout for a public official who has neither the ability to recommend some reasonable method of solving the problem presented nor the courage to present it.

This brings us along to the stage where mediation and conciliation have failed, and what then? It seems to me that depends on the character and importance of the industry. If it be of a public or quasi public service character, necessary to the welfare, comfort, or convenience of the general public, there should be forthwith a thorough public investigation conducted by the State or governmental body having jurisdiction in the premises. And, by the way, State and National statutes should be created or strengthened so that either the Federal or State Government should have jurisdiction in every such situation. In fact, I am firm in the belief that if it were a generally accepted fact that a full and thorough official investigation of every important strike and lock-out would be promptly made and a formal finding and public official recommendation ensue, a very material reduction in the volume of such disputes would be effected. But, my friends, here is the rub: It takes time and money to conduct investigations. As a matter of fact, it takes time and money and tact and patience and oftentimes self-restraint to do almost any of the things indicated in the mystic words "conciliation, mediation, and arbitration," and, here again, it is up to us. Have we put the proposition squarely up to the powers that be at home? Have we said or can we say that, given so many more dollars, we will return it manifold to the State through minimizing interruptions to industrial energy? Whether or not such statements would be credited is another matter. In any event it is a foregone conclusion that a percentage of our people would immediately raise the question of governmental interference with individual or property rights, which could well provoke the retort that labor disputes are about, if not quite, the only phase of human existence or endeavor in which government does not now interfere, and I might add, while I am at this time opposed to compulsory arbitration, industrial disputes are about the only form of human contention in which government does not arbitrarily compel adjustment.

Then, we always have with us the individual who insists on preserving the autonomy and authority of the State. I would have no objection to his contention if the factors composing our industrial life were confined to State limits or jurisdiction. We all realize this to be not only an impossible proposition, but an undesirable one as well. We are in an age of combination—the doing of things collectively, especially as applied to industry—and it stands to reason if there is to be any effective supervision or regulation it must be collective, or at least cooperative in character. As a matter of fact, in nearly all large avenues of employment, especially those that are public or semipublic service in character, the individual employer has given way to the corporation, which is a creature of government. I can see no good reason why, when through the medium of a labor dispute an industry controlled by a corporation is suspended or seriously impaired in operation, the stockholders, to say nothing of the public, are not entitled to know the cause thereof. It would also seem that this knowledge would be of great importance to the legislative branches of government, in order that if legislation were advisable or necessary it might be based on reliable information.

Turning to the Federal Department of Labor and Federal legislation on this general subject, I believe no one at all familiar with the recent industrial history, especially the two critical situations on the railroads, first the so-called Western Association dispute three years ago and a year later the dispute on the railroads in the South, will other than thank Providence and the United States Congress that we had such a statute as the Erdman Conciliation Act, and it might well be said, such capable men as Commissioner of Labor Neill and Chairman of the Interstate Commerce Commission Knapp to administer it. Inasmuch as this is practically all of the executive authority the Federal Government has thus far enacted into law on this subject, it would perhaps be well to consider whether or not it is adequate to meet conditions which may at any time arise. Personally, I am of the opinion that it is not. As a matter of fact, a situation familiar to several of those present appears to have existed on the Great Lakes during the entire season of navigation for 1909, which was investigated so far as possible by the combined boards of arbitration of several of the great States of the Union, which according to a statement signed by them contained many grave contentions, and apparently involved nearly 8,000 workpeople as well as a loss to industry which can not be measured or computed. No single State had either sufficient jurisdiction or equipment to make proper inquiry. Although I am merely stating a fact in asserting that all participants were of the opinion that a full inquiry should be made, I believe the Federal law should be so amended as to include all interstate-commerce indus-

trial disputes within the jurisdiction of conciliation and investigation. Another point I desire to make, in justice to, rather than in criticism of, the present Federal officials charged with its execution. It seems to me that both the Federal Commissioner of Labor and the chairman of the Interstate Commerce Commission are so thoroughly and completely engrossed with other important and often imperative administrative duties that they (not the present individuals, but the officials referred to) should be relieved of the administration of this law, and other agencies provided. I also believe the principle of permissive or positive investigation should be incorporated into the law and that the present avenue for appeal by either party should be retained as well. This would eliminate the possible contention as to the right or jurisdiction of government to intervene, without taking away any relief now afforded to the contestants and, which is perhaps of more importance, permit the governmental agency to determine when intervention or investigation was advisable or necessary.

Another and, in so far as it can have practical application, perhaps the most important phase of the whole subject is prevention of strikes and lockouts. At times this looks to be an impossible proposition, but when we stop to think of the many ramifications of human existence which in the past were admittedly or at least negatively impossible of correction, which time and education have solved, we are encouraged to renewed effort, firm in the belief that human character is being continually elevated and purified and that our constantly enlarging and improving educational facilities must and will aid materially in the substitution of right for might, reason for force, and conciliation coupled with arbitration for strikes and lockouts. Summed up in that potent phrase, "Let us reason together." We said in substance in our 1901 report to the New York State Legislature: "A somewhat new development is being manifested in our industrial life by the creation and organization of associations of employers. * * * If the dual organizations of employers and employees realize and recognize their interests in and dependence on each other and each within its proper sphere gives consideration to the claims or contentions of the other, good rather than evil must result. * * * It goes without saying that practically all employers in a given locality engaged in the same general avenue of industry are natural competitors and in a position to grant practically the same terms and conditions of employment, which must have the effect of eliminating the labor cost as a factor in competition. Therefore agencies through which uniform terms and conditions of employment can be established in competitive industry are more just and feasible than the enactment of separate bargains by separate employers and individual employees or separate groups of employees. We know of no vehicle through which this can be accomplished except that of the trade agreement."

I can see no reason to vary one iota from the text as then written on the subject of providing the most reasonable expedient now at hand for a clear and comprehensive understanding between the organized forces of capital and labor. It is nevertheless a fact that many strikes have occurred as a result of the single contention "whether or not an existing trade agreement should be renewed." We have met this situation by urging parties to such agreements to inaugurate a specific provision in all new agreements and old ones renewed, providing that "this agreement shall be in full force and effect from _____ (date) to _____ (date) and thereafter until either of the parties shall have given the other _____ (number) days' notice in writing of their intention to terminate the same, and that nothing contained herein shall be construed to prevent either party from proposing any amendment to take effect at any time after the original period designated." The effect is to provide a continuous agreement which can easily be terminated and at the same time give ample opportunity for discussion and amendment. Our experience justifies the contention that this provision is assisting materially in preventing strikes and should be generally recommended.

Other practical suggestions or recommendations made by the bureau are set forth in the following exhibits or correspondence, copies of which were mailed to the executive officers of all associations of both employers and employees in the State of New York of which we had knowledge:

(1)

DEAR SIR: The experience of this bureau has been, and continues to be, that local agencies or boards of conciliation, mediation, or arbitration are more feasible and effective than general or State boards in the adjustment of indus-

trial disputes, and especially in their prevention. Therefore, it is our intention and desire to, so far as possible, promote and encourage the formation of such boards or agencies in every industrial locality of our State, and to give them all the assistance and cooperation possible.

We realize that it is difficult to secure interest in a subject of this character during a period of industrial peace, and practically impossible during a period of industrial war.

Study observation, and practical experience have, in our judgment, demonstrated the fact that trade agreements or collective bargaining has proven the most effective method of preventing interruptions of industries in the form of strikes or lockouts. Notwithstanding the application of this principle, many apparently unnecessary strikes and lockouts still occur which would be avoided if some method of procedure could be imposed which would (by moral obligation at least) require the application of the principle of conciliation, mediation, or arbitration. With this object in view, the bureau is now endeavoring to provide some equitable method or agency of a local character which will meet this condition. In order that this suggestion be put in successful operation, the cooperation of every organization and individual interested is necessary and is earnestly requested.

A copy of this letter is being sent to all local organized bodies of employers and central councils of labor organizations, as well as to individuals, who our records show have displayed interest in the industrial situation, the object being to invite plans or suggestions which may be utilized in preparing some general plan which it is hoped may meet the general or local requirements. A full discussion is invited, and the courtesy of a reply embodying your views is requested.

This bureau will cheerfully furnish any information or data in its possession, or if desired, submit a general scheme or plan covering the proposition referred to. We wish to emphasize the fact that there is no intention or desire to interfere in any way in localities where agencies or boards herein referred to now exist, but rather to, so far as possible, cooperate with and assist them.

Very truly, yours,

JOHN LUNDRIGAN.

(2)

The accompanying plan or synopsis of a plan for the establishment of local boards of conciliation and arbitration is presented as the result of many requests from various industrial organizations throughout our State. We do not consider it as perfect, or as a whole applicable to every condition or locality. We do, however, believe that any plan based on these general lines will prevent many strikes and lockouts that now occur solely because there has been little or not any discussion of the question at issue. We desire to again mention the fact that there is no desire or intention on our part to interfere with existing plans which are working satisfactorily. Our sole purpose is to assist in providing some method by which satisfactory relations may be established between employers and employees without resort to strikes and lockouts, and the resultant loss and inconvenience to the parties to the strike and to the general public.

We invite suggestions and criticisms, and recommend that where advisable or necessary the plan be changed to conform to local conditions. The bureau will be pleased to cooperate in this or any other matter having for its object industrial peace.

Very truly, yours,

JOHN LUNDRIGAN,
Member of Board of Mediation and Arbitration.

(3)

TENTATIVE PLAN FOR LOCAL BOARDS OF CONCILIATION AND ARBITRATION OF INDUSTRIAL DISPUTES SUGGESTED BY NEW YORK STATE BUREAU OF MEDIATION AND ARBITRATION.

So far as possible all organizations of both employers and employees now existing or to be formed in any trade or industry should come together and enter into a general agreement, which shall provide that no organization nor

any of its members shall engage in strike or lockout until any dispute affecting either of them shall have been subjected to mediation, conciliation, or arbitration, as hereinafter provided:

1. Each separate organization of employers and employees shall annually or semiannually elect two of its members to serve on a board to be known as the conciliation and arbitration board for such industry or trade within the local territory over which the organized parties to this agreement have jurisdiction, who shall serve until their successors are elected and qualify, except as hereinafter provided.

2. The members so elected shall forthwith meet in joint session and organize as the board of conciliation and arbitration for the industry or trade they represent by electing a president and secretary (one of whom shall be from the employers' and one from the employees' organization) and such other officers as they may deem necessary, and shall designate time and place of meeting, etc.

3. It is mutually agreed that disputes or disagreements which may hereafter arise affecting agreements or relations between employers and employees in this industry or trade which can not be settled satisfactorily by the parties directly interested shall be referred to the board provided for and established by this agreement. The parties or organization who originated the dispute shall submit it in writing and addressed to the chairman of the board, setting forth all of the facts, claims, or contentions relating thereto.

4. Whenever a dispute or contention is referred to or submitted to the board the chairman shall appoint a meeting of the board to be held within 10 days from the date of receipt of written statement of such dispute, of which all members of the board shall be notified. Should any member be unable to attend, or should the matter in dispute affect him personally other than as a member of his organization, such organization shall designate another of its members to act in his place for the disposition of that particular dispute only.

5. The board shall have full power to investigate and determine any contention or dispute referred to it, and any decision arrived at by a majority of its members shall be final and binding on the parties to this agreement.

6. Should the board be unable to reach an agreement within 15 days after a complaint has been referred to it, they shall proceed (unless requested in writing by both parties to the dispute to continue their efforts to reach an agreement) forthwith to select an umpire, to whom the whole subject matter shall be referred, the members of the board to have the right to act as counsel for the interests they represent.

7. Unless granted further time by a majority vote of the board, the umpire shall be required to furnish a decision within 20 days from the date of the submission of the dispute to him, such decision to be final and binding on all parties to the dispute.

8. Should the board fail to agree on the selection of an umpire within 20 days after the date on which the dispute was originally referred to them, it is agreed that the county judge for the county in which the parties to the dispute maintain their official residences shall designate the umpire.

Many commendations of this effort were received and we are firmly convinced that the general effect tended to more harmonious and stable industrial conditions in our State.

The policy of the New York State Bureau of Arbitration in dealing with this subject is so clear that he who runs may read. We enter into no defense of our position or policy, neither do we apologize for anything connected with our treatment of this subject except our own personal limitations. Since the establishment of the present bureau in 1901, all of the energy and effort at our command have been directed toward seeking to conserve honorable industrial peace between employer and employed. At no time during that period have we been able to see how this could be generally accomplished except through the medium of mutual understandings between the employers and employed. The only sane method of which we are yet aware is what is usually termed mutual bargaining or trade agreements, coupled with provisions for local or other arbitration of questions which can not be mutually decided or that arise outside of such agreements. We have proceeded on the theory that as a general proposition the most lasting and satisfactory industrial peace can be secured through agreements made by the parties at first interest and we have stood ready to furnish such data, advice, or information as we were possessed of to either or both parties. On the other hand, where there has been a continued interruption of industry causing not only loss and inconvenience to the parties directly involved but to the general public as well, we have not hesitated to

place the responsibility where it appeared to us to rightly lie and in the case of serious interruption of public utilities or practical public service corporations to go so far as to suggest the possible necessity of compulsory settlement.

Public officials or others engaged in an honest effort to promote industrial peace along the foregoing lines need not expect either consideration, support, or sympathy from those who believe in the right of might. We see men who appear to be intelligent on most subjects insisting on the right of their interests to consolidate and amalgamate and absolutely denying such right to the other fellow; men decrying paternalism and contending for the absolute right to dictate the conditions under which other men shall live. We prefer to look at the whole subject of our industrial life from the viewpoint that its development has been so wonderfully vast and rapid that many of its important ramifications have been at least partially neglected, the bad effects of which are becoming more patent and for which remedies must and will be provided. Organization is here, both of capital and labor, and here to stay. There are, no doubt, many ramifications of organization, corporate and otherwise, capital and labor, that are harmful and even wrong. Let us seek to cure the evil instead of undertaking to kill the principle.

It seems a pretty good proposition to subscribe to that government is greater than any of its creations, whether they be citizen or corporation, and, it might as well be said, greater and more important than any of its subdivisions; and I believe that government will eventually find a way to dispose of this question in such a manner as to operate for the general good, even if it is necessary to interfere with some of the so-called existing rights of individual citizens, corporations, organizations, or even subdivisions of government. This can not and should not be accomplished until we find out just what the trouble consists of and as nearly as possible what will be an adequate remedy, based on humanity, reason, and order.

Finally, and I am taking up what I consider the most important subject last so that it may not be lost in the maze of what has gone before, I am very strongly of the opinion that this conference should take the necessary action to perpetuate the work which caused its inception. There are several ways in which this could be accomplished, two of which are either by merger with the existing association of labor commissioners or the formation of a permanent organization of public agencies dealing with this single subject. While I have no pride of opinion as to what particular method should be adopted, I am thoroughly convinced that there should be a permanent forum, devoted to discussion and instruction on this subject, and I am even optimistic enough to hope that some day it may include those delegated to represent directly the interests of the employers and employees, all striving to conserve the general good through mutual understandings based on humanity, reason, and order.

MEMO.—The New York bureau has provided, for the information of this conference and its committee on uniform methods, copies of the several blank forms now used in our routine work, and at the proper time I will be pleased to explain their workings in detail to either the conference or the committee or both.

MEN'S GARMENT TRADES OF NEW YORK CITY

(For exhibits under this subject, see pages 2048 to 2050.)

COMMISSION ON INDUSTRIAL RELATIONS.

NEW YORK CITY, *June 4, 1914—10 a. m.*

Present: Chairman Walsh, Commissioners Lennon, O'Connell, Garretson, and Harriman; Counsel W. O. Thompson.

TESTIMONY OF MISS LILLIAN B. WALD.

Mr. THOMPSON. Miss Wald, will you kindly give your name, your address, and your occupation?

Miss WALD. My name is Lillian B. Wald; I reside at 265 Henry Street, New York City.

Mr. THOMPSON. I believe that you are the organizer or superintendent or carrier on of the Henry Street Settlement?

Miss WALD. I am all; yes, sir; in a measure.

Mr. THOMPSON. In the work that you have done there, and the work that you have carried on there, by nurses and others, have you come in contact with that species of tailoring work which is called home work, and its effect on women and children who engage in it?

Miss WALD. I have come in contact in several relationships; first, that I have lived for nearly 21 years in the regions where home work is carried on extensively; that I am the head resident of a settlement, which includes in its work a great deal of home visiting by trained nurses. Last year the staff paid 200,000 visits upon the sick in their homes, and also because of my connection with the New York State Child Labor Committee, and I have participated to some extent in numerous investigations of home work in this particular industry.

Mr. THOMPSON. And, from that work, Miss Wald, have you found the condition under which this work is carried on and its effect generally on the women and children engaged in it?

Miss WALD. Do you wish me to speak somewhat generally?

Mr. THOMPSON. You may speak generally, if you wish.

Miss WALD. When I first became acquainted with the home life of people in the sections of the city that we are considering to-day, the effect of home work on the family life seemed exceedingly serious, even to an inexperienced observer. All kinds of manufacturing was done at that time. Women's clothing, suits and cloaks, children's, men's clothing—some of these manufactures have been abolished in the tenement houses, entirely to the advantage of the trade, the workers in the trade, the women and children, and the home conditions of the people.

The men's trade that I infer you wish me to discuss more particularly to-day has persisted, much to our regret. If you wish me to go into the results more particularly, the reasons why we think it bad, I will try to be more definite.

Mr. THOMPSON. I wish you would.

Miss WALD. First, many people believe that it is only the cheap clothing that is made in the tenement houses. That is not true. Quite expensive custom work is carried home. A great deal of the finishing of the children's garments—knee pants, for instance—is carried home. Home work promotes congestion. Around some of the establishments in the lower part of the city a great number of people live because it is near to the employers and they can carry the work back more easily.

It is particularly serious because there is no regulation, no possibility of supervising work in the tenement houses. Year by year the importance of protecting children in the factories has been accentuated, but there is no possibility of doing so in the home. There is bound to be overwork; there is foot power, of course, for everything that is done in the homes. There is quite serious danger of infection. We have presented many times—and I could again

to-day, by illustration—the danger in this respect to the community because of the work in the homes where there have been infectious diseases. It would be very obvious, indeed, if children suffering from chicken pox, measles, scarlet fever, or women in advanced stages of tuberculosis were working upon garments which would later be taken into the homes and worn by children—it is not known when that work is done in the homes, but these sick people do work there. We dislike home work, particularly for the children, because it means many hours of work. Work after school hours, work in the early morning, promotes truancy. Because when work is done at home it is to the interest of the people who employ and those who need the wage to put all the pressure possible upon the family to get it done as quickly as possible.

The study that was made some time ago of the effect of home work on truancy showed it to be a particularly subtle form, because it was not the absence from school of the workers for a week or two weeks at a time, but one day at home and then alternating a day at school, etc. That is true of all work that is done in the homes.

The recent legislature in New York State prohibited the manufacturing of foodstuffs and toys and infants' garments, but there is no difference. It is not possible to supervise; it is not possible to say that in a home a child under 14 shall not work. It would necessitate placing an inspector in every licensed tenement house and many unlicensed tenement houses in New York.

To sum up, I should say, from such experience and opportunities for observation that I have had, that tenement-house work should be abolished. If you get well-meaning factory inspectors or commissioners, the inspections would increase, but it would still be bad, because it promotes secrecy. Anyone walking along Elizabeth Street with an inspector would soon see that everyone is warned that the inspector is on the street. The more rigid the inspection the more ingenuity there is in hiding things under the beds or under the bedcovers. I think there is no compromise.

I say with as much emphasis as I can that all tenement-house work should be abolished.

I have brought some pictures, if you wish them.

Mr. THOMPSON. Will you leave them with the commission, please?

Miss WALD. I will be glad to.

Mr. THOMPSON. How do you believe this condition could be stopped—by a State law?

Miss WALD. Oh, yes; I should have a rigid State law abolishing the manufacturing in tenement houses.

Mr. THOMPSON. Would you say that the passage of a law abolishing the manufacturing of those goods in tenement houses would have a tendency to compel those industries to move outside the State of New York?

Miss WALD. I think that is of no consequence whatever. If the trade in New York City is dependent upon the exploitation of women and children, it is a parasitic trade. I should say it would be very wholesome for the city to have it move out, and I personally would see no harm—rather a benefit and advantage.

Mr. THOMPSON. In other garment trades here—for instance, the cloak trade—home work has almost ceased, has it not?

Miss WALD. It has somewhat.

Mr. THOMPSON. Has that resulted in driving the trade from New York City?

Miss WALD. I don't think so. I think that trade is very prosperous in the city, and nobody has suffered. I think the homes have gained. We used to see cloaks made in rooms where there was scarlet fever, because you must know that all those things are made in the living and sleeping rooms of the people. It was not uncommon to see women's cloaks thrown over sick people. I remember once confiscating a lot of stuff—women's cloaks that were used to cover a scarlet-fever patient. That is not possible now, because the trade-unions themselves are so well organized that I think that, under the agreements with the manufacturers, it would be impossible to send such garments into the tenement houses.

Mr. THOMPSON. There is a great deal of what is called inside men's clothing manufactured in this city, is there not?

Miss WALD. Yes, sir; a great deal.

Mr. THOMPSON. That is not subject to these objections?

Miss WALD. Of course, my objection to it is that there are, incidentally, the finishings in the tenement houses, the pulling of the basting threads, fixing of the pockets, and so forth.

Mr. THOMPSON. That is given out to the inside shops?

Miss WALD. From the factories and shops into the tenement houses. I have somewhere the statistics, but there has been a very comprehensive investigation by the Federal Government into the condition of women and children, all of which we agree with and some of which we were able to inquire into. That is not at all exaggerated; it is accurate.

Mr. THOMPSON. That is one of the bulletins of the Department of Labor?

Miss WALD. No, sir. That is the investigation into the condition of women and children.

Mr. THOMPSON. That is part of it?

Miss WALD. Yes, sir.

Mr. THOMPSON. Have you anything further, Miss Wald, that you would like to say in connection with this subject?

Miss WALD. Of course I should like to dwell upon the exploitation of the children, and perhaps one or two instances will make that clear.

Mr. THOMPSON. You may give them.

Miss WALD. We have some pictures—I don't know whether they are in this group—of the very little children who are at work, and pictures taken at night.

We had one instances of a little child who was sent home from the preventorium for tuberculous children. She lived in a very poor house, two rooms, on the lower East Side. We had the greatest difficulty, practically found it impossible, to get the father's consent to take the child to the day camp for tuberculosis, because she was working on knee pants. She was unfit to work at all, but she worked all day long in a very dark tenement house. Her mother was a hunchback and worked with her. The nurses frequently bring in stories of children who want to go out and play.

There was one little child whose story I have told before, who was reported as a defective because she fell asleep at school and seemed dull at all times. The child was 8 years old, and was put in the defective class of the public school. But the child was not defective; she worked so late at night and so early in the morning that when she got to school she fell asleep.

Mr. THOMPSON. She was 8 years old?

Miss WALD. Eight years old; yes, sir. I could multiply those instances and, perhaps, show the pictures.

Mr. THOMPSON. These pictures are taken in the homes?

Miss WALD. These pictures are all taken in the homes and may be left here for your record.

Mr. THOMPSON. That is all, Mr. Chairman.

(The photographs were received and marked "Wald Exhibits 1 to 11.")

The above exhibits are not printed.)

Chairman WALSH. How do you conclude, Miss Wald, please, that the making of cloaks in tenement houses was stamped out?

Miss WALD. Well, I conclude because the suit and cloak trades-unions objected.

Chairman WALSH. By what means do you conclude that was brought about?

Miss WALD. I believe that that has been brought about because of the control of the trade through the trades-unions that finally culminated in the protocol.

Chairman WALSH. Are there any city ordinances on the subject?

Miss WALD. No, sir; I think there is no city ordinance.

Chairman WALSH. Or any State law limiting it?

Miss WALD. No, sir. The present State law definitely prohibits three classes that I have mentioned. There were 41 specified trades that could be manufactured in the home. Under the law that operated until this October there were specific articles that were permitted to be manufactured. Now nothing can be manufactured in the tenement houses unless the house itself is licensed, and those three things are specifically prohibited.

Chairman WALSH. Have you any suggestion as to anything that could be done, outside of a drastic law, to cause them to cease making men's garments, as they did women's cloaks, other than the agreements between the employers and the employees themselves not to do so?

Miss WALD. I should say, a drastic law.

Chairman WALSH. Was the only thing?

Miss WALD. Yes, sir; was the only thing to prohibit it.

Chairman WALSH. Are these garments that are made in the tenement houses shipped out of New York?

Miss WALD. Yes, sir.

Chairman WALSH. To a great extent?

Miss WALD. They are shipped out of New York to a very great extent.

Chairman WALSH. All over the United States?

Miss WALD. All over the United States.

Chairman WALSH. Are such industries carried on in tenement houses and places adjacent to New York, such as Jersey City and Newark and those places?

Miss WALD. I think not to any great extent.

Chairman WALSH. You think it is all confined to the city of New York?

Miss WALD. It was formerly confined to one part of the city and to a large extent to work from the shops near by, but it is spreading into other parts of the city.

Chairman WALSH. That is all. Have you any questions, Mr. Harriman?

Commissioner HARRIMAN. I want to ask you one question. How directly related do you think the clothing trade in Cleveland and in Philadelphia and other places is to New York? I mean, what connection there is between the manufacturers of clothing in those cities with New York?

Miss WALD. I think I could not answer. There must be some trade competition between them; but there are, of course, suspicions of combinations, about which I would not be competent to speak.

Commissioner HARRIMAN. I mean, for instance, in the strike this winter in Philadelphia; wasn't it supposed that their orders were sent over to New York and shipped out?

Miss WALD. Yes.

Commissioner HARRIMAN. You have no definite information about that?

Miss WALD. I have no exact data upon that. Of course, that was the general suspicion, and I remember at one time when there was a very serious strike in Boston, and the Boston public sentiment wholly favored the contentions of the working people, that the manufacturers at that time did send in to New York to have their orders carried out.

Commissioner LENNON. Apparently, from your testimony, collective bargaining between the unions and the employees organizations has been more effective than the law in abolishing home work?

Miss WALD. I should say in the instance of the cloak and suit trade that it had been more effective; but we have never had any law in New York State completely abolishing home work, and the conditions of home work—the hours in which it is performed—makes enforcement of such laws as we have had literally impossible.

Commissioner LENNON. Would you or would your friends undertake to submit to this commission the form of a law or the outline of a form of the law which you believe could be made effective to prevent home work?

Miss WALD. We would be glad to, but I think we would like to begin by saying that we would have none at all. I am quite sure that conditions do not admit of any compromise on that point.

Commissioner LENNON. I don't want any compromise. I lived many years in New York and I have been through the whole mill. I have studied the question and been to the houses.

Miss WALD. And, of course, you know the situation.

Commissioner LENNON. I can't see how a law can apply in all cases. That is what always bothered me, how to make a law to apply in all cases.

Miss WALD. It can't in this situation, can it?

Commissioner LENNON. Would you favor the passage of a law by Congress prohibiting the interstate shipment of products of the home workers, or tenement-house worker? That is being proposed, regarding the employment of children, isn't it?

Miss WALD. Yes; I know that proposal for children. Mr. Commissioner, I should like to have the experiment made with the products of children's work first, and create the machinery for enforcing it, and then include the home industries, because I presume it would be much more effective, since the children and the women and the home ought to be preserved everywhere in the United States. I am not only interested in New York; I am interested in improving conditions anywhere.

Commissioner LENNON. I think that is all.

Chairman WALSH. Thank you, Miss Wald.

TESTIMONY OF MR. JOSEPH SCHLOSSBERG.

Mr. THOMPSON. Mr. Schlossberg, will you give us your name, your address, and the position you occupy?

Mr. SCHLOSSBERG. Joseph Schlossberg, 79 Delancey Street, secretary and treasurer of the joint board of the United Brotherhood of Tailors.

Mr. THOMPSON. How long have you been secretary of that joint board?

Chairman WALSH. I did not catch that.

Mr. SCHLOSSBERG. United Brotherhood of Tailors.

Mr. THOMPSON. Speak up loud so Commissioner O'Connell can hear you over here [indicating].

Mr. SCHLOSSBERG. I have been secretary since last July.

Mr. THOMPSON. How long have you been a member of that organization?

Mr. SCHLOSSBERG. Since that time.

Mr. THOMPSON. How long have you been a member of the union in New York?

Mr. SCHLOSSBERG. Since that time.

Mr. THOMPSON. Has your organization had a contract with the East Side Retail Clothing Manufacturers' Association?

Mr. SCHLOSSBERG. We had a contract with them that was made between the association and the national officers. That contract expired last February. The contract has not been renewed except upon the understanding that we work under the same conditions.

Mr. THOMPSON. Briefly, what did that contract provide? What machinery did it provide for the adjustment of grievances, if any?

Mr. SCHLOSSBERG. That committee representing both parties meet for deciding disputes.

Mr. THOMPSON. How large was that committee?

Mr. SCHLOSSBERG. Well, there was no particular number prescribed.

Mr. THOMPSON. Was there any board of arbitration under it?

Mr. SCHLOSSBERG. Well, if my recollection is right, I think it provides for a board of arbitration, but we always act direct; representatives of the union meet representatives of the association and dispose of disputes.

Mr. THOMPSON. Have you got a copy of that agreement?

Mr. SCHLOSSBERG. No; I haven't with me. It was not made with my local organization; it was made between the association and the national officers.

Mr. THOMPSON. Then the copy of that agreement would be in the hands of the national officers?

Mr. SCHLOSSBERG. Yes.

Mr. THOMPSON. How is that agreement, successful, in your opinion?

Mr. SCHLOSSBERG. Yes.

Mr. THOMPSON. It was?

Mr. SCHLOSSBERG. Yes.

Mr. THOMPSON. In your position as secretary and from your interest in the garment trade have you made any investigation of the condition in shops and the evils in the men's garment trades in this city?

Mr. SCHLOSSBERG. Personally?

Mr. THOMPSON. Yes.

Mr. SCHLOSSBERG. No.

Mr. THOMPSON. Well, do you know from your position and from your talk with others on the conditions in the trade?

Mr. SCHLOSSBERG. Yes.

Mr. THOMPSON. For instance, take the question of tenement-house work, home work, subcontracting, and the sanitary conditions, etc. You might state.

Mr. SCHLOSSBERG. Subcontracting has been abolished since the end of the last big strike in 1913.

Mr. THOMPSON. How was it abolished?

Mr. SCHLOSSBERG. By—

Mr. THOMPSON (interrupting). As a result of the strike?

Mr. SCHLOSSBERG. By the strike.

Mr. THOMPSON. State what you know about home work and tenement work.

Mr. SCHLOSSBERG. Home work has been abolished except the work that is being done by Italian women. They take garments from the shops home. Home work has been abolished in the sense that it used to be taken home as overtime work. That has been done away with, but there are quite a number of Italian women who can not go to the shop, that have families to take care of, and they take work home. That still exists.

Mr. THOMPSON. When you speak of shops, do you mean contractors' shops, or these large manufacturers?

Mr. SCHLOSSBERG. It is largely inside shopwork.

Mr. THOMPSON. The large manufacturers?

Mr. SCHLOSSBERG. Yes; large manufacturers.

Mr. THOMPSON. Name them, if you can speak of them by name?

Mr. SCHLOSSBERG. Well, I can't think of any particular name, but I remember in this connection, the name of the Benjamin factory.

Mr. THOMPSON. Well, if those names don't come readily, you need not try to remember.

Mr. SCHLOSSBERG. No; they don't.

Mr. THOMPSON. I wish you would contrast the conditions of work between contractors' shops and the so-called inside shops.

Mr. SCHLOSSBERG. What conditions? The conditions——

Mr. THOMPSON (interrupting). The conditions of work, working conditions, sanitary conditions of the shop, the wages and hours, and the relations of the unions to both?

Mr. SCHLOSSBERG. The sanitary conditions are better in the inside shops than they are in the outside shops, and the union——

Mr. THOMPSON (interrupting). By outside shops you mean contractors' shops?

Mr. SCHLOSSBERG. Contract shops, of course.

Mr. THOMPSON. Inside shops, you mean these——

Mr. SCHLOSSBERG (interrupting). Manufacturers. The union has not been in a position to do very much along these lines so far since the last strike, but we do expect that with the aid of the law that is going into effect July 1 that we might be able to take that work up, and especially so since the union is establishing itself now on a firmer basis.

Mr. THOMPSON. What is the difference, if you know, in wages between the two shops, the two classes?

Mr. SCHLOSSBERG. Well, the wages are higher in the contractors' shops.

Mr. THOMPSON. What are the hours, if you know?

Mr. SCHLOSSBERG. In the contractors' shops, 50. The wages and hours in the contractors' shops are all regulated by the union.

Mr. THOMPSON. What are the hours, if you know?

Mr. SCHLOSSBERG. In the contractors' shops, 50 hours. The wages and hours in contractors' shops are all regulated by the union.

Mr. THOMPSON. Do you know what the hours are, if there are any uniform hours, in the inside shops?

Mr. SCHLOSSBERG. They are 50 and 52 hours.

Mr. THOMPSON. Is most of this work done by piecework, or on the weekly wage basis?

Mr. SCHLOSSBERG. In contractors' shops, week work only; and inside shops, both systems.

Mr. THOMPSON. What, if you know, is the rule in the contractors' shops? If any, with reference to fines, rent of machines, and power?

Mr. SCHLOSSBERG. There are no fines.

Mr. THOMPSON. And deposits and sale of defective goods?

Mr. SCHLOSSBERG. No; there are none.

Mr. THOMPSON. Do you know any other shops in which those things existed?

Mr. SCHLOSSBERG. No.

Mr. THOMPSON. Is there any insecurity in the matter of collecting wages on the part of workers from contracting shops?

Mr. SCHLOSSBERG. There is.

Mr. THOMPSON. Is that general, and what is the reason for it, if you know?

Mr. SCHLOSSBERG. The reason for it is that the small contractor is financially unreliable and has nothing to lose by taking the week's pay of his men and running away with it.

Mr. THOMPSON. And does that occur?

Mr. SCHLOSSBERG. It occurs once in a while.

Mr. THOMPSON. In regard to the question of seasonal employment—the garment trade is a seasonal trade, is it not?

Mr. SCHLOSSBERG. It is.

Mr. THOMPSON. What are the seasons, and about how long do they last in the year?

Mr. SCHLOSSBERG. The fall season will last, approximately, from June 1 to about October 1.

Mr. THOMPSON. That is, manufacturing fall goods?

Mr. SCHLOSSBERG. Yes, sir. The spring season from about February to March; no; I would say from about December to March.

Mr. THOMPSON. And makes about eight months?

Mr. SCHLOSSBERG. About eight months.

Mr. THOMPSON. Have there been any attempts made to change that seasonal occupation and to dovetail in with the manufacture of others goods in the men's garment trades, if you know?

Mr. SCHLOSSBERG. No; not that I know of.

Mr. THOMPSON. Where does the supply of labor usually come from that is used in men's garment trades in New York? Is it immigrant labor—new labor—and is it supplied, if you know, adequate to the men, or is there an oversupply of labor?

Mr. SCHLOSSBERG. Immigrant labor.

Mr. THOMPSON. What's the nationality, mostly?

Mr. SCHLOSSBERG. Hebrews, mostly.

Mr. THOMPSON. And what other?

Mr. SCHLOSSBERG. Italians; and then there are small numbers of Poles and Russians.

Mr. THOMPSON. But the Hebrews and the Italians comprise a very large majority of the trade?

Mr. SCHLOSSBERG. Yes.

Mr. THOMPSON. What is the advantage of the contracting system to the workers?

Mr. SCHLOSSBERG. No advantage at all; but it is a disadvantage.

Mr. THOMPSON. What are its disadvantages?

Mr. SCHLOSSBERG. The disadvantages are that the small contractor is very often financially unable to have a sanitary shop; and also, as I stated, being financially irresponsible, his employees are not safe as to their wages.

Mr. THOMPSON. How about the question of speeding up?

Mr. SCHLOSSBERG. That has been very much done away with; but it used to exist to a large extent before.

Mr. THOMPSON. How about State or city inspection of these small contracting shops. Is it effective or not?

Mr. SCHLOSSBERG. No; it did not seem to affect it very much until the union came in.

Mr. THOMPSON. About how many people are there engaged in the manufacture of men's clothing in New York City, if you know?

Mr. SCHLOSSBERG. No; I can not tell for the entire industry.

Mr. THOMPSON. Well, about how many do you think are engaged in it?

Mr. SCHLOSSBERG. About 100,000.

Mr. THOMPSON. How many people are there in your union—the United Garment Workers?

Mr. SCHLOSSBERG. In the entire industry or in the organization that I represent?

Mr. THOMPSON. In the entire industry here?

Mr. SCHLOSSBERG. I can not answer that.

Mr. THOMPSON. In your own organization?

Mr. SCHLOSSBERG. Forty thousand; over 40,000.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Do you want to ask any questions, Mrs. Harriman?

Commissioner HARRIMAN. No; I thank you.

Chairman WALSH. Or you, Mr. Lennon?

Commissioner LENNON. You spoke of Italian women taking work to their homes. Do they get this work from union shops or nonunion shops?

Mr. SCHLOSSBERG. Get it from both.

Commissioner LENNON. Why is it that the unions can not exert their power or influence to prevent this work going home?

Mr. SCHLOSSBERG. We have not, as yet, been in position to take up that part of the industry, or that problem, particularly. Some of our local unions have been in existence for quite a number of years, but it has only been since last March when that strike was settled that the organization really became effective; and the time has been too short for taking up all problems that confront the organization.

Commissioner LENNON. Does your union prohibit children under legal age working in the tenement houses or in the shops?

1972 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. SCHLOSSBERG. Well, we do not admit children under legal age to our organization; and in the shops that we control a nonunion member can not work.

Commissioner LENNON. You don't permit them in shops where the union controls? What effect do you believe that the contractors have upon wages?

Mr. SCHLOSSBERG. The contractors?

Commissioner LENNON. Yes; what effect do the contractors have upon the wages of the union men that are working generally in the city?

Mr. SCHLOSSBERG. Without the influence of the organization the effect of the contracting system would be to reduce wages.

Commissioner LENNON. Do the contractors, in any case, belong to the union?

Mr. SCHLOSSBERG. No.

Commissioner LENNON. You have stopped that. You say you think there are 100,000 of these people working at men's trade in the city of Greater New York?

Mr. SCHLOSSBERG. That is my impression.

Commissioner LENNON. Is that a greater number than there was a few years ago?

Mr. SCHLOSSBERG. Yes; the number is constantly increasing.

Commissioner LENNON. Isn't it possible for the people who work in men's trade to transfer and work in the ladies' trade?

Mr. SCHLOSSBERG. Well, it is for some of them; those who understand how to make a complete garment. They might be able to work in other branches of the tailoring industry; but the men's clothing industry has been subdivided into many sections, and a great many of the people don't know more than how to make a certain section or a certain part of the garment.

Commissioner LENNON. That is all.

Commissioner O'CONNELL. Are there any independent organizations among the tailors not affiliated with the international?

Mr. SCHLOSSBERG. There is another international body, the industrial tailors' union; but—

Commissioner O'CONNELL (interrupting). Industrial tailors' union, what are they?

Mr. SCHLOSSBERG. Well, they are confined largely to custom tailoring work; they do not enter our field, but in our own field there is no other organization.

Commissioner O'CONNELL. How long did you say you had been associated with your organization?

Mr. SCHLOSSBERG. Since July of last year.

Commissioner O'CONNELL. What were you doing before that?

Mr. SCHLOSSBERG. I was doing editorial work.

Commissioner O'CONNELL. You were on the Weekly People?

Mr. SCHLOSSBERG. No.

Commissioner O'CONNELL. Were you connected with the Weekly People for some time?

Mr. SCHLOSSBERG. Yes; for a time I was.

Commissioner O'CONNELL. Did you aid in the last garment workers' strike in any way?

Mr. SCHLOSSBERG. No—except that I addressed a meeting when I had an opportunity.

Commissioner O'CONNELL. That is all, Mr. Chairman.

Chairman WALSH. That is all, Mr. Schlossberg.

Call your next, Mr. Thompson.

Mr. THOMPSON. Mr. Goldman.

TESTIMONY OF MR. WILLIAM GOLDMAN.

Mr. THOMPSON. Mr. Goldman, will you give us your name?

Mr. GOLDMAN. William Goldman, 694 Broadway.

Mr. THOMPSON. And your business?

Mr. GOLDMAN. Clothing manufacturer.

Mr. THOMPSON. What firm?

Mr. GOLDMAN. Cohen, Goldman & Co.

Mr. THOMPSON. How long have you been engaged in the manufacture of clothing in this city?

Mr. GOLDMAN. Twenty-five years.

Mr. THOMPSON. Are you president of the New York Clothiers' Association?

Mr. GOLDMAN. No, sir; I am not.

Mr. THOMPSON. Have you any official connection with that company?

Mr. GOLDMAN. There is no such organization.

Mr. THOMPSON. There is no such organization?

Mr. GOLDMAN. No, sir.

Mr. THOMPSON. Was there such an organization?

Mr. GOLDMAN. No, sir. I will set you right. I have been the president of the National Association of Clothiers.

Mr. THOMPSON. Is that purely a New York proposition?

Mr. GOLDMAN. No, sir; that is national. I am no longer president, but I am a member of what is known as the New York Clothing Trade Association.

Mr. THOMPSON. Have you any official connection with it?

Mr. GOLDMAN. I have not, with the exception that I am on the executive committee.

Mr. THOMPSON. How long has that organization been in existence, about?

Mr. GOLDMAN. Eleven years.

Mr. THOMPSON. How many firms are now members of it?

Mr. GOLDMAN. About 17.

Mr. THOMPSON. Could you furnish us with a list of the names of those 17 firms?

Mr. GOLDMAN. I can, but I haven't it with me.

Mr. THOMPSON. Will you please do that?

Mr. GOLDMAN. Yes, sir.

(The list referred to is as follows:)

NEW YORK CLOTHING TRADE ASSOCIATION.

Alfred Benjamin-Washington Co.
Berger, Raphael & Wile.
Cohen, Goldman & Co.
Heidelberg, Wolff & Co.
Hornthal, Benjamin & Riem.
Kornmann, Cohen & Ettlinger.
H. Kuhn & Sons (Inc.).
Lange & Walsh Manufacturing Co.
M. & W. Naumburg & Co.

Henry Peavy & Co.
Samuel W. Peck & Co.
Present & Co.
B. Stern & Son.
Joseph Yeska.
Hays, Levi & Co.
Nedwill-Taylor Co.
Fruhauf Bros.
David Marks & Sons (Inc.).

Mr. THOMPSON. Are those firms, generally, the firms that are called inside shops, or clothing factories?

Mr. GOLDMAN. Yes, sir; largely those houses that principally manufacture their goods in their inside shops.

Mr. THOMPSON. What is the purpose, Mr. Goldman, of this organization you speak of?

Mr. GOLDMAN. This organization was formed for the purpose of getting into one organization those firms which it was thought could support the best standards in the industry—the best working conditions. One of the first acts of this new body was to establish the 48-hour working week in the cutting department. The hours, then, were generally longer. That has limited the membership very materially of the new organization, because there were a good many firms that did not care to join because of that fact. The organization is an organization that is committed to the open-shop policy, and committed, also, to the maintenance of the best working standards in the industry, and has always sought to maintain such standards.

Mr. THOMPSON. Referring to the cutters, Mr. Goldman, is there an organization of cutters that work in your shop? Are they in a union?

Mr. GOLDMAN. Some of them are and some are not.

Mr. THOMPSON. Are you advised as to that fact?

Mr. GOLDMAN. Yes; I am advised as to that fact.

Mr. THOMPSON. What proportion of the cutters that work for these firms, or for your firm, particularly, in your opinion, are members of the union, and what proportion are not members of the union?

Mr. GOLDMAN. I could not give that information.

Chairman WALSH. Can you approximate it, Mr. Goldman?

Mr. GOLDMAN. Why, I believe that, in some of the shops, they are very largely union; in others, again, they are hardly any union men.

Chairman WALSH. Could you approximate the number in yours, relatively?

Mr. GOLDMAN. Why, I think a very small percentage in ours.

Chairman WALSH. Belong to unions?

Mr. GOLDMAN. Yes, sir; a very small percentage.

Mr. THOMPSON. Now, Mr. Goldman, what was the reason which actuated your firm and these other firms in granting to the cutters a 48-hour week whereas I would take it it is not granted to the tailoring branches of the trade?

Mr. GOLDMAN. At that time the inside work; that is, the work done in the shops of the manufacturers, was confined practically to a very few firms throughout the country. There had always been a large amount of contracting, and even these firms in only a small majority controlled the tailoring. The desire on the part of the association to establish the 48-hour week was due to the fact that it had been established in some other centers in the cutting department, and it was felt desirable that we should at least be on as good a footing as those other centers.

Mr. THOMPSON. If you know, in those other factories was the 48-hour week established by the union?

Mr. GOLDMAN. That I don't know.

Mr. THOMPSON. That you don't know?

Mr. GOLDMAN. No; I do not.

Chairman WALSH. Did the union present demands?

Mr. THOMPSON. No; no, there were no demands.

Chairman WALSH. Or a strike?

Mr. GOLDMAN. No; nothing of the kind. It was a voluntary act on the part of the association.

Mr. THOMPSON. In the tailoring branches of your business, Mr. Goldman, what are the hours there?

Mr. GOLDMAN. Almost universally 52 in our shops. There are some, I believe—I think in our shops they are all 52 without exception.

Mr. THOMPSON. That is, in your own?

Mr. GOLDMAN. In our own shops there are 52 hours in the tailoring department..

Mr. THOMPSON. Something has been said here this morning, Mr. Goldman, with reference to the sending out of certain kinds of work from the inside shops to the home, I think "basting" was the name as called.

Mr. GOLDMAN. It is not basting—

Mr. THOMPSON (interrupting). What kind of work is sent out?

Mr. GOLDMAN. No garment is sent out to be made in the home; such a thing does not exist in the clothing trade. There is an operation known as finishing; that operation is more or less on certain garments and does not exist at all on a great many. On a large part of the production there is no such thing as outside finishing; but there are certain garments sent out to finish by certain manufacturers in practically all grades of work—fine, medium, and cheap. It is a thing which has been growing less and less, I believe, and the work is done entirely by Italian women. And they take home a few garments, perform that particular part of the work, return them, having no regular quantity of work that they produce, but doing such work as they can in conjunction with their housework at home.

Mr. THOMPSON. Isn't it true that practically all men's garments have to be finished?

Mr. GOLDMAN. There is some finishing of the largest percentage of them; there are certain garments that are practically all machine-made, but on a large percentage there is some finishing; but it does not necessarily mean that that is all done outside.

Mr. THOMPSON. Well, what proportion, if you know, of the finishing work of your own firm is sent outside?

Mr. GOLDMAN. Why, I should say perhaps 25 per cent; that would be about a correct figure.

Mr. THOMPSON. And what is the reason that it is sent outside and not done in the shop?

Mr. GOLDMAN. We are diminishing it gradually; trying constantly to make it less and less, and have made great progress along those lines in the last two or three years. It is a very difficult thing to get enough finishers to work inside; they are all hand sewers, and it is always difficult to get an adequate supply of those trained to do the particular kind of work required, and for that reason we have to avail ourselves of this outside work. But it is something that I thoroughly—I would like very much to see abolished. The only objection I have heard to its abolition is really on the part of some well-meaning people who think that it might be a deprivation to some very poor people. That is the only objection I know of.

Mr. THOMPSON. What does your firm do with respect to inspecting the home into which your finishing work goes?

Mr. GOLDMAN. We issue work only where licenses are presented. They are all licensed finishers—licensed by the State.

Mr. THOMPSON. By the State?

Mr. GOLDMAN. Yes, sir.

Mr. THOMPSON. That is the guaranty upon which you operate?

Mr. GOLDMAN. Yes, sir; that is the guaranty.

Mr. THOMPSON. In other words, your firm makes no effort itself to investigate the condition of these homes?

Mr. GOLDMAN. We consider it entirely unnecessary, in view of the fact that the State maintains a staff of inspectors for that purpose.

Mr. THOMPSON. But in view of the testimony of Miss Wald this morning and of the testimony the other day of factory inspectors as to their inability to get around the city, it would appear that State inspection is very imperfect.

Mr. GOLDMAN. It is the first complaint I have heard that it was. It is certainly something that ought to be investigated.

Mr. THOMPSON. But, Mr. Goldman, I might say that that has been the general statement of the situation here, both by city officials and by individuals.

Mr. GOLDMAN. I know; but I have never heard any criticism of the State inspection.

Mr. THOMPSON. Then, neither you nor your firm has made any attempt to investigate how thorough the State inspection was?

Mr. GOLDMAN. No; not at all.

Mr. THOMPSON. Your work, Mr. Goldman, is the seasonal work, is it not?

Mr. GOLDMAN. Why, I would not call it so; I mean, the clothing business, generally, might be called a seasonal industry, but it depends on other conditions. The business has been largely seasonal recently because of the business depression that is on, and there has been a good deal of unemployment; but when conditions are normal there are very many factories that run steadily throughout the year; and that does not apply entirely to the inside shop; there are lots of contractors that run steadily throughout the year. But, generally speaking, I would say there was a slack period of from four to six weeks twice a year, during which time the workers are employed from half to full time, and perhaps some of the shops shut down completely for a period, even when conditions are normal; but I know and have always known, of a great many contractors that have practically—and manufacturers as well—that practically run throughout the year without stopping.

Mr. THOMPSON. Referring to this slack season, and I note that it exists elsewhere in your trade, what is being done, if anything, by the manufacturers of this city to dovetail work in with the usual men's clothing work to give substantially full-time work to the employees?

Mr. GOLDMAN. So far as the manufacturer is concerned, he has every possible incentive to employ his people regularly. His overhead goes down and the loss that is entailed by a shutdown in a clothing shop is very great; and the manufacturer is constantly struggling to find steady employment for his shop; but so far as dovetailing in with other industries—for instance, in the women's cloak trade—it is entirely out of the question. The clothing trade is conducted on the sectional system, whereby the hands work on one portion, while in the cloak trade they operate the entire garment—making the complete garment. So that the system is entirely different in operation.

Mr. THOMPSON. I know that in other cities studies of that kind are being made, and I wondered whether any successful study had been made here in New York?

Mr. GOLDMAN. None that I know of. I do know this, that in certain processes or operations the hands do and can get employment in both branches. In the women's wear branch, as well as the men's—for instance, underpress and pressers, finishers, button sewers, and minor operations, generally speaking, basters, it is possible for those people to find employment in different branches of the work. But so far as any organized effort on the part of our organization or the manufacturers here generally or the two associations to dovetail work, it has never been undertaken that I know of.

Mr. THOMPSON. Referring to the contract system, Mr. Goldman, what are the advantages to the manufacturer of that system?

Mr. GOLDMAN. The contract system exists because of the large number of small clothing manufacturers, manufacturers that haven't a sufficient output in any one grade of goods to justify them running a shop of their own. They

would be wholly incapable of maintaining a shop, and for that reason the contract business came into vogue. Now, a number of these contractors have developed good-sized plants, and by adhering strictly to one class of work have been able to get a degree of efficiency sometimes not attainable by the manufacturer himself in his shop, and so, to some extent, the larger manufacturers have elected to give part of their work to contractors, as well as the small, and in that way the contract system has come into being in the trade.

Mr. THOMPSON. What are the disadvantages to the manufacturer of the contract system?

Mr. GOLDMAN. The desirable thing for the manufacturer is to get uniformity of production. By giving his work to a large number of contractors of various grades he gets a lack of uniformity, and it would be very much more desirable if he could manufacture all of his goods in one large inside shop, and that tendency has been growing throughout the country. The better grade clothing houses have been very largely developing the inside factory in order to secure uniformity of production.

Mr. THOMPSON. The work in the inside shop is divided up into many operations, is it not?

Mr. GOLDMAN. In all shops, but very largely there is perhaps a larger subdivision found in the inside shops than the contract shops; not materially, but still some. The subdivision applies equally to the contract shop as to the inside shop.

Mr. THOMPSON. About how many operations are necessary for the completion of an ordinary suit of clothes?

Mr. GOLDMAN. Well, I should say that they would vary according to the way in which the work had been subdivided. That varies from shop to shop, but it would run somewhere between 75 and 150 operations on a complete suit of clothes.

Mr. THOMPSON. What is the reason, Mr. Goldman, you have this finishing work done outside instead of having it done in your shop?

Mr. GOLDMAN. Why, I explained that before, that in the first place was the method, the method that prevailed in the industry. Now, there has been a tendency going on for years to gradually lessen that home work, and it has been disappearing, but the difficulty has been—I will be very frank about it—that inside finishers have been less successful, very unsuccessful, and it has cost more money to get the work done; but notwithstanding that fact, the giving out of work is very unsatisfactory to most manufacturers, and we, for instance—my own firm—have made strong efforts in the past two or three years to reduce that, and very successful efforts, and we are getting it down so much that we feel it is only a question of time when it will be entirely eliminated.

Mr. THOMPSON. Was your firm involved in the last strike?

Mr. GOLDMAN. Yes, sir.

Mr. THOMPSON. And as the result of that strike was there a commission appointed, and did you have anything to do with it?

Mr. GOLDMAN. There was a commission to fix the hours.

Mr. THOMPSON. Did you have anything to do with the commission? I mean your firm?

Mr. GOLDMAN. No, sir; nothing.

Mr. THOMPSON. Was your firm in any way within its scope?

Mr. GOLDMAN. Well, yes. The commission was named to fix the working hours for the industry, and when they had performed that function, whatever the hours fixed by that commission were, we agreed to them.

Mr. THOMPSON. And the commission has finished its work?

Mr. GOLDMAN. Yes, sir.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Commissioner Garretson would like to ask you a few questions.

Commissioner GARRETSON. Mr. Goldman, is not the use of the contract system, not possibly where the contractor has developed to a degree that he maintains a factory, but the small contractor as he originally, I suppose, existed—the contractor was originally a small man?

Mr. GOLDMAN. He was a small man, and it has grown to be a big thing.

Commissioner GARRETSON. In that form has it been true that he was available to keep wages down by splitting the workers into small bodies where their resistance was not as effective as in larger bodies?

Mr. GOLDMAN. Well, the small contractor having disappeared to a very large extent, there being larger factories now mainly, and from the——

Commissioner GARRETSON. Well, originally that possibly was a factor in the case?

Mr. GOLDMAN. Well, I think that statement would be a bit unfair to the contractor. My own judgment is that the wages of the workers in the contract establishments will average quite as good as those in the inside shops.

Commissioner GARRETSON. Would the contract system also have a value, or could it have in this direction: That if abuses did exist in the treatment of men that aroused public sentiment as, for instance, investigations brought out, that the contractor has a value as a goat to put it on? Would that be one of the factors, possibly?

Mr. GOLDMAN. Why, I don't think so.

Commissioner GARRETSON. Nobody ever tries to pass the buck in that case?

Mr. GOLDMAN. I haven't heard it.

Commissioner GARRETSON. A man invariably assumes the responsibility for the abuses in his own system, the manufacturer?

Mr. GOLDMAN. I will tell you so far as that is concerned, those men that employ contractors probably recognize their responsibility only so far as their own direct employees are concerned.

Commissioner GARRETSON. Yes.

Mr. GOLDMAN. And therefore would say, naturally, that they had no responsibility over the employees of those contractors.

Commissioner GARRETSON. Although they received certain advantage therefrom in price?

Mr. GOLDMAN. Perhaps, yes.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Mr. Goldman, has your organization made any study or an attempt to regularize, the employer, to so conduct the selling part of the trade that the employment could be more continuous or suggesting other lines, for instance, women's lines, etc.

Mr. GOLDMAN. Well, we have made a very great study of that question, continuous study, and are doing it all the time, and I want to say that in a very large percentage, particularly of the larger houses in the industry there is up to practically the present period; that is, the last six months, we have had a trade depression, but prior to that time, covering a long period of years, the majority of the large and growing successful houses in the industry have been able to keep their people employed steadily.

Chairman WALSH. Have you an organization working to that end in your employer's association?

Mr. GOLDMAN. No, sir; we have not, but we have discussed these questions frequently in our conventions, and the value of it is so great to the manufacturers themselves, the loss is so large through stoppage of shops or through shutdowns on the section system under which we work, where it takes from 75 to 150 hands to make one garment, that system depends on continuous operation and therefore it is in the line of efficient management of the business, something which is highly desirable, and the selling season has been advanced largely to help bring about that end, to make for continuous production.

Chairman WALSH. What is the name of the organization of which you are president, Mr. Goldman?

Mr. GOLDMAN. I am not president any more, but I was formerly president of the National Association of Clothiers, until day before yesterday.

Chairman WALSH. It is still in existence, of course?

Mr. GOLDMAN. Yes, sir.

Chairman WALSH. Have you a constitution and by-laws?

Mr. GOLDMAN. Well, that organization is not the one that I have been representing here. I am here testifying as a member of the New York Clothing Trade Association.

Chairman WALSH. Yes; but in the organization that you were president of until day before yesterday——

Mr. GOLDMAN. Yes, sir.

Chairman WALSH. Has a written constitution and by-laws?

Mr. GOLDMAN. Oh, yes.

Chairman WALSH. Could you, without great inconvenience, submit that to us?

Mr. GOLDMAN. There is nothing in it that relates to the labor question.

1978 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Chairman WALSH. No; but I would just like to have it for a part of the record.

Mr. GOLDMAN. Yes; I will be very glad to submit it.

(The pamphlet referred to, entitled "Constitution National Association of Clothiers" was submitted in printed form.)

Chairman WALSH. Have you a constitution and by-laws in this New York association of which you are a member?

Mr. GOLDMAN. Yes.

Mr. THOMPSON. And are their activities confined to the purposes expressed in them?

Mr. GOLDMAN. Yes, sir; entirely.

Chairman WALSH. Would you be kind enough to submit them to us?

Mr. GOLDMAN. Yes, sir; with pleasure.

Chairman WALSH. Commissioner Harriman would like to ask you a question.

Commissioner HARRIMAN. I would like to know, Mr. Goldman, would the enactment of a law completely abolishing home finishing be, in your opinion, desirable?

Mr. GOLDMAN. It would so far as I am concerned; I feel that it is desirable. The only objection that I do hear raised, as I say, is from well-meaning people who think, perhaps, it might work disaster to some very poor people for the time being.

Chairman WALSH. That is all; thank you, Mr. Goldman.

TESTIMONY OF MR. J. HARRIS LAVNER.

Mr. THOMPSON. Give us your name, address, and the position you occupy with the union?

Mr. LAVNER. J. Harris Lavner, 307 Wallabout Street, Brooklyn, N. Y.

Mr. THOMPSON. You are manager of District Council No. 1?

Mr. LAVNER. Yes, sir.

Mr. THOMPSON. United Garment Workers of America?

Mr. LAVNER. Yes, sir.

Mr. THOMPSON. What does your organization include?

Mr. LAVNER. This is a central organization, composed of the clothing workers' locals of Greater New York.

Mr. THOMPSON. How many locals is that?

Mr. LAVNER. Forty.

Mr. THOMPSON. Forty?

Mr. LAVNER. Yes.

Mr. THOMPSON. What kind of locals are they?

Mr. LAVNER. Those locals constitute all branches in the clothing industry, men's, children's clothing, which are subdivided into various locals throughout the greater city.

Mr. THOMPSON. Like cutters?

Mr. LAVNER. Yes.

Mr. THOMPSON. Pants makers?

Mr. LAVNER. Yes.

Mr. THOMPSON. Vest makers?

Mr. LAVNER. Yes.

Mr. THOMPSON. And also children's clothing workers?

Mr. LAVNER. Yes.

Mr. THOMPSON. About how many workers do those locals represent, if you know?

Mr. LAVNER. Well, approximately, according to my figures, I have got them down to about 90,000.

Mr. THOMPSON. About 90,000?

Mr. LAVNER. Yes.

Mr. THOMPSON. About how many men are there in the men's clothing industry in this city, if you know, approximately?

Mr. LAVNER. Well, I would put them down close to 100,000.

Mr. THOMPSON. Close to 100,000?

Mr. LAVNER. Yes.

Mr. THOMPSON. Then, nearly all of the workers in the men's clothing industry are in the union?

Mr. LAVNER. Well, I would put it down over 90 per cent.

Mr. THOMPSON. Over 90 per cent?

Mr. LAVNER. Yes.

Mr. THOMPSON. What are the terms of admission to your union—initiation fee?

Mr. LAVNER. By individual members?

Mr. THOMPSON. Yes.

Mr. LAVNER. The maximum price is about \$15 and some 60 cents, I believe; but there are certain locals who have taken members with a much lower initiation fee.

Mr. THOMPSON. Of course you have no restrictions as to nationality?

Mr. LAVNER. No.

Mr. THOMPSON. Or color?

Mr. LAVNER. No. This is the maximum price, some \$15; but a good many locals admit members with a much smaller initiation.

Mr. THOMPSON. To what extent does piecework exist in your trade?

Mr. LAVNER. You mean the percentage?

Mr. THOMPSON. Yes; and to what extent does the week work exist?

Mr. LAVNER. It depends on the various branches of the industry. Some branches are altogether piecework. For instance, the pants, vest, and knee pants trade is almost entirely based on a piecework system; whereas the other branches of the clothing industry, such as making coats, collars, examiners, bushelmen, are week workers, with a very small exception.

Mr. THOMPSON. Is there steady work during the year for the workers, or is it seasonal work? Do they have a busy season and a slow season?

Mr. LAVNER. Well, there are two seasons, usually the fall and the spring season, lasting, I should say, four months for each season.

Mr. THOMPSON. During the slack season, so-called, do the workers have a good proportion of work?

Mr. LAVNER. It all depends on what places. In some places they work a quarter or half time, and in some places there is a total shut-out. It is not everywhere alike.

Mr. THOMPSON. Has the union given that subject any consideration?

Mr. LAVNER. We did.

Mr. THOMPSON. To find a remedy for it?

Mr. LAVNER. We did.

Mr. THOMPSON. What is the result of that consideration?

Mr. LAVNER. So far as we considered the advisability, rather the importance of shortening the hours of labor. This is the supreme subject that the organization has given consideration to.

Mr. THOMPSON. What proportion of the men and boys' clothing in New York City is handled through contract shops, and what proportion through what is called the inside shops?

Mr. LAVNER. You mean the entire clothing industry, or would you divide that into men's clothing and children's clothing separately?

Mr. THOMPSON. Take men's clothing first, and have it divided that way.

Mr. LAVNER. I have not got that detailed, but I have some data concerning inside and outside shops. The total number of shops, inside and outside—by outside I mean the contract shops—is over 2,600.

Mr. THOMPSON. Over 2,600.

Mr. LAVNER. Over 2,600. Of those 2,600 shops I find so far about 280 shops in side shops, under the jurisdiction of the manufacturers.

Mr. THOMPSON. What is the advantage of the contract system to the workers, and what are its disadvantages?

Mr. LAVNER. The advantage of the contract system is for a very small percentage of orthodox, who like to observe their Sabbath, and in those shops they do not work on Saturdays; otherwise I don't see any advantage there.

Mr. THOMPSON. What are the disadvantages, then, from your point of view?

Mr. LAVNER. The disadvantage is, because, I believe, that on account of the contracting system there is a surplus, an abnormal surplus of unemployed. I will try to make it as simple as I possibly can. If a manufacturer himself employed the people directly, he knows how many suits he has sold, and how many people he can employ; and as such he figures how many tailors he has got room for. Under a contracting system there is no such thing. The contractor opens up a shop with a hope of going out into the clothing district and getting work. He can fix up a shop with 10 machines, or he can fix up a shop with 20 machines or with 30 machines, or he can fix up a factory of 50 machines, regardless of whether the industry wants 50 or 200 people to work.

Especially under the present method of production, where the work has been so much subdivided and sectionized, it is very easy to get laborers because there

is not so much requirement for skilled mechanics, and this creates an abnormal surplus of idle men. The trade don't need it. And under such methods of production it is very easy to learn the trade to anyone whom he comes across when he is needed for the season, but as soon as the season is over there is surely no room for him. The contracting system is the greatest factor for the creation of this abnormal number of unemployed. In addition to that, the contracting system creates a possibility of lowering the prices from time to time. When the contracting system spreads and each contractor is eager to get that much work as he possibly can from the manufacturer, there is a constant competition and lowering of prices, which ultimately results in the tailors, the clothing workers, coming down to their prices. So this practically creates a competition which we might call an illegitimate competition, because the contracting system can not keep track of how many clothing workers are necessary in New York or elsewhere to turn out the amount of production that is to be turned out in New York City.

I believe it is also a great factor in the maintenance of home work. The contracting shops are usually small shops, although they are now trying to increase their plants, and so on, but usually they are small plants, and this has, to a very large degree, to do with the maintenance of home work and tenement-house work, because he has no room for that particular kind of work, and he gives them outside.

Mr. THOMPSON. What is the efficiency of inspection of contracting shops by the State officers, if you know?

Mr. LAVNER. Well, from time to time they make an effort to remedy the evil, but to my knowledge I didn't see very much of it.

Mr. THOMPSON. Do the contracting shops lead to the speeding up of the workers?

Mr. LAVNER. Not necessarily.

Mr. THOMPSON. What is the difference, if you know, between the wages paid in the contract shops and the wages paid in the inside shops, those clothing manufacturers?

Mr. LAVNER. There is a small percentage of wages higher in contracting shops than inside the shops. Not very much.

Mr. THOMPSON. What machinery, if there is any, exists in the inside shops for the settlement of the grievances of the employees?

Mr. LAVNER. In the inside shops?

Mr. THOMPSON. In the inside shops, if you know.

Mr. LAVNER. None whatever.

Mr. THOMPSON. That is all, Mr. Chairman.

Chairman WALSH. Have you any questions, Commissioner Garretson?

Commissioner GARRETSON. I would like to ask one or two questions.

Mr. Lavner, you heard the statement made by the witness who preceded you on the stand, to the effect that in normal years employment was almost continuous in this trade. Does your experience bear out that statement?

Mr. LAVNER. Well, from my knowledge and being in the trade for the past 22 or 23 years, I say that this tendency to increase the small seasons, or rather the most slackening down of the trade, is for the 12 or 15 years. I don't see much difference, except when there is an exceptional good prosperity, which is very seldom; otherwise the seasons are usually from seven to eight months, and between two seasons there is a little work in some places, and some there is a little more, and some there is no work at all.

Commissioner GARRETSON. Does your experience show that there is a greater tendency to continuous employment under the manufacturer himself than there is under the contractor?

Mr. LAVNER. I see to the contrary.

Commissioner GARRETSON. It is greater?

Mr. LAVNER. That is what I see.

Commissioner GARRETSON. That is all, Mr. Chairman.

Chairman WALSH. Mrs. Harriman, do you wish to ask any questions?

Commissioner HARRIMAN. No, thank you.

Chairman WALSH. Mr. Lennon?

Commissioner LENNON. Mr. Lavner, you say there are approximately 90,000 members of the garment workers, different organizations, in this city?

Mr. LAVNER. Yes, sir.

Commissioner LENNON. Did I understand you right?

Mr. LAVNER. Yes, sir.

Commissioner LENNON. Does that mean that you have 90,000 people paid-up members of your union, or is that the people who have been on the road in the last year?

Mr. LAVNER. A certain percentage, on account of the depression of the times, are in arrears, but I would not consider them dropped members. It is only a question of when there is work and they pay up their debts.

Commissioner LENNON. What percentage of difference is there in the prices you get or the wages you secure from inside shops and the contractor shops? You said there was a small percentage?

Mr. LAVNER. Yes, sir.

Commissioner LENNON. About what is it?

Mr. LAVNER. Well, I would put it down to 5 per cent. Not in all branches of the industry; not in all branches. For instance, among the pieceworkers there is absolutely no difference, except in week workers there may be some slight difference.

Commissioner LENNON. Well, if there is such a slight difference, where does the profit come to the manufacturer to maintain the contractor shops?

Mr. LAVNER. I can hardly tell that. I do not believe it is advantageous for the manufacturer to continue the contracting system, because he can shift the responsibility and avoid reductions and other inconveniences. I believe it is a good proposition.

Commissioner LENNON. Have you collective bargaining with any of the establishments here in the city?

Mr. LAVNER. Since the recent strikes of 1913 there has been three agreements along this principle, or national organizations with some minor merchants, not with the bulk of the trade.

Commissioner LENNON. Does your union stand for collective bargaining?

Mr. LAVNER. Neither side has taken the initiative as yet.

Commissioner LENNON. Have you made at any time in the past attempts in that direction?

Mr. LAVNER. We did not.

Commissioner LENNON. Haven't you ever had in this city collective bargaining with the firms to any extent, say, 15 or 20 years ago?

Mr. LAVNER. No, sir; not that I know of.

Commissioner LENNON. Are you undertaking to accomplish anything of that kind at the present?

Mr. LAVNER. We did not touch that proposition at all as yet. As I told you before, no party at all has taken as yet any initiative in that direction.

Chairman WALSH. Are you in favor of it?

Mr. LAVNER. I personally?

Chairman WALSH. Yes.

Mr. LAVNER. Absolutely.

Commissioner LENNON. What sentiment has been expressed in your organization? The question must have come up at some time. What sentiment has been expressed by the members as to collective bargaining with employers, fixing wages, hours, and general conditions of labor for a certain time?

Mr. LAVNER. I did not hear any opposition.

Commissioner LENNON. How do the wages secured by your members compare with that of the cloak makers of this city—cloak and skirt makers?

Mr. LAVNER. Pardon me?

Commissioner LENNON. How does the wages received by the membership compare with that received by the cloak makers' and skirt makers' association?

Mr. LAVNER. I am not much familiar with that industry. I would not make any estimate.

Commissioner LENNON. Don't your people live next door to the cloak and skirt makers all over New York?

Mr. LAVNER. Well, I think, from general talk, that it is very likely they have accomplished more through the machinery. It is very likely, but I would not be positive about it.

Commissioner LENNON. There is not much difference?

Mr. LAVNER. Yes; I would say they have accomplished much more.

Commissioner LENNON. That the cloak and skirt makers have accomplished much more?

Mr. LAVNER. Very likely.

Commissioner LENNON. If they have, what do you consider it due to, the activity of the union, or to the law, or to some psychology that exists in the business; or what has been the cause of it, if they have been more successful?

Mr. LAVNER. Well, I would say there may be a good many factors, for this reason: In the first place, our industry has many more complications than the cloak industry. The cloak industry, they vary in style, probably, every day, and whenever the designer feels like it, and we have too many branches, and each branch is almost an industry in itself. Juvenile clothing is an industry by itself, having coat and knee pants and sometimes a blouse; the men's clothing industry has coats, pants, and vest; each branch is an industry by itself.

Secondly, on account of those complications we were unsuccessful all at once during the strike or after the strike to accomplish as much as they did.

Commissioner LENNON. Do you have the same difficulty in fixing the prices for piecework they have in the cloak and suit trades?

Mr. LAVNER. No, sir.

Commissioner LENNON. For instance, we had testimony here, I think in January last, that in one firm prices had been fixed for, I think it was, 2,400 different styles in one season; do you have anything of that kind?

Mr. LAVNER. No, sir.

Commissioner LENNON. You fix the price at the beginning of the season, or such time as you have conferences, and it runs through the season?

Mr. LAVNER. Even that is not necessary. Usually each manufacturer is manufacturing two or three different grades at the highest, and this is almost a continuing process year in and year out, except a few slight changes, but usually it is almost the same year in and year out.

Commissioner LENNON. When was the last scale of prices made in this city established?

Mr. LAVNER. During the last strike.

Commissioner LENNON. In 1910?

Mr. LAVNER. 1913.

Commissioner LENNON. 1913; yes.

Mr. LAVNER. Yes, sir.

Commissioner LENNON. Where do the people who come into your trade here and live go?

Mr. LAVNER. Pardon me.

Commissioner LENNON. We will put it in a different way. You have coming into your union five or six thousand members a year, don't you? In a good season there are five or six thousand new people coming into the unions every year?

Mr. LAVNER. I am not able to give you the facts, but usually in busy times, of course, there is an influx of new members.

Commissioner LENNON. What becomes of those that these new members take their places every year? Supposing you had 100,000 members last year and trade was good, and during the dull season a less number leave the trade; where do they go, back to the old countries or somewhere in the United States?

Mr. LAVNER. Well, some become unable to work, some leave for abroad, and some try a little business. I can not give you any statistics as to that.

Commissioner LENNON. Is the city of New York being built up entirely, almost, with people who are in the clothing trade or have been in the clothing business—at some time in the business—in the past?

Mr. LAVNER. Yes, sir; for the past quarter of a century.

Commissioner LENNON. You will have to change the name of the city of New York some time to something designating clothing.

Mr. LAVNER. It is very likely.

Commissioner LENNON. Do you have any serious difficulty with the immigrants when they first come here as to their maintenance of wages and a standard of living that you have established in your unions?

Mr. LAVNER. Well, when they just land, certainly.

Commissioner LENNON. How long does that last with them? How long does it take you to influence them?

Mr. LAVNER. Until they Americanize a little, adopt the American standard of living.

Commissioner LENNON. That is a variable time, I suppose? With some they last a long time?

Mr. LAVNER. There are some institutions who are trying to work that end—to give them so much education as to bring them up to the standard.

Commissioner LENNON. What do your people say as to the comparative standard of living in this country and in the countries from which they come?

Mr. LAVNER. Well, it all depends from where they come. When they come from a country where there is no industry at all, no comparison can be made. If they come from a country where there is an industry, say, Germany, I believe the American standard is higher, although the cost of living is increased. I do not think there is some benefit left, but to extract him, give him the possibility of enjoying some life better.

Commissioner LENNON. Do you find the people who come from across the seas as easy to induce to stand for living wages and as high standard of living as are the people who are born here in the country, so far as you come in contact with them?

Mr. LAVNER. Absolutely; sometimes they try to exceed it.

Commissioner LENNON. That is all I care to ask, Mr. Chairman.

Chairman WALSH. Are there any other questions?

(No response.)

Chairman WALSH. That is all, thank you, Mr. Lavner.

Mr. THOMPSON. I will call Mr. Friedman.

TESTIMONY OF MR. MAX FRIEDMAN.

Mr. THOMPSON. Mr. Friedman, will you give us your full name?

Mr. FRIEDMAN. Max Friedman.

Mr. THOMPSON. Your address, please.

Mr. FRIEDMAN. 708 Broadway.

Mr. THOMPSON. Your business, please.

Mr. FRIEDMAN. Manufacturer of clothing.

Mr. THOMPSON. Under what firm name?

Mr. FRIEDMAN. J. Friedman & Co.

Mr. THOMPSON. Are you president of the American Clothing Manufacturers' Association?

Mr. FRIEDMAN. I am.

Mr. THOMPSON. Is that an association all over this country, or mostly in New York City?

Mr. FRIEDMAN. Only in New York City.

Mr. THOMPSON. How many members has that association?

Mr. FRIEDMAN. Seventy-eight.

Mr. THOMPSON. When was it organized?

Mr. FRIEDMAN. At the inception of the strike of 1912; in December, 1912, I believe.

Mr. THOMPSON. 1912?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. What are the objects of the association?

Mr. FRIEDMAN. The object for which it was formed?

Mr. THOMPSON. The purposes?

Mr. FRIEDMAN. To resist any unfair and unjust demands of labor organizations, and to further the industry of the cheap and medium-priced clothing, and preserve it for New York City.

Mr. THOMPSON. Have you a written constitution and by-laws?

Mr. FRIEDMAN. We have.

Mr. THOMPSON. Printed?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. Will you furnish the commission with a copy?

Mr. FRIEDMAN. I guess so.

Mr. THOMPSON. We will be pleased, if you will.

Chairman WALSH. Did you say you will furnish a copy?

Mr. FRIEDMAN. I will.

Chairman WALSH. Thank you.

Mr. THOMPSON. How does your firm carry on its business? Does it have an inside shop or does it do a contracting business?

Mr. FRIEDMAN. We do all of our cutting on the premises, and get all of our work done in the contracting shops, with one exception, that we have one shop, of our own, just begun.

Mr. THOMPSON. What does that shop produce?

Mr. FRIEDMAN. Coats.

Mr. THOMPSON. Is that true, generally, of the members of your association?

Mr. FRIEDMAN. I think all of them do have all of their work done through contractors.

Mr. THOMPSON. Through contractors?

Mr. FRIEDMAN. Yes, sir; there might be some individual members who have their own shops, the same as I have one of them.

Mr. THOMPSON. But most of them have their cutting done in their own shops?

Mr. FRIEDMAN. All of them.

Mr. THOMPSON. All of them?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. What are the hours of work of the cutters that you employ, and what are their wages, if you can state it?

Mr. FRIEDMAN. The hours are 48; the wages for a cutter, I believe, are \$24.

Mr. THOMPSON. Is it by piecework or on a weekly basis?

Mr. FRIEDMAN. Weekly basis.

Mr. THOMPSON. Is there any standard by which you judge whether a man earns weekly wage or not?

Mr. FRIEDMAN. There is a standard.

Mr. THOMPSON. What is that?

Mr. FRIEDMAN. By ascertaining as to the work that he does.

Mr. THOMPSON. Do you have any price for a cut?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. To the members and to yourself, how do you view the advantages of the contracting system?

Mr. FRIEDMAN. We consider that the advantage of the contracting system is decided. A great many manufacturers in New York City and a great many of the association are of the small manufacturers who can not afford to maintain their own shops, because, as it has been spoken of and explained here, the seasons are divided in two, and there is a limited amount of time that this production must be done, and there is no way for any manufacturer to engage space if he were, considering the prices that the garments are sold at, to know just exactly how many employees he would need, and how much space he would need to have his work done. In a good season so much more space, maybe, would be required than in a bad season, and in a bad season he may not need one half, and it is to do away with that unnecessary expense which the manufacturer of the cheap clothing would be burdened with, and it has to go on the cost.

Mr. THOMPSON. In other words, it cheapens the cost of production to the manufacturer?

Mr. FRIEDMAN. I would not put it that way.

Mr. THOMPSON. Well, it makes the cost less, then?

Mr. FRIEDMAN. The overhead charge would be less.

Mr. THOMPSON. What control have you over the sanitation of those contracting shops with whom you deal?

Mr. FRIEDMAN. Personally, we have no control, but the State laws, I understand, are rigid. Inspectors going around and inspecting shops. I know of cases where the shops were found in a condition not applicable to the State laws, that notice was sent to the manufacturer, and the work was either withdrawn or notice was sent that unless he complies with the law he can not obtain any work.

Mr. THOMPSON. Have you made any investigation yourself, or by others, as to whether or not the State inspection is carried on efficiently?

Mr. FRIEDMAN. I have had no investigation made.

Mr. THOMPSON. You have not?

Mr. FRIEDMAN. I have not.

Mr. THOMPSON. With reference to the question of seasonal work, you contract your work out, that is not a problem that you are confronted with, is it?

Mr. FRIEDMAN. Yes, sir; it is.

Mr. THOMPSON. In what way, in relation to your cutters?

Mr. FRIEDMAN. No, sir; in relation to the contractors, even. At times, at the height of the season, we sometimes find it impossible to get a contractor to make our work.

Mr. THOMPSON. I was speaking more particularly in reference to the slack season, when the people have not work enough to keep them busy?

Mr. FRIEDMAN. There are four different manufacturers, practically, in this market. There is the manufacturer that caters to the jobbing business exclusively; and there is the manufacturer that caters to the jobbers and the retailers; then there is the manufacturer that caters to the retailers exclusively;

and the manufacturers for his own use, his own stores. It oftentimes happens that a contract, as you probably understand, a jobbing season begins earlier, a contractor will begin, say, I will use a period of a month; they will begin to manufacture in the month of October for a jobber, and be through manufacturing for him in December. In the month of January the man that caters to the retail trade will begin and manufacture on until, say, March or April; and then that same contractor can get work from another manufacturer who manufactures for his own use, and his season does not begin, really, until April. So one contractor can practically, if he is a good business man, stretch the amount of work for himself and his people for the best part of the year.

Chairman WALSH. The commission will now adjourn until 2 o'clock this afternoon, to meet in this same room.

(Thereupon, at 12.35 p. m., a recess was taken until 2 o'clock p. m.)

AFTER RECESS.

NEW YORK, June 4, 1914—2 p. m.

Commissioner Lennon in the chair.

TESTIMONY OF MR. MAX FRIEDMAN—Continued.

Mr. THOMPSON. Mr. Friedman, are you acquainted with the conditions in the inside shops or manufactories?

Mr. FRIEDMAN. I am not.

Mr. THOMPSON. In New York City?

Mr. FRIEDMAN. I am not.

Mr. THOMPSON. Therefore, you are not capable of making any comparison between the workers, the condition of the workers in the contract shops and those in the inside shops?

Mr. FRIEDMAN. No, sir; I would not be able to.

Mr. THOMPSON. Are you acquainted with the wages that are paid workers in contract shops?

Mr. FRIEDMAN. Occasionally I have ascertained that from the various contractors who work for us.

Mr. THOMPSON. The work done by the contractors is just generally labor on the cloth, is it not?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. And the cloth is furnished by the association?

Mr. FRIEDMAN. Yes; we send the cut down from the shops and they finish them into the garment.

Mr. THOMPSON. And the profit of the contractors must be made on the labor proposition solely?

Mr. FRIEDMAN. I suppose so.

Mr. THOMPSON. The difference between what you pay the contractor for the labor and what he pays the people for it?

Mr. FRIEDMAN. I suppose so; yes sir.

Mr. THOMPSON. Do you know the comparative cost of the making of garments in the factory shops, the inside shops, and the contractors' shops?

Mr. FRIEDMAN. Well, I can say yes; but I don't want to speak of it authoritatively.

Mr. THOMPSON. What is your impression?

Mr. FRIEDMAN. It costs more on the inside shops.

Mr. THOMPSON. On the inside shops?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. What is the reason? Do the people get paid less?

Mr. FRIEDMAN. They do not. I can not understand it; but it seems to me that the cost of production in the contract shop is cheaper, and yet the men earn more.

Mr. THOMPSON. Well, haven't you any theory in regard to that?

Mr. FRIEDMAN. Well, it is probably due to the fact that the contractor knows who he wants to hire; he knows the best mechanics; he is acquainted with them. He assembles in the shop the body of men who fit in with one another and who are able to do the work more thorough and quicker and thereby produce a better garment and probably a larger quantity for the same money—for less money.

Mr. THOMPSON. Are they paid weekly wages?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. Does the contractor drive his people more than on the inside shops?

Mr. FRIEDMAN. That is ridiculous, because they do not permit themselves to be driven, and nobody drives.

Mr. THOMPSON. Has your association a contract with the unions?

Mr. FRIEDMAN. No, sir.

Mr. THOMPSON. Have you any working arrangements with the union?

Mr. FRIEDMAN. We have not.

Mr. THOMPSON. Have you ever had any dealings with the union before as an organization?

Mr. FRIEDMAN. No, sir.

Mr. THOMPSON. Didn't you lately, in the last three or four months, have some conference with the union people?

Mr. FRIEDMAN. Not with the union people. We had a conference with the commission.

Mr. THOMPSON. Who constitutes that commission?

Mr. FRIEDMAN. At the present time—it was constituted first of Mr. Marcus M. Marks, now the president of the Manhattan Borough, Dr. Magnus, and Mayer London.

Mr. THOMPSON. What conference did you have with the commission?

Mr. FRIEDMAN. It seems to me there have been such chaotic conditions in the clothing business that the commission stepped in to investigate and tried to ascertain where the trouble lay; and the commission, of its own initiative, asked me in the conference whether it would be plausible to have an investigation as to that chaotic condition and try to ascertain a remedy.

Mr. THOMPSON. What was the chaotic condition that they found and what remedy did they suggest, if any?

Mr. FRIEDMAN. Well, they were to investigate, but the investigation did not start.

Mr. THOMPSON. Didn't you, as a matter of fact, have an agreement, either with the representatives of the union in the shop or their officials or an attorney, in regard to guaranteeing the wage of workmen in the contractors' shop?

Mr. FRIEDMAN. It was always an understood fact that the manufacturers guarantee the wages of the contractor in case he absconded.

Mr. THOMPSON. You say it was an understood fact always?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. Then you did not make any agreement or have a conference of that kind lately, in the last three or four months?

Mr. FRIEDMAN. There was a personal understanding regarding my individual firm.

Mr. THOMPSON. Your individual firm?

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. Between the contractor who was dealing with your firm——

Mr. FRIEDMAN. Yes, sir.

Mr. THOMPSON. Did it touch the question of the sanitation of the shops of those contractors?

Mr. FRIEDMAN. It did not.

Mr. THOMPSON. It did not?

Mr. FRIEDMAN. No, sir.

Mr. THOMPSON. What question did it cover, if any other than the question of wages?

Mr. FRIEDMAN. Well, there was a demand made upon me about the unionization.

Mr. THOMPSON. Union what?

Mr. FRIEDMAN. Unionization of certain shops which were nonunion. I couldn't see how it could be done or I could do it, and the extreme measure was resorted to by a strike against my firm. Between two and three weeks some kindly gentleman assisted us in bringing us together and the understanding at that time was that these vest shops, that is what they were, are to continue to receive work from J. Friedman & Co., from my firm, that the union would make an effort to unionize them, and that in the event that they are unsuccessful that I should lend my efforts so to do. And as far as the understanding with them about wages, as I said before, it was always an understood fact that every manufacturer always guaranteed the wages of the men in case the contractor absconded or disappeared.

Mr. THOMPSON. That was also subject to this agreement?

Mr. FRIEDMAN. Yes.

Mr. THOMPSON. That is all, Mr. Chairman.

Commissioner GARRETSON. Mr. Friedman, you say that there has been a universal understanding that the manufacturer in every instance guaranteed the wage in the event that the contractor failed to pay?

Mr. FRIEDMAN. Yes, sir.

Commissioner GARRETSON. Have they so paid, and without delay, in all instances?

Mr. FRIEDMAN. Yes, sir; all I know of; yes, sir.

Commissioner GARRETSON. The objects of your association, are, I believe, as you stated them, of getting together for the purpose of resisting unjust and unfair demands on the part of labor unions?

Mr. FRIEDMAN. That is one of the objects.

Commissioner GARRETSON. If that is the prime object, did I misunderstand you when you stated that none of the members of your association are manufacturers through their own employees further than cutters?

Mr. FRIEDMAN. Exactly; that is, none of them do all of their own work in their own shops.

Commissioner GARRETSON. But they all employ their own cutters?

Mr. FRIEDMAN. Every one of them.

Commissioner GARRETSON. And that work is performed on the premises of the contractors?

Mr. FRIEDMAN. No, sir.

Commissioner GARRETSON. In your own premises?

Mr. FRIEDMAN. Yes, sir.

Commissioner GARRETSON. Are any of the firms in your association or any of the individual members thereof interested in any firms of contractors also?

Mr. FRIEDMAN. No, sir.

Commissioner GARRETSON. None.

Mr. FRIEDMAN. Not that I know of. I will answer that, not that I know of; I don't think so.

Commissioner GARRETSON. If your association does not do manufacturing and employ men on its own responsibility further than cutters, what is the necessity for banding together to resist labor unions?

Mr. FRIEDMAN. Because the organizations are allied, and when the cutters don't work the tailors don't work, and any demand made upon any firm by the cutters is also taken up by the tailors.

Commissioner GARRETSON. Are your cutters union men, all of them?

Mr. FRIEDMAN. I believe most of them are.

Commissioner GARRETSON. Although you don't deal with the organizations representing them?

Mr. FRIEDMAN. No, sir.

Commissioner GARRETSON. Is there anything in your organization that pledges you not to deal with unions?

Mr. FRIEDMAN. Nothing.

Commissioner GARRETSON. In answer to a question from counsel you stated that, in reply to a question as to whether the cost was less manufactured through the contractor, that it was not, if I understood you correctly, although you afterwards stated that it did reduce overhead?

Mr. FRIEDMAN. I said it was less to the contractor.

Commissioner GARRETSON. Yes; but to yourself, this question applied to the cost to you. I understood you to say that working through the contractor it did not in any appreciable degree lessen cost, although it did lessen overhead?

Mr. FRIEDMAN. That is true.

Commissioner GARRETSON. Isn't overhead one of the principal elements in cost of production?

Mr. FRIEDMAN. Well, if you have to figure a cost and the overhead is so much more, naturally it changes the cost.

Commissioner GARRETSON. Naturally it does.

Mr. FRIEDMAN. If we have a specific cost without overhead, it lessens the cost.

Commissioner GARRETSON. Then, the fact is that you reduce overhead to reduce cost?

Mr. FRIEDMAN. Yes.

Commissioner GARRETSON. That is all.

Mr. THOMPSON. Is Mr. Kaufman here?

(No response.)

Mr. THOMPSON. Mr. S. Kaufman, the representative of the contractors' association, is not here now, Mr. Chairman, so we will have to call Mr. Adolph Stieglitz.

TESTIMONY OF MR. ADOLPH STIEGLITZ.

Mr. THOMPSON. Will you give us your name?

Mr. STIEGLITZ. My name is Adolph Stieglitz.

Mr. THOMPSON. How do you spell your name?

Mr. STIEGLITZ. A-d-o-l-p-h S-t-i-e-g-l-i-t-z. .

Mr. THOMPSON. Where is your address?

Mr. STIEGLITZ. 120 East Eighty-second Street.

Mr. THOMPSON. And what is your occupation?

Mr. STIEGLITZ. Coat presser.

Mr. THOMPSON. For what firm do you work?

Mr. STIEGLITZ. For Adel Levinsky, 96 Canal Street.

Mr. THOMPSON. How long have you been a coat presser?

Mr. STIEGLITZ. Since 1888.

Mr. THOMPSON. In this city?

Mr. STIEGLITZ. In this city.

Mr. THOMPSON. Are you paid by the week or by the piece?

Mr. STIEGLITZ. By the week.

Mr. THOMPSON. What wages do you get?

Mr. STIEGLITZ. Twenty-three dollars.

Mr. THOMPSON. Twenty-three dollars?

Mr. STIEGLITZ. Yes.

Mr. THOMPSON. What is the difference in the rates, if you know, in inside shops and outside shops of wages for your kind of work?

Mr. STIEGLITZ. In inside and outside shops there is no difference.

Mr. THOMPSON. That is to say, the inside shop gets just as much as the outside shop?

Mr. STIEGLITZ. According to the skill of the workman.

Mr. THOMPSON. Your work is weekly work?

Mr. STIEGLITZ. Yes.

Mr. THOMPSON. How about the piecework in the men's garment industry? Are the prices for piecework as high in the inside shops as in the outside shops, if you know?

Mr. STIEGLITZ. I can't tell you.

Mr. THOMPSON. You can't tell me. Do you know with reference to ready-made garments?

Mr. STIEGLITZ. Yes.

Mr. THOMPSON. What is it with reference to ready-made garments?

Mr. STIEGLITZ. We have no regular prices so that we could tell the difference. The prices are different in every shop.

Mr. THOMPSON. What kind of shop is yours—a contracting shop?

Mr. STIEGLITZ. An inside shop.

Mr. THOMPSON. Inside shop?

Mr. STIEGLITZ. Yes.

Mr. THOMPSON. What pay do you get for overtime and holidays, if any?

Mr. STIEGLITZ. The same, as usual; the same as regular time.

Mr. THOMPSON. Same as what?

Mr. STIEGLITZ. The same price as we get for every hour working in the day-time.

Mr. THOMPSON. You don't get any surplus time? You don't get time and a half or double time?

Mr. STIEGLITZ. No, sir.

Mr. THOMPSON. Are there any fines which exist in your business?

Mr. STIEGLITZ. Not in the place where I work.

Mr. THOMPSON. There are no fines there?

Mr. STIEGLITZ. No.

Mr. THOMPSON. Do you know anything about the insecurity of wages of the workers by contractors? Is their pay sure, or are they apt to lose money?

Mr. STIEGLITZ. It is often the case that they are not sure if they are paid by contractors.

Mr. THOMPSON. Do you know anything about subcontracting in the presser's occupation?

Mr. STIEGLITZ. I used to, but not at present.

Mr. THOMPSON. But not at present?

Mr. STIEGLITZ. Not at present.

Mr. THOMPSON. How do the seasons run in your shop?

Mr. STIEGLITZ. Twice a year; from 12 to 14 weeks to the season.

Mr. THOMPSON. And that is called the busy season and dull season?

Mr. STIEGLITZ. That is called the busy season.

Mr. THOMPSON. Do you have any work during the slack season; and if so, about how much?

Mr. STIEGLITZ. It is according; sometimes three or four days a week, sometimes less, some weeks nothing.

Mr. THOMPSON. What is being done, if you know, in the trade here in New York City, in your shop or elsewhere, to give them more work or to create more work for the workers during the slack season? Do you know of any attempts to have other kinds of garments made or to bring other kinds of work into the shop?

Mr. STIEGLITZ. Not in my shop.

Mr. THOMPSON. Not in your shop?

Mr. STIEGLITZ. No.

Mr. THOMPSON. What hours a week do you work?

Mr. STIEGLITZ. Fifty hours a week.

Mr. THOMPSON. Is there an oversupply of labor in the men's clothing industry in this city? Have you more workers than needed?

Mr. STIEGLITZ. Certainly there is, at times.

Mr. THOMPSON. Where do they mostly come from? Are there a fresh supply of workers coming all the time—immigrants?

Mr. STIEGLITZ. So far as pressers are concerned, most of them are old pressers; but there is not enough work to supply them.

Mr. THOMPSON. There is not enough work?

Mr. STIEGLITZ. No, sir.

Mr. THOMPSON. But with reference to the trade generally, is there a great influx of immigrants all the time seeking work as tailors?

Mr. STIEGLITZ. There certainly is.

Mr. THOMPSON. What control does the union have, if you know, over the local supply of labor in your trade?

Mr. STIEGLITZ. Well, the union sees that they work regular hours; that they get regular pay; that their pay is secured; that they are supplied with work; if there is a place to be gotten, that a man can get it.

Mr. THOMPSON. Has your union an organization in the shop you work in?

Mr. STIEGLITZ. How?

Mr. THOMPSON. Has the union an organization in the shop you work in?

Mr. STIEGLITZ. Yes.

Mr. THOMPSON. I mean, are many people working there members of the union?

Mr. STIEGLITZ. They are all members of the union.

Mr. THOMPSON. They are?

Mr. STIEGLITZ. Yes, sir.

Mr. THOMPSON. What method do you have of adjusting your grievances with the firm when a worker has any trouble? What do you do? Suppose a man is discharged, or suppose he is ill-treated by the foreman, how do you adjust those matters?

Mr. STIEGLITZ. We put it to the organization.

Mr. THOMPSON. And they handle it?

Mr. STIEGLITZ. Yes, sir.

Mr. THOMPSON. Have you a shop chairman?

Mr. STIEGLITZ. We have.

Mr. THOMPSON. About what proportion of the pressers that work in the trade in New York City are members of the union, if you know, and how many nonunion?

Mr. STIEGLITZ. Well, we could not tell exactly how many pressers are not union men, and I can only tell you we are about as much as 3,000 pressers in the organization.

Mr. THOMPSON. That is all, Mr. Chairman.

Acting Chairman LENNON. Have you anything, Mr. Garretson?

Commissioner GARRETSON. Mr. Stieglitz, did you hear the testimony of Mr. Friedman to the effect that there was a universal understanding, a general understanding, that the wages of the employees of contractors were guaranteed by the manufacturers and that they were always paid?

Mr. STIEGLITZ. I heard that testimony.

Commissioner GARRETSON. You heard that statement.

Mr. STIEGLITZ. Yes, sir.

Commissioner GARRETSON. Does your experience bear out the fact that if any contractor fails to settle with his people it is invariably settled promptly by the manufacturer for whom he is working?

Mr. STIEGLITZ. I have never heard that.

Commissioner GARRETSON. Have you known of instances where employees of contractors did not receive their pay?

Mr. STIEGLITZ. I never did.

Commissioner GARRETSON. You never did?

Mr. STIEGLITZ. I never did; no, sir.

Commissioner GARRETSON. That is all.

Commissioner O'CONNELL. How many coats do you press a day?

Mr. STIEGLITZ. Well, we don't count them now.

Commissioner O'CONNELL. When you did count them how many did you do?

Mr. STIEGLITZ. Well, we worked piecework.

Commissioner O'CONNELL. How many would you press then?

Mr. STIEGLITZ. It was according to the material; according to the work we had.

Commissioner O'CONNELL. What is the largest number of coats you ever pressed in one day?

Mr. STIEGLITZ. Well, there was a time when I pressed 24 coats a day.

Commissioner O'CONNELL. Was that considered a big day's work or a small day?

Mr. STIEGLITZ. It was a big day's work.

Commissioner O'CONNELL. What, about, would be the average day?

Mr. STIEGLITZ. Well, about 20.

Commissioner O'CONNELL. Have you ever figured out what your total earnings were per year—how much you earned in one year, say last year, 1913—how much money you made during the year as a presser?

Mr. STIEGLITZ. I could not tell you.

Commissioner LENNON. Mr. Stieglitz, when an immigrant arrives here and wants to go into the clothing industry to work, what initiation does he pay into the union if he wants to join the union?

Mr. STIEGLITZ. Well, we usually make it as easy for the immigrant to enter the union as possible, although our regular prices are \$15; and we usually take the immigrant in for about \$2.

Commissioner LENNON. What wages does this immigrant receive the first three months he is at work? Suppose he goes into the pressing department of some firm or other, what wages does he get the first three months of his employment?

Mr. STIEGLITZ. Usually as a beginner he gets the smallest price possible.

Commissioner LENNON. I know, but about what is that?

Mr. STIEGLITZ. Well, it is according to his training, according to his mechanism.

Commissioner LENNON. Well, suppose he has never worked in the trade in the old country or anywhere else, and he starts in here, what would he be paid for the first three months?

Mr. STIEGLITZ. Well, I don't see, if the man never has been a tailor, how he could find employment in a tailor shop.

Commissioner LENNON. Then the new beginner don't get the standard wage or the wage you do?

Mr. STIEGLITZ. Positively not.

Commissioner LENNON. Let's see, now; can't you tell us about what they get?

Mr. STIEGLITZ. Well, they try to get them for five or six dollars a week.

Commissioner LENNON. They try to get them for five or six dollars a week?

Mr. STIEGLITZ. Yes, sir.

Commissioner LENNON. And that would continue how long?

Mr. STIEGLITZ. Well, as long as the boss likes it.

Commissioner LENNON. Will it continue six months, or three months, or how long?

Mr. STIEGLITZ. There is no limit.

Commissioner LENNON. There is no limit for such things? No rules governing them?

Mr. STIEGLITZ. No, sir.

Commissioner LENNON. Then such a man entering the trade, he might work a year at five or six dollars a week, or if there is no rule he might work only a month at that price, and then get a standard wage. Is that true?

Mr. STIEGLITZ. Yes, sir; sure. He might work five years at the same price, and if he would not demand a better price he would never get it.

Commissioner LENNON. Well, I advise your union to amend some of its rules; but that is not my business, though. That is all, Mr. Stieglitz.

TESTIMONY OF MR. JOSEPH GOODMAN.

Mr. THOMPSON. What is your name and place of residence?

Mr. GOODMAN. Joseph Goodman, 313 East Sixteenth Street.

Mr. THOMPSON. And your business?

Mr. GOODMAN. I am working now on a division of basting.

Mr. THOMPSON. For whom?

Mr. GOODMAN. I am working for a contractor.

Mr. THOMPSON. What contractor?

Mr. GOODMAN. On coats.

Mr. THOMPSON. What is the name?

Mr. GOODMAN. Zucker.

Mr. THOMPSON. What is his address?

Mr. GOODMAN. 125 Ridge Street.

Mr. THOMPSON. How many people are employed, if you know?

Mr. GOODMAN. Employing about 65.

Mr. THOMPSON. For what manufacturers or people does he do work, if you know?

Mr. GOODMAN. I can't tell you, because he changes all the time.

Mr. THOMPSON. What wages do you get?

Mr. GOODMAN. My part—the part I work—I am getting \$22.

Mr. THOMPSON. Twenty-two dollars?

Mr. GOODMAN. Yes, sir.

Mr. THOMPSON. Is that weekly wage, or on piecework?

Mr. GOODMAN. Weekly wage.

Mr. THOMPSON. Is that the average wage in your shop for your work?

Mr. GOODMAN. No; I am simply doing certain parts; and, of course, not in every shop, because we have not got no scale of wages in our organization.

Mr. THOMPSON. Are you a member of the organization?

Mr. GOODMAN. Certainly.

Mr. THOMPSON. Have you fines you are subject to? Does your employer fine you for spoiling goods, or anything of that kind?

Mr. GOODMAN. No, sir; because my organization protects me from that.

Mr. THOMPSON. Are your wages secure, or do you have trouble collecting them.

Mrs. GOODMAN. My wages are secured through the organization through the managers where the work is for.

Mr. THOMPSON. How does the organization secure your wages, if you know?

Mr. GOODMAN. As soon as any trouble occurs—of course, we have a chairman in our shop, and the chairman gets up in the organization and tells the manager of the organization that the boss wants to finish out the work—of course, the boss can't leave the work in pieces—unless he finishes it up, and if there is some understanding between the workmen that the boss means some tricks, of course, he goes over to the organization and advises, tells the organization—the manager, through the organization, sees the firm where the contractor works in and gets some security for our wages.

Mr. THOMPSON. Do you people ever have to seize the goods—put a lien on the goods, on the clothing—in order to get your pay?

Mr. GOODMAN. Some of them do; of course, if at the time we didn't have no organization here we always used to do it.

Mr. THOMPSON. Was that a frequent occurrence at that time?

Mr. GOODMAN. At that time; at the present moment, no.

Mr. THOMPSON. At that time, yes; but at the present moment, not?

Mr. GOODMAN. Yes, sir; the organization does it.

Mr. THOMPSON. How long a season have you in the shop?

Mr. GOODMAN. I can't tell exactly; sometimes the season keeps on longer and sometimes less; I would say about eight months during the year.

Mr. THOMPSON. Is any special effort made in your shop to provide workers with work during the slack season?

Mr. STIEGLITZ. Yes, sir; they support children.

Commissioner O'CONNELL. Have they grown-up children also that work in the factory?

Mr. STIEGLITZ. I don't know. But I want to state the fact that all of the women who take in home work to the houses, the most of the women, the new immigrants learning in those houses. The most of the women are contractors in the house. They have children. If newcomers come, they teach them how to sew, too.

Commissioner O'CONNELL. Have you been in some of those houses where they take in clothing to the home and sew sometimes?

Mr. STIEGLITZ. I happened to be, sometimes.

Commissioner O'CONNELL. What are the sanitary conditions in those homes?

Mr. STIEGLITZ. There is nothing to speak of in sanitary conditions in a place where a family lives home, at the same time having sewing there and doing basting, and so on. They are simply small bedrooms, and under such wages they can not live in the five or six room cottages and live on that wages. They are making simply a poor living.

Commissioner HARRIMAN. Would you give the commission the address of some of those places you are speaking of?

Mr. STIEGLITZ. I think it is not very necessary for me, and I don't think whether I remember exactly the addresses. I just want to point out streets. This is on Christie Street, the most of them. Christie Street is the most of them.

Commissioner HARRIMAN. Do most of those women have husbands working, too?

Mr. STIEGLITZ. I am not very familiar with that.

Commissioner LENNON. I understood you, Mr. Stieglitz, in response to Commissioner O'Connell, just a moment ago, to say something about there being women contractors. I want to see if I understood you right.

Mr. STIEGLITZ. Yes, sir; there is in the Italian houses. The newcomers from the old country know how to sew, and the newcomers from the Italians don't know, some of them; they did not work in the old country in the tailoring line; they come to learn; so the first thing they come in places where the women are taking out work from shops, and they teach them; they learn them by this work; and there is some children which, even they are in school, yet during the time they are out of school they are also learning. After they get out from school they are already full mechanics and carrying home the coats on their heads, or some of them working in the tailor shop making \$6 a week.

Commissioner LENNON. Those shops, those contractors, those women who teach the others, they get the work from the principals—that is, they go to the principals for it—and then they pay those new immigrants a still lower wage?

Mr. STIEGLITZ. I don't know whether they get paid or not. Maybe they are just learning them. I am not very familiar with that. I never was there when they were paid.

Commissioner LENNON. Do you want to ask any more questions, Mr. Thompson?

Mr. THOMPSON. No, thank you.

Commissioner LENNON. I wish we had a witness who could develop this woman proposition.

Commissioner HARRIMAN. Yes; I do.

Commissioner LENNON. Thank you. That is all.

Mr. THOMPSON. There are one or two of the men who are not here we had billed for to-day. They might know more about it. There are one or two who are spoken of as good English speaking people.

TESTIMONY OF MR. WILLIAM EISENBERG.

Mr. THOMPSON. Will you please state your name, age, residence, and occupation.

Mr. EISENBERG. William Eisenberg; 59 Cannon Street; I am a general tailor.

Mr. THOMPSON. What particular work are you doing now?

Mr. EISENBERG. Doing work as a baster.

Mr. THOMPSON. With what firm?

Mr. EISENBERG. Cossock & Cohen, 125 Spring Street.

Mr. THOMPSON. How long have you been doing basting work for them?

Mr. EISENBERG. Two years.

Mr. THOMPSON. What wages do you get, if it is a weekly wage?

Mr. EISENBERG. Eighteen dollars.

Mr. THOMPSON. How many hours a week do you work?

Mr. EISENBERG. Fifty.

Mr. THOMPSON. Do you know what the difference is, if any, between the wages paid for basters in inside shops and the wages paid by contractors?

Mr. EISENBERG. Yes, sir.

Mr. THOMPSON. What is the difference, if any?

Mr. EISENBERG. If counsel will permit me, I will explain.

Mr. THOMPSON. Go ahead.

Mr. EISENBERG. A baster, or any worker who works for a contractor, generally gets more wages, for the reason that a contractor who is always in the shop, whose people are always working under his own supervision, his work is so divided; that is, I would call it in brief the speed system. The contractor drives every one of his workers; he speeds, and consequently he is able to pay his workers more than the manufacturer, and we turn out more work than the inside shop, naturally. Naturally the contractor is in position to pay his worker in general, not only the baster, but his workers in general, from the baster down to the presser, he is in position to pay them more than the inside shop does, for we turn out more work by the speed system than in the inside shops. On the contrary, the work—to compare in the inside shops where the people are working under the supervision of a foreman, the boss does not come; he comes in maybe once in a month or once a week and just gives a look on the place—and the machinery in the inside shop is so highly developed so that it is not necessarily needed so much help as is needed in the inside, because the machinery turns out just as much work, and it is as necessary for him to drive that man because he turns out the same work, and by it generally if a worker works less he does not turn out so much work; he is not compelled to work so fast; he is willing that he—he is satisfied to work for \$2 or \$3 less a week than the inside. I have worked for a contractor; I have speeded, when I speed all I work my nine hours a day, I know that I honestly earn that money for I do more work, because I am compelled to. It is not a question that I am willing to work on the inside or the outside, because I can not get it. I would be willing to work in the inside shop rather than the outside shop. We know it affects very much upon the health, but it is a question that we can not get it.

If you would permit me, I have carefully listened to everyone who has appeared here; I have listened to our manager, Lavner, of the district council, who is the general manager; he said we had 2,600 shops, and out of those most of them are contracting, and a very small percentage are inside shops. This is the reason we can not get into the inside shops, because the manufacturer would rather have outside than inside shops, because he pays him better to have contractors than inside, and you may be sure that if the manufacturer saw there was more profit by an inside shop he would have inside shops. Therefore, we are compelled to work for the inside shops and speed our life out. That is all I have to say.

Mr. THOMPSON. Did you state the number of hours a week you work?

Mr. EISENBERG. Fifty hours.

Mr. THOMPSON. You are a member of the union?

Mr. EISENBERG. Yes, sir; I am a member of the union, as long as I am in America; nine years; and I am a tailor from the old country.

Commissioner O'CONNELL. What part of the old country?

Mr. EISENBERG. Russia.

Mr. THOMPSON. Has the baster a stronger position in the shops than the other workers?

Mr. EISENBERG. The baster is a man, mechanic in the shop. The baster is the one who knows more about the coat than anyone else in the shop, because he is the one who begins the coat, he basts the coat, he fixes up the coat; he is the one who knows everything about the coat, more than anybody else. He is the skilled mechanic and an operator. The presser of those, they are the ones who have immigrated here and who have to learn the trade. Therefore the baster knows more about the coat than anybody else.

Mr. THOMPSON. Is he generally treated better in the shop than the others?

Mr. EISENBERG. No, sir. In fact worse.

Mr. THOMPSON. What?

Mr. EISENBERG. Worse. The one who knows more tries to explain more and therefore he is treated worse than the others.

Mr. THOMPSON. What control has the worker over the sanitary conditions of the shop?

Mr. EISENBERG. I shall express my honest opinion, a very poor control.

Mr. THOMPSON. Is the sanitary condition of the contractor's shop better than the inside shop?

Mr. EISENBERG. Very bad. I must admit that the sanitary conditions on the inside shops are nothing compared to the outside shops.

Mr. THOMPSON. The inside shops are better?

Mr. EISENBERG. The better sanitary conditions. They are much better than the outside shops; therefore we have very little of the inside shops.

If counsel permits me, I have listened carefully in the line of which labor I am working. I for one who have been working in that line for many years, I for one who have taken an active part in the recent strike and our general strike of 1913, I have visited mostly all of the homes of the Italians, and I have noticed, I have went there with the object that I should see what was there. Never in my life have I seen and I could not believe that things of this kind could be in existence—that is, home work. If counsel and the commission will permit me I will explain.

Mr. THOMPSON. Go ahead.

Mr. EISENBERG. When the big general strike was broken out, we, the active members of the organization, I made up my mind to go to these poor women, these Italian women, who do all, not all, but they do all the finishing work, and I am responsible for every sentence I utter. I went down to Mott Street, where the Italians all live. I found there the families living in two rooms each family, two and three children, at the age of 10 and 12 years. I was astonished to see when a child of 10 years has felled a coat—felling means the sleeve lining, the girl fells the sleeve lining and collar and at the same place pulls out the basting. I have seen the families living in two rooms, two families living in two rooms, so horrible looking when they felled those coats. When the general strike came out the union put this out as a demand—we have demanded the abolishing of child labor and home work, but to my great sorrow we were not successful in that line. We had many, many demands and we had to go on, on this demand, for the reason the Italian women are very ignorant, I must say, although I am very sorry to say it; they can not conceive how they are threatened; they can not conceive how low wages they are willing to work for, for very low wages. I think they can't help it. I have listened very carefully to one of our manufacturers who said that only 25 per cent of the work is sent out to homes.

This, I must say, is not true. I can prove it. I say that 85 per cent of the work of the finishing, that is of the felling—I want you to understand me clearly—the felling, the bottom, and the sleeve lining and the shoulders, 85 per cent of that line of work is sent out to the homes, and this is made by children 10 and 12 years of age; and if the commission will make this as a matter of their effort to find out here how in the Italian neighborhood they are living they will find my statement is true; 85 per cent is sent out and 15 per cent is in the shop. I admit one of the manufacturers said the reason they sent out the work, and I believe he was very frank in saying it, is because they get the work outside cheaper, because the woman who fells her coat, she gets 5 or 6 cents; and as one, Mr. Goodman, the previous witness, has said before, she lives at home. She has very little, she has very little time to make that work, and she is willing, I know it and I can produce statistics, that a woman in my shop, where my boss sends out all work, earns \$4 and \$5 a week, which is true. And this you must consider, gentlemen, is not steady all year round. I work for a contractor and I have been out of work for the last 14 weeks, and naturally the women have to be out of work, too, and you can imagine how much a woman makes a week during the year on an average.

Mr. THOMPSON. You say that the manufacturers could get all the women they wanted to do the inside work?

Mr. EISENBERG. They can get all the women they need; it is only a question of paying more money.

Mr. THOMPSON. When you say that 85 per cent of the work is done in the home, upon what basis do you make that statement?

Mr. EISENBERG. Upon what basis?

Mr. THOMPSON. Yes; what investigation have you made?

Mr. EISENBERG. What investigation? We know it. First of all, I am a member in the union, and the union does this, makes it its business to investigate how much work is made in the outside shop; and we know it, and they make it under the basis, under the subdivision of piecework.

Mr. THOMPSON. Is the union pretty well organized in these large factories?

Mr. EISENBERG. What?

Mr. THOMPSON. Has the union got a great many members in these large organizations?

Mr. EISENBERG. We are organized, but—well, we are organized on some grounds, but we were successful from the beginning of the strike, but we have almost every shop in Greater New York, the biggest and the smallest, organized, but lately the manufacturers have tried—they made a tendency to send their work out of town. Their tendency is, with the object to weaken the organization, they say to the worker, to the tailor: "If you want to manufacture work for us, for these and these members, for this and this price, we shall not send that work out of town"; and they also tell him, "If you want to work for me, you can not be a union man," and the worker naturally gets scared, and he bends his head down and becomes disorganized; and if he is organized he is not organized by the knowledge of the boss, and therefore their tendency is to weaken the organization; therefore we have not such a big control over the big firms, such as Benjamin and a good many others, Browning, King, and I could name them by the dozen; but we have very good control as J. H. Friedman's people, although not directly but indirectly.

Mr. THOMPSON. I did not want you to mention names, but I wanted to get at how the shops in the large inside factories, where you have not got an organization—how do you find out what proportion of the finishing work goes to the homes and what proportion is done in the factory?

Mr. EISENBERG. That is just as well as we know how many people are organized or unorganized. We know how many people are organized in the big shops and how many of them are not.

Mr. THOMPSON. In other words, you have members in all shops?

Mr. EISENBERG. Yes; all over.

Mr. THOMPSON. That is all.

Commissioner O'CONNELL. I want to get a little more information about employment of women and children.

Mr. EISENBERG. Yes.

Commissioner O'CONNELL. You heard the gentleman just preceding you say that the wages ran from \$2 a week to \$6?

Mr. EISENBERG. Yes, sir; I did. But if you will permit me, this is in regard to the Italian women who take their work out. But we have girls who could not work outside. They must work inside; that is, as button sewers; and they sew on the hanger, and the busheling, those girls are under the supervision directly of the organization, and the organization sees to it that when a member of the organization works, either a man or a woman, he should be treated honestly and justly, and their wages are not as high. The highest is \$10 and \$11, but an average might amount to \$5.

Commissioner O'CONNELL. The average would be \$5?

Mr. EISENBERG. Yes; for women.

Commissioner O'CONNELL. Those are the women working in the factory?

Mr. EISENBERG. Yes, sir.

Commissioner O'CONNELL. Under the union?

Mr. EISENBERG. Yes; under the union. The reason is, the average—because we have a very big slack season. I will try to contradict my own brothers who have—they claim we have a season of a year of around eight months. I say it is not. I think we do not work more than three months in a season; therefore our wages are lower.

Commissioner O'CONNELL. Have you any cases in mind where women and men do the same work exactly?

Mr. EISENBERG. I have.

Commissioner O'CONNELL. How are the wages compared between the men and the women? How much does the man get, and how much does the woman get? How much does the man get more than the woman, or do they make the same wage?

Mr. EISENBERG. Practically; not in all cases. We have heard that women who do the same work as the men, and that is, the women, as a rule, are always willing to work for less money than the men, and we see to it that she should not get less. It is for the benefit of our people that she shall not get less, but the one who does not do the same work as the man usually gets less, as the button sewer and the hanger sewer and so on, but the woman who bastes all get the same money; not many, very few of them. We see she shall get the same wages, because it hurts the man who has to support a family.

Commissioner O'CONNELL. Will they work for piece prices?

Mr. EISENBERG. Well, we have got a good many of these piece prices, and we have a lot—in most of the shops we have week prices.

Commissioner O'CONNELL. Where the piece prices prevail, do the women get the same price for doing a certain piece of work?

Mr. EISENBERG. Yes, sir.

Commissioner O'CONNELL. Can she do as many pieces as the man?

Mr. EISENBERG. If she sends out more pieces she will get more money, but if she turns out less pieces she has less. Naturally, the woman is weaker and turns out less.

Commissioner O'CONNELL. How about the sanitary conditions? You say you visited their homes and found two families living in two rooms.

Mr. EISENBERG. I am very sorry to say, very poorly.

Commissioner O'CONNELL. How many people did you find living in those two rooms?

Mr. EISENBERG. Well, I have—I have friends of mine here what has been around with me, and I found 10 or 12 people in two rooms living.

Commissioner O'CONNELL. There were two rooms?

Mr. EISENBERG. Well, very small.

Commissioner O'CONNELL. How large were the rooms?

Mr. EISENBERG. Well, very small; I can't tell you just how big they were.

Commissioner O'CONNELL. Were they as large as this room?

Mr. EISENBERG (laughing)——

Commissioner O'CONNELL. Half as large?

Mr. EISENBERG. Neither; I believe, truthfully speaking, it will be a quarter of that room, two rooms; just a quarter of that room.

Commissioner O'CONNELL. A quarter of this room?

Mr. EISENBERG. Yes; the two rooms; there is two rooms, occupy just one quarter of this room, but it was not so high as this.

Commissioner O'CONNELL. Twelve people in each of those rooms, you say?

Mr. EISENBERG. Yes.

Commissioner O'CONNELL. Twenty-four people in those two rooms?

Mr. EISENBERG. Yes, sir.

Commissioner O'CONNELL. How many beds were in the room?

Mr. EISENBERG. Well, I could not tell you how many beds. I have seen one bed. You know what the poor people does? They use a little couch, and if they haven't got another they rest on the floor. They are satisfied to sleep anywhere at all.

Commissioner HARRIMAN. Where did you say this was, in Mulberry Street?

Mr. EISENBERG. Mott Street and Mulberry Street, around that street. If you go up there in any house you will find it.

Commissioner O'CONNELL. Are these rooms you speak of in some apartment building, or where are they, in flat buildings?

Mr. EISENBERG. I don't know what you call it, a tenement or apartment; I don't know how to name it.

Commissioner O'CONNELL. Is it a tenement house?

Mr. EISENBERG. A tenement house, sir; old building, small houses, renting two or three flats.

Commissioner O'CONNELL. Running water in the room?

Mr. EISENBERG. Yes; there is water.

Commissioner O'CONNELL. Bathtubs?

Mr. EISENBERG. No, sir; nothing like that. They don't know about them; they are glad to have a sink there.

Commissioner O'CONNELL. If there was a bathtub I suppose it would be used for sleeping purposes?

Mr. EISENBERG. I don't know; maybe they just sit on the cover.

Commissioner O'CONNELL. It is not insanitary under the new rules not to take a bath in the bathtub?

Mr. EISENBERG. No, sir.

Commissioner O'CONNELL. That is all.

Mr. THOMPSON. Is Mr. Silverman here?

TESTIMONY OF MR. SAMUEL SILVERMAN.

Mr. THOMPSON. Give us your name and address?

Mr. SILVERMAN. Samuel Silverman.

Mr. THOMPSON. Address?

Mr. SILVERMAN. 3023 West Twenty-third Street, Coney Island.

- Mr. THOMPSON. What position do you hold?
- Mr. SILVERMAN. Business agent.
- Mr. THOMPSON. Of what local?
- Mr. SILVERMAN. One hundred and sixty-two.
- Mr. THOMPSON. Of the United Garment Workers?
- Mr. SILVERMAN. Yes, sir.
- Mr. THOMPSON. That is, custom tailors?
- Mr. SILVERMAN. Yes, sir.
- Mr. THOMPSON. What are the wages that are paid for the different tailors in the custom tailors' trade?
- Mr. SILVERMAN. Our work is a single trade, mostly a tailor makes a coat by himself. There is a small number only divided in section parts in the shop, but the majority the tailor makes the coat by himself.
- Mr. THOMPSON. As a pieceworker?
- Mr. SILVERMAN. As a pieceworker.
- Mr. THOMPSON. What is the price for a coat, for instance?
- Mr. SILVERMAN. There is from \$2.50 up.
- Mr. THOMPSON. Is this supposed to be fancy work?
- Mr. SILVERMAN. Yes; high-class custom work.
- Mr. THOMPSON. What do they get for a vest and for pants?
- Mr. SILVERMAN. I could not tell you, sir; I only represent the coat department.
- Mr. THOMPSON. You represent the coat department?
- Mr. SILVERMAN. Yes, sir.
- Mr. THOMPSON. What kind of shop is this work done in?
- Mr. SILVERMAN. Mostly done in the tenement houses, single tailors sitting with a family and working.
- Mr. THOMPSON. Do all the members of the family work on the work?
- Mr. SILVERMAN. Mostly.
- Mr. THOMPSON. Does your organization take in the different members of the family?
- Mr. SILVERMAN. No; we don't take in even the principal tailors there.
- Mr. THOMPSON. Well, what kind of shops or tenements has your organization got members in?
- Mr. SILVERMAN. We haven't got any members from tenement houses; we don't take any members if they work in tenement houses.
- Mr. THOMPSON. But where is the work done that your members do?
- Mr. SILVERMAN. In the stores.
- Mr. THOMPSON. In the stores?
- Mr. SILVERMAN. Merchant tailor stores.
- Mr. THOMPSON. Merchant tailor stores?
- Mr. SILVERMAN. Yes, sir.
- Mr. THOMPSON. And those are all paid on piecework?
- Mr. SILVERMAN. Some of them is week workers.
- Mr. THOMPSON. Is any fining done by the proprietors?
- Mr. SILVERMAN. No, sir.
- Mr. THOMPSON. Are those stores pretty well organized?
- Mr. SILVERMAN. Most of them; the majority.
- Mr. THOMPSON. Does their work run in seasons, or is it pretty steady the year through?
- Mr. SILVERMAN. Season.
- Mr. THOMPSON. How long is the season, or are the seasons?
- Mr. SILVERMAN. About three months is a season in our line.
- Mr. THOMPSON. How many seasons in a year, two or three?
- Mr. SILVERMAN. About six months in a year; three months to a season; two seasons.
- Mr. THOMPSON. Is there any effort made by the proprietors of those stores to give work to the workers during the slack season?
- Mr. SILVERMAN. What is that?
- Mr. THOMPSON. Is there any effort made by the owners of the stores in which the members of your union work to get them other kinds of work, needlework, during the slack seasons, to keep them busy?
- Mr. SILVERMAN. No, sir.
- Mr. THOMPSON. What do your members usually do during the slack season in order to help their income out?
- Mr. SILVERMAN. They go idle.

Mr. THOMPSON. What is that?

Mr. SILVERMAN. They go idle.

Mr. THOMPSON. Running around idle?

Mr. SILVERMAN. Yes.

Mr. THOMPSON. Generally is no effort made by the men to make additions to his income in other trades?

Mr. SILVERMAN. No, sir.

Mr. THOMPSON. He simply waits with part work until the busy season comes around again?

Mr. SILVERMAN. Yes, sir.

Mr. THOMPSON. How much will a worker earn on coats during the busy season a day?

Mr. SILVERMAN. A day?

Mr. THOMPSON. Yes.

Mr. SILVERMAN. He makes about two or three coats a week.

Mr. THOMPSON. And gets about \$7.50 a week, then, during the busy season?

Mr. SILVERMAN. Some, according to coats. There is some coats that pay \$2.50, when the tailor is liable to make \$8, or \$10, or \$12 a week. Some coats pay \$8 or \$10, and he could not make more than a coat and a half or two; that is, according to the price, according to the work.

Mr. THOMPSON. How much would the members of your union make in a week during the busy season?

Mr. SILVERMAN. An average?

Mr. THOMPSON. What is the lowest and the highest they could make?

Mr. SILVERMAN. The lowest they might make, \$8 or \$9, and the highest is \$20 or \$21.

Mr. THOMPSON. What would be the average, if you have any information about it?

Mr. SILVERMAN. About \$10 or \$11.

Mr. THOMPSON. What will they make during the slack season—during the other six months of the year?

Mr. SILVERMAN. During the other six months of the year?

Mr. THOMPSON. Yes.

Mr. SILVERMAN. \$2 and \$3 and \$4 a week.

Mr. THOMPSON. Are the members of your union mostly adults—grown up people?

Mr. SILVERMAN. Yes, sir.

Mr. THOMPSON. So that they have an average wage, then, say, of \$10 or \$12—\$6 a week during the year?

Mr. SILVERMAN. Mostly.

Mr. THOMPSON. Are their wages, as a matter of fact, as low as that?

Mr. SILVERMAN. What is that?

Mr. THOMPSON. Are their wages that low on the average?

Mr. SILVERMAN. Yes; so far.

Mr. THOMPSON. And yet you say these people make no effort to get other work during the off-season to help out the income?

Mr. SILVERMAN. So far as I know, they do not.

Mr. THOMPSON. And you probably would know, wouldn't you, being their business agent?

Mr. SILVERMAN. Well, sometimes they might try, but I don't know.

Mr. THOMPSON. I am only speaking generally.

Mr. SILVERMAN. No.

Mr. THOMPSON. How many hours a day do they usually work?

Mr. SILVERMAN. Fifteen.

Mr. THOMPSON. Are they all organized?

Mr. SILVERMAN. The majority.

Mr. THOMPSON. The majority?

Mr. SILVERMAN. Yes.

Mr. THOMPSON. What conditions do they have? What are the sanitary conditions of those stores?

Mr. SILVERMAN. Shorter hours and more money—

Mr. THOMPSON (interrupting). What is that?

Mr. SILVERMAN. The sanitary conditions?

Mr. THOMPSON. How are the working conditions? Are the shops clean, or are they not clean?

Mr. SILVERMAN. In our trade there isn't any sanitary condition. We are supposed to have them, but we have no sanitary condition, because they are

working in a store. and in some stores there are no windows. They are working by light during the day the entire year, and no air.

Mr. THOMPSON. Do you have anything to do with the contractors?

Mr. SILVERMAN. Some of them in custom lines.

Mr. THOMPSON. In custom lines?

Mr. SILVERMAN. Yes, sir.

Mr. THOMPSON. What are the wages your workers get in those shops in your line?

Mr. SILVERMAN. Pretty near the same.

Mr. THOMPSON. Pretty near the same?

Mr. SILVERMAN. Yes.

Mr. THOMPSON. What are the advantages, if any, of the workers in those shops—contracting shops?

Mr. SILVERMAN. To get more sanitary conditions.

Mr. THOMPSON. More sanitary conditions?

Mr. SILVERMAN. Yes. More sanitary conditions.

Mr. THOMPSON. Have they got steady work?

Mr. SILVERMAN. No; the same thing.

Mr. THOMPSON. What is the disadvantage to the workers in the contract shops in your trade? The last witness said they speed up the workers in the contracting shop. Is that true—they make them work faster?

Mr. SILVERMAN. Yes; they make them work faster.

Mr. THOMPSON. They do that?

Mr. SILVERMAN. Yes.

Mr. THOMPSON. What does your union do to try to stop that?

Mr. SILVERMAN. Trying to arbitrate.

Mr. THOMPSON. Have you any trade agreement with the contractors or with the custom tailors?

Mr. SILVERMAN. No; we have an agreement with the association, the Metropolitan Association—the Monet Association.

Mr. THOMPSON. Have you got a copy of that agreement here?

Mr. SILVERMAN. No; I haven't got it with me, because I was not prepared.

Mr. THOMPSON. Will you furnish us with a copy of it?

Mr. SILVERMAN. I will.

Mr. THOMPSON. How do you adjust grievances or complaints of the wages under your contract?

Mr. SILVERMAN. By committees.

Mr. THOMPSON. By committees?

Mr. SILVERMAN. Yes, sir; by committees.

Mr. THOMPSON. Who are on that committee?

Mr. SILVERMAN. From both sides.

Mr. THOMPSON. Is it a standing committee? Has it any regular people on it?

Mr. SILVERMAN. No; they are not standing. We call them from both sides whenever trouble comes.

Mr. THOMPSON. What means have you of enforcing that agreement?

Mr. SILVERMAN. What is that?

Mr. THOMPSON. How do you enforce the agreement if it is not kept?

Mr. SILVERMAN. We don't try to enforce.

Mr. THOMPSON. You don't?

Mr. SILVERMAN. No.

Mr. THOMPSON. What do you do if the employer breaks the agreement?

Mr. SILVERMAN. If the employer—

Commissioner O'CONNELL. If the employer breaks it, don't live up to it?

Mr. SILVERMAN. We take him down.

Commissioner O'CONNELL. You take him down?

Mr. SILVERMAN. Yes.

Mr. THOMPSON. Strike?

Commissioner O'CONNELL. How do you take him down?

Mr. SILVERMAN. Call it a strike.

Mr. THOMPSON. That is all, Mr. Chairman.

Commissioner LENNON. Have you any of this child labor and woman labor under your jurisdiction?

Mr. SILVERMAN. No; we have got it in the tenement houses; the single tailors take out work, for instance, they come in a store for it, the merchant tailor takes out a coat and he takes it for less money than the contractor works at it, and he works home with his family, probably, if they have got some children

they help him to pull out the baste, and if she is big enough she helps him to fell. Very small money.

Mr. THOMPSON. Have you any idea how much money they earn a day or week?

Mr. SILVERMAN. No.

Mr. THOMPSON. No idea on that, or how they live?

Mr. SILVERMAN. What is that?

Mr. THOMPSON. Have you been in their homes?

Mr. SILVERMAN. No.

Mr. THOMPSON. You don't know how they live at home, whether they are clean at home, or dirty at home?

Mr. SILVERMAN. No sanitary conditions. When a single tailor takes a coat home, he has got two or three rooms in a tenement house.

Mr. THOMPSON. They use the clothing they take out for bedding, do they, and to put over them at nights and keep them warm in the wintertime?

Mr. SILVERMAN. Yes; certainly.

Mr. THOMPSON. If they have sickness in the house, they use this extra clothing?

Mr. SILVERMAN. Very often.

Mr. THOMPSON. Contagious diseases—diseases they can carry out?

Mr. SILVERMAN. It happened once a child burned his hands by the iron when the father was pressing the coat.

Mr. THOMPSON. That is all the witnesses we have here. There is an attorney here who says he would like to speak on this subject. I don't know whether the commission wishes to hear him or not. He is an attorney for the union, and would like to be heard on this case. I don't know whether the commission wants to hear him or not. Otherwise, we are through for the day.

Commissioner LENNON. I think he can be heard to-morrow, in all probability. I think that will be best.

Mr. THOMPSON. There is a contractor here, too, Mr. Chairman, a voluntary witness, who would like to go on the stand.

Commissioner LENNON. All right, let the contractor go on.

TESTIMONY OF MR. CHARLES A. ROSENWASSER.

Mr. THOMPSON. Where do you live?

Mr. ROSENWASSER. Newark, N. J.

Mr. THOMPSON. What is your business?

Mr. ROSENWASSER. Executor of my father's estate, and as such I am conducting his business.

Mr. THOMPSON. What is that?

Mr. ROSENWASSER. A clothing contractor.

Mr. THOMPSON. What is the name of the firm?

Mr. ROSENWASSER. Rosenwasser Tailoring Co.

Mr. THOMPSON. That is located in New Jersey?

Mr. ROSENWASSER. Newark, N. J.

Mr. THOMPSON. Newark, N. J.?

Mr. ROSENWASSER. Yes, sir.

Mr. THOMPSON. How long have you been in that business?

Mr. ROSENWASSER. I beg your pardon, sir.

Mr. THOMPSON. How many years have you been in that business?

Mr. ROSENWASSER. Well, my father was established in the city of Newark for 20 years, and before that he was in the city of New York about 30 years.

Mr. THOMPSON. Where does your work come from as contractor?

Mr. ROSENWASSER. Most of it comes at the present time from the city of New York, but we have also work coming from Newark and other cities.

Mr. THOMPSON. How far is Newark from New York?

Mr. ROSENWASSER. Eight miles.

Mr. THOMPSON. Mr. Rosenwasser, what have you got to say about the contracting shops, as to their sanitary condition?

Mr. ROSENWASSER. I think it is a mistake not to have just a few words from the contractor's side after all the testimony of the other gentlemen.

Mr. THOMPSON. Of course, I want to draw your attention, Mr. Rosenwasser, that we have asked Mr. S. Kaufman, secretary of the United Clothing Contractors' Association, to be here to-day, and subpoenaed him, as a matter of fact.

Mr. ROSENWASSER. I understand. I don't know the gentleman. I am simply trying to say a few words about—to the effect that there is a different side to

this contracting situation. Of course, I speak only from the standpoint of a high-class contractor making high-class work.

Mr. THOMPSON. You do high-class work?

Mr. ROSENWASSER. The very best and finest work that is made. And, of course, the conditions under which this work is made is somewhat different from the conditions described by some of the gentlemen who have spoken. I think that most of the conditions that they have referred to is in the cheaper grade of work, and there is a very great difference in the cheaper grade of work and the higher grade of work, and a great difference in the conditions under which it is made.

Mr. THOMPSON. As to the cheaper grade of work and the conditions they state, are you prepared to contradict what they say?

Mr. ROSENWASSER. I want to contradict the statement.

Mr. THOMPSON (interrupting). Answer my question.

Mr. ROSENWASSER. Yes; there are two or three statements I would like to contradict. I have been familiar with the industry and been in it all my life and am familiar with every—familiar with it from top to bottom.

Mr. THOMPSON. Go ahead.

Mr. ROSENWASSER. I think it is a mistake to let the statements go forward about these women making \$2 a week when they have home work. These women do not work steady. Almost invariably they have means of support; they have a husband who works, and this money is a little extra allowance. Now, I don't want to justify home work. I have fought it in every way, type, and form. I absolutely oppose it. There is only one thing to be said in favor of it, and that is it does bring a few pennies into the pockets of people who need it. Aside from that I have fought it for years and have opposed it for every possible reason.

Mr. THOMPSON. Do you do any of it yourself?

Mr. ROSENWASSER. Absolutely; not 95 per cent nor 85 per cent, but 100 per cent of the finishing work in our shop is sent outside. Why? Because the women will not come in. Pay them more money? I have paid them more money to come in than what I will have to do to give the work out, and they will not come in. Why? Because they have their bambinos—they have six or eight children—and they have this work to do; and in between their household duties they can do this sewing.

Mr. THOMPSON. And you say your work is high-grade work?

Mr. ROSENWASSER. Yes, sir.

Mr. THOMPSON. The very highest grade?

Mr. ROSENWASSER. The best made.

Mr. THOMPSON. And it comes from New York City?

Mr. ROSENWASSER. Yes, sir.

Mr. THOMPSON. How many homes do you send this work to?

Mr. ROSENWASSER. They will vary anywhere from 10 to 20, depending on how much work there is.

Mr. THOMPSON. What kind of families does it go into?

Mr. ROSENWASSER. Almost all in Italian families.

Mr. THOMPSON. Italian families?

Mr. ROSENWASSER. Yes.

Mr. THOMPSON. And you say these families have six or eight children that the women have to attend to?

Mr. ROSENWASSER. They attend to the children and do the work in addition to this.

Mr. THOMPSON. Do you go around into these homes yourself?

Mr. ROSENWASSER. I have gone to many of them a good many times.

Mr. THOMPSON. What are the conditions in those homes?

Mr. ROSENWASSER. They are not by any means as bad as they are in New York City. That is a very different point.

Mr. THOMPSON. In comparison, they are not as bad as they are in New York City?

Mr. ROSENWASSER. No; the working people in the city of Newark live in better conditions than in New York.

Mr. THOMPSON. What conditions do the Italian families live in in Newark where the woman has got six or eight children to take care of? What time does she have to work on these high-class garments in between attending to babies?

Mr. ROSENWASSER. She will have a home that is decidedly better than the home she is in in this city. You will very seldom find more than six families in a house.

Mr. THOMPSON. How much time do you suppose a woman will have after attending to six or eight children a day?

Mr. ROSENWASSER. Well, that would depend upon how thoroughly she does her housework. I heard the president ask this question: "How much time a woman devotes to this work?" I have timed them. I have made them sit down in my shop and finish a coat, to see how long it takes them, and now I am talking about an overcoat, and there are all kinds and grades of overcoats, and all kinds and grades of work that must be done, and I propose to take an ordinary—what we call an ordinary full-lined coat, which is a perfectly plain coat—and a woman will sit down and finish that coat in one hour, and for that work she will not get more on the finest coats cut than 12 or 13 cents.

Mr. THOMPSON. How often do you go around to these 20 homes?

Mr. ROSENWASSER. Not very often, but I know them pretty well.

Commissioner O'CONNELL. And some of them you have not visited at all?

Mr. ROSENWASSER. Some of them I have never seen.

Commissioner O'CONNELL. You don't know what the conditions are?

Mr. ROSENWASSER. Don't know anything about them.

Commissioner O'CONNELL. Don't know under what conditions these clothes are being made?

Mr. ROSENWASSER. No; except I know the general appearance. Home work ought to be abolished, if not for any other reason except it leads to child labor.

Commissioner O'CONNELL. You don't know whether that home where you send that work has smallpox or not?

Mr. ROSENWASSER. Yes; we have reported to us in the city papers of Newark the homes where contagious diseases break out, and we have made it a rule to know where every one of our finishers lives, and don't allow any work to go to a house where there is a record of any contagious disease in that house.

Commissioner O'CONNELL. Suppose the clothes go out and the case has not been reported until several days after, which sometimes occurs.

Mr. ROSENWASSER. That often happens.

Commissioner O'CONNELL. Have you ever had a case of that kind?

Mr. ROSENWASSER. I have in Newark seen women finishing the coats with a scarlet-fever sign on the door, but there is one thing that steps in between scarlet fever and the fellow who wears the coat, and that is a hot iron. I do not advocate home work; I do not advocate the disinfection of garments with a hot iron. I absolutely oppose home work.

Commissioner O'CONNELL. But the disease may get into the garment after the hot iron was used?

Mr. ROSENWASSER. They don't press them in the homes; they press them in the factory when the garments are brought back.

Commissioner O'CONNELL. What becomes of the germs between the time it leaves the house until it gets to the factory?

Mr. ROSENWASSER. I do not advocate spreading germs; I do not advocate home work, but I do say there is another side of this whole question. And I have done everything I could to abolish it. I have advertised for girls.

There is a way, possibly, that it could be abolished; if our union friends would help us, and they will give it thought, and that is if we could take a garment and if we can take something away from the fellow who is getting too much and give it to the girl who is getting too little.

Commissioner O'CONNELL. Take it away from the fellow who is getting too much?

Mr. ROSENWASSER. Yes, sir. [Laughter in the audience.]

Commissioner O'CONNELL. In the garment trade?

Mr. ROSENWASSER. I am very glad I testified, because it seems, Mr. Commissioner, there are a few things I might tell you.

Commissioner O'CONNELL. Before we get away from this question?

Mr. ROSENWASSER. Yes, sir.

Commissioner O'CONNELL. What did you refer to?

Mr. ROSENWASSER. I referred to the pocket makers in the industry, the man who makes the pockets.

Commissioner O'CONNELL. How much does he make?

Mr. ROSENWASSER. I have personally paid pocket makers as high as \$30 for 50 hours work, and I might tell you they make more than that on the shop line by piecework.

Commissioner O'CONNELL. And why is it the pocket maker makes more money?

Mr. ROSENWASSER. Because, like this young gentleman, who was so thoroughly satisfied with himself and the fact the basting was the most important

part of the coat, that he is a crackajack, and that he is the whole thing he thinks, and he has got a monopoly. These men have become very skillful.

Commissioner O'CONNELL. They have a clothes union of some kind?

Mr. ROSENWASSER. No; they belong to the same union that all their friends belong to, but they are very skillful. There is no question about that. They have learned to make a pocket in a most marvelous way, and they get well paid for it, very well paid for it.

Commissioner O'CONNELL. Well, that is very interesting. What is there so marvelous about making a pocket?

Mr. ROSENWASSER. Well, in olden times they took a pocket and it was what they called basted, but these young men have got it down to making a mark with chalk and putting it on the machine and doing it without basting, and that is done on the \$50 coat, and those men that buy the \$50 coat don't know it is done any other way than by hand. These men are very clever. I have paid as high as \$30 for a man and \$18 for a girl for that some operation.

Commissioner HARRIMAN. If the work is so skillfully done and the young men so clever, why do you consider they are overpaid? You just said they are overpaid?

Mr. ROSENWASSER. I said that they are overpaid as long as the appropriation, which has got to be divided among 50 people, we will say—and if we have starvation at one end and prosperity at the other end I think something is wrong.

Commissioner HARRIMAN. How do you get that appropriation?

Mr. ROSENWASSER. Unfortunately we do not make it; it is these wealthy gentlemen that went home that make it.

Commissioner HARRIMAN. What do you mean?

Mr. ROSENWASSER. The manufacturers.

Commissioner GARRETSON. How many pocket men are there in proportion to the 20 people employed in another capacity?

Mr. ROSENWASSER. Well, an ordinary shop making 500 coats would not—well, ordinarily, on very fine work, have a staff of about five people making pockets.

Commissioner HARRIMAN. And how many others?

Mr. ROSENWASSER. Well, on pockets?

Commissioner GARRETSON. No; on making these coats?

Mr. ROSENWASSER. Probably in a coat shop making 500 coats a week you will probably have altogether, say, 90 people.

Commissioner GARRETSON. Ninety people?

Mr. ROSENWASSER. Yes, sir.

Commissioner GARRETSON. And five pocket men?

Mr. ROSENWASSER. Pardon me. Every one of those five men does not make \$28 or \$30 a week, because of those five there may be one making \$30, his assistant gets \$22, then a girl getting \$18, and a girl getting \$8, and one girl getting \$7.

Commissioner GARRETSON. If you nail these five pocket people to the cross, how far would it go on the other 90 that are underpaid?

Mr. ROSENWASSER. If you took off—if you were making 500 coats a week and you took off \$5 from a pocket maker and put that onto coats, you have got a penny more to pay the finisher.

Commissioner GARRETSON. A penny more to pay the finisher. That is for the week?

Mr. ROSENWASSER. On every coat. Now, that is simply—I simply speak of that to show you that while it is perfectly true that there are a number of people in the garment industry who are underpaid, there are other people in the garment industry that are overpaid. Not necessarily the mechanic that you have spoken about here, but other people who are engaged in these processes of the garment maker's trade.

Commissioner GARRETSON. If this hired person had \$26, \$28, or \$30 a week and is a man who has developed the skill that you admit that this man has developed in any pursuit, is \$120 a month, provided he worked 12 months in the year, an abnormal wage for an abnormally skillful man in any pursuit?

Mr. ROSENWASSER. No, sir.

Commissioner GARRETSON. Then why is he overpaid?

Mr. ROSENWASSER. He is overpaid until such time arrives that there is enough money to be divided up among the workers so that everyone who does a trick gets something.

Commissioner GARRETSON. He is overpaid in proportion to the people that work for a starvation wage?

Mr. ROSENWASSER. That is the idea.

Commissioner O'CONNELL. Just a question about your contract. You take a contract for 500 overcoats, we will say?

Mr. ROSENWASSER. Yes.

Commissioner O'CONNELL. And you take a price to put up those 500?

Mr. ROSENWASSER. Yes, sir.

Commissioner O'CONNELL. And you proceed to figure on how much should be paid the help to give you a certain profit on the contract?

Mr. ROSENWASSER. Yes.

Commissioner O'CONNELL. Say 10, 20, or 30 per cent, whatever it is?

Mr. ROSENWASSER. Yes, sir.

Commissioner O'CONNELL. So you divide that up so as to make a profit?

Mr. ROSENWASSER. Yes.

Commissioner O'CONNELL. And wherever it is necessary to cut, you do it?

Mr. ROSENWASSER. Yes.

Commissioner O'CONNELL. You settle the whole question of the wage yourself?

Mr. ROSENWASSER. No; I do not.

Commissioner O'CONNELL. Who does?

Mr. ROSENWASSER. I send for my friend, the shop chairman of the union, and he comes in and we sit down and talk this thing over and decide ourselves, together with the workers, just what is fair, some proportion to give every man for his task and give him enough.

Commissioner O'CONNELL. He knows the amount of money you get for the contract?

Mr. ROSENWASSER. He does not in some places, but he does in my shop.

Commissioner O'CONNELL. Do you sublet?

Mr. ROSENWASSER. No, sir. You mean subcontract?

Commissioner O'CONNELL. Yes.

Mr. ROSENWASSER. No; we don't do that. I simply want to testify to let you know that there were some contractors who are doing business on a very large and honest scale. I have personally paid out in the city of Newark in the last 20 years \$1,000,000 in wages, and still doing business.

Commissioner O'CONNELL. And you are still living?

Mr. ROSENWASSER. Yes; but I don't think this commission should go home and not hear this testimony, that there are contractors that are pretty nearly white.

Mr. THOMPSON. You said you have made an attempt to get girls, you had advertised?

Mr. ROSENWASSER. Yes.

Mr. THOMPSON. How often did you advertise, and about when did you advertise?

Mr. ROSENWASSER. Well, I do that every once in a while, a sort of spasm comes over me that it is about time to stop this home work once more.

Mr. THOMPSON. A spasmodic proposition?

Mr. ROSENWASSER. Yes. I telephone to the business agent of the union and say what are we going to do about this, and he states that he has not got anybody to send to me, and I will advertise, and they will come in and we will teach them for a few days, and then they go home, and it has not been a success with me.

Mr. THOMPSON. Don't you know tens of thousands of girls are working in the shirt-waist factories in this city?

Mr. ROSENWASSER. Yes, sir; without doubt. There seems to be something different. The conditions under which a girl will work and the conditions under which a married woman with children will work. I presume that if we ever could get to the time that a finisher instead of getting 10 cents for a task could get 20 cents, this question would be solved.

Mr. THOMPSON. Then it is simply a question of poor pay?

Mr. ROSENWASSER. I think that has a great deal to do with it.

Mr. THOMPSON. Just exactly what Mr. Goldman said this morning. He felt if they paid more wages they could get the girls inside of the factories, which, of course, is self-evident to anybody that knows anything about the clothing industry of New York City, where thousands and thousands of girls are working?

Mr. ROSENWASSER. There is another question and that is we can not always get enough help. It may be that over here things are different. There is one more remedy which I will take the liberty of pointing out to the commission,

that is, to advise all these manufacturers to leave New York City with their factories. That is one thing. This is no place to make goods and pay wages, when people can live in the city of Newark for \$13 a month and get five rooms and live in a three-family house. What can they do in New York City for rent? Labor conditions are better out there.

Commissioner HARRIMAN. You said in the answer about these girls working in the shirt-waist factories, you said you could not get those girls, they would not come and work as cheaply as married women, is that what you said?

Mr. ROSENWASSER. No; I did not mean that. The finishing work is not interesting. It is a sort of monotonous lot of plain sewing. It is endless. It is not a very nice task, but we are getting away from it, as Mr. Goldman told you, by two things. Much of the machine work that is now being done has done away with this handwork altogether, and whereas a girl would formerly have to seal a bottom of 110 inches in a very long coat and 50 inches down this way [indicating the front] and then up around the sleeves, now the bottom, what we call the facing, is done by machine, and the girl now, all she will have to do after a little while is to do the bottom and the top of the sleeves. That makes it ever so much less of an onerous task, and I think that will help us getting the work done inside. I don't advocate outside work by any means, and it is not what this enthusiastic gentleman told you.

Commissioner LENNON. Do you desire to ask any more questions?

Mr. THOMPSON. Yes; I just want one more question. You said the condition of work of labor in Newark was very good, the best around this part of the country?

Mr. ROSENWASSER. I don't believe I said that. I said the conditions in general, the living conditions surrounding the workers in the city of Newark, are very much better than in New York City.

Mr. THOMPSON. Is Newark a strongly unionized town?

Mr. ROSENWASSER. I think it is.

Mr. THOMPSON. Very strongly organized?

Mr. ROSENWASSER. I don't think the garment industry was very strongly organized until the last garment strike.

Mr. THOMPSON. Generally?

Mr. ROSENWASSER. Yes, sir; I think it is a good union town.

Commissioner GARRETSON. I got a little bit interested in those germs. Assuming that what you do with the hot iron is a true disinfectant, what safeguard is there on these scarlet-fever germs so far as the workers inside of your shop are concerned before the iron gets on them?

Mr. ROSENWASSER. Well, this is—when the coat is brought back from the finisher the very next process is the pressing. I should not say that in every case, because there may be some cases when they come back from the finisher and then they go to the buttonhole maker; sometimes the buttonholes are made before the finishers, and then they go on to the pressing.

Commissioner GARRETSON. Ought not the buttonhole maker have as much protection from these germs through disinfection as the consumer?

Mr. ROSENWASSER. I have no doubt of it. I think it is a positive fact that, and I think, why is it with all the contagious diseases around, especially among the poor—why is it so little spread with garments?

Commissioner GARRETSON. Is there any statistics to prove that the spreading is done by garments?

Mr. ROSENWASSER. No. I can tell you more of that, but I am not testifying to that now. I have another side of my existence which I will not go into just now.

Commissioner GARRETSON. That is all.

Commissioner LENNON. That is all. The commission will now stand adjourned until to-morrow morning at 10 o'clock to meet in the mayor's reception room downstairs.

(Thereupon, at 3.40 p. m., the commission adjourned until Friday, June 5, 1914, at 10 a. m.)

NEW YORK CITY, June 5, 1914—10 a. m.

Present: Chairman Walsh, and Commissioners O'Connell, Lennon, and Garretson; also William O. Thompson, counsel for the commission.

Chairman WALSH. The commission will please come to order. You may proceed, Mr. Thompson.

Mr. THOMPSON. I will call Mr. Gold.

TESTIMONY OF MR. JOSEPH GOLD.

Mr. THOMPSON. Mr. Gold, will you give us your name, your address, and the position you occupy?

Mr. GOLD. My name is Joseph Gold; my address is 250 Grove Street, Brooklyn.

Mr. THOMPSON. What do you do as a workman?

Mr. GOLD. Operator. Part of the operating work.

Mr. THOMPSON. At whose factory do you work?

Mr. GOLD. Levy Bros., on Canal Street.

Mr. THOMPSON. Is that called an inside shop or a contractor's shop?

Mr. GOLD. An inside shop.

Mr. THOMPSON. An inside shop?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Not a contractor's shop?

Mr. GOLD. No, sir; not a contractor.

Mr. THOMPSON. Are you chairman of the board of directors of the United Brotherhood of Tailors?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. How long have you been such chairman?

Mr. GOLD. Chairman?

Mr. THOMPSON. Yes, sir.

Mr. GOLD. Since last July.

Mr. THOMPSON. How long have you been a member of the union?

Mr. GOLD. About five or six years.

Mr. THOMPSON. Five or six years?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Are you acquainted with the conditions of inside shops and the conditions of the outside shops?

Mr. GOLD. To a certain extent.

Mr. THOMPSON. To a certain extent?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. What wages are paid generally in the inside shops and on the outside shops? How do those wages compare with one another.

Mr. GOLD. I can say that on the inside shops the wages are usually smaller than on the outside.

Mr. THOMPSON. They are more on the inside?

Mr. GOLD. On the inside they are smaller than the outside shops.

Mr. THOMPSON. Smaller?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. What is the reason, if you know?

Mr. GOLD. Well, the reason is that on the inside shops they have a lot of men that have emigrated lately to this country, a lot of Italians that generally to a certain extent work cheaper than the workmen who are in this country for a number of years. That is one of the reasons. Another reason is that you always find in the outside shops more skilled workmen than you will find on the inside shops.

Mr. THOMPSON. Are the working people in the inside shops generally hired on a weekly basis?

Mr. GOLD. At the present time it is a weekly basis, since after the strike.

Mr. THOMPSON. Is there any driving or speeding up of the workers in the outside shops who are paid on a weekly basis?

Mr. GOLD. They are more specializing than on the inside shops. The general conditions are better on the outside shops to a certain extent, because the inside to a certain extent is not the weekly system, piecework, etc.; and the outside shops, it is weekly system.

Mr. THOMPSON. It was testified here yesterday that in the outside shops there was a stricter supervision of the work of the people, and they are watched closer, and that they are speeded up and compelled to do more work. Is that your view of it?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. On the other hand, we also had testimony yesterday from officials of the union that the union, by its organization of the outside shops, had absolutely eliminated the so-called driving or speeding up?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Well, there are two views there that contradict each other. Which is correct?

Mr. GOLD. In what way do you mean?

Mr. THOMPSON. One witness testified that, in a contractor's shop, there was a speeding up of the working people. A union official testified that the union had such control of the contractors' shops that they had stopped the speeding up.

Mr. GOLD. Yes, sir.

Mr. THOMPSON. I understand from your testimony this morning that they do speed them up?

Mr. GOLD. In the outside shops?

Mr. THOMPSON. Yes, sir.

Mr. GOLD. No, sir; not to such full extent as the inside shops. I agree with the union official here that we have such control in the outside shops that the general speeding up is not so high as it used to be formerly before the union was organized.

Mr. THOMPSON. Then, from your viewpoint, that young man who testified yesterday that the contractor's shop, the one in which he worked, were speeded to do work cheaper than the inside shops because they speeded the people up and were thereby able not only to do the work cheaper but to pay higher wages to the working people, he was mistaken.

Mr. GOLD. In the outside shops, my view is you have the mechanics for use that know the work better and generally the work is done much faster than by the others, than some of the inside men who have apprentices who don't know the work so well as the outside shops. It takes them longer than a man who was in the trade for 18 years or more.

Mr. THOMPSON. Your idea is that the contractors' shops can do the work cheaper and pay the men better wages because they have better mechanics?

Mr. GOLD. To a certain extent; yes, sir.

Mr. THOMPSON. And the inside shops have poor workers and immigrants and therefore the work costs more?

Mr. GOLD. Yes, sir; that is my view to a certain extent.

Mr. THOMPSON. What do you mean you agree to a certain extent?

Mr. GOLD. I mean to a certain extent that they have good help in the inside shops, too, but the reason is they work them for a little price, and for that reason.

Mr. THOMPSON. I didn't understand your answer.

Mr. GOLD. They have got good help on the inside shops, too, but the result is they work them for a very low price.

Mr. THOMPSON. For a very low piece price?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Are any of the inside shops organized that you know of?

Mr. GOLD. Yes, sir; a good many are.

Mr. THOMPSON. Do they have any machinery in there to adjust grievances?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. What inside shops are organized, if you know?

Mr. GOLD. There is Morris Levy & Co. on Broadway; Levy & Schult.

Mr. THOMPSON. But in the large inside shops that belong to the New York Clothing Trade Association they are not organized, are they, in the sense of having any agreement with the union?

Mr. GOLD. No, sir; not at all.

Mr. THOMPSON. They have no machinery in any of those shops for settling piece prices or adjusting grievances?

Mr. GOLD. No, sir. The last fight that was settled was settled by a commission. The organization did not settle the strike.

Mr. THOMPSON. How long are the seasons that you work, and how many are there?

Mr. GOLD. In my shop in particular?

Mr. THOMPSON. In your shop?

Mr. GOLD. Well, it is about eight or nine months.

Mr. THOMPSON. Divided into two seasons?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Eight or nine months' work?

Mr. GOLD. Yes, sir. We usually have off during January and February and July and August, because we manufacture for the retail trade in the shop I work in.

Mr. THOMPSON. Are you paid on a piece basis or weekly basis?

Mr. GOLD. Weekly basis.

Mr. THOMPSON. What do you get per week?

Mr. GOLD. Twenty-five dollars.

Mr. THOMPSON. How many hours do you work a week?

Mr. GOLD. Fifty.

Mr. THOMPSON. Those are the union hours?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Are you paid just as much during the slack season or are you laid off?

Mr. GOLD. I am paid according to the hours I make. In the slack season, suppose I make 25 hours, I am paid for 25 hours, \$12.50, of course.

Mr. THOMPSON. About how much work do you have during the slack season, half time or one-third time?

Mr. GOLD. Three or four days; sometimes we close up altogether for two weeks.

Mr. THOMPSON. And, of course, you lose your wages then?

Mr. GOLD. Of course.

Mr. THOMPSON. What is done by the employer, if anything, in your line to help out and get work in the shop, either of the men's clothing kind or other kind of needlework, to give you a full day during the slack season?

Mr. GOLD. The firm I work for do not take any outside work at all. He only makes up what he can sell himself in the retail trade. If times are better we have more work.

Mr. THOMPSON. Are you a married man?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Have you a family?

Mr. GOLD. A wife; yes, sir. No children.

Mr. THOMPSON. How much will you earn on an average during the year, if you know?

Mr. GOLD. During a year?

Mr. THOMPSON. Yes.

Mr. GOLD. Well, I don't think it exceeds \$16 or \$17—\$18 at the most.

Mr. THOMPSON. A week?

Mr. GOLD. Yes, sir.

Commissioner GARRETSON. Is that for the period only while you work?

Mr. GOLD. No, sir; during the year.

Commissioner GARRETSON. The average for the year?

Mr. GOLD. Yes, sir.

Commissioner GARRETSON. What is the advantage, and what are the disadvantages, if any, to the working people from the contract system?

Mr. GOLD. From the contract system?

Mr. THOMPSON. Yes, sir. As it exists in this city?

Mr. GOLD. Well, of course, I for one do not see much good in the contract system. I would rather see it abolished. I think that if all manufacturers would have their own factories the trade could be more standardized.

Mr. THOMPSON. Why? What is the reason?

Mr. GOLD. Well, first of all, the contractors usually compete with one another dally. The result is sometimes workmen have to suffer on account of that.

Mr. THOMPSON. How do the workmen suffer from that competition?

Mr. GOLD. The competition?

Mr. THOMPSON. Do they reduce the wages of the men?

Mr. GOLD. Well, usually the contractor reduces the price of the garment. He usually goes to the men and offers them a reduction of wages. Of course, the union always fights that reduction.

Mr. THOMPSON. But they all have to meet it to go to work?

Mr. GOLD. Yes, sir; they do. Not with the consent of the organization. The organization—we are naturally fighting that.

Mr. THOMPSON. Is there any subcontracting done in New York now?

Mr. GOLD. Yes, sir.

Mr. THOMPSON. Much of it?

Mr. GOLD. Not very much; not since the last general strike.

Mr. THOMPSON. What do you know about home work that is done here?

Mr. GOLD. What do I know about the home work?

Mr. THOMPSON. Yes, sir.

Mr. GOLD. I know in the shops I have been working for the last three years it still exists to a certain extent, quite a large extent. I know in my shop the Italian women, after working all day, usually take work home, some garments.

Mr. THOMPSON. What kind of work do they usually take home to do?

Mr. GOLD. The finishing work.

Mr. THOMPSON. Have you made any study as to whether or not the State factory inspection makes a careful supervision of the work of all the homes?

Mr. GOLD. Well, what I know, so far as my shop, I have never seen any investigation made to that effect.

Mr. THOMPSON. Do you know what kind of homes this work goes to that is taken home?

Mr. GOLD. Of course I do more or less. Some of the women that work in our shop live around Lispenard and Mott, etc., and we all know the homes that exist in that section of the town.

Mr. THOMPSON. And do you think these homes are proper places for clothing to be made in?

Mr. GOLD. No; not at all.

Mr. THOMPSON. Why?

Mr. GOLD. Why, because I think in a house where there is a family with a few children there should be no clothing whatever, because there may be some disease, and it might spread, and then the one that buys the garment will suffer from it.

Mr. THOMPSON. Mr. Gold, I would like you to tell me how the subcontractor works. He takes a contract from the regular contractor?

Mr. GOLD. Yes; the subcontractor works it this way: Usually, for instance, say, in a factory, especially at this time when our trade is a section system, one man is hired to do a certain part of the work. That requires, sometimes, to do that work, five or six men, and sometimes more than that. Of course, he gets help to do that part of the work, and he tries to get the cheaper help, as cheap as possible, and to a certain extent he tries to get apprentices in order to get them at as cheap as possible a rate, for the less it costs him the contractor makes so much more. That is how it works out.

Mr. THOMPSON. Take a certain piece of work that you know of and follow it with the contractor. What is it, pressing or finishing?

Mr. GOLD. Well, if it is in my line—it is mostly subcontractors are in my line or trade—it is pocket making. Pocket maker usually gets—sometimes gets three or four, as I said, help to do a certain part of the work. Of course, he tries to pay them as little as possible, tries to speed them up as much as possible, and if he gets part of the work out for very little, so much more profit for the subcontractor.

Mr. THOMPSON. He makes a price for the work to the contractor?

Mr. GOLD. He makes a price to the contractor, yes; then he makes a price for the men that he engages.

Mr. THOMPSON. Where is that work done, with these men right in the shop?

Mr. GOLD. Yes; they work side by side.

Mr. THOMPSON. In other words, a shop within a shop?

Mr. GOLD. Yes; a shop within a shop.

Mr. THOMPSON. Is the pocket making very skillful work?

Mr. GOLD. Yes; the most skillful work on the garment.

Mr. THOMPSON. And they are the highest paid?

Mr. GOLD. Yes.

Mr. THOMPSON. What will the average pocket maker earn in the city of New York?

Mr. GOLD. The average?

Mr. THOMPSON. Yes?

Mr. GOLD. Well, there are different prices; the week-work system he gets up to \$30, some places more, but not very much more.

Mr. THOMPSON. That is in the busy season?

Mr. GOLD. Yes, sir. Of course, formerly the pocket makers, as I myself for a number of years, used to earn quite good money—used to earn as high as \$40 and \$50 a week. Of course, that money came out of the help mostly. They could not do it working themselves. Then the pocket making as a trade, it is all very dangerous to the eyes. You will find most of the pocket makers must wear glasses. It is very dangerous to the eyes, as I said.

Mr. THOMPSON. But a subcontractor, contracting for making the pockets, would try to hire as cheap help as he could, wouldn't he?

Mr. GOLD. As much as possible. Many times they take apprentices, take people that don't know anything of the trade at all, and break them in. Of course, sometimes they work for a week or two without money at all, then they pay them as little as possible.

Mr. THOMPSON. What will the average pocket maker make for, say, a year, including the slack time and poor time, here in New York?

2012 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Mr. GOLD. Well, to-day, I should say that about \$18 or \$20; that is my estimation.

Mr. THOMPSON. That is the best he can make?

Mr. GOLD. Yes. There may be one or two exceptions, but the general rule would not go higher than \$18 or \$20.

Mr. THOMPSON. In other words, the most skillful work in the tailoring trade in New York City, operating by the most skillful operators, will net the people only about \$18 a week, is that correct?

Mr. GOLD. Of course, it may go higher; if a man works as a subcontractor, then it might go higher.

Mr. THOMPSON. Then he will take the profits from the other workers?

Mr. GOLD. Of course, that is understood.

Mr. THOMPSON. Is there any subcontracting in the union shops?

Mr. GOLD. No; we have abolished it since the last general strike.

Mr. THOMPSON. It was abolished as the result of the strike?

Mr. GOLD. As the result of the strike, of course.

Mr. THOMPSON. By demand of the union?

Mr. GOLD. Yes; that is the idea. This was one of our demands. If you will allow me, I can also say, while the strike was settled with the large associations, those that we haven't got full control of, it was understood then that they would abolish the subcontracting system, but to-day it still exists in those shops. Of course, we have no control and can not do anything to remedy it.

Mr. THOMPSON. Do you think that a law should be passed by the State to abolish home work, or do you think that the union could abolish it itself?

Mr. GOLD. Of course, it would be no harm if there should be such a law. Of course, with the help of the union. The union must do a whole lot to that extent, and help a whole lot to that extent. Of course, the law should be enacted to that effect. It would help them with the organization to abolish it.

Mr. THOMPSON. Is the attitude of the organization opposed to home work?

Mr. GOLD. Positively.

Mr. THOMPSON. Have the unions voted any such laws, or asked for the passage of any such laws by the legislature, either at the present time or in the past?

Mr. GOLD. I think the unions, as much as I know, being connected with this organization, they have always asked for the passage of such laws for a number of years.

Mr. THOMPSON. Have they had any laws drafted by anybody and submitted to the legislature?

Mr. GOLD. If I am not mistaken, there are such laws at the present time, to a certain extent, to abolish home work, but it seems it is not enforced.

Chairman WALSH. Commissioner Lennon would like to ask you a question.

Commissioner LENNON. Do you work with a helper?

Mr. GOLD. I?

Commissioner LENNON. Yes.

Mr. GOLD. One helper.

Commissioner LENNON. Do the pocket makers generally work with one or more helpers?

Mr. GOLD. The union law is that the pocket makers shall work with one helper.

Commissioner LENNON. What do you pay the helper?

Mr. GOLD. I don't pay him anything; the employer pays him.

Commissioner LENNON. The employer pays the helper?

Mr. GOLD. Yes, sir.

Commissioner LENNON. What does the employer pay the helper?

Mr. GOLD. The helper?

Commissioner LENNON. Yes.

Mr. GOLD. My helper gets \$17 a week.

Commissioner LENNON. Well, is the helper an apprentice? Can they become pocket makers themselves after awhile?

Mr. GOLD. In time they do become pocket makers.

Commissioner LENNON. Then, the pocket makers are not all tailors? That is to say, they are not all men who learned the trade originally, either in the old country or somewhere else?

Mr. GOLD. No; they learned the trade in this country, mostly.

Commissioner LENNON. They learned the trade through being helpers and working with other men?

Mr. GOLD. Yes, sir.

Commissioner LENNON. Have you any apprentices in the trade generally? You have mentioned this helper. Now, have you apprentices in the other parts?

Mr. GOLD. Of course, there are apprentices in every part of it.

Commissioner LENNON. How long a time do they have to serve before they get the regular wages?

Mr. GOLD. Of course, especially at this time, when our trade is so divided in parts, it takes them some time before they become a mechanic. Sometimes a man may work for years on a certain part of the work and he would not have any chance to become a mechanic.

Commissioner LENNON. What will he get? Suppose he works a year and makes a good helper, what will he make?

Mr. GOLD. Well, as I said, from \$17 up to \$18; sometimes a dollar less.

Commissioner LENNON. What do they pay them the first three months? Suppose a man comes here from Russia or Italy or somewhere else and wants to go into the tailoring trade and he gets a job somewhere, what will he get the first three months?

Mr. GOLD. Well, of course, he may get from \$6 up to \$8.

Commissioner LENNON. For the first three months?

Mr. GOLD. Yes; for the first three months.

Commissioner LENNON. What kind of work will he be put at?

Mr. GOLD. That is a question of the section of the coat.

Commissioner LENNON. Well, suppose he goes into the pressing department, what will he do?

Mr. GOLD. He will simply press seams. See, this kind here [indicating].

Commissioner LENNON. I know; I am a tailor myself.

Mr. GOLD. That is different.

Commissioner LENNON. Are there any women in your shop?

Mr. GOLD. In my shop, quite a number.

Commissioner LENNON. Do they work as helpers, or how do they work?

Mr. GOLD. They don't work at machines.

Commissioner LENNON. They don't work at any machines?

Mr. GOLD. No; they simply do handwork, sew on buttons and buttonholes, and finishing.

Commissioner LENNON. Are there any women helpers in the pocket-making business?

Mr. GOLD. Not that I know of. Out of town, I am told, there are, but not in New York.

Commissioner LENNON. Will the women in the shop—what kind of wages do they get?

Mr. GOLD. Well, their wage ranges from \$8 up to \$10; some make as high as \$12, \$14; the buttonhole makers, that is, that make the buttonholes in the garments.

Commissioner LENNON. Well, suppose the trade is dull, like it is now; do the women get their share of the work along with the men?

Mr. GOLD. Of course.

Commissioner LENNON. Just the same?

Mr. GOLD. Of course.

Commissioner LENNON. The union won't stand for anything different?

Mr. GOLD. Oh, no; not at all.

Commissioner LENNON. Do you know anything about the finishers who take the work to the homes, what kind of wages they make?

Mr. GOLD. They make, the highest, from \$9 up to \$10; sometimes less than that, too.

Commissioner LENNON. A good deal less than that, sometimes?

Mr. GOLD. Sometimes; yes. Their wages only \$7.

Commissioner LENNON. I understood from some of the witnesses that these finishers who take their work home are nearly all Italian women. Is that true, so far as you know?

Mr. GOLD. Mostly Italian; yes.

Commissioner LENNON. Some of the witnesses told us that these women, when they come over here, they go to work with other women to learn the trade; that is, other women get the work and these women have to come in to even learn to sew; that they don't know how to sew at all when they come from the old country. Do you know whether that is true?

Mr. GOLD. I know that is a fact. It is a custom among the Italians only, as soon as one lands, she has relations or a countrywoman; she takes her along and learns her the trade. A good many don't know how to sew.

2014 REPORT OF COMMISSION ON INDUSTRIAL RELATIONS.

Commissioner LENNON. What kind of wages will those women make when they are learning the trade—when they are being taught the trade?

Mr. GOLD. Sometimes they may make \$3, and sometimes they may not make that, either, for a short time, until they know the trade to a certain extent.

Commissioner LENNON. How do they get the work from the shop? How do they get the work from the factory to their homes?

Mr. GOLD. They come for the work; sometimes the husband comes for the work.

Commissioner LENNON. Haul it in a wagon?

Mr. GOLD. No; they usually carry it on their heads.

Commissioner LENNON. They still have that custom in New York, have they?

Mr. GOLD. Yes.

Commissioner LENNON. I thought it would be abolished when I left here.

Mr. GOLD. It is about time.

Commissioner LENNON. Does nearly every coat that is made in the city of New York—have they to go in these homes to be finished?

Mr. GOLD. No; not exactly; not all.

Commissioner LENNON. Well, what proportion of them have to go in these homes to be finished?

Mr. GOLD. Well, I can safely say about 50 per cent, if not more.

Commissioner LENNON. Well, are there some finishers in the shops?

Mr. GOLD. There are some; yes.

Commissioner LENNON. In the outside shops or in the contract shops?

Mr. GOLD. There are some in the inside, and there are some in the contracting shops, but the trouble is in our case that some manufacturers, as well as contractors, like to save space; don't like to take a large loft to be able to accommodate all; and this is part of the reason. Of course, another reason is that many of them have children and can not do work in the shop and have to do it home in order to be near their children.

Commissioner LENNON. Have you ever been in any of the houses where this finishing is done?

Mr. GOLD. I have.

Commissioner LENNON. In the room where the finishing is done do you ever see a cookstove, for instance?

Mr. GOLD. Why, of course. The chances are—now, I have been once in Mott Street. My father used to own a pants business, and I went for him there to get certain pants he had there finished, and I have seen them sit right around the stove, finishing the garments, being it was a cold day in winter.

Commissioner LENNON. That is, around the cookstove?

Mr. GOLD. Yes.

Commissioner LENNON. I am not speaking of any other stove—I mean the cookstove.

Mr. GOLD. Yes.

Commissioner LENNON. Have you ever been in a room where finishing was being done where there were beds?

Mr. GOLD. Oh, yes.

Commissioner LENNON. And where the clothing of the family was hanging in the room?

Mr. GOLD. Of course. They only have sometimes two rooms, and they can not be anywhere else.

Commissioner LENNON. What have they in the other room?

Mr. GOLD. What?

Commissioner LENNON. What is in the other room? A sleeping room or kitchen?

Mr. GOLD. One room is the kitchen and one room is the sleeping room. And sometimes they may have a sleeping room. Generally they have two or three rooms.

Commissioner LENNON. Is the work all done in one room, as a rule, or do they work in all the rooms?

Mr. GOLD. You know how it is. Many times their children help them; so one works in this room, and the next one in the other room, and that is how it goes on.

Commissioner LENNON. Do you believe in trade agreements between the unions and the employers?

Mr. GOLD. I do.

Commissioner LENNON. Setting the prices and hours of labor and making the conditions under which the work shall be done?

Mr. GOLD. Yes, sir.

Commissioner LENNON. Do you have shop strikes in this city to any great extent?

Mr. GOLD. Oh, yes.

Commissioner LENNON. Before having the shop strike do you have to secure the consent of the union?

Mr. GOLD. To the shop strike?

Commissioner LENNON. Yes.

Mr. GOLD. Yes, sir.

Commissioner LENNON. And you don't have shop strikes without the consent of the union?

Mr. GOLD. No. If the union has control, it must have the consent of the union.

Commissioner LENNON. I am glad to hear that. I have known the time when that was not true.

That is all, Mr. Chairman.

Chairman WALSH. Thank you. That is all for you, Mr. Gold.

TESTIMONY OF MR. JACOB PANKIN.

Mr. THOMPSON. Will you give us your name and address and profession?

Mr. PANKIN. Jacob Pankin; 5 Beekman Street, New York City; I am an attorney at law.

Mr. THOMPSON. How long have you been practicing law in this city?

Mr. PANKIN. Nine years.

Mr. THOMPSON. What were you doing prior to practicing law, if engaged in business?

Mr. PANKIN. Working in the leather-goods business; mechanic in the leather-goods business.

Mr. THOMPSON. How long have you been working at that business?

Mr. PANKIN. Off and on, I guess, for about seven or eight years.

Mr. THOMPSON. In the city of New York?

Mr. PANKIN. In the city of New York. And I have done some work organizing for the International Ladies' Garment Workers' Union in 1903.

Mr. THOMPSON. Were you ever engaged in the needle trades in New York City?

Mr. PANKIN. No; excepting that I have tried to learn the trade some 12 or 15 years ago.

Mr. THOMPSON. You never worked at it?

Mr. PANKIN. I worked at it about two or three weeks.

Mr. THOMPSON. Are you the attorney or have you acted as the attorney for any of the needle-trade unions here in the men's garment trades?

Mr. PANKIN. Yes; I am the attorney for the United Brotherhood of Tailors, and I am attorney for the pants makers' union, and the knee-pants makers' union, and one of the children's jacket-makers' union, and also the ladies' dressmakers' union.

Mr. THOMPSON. As such attorney, have you had communication and dealings with employers?

Mr. PANKIN. I have.

Mr. THOMPSON. And with union officials?

Mr. PANKIN. Yes.

Mr. THOMPSON. And from your position as counsel and attorney, have you learned of the conditions in the men's clothing trade in this city?

Mr. PANKIN. I have.

Mr. THOMPSON. Have you anything that you want to say to the commission in this respect?

Mr. PANKIN. I might say a few things for the commission which might be of some help. I would like to say, in the first place, that the make-up of the trade, of the men's garment trade, is about 90 per cent men, or 80 per cent men, and about 20 per cent women; about 65 per cent are of Jewish extraction, 30 per cent, possibly, or 28 per cent Italian, and the rest mixed, Poles, Slavs, and Russian, largely immigrant labor. There are very few in New York City that are native born that enter into the tailoring business. I don't think I know one in New York City, native born, that takes up the tailoring business as his vocation.

Years ago, Commissioner Lennon, I guess, knows that, that the tailoring business was largely confined in New York City to the Germans, and it was

recently, within the last 25 or 30 years, that the change has come to take place, that the Jews replaced the Germans, and now the Italians are replacing to some extent the Jewish people in the tailoring business, not only as regards the men's clothing business, but as regards the entire needle industry in the city of New York. And it may be said that probably a quarter of a million men and women are employed in the needle industry in the city of New York, or possibly a little more. There is surely about 120,000 in the men's and childrens' trades, and there are 60,000 to 70,000 in the cloak trade, and there are about 30,000 in the ladies' waist and dress trade, and there are about 15,000 or more thousands in what they call the white goods trade. And then there are the smaller trades, such as kimona and wrappers and children's dresses and children's hats and caps. These caps, that is also part of the needle trade. So it can be safely said it is upward of a quarter of a million in New York City. And all of this labor is immigrant labor.

I want to say also that this labor, this immigrant labor, has done a great deal toward bettering the conditions in the trade within the last 10 or 12 years, or possibly a little more than that.

I don't think there is any trade in the city of New York of the proportion that the needle industry is, and hardly any industry in the city of New York is as thoroughly organized as the needle industry in the city of New York is. The cloak makers have a 100 per cent organization, practically. The men tailors have a 90 per cent organization, between 80 and 90 per cent, and the waist and dress makers, probably, also have an 80 per cent to 90 per cent organization. That means that 80 per cent of the people engaged in the trade are organized.

So that this immigrant labor is trying not only to keep up the standard of life of American labor, but, in some instances, tries to exceed it.

I make this statement because of one question put by Mr. Lennon, as to what the effect of the immigrant labor is upon the standard of living, of the American standard of living, and I emphatically say that the immigrant labor that has come to this country is trying to do its very best to maintain the standard of living, and, to some extent, to raise that standard of living.

We have tried very hard in this garment industry to come to some understanding with the manufacturers collectively—not only collectively on our side, but even collectively on the other side. That is, agreement with the associations. In the custom tailoring trade, Mr. Silverman was a witness representing Local 162. He is also a member of the joint board, or Brotherhood of Tailors, and a member of District Council No. 1, of New York City. There are two collective agreements. One collective agreement with the Metropolitan Association of Merchant Tailors, and a collective agreement with the Manhattan Association of Tailors. In that trade there is one great trouble, and that is known as the single tailors.

The single tailors here come into the stores, into the finest stores in the city of New York, garments selling as high as \$60 and \$70 a suit of clothes. They come into these stores and take this work to be done at home. Most of the fine grade of work in New York City is done by single tailors, and that is done in tenement houses, done at home. I remember that we lived on Eighty-second Street in this city, some 10 or 12 years ago. I remember that distinctly. There was a tailor living in an apartment in that house, and they worked, sometimes, as late as 11 and 12 o'clock at night. That was home work, single tailor, working on the highest price garment made in the city of New York.

That is the really great trouble that confronts the custom part of the trade of the needle industry. The single-tailor business. In recent years there has been developed in the city of New York a contract system in custom tailoring. The merchant tailors who advertise custom-made goods, whether they are custom-made garments or not, I really don't know. The large storekeepers contract their work out to contractors, who maintain shops, some as large as to employ in the neighborhood of 100 people.

We also had a collective agreement, and that agreement is still in existence between what we call the East Side Retail Clothing Merchants' Association and the union. This East Side Retail Clothing Merchants' Association employs in the neighborhood of between six and seven thousand people, that is for coats, and they employ probably three or four thousand people on the vests and the pants. That agreement has been in existence for over a year. Well, a year and four or five months, and during the entire time every dispute that has arisen between the union or the members of the union and the members of the association have been settled by the grievance board. The agreement provides for a board of arbitration, but that board of arbitration has never

been organized, because there was really no serious disputes that required the submission of the matter to the board of arbitration, but there were little shop disputes, and those shop disputes were determined and adjusted by a grievance board appointed from time to time. I don't think they have had more than five or six meetings during the 15 or 16 months of that grievance board to adjust the trouble between the 10,000 members of the union and the association.

On the 28th of February, 1913, during the progress of the general strike in which there were some 100,000 people involved in the city of New York in the men and children's garment trade, the manufacturers' association—that is, the New York Clothing Trade Association, together with the New York Clothing Manufacturers, appointed at that time Robert Fulton Cutting, Mr. Marcus M. Marks, and Rabbi Magnus as a commission to adjust certain differences, and in that way settled the strike. It was said here yesterday that the only thing that commission had to do was to fix the hours. In the letter appointing that commission it was also provided that there shall be no subcontracting; that all the people shall return to work; that no discrimination shall be practiced against such men as those who have participated in the strike; that \$1 increase shall be given to each man upon his return to work; that the hours of labor shall be reduced immediately to 54 hours, and then gradually decreased to 53 hours and 52 hours, and at the same time the commission shall make a thorough investigation of the different trade centers in the country and make an effort to standardize the hours of labor throughout the entire country in the men's garment and children's garment industry.

The people were dissatisfied with that arrangement, and the commission was then changed. Mr. Robert Fulton Cutting was then to leave for Europe, and he withdrew from the commission, and Mr. Meyer London, the attorney for the International Ladies' Garment Union, was substituted, and the commission at that time reduced the hours to 53 hours before the people returned. The people refused to return on 54, because 70 per cent of the people at that time were working on a 50-hour basis in accordance with the settlement with the union. The commission has never, to my knowledge, made an investigation, and I am quite sure that no such investigation has been made or I would know of it. That is, an investigation with reference to the hours of labor in the entire country.

On January 1, 1914, the hours of labor were further reduced to 52 hours in the association shop, so that now about 70 or 75 per cent of the people working in the men's and children's garment trade in the city of New York work 50 hours and 25 or 30 per cent work 52 hours in the large shops. As far as the union is concerned, and I have spoken to a great many of the men who are the active people in the organization, they are all in favor of a collective agreement. Of course, with some limitations. The tailor unions of the city of New York feel that collective agreements do help to maintain the organization and to maintain conditions obtained by the organization, but they feel that the right to strike for a violation of agreements on the part of the employers shall not be taken away from the employees, from the unions. What I mean by it is this: That a palpable violation, breach of a contract, of an understanding between the union and the employers, is of such a nature that there could be no dispute about it should not be a matter of arbitration. There is a breach there. And the union in that event should have the right, if it deems advisable, to strike the job, strike the place. But on the whole the tendency in the garment trade, in the entire needle industry, is in favor of collective agreements.

Of course, another great evil in the business is this contract shop; it is almost a miracle that in the contract shops conditions are to some extent better, largely better, than they are in the manufacturing establishment, except in so far as sanitation is concerned; and the reason for this is that the contract shops are usually conducted in the old ramshackle buildings, in the older buildings in the city of New York, while the manufacturing establishments are usually conducted and maintained in the new, large, ventilated, light buildings, so that the sanitary conditions in the inside shops are really better than they are in the contract shops; but so far as the treatment is concerned of the men, as far as the wages are concerned, as far as the hours are concerned, it is peculiar that they are much better in the contract shops than they are in the inside shops. Yet the manufacturer must allow a profit to the contractor, so that the contractor should be able to go along, to maintain his business.

You will find, for instance, cases where the manufacturers have their own shops and they also contract some of their work out, and in the contract shops

the wages are higher than in the inside shops. It is a peculiar phenomena. I suppose it works out because the conditions being better in the contract shops, the people—the workmen naturally drift toward the contract shops, and the contract shops naturally have the better class, better grades of mechanics, because there is not that strictness, there are not so many stringent rules and by-laws, and the chances of getting more wages attracts to the contract shops a better grade of mechanics; and, for that reason, possibly they are in a position to pay better wages, because the mechanics are better——

Commissioner GARRETSON. The average is better, although each man may have as expert individuals?

Mr. PANKIN. Yes, sir.

Commissioner O'CONNELL. Can you give us some light on the home workers? You heard some testimony of that yesterday?

Mr. PANKIN. Yes, sir; I did. This home work. I don't know whether any of the commission has seen those women carrying the work home. I have seen them do that time and again. They carry tremendous bundles on their heads. Sometimes I am surprised how their necks will be able to support those bundles.

Commissioner LENNON. I have lived down on Houston and Stanton Streets; I have seen some of them.

Mr. PANKIN. You saw them 20 years ago, perhaps.

Commissioner LENNON. I go there every day.

Commissioner O'CONNELL. The loads have increased, have they?

Mr. PANKIN. I don't think so. This work is generally done by married Italian women. The Italian girls go right in and do the work in the shops. I know many of them; while the married women take the work home. The union has made several efforts to eliminate that sort of thing. The unions are deadly opposed—your commissioners who are members of the unions know just how the unions stand on those things—we want the home life perfectly clean; we want the homes sanitary; but here is a situation that confronts the organization. From time immemorial, so to speak, this custom was in existence, obtained, and what we are trying to do is to educate. It is largely, as I said before, done by the Italians. I have had a conference with the executive board of the Italian local, and we discussed the plan of calling meetings of the husbands of those women and put them to shame.

I have spoken to some clergymen, who are Catholic clergymen, Italians, and asked them whether it would not be possible for them to, from the pulpit, shame the men and women at the same time, and in that way eliminate this awful condition of home work. I have been in the tenement houses. I suppose some of you have also been in the tenement houses. The entire district where the Italians live, in the lower portion of the city, is between Forsyth and Center Streets—Center on the west and Forsyth on the east. Hester, I guess, or Canal in the south, and Bleeker in the north. That entire section has not been changed, to my knowledge, or within my memory, in 25 years. The same old houses that have been there 25 years ago are still there. I don't know of a single new building. Of the new buildings put up there, only a few of them were put up, so that the old-style buildings are there. Only running water, and where the lavatories were in the yards, by law they have been taken up into the building. There are no bathtubs at all that I know of in those old buildings. And here and there possibly a bathtub has been put into those new buildings. They are separated into two and three room apartments, dark rooms.

This work is done largely in that section, between Forsyth, and, as I told you, Center Streets, and then up beginning at Ninth Street and Second Avenue, or First Avenue, some between Second and First, but largely beyond First Avenue, Ninth Street, Tenth Street, Eleventh Street, Twelfth Street, Thirteenth Street, Fourteenth Street, down to the East River. I don't know that section as well, but I have passed through there with a car often, and there are lots of old buildings there, three and four stories, old buildings.

Mr. PANKIN. Anything else, Mr. Thompson?

Mr. THOMPSON. A question has been submitted here that I would like to have you answer. That is, how can the manufacturer making rough tweeds, smoking jackets, bath robes, and overcoats, and not having enough of any one line or grade to conduct a shop, do his business except through contract?

Mr. PANKIN. The question answers itself. If it is possible for the contractor to do that sort of thing why is it not possible for the manufacturer? Now, let's see. Now, in the waist and dress industry——

Mr. THOMPSON (interrupting). I will put this other question——

Mr. PANKIN. I will just explain that.

Mr. THOMPSON. Just one moment. When the manager has special work to do he can pick any special contractor?

Mr. PANKIN. Yes, sir; he can do that. But now I just want to explain that. You take in the waist and dress industries; the manufacturers of waists manufacture dresses and, in some instances, they manufacture suits, and all of the work is done right on the premises. As a general proposition the man who makes or who is able to make a smoking jacket is also able to make an ordinary coat—as a general proposition. The pocket is not much different, the finish on it; there is really no difference, and the operating on the jacket is but very little different, so that he can easily do manufacturing right on the premises. He might have so many workmen for the smoking jackets and have so many workmen for the suits and have so many workmen for the bath robes. There are very few manufacturers, though, who do bath robes, smoking jackets, and suits. The general run is that the manufacturer makes nothing but clothing. Even to that extent there are probably four or five manufacturers in the city of New York who make children's and men's garments. Otherwise a manufacturer confines himself only to children's garments or he confines himself only to men's garments. And there are manufacturers who confine themselves only to spring clothing and do not make any winter clothing—only serges, blue serges, etc.

Chairman WALSH. Mr. Lennon, you would like to ask a question or two?

Commissioner LENNON. Yes. You indicated, Mr. Pankin, that the unions here in the men's garment trade were in favor of collective bargaining and agreements with the employers' association; but you desire to retain the right, if the agreement was broken by the employers, to strike. I understood you to say that.

Mr. PANKIN. Yes; that is the position that I take and I think that is the position of the union.

Commissioner LENNON. What do you understand as being the ordinary policy of the trades-union movement on this subject; the regular policy of the established unions?

Mr. PANKIN. Well, in a great many unions any breach of the contract under the protocol arrangement is submitted to the grievance board, and thereafter to arbitration if the grievance board can not adjust the matter. That has been the policy pursued in the trades where there are collective agreements. Now, I would change that. I would limit the agreement to the extent that if there is a violation of a contract—now, what I mean by it is this: If a union enters into an agreement with an employer and that agreement sets out certain provisions that are to be carried out by the employer and are to be carried out by the union or the members of the union, a breach of any of the provisions of that agreement is not a subject for arbitration. It has already been decided that the provisions shall govern the conduct between the union and the employer.

Commissioner LENNON. In such cases, however, is it not always true that one side says that it is a breach of the agreement and the other side says it is not a breach of the agreement?

Mr. PANKIN. Not always true; it is not always true. It is largely true, but not always true.

Commissioner LENNON. Suppose one side claims it is a breach of the agreement and the other side claims it is not; is it then a subject for investigation?

Mr. PANKIN. Investigation, yes; but not arbitration.

Commissioner LENNON. And not arbitration?

Mr. PANKIN. No; because I don't think that any matter that has already been decided upon shall be submitted to arbitration.

Commissioner LENNON. Suppose the agreement contains a clause for the settlement of disputes by conciliation and mediation or arbitration, then is it not adding another breach to the contract if a union refuses to abide by that clause in the agreement?

Mr. PANKIN. Well, if I drew the agreement I would not draw it that way. I would draw the agreement that any dispute that might arise with reference to any propositions not embodied in the contract should be the subject of arbitration; but such conditions as arise under provisions of the contract shall be subject only to investigation or mediation. Now, if you allow me, Mr. Lennon, the reason I am in favor of that proposition is this: We have had the experience in some of the trades connected with the needle industry, where there are sometimes breaches of a contract by an employer who is a member of the association; and by the time we are ready with the decision made by the board

of arbitration the people who have been aggrieved are no longer in the shop, or the season is over, and nothing can be done.

Commissioner LENNON. Well, that is because of faulty machinery; that is not the fault of the agreement itself. If you maintain the position that under an agreement if the union finds according to their own conscience that the agreement has been broken and the union has a right to strike, then you must concede, or do you concede, that if the employer claims that the agreement has been broken by the union he has a right to lock everybody out?

Mr. PANKIN. I think what is fat for the goose is fat for the gander.

Commissioner LENNON. Well, then, how long would you anticipate your agreements would last?

Mr. PANKIN. Our agreements probably would last and be more efficient under such a state of affairs than they would be—well, they probably might not last as long, but maybe would last longer, but they would be more efficient than other agreements. Where both sides know they have got to live up to their provisions of the contract—they have to take the consequences—they live up to them. I believe if an agreement—that if a union enters into an agreement with an employer, that agreement should be carried out to the letter or they should not enter into the agreement. And I think if the employer enters into an agreement, he ought to carry out that agreement to the letter. The great trouble is that a great many employers and a great many manufacturers—not the majority of them, but a goodly number—make use of the associations to their own advantage. I have had that experience.

Commissioner LENNON. Have you in mind that you could draft an agreement that is not subject to different interpretations on vital points, for instance?

Mr. PANKIN. Yes. Of course you can set down a question of hours, you can set down the question of the employment of union men, without a question of interpretation. He is either a union man or is not a union man. The employees are either working 50 hours or they are not working 50 hours. The employer is either giving the minimum scale or is not observing the minimum scale. For instance, the ladies' waist and dress industry, the minimum scale was \$6 a week. That is the lowest wages to be paid to girls—mark you, the most inexperienced girl, the girls who pull the bastings, the girls who do the trimming, being just able to cut away the threads—the minimum wage was \$6 a week, not less; but that no girl employed in the waist dressmaking industry shall receive less than \$6 a week. Now, then, Mr. Stone showed that there were a great number—I don't remember exactly the figures, but somewhere up in 30 or more per cent—getting less than \$6, less than \$5, a week, contrary to that provision. I say that is a breach of the agreement on the part of the employers. There can be no dispute that \$6 is the minimum wage and that if he pays less than \$6 he reads himself out of that agreement. That is the way I feel about it.

Commissioner LENNON. And you hold that under the agreement that the proper way to right that wrong is to go on a strike?

Mr. PANKIN. The proper way to right that wrong is this, to tell him, "If you don't pay the minimum scale you read yourself out of that association," not to leave it to arbitration as to whether he shall pay the difference or not. Now, here is another experience, under this protocol the employers were to pay for legal holidays. There was no question about that. But they did not pay for the legal holidays and we had to submit that to arbitration and it was two months before we got a decision from the board saying as to whether the money should be paid or not. Many of the people had left the job. Some of the people had left New York. Some of them had got disgusted.

Commissioner LENNON. That is all, I think, Mr. Chairman.

Chairman WALSH. Did you want to ask something, Mr. Garretson?

Commissioner GARRETSON. Yes. Going a little further, Mr. Pankin, with this question of arbitration; isn't the question of fact as to whether or not the agreement has been breached properly a question of arbitration?

Mr. PANKIN. I think it ought to be investigated.

Commissioner GARRETSON. If it is investigated how would a decision be reached? For instance, a manufacturer or employer who is a member of the association and a party to the agreement which is collectively made, if that manufacturer fails to pay, in a certain instance, or the agreement provides he shall pay, isn't the association of which he is a party entitled by right to pass upon the question of whether or not he has conformed and to use its own methods to compel performance?

Mr. PANKIN. That is just what I said a moment ago. Where there are ordinary provisions of the contract and he breaches the ordinary provisions of the contract—the association or the union shall tell this man “Here, you live up to this agreement,” after investigation is had; “If you don’t you will read yourself out of the contract—read yourself out of that provision of the protocol.”

Commissioner GARRETSON. If after arbitration is had and the man then does not conform, isn’t your right clear then to go on a strike?

Mr. PANKIN. You see, it is a cumbersome way to arrive at the right to have a strike. It may take three months. Mr. Lennon says it is a question of machinery, but if you have any grievance brought up and you have your clerks make your investigations and then going to the grievance board, and then you are going to the arbitration board, and the arbitration board meets sometimes no more than once in three months, and by the time the board of arbitration hands down the decision the point gained is no longer a gain.

Commissioner GARRETSON. Isn’t the record fairly established that the organizations that have gone off half-cocked have died in the process, while those that have used the cumbersome methods have survived and established both power and reputation?

Mr. PANKIN. In answer to that I want to add this, Mr. Garretson—Brother Garretson—it is this: It seems to me that there is always a desire on the part of the employers, on the part of the corporations, on the part of the manufacturers to treat with the unions, and that it is due to this fact that there is an underlying tendency on the part of the workers toward organization, and the manufacturers and employers, realizing that the workpeople in this country are coming to their senses, want to get the best deal they can from the employees.

Commissioner GARRETSON. It is fair to assume that the average employer, contractor, or manufacturer is not dealing with the union because he loves the union itself. It is because, is it not, that it is probably the least costly horn of the dilemma?

Mr. PANKIN. That is about the size of it.

Commissioner GARRETSON. But, on the other hand, is it not the part of wisdom on the part of the men to establish once and for all the fact that they won’t use the last weapon, the strike, until other means have been invoked and have failed, whatever that may be?

Mr. PANKIN. I agree that no union shall strike for strike’s sake. I believe that every union should do its best to eliminate, as far as possible, the possibilities of strikes and try to settle everything; but, I say, wherever there is an agreement arrived at between employers and unions, the agreement shall not be the subject of arbitration. It may be the subject of investigation and mediation, but not arbitration. I mean those things that are definite in the agreements.

Commissioner GARRETSON. In your experience in writing agreements you seem to have attained a success that I have never been able to attain. I have been writing them and doing not much else for 27 years, and I have never seen one written yet, nor have I ever been able to write one, on any clause of which two interpretations could not be placed; and I have arbitrated many times, although in all the trade agreements I am connected with not one provision for arbitration is included. I have arbitrated many times as to the interpretation of a clause.

Mr. PANKIN. But there are certain clauses that are not the subject of interpretation.

Commissioner GARRETSON. May not be.

Mr. PANKIN. Need not be interpreted. The question, as I say, of employing union men or the question of hours or the maximum hours, or the maximum hours and minimum wage. These are common things, and these are not things that should be arbitrated or interpreted. They are set and fixed.

Commissioner GARRETSON. Now, this one-man tailor——

Mr. PANKIN. Single tailor.

Commissioner GARRETSON. Suppose the one-man tailor, the man who comes into a custom shop and takes work out. He has no use for the union because he wants to work long hours. Moreover, does he use members of his family also or associates?

Mr. PANKIN. Yes. He sometimes has a helper and oftentimes his wife, and if there are children they will help him along.

Commissioner GARRETSON. That is all.

Mr. THOMPSON. One more question. You are a lawyer, are you not?

Mr. PANKIN. Well, so the State board says.

Mr. THOMPSON. You know that many able lawyers, judges of our supreme court, differ on the construction of laws?

Mr. PANKIN. Yes; I should say so. They never agree, it seems.

Mr. THOMPSON. And you also know that when a question of fact is to be decided under a contract or a law that it becomes a matter for a jury?

Mr. PANKIN. Questions of fact are supposed to be submitted to a jury.

Mr. THOMPSON. Now, if a question of construction of a contract arises, why is it not proper to submit it to a board of arbitration and mediation, and if it is a question of fact as to whether or not the contract as drawn has been violated, why should not that be submitted to a jury sitting as a board of arbitrators?

Mr. PANKIN. If it is a question of law—you see the question of the construction of a contract becomes a question of law. As to whether any single thing was done or not done would be a question of fact. Now, I say in response to this as a lawyer I know a great many people refuse to pay their bills——

Mr. THOMPSON (interrupting). Well, but——

Mr. PANKIN (interrupting). Excuse me just a moment. I will answer it shortly. They refuse to pay their bills and of course that necessitates the person aggrieved coming into a court and the defendant then is entitled to a trial by jury, and the defendant knows and the plaintiff knows and the jury immediately knows that it is a cooked-up defense. That is all.

Mr. THOMPSON. What you really think, then, Mr. Pankin, is that the machinery should be such as that these matters of grievance may be taken up and decided before they become serious?

Mr. PANKIN. Yes; except I do not believe an absolutely decided point should be the subject of arbitration.

TESTIMONY OF MR. MEYER SCHOENFELD.

Mr. THOMPSON. Give us your address.

Mr. SCHOENFELD. 62 Second Avenue.

Mr. THOMPSON. What is your present occupation?

Mr. SCHOENFELD. I am acting in the capacity of advisor on labor matters to the employers in the garment trade.

Mr. THOMPSON. Have you any title?

Mr. SCHOENFELD. Well, the title is Clothing Trades' Bureau of Sanitation and Information, which is organized as a means of information for employers and employees in my branch of the trade on labor matters.

Mr. THOMPSON. It is organized under the name of the Bureau of Sanitation?

Mr. SCHOENFELD. Yes.

Mr. THOMPSON. Now, are you paid a salary?

Mr. SCHOENFELD. I am paid a salary, and I am paid by the individuals.

Mr. THOMPSON. Who pays your salary?

Mr. SCHOENFELD. The association.

Mr. THOMPSON. What association?

Mr. SCHOENFELD. American Association.

Mr. THOMPSON. What is the full name?

Mr. SCHOENFELD. American Clothing Manufacturers' Association.

Mr. THOMPSON. How long have you been organized?

Mr. SCHOENFELD. About a year or 14 or 15 months.

Mr. THOMPSON. What were you doing before that, Mr. Schoenfeld?

Mr. SCHOENFELD. Before that I had been in the trade as an operator about 9 or 10 years.

Mr. THOMPSON. What were you doing the year preceding your taking this position?

Mr. SCHOENFELD. Just now?

Mr. THOMPSON. The year before you took this position?

Mr. SCHOENFELD. I have been following up the conditions of the clothing trade in the city and outside.

Mr. THOMPSON. I mean before this present time this——

Mr. SCHOENFELD (interrupting). I have been publishing a newspaper.

Mr. THOMPSON. What was that published by?

Mr. SCHOENFELD. A corporation—a weekly publication.

Mr. THOMPSON. Was it run by any organization?

Mr. SCHOENFELD. No; by a corporation.

Mr. THOMPSON. Whom did that corporation represent—anybody particularly?

Mr. SCHOENFELD. No; just a membership corporation.

Mr. THOMPSON. Was it maintained by any association or union?

Mr. SCHOENFELD. No, sir; neither by the employers nor the union.

Mr. THOMPSON. What were you doing before that, Mr. Schoenfeld?

Mr. SCHOENFELD. Before that I was connected with an institution known as the Baron de Hirsch Fund.

Mr. THOMPSON. That was philanthropic?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. For how long were you with them?

Mr. SCHOENFELD. About eight years.

Mr. THOMPSON. What did you do with the Baron de Hirsch Fund?

Mr. SCHOENFELD. Investigating industrial conditions.

Mr. THOMPSON. At that time were you working for the union?

Mr. SCHOENFELD. No, sir.

Mr. THOMPSON. That takes you 10 years previous to the present employment?

Mr. SCHOENFELD. About nine years.

Mr. THOMPSON. Have you ever been connected with the unions in the garment trade in New York City?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. For how long?

Mr. SCHOENFELD. First, I have been working at the trade under the system that was then really known as the sweat-shop system. I left the machine after being in the country 10 years and helped organize that organization which is now in existence as the United Brotherhood of Tailors, and I have been affiliated with that organization and quite active for about nine years; and that brings me to these years after I received the position with the Baron de Hirsch Fund.

Mr. THOMPSON. What position did you occupy? Were you president or organizer with the union?

Mr. SCHOENFELD. From 1892—no; from 1891 up until 1898 I was known as the organizer of the United Brotherhood of Tailors; and the last two years I was known as the organizer for the national association known as the United Garment Workers of America.

Mr. THOMPSON. That is a present organization?

Mr. SCHOENFELD. Present organization.

Mr. THOMPSON. Mr. Schoenfeld, you have been asked to come here by Mr. Kaufman in his place on the program?

Mr. SCHOENFELD. I have been asked by a committee of contractors, yesterday morning, whether I would be willing to appear for the contractors at this hearing. I have answered that if I will be asked by the commission that I will gladly appear.

Mr. THOMPSON. Well, we are glad to have you here, Mr. Schoenfeld. Now, do you know of the United Clothing Contractors' Association?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. Do you know the membership of that association?

Mr. SCHOENFELD. The membership of the United Clothing Contractors' Association—the coat contractors, about 250.

Mr. THOMPSON. How much the pants contractors?

Mr. SCHOENFELD. Well, the pants contractors at the present have not got a close affiliation with the United Clothing Contractors' Association—nor the vests.

Mr. THOMPSON. Then the membership instead of being between 500 and 600 is only about 200?

Mr. SCHOENFELD. About 250 members of the association.

Mr. THOMPSON. What is the nationality of the membership of the association, if you know?

Mr. SCHOENFELD. I should say about 95 per cent Jewish.

Mr. THOMPSON. And the rest Italian?

Mr. SCHOENFELD. No; only about half a dozen Italians, but quite a number of Lithuanians.

Mr. THOMPSON. What proportion of the coat contractors, whom you say are in this association in the city of New York, are in your association—what percentage?

Mr. SCHOENFELD. According to our best statistics, if I may add my personal knowledge, there are in the trade about 350 to 400 coat contractors, not more. I base my information from the manufacturers, as the employers of the contractors, and they ought to know best how many they have.

Mr. THOMPSON. What is the reason that the vest contractors or pants contractors are not affiliated with the United Clothiers' Association?

Mr. SCHOENFELD. We had an agreement, but recently certain interests, or a certain policy pursued by the one branch of the trade, which has not been invariably taken up by the coat contractors, so we are not now as a unit.

Mr. THOMPSON. Can you state this briefly—the reason?

Mr. SCHOENFELD. Well, yes. The pants contractors have taken sides as middlemen between the manufacturers and the unions, or the workmen, and they have to some extent formed certain alliances with the union to which the coat contractors did not agree at the time.

Mr. THOMPSON. What is the nature of that alliance? And why do the pants contractors favor it, and why do the coat contractors disagree with it?

Mr. SCHOENFELD. Why the pants contractors favor it I can not say, because I do not speak for them. Why the coat contractors do not I can answer that.

Mr. THOMPSON. Answer that.

Mr. SCHOENFELD. The contractor being considered and known as the middleman, finds it to his advantage not to take sides, neither with his employer, the manufacturer, nor with the organization that represents his employees; that he should assume a neutral position, siding neither with the employers' organization nor with his employees.

Mr. THOMPSON. What attitude does the union take in this respect, if you know?

Mr. SCHOENFELD. Well, the union is sufficiently represented here; I think that question should be answered by them.

Mr. THOMPSON. Do they make any demands?

Mr. SCHOENFELD. On what?

Mr. THOMPSON. On the coat contractors?

Mr. SCHOENFELD. For what?

Mr. THOMPSON. Do they make any demands on the coat contractors?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. In respect to that question?

Mr. SCHOENFELD. Not in respect to that question; not that I have heard of.

Mr. THOMPSON. Then, the question never has been brought up, really, to the coat contractors; no demand of the union has been made on them?

Mr. SCHOENFELD. By individuals, but I doubt whether they were speaking for the organization. Individuals may have suggested personal opinions on both sides.

Mr. THOMPSON. What would be the nature of the demands or the affiliation that the union would want with the contractors as against the employers?

Mr. SCHOENFELD. You mean the manufacturers' association—that they were to come to an understanding?

Mr. THOMPSON. Yes.

Mr. SCHOENFELD. Well, it would mean that the contractors would be used by the organizations, or the contractors would use the workmen's organizations as a weapon against the manufacturers.

Mr. THOMPSON. Well, how?

Mr. SCHOENFELD. If the contractors—

Mr. THOMPSON. How would a contractor be used by the union against the employers?

Mr. SCHOENFELD. In the first place it could be used in a way that, by having an alliance between the contractors and the union, they could raise prices just at their will on the manufacturer. And that answers it; that answer ought to be sufficient why many responsible contractors do not favor it.

Mr. THOMPSON. At least, you think it is sufficient?

Mr. SCHOENFELD. What?

Mr. THOMPSON. You think it is sufficient, anyway?

Mr. SCHOENFELD. Well, it would be unfair. There are three elements in the trade—the workmen, the contractors, and the manufacturers—and it is unfair that two shall unite against one, just as it would be if the manufacturers were united with the contractors against the workmen.

Mr. THOMPSON. Do you think it is possible for the three elements, as they are in the trade, as you have named them, to exist at the same time and not to have an understanding between two of them in reference to the other?

Mr. SCHOENFELD. It would be unfair, and it would not be lasting.

Mr. THOMPSON. Don't you believe that there is at least an understanding between either the contractor and the union or the contractor and the employer?

Mr. SCHOENFELD. There is not.

Mr. THOMPSON. There is none?

Mr. SCHOENFELD. There is no such understanding of any account.

Mr. THOMPSON. Where does the contractor get his work from?

Mr. SCHOENFELD. From the manufacturer.

Mr. THOMPSON. Has the manufacturer the liberty to pick any contractor he pleases?

Mr. SCHOENFELD. Whether he is at liberty to pick?

Mr. THOMPSON. Yes.

Mr. SCHOENFELD. It is not a question of liberty; it is his absolute right. Certainly he does, and the contractor has his liberty to pick his manufacturer for whom he should work.

Mr. THOMPSON. But if the contractor gets work from a manufacturer——

Mr. SCHOENFELD (interrupting). Yes, sir.

Mr. THOMPSON. It has got to be at the instance of the manufacturer?

Mr. SCHOENFELD. What am I to understand, "at the instance?"

Mr. THOMPSON. That the manufacturer wants him for his contractor?

Mr. SCHOENFELD. Yes, sir; naturally it takes two to make a bargain.

Mr. THOMPSON. Sure; and under those conditions where the manufacturer picks the contractor, still you believe that there should be no understanding between the contractor and the manufacturer as to what attitude they should take toward the organization or the union?

Mr. SCHOENFELD. No, sir; this question does not come up at all. The manufacturer looks to the contractor to turn out the goods in time and in good shape.

Mr. THOMPSON. That is what you think?

Mr. SCHOENFELD. That is what I think, to the best of my knowledge.

Mr. THOMPSON. You are handling the labor end for the contractors and manufacturers?

Mr. SCHOENFELD. I am not handling——

Mr. THOMPSON (interrupting). In your bureau of sanitation?

Mr. SCHOENFELD. I am not handling anything. I am acting, as I said, in an advisory capacity to individual employers and the association on labor matters.

Mr. THOMPSON. And from that position you don't know of any understanding in regard to the matter we have been speaking of?

Mr. SCHOENFELD. If there would be an understanding I would know it.

Mr. THOMPSON. You would know it?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. And yet you say there is not any?

Mr. SCHOENFELD. There is not any.

Mr. THOMPSON. Why did you call this bureau of yours the bureau of sanitation instead of the bureau of labor?

Mr. SCHOENFELD. There is a certain work we are doing, so far, as sanitation. It has not developed yet to the extent I would like.

Mr. THOMPSON. When you come to name the work you are doing, you say you are doing labor work?

Mr. SCHOENFELD. You have not touched that question yet.

Mr. THOMPSON. I asked you what work you are doing.

Mr. SCHOENFELD. Sanitation and labor matters are one thing. The labor organizations use the sanitary question as the forerunner to all matters.

Mr. THOMPSON. That is your answer, is it?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. What is the object, if you know, of the contractors' association?

Mr. SCHOENFELD. What their object is?

Mr. THOMPSON. Yes.

Mr. SCHOENFELD. The object of the contractors' association, as an association, is a defensive position against any unjust demands, either from their workmen or from their employers.

Mr. THOMPSON. In regard to matters of sanitation, I presume?

Mr. SCHOENFELD. No, sir; that does not come into that.

Mr. THOMPSON. It does not?

Mr. SCHOENFELD. No, sir; this does not come into that.

Mr. THOMPSON. Who supports the sanitation part of your bureau, which you say is the important end of it?

Mr. SCHOENFELD. I am attending to that.

Mr. THOMPSON. Who pays you for it?

Mr. SCHOENFELD. The manufacturers.

Mr. THOMPSON. The manufacturers pay for it?

Mr. SCHOENFELD. Yes, sir.

Mr. THOMPSON. From the association or individuals?

Mr. SCHOENFELD. Individuals and the association.

Mr. THOMPSON. It is a sort of philanthropic work, then?

Mr. SCHOENFELD. No, sir; not exactly. It is to prevent false pretenses in the times of strike on the sanitation question.

Mr. THOMPSON. Then it is a part of the labor trouble?

Mr. SCHOENFELD. Yes, sir; I have said sanitation and the labor trouble go together in the needle industry.

Mr. THOMPSON. It is not for the purpose of making shops more sanitary, but for the purpose of presenting the employers' side of sanitation?

Mr. SCHOENFELD. I didn't say so.

Mr. THOMPSON. Didn't you say that just a moment ago?

Mr. SCHOENFELD. If you will repeat the question and answer, I will know what you are getting at now.

(The former questions and answers on this subject were read by the reporter.)

Mr. THOMPSON. I think the position is plainly stated.

Mr. SCHOENFELD. Yes; but you have not asked for what the sanitation part of the work is.

Chairman WALSH. I understood you to say that the sanitation part of it was to present fairly the employers' side of the sanitation, when it is used against them in labor disturbances, is that correct?

Mr. SCHOENFELD. And to disprove it.

Chairman WALSH. And that is where the sanitation part comes in?

Mr. SCHOENFELD. Yes, sir.

Chairman WALSH. In your particular work?

Mr. SCHOENFELD. Yes, sir.

Chairman WALSH. That settles it.

Mr. THOMPSON. That is all I have.

Chairman WALSH. Do you want to ask any questions, Commissioner Garretson?

Commissioner GARRETSON. Yes; I want to ask a question or two.

The paper you published was a trade journal?

Mr. SCHOENFELD. No, sir.

Commissioner GARRETSON. You stated that there was no understanding between the employer and the contractor in regard to the questions that may arise between the unions and the individuals on that subject?

Mr. SCHOENFELD. No, sir; there is not.

Commissioner GARRETSON. Is it not true that the logical position of the contractor and the manufacturer, as an employer, are exactly the same whenever these questions arise and you do not need any understanding?

Mr. SCHOENFELD. It is not so in the clothing trade?

Commissioner GARRETSON. No?

Mr. SCHOENFELD. No, sir; because in the clothing trade, the contracting situation is different from the contracting line in any other trade.

Commissioner GARRETSON. How is it?

Mr. SCHOENFELD. The contracting system in the clothing trade is the stepping stone for the mechanic to become a manufacturer, and the contractor of to-day is apt to be a union man of yesterday; and you will find 25 per cent of the contractors of to-day, that they were strong union men a year or two or three or five or ten or fifteen years ago.

Commissioner GARRETSON. Have you noticed, though, when they get to the stage where they are employers, the unions, their union principles never get in the way of their profits?

Mr. SCHOENFELD. Well, as employers, naturally, they have a right in their acting, in a way, as it is to their interest.

Commissioner GARRETSON. I am not questioning the right; I am asking you in regard to the fact?

Mr. SCHOENFELD. As individuals, as contractors, but there is no understanding with the manufacturers.

Commissioner GARRETSON. Isn't their interest as the employers of men exactly the same without any understanding?

Mr. SCHOENFELD. Naturally so; there is no understanding.

Commissioner GARRETSON. So they just follow the same course of action from self-interest without any understanding?

Mr. SCHOENFELD. With the contractor it is a different situation. He is the middleman between the manufacturer and his employees, and he would not

and should not take sides either with the manufacturer or with his employees as an organization.

Commissioner GARRETSON. Still his interest lies in how cheap he can get his men just as the manufacturer's interest lies in how cheap he can hire his men?

Mr. SCHOENFELD. Just as it is to the interest of the workingmen how much money he can get. It is the daily occurrence between labor and capital.

Commissioner GARRETSON. And isn't he naturally aligned against them in exactly the same way?

Mr. SCHOENFELD. No; because in many instances, if a contractor should make an attempt to reduce wages from his employees, it is very apt that the manufacturer for whom he is working will just on account of that reduce the pay of the contractor. Therefore the contractor does not take that position.

Commissioner GARRETSON. Well, the department of sanitation is not used to disinfect that method, is it?

Mr. SCHOENFELD. No; this was for the purpose of disprove false pretenses on the part of unions in creating issues which are not true and inconsistent.

Commissioner GARRETSON. False statements and false representations entirely in your experience are confined to unions?

Mr. SCHOENFELD. Occasionally they are practiced on all sides.

Commissioner GARRETSON. That is all.

Mr. SCHOENFELD. I did not say it otherwise, but that is the union's business.

Commissioner O'CONNELL. The organizations you represent as their labor representative do not deal with unions as unions as I understand it?

Mr. SCHOENFELD. No.

Commissioner O'CONNELL. But you do deal with individuals?

Mr. SCHOENFELD. With individuals.

Commissioner O'CONNELL. Do you adjust all grievances they may have as to wages and hours and conditions of employment?

Mr. SCHOENFELD. What?

Commissioner O'CONNELL. Any grievances they may have, do you deal with them as individuals?

Mr. SCHOENFELD. Our position is, if a demand is made on the part of a workman or the union, simply on an individual manufacturer, I do investigate those demands. If they are fair and reasonable and consistent with the conditions in the trade, I advise the manufacturer to adjust them; if they are not reasonable and not consistent with conditions of the trade, I advise the manufacturer not to grant them.

Commissioner O'CONNELL. And you are the sole judge of whether they are?

Mr. SCHOENFELD. I don't say, sir, that I am the sole judge. I make the suggestions and usually the firms take it under advisement and discuss it.

Commissioner O'CONNELL. Your suggestions are largely accepted, I suppose, by the employer?

Mr. SCHOENFELD. Well, in many cases.

Commissioner O'CONNELL. Do you know anything of the conditions of the subcontractors, as to the methods in their factories?

Mr. SCHOENFELD. I know something about it. I understand that the union has claimed last year, after the termination of the general strike as a victory, that all subcontracting has been abolished; that it does not exist any more.

Commissioner O'CONNELL. Doesn't it?

Mr. SCHOENFELD. Yes. That was the official statement at the conclusion of the general strike, that the unions had succeeded in the abolition of the entire subcontracting; that is something that has existed but does not exist now.

Commissioner O'CONNELL. Does it exist?

Mr. SCHOENFELD. It did exist.

Commissioner O'CONNELL. Does it exist now?

Mr. SCHOENFELD. Very slightly.

Commissioner O'CONNELL. What became of it, then?

Mr. SCHOENFELD. Well, partly, the union succeeded in abolishing it, but there are certain conditions in the trade which can not be forced to be abolished. The trade calls for it.

Commissioner O'CONNELL. Why?

Mr. SCHOENFELD. Conditions.

Commissioner O'CONNELL. What are the conditions?

Mr. SCHOENFELD. Well, do you want any particular branch, or in a general way?

Commissioner O'CONNELL. In a general way.

Mr. SCHOENFELD. The conditions of the clothing trade can not be compared to any other industry. The clothing trade depends entirely on the general conditions of the country. The clothing trade is the indicator of conditions, for the reason, as I understand it, that the middle class and the poorer classes use its income, first, for rentals; second, for eatables; third, for clothing; that when conditions in the country get somewhat dull, the middle class and the workingmen save first on clothing. Therefore the clothing trade is the first one to suffer when the conditions of the country are not prosperous. The immigration question, the Sabbath question, and many other questions can not be compared in this trade as they are in any other industry. You must deal with this question in a different way than you take up any other industry for investigation.

Commissioner O'CONNELL. Hasn't the immigration question a great bearing on the question of wages?

Mr. SCHOENFELD. Very much. I should say 75 per cent of all the people in the clothing trade have been immigrants; and, so far as that part is concerned, nearly all of them.

Commissioner O'CONNELL. Do the employers take advantage of the fact that the market is exceptionally well stocked with labor?

Mr. SCHOENFELD. Well, if it comes down to employers, I want to say that there are certain things that even the other side don't do. The unions are the very people which clamor and favor the open door for immigrants and pass resolutions and go to Congress and protest against the literacy test, but they are asking for the closed door in the shop when these immigrants come in.

Commissioner O'CONNELL. Are the employers in favor of the literacy test?

Mr. SCHOENFELD. I don't know. They have never taken a position in that direction.

Commissioner O'CONNELL. Have they ever taken any position on the immigration question at all, toward restricting it?

Mr. SCHOENFELD. Not as an association; just as individuals; they are divided on that proposition. Some people believe in what you call an open door, and they all differ.

Commissioner O'CONNELL. Do you know anything about this home-work condition?

Mr. SCHOENFELD. Yes.

Commissioner O'CONNELL. What is there about a family of 10 or 12 living in one room and making up clothing under most insanitary conditions?

Mr. SCHOENFELD. Making up clothing, or finish?

Commissioner O'CONNELL. Finishing?

Mr. SCHOENFELD. Well, if the union controls 90 per cent of their members, why don't they stop it?

Commissioner O'CONNELL. No; I am not asking you whether they do stop it, but whether clothes are made under these conditions?

Mr. SCHOENFELD. It is not clothes made; simply finishing. For the last 35 years—I say for the last 35 years because the contract system is only about 40 or 45 years old—for the last 35 years, when the original so-called sweatshops were in the trade, which were abolished about 12 years ago, with the exception of here and there a single case, there was always finishing done outside. But the laws of the State have practically a full control over these home workers by revoking licenses, and no reliable house or manufacturer, and no large contractor, gives work to any women in a tenement house to do finishing unless she provides a monthly certificate from the State factory department.

Commissioner O'CONNELL. What does that certificate require?

Mr. SCHOENFELD. It requires sanitary conditions and certain space, etc. If I would have known that question would come up, I would have brought one. That comes within our part of the work on sanitation.

Commissioner O'CONNELL. The question has been discussed here quite freely yesterday, and some very valuable statements as to conditions existing in those homes where clothing is finished were made, as, for instance, one statement was made of two rooms with 24 people in them finishing clothing, 12 people living in each separate room.

Mr. SCHOENFELD. I would not question the gentlemen or ladies who made that statement, but you will pardon me if I may be so impertinent as to say it would be the duty of the commission to ask on the Missouri style and say, "Show us," and let them take you down and see where that is. I deny it.

Commissioner O'CONNELL. I think we will go and see it.

Mr. SCHOENFELD. I deny it, because I am getting reports on conditions on these things, conferring with factory inspectors' reports. But we do find this,

that if occasionally there is a complaint on the part of a factory inspector I do look into it and advise the firm not to give any work to such contractor until he gets the certificate from the State factory department.

Commissioner O'CONNELL. Supposing you found a place that is, in your opinion, insanitary. Do you report it to the factory-inspection department?

Mr. SCHOENFELD. I would inform the firm which supplies the party with work to stop giving him work until this thing is rectified.

Commissioner O'CONNELL. But you will not send the information to the factory inspector?

Mr. SCHOENFELD. No, sir.

Commissioner O'CONNELL. You would not think that is your business?

Mr. SCHOENFELD. I would not think that comes within my class of work. Probably it will in course of time, but not at present.

Commissioner GARRETSON. If they had the State certificate, even if you knew that infectious disease was there, you would not report it to the State department, but you would take the State certificate as proper ground for letting the work go there?

Mr. SCHOENFELD. If I would know it, I would not.

Commissioner O'CONNELL. You just stated you would.

Mr. SCHOENFELD. Yes; that was not the question. That question is different. If I would know that there is really a sickness in that house, I would inform them; but on the general complaint I would not. That is all sentimental; that is all.

Commissioner GARRETSON. Is smallpox sentimental?

Mr. SCHOENFELD. I don't mean that. I mean these issues are all sentimental.

Commissioner GARRETSON. Are they?

Mr. SCHOENFELD. Yes; I mean on the part of the unions.

Commissioner GARRETSON. Most people believe that conditions of labor are facts and not sentiment.

Mr. SCHOENFELD. Yes. Why don't the unions abolish them?

Commissioner GARRETSON. Why don't the unions abolish murder?

Mr. SCHOENFELD. Well, society, as a whole, is part and parcel to the responsibility for murder, and the unions have their share for murder.

Commissioner GARRETSON. Why don't your employers' associations abolish murder?

Mr. SCHOENFELD. They are just as responsible as you and I and everybody. We are, as a whole as society, responsible for conditions.

Commissioner GARRETSON. Is responsibility dodged by saying, "Why don't unions do it"?

Mr. SCHOENFELD. No.

Commissioner GARRETSON. That is all.

Mr. SCHOENFELD. But the manufacturers disclaim it.

Chairman WALSH. Disclaim what?

Mr. SCHOENFELD. The manufacturers disclaim that these conditions are as bad as represented by the other side. They claim that they are magnified for a fact.

Commissioner GARRETSON. You better get a duplicate of the pictures presented here on the premises.

Chairman WALSH. The thing that I might say that impressed me was the testimony of Miss Lillian Wald, for whom I have a very high regard.

Mr. SCHOENFELD. Yes; she has been here for the last 20 years.

Chairman WALSH. She has lived in the neighborhood?

Mr. SCHOENFELD. Yes.

Chairman WALSH. And she presented certain facts, accompanied by illustrations.

Mr. SCHOENFELD. Yes.

Chairman WALSH. Do you know anything about the matter presented by her?

Mr. SCHOENFELD. I don't know what was presented by Miss Lillian Wald, but she knows a great deal of conditions, and she also knows them as they were before, and they are not to-day what they were years ago.

Chairman WALSH. But you think her facts would be reasonably reliable?

Mr. SCHOENFELD. Yes; whatever Miss Wald's opinion is on things I would be guided a great deal. She is apt to be misinformed; she has got a good heart and she is apt to be carried away, as all other good people are, sympathizing, usually, with the underdog.

Chairman WALSH. Well, in what way, then, would you determine that question?

Mr. SCHOENFELD. I determine that question that all good people are occasionally taking up these investigations and making the east side of New York a place for slumming visits, and looking into conditions only from one side, and seeing the dark side and nothing else.

Chairman WALSH. Well, do you think they ought to look into conditions as a whole or in part?

Mr. SCHOENFELD. As a whole, but they should see both sides and present the matter really as it is, and not take part, just pick up the bad things and make an impression on the public and magnify it. That is not fair.

Chairman WALSH. Are you through now?

Mr. SCHOENFELD. Yes.

Chairman WALSH. We have been informed that a great deal of the work on garments that was done in private homes or tenements was done on the east side of New York, a great deal of it. That is correct, is it not?

Mr. SCHOENFELD. Whatever is done, the finishing part, is done not only on the east side, but in other sections also.

Chairman WALSH. Will you say that there was more finishing done on the east side than in other sections of New York?

Mr. SCHOENFELD. It is only natural, because the clothing shops are around there.

Chairman WALSH. Well, is it or is it not the fact?

Mr. SCHOENFELD. Yes; it is on the east side more.

Chairman WALSH. Well, that being the case, would you not believe the investigations should be made as to the circumstances covering the finishing being done in that particular locality?

Mr. SCHOENFELD. Oh, yes; they should be investigated.

Chairman WALSH. It would be the place to go where the finishing was being done?

Mr. SCHOENFELD. You would get a better line over there on investigations.

Chairman WALSH. You say the tendency of all good people is to be with the under dog, and therefore there is danger of exaggerating conditions?

Mr. SCHOENFELD. I mean those that present these conditions know how to play on good people to impress them with the dark side, not showing the actual fact.

Chairman WALSH. Take, as a typical case, that of Miss Wald. You say she is a creditable person?

Mr. SCHOENFELD. Yes.

Chairman WALSH. She has had experience, and has lived there, and her testimony could be relied upon as to conditions, except for the fact that she might be misinformed or swayed by her own feeling, is that correct?

Mr. SCHOENFELD. And misinformed by others.

Chairman WALSH. Well, that is what I said.

Mr. SCHOENFELD. Yes.

Chairman WALSH. So that whatever Miss Wald, with those attributes, is not a good witness, perhaps. So, who would you say would be a good witness?

Mr. SCHOENFELD. I did not say Miss Wald was not a good witness.

Chairman WALSH. Well, she could be relied upon as nearly as given testimony could be brought to bear upon that question, is that correct?

Mr. SCHOENFELD. Yes; you asked me as to what I say would be a good witness.

Chairman WALSH. Yes.

Mr. SCHOENFELD. Well, the commission, if they want to go in really to find out the facts, let them take a representative of the workingman or a representative of the manufacturers and see the things all around as they are, on both sides, and not to pick up just one little thing, and cause a sentiment for it and impress the public that that is the general condition of the trade.

Chairman WALSH. Might we not be swayed by our feelings one way or the other, either that we were with the under dog or that we would hold the viewpoint that perhaps you hold?

Mr. SCHOENFELD. Well, they would see the things as a whole, not just one side. And they would then, as a commission, as a nonpartisan body, just see the average things as they really exist, and not be impressed by one side only.

Chairman WALSH. Do you think Miss Wald saw it that way?

Mr. SCHOENFELD. Well, as I said, Miss Wald is one of our most creditable and distinguished people on the East Side, and whatever she sees herself I

would be guided a great deal by her judgment. But she, and we all know, are often impressed by things that if she did not investigate herself, she would probably be misinformed.

Chairman WALSH. You have testified as a witness here and said that conditions were exaggerated as stated here?

Mr. SCHOENFELD. Yes.

Chairman WALSH. Are you swayed in that statement by your feeling for one side or the other?

Mr. SCHOENFELD. No, sir.

Chairman WALSH. So that you would really be a first-class witness in that respect?

Mr. SCHOENFELD. I don't know.

Chairman WALSH. That is all.

Commissioner GARRETSON. You were a walking delegate——

Mr. SCHOENFELD (interrupting). I was not a walking delegate.

Commissioner GARRETSON. When you were an adherent of the union——

Mr. SCHOENFELD (interrupting). I did not call it that way. Call it by the proper name, and I will answer the question.

Commissioner GARRETSON. When you were an organizer of the United Brotherhood of Tailors did your imagination and sympathy ever run away with you on those statements?

Mr. SCHOENFELD. I always considered certain rights, and it is known that, if you will trace the records, the rights of the employer, when he was right, and the rights of those I have represented.

Commissioner GARRETSON. And were you ever swayed by sentiment in making the presentation of the conditions that existed in those days?

Mr. SCHOENFELD. Well, I admit that all was part and parcel, that occasionally we did play up to the gallery a great deal.

Commissioner GARRETSON. Have you dropped the habit of playing to the galleries to-day?

Mr. SCHOENFELD. I have. [Laughter in the audience.]

Commissioner GARRETSON. You are not swayed by any sentiment or selfish interests now as you were then? You are a better man now than you were then?

Mr. SCHOENFELD. That is not the question.

Commissioner GARRETSON. Yes; it was.

Mr. SCHOENFELD. I am as good a man as then, but the path of work is not as narrow as then.

Commissioner GARRETSON. And the interest is different now?

Mr. SCHOENFELD. I did not say that.

Commissioner GARRETSON. I ask if it is?

Mr. SCHOENFELD. What do you mean by interest?

Commissioner GARRETSON. Does your interest now run in another direction than it did then?

Mr. SCHOENFELD. What do I understand by interest?

Commissioner GARRETSON. Gain.

Mr. SCHOENFELD. No; that counts no part.

Commissioner GARRETSON. Was it different then?

Mr. SCHOENFELD. It was not.

TESTIMONY OF MR. PAUL ARNONA.

Mr. THOMPSON. Will you give us your full name and address?

Mr. ARNONA. Paul Arnona, 175 Eighty-fourth Street, Brooklyn.

Mr. THOMPSON. And your work?

Mr. ARNONA. Business agent for the United Brotherhood of Tailors.

Mr. THOMPSON. That is, the United Garment Workers?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. How long have you been acting as such business agent?

Mr. ARNONA. About 16 months.

Mr. THOMPSON. Were you engaged at work in the trade before then?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. For about how long?

Mr. ARNONA. About 10 years.

Mr. THOMPSON. Here in New York?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. You are pretty well acquainted with the condition of the men in the garment trades in this city?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. That relates to the Italian workers?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. You are an Italian yourself, are you not?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. About how many Italians are there in the men's garment trades in this city, if you know?

Mr. ARNONA. You mean in the men's garments?

Mr. THOMPSON. The men's garments.

Mr. ARNONA. Well, I believe about 45 per cent of them are Italians in the trade.

Mr. THOMPSON. Are Italians?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. How many thousands would that be, about?

Mr. ARNONA. I believe over sixty.

Mr. THOMPSON. Over sixty?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. Italians engaged in the garment trades in New York City?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. About how many are engaged in the men's garment trades?

Mr. ARNONA. I am talking about the men's garments—pants, vests, and coats.

Mr. THOMPSON. What proportion of those are affiliated with or members of the union?

Mr. ARNONA. With the union?

Mr. THOMPSON. Yes.

Mr. ARNONA. I believe, roughly speaking, pants, vests, and coats, I believe some 35,000 to 45,000. They are affiliated with the union.

Mr. THOMPSON. Thirty-five to forty-five thousand of them are affiliated with the union?

Mr. ARNONA. Yes—vests, pants, and coats.

Mr. THOMPSON. What proportion of the Italian workers are working in the inside shops, and what proportion are working in the outside shops?

Mr. ARNONA. Roughly speaking, that is a thing we have to look up. But the majority of the Italians, they are working in the inside shops.

Mr. THOMPSON. Inside shops?

Mr. ARNONA. Yes.

Mr. THOMPSON. That is, the large manufacturers?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. Are there many Italian contractors or manufacturers?

Mr. ARNONA. No; very small group of Italian contractors, pants and coats. I believe there is about 85 to 50 Italian contractors in Greater New York.

Mr. THOMPSON. Are the Italians mostly unskilled workers in the trade, or have they many skilled workers?

Mr. ARNONA. Well, you see you have to take the thing in two parts—the custom-tailoring part and the ready-made part. Mostly the custom tailors are the skilled mechanics, but in the ready-made part, then you have, you see, two different conditions—the inside shop, which most of them are very cheaply paid, and where the men come in as they come over from the other side—then you find another part, where the tailors—of which they constitute a very small number.

Mr. THOMPSON. In other words, most of the Italians are beginners at the trade?

Mr. ARNONA. Yes.

Mr. THOMPSON. And not very skilled as yet?

Mr. ARNONA. No, sir.

Mr. THOMPSON. Is there any antagonism on the part of Italians toward organization of unions?

Mr. ARNONA. No, sir.

Mr. THOMPSON. There is not?

Mr. ARNONA. No; they are very reasonable and willing to join the organizations, because they know through organizations they will get better conditions.

Mr. THOMPSON. I take it, from what you say, that the Italian will work for either contractor or inside shop?

Mr. ARNONA. Yes.

Mr. THOMPSON. Does he favor one as against the other?

Mr. ARNONA. Well, generally speaking, there has always been a tendency for the Italian to always work in the inside shops. There is many reasons for it, because most of these inside shops they have Italian foremen, and these Italian foremen, you see, they are given good pay, and they always like to get the Italian to work for them, being the Italian has no experience in the land and the custom of the country, you see, and they are easily misled or fooled by an Italian foreman. Of course, as soon as the Italian is a good mechanic he leaves the place to get a better place in the inside contractor's shop.

Mr. THOMPSON. In the finishing—the work that Italians do for contractors in the trade, do they suffer more from other people in loss of wages?

Mr. ARNONA. No, sir.

Mr. THOMPSON. By the failure of the contractor to pay?

Mr. ARNONA. No.

Mr. THOMPSON. They are not taken advantage of any more than any other people?

Mr. ARNONA. No, sir.

Mr. THOMPSON. Are the Italians subject to exploitation by subcontracting more than any other people?

Mr. ARNONA. Yes; a good many of them, too.

Mr. THOMPSON. Does that exist to-day in New York?

Mr. ARNONA. It does exist to-day in New York. For example, I might cite the case of Naumberger shop, University Place and Eleventh Street, where that shop—there is a good many of them that they have working for subcontractors in that shop, such as pressers, basters, and fellers, and so on.

Mr. THOMPSON. How many shops are there where subcontracting exists among the Italian people, about, if you know?

Mr. ARNONA. Well, I could not give exactly the number, because from different information we get, through the complaint that we receive in the organization office from Italian workers coming out from a given shop, for example, like Peck's shop in Brooklyn, Cohen & Goldman, and the Naumberger shop, to a certain extent it exists, for example, Stern Bros. You see, they work, and once in a while one of them falls out and comes to the organization and complains about the treatment he received at the hands of the subcontractor.

Mr. THOMPSON. Is the union in favor of or against subcontracting?

Mr. ARNONA. We are against subcontracting.

Mr. THOMPSON. Do you do what you can to prevent subcontracting?

Mr. ARNONA. We use every means in order to show to the manufacturer or to the contractor that such a thing works to the injury of the interests of the worker, and also against the interests of the contractor himself.

Mr. THOMPSON. And this work you have just said you do is done by special contract?

Mr. ARNONA. By subcontract.

Mr. THOMPSON. I mean by subcontracting.

Mr. ARNONA. Yes.

Mr. THOMPSON. What firm—what Goldman is that, the firm you just spoke about now?

Mr. ARNONA. Well, pressing.

Mr. THOMPSON. Well, I mean what Goldman?

Mr. ARNONA. Goldman?

Mr. THOMPSON. What Goldman?

Mr. ARNONA. Cohen & Goldman.

Mr. THOMPSON. That is the man connected with the New York Trade Association?

Mr. ARNONA. I could not tell you what he is connected with.

Mr. THOMPSON. Were you here yesterday?

Mr. ARNONA. No, sir.

Mr. THOMPSON. Is he president of the National Clothing Association?

Mr. ARNONA. I don't know; that does not interest me at all.

Mr. THOMPSON. What do you know about the home work done by the Italians? Is much of that done here?

Mr. ARNONA. Yes; I know quite a good deal, because I was always interested in matters, and I always worked in the shops as an Italian to see that the sister work should be abolished altogether. And I want to say—the gentleman here says he is from Missouri, but I want to say I am a New Yorker, 20 years in New York, and I could take the commission around here at any time, any hour in the morning, at any time, on any of the East Side streets, uptown,

and in Brooklyn, and show to them with the fingers, without any sentimental feeling at all, how the whole work is carried on every day.

Mr. THOMPSON. From what factories, or what wind of work goes into the homes?

Mr. ARNONA. Let me make this clear. I want to put this in as it is. I don't want to put anything on to it, to add on anything. For example, take any mail-order houses here. Perhaps they finish the coats and pants. It is not only on the coats, but also on the pants. Most of the work is done inside, but when the rush season comes along, the foreman who is in charge of the job is compelled to use some outside help to do the work. So you see in the mail-order house—in some of the custom shops, mostly—the work is done inside, but when the rush season comes around they are always keeping numbers of women in reserve to use them in case of a strike or anything like that. Some work is given on the outside. So you see in the mail-order houses such as I worked at, the International, there isn't as much evil as the sweatshop work, but it is all underhand. There it is entirely different, because they have very big lofts and enough room to put a lot of women into. But when we go to the sweatshop, there is where the evil exists, where they make ready-made coats and pants. It does not matter if it is an inside or an outside shop. I will give you various statements, so if you care you could investigate yourself.

For example, take the firm by the name of J. Friedman & Co.; most of its work is given out, you see, to contractors all over Greater New York. For example, I will take you to the shop right here in New York City, to a shop by the name of Rogers, 105—one of the streets on the East Side, I don't recollect just now. Or I will take you to another shop, Witson & Price, 174 Allen Street, top floor. This Witson & Price, understand, he has not got enough room on the inside to have the fellings drawn there, so you find women, mostly over the age of 45, mostly over the age of 45, Italian women which, through economic conditions, are compelled to have work to do. These women come early and take work at 7 o'clock in the morning or at the lunch hour and take it to the house, and when you go to the houses you will find two or three small rooms. You will find the children have to come from schools, and some girls which are not able to find work and the children help to finish these coats in the kitchen room, and dining room, parlor, and everything—it is all in one room, and the work is there on the floor, and you can't tell but maybe the children are sick, and the mother has to work at the coat at the same time and attend to the work and take care of the children.

For example, if you go to the shop, they are getting some from Corn & Goldman; a contractor by the name of Bush, in South Fifth Street, Brooklyn, near the new bridge; Bush has got a new, large modern shop, still he has not got enough finishers, or does not care to get enough to have the work finished inside, and some work is given outside. And I have investigated and I have followed them up to have those women join the organization and try and see that they work in the shop, and still they always say, "The boss says we can get them outside." So, for example, you go down to the corner of Cherry Street and Grand any morning, any hour of the day, you will find a number of women coming out of the East Side shop with coats, and that same thing is happening over and over again. If you go on the West Side, up around Lafayette Street or up around Allen, wherever there are shops situated, you will find the Italian neighborhood, and the women, most of them Italian, say going out to get work and finish it in the house. Not only that, but we find also a competition in the prices between them. The contractors and manufacturers, they agree to give the work out to cheapen the price.

For example, for fellings work in the shop, either pants or coat, she gets 7 cents inside for a coat, but outside she will get 5½ or 6 cents; so you see it is economical to the concern and they are benefited to give the work outside.

Mr. THOMPSON. When you speak of the economic necessities compelling these women of 45 and over to do this home work, what do you mean by economic necessities?

Mr. ARNONA. You have to understand the situation of the average Italian family—those who are compelled to send and do the work.

Mr. THOMPSON. You mean poor families?

Mr. ARNONA. Yes, sir; not because they like it, but because of their economic conditions. They are common laborers, and they only earn \$1.50, \$1.75, or \$2 a day, and they do not have steady work the year round, and in order to make both ends meet it is necessary for the women to work.

Mr. THOMPSON. Therefore poor families are compelled to do this home work?

Mr. ARNONA. I am of the opinion that if there will ever be a law or anything like that that no home work shall be done I believe those women will work in the shop.

Mr. THOMPSON. You mean the poor families who take work home now?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. What are the conditions of the poor families—what kind of homes do they have? How many people in the rooms, etc.?

Mr. ARNONA. Some you will find 6 in a room, some 8, some 10. It all depends on the size of the family and how many boarders they can get in. Some families have no boarders; are able to get along without it.

Mr. THOMPSON. Those are in apartment buildings?

Mr. ARNONA. Most of the old-style tenement houses.

Mr. THOMPSON. Old-style buildings?

Mr. ARNONA. Yes, sir.

Mr. THOMPSON. In crowded neighborhoods?

Mr. ARNONA. Oh, yes; crowded; the East Side neighborhood.

Mr. THOMPSON. That is all.

Commissioner LENNON. What can a woman finisher make in an hour if she works steady for an hour—how much an hour can she make?

Mr. ARNONA. For example, for a woman goes into a shop in the morning and she get 10 coats; that is the usual amount; takes them sometimes three-quarters of an hour to finish a coat. You see, when the week is over some of them do not make any higher than \$4, and some \$3, because I have seen the paper.

Commissioner LENNON. But what I want to find out is—the women get, we will say, 20 coats?

Mr. ARNONA. Yes, sir.

Commissioner LENNON. And she goes home; the children are in school?

Mr. ARNONA. Yes, sir.

Commissioner LENNON. And she can work one hour steady?

Mr. ARNONA. Yes, sir.

Commissioner LENNON. Then there is nothing in the way?

Mr. ARNONA. No, sir.

Commissioner LENNON. She can work an hour?

Mr. ARNONA. Yes, sir.

Commissioner LENNON. How much could she make an hour?

Mr. ARNONA. 10 cents. A coat and a half; no more than a coat and a half. She has to finish the sleeves, shoulders, bottom, and all that.

Commissioner LENNON. I understand.

Mr. ARNONA. No woman gets 20 coats unless they have a husband or daughter to help them; but most of them get three or four or five coats at a time.

Commissioner LENNON. That is all.

Chairman WALSH. That is all; thank you.

Mr. ARNONA. I want to say—

Chairman WALSH. Yes. I would be very glad if there is anything that you would like to volunteer, that you think is germane to this subject, we would be very glad to hear it.

Mr. ARNONA. Am I to add anything?

Chairman WALSH. Any comment which you have to make of any testimony, or anything you wish to volunteer, you may do it now.

Mr. ARNONA. Yes; I want to say to the commissioner. The question of home work, it is a question which I believe if the State would investigate with the right people there could be a great deal learned, and the State could correct the evils. For example, I find in my work as business agent going from tenement house to tenement house, I have never met a factory inspector, and if I do meet one they know very little about the condition of the people. I am sure if a law should be passed that the manufacturers and contractors have six months time, and in that six months they shall provide themselves with help, the home work will cease. Many of those coats, whenever they go out of a house they are full of germs and disease, and the person who has got to wear the coat doesn't know what it is. The Italian has a community, has an organization, they want to see this horrible condition of home work abolished once and for all. For example, we find some women who emigrated here and becomes a pants finisher. The most of the contractors, who through the ignorance of the women, they take much advantage of them, and when the work is over they do not make more than \$3 or \$4 a week. The bosses are unscrupulous, and in some cases we have to sue the contractor to collect the wages of the poor women. I think a State law should say that when a woman is about to give birth to a

child, no work should be given to the house. I can show you many places where I have seen women and I have asked them, "Why don't you pay your dues to the organization?" And they say, "Don't you see I am going to have a child in two or three weeks, how can I pay my dues to the organization?" "Why do you work?" "I have to work." It seems to me that the factory inspector has never tried to enforce this law. In many ways the contractor does not know a continental about laws, but keeps on sending the work to the women. I challenge any representative or manufacturer, and I will take them to the homes and show them a large number of women where they are about to give birth to a child, and they are sitting in a chair for two or three months finishing clothes before giving birth to a child.

It seems once and for all something should be done in order to eliminate this awful condition which exists to-day in the coats and pants.

Mr. THOMPSON. What is the union trying to do, put on a law, have a law passed to prevent that?

Mr. ARNONA. I could give you this information. Two weeks ago we had a meeting of all Italian executive board locals of Greater New York, and the question was this—we had the first meeting, and we were trying to get things on the way to get a resolution to show the evils, to have some one help the organization through and help some of the people interested in this work to have a State law passed, or to have some kind of an agreement with the contractors that, after a length of time, no more work shall be given in the houses because it is morally and financially and otherwise against the women.

Chairman WALSH. Thank you. Call your next.

TESTIMONY OF MRS. MARY MINORA.

Mr. THOMPSON. Mrs. Minora, will you give your name to the reporter?

Mrs. MINORA. Sure.

Mr. THOMPSON. Mary Minora?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. You live where?

Mrs. MINORA. I live in Mulberry Street.

Mr. THOMPSON. What sort of building is that?

Mrs. MINORA. Well, it is a red building, tenement house.

Mr. THOMPSON. How many stories high?

Mrs. MINORA. Five stories high.

Mr. THOMPSON. Is it what is called a tenement house?

Mrs. MINORA. Tenement house.

Mr. THOMPSON. How many rooms have you there?

Mrs. MINORA. Three.

Mr. THOMPSON. How many people live in those three rooms?

Mrs. MINORA. Two families.

Mr. THOMPSON. Two families?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. How many people in the two families?

Mrs. MINORA. Six.

Mr. THOMPSON. You have six?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. How many in the other family?

Mrs. MINORA. No; me and my mother is six—both of them.

Commissioner O'CONNELL. Six altogether?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Six altogether?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. You are married?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. What is your husband's name?

Mrs. MINORA. R. Angelo.

Mr. THOMPSON. What trade does he work at?

Mrs. MINORA. He is a presser.

Mr. THOMPSON. Does he work at home?

Mrs. MINORA. No, sir.

Mr. THOMPSON. Where does he work?

Mrs. MINORA. In the shop.

Mr. THOMPSON. What shop?

Mrs. MINORA. Third Street. My husband is not working at the present time. He is out of work about nine months.

Mr. THOMPSON. He isn't working at the present time?

Mrs. MINORA. No, sir.

Mr. THOMPSON. Why is it? You say your husband is out of work nine months of the year?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Is that right?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. He only works three months?

Chairman WALSH. Let me ask her a question. Did you mean that your husband has been out of work for nine months?

Mrs. MINORA. Yes, sir.

Chairman WALSH. He is not out of work nine months every year?

Mrs. MINORA. No, sir.

Mr. THOMPSON. He is out of work nine months this year?

Commissioner O'CONNELL. He has not worked for nine months.

Chairman WALSH. How long since your husband worked?

Mrs. MINORA. He never worked. This year he is learning to press. This year he never worked for nine months.

Chairman WALSH. What did he do before he learned to press?

Mrs. MINORA. He was working in a shop on Fifty-fourth Street. I don't know what trade.

Mr. THOMPSON. What work do you do?

Mrs. MINORA. Pants.

Mr. THOMPSON. At home?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. For whom do you work? What is the name of the man you do the work for?

Mrs. MINORA. Well, I don't know the name of the boss.

Mr. THOMPSON. Where do you get the work from?

Mrs. MINORA. Mulberry Street.

Mr. THOMPSON. What number?

Mrs. MINORA. I don't know the number.

Mr. THOMPSON. Do you go there to get it?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. And you don't know the number?

Mrs. MINORA. No, sir.

Mr. THOMPSON. How long have you been doing this work?

Mrs. MINORA. Two years.

Mr. THOMPSON. Two years?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. How many children have you?

Mrs. MINORA. One.

Mr. THOMPSON. Just this one child?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. How much of the day do you work; how many hours during a day do you work?

Mrs. MINORA. Before I have the pants I used to make \$1 a day—\$1 and \$1.25—and now I can only make 16 cents.

Mr. THOMPSON. Only 16 cents?

Mrs. MINORA. Yes, sir; because before the pants was 12 cents and 13 cents; now they make it 4½ cents and 5 cents.

Mr. THOMPSON. Four and a half and 5 cents for the pants?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. It used to be 12 and 13 cents?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. What work do you do on pants for 4½ cents?

Mrs. MINORA. We make the lines, buttons, and the bottom and the yokes and eyes.

Mr. THOMPSON. How long does it take you to do that work on one pair of pants?

Mrs. MINORA. One hour.

Mr. THOMPSON. One hour?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Do you work pretty fast?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Work steadily?

Mrs. MINORA. Sure.

Mr. THOMPSON. You are only able to earn about 16 cents a day?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Are pants the only work that you do?

Mrs. MINORA. Sure.

Mr. THOMPSON. Did you work on other clothing before?

Mrs. MINORA. No, sir.

Mr. THOMPSON. It takes you about four hours a day to earn 16 cents?

Mrs. MINORA. No, sir. Before when I was to work, before I was there—one hour and five hours a day—I was making \$1, but now if I work 12 hours in one day I can make 16 cents. I must commence at 8 o'clock in the morning and finish about 9 o'clock at night to make 16 cents, because there is a lot of work on the pants.

Chairman WALSH. To make what?

Mrs. MINORA. Sixteen cents.

Chairman WALSH. Sixteen cents?

Mrs. MINORA. Yes, sir.

Commissioner LENNON. Is it 16 or 60 cents?

Mrs. MINORA. Sixty cents.

Mr. THOMPSON. Sixty cents?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. How many people are there in your family?

Mrs. MINORA. Six.

Mr. THOMPSON. Who are they?

Mrs. MINORA. My husband, me, and my little baby, my father, and my brother and my mother.

Mr. THOMPSON. Does your mother work?

Mrs. MINORA. Sure.

Mr. THOMPSON. She does the same sort of work?

Mrs. MINORA. Yes, sir; works in the same shop.

Mr. THOMPSON. Earns the same amount of money?

Mrs. MINORA. Before she used to make more money—made more money. If I make \$1 she made \$2 a day.

Mr. THOMPSON. What does your brother do?

Mrs. MINORA. He is a little boy; he goes to school.

Mr. THOMPSON. What does your father do?

Mrs. MINORA. Work at the same work my husband is doing.

Mr. THOMPSON. Has he been working pretty steady lately?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Has he worked?

Mrs. MINORA. Yes, sir; but not now.

Mr. THOMPSON. He does not work now?

Mrs. MINORA. No, sir.

Mr. THOMPSON. How long has he been out of work?

Mrs. MINORA. The same as my husband.

Mr. THOMPSON. For nine months?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. What does he get when he works?

Mrs. MINORA. \$15 and \$16 a week.

Mr. THOMPSON. \$15 and \$16 a week?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. Then the only people working in your family are yourself and your mother?

Mrs. MINORA. That is all.

Mr. THOMPSON. And you earn 60 cents a day?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. And she earns about 60 cents a day?

Mrs. MINORA. Yes, sir.

Mr. THOMPSON. What does your mother earn; how much does she earn a day?

Mrs. MINORA. She makes 15, 16, and 17. She can not make as much money as she made before.

Chairman WALSH. She makes 60 cents now. How much does your mother make?

Mrs. MINORA. Between 17 and 18 cents.

Chairman WALSH. Seventy and eighty, you mean?

Mrs. MINORA. Yes, sir.
Chairman WALSH. And you make 60 cents?
Mrs. MINORA. Yes, sir.
Mr. THOMPSON. That is all the income the family has?
Mrs. MINORA. Yes, sir.
Mr. THOMPSON. All the money?
Mrs. MINORA. Yes, sir.
Mr. THOMPSON. How long does it take your mother to finish a pair of pants?
Mrs. MINORA. Eight.
Mrs. THOMPSON. How long does it take your mother to finish a pair of pants?
Mrs. MINORA. If I take four——
Mr. THOMPSON. She works faster than you do?
Mrs. MINORA. If I have four hours, she takes three.
Chairman WALSH. She can do three times as much as you?
Commissioner GARRETSON. For her four hours it takes her mother three.
Mr. THOMPSON. What rent do you pay there?
Mrs. MINORA. How many rent?
Mr. THOMPSON. What rent do you pay for your rooms there?
Mrs. MINORA. Six dollars and twenty-five cents.
Mr. THOMPSON. A month?
Mrs. MINORA. Yes, sir.
Mr. THOMPSON. Have you any bathroom?
Mrs. MINORA. What?
Mr. THOMPSON. Do you have any bathroom in the house?
(No response.)
Chairman WALSH. How much rent do you pay for the rooms; how much a month?
Mrs. MINORA. Thirteen dollars.
Chairman WALSH. Thirteen dollars a month?
Mrs. MINORA. Yes, sir.
Chairman WALSH. Is there a bathroom in your rooms?
Mrs. MINORA. Yes.
Chairman WALSH. Are you sure—a bathtub? Do you know what I mean? Do you understand me?
Mrs. MINORA. I can not understand at all.
Chairman WALSH. Ask somebody else.
(From this point in the testimony of Mrs. Minora Mr. Arnona acted as interpreter.)
Mrs. MINORA. No; there is no bathroom.
Chairman WALSH. How old is your father?
Mrs. MINORA. Thirty-seven years old.
Chairman WALSH. Your father?
Mrs. MINORA. Yes, sir.
Chairman WALSH. How old is your mother?
Mrs. MINORA. Thirty-six.
Chairman WALSH. How old are you?
Mrs. MINORA. I am going to be 15 the 4th of September.
Chairman WALSH. Fifteen?
Mrs. MINORA. Yes, sir.
Chairman WALSH. How long have you been married?
Mrs. MINORA. Two years.
Chairman WALSH. At what age did you begin to do this work on clothing in your rooms in your tenement?
Mrs. MINORA. Ten years old.
Chairman WALSH. Ten years old?
Mrs. MINORA. Yes, sir.
Chairman WALSH. Does anybody ever come into the house—any inspector ever come into your house to look it over?
Mrs. MINORA. Never.
Chairman WALSH. Never?
Mrs. MINORA. No, sir.
Chairman WALSH. Do you know any inspector at all—do you know of any inspector ever coming in there?
Mrs. MINORA. I don't know anybody, because nobody ever went to my house.
Chairman WALSH. How many garments per day do you have in there altogether?

Mrs. MINORA. When I used to get 15 cents a pair I was able to make \$1 or \$1.25 a day, but to-day there is more work on the pants—on the garment—and I can not earn as much as I did before.

Chairman WALSH. What I would like to know was if she could tell you about how many garments per day, when she was working steadily, came into their rooms?

The INTERPRETER. She says if she gets steady work she can make five pairs a day.

Chairman WALSH. Has there been any illnesses in the family in the past year—anyone sick?

The INTERPRETER. She says nobody was sick in her house, with the exception of her mother, about an operation, about seven years ago.

Chairman WALSH. Ask her whether or not they have been able to live for the last nine months upon what she and her mother earned without outside assistance of any kind?

The INTERPRETER. She says they never received any outside aid. They have been able to live on the salary she was earning, but now they are not able to do so.

Chairman WALSH. Ask her whether or not they have gone into debt—whether they have been able to get credit any place?

The INTERPRETER. She says they went in debt to their uncle; but being now their uncle has gone over to Italy he is not able now to trust them with any more money.

Chairman WALSH. Ask her, if it will not embarrass her and she is perfectly willing and freely willing to do so, to give the commission about what they live on. Describe what they live on—that large family. If she doesn't like to state it, explain to her that she need not.

The INTERPRETER. She says she is willing.

Chairman WALSH. Describe about how they live.

The INTERPRETER. She said, at night they have to buy—you know, the supply, the food supply, and so on, and it cost them at least a dollar for all the six people in the house.

Chairman WALSH. Where do they buy their supplies?

The INTERPRETER. At Elizabeth Street.

Chairman WALSH. Is there a market or store, or what, there?

The INTERPRETER. In the pushcarts in Elizabeth Street. You see, there are a number of pushcarts.

Chairman WALSH. What we want to get at, if it is all right with her, is what they buy with the dollar?

The INTERPRETER. She says she has to buy macaroni and cheese and vegetables, you know, and whatever it is necessary; and food is very dear besides, too.

Chairman WALSH. What do they do for clothing and how do they manage about clothing?

The INTERPRETER. They put away five cents a day and after they get so much money together they buy clothing.

Commissioner O'CONNELL. In the course of a few years they can buy something?

The INTERPRETER. She says as long as it takes. She says they do not go with such a high price clothing on; just simply go the best they can.

Commissioner O'CONNELL. Ask her if things are not much higher now to live on than they were a year ago—times harder and work scarcer?

The INTERPRETER. She says yes. She says like that, what do you think we come down here for—for nothing? I suppose she has the opinion that she comes down here to better their conditions.

Mr. THOMPSON. Ask her when her father and husband were working and her uncle here if they did not have better conditions?

The INTERPRETER. She says her father and her husband don't work since the last nine months. She says positively the men's work in the house even would be better.

Chairman WALSH. Ask her when they did work if they always worked at the needle trade—sewing trade?

The INTERPRETER. No; they did not.

Commissioner O'CONNELL. Why don't they now if they can get work at something else like working on the streets or—

The INTERPRETER. She says they are going out every morning, when she go out of the house they already out in search of work.

Commissioner O'CONNELL. Ask her whether or not her father or her husband drink liquor?

The INTERPRETER. She says they do not drink any liquor—anything of the kind; don't go in saloons or anything of that kind.

Commissioner O'CONNELL. Do they stay at home when they are not out looking for work?

The INTERPRETER. They stay home and whenever they have no work and they play with the children or they do some cooking you know, help along in order so that she may work more steadily.

Commissioner O'CONNELL. Does the family go to church?

The INTERPRETER. Every Sunday they go to church.

Commissioner O'CONNELL. Do her father and mother take care of the children so she can work when she has work to do?

The INTERPRETER. Yes; they attend to the work of the house and they work.

Commissioner O'CONNELL. The men do the housework in order that the women may sew?

The INTERPRETER. Yes, sir; help.

Chairman WALSH. Any other families in the same tenement house in which she lives that do work in the same way?

The INTERPRETER. She says she could not tell, because they mind their own affairs. They never see what somebody else is doing.

Mr. THOMPSON. Before this nine months, since her father and her husband have been idle, but when they were working before, didn't the family have more money for food and spend more money for clothing than 5 cents a day?

The INTERPRETER. Yes; they did, she says.

Mr. THOMPSON. Has she any brothers or sisters?

The INTERPRETER. Only a small brother, that goes to school.

Chairman WALSH. Only the one she has mentioned here?

The INTERPRETER. Only the one she has mentioned.

Mr. THOMPSON. How long has she been in this country?

The INTERPRETER. Ten years.

Mr. THOMPSON. Did she go to school here?

The INTERPRETER. Yes, sir.

Mr. THOMPSON. What grade did she get in?

The INTERPRETER. She says she couldn't tell to what grade or class she arrived because she would go two days in school and stay away four days to work; that her mother needed her to help along to sew pants, in order to make a living.

Mr. THOMPSON. Was she taught needlework in the school?

The INTERPRETER. Well, by her own head she learned it.

Mr. THOMPSON. She was not taught needlework in the school?

The INTERPRETER. No.

Chairman WALSH. That is all, thank you.

TESTIMONY OF MRS. CONCENTINA FALZONE.

(Mr. Paul Arnona acted as interpreter.)

Chairman WALSH. Does she speak English?

The INTERPRETER. She says not.

Mr. THOMPSON. What is her address?

The INTERPRETER. 36½ Stanton Street.

Mr. THOMPSON. What floor does she live on?

The INTERPRETER. Top floor.

Mr. THOMPSON. In the front or rear?

The INTERPRETER. In the back—rear.

Mr. THOMPSON. How high a building is that—how many stories?

The INTERPRETER. Five floors.

Mr. THOMPSON. Is it a tenement house?

The INTERPRETER. Yes; a tenement house.

Mr. THOMPSON. How many rooms has she there?

The INTERPRETER. Three rooms—by her brothers, brother-in-law and sister-in-law.

Mr. THOMPSON. How many people live in those three rooms?

The INTERPRETER. Ten people.

Mr. THOMPSON. Ten people in the three rooms?

The INTERPRETER. Three rooms; yes, sir.

Mr. THOMPSON. How many of the 10 are children?

The INTERPRETER. Four children belong to her, and one of them belongs to her brother.

Mr. THOMPSON. What are the ages of the children?

The INTERPRETER. Her oldest daughter 8 years, the next one is 5, another one 3, another one 1.

Mr. THOMPSON. What is the age of the other child?

The INTERPRETER. The other one is 1 year old.

Mr. THOMPSON. How old is Mrs. Falzone?

The INTERPRETER. Thirty-two.

Mr. THOMPSON. Is her husband living?

The INTERPRETER. Yes; he is living.

Mr. THOMPSON. In New York, here?

The INTERPRETER. In New York.

Mr. THOMPSON. What work does he do?

The INTERPRETER. Carpenter.

Mr. THOMPSON. Is he working now?

The INTERPRETER. No; he is not working.

Mr. THOMPSON. Is he here?

The INTERPRETER. He is not working for six months. This is the gentleman here.

Mr. THOMPSON. Why has he not been able to get work? Has he been sick?

The INTERPRETER. He has not been able to find any steady work. Whenever he finds a job he makes a day once in a while, or three days.

Mr. THOMPSON. Does she do any sewing work in her apartment or place where she lives?

The INTERPRETER. Yes; she does. She finishes pants.

Mr. THOMPSON. How long has she been finishing pants work in her home?

The INTERPRETER. As long as she has been in this country.

Mr. THOMPSON. How long has that been?

The INTERPRETER. Nine years.

Mr. THOMPSON. What do these pants, if she knows, sell for? What are they sold for to the customers, if she knows.

The INTERPRETER. She does not know.

Mr. THOMPSON. Are they good clothes or poor clothes?

The INTERPRETER. Custom work.

Mr. THOMPSON. She means by custom goods stuff that is made to measure for men?

The INTERPRETER. Yes; individual custom pants.

Mr. THOMPSON. What work did she do on the pants?

The INTERPRETER. She makes everything—that is, finishing the bottoms, the lining, tack on the pockets, sew on the buttons, and so on—with the exception of the buttonholes.

Mr. THOMPSON. How long does it take her to do the work on a pair of pants?

The INTERPRETER. It takes from two hours to two and a half, according to the kind of pants she is finishing.

Mr. THOMPSON. And how much does she get for a pair of pants—for one pair?

The INTERPRETER. She said before she used to get 50 cents for finishing, and then he lowered it down to 40 cents and then down to 30 cents, and this week he wants to pay her 20 cents a pair.

Mr. THOMPSON. Did they give any reason to her why they wanted to lower the price?

The INTERPRETER. No reason whatever. Not only that, but many times you know the foreman, in order to have credit, they say the thing is not made right, give them lots of busheling, which is not necessary.

Mr. THOMPSON. Lots of busheling?

The INTERPRETER. Yes. That is opening up the lining and all.

Mr. THOMPSON. How much has she been able to earn a day lately?

The INTERPRETER. Forty cents, fifty cents, sixty cents, when she has work.

Mr. THOMPSON. How many hours does it taken her to earn 40 or 50 cents or 60 cents?

The INTERPRETER. To earn 60 cents she has to work all day long from morning until night.

Mr. THOMPSON. To earn 60 cents?

The INTERPRETER. In the morning very early and at night as late as 8 and 9; and in the morning about 4 o'clock, and 5 o'clock.

Mr. THOMPSON. How does she get her clothes—are they brought to her home or does she go after them?

The INTERPRETER. She goes over to the shop and gets them and has to carry them back to her house.

Mr. THOMPSON. Anr has to carry them back to her house?

The INTERPRETER. Yes, sir

Mr. THOMPSON. How long a distance is that?

The INTERPRETER. Near her house. She lives on Stanton Street and the shop is on—

Mr. THOMPSON. Does she get paid for carrying the bundles back and forth?

The INTERPRETER. No, sir.

Mr. THOMPSON. Does she have to wait for the bundles at all?

The INTERPRETER. She has to wait until the work is ready sometimes from the other men in the shop, and many times she has to wait until the busheling is finished and the boss has to examine the work and if there is busheling she has to do the busheling and sometimes she has to wait.

Mr. THOMPSON. Does she get paid for busheling?

The INTERPRETER. No.

Mr. THOMPSON. Does she ever get or try to get other kind of work in the inside shop?

The INTERPRETER. No; she never tried because she had to attend the children, and being she has to attend the children, you see, she has got to get work in the shop so that she can bring the work in the house.

Mr. THOMPSON. Ask her what the income of her family has been the last few weeks?

The INTERPRETER. She says nothing at all with the exception of what she has earned by finishing a few pair of pants.

Mr. THOMPSON. How much a day?

The INTERPRETER. Nothing, because her husband goes out in the morning and comes back without finding any work.

Mr. THOMPSON. How do they live now?

The INTERPRETER. By whatever earnings she made by finishing a few pair of pants.

Mr. THOMPSON. That is 40 to 60 cents a day?

The INTERPRETER. Yes; and she says when she earns 60 cents it has been a big day's work.

Mr. THOMPSON. How do she and her husband and baby live on the 40 to 60 cents a day?

The INTERPRETER. She says as God provides, the best way they can.

Mr. THOMPSON. What is the rent that they pay for these three rooms?

The INTERPRETER. Twelve dollars and fifty cents for the three rooms, and now her share is \$6.25.

Mr. THOMPSON. Ask her what they spend for food?

The INTERPRETER. As much as they can afford. Whenever they have more they spend more; and whenever they have less they spend less.

Mr. THOMPSON. What do they usually eat, if she is willing to tell that?

The INTERPRETER. Macaroni with cabbage—it is kind of a soup—they call it in Italian—and beans, or macaroni with cheese.

Mr. THOMPSON. All meals for the day?

The INTERPRETER. Well, generally speaking, in order to save up they eat macaroni right along with side dishes either with cabbage or cheese.

Mr. THOMPSON. Ask her if she ever gets any meat to eat?

The INTERPRETER. Once in a while, whenever they can afford.

Mr. THOMPSON. When is it she last has had meat to eat?

The INTERPRETER. Last Sunday they bought meat.

Mr. THOMPSON. About how often do they have meat?

The INTERPRETER. Well, at least once a week she says.

Mr. THOMPSON. That is all, Mr. Chairman.

Commissioner O'CONNELL. Why does her husband, if he is not working, why doesn't he go and carry these bundles of clothes back and forth?

The INTERPRETER. Well, she explains that he does not stay right along in the house. He is always out hunting for work. And at the same time the boss of the shop won't give any work to her husband because she has to go over to the shop to do some busheling, if there is any. She never gets no more than one or two pair of pants at a time.

Commissioner O'CONNELL. By busheling you mean alterations?

The INTERPRETER. Yes.

Commissioner O'CONNELL. She never gets but one or two pair of pants at a time?

The INTERPRETER. Yes; in custom work they generally don't give but one or two pair at a time. She never gets more than three pair.

Chairman WALSH. That is all. Thank you, Madame.

TESTIMONY OF MR. BERNARD A. LARGER.

Mr. THOMPSON. What is your name and address?

Mr. LARGER. Bernard A. Larger, 1765 West Seventh Street, Brooklyn.

Mr. THOMPSON. What is your business?

Mr. LARGER. I am secretary of the United Garment Workers of America?

Mr. THOMPSON. That is the International Association?

Mr. LARGER. An international association.

Mr. THOMPSON. How long have you been secretary?

Mr. LARGER. About 10 years.

Mr. THOMPSON. How many people are employed in the men's garment industry in Greater New York City, if you know—about how many?

Mr. LARGER. Well, a census has never been taken of them by the garment trades; but I am of the opinion that there is not more than 75,000, between that and 100,000; 75,000 tailors are a lot of tailors and cutters, and when they are out on a strike they look like a large number; but I think if it reaches 75,000 that would be about as many tailors and cutters as there are in the business in New York.

Mr. THOMPSON. In the statistics compiled by the New York Department of Labor, they placed the garment industry as employing the largest number of any industry in the State of New York, do they not?

Mr. LARGER. Well, I guess they do.

Mr. THOMPSON. How many members of this union have you in New York City?

Mr. LARGER. Well that is a difficult question to answer, although it has been answered here. I can only see those that I get a per capita tax from. I can not see anybody else. We have about, at the present time, less than—well, 19,000 members; but it is naturally true that there are a great many more in the organization; a great many more that we don't get paid for.

Mr. THOMPSON. Are the members of the union in this city a dues-paying membership or not?

Mr. LARGER. Well, yes; they are.

Mr. THOMPSON. Yet you think there are a great many you don't get paid for?

Mr. LARGER. Yes, sir.

Commissioner O'CONNELL. That is, the local union does not pay the per capita tax?

Mr. LARGER. No; the local union does not pay the per capita tax; but about once a year or two years we get around and we get about all that they have, sometime, because the auditor goes over the books, and we find out what they have and make them pay up.

Commissioner O'CONNELL. That is your general method?

Mr. LARGER. I think if we have got 55,000 or 60,000 men in the trade—dues-paying and nondues-paying members, that is about all we have got.

Mr. THOMPSON. What is the advantage or disadvantage to the workers of the contract system?

Mr. LARGER. The disadvantage of the contract system, as it works out here in New York City and in other cities, heretofore it has been—the employees have been driven and worked long hours and for small wages. Now, in New York here the contractor seems to pay a higher rate of wages than they do on the inside shop. Why that is I am unable to explain; but it is true, also, that he drives his help harder than the inside factory, and the clothing manufacturers complain that their goods are made cheaper on the outside than they are on the inside.

Well, that is true; but the inside manufacturer, he demands a better garment and more particular work, and as a consequence his garments cost him more on the inside than on the outside. And on the outside the organization has got a better control than the contract shop, and consequently can demand and get better wages. It has better control over the contract shops than it has got—could have over the inside shop.

Mr. THOMPSON. What is the reason, then Mr. Larger, that the manufacturer will turn his work over to a contractor when the worker in the outside shop can get higher wages because of the union, why does the manufacturer bother to send it out?

Mr. LARGER. When he does the work in his own shop he has the work done better. He won't accept the work from his own shop that he will accept from the contractor. The manufacturer can't see the inside of the coat when it comes in, and if it is pressed right it passes; but the rest of it is sent away from New York and goes out to the consumer.

Mr. THOMPSON. Some of the other witnesses have stated that the reason the inside shops cost more was because they used inferior help, and more immigrants, and so on?

Mr. LARGER. I don't know that that is altogether true. I know that some shops use the very best of help, and they pay good wages.

Mr. THOMPSON. Then your theory would be, as I get it from your testimony, Mr. Larger, that the inside shops require better work that costs more; but where they do not require good work, or do not care much about that, the work, it is turned over to contractors who are able to pay better wages, because they rush their people on inferior work.

Mr. LARGER. They do not put in the work on the inside of the coats. It all goes on the outside. And one disadvantage in other cities—I have never known any other city where a contract shop got more money than the inside shop; but there is such a competition among the contractors for the work that up until our last strike they would take a coat out for 5 or 10 cents less, and the contractor would go down for work, and the manufacturer would say, "Well, I have got a coat here, but you will have to make it for 10 or 15 cents less," or for whatever it was, and the man goes back to the tailor and he says, "If you will work an hour longer, take a dollar off your wages, I'll take this work out," and they would do it and get the work done in that way.

Mr. THOMPSON. Then, as a matter of fact, these tailors in the outside shops get more than on the inside?

Mr. LARGER. That is what they say; but I don't know that; I would not swear to that of my own knowledge.

Mr. THOMPSON. Some of the witnesses here stated that they do not speed them up, that they are not speeded up. Do you know anything about that?

Mr. LARGER. Well, it has always been my experience that when a man is working in a contract shop he is speeded to his limit, not only speeded, but he comes to work very early in the morning and quits late at night. That may account for their possibly making more money in the outside shops than the inside shops, because the inside shops they have a certain number of hours to work, and they work, and that is all.

Mr. THOMPSON. Have you studied or noticed at all the results of factory inspection on the outside shop?

Mr. LARGER. Well, we have tried in various ways to have the factories inspected and taken care of a little better, and we were told at the time that the commission could not afford to put on any more men. I offered to put on a half dozen inspectors for them and pay the salaries ourselves, just the same as the State; pay all expenses just the same as the State; it would give them commissions and let them inspect the factories, but they told me they couldn't do it.

Mr. THOMPSON. What did they tell you?

Mr. LARGER. They told me at that time that it was contrary to law and that they couldn't do it.

Mr. THOMPSON. Whom did you ask that right of?

Mr. LARGER. I asked it of Mr. Schurman when Mr. Schurman was the commissioner.

Mr. THOMPSON. Is he the commissioner now?

Mr. LARGER. No, sir; Mr. Williams came after him, and then Mr. Lynch is the commissioner now.

Mr. THOMPSON. You have not made that proposition since then?

Mr. LARGER. No, sir.

Mr. THOMPSON. Has the existence of the contracting shops in New York any effect on the national labor proposition, so far as it confronts the members of your union?

Mr. LARGER. No; none whatever.

Mr. THOMPSON. It has not got a tendency to undermine collective agreements made elsewhere in other cities?

Mr. LARGER. No. Every manufacturer in Chicago accuses the manufacturers in New York of getting their work made cheaper and the manufacturer in New York accuses the Chicago manufacturer of getting his work made cheaper. I just had a letter the other day from Chicago wanting to know how these

dollar coats were made here in New York, and saying that we were selling them for \$2 less than they could afford to sell them for. Well, it couldn't be the labor altogether.

Mr. THOMPSON. The attitude of the Chicago manufacturer is that his labor costs him more than New York?

Mr. LARGER. Yes, sir.

Mr. THOMPSON. And that the work can be done here and gotten out cheaper because of the green help?

Mr. LARGER. Yes, sir.

Mr. THOMPSON. And do you agree with the Chicago manufacturer in that?

Mr. LARGER. No, sir; I do not, because the green help, as it comes in here—apprentices, they ought to be called—they come in here and go to work only on the very cheapest work.

Mr. THOMPSON. The Chicago manufacturers complain that New York, by reason of that cheap labor, has driven Chicago out of the cheaper class of garments. Is that true?

Mr. LARGER. New York has always, since I have been in the clothing trade, and I have been in it for 25 years—New York has been able to beat any market in making cheap clothing, because they have the help here that they could not get anywhere else.

Mr. THOMPSON. Chicago clothing is mostly advertised clothing—specialty stuff?

Mr. LARGER. Yes, sir.

Mr. THOMPSON. What is your national union's attitude toward the contracting system, if it has an attitude?

Mr. LARGER. Well, our attitude is that we would like to discontinue it if we could. If we had the power to discontinue it, we would, and we would at the same time try to see that every manufacturer had his own shop inside.

Mr. THOMPSON. Is that true of home work, as well?

Mr. LARGER. It is true of home work? I have always objected to home work.

Mr. THOMPSON. And as an international union, what have you done to promote the work in the clothing trade?

Mr. LARGER. We have been instrumental in having some laws passed; we are on record as to sweat shops and the inspection of those tenement houses where the work is made, and other laws that the garment workers needed; and in fact were before the legislature when some of those laws were passed, and we have done the best we could as against this home work.

Mr. THOMPSON. What was the attitude of your organization toward agreements with the trade in your collective bargaining, as you call it sometimes?

Mr. LARGER. We have always sought them; we want them.

Mr. THOMPSON. You believe in them?

Mr. LARGER. Yes, sir.

Mr. THOMPSON. That is all I have.

Chairman WALSH. Are there any questions?

Commissioner LENNON. You heard those two Italian women who spoke here as witnesses. Is there a large amount of that kind of thing prevailing in the business?

Mr. LARGER. Yes, sir; there is a great deal of it. A great deal of it, and it ought to be stopped, but unfortunately when you go up against it, they say: "Here is this building and it has a license, and if there was a dozen families in there they could do the work, and it is impossible for the State to give us sufficient inspection to keep going around among those houses."

Commissioner LENNON. Tell us what the license guarantees?

Mr. LARGER. It does not guarantee anything, only that it is clean and in a sanitary condition. That is about all.

Commissioner LENNON. And it states it in about as broad terms as you have mentioned?

Mr. LARGER. How?

Commissioner LENNON. It states "This building is guaranteed to be clean"?

Mr. LARGER. Yes, sir.

Commissioner LENNON. And in sanitary condition.?"

Mr. LARGER. Yes, sir; and usually it is the owner of the building that gets the licenses and hangs them up in the hall and everybody is immune then.

Commissioner LENNON. Your organization officially stands for collective bargaining?

Mr. LARGER. Yes, sir.

Commissioner LENNON. In case there is a breach of the bargain, in case the employer absolutely breaks the agreement, and your union finds that out to be the case,, but the employer says, or your agreement provides that these breaches or agreements shall be settled by arbitration or agreement, are you in favor of going immediately on strike or trying to settle by arbitration, by agreement?

Mr. LARGER. I believe in settling it, if we can, and if they won't settle, there is plenty of time to strike. You can strike at any time, but settle, if you can, first.

Commissioner LENNON. You believe that agreement should provide for interpretations of the agreements and the settlement of the grievances that arise, the agreement itself should provide for mediation and conciliation and arbitration methods of settling those disagreements during the life of the contract?

Mr. LARGER. All our agreements provide for arbitration, but I don't know of any agreement that would cover everything. There is always something new coming up.

Commissioner LENNON. Oh, yes.

Mr. LARGER. It is a difficult matter, and you have to use your judgment in those cases; and I don't think that a man is using good judgment when he places a member of his organization on strike before he positively has to do it.

Commissioner LENNON. That is all.

Commissioner O'CONNELL. One question. Can you give the commission some idea, Mr. Larger, as to what the exact cost of labor is in the production of a suit of clothes; say, the ordinary suit of clothes retailing around \$20?

Mr. LARGER. No, sir; I could not. I could tell you about what the coat, pants, and what the vest cost, and the cost of the pants.

Commissioner O'CONNELL. Give us that.

Mr. LARGER. A suit retailing for, say, \$20, a coat will be made from anywhere, say, \$1.50 up to \$2.50, and the vest about 45 to 55 cents; a pair of pants, say, 60 cents.

Commissioner O'CONNELL. Then, approximately what would it cost to cut that suit?

Mr. LARGER. That you figure about 50 cents a suit.

Commissioner O'CONNELL. And the cost would be in the material and the natural fixed charges, according to the operation?

Mr. LARGER. Yes, sir.

Chairman WALSH. Is that all?

(No response.)

Chairman WALSH. That is all. Thank you.

The commission will now stand adjourned until Monday morning, at 10 o'clock.

(Thereupon, at 1 o'clock p. m. on Friday, June 4, 1914, the commission adjourned until Monday, June 8, 1914, at 10 o'clock a. m.)

EXHIBITS.

SILVERMAN EXHIBIT.

At a conference at the Public Bank, 89 Delancey Street, New York City, on February 26, 1913, the following articles of agreement were decided upon by authorized representatives of the United Garment Workers of America, whose official signatures in their official capacity are attached to this agreement, and the executive board of the Metropolitan Merchant Tailors' Association of Greater New York, whose signatures are also affixed.

This agreement entered into by the United Garment Workers of America and the Metropolitan Merchant Tailors' Association agrees that in their own and contractors shops only members of the Custom Tailors Unions Nos. 162, 80, and 16, of the United Garment Workers of America shall be employed.

SECTION 1. All tailors employed in the shops of the members of the association or their contractors to work 50 hours.

A. In busy season overtime shall be worked when necessary and at regular rate.

SEC. 2. This association hereby agrees to an advance of 15 per cent increase on every garment to pieceworkers.

A. The shorter hours of the week workers to be construed as equivalent to an increase in pay.

B. Overtime at regular wages during the busy season.

C. When overtime is necessary during the dull season, time and a half shall be paid.

SEC. 3. Men to be taken back who went down during strike, including bushelmen.

SEC. 4. Schedule of hours for bushelmen shall be 56.

A. Pay shall be rendered for legal holidays of the State of New York and the United States of America, when establishments shall be closed.

B. It is understood and agreed that when said establishments shall be open for business that such bushelmen shall work on such day in conjunction with other employees.

C. Their not working on such holidays when establishments shall be open shall be sufficient cause for deduction in pay for time not working.

D. It is understood and agreed that the payment for a current week's work shall not be made at a later day than Monday of the succeeding week.

SEC. 5. It is understood and agreed that this agreement is for the term of two years.

A. At the end of one year, or if conditions should be prosperous, there should be increase subject to the arbitration committee.

B. It is understood and agreed, however, that there shall be no lockout or strike during this period of two years.

C. All disputes shall be referred to the arbitration board.

D. It is understood and agreed that in the event of labor disputes with the United Garment Workers of America, through Custom Unions Nos. 162, 80, and 16, with other association or organizations, that in the event of no dispute arising between the parties to this agreement, there shall be no sympathy strike called with the contractors in the employ of the members of the association.

E. That in the event of a general strike, if called by those local unions, it shall not affect the members of the Metropolitan Merchant Tailors' Association.

SEC. 6. There shall be a permanent board of arbitration consisting of six members, three to consist of the Metropolitan Merchant Tailors' Association

and three to consist of the officers of Custom Union Locals Nos. 162, 80, and 16, of the United Garment Workers of America.

This arbitration committee shall have the power to settle all such matters as may be brought before them during the life of this agreement.

In the event of a disagreement or the inability of said board to reach a decision in any matter in hand, a disinterested party, consisting of one referee, shall be selected by mutual consent. The report and finding of said selected referee shall be binding and such report as he may render shall be final and conclusive without further recourse.

UNITED GARMENT WORKERS OF AMERICA,
By J. A. RICEKERT, *General President*.
METROPOLITAN MERCHANT TAILORS' ASSOCIATION,
By LOUIS PELL, *Chairman*.

EXHIBIT H.

This agreement entered into by the UNITED GARMENT WORKERS OF AMERICA and the MANHATTAN MERCHANT TAILORS' ASSOCIATION hereby agrees that in their own and contractors' shops only members of the Custom Tailors' Unions Nos. 162, 80, and 16 of the United Garment Workers of America shall be employed.

SECTION 1. All tailors employed in the shops of members of the association or their contractors to work 50 hours.

A. In the busy season overtime shall be worked when necessary and at the regular rates.

SEC. 2. This association hereby agrees to an advance of 15 per cent increase on every garment to pieceworkers.

A. The shorter hours of the week workers to be construed as equivalent to an increase in pay.

B. Overtime at regular wages during the busy season.

C. When overtime is necessary during the dull season, time and a half shall be paid.

SEC. 3. Men to be taken back who went down during strike, including bushelmen.

SEC. 4. It is understood and agreed that this agreement is for the term of two years.

A. At the end of one year, or if conditions should be prosperous, there should be another increase subject to the arbitration committee.

B. It is understood and agreed, however, that there shall be no lockout or strike during this period of two years.

C. All disputes shall be referred to the arbitration board.

D. It is understood and agreed that in the event of labor disputes with the United Garment Workers of America, through Custom Unions Nos. 162, 210, and 16, with other associations or organizations, that, in the event of no dispute arising between the parties to this agreement, there shall be no sympathy strike called with the contractors in the employ of the members of this association.

E. That in the event of a general strike, if called by these local unions, it shall not affect the members of the Manhattan Merchant Tailors' Association.

SEC. 5. There shall be a permanent board of arbitration consisting of six members, three to consist of members of the Manhattan Merchant Tailors' Association and three to consist of the officers of Custom Union locals Nos. 162, 80, and 16 of the United Garment Workers of America.

This arbitration committee shall have the power to settle all such matters as may be brought before them during the life of this agreement.

In the event of a disagreement or the inability of said board to reach a decision of any matter in hand, a disinterested party, consisting of one referee, shall be selected by mutual consent. The report and finding of said selected referee shall be binding and such report as he may render shall be final and conclusive without further recourse.

The hours of the bushelmen to be left to the arbitration board.

Members of both parties hereto not to be allowed to go to work unless in good standing with both organizations.
